At last it is time to stop, I give a signal, and in less time than it takes to tell I have pushed the levers and anxiously follow the flight of the released bombs. With a tremendous crash they strike the heart of England. It is a magnificently terrific spectacle seen from midair. Projectiles from hostile batteries are sputtering and exploding beneath and all around us, while below the earth seems rocking and houses are disappearing in craters and conflagrations, in the light of the glaring sun.

In a few moments all is over and the squadron turns. One last look at the panic-stricken metropolis and we are off on our home course. I nod to my pilot, indicating that everything is all right. He answers "likewise." We have gotten somewhat behind the squadron, but soon make up the distance.

Now we are in for a little bout with English chasers. They don't let us wait very long. As we reach the suburbs the first three English fliers suddenly appear in front of us, seeking to block our flight. At a hundred or two hundred meters distance both sides open fire, striving to get at each other's weak spots.

Then from several directions the attacking British planes reach us. They appear from below, then from the right or left or from above. My pilot is watch-

THE BRITISH ARMY ENTERING BAGDAD

Early on the morning of March 11, 1917, the British Army in Mesopotamia entered the ancient City of the Caliphs, Dur-
ing the previous nights the Turks had beaten a simultaneous retreat upstream on both banks of the Tigris.

ing with eagle eyes, while I, with my hand on the gun lever, am not slow to give a tack-tack to the daredevil who exposes himself to my machine. Twice we just evade terrific onslaughts. Two hostile pilots turn and do not come back.

But the third is a brave and tenacious fellow. For ten minutes we fire at each other almost incessantly, my opponent looking for an opening. Suddenly he makes for us and showers his bullets on our machines. I can see or feel that the bullets have struck our planes, but I know I've got him. I send a whole sheaf of fire into his body. His machine rears up in the air like a wounded animal, turns a somersault, and disappears in the depths. This is the first enemy I have defeated over British soil. Three cheers!

Already the British coast is in view again, but more fighting awaits us. This

time the English fliers seem to have lost heart. Their attacks are easily beaten off. Our machines reach the coast at length and close up with the rest of the squadron. While reloading my machine gun my pilot discovers a new enemy. By his tactics I recognize him as one of those astute English fliers we encountered at the Somme. Perhaps we had met there. For a short time we fly almost parallel, both preparing to attack. Suddenly he turns sharply to the left and there he is not twenty meters distant. Our machine guns pour lead into each other. Suddenly his gun stops dead. Must have jammed. He turns sharply and tries to fly, but my machine gun catches him squarely on the broadsides, and down he goes. Just twenty seconds of fighting and all is over, old friend of last Summer!

Ear Disturbances Suffered by Aviators

By P. Lacroix, M. D.

[Translated from the Bulletin de l'Académie de Médecine de Paris for CURRENT HISTORY MAGAZINE.]

AS a military surgeon I have spent a year in one of our most important schools of aviation. This has enabled me to make a systematic study of the reactions and disturbances of the ear observed in aviators during their flights. I have based this study on questioning and on the otoscopic examination of numerous pilots from the aviation centre at Ambérieu (near Lyons) and also on personal auto-observation during the flights which I have made myself as an observer at altitudes varying from about 1,500 to 6,000 feet.

The ear is both an organ for the maintenance of equilibrium and an organ for hearing. As an organ for maintaining equilibrium, how does the ear behave itself in the aviator during flight? Do the flights produce vertigo? It seems, a priori, that rising in an aeroplane to great altitudes must entail a tendency to vertigo; but this conception does not correspond at all to the reality; on the contrary, one is struck with the rarity of vertigo under such circumstances. As

soon as the aeroplane leaves the ground, the fear of dizziness which one was expecting disappears, and is replaced by a feeling of calm stability. When the apparatus, having attained the altitude sought, advances in the air, proceeding at a speed which ordinarily is an average of sixty miles an hour, one believes that he is advancing only with a majestic deliberation. Aside from the impression caused by the spectacle (very beautiful it is) which one has below him—the long, white ribbons of the roads, the diminutive houses, the microscopic living beings, a spectacle truly Lilliputian—there is really the absence of every painful impression, of all dizzy conditions. Personally, although I feel visual dizziness on the balcony of a second story, I have never felt it in an airplane even in the eddy wind, in the spirals, in the rapid descents.

This is easily explained. Vertigo, a malady of the sense of space, may have for its origin a visual condition, or a tactile disturbance, or an affection of

the labyrinth of the ear. In the airplane, the terrestrial guiding marks are too far distant to disturb the visual state. The habitual stability of the apparatus brings with it tactile and labyrinthine stability. It is only when the airplane is taken in a violent eddy wind that the tendency to vertigo may appear. But, in the matter of aviation, the rolling and the pitching, the dangerous "montagnes russes," are already abnormal and are near neighbors to accident.

Let us now consider how the aviator's ear behaves as an organ of hearing during flights. Do the flights provoke deafness?

The disturbances of equilibrium with vertigo are exceptional; but, on the other hand, affections of the hearing—buzzings, deafness—are habitual and practically the rule. The observer who is making his first flight is surprised to hear his ears buzz while the airplane is rising. This buzzing disappears at certain moments and then appears again. Auditory distinctness follows the same alternations. The noise of the motor which was striking the eardrums ceases to be perceived, then reappears. It is in the very high altitudes especially that these disturbances are produced during the ascents and the rapid descents; it is to these phenomena (deafness and intermittent buzzings) that it is fitting to give the name of "reactions of the ear."

These reactions are the rule, but they vary in intensity as well as in duration. An attempt has been made to explain them by the effect of the air set in motion by the propellers, by the noise of the motor. The air, which strikes the face quite vigorously during flight, certainly plays a rôle in this respect. However, the disturbances in question are also dependent in good part on the irregular aeration of the middle ears. The successive atmospheric strata into which the airplane passes do not have the same density, for the barometric pressure decreases as the altitude increases. The air which fills the external auditory canal in a given atmospheric stratum finds itself in a different pressure from that of the air which has been stored up

by the middle ear in the preceding atmospheric stratum. To this fact are due the tractions on the eardrum and on the chain of the ossicles [small bones of the ear] and also the buzzings and the deafness; but these cease as soon as an act of swallowing (which opens the Eustachian tube) re-establishes the balance of the pressure on the internal and external surfaces of the eardrum. The aviator protects himself from these ear disturbances, in fact—sometimes without noticing that he does so—by executing almost automatic acts of swallowing, which, by aerating the middle ear, restore the equilibrium on the two surfaces of the membrane of the eardrum.

I have made frequent otoscopic examinations on pilots who had just landed, and I have verified in varying degrees objective traces of these reactions of the ear. For these examinations I have chosen pilots returning from important tests, flights at high altitude, flights of long duration, which constitute the tests for the brevet of pilot. In such cases the lesions of the eardrum ascertained are always similar. One finds more or less pronounced: (a) On the one hand, a red stripe the whole length of the handle of the hammer-bone in front and behind; (b) on the other hand, a congestive state sometimes very intense of that upper part of the eardrum known under the name of the membrane of Shrapnell. This appearance of the eardrum is well known to aurists; this it is which one excites in correcting a retracted eardrum by insufflations of air into the middle ear.

In healthy ears these disturbances are temporary. In the flights of short duration they cease immediately on landfall. For the prolonged flights, a slight buzzing with some deafness may persist for a few hours or even a day, but rarely beyond that. I believe, however, that in case of ears already diseased, as found in persons subject to ear or tube ailments, the flights would be susceptible of aggravating these affections. Therefore it is with good reason that the medical certificate of fitness for pilotage demands in the candidate integrity of the middle and internal ears.

Airplanes and Gas Bombs

New and Deadly Methods of Warfare Developed Since the Beginning of the Conflict

CONGRESSMAN TILSON of Connecticut, in a discussion in Congress on new methods of warfare, advocated the expenditure of \$600,000,000 for airplanes, arguing that if the United States could have 100,000 machines in the air in France the result would be to blind the artillery of the enemy and win the war. In the course of his address, he said:

"At the beginning of the war each side had a few airplanes. The subject had appealed to the imaginative Frenchman more than it had to us or to the English. So France had quite a number. Germany, of course, following out her practice of thorough preparedness in everything, was well prepared with airplanes. At the battle of the Marne airplanes cut a considerable figure. The Germans had the old Taube machine and the French had the old Nieuport and others. These machines made something like seventy or eighty miles an hour. At once both sides set to developing this art, and very soon they were turning out machines on both sides that made very much in excess of those figures. First came the German Fokker, and gained superiority for the Germans. Then the Nieuport and other French machines were improved, and so it has gone, with superiority first going to one side and then to the other. Both sides now claim to have machines that will make the incredible speed of 140 miles an hour, and that will climb in the air 10,000 feet in thirteen minutes.

"The old machine was made to carry one man, or two at the most, and some thought that was the limit of the size of airplanes. The development in size has gone on until today larger machines are flying than ever were thought possible. Today smaller ones than any practical constructor dreamed of are being successfully flown. Take the big machines of the Handley-Page type, in which eleven men have flown from London to

Rome in the night time. Such a machine is so large that it can take two little airplanes with their aviators on the wings, go up in the air 10,000 feet, and launch the small machines from the wings of the big one. That feat actually has been done. A machine of this larger type, which it is necessary to fly lower and which now usually flies at night, when we are able to take and hold complete supremacy of the air we shall be able to use in the daytime.

"The weapons that can be used from aircraft are practically all of those that can be used on the land, up to and including the Davis 3-inch recoilless gun, and a number that can be used in no other way, as I shall show in the case of certain drop bombs. I have spoken of the use of pistols, rifles, and machine guns from airplanes. The machine gun especially is extremely important. I also referred to the use from airplanes of fragmentation bombs, especially the Barlow bomb. At that time I told the House that this bomb had not yet received its final test. The test was held at the Hampton grounds a few days ago. It was dropped from airplanes at great heights, so as to thoroughly test it, especially as to accuracy and destructiveness. I do not think it advisable to give you the official figures, but I am permitted to say that the results were highly satisfactory in every respect, and that the officers having the matter in charge are quite enthusiastic. This bomb, in my opinion, is sure to be heard from before the war is over. Not only is great credit due to the inventive genius of Mr. Barlow, but to the Ordnance Department, and especially to the commandant and other officials of Frankford Arsenal, under whose special guidance this young man's fertile ideas were so satisfactorily worked out. I am informed that an up-to-date corporation of patriotic men has made all preparations necessary to manu-

facture these bombs in large quantities under whatever arrangement the Government may deem necessary and proper.

Deadly Gas Warfare

"In addition to the fragmentation bombs there is a large field to which I now refer, viz., that of gas, bombs. Fighting with gas is worthy of an entire chapter by itself. The use of gas as a weapon of defense, like many of the other weapons now in common use in the armies of Europe, such as the catapult, flame projector, trench knife, and sling, is an inheritance from the early ages amplified, improved, and made more destructive by the aid of modern science.

"The first recorded effort to overcome the enemy by the generation of poisonous and suffocating gases seems to have been in the wars of the Athenians and Spartans, (431 to 404 B. C.,) when, in besieging the Cities of Platea and Belium, the Spartans saturated wood with pitch and sulphur and burned it under the walls of these cities in the hope of choking the defenders and rendering the assault less difficult. They also melted pitch, charcoal, and sulphur together in caldrons and blew the fumes over the defenders' lines by means of bellows.

"Greek fire' was used by the Byzantine Greeks under Constantine about 673 A. D. to destroy the Saracens, and Saracens in turn used it as a weapon of defense against the Christians during the Crusades. This Greek fire had the double advantage of being not only inflammable but also generating during the process of combustion clouds of dense, blinding smoke and gas of an asphyxiating character. Its chemical composition was supposed to be a mixture of quicklime, petroleum, sulphur, and such other inflammable substances as pitch, resin, &c. Upon the addition of water the slaking process which the quicklime underwent generated enough heat to ignite the petroleum, which in turn ignited the resin, pitch, and sulphur. This flaming mixture was delivered against the enemy by means of phantastic syringes in the shape of dragons and other monsters with wide jaws.

"The first use of gas in modern war-

fare occurred April 22, 1915, when the Germans liberated great clouds of gas against the allied trenches near Ypres with a resulting complete demoralization of the troops and a large number of casualties. The Germans at that time turned loose fifty tons of chlorine gas to the mile of front occupied. Chlorine gas is two and one-half times as heavy as air. It apparently rolls along the ground in a greenish-yellow cloud. As soon as it reaches the vicinity of the dugouts, being heavier than air, it immediately goes down into the dugout and remains there until removed. The Allies had to meet this problem, and they began meeting it at once. Some Germans were captured who had gas masks, and in a few days every woman in France that could find any material out of which to make these things was making gas masks—imperfect, crude things at first, but they improved rapidly. A gas mask is absolutely necessary for the life of any one who is exposed to these deadly gases.

"Coincident with the use of the 'gas cloud' the Germans began to use gas also in bombs, hand grenades, and shells. From this beginning gas has now become recognized as one of the accepted arms of the military service and is being used very extensively in all armies, especially in the form of gas shells. The gases were used against the Canadian troops contrary to The Hague Convention, but are now generally used, not only by the enemy but by the Allies themselves."

Gas Bombs Most Terrible

In answer to a question as to whether the use of cloud gases had been discontinued on account of the effective results from gas masks, Mr. Tilson replied: "That is probably true as to cloud gases, which of course can be used successfully only against the front line of trenches, in which every man must be thoroughly prepared to defend himself against gases. It is our intention to have one of these respirators of the box type with every man, and a reserve mask of the type used by the French and the Belgians, so that cloud gases will prob-

ably not be used much when it is known that everybody is thoroughly prepared against them. The gentleman will note, however, that it is my expectation that these gases will be made use of from airplanes a great deal more than they ever have been. They have already been used, and are now being used increasingly, in the form of projectiles of glass and steel containing these poisonous gases and fired from trench mortars and howitzers. They are using those increasingly. My idea is that they will be used still more from airplanes when we get supremacy of the air, and that the gases being dropped suddenly from the air, perhaps at some distance back from the front line, the men behind the front line will not be so well prepared and will suffer demoralization and other damage, especially among the artillery."

A member asked: "Is the nature of these gases such that if the bombs containing them are fired from a howitzer or dropped from an airplane there will be time to adjust a mask which is actually being carried by the soldier, in time to prevent his being harmed by the explosion of the container of the gas?"

"There is not time," Mr. Tilson replied. "As a matter of fact, they figure that in order for a man to be sure to protect himself against cloud gases he must be ready to put these masks on in six seconds. The drill in putting on these masks is made as accurate as the manual of arms used by infantry. It is intended to speed up so that a man can put one on, as I say, in six seconds. Even six seconds may be too long with these deadly gases falling from the sky,

going out in every direction, and a man getting a whiff of the gas before it is possible to put on his mask. That has happened. I remember one of the party with the British Commissioners told of an instance showing the effect of gas shells containing the terribly poisonous gas called phosgen, which, unlike the chlorine or bromine gas, has a delayed action, so that you take it today and die tomorrow. The instance was one where a shell descended and two men got a whiff of the gas. A surgeon being near, saw that they were exposed to it, and immediately ordered them to the hospital and to bed. They obeyed orders and went off to the hospital, joshing each other that two strong men should be ordered to bed with nothing the matter with them. Before the dawn of the next morning both had died horrible deaths from that awful poison."

Another member asked whether the Germans would not see these flying machines coming or, hearing them and knowing that we had resorted to the use of this outrageous way of fighting, would they not have time to put their masks on. Mr. Tilson said:

"It is hoped that we are going to have so many machines in the air that they will not have to fly 10,000 feet high, but will be able to fly down nearer the ground, and in that way the Germans may have to wear their masks all day long.

"The point is that only a small part of the men can be on the front at once. They take turns, and the men on the front line, subject to exposure to cloud gases, all have to be doubly prepared by having these masks."

Japan's Part in the War

By Gardner L. Harding

FOLLOWING her capture of Kiao-Chau and her hardly less dramatic diplomacy in China, Japan's rôle in war and policy has been less spectacular; but its effect has been none the less actual, and the harmony of that effect with the larger policies of the Allies has within the last two years steadily and substantially increased. The arrival of the Ishii mission in the United States, (in the month of August,) a wise and statesmanlike attempt on Japan's part to co-ordinate with America, Japan's contributions toward the conduct of the war and her policies with respect to its aims, has provided an excellent landmark wherewith to trace up to this point, in extent and in actual results, Japan's assistance to the allied cause.

Her naval assistance began even before the capture of Kiao-Chau, when fast Japanese cruiser squadrons carried out the occupation of the three groups of German islands in the South Seas during the first two months of the war. From that time forward the Japanese fleet has done extremely valuable and incessant patrol duty in the Pacific, in the China Sea, and far westward in the Indian Ocean. The disposition of the Japanese fleet during this period has naturally been a naval secret, but it early allowed the substantial withdrawal of British warships from the crucial shipping lanes between Hongkong and Suez. It also bore a large part in the increased patrol necessitated by the depredations of German raiders like the Emden; it took a responsible share in keeping watch on the interned German ships in Chinese and Dutch East Indian ports, and until recently in American harbors in Guam and the Hawaiian and Philippine Islands.

Japanese warships have engaged on patrolling missions on the Pacific Coast of both North and South America; they have landed marines to quell riots at Singapore, and finally, within the past five months, they have appeared on

active service in European waters, in the shape of a destroyer squadron operating in the Mediterranean Sea.

The ability of the Japanese fleet to perform such services is evidenced by its possession of ten superb destroyers, practically brand new, (having been finished since the opening of the war,) with possibly some of the eight others voted under the Okuma Ministry already available, and with a reserve of twenty-odd other destroyers, including four launched since 1910, less than twelve years old. Of other potential patrolling ships the latest Japan Year Book gives twenty-one first and second class cruisers, all rated above 20 knots speed. Finally, there is the first line of the Japanese Navy, numbering twenty battleships and battle cruisers, including eight of dreadnought construction, to which the three big battleships of the Fuso type voted by the Okuma Ministry are soon to be, or may already have been, added. The sixty-five leading ships of this formidable fleet displace no less than 628,321 tons.

Japan's Naval Contributions

Since the entrance of America into the war, the Japanese fleet in the Mediterranean has several times seen active service, and one victorious encounter with a submarine has cost a Japanese warship the loss of her commander, two other officers, and a number of her crew, the first casualties suffered by Japanese naval forces in European waters.

No account of Japan's naval contributions to the Allies' cause would be complete without mention of her assistance in conveying to Europe the Anzac troops at a time when, with the Emden still abroad, such assistance was of immense importance to the scheme of transportation. Furthermore, though other units of the Japanese fleet were not at that time fortunate enough to encounter the German raiding squadron in the South Pa-

cific, they had much to do with driving it into a position where it was effectually dealt with off the Falkland Islands by Admiral Cradock's British cruisers.

The extension of her submarine-chasing service in the Mediterranean, where the U-boats have accounted for practically all the Japanese merchantmen who have so far been their prey, and the assumption by Japan of new naval responsibilities in the Pacific, with the object of freeing American warships for service in the Atlantic, have both been widely suggested among influential centres of opinion near to the Japanese Government, and both these proposals, though as yet still unrealized, are undergoing serious consideration at the hands of the Allies, in close consultation with our own Government.

Commercial Assistance

Japan's naval aid has been formidable; but it has been in financial and commercial assistance that her power has so far been applied to the allied cause with the most cumulative and effectual result. The military character of this assistance makes its determination during the course of the war a delicate matter for general discussion; but in its broad features it is readily ascertainable. For instance, Japan had provided Russia with enormous quantities of guns, ammunition, military stores, hospital and Red Cross supplies, with skilled officers and experts to accompany them, which have admittedly been factors of the highest potency in sustaining Russia through the period of her disorganization, a period which is by no means wholly concluded yet. Those supplies alone had reached a total value of \$250,000,000 by the first of August, 1917.

When it is remembered that the entire volume of Japan's exports in 1914 was less than \$300,000,000, it will be seen how much Japan has expanded her facilities of export under the influence of the war. Her exports to Russia have, of course, been spread over a period of three years, but they have been accompanied by a huge expanse in general exports, most of it directly attributable to the war, so that in 1916 for the first time in her history her exports passed

the billion-yen mark, mounting to as high as 1,127,468,118 yen, or, in round numbers, to over \$550,000,000. Her imports also established a record last year, assisted by an unparalleled influx of raw materials for war manufactures, of 756,427,910 yen. The difference gave Japan a trade balance double that of 1915, of 371,040,208 yen, and insured her the firmest commercial and industrial position in her modern political life.

This extraordinary influx of prosperity, while it has naturally enormously benefited Japan, has also been convertible to allied advantage in the war. It has enabled Japan to ship to both England and France vast quantities of flour, beans, peas, and canned goods. A characteristic reaction of her food export possibilities to this country has been, for instance, the increase of our imports of Japanese canned crabs from supplies worth \$450,000 in 1915 to last year's total of over \$900,000. She also sent us a third again as much sulphur, almost four times as much camphor, almost five times as much cotton fabric, (mostly of cheap grades,) according to the Japanese Ministry of Agriculture and Commerce; and according to our own statistics she sent us ten times as much of her famous Manchurian soya bean oil.

Japan's Financial Aid

Besides this direct trade, besides supplying ourselves and the Allies with many hundred million dollars' worth of economic staples, worth even more than their enhanced price in the ultimate contingencies of wartime, Japanese finance has managed to accommodate nations in the stress of the war who are usually and normally her creditors. It has been semi-officially reckoned in Japan that these accommodations, in actual and outright loans, in the purchase of bonds for cancellation in England and France, and in other and equally useful transactions involving munition supplies, have mounted up to well over \$200,000,000. Japan's early loans to Russia of \$25,000,000 and \$35,000,000, respectively; her loan to Great Britain of \$50,000,000 to help adjust British credit in the United States,

all promptly subscribed and ably floated, have produced in Europe an effect of generosity and good-will on the part of the Japanese Government which is not at all affected by the fact that the comparatively high terms of these loans make the benefit mutual. The benefit is an immediate benefit to the Allies at a time of great need, and the fact that Japan's economic and financial organization has been in a position to supply that need has resulted opportunely to her credit.

Incidentally, her gold holdings doubled in two years, from \$175,000,000 to over \$350,000,000, (in round numbers,) and they are still rapidly increasing. A symbol of the strength of the Japanese market was evident in this country when, in the eight months preceding June 1, 1917, as much as \$50,000,000 in specie gold was shipped from America to Japan, a withdrawal that went on during the month of May at the rate of between \$150,000,000 and \$200,000,000 a year.

In short, Japan is today a great workshop and trading mart intimately concerned with the economic side of the war purposes of her allies, and formidably useful in furthering those purposes. A typical instance of the overseas destination of her principal products is illustrated in the case of copper. Her output of copper increased last year under the acceleration of war necessity from 78,000 to 108,000 tons; but of all this great yield hardly 10 per cent. was used at home. Some 60 per cent. went to Russia, at least 20 per cent. was shipped to England, a substantial part of the rest was sent to France—even America, richly productive in copper, received over 3,000,000 yen worth (about a million and a half dollars) of this precious metal.

Growth of Japanese Shipping

Finally, Japanese merchant shipping, which grew in gross tonnage from 790,000 to over 2,000,000 tons between 1904 and 1914, and stands at 2,000,000 tons

today in oceangoing shipping alone, has loyally, though most profitably, served allied purposes throughout the war. The immense cargoes that have been moved from the American seaboard to Vladivostok, the coolie labor transportation service that has put over 100,000 Chinese industrial laborers at the service of the Allies in France and England, and scattered tramp and traffic services with India, Australia, China, and East Africa, often of importance wholly disproportionate to the size of the cargo—all these services have been insured and stabilized by the presence of Japanese shipping as by no other factor.

With direct connections established from Japan with every great port in the world, including a service maintained by six 8,000-ton boats of the Nippon Yusen Kaisha, (Japan Steamship Company,) for instance, between Yokohama and New York, via the Panama Canal, Japan's opportunity for placing part of this magnificent merchant fleet as reinforcements into the depleted shipping lanes of the Atlantic powers has several times been spoken of semi-officially by the authorities at Tokio; in fact, full consideration of that momentous step has already been stated in the Japanese press to be one of the most important questions to be discussed in this country by the Ishii mission.

In naval and maritime, commercial and financial aid, then, Japan's freely given assistance to the allied cause has been, up to the present, considerable. There is still no responsible move, however, either from Europe or from Japan, actually to transfer Japanese soldiers to the battle front. Japan has sent to France some excellent Red Cross units, and some of her ablest surgeons and sanitary experts, but she is not yet prepared to undertake the vast and delicate task of supplying, replenishing, and maintaining abroad her sons as troops in a war that is still half a world away.

The Arabs and the Turks In the War

By Dr. J. F. Scheltema

LIKE the war in Europe, its counterpart in Asia is being fought on more than one front. The principal theatre of action in the East was at first the Caucasus, where the Turks, launching a brisk attack, tried to reconquer the provinces wrested from them by Russia; they were repulsed and had to evacuate almost the whole of Armenia. Then, after initial reverses, the British tightened their hold on Mesopotamia, swept on to Bagdad and beyond. Turkish attempts on Egypt having failed, there, too, they were thrown back, and a British army followed closely on their heels into Palestine. Now we hear of the occupation of Maan, Tafilah, and Akaba by the Grand Sherif of Mecca, who, proclaiming himself King of the Hejâz, had already chased the garrisons out of the holy places of Islam and adjacent strongholds. This tends to hamper still further the use of the Syrian railway system for the transportation of Turkish troops.

Incidentally, it proves also the wisdom of the Syrian leaders of the Arabic movement, who, as recently became known, abandoned their plan of starting their projected revolution in Iraq to promote the defection of the Hejâz and its transformation into an independent State under the Grand Sherif Husayn Ibn Aly with the title and prerogatives of King. This coup won over to their side the orthodox Arabs, perhaps somewhat suspicious of the Syrian intellectuals but willing to make common cause against the Turks, aliens and usurpers in the land of the Prophet's own; especially against the Young Turks, downright "departers from the precepts of the Book." Some of the Syrian leaders had been officers in the Ottoman Army, which they deserted, and this, with the assistance given to the King of Hejâz by the powers of the Entente, may account for his suc-

cess in reducing the fortified towns of Western Arabia held by Turkish troops.

Husayn Ibn Aly's son Abd'Allah, who, as the new-blown King's Minister of Foreign Affairs, notified the powers of his advent to the throne, was replaced in that capacity by a Syrian Moslem. Other counselors have been provided by the Entente, notably from among Moslemin that owe allegiance to the French Republic. The loyal Arabs are well supplied from the same source with arms and ammunition, with machine guns, field batteries, and even, it is said, with heavy ordnance of the most improved type, together with expert gunners to instruct them in the efficient use of modern artillery. The expenses attendant on his Majesty Husayn Ibn Aly's civil list are provisionally guaranteed by the Governments of Britain and France. Repayment of the money thus lent can be secured by a lien on the revenue assured to the holy places of Islam by the yearly pilgrimage. And if, as seems likely, this asset does not cover principal and interest of the debt saddled on the new kingdom, the possibilities of future restitution in some form or another are not exhausted.

The story of the British advance on Bagdad and beyond, of the Russian operations in Armenia and Persia, need not be retold. In the latter country German influence, stimulated by the construction of the Bagdad Railroad, received a staggering blow with the expulsion of the Turks. This influence had grown steadily since the brilliant reception accorded at Berlin in 1902 to the Shah Muzaffar ad-Din. Extending northward from Bushir with the extension of German trade, with the foundation of a German bank, its growth can be best gauged by the statistics of Persian exports and imports: from 3,670,000 krans in 1901, their total had increased to more than 30,000,000 krans in 1914.

It goes without saying that political plotting went *pari passu* with trade. It was principally directed against Great Britain and Russia. Agitators of doubtful antecedents, but useful for the German propaganda, were called to Consular posts and abused their official positions to organize a strong campaign, supported by Turkish envoys. Shiraz, Kerman, Kashan, and Khum, the centre of revolutionary intrigue fomented with funds secretly supplied by Berlin, became almost uninhabitable for Europeans not in sympathy with German ambitions. Astute and adroit, the German emissaries managed even to make the Persians and Turks, equally hostile to the *giaours* who were dividing up their ancient patrimony, forget the rancorous animosity that separates in Islam the Shi'ite from the Sunnite.

Carried on in that manner, the German propaganda, with a smaller Austrian one in its wake, was greatly aided by the Turkish occupation of Tabriz and Urumiah, as it had been by the institution of a Swedish instead of a French gendarmerie to police the roads and, generally, to keep up an appearance of re-establishing order in a country which did not escape the fate of other lands fallen into anarchy by foreign interference. When the Russians in Northern Persia had to retire before the massed battalions of the Ottoman army, all foreigners not acceptable to the representatives of the Central Powers were more or less directly notified to leave. Among those driven out were the French Carmelite Fathers, who, in Bagdad, kept an excellent industrial college; the Dominicans and Lazarists, who taught school in Mosul and Ispahan. Soon, however, the fortune of war changed and the Russians were able to shove the Turks back over the Persian frontier. Meanwhile General Maude entered Bagdad, and the allied forces, pushing on, threatened to crush the Sixth Turkish Army Corps between them if it offered resistance to their junction for a combined sweep to the north.

There matters rested for a while until tidings came of a Russian reverse which, for the present, delays that junction, in

fact, jeopardizes the advantages gained both in Persia and Mesopotamia. The Turk, notwithstanding all that has lately been said of his declining mettle, is not to be despised as a warrior. Especially where distances are so enormous and means of transportation so bad as on his Asian front he possesses one virtue which makes him vastly superior to Tommy Atkins and Ivan Ivanovitch. He subsists and marches obediently and fights cheerfully on very little, indeed, on next to nothing. He needs no tremendously complicated commissariat, no excessively heavy and long provision trains that incumber the movements of the combatants proper. A cup of coffee and a handful of millet or corn, at a pinch only a drop of water and a few dates, suffice him for days at a stretch. He pulls through without elaborate preparations and implements of newest invention, whether the khamsin blows or the rain pours down in torrents when his tent has not arrived, if he has a tent at all. His merits are those commended for the ideal soldier by Napoleon, who ranked courage in the third place, after discipline and the ability to endure hardships and fatigue.

Besides that, he knows how to help himself in a quandary. The Turkish military engineers are excellent bridge builders in the most approved scientific fashion if they have the material to hand. If it is lacking, the men return to the methods of their fathers, having recourse to kelleks for the crossing of streams in their path, inflating goatskins for the construction of rafts in any desired dimension, exactly as we see it done on the old Assyrian bas-reliefs. Safely across, they remove the plugs and load the empty kelleks on camels or asses; if no such animals are handy, on their own backs. Though in the present war the finished sections of the Bagdad Railroad, like the Syrian railways, were of the greatest service to the Turks, the secret of their stubborn resistance lies in their extraordinary mobility in regions innocent of even ordinary roads, or roads of any description. Unincumbered by burdensome baggage, or by the superfluous equipment which no European

armament can do without, they pass everywhere at their fastest gait, sharing this power, of course, with the Arabs of Hejâz and the other native auxiliaries of the Entente. On the other hand, they suffer from the desertion of many of their best officers, and from the disruption of their military administration in Asian provinces by their forced removal from Erzerum, Erzincan, and Bagdad, headquarters, under the old dispensation, of their Ninth, Tenth, and Thirteenth Army Corps.

The Turkish reoccupation of Khanikin, among other places of strategic significance, facilitates again the concentration of Ottoman efforts, guided by German brains, in the direction of Khum, with Teheran and Ispahan as their ulterior objects. At any rate, instead of receiving Russian support in their march on Mosul, the British forces under General Maude are seriously imperiled on their right flank. The situation on the Caucasian front, too, appears less favorable, since many Armenians, equally averse to Russian as to Turkish rule, have joined an armed league for the attainment of absolute independence. On the other hand, we have to note the auspicious activity of the Arabs of the Hejâz, which runs counter to the dictum of one of the highest authorities on Arabian affairs—the dictum that the Sherifate of Mecca cannot possibly take part in the present conflict in its wider sense.

And yet, he may be right. In the game now in progress on the chessboard of the Near East the Grand Sherif-King is but a pawn moved forward as suits the gambit planned by Western players for higher stakes than the royal prestige of

an Oriental Kinglet whose counselors could do worse for him than inculcate the homely advice of the Scotch sage: Creep before ye gang. Al-Oiblah, the official organ of the royal Arabian Government, sees fit to repeat periodically that its alliance with the powers of the Entente is based upon its unconditional independence. Its very existence being founded in its purely Islamic character, there seems occasion for such statements in anticipation of hyperorthodox protests. And Mohammedan doctors of the new school can be trusted to find an acceptable equivalent for the opinion of an eminent unbeliever that religion and politics are merely the mutually supplementary manifestations of a single idea.

However this may be, according to the German newspapers, General von Falkenhayn has repaired to the East to continue the work of von der Goltz Pasha, removed from the scene by assassination. This fact indicates the importance Berlin attaches, and rightly, to the conduct of the war in its Oriental ramifications. But the supreme command in such hands, though perhaps it can delay, cannot avert the final outcome of the gigantic struggle, which, for Germany and Turkey alike, bids fair to prove Charles H. Pearson's contention* apropos of one of Bacon's axioms;† that, if the nation which cultivates war absorbingly is bound to achieve great success, it is bound also to do it at the cost, within measurable time, of its place among the nations of the world.

*National Life and Character.

†Essay XXIX: * * * that no nation which doth not directly profess arms may look to have greatness fall into their mouths (laps).

General Haig's Official Report

II.

The German Retreat

Field Marshal Sir Douglas Haig's official report of the operations of the British armies in France from November, 1916, to March 11, 1917, appeared in the August issue of CURRENT HISTORY MAGAZINE. The report of the withdrawal of the Germans, which began March 12-13, to the opening of the 1917 Spring offensive, follows:

FOR some time prior to March 12-13 a number of indications had been observed which made it probable that the area of the German withdrawal would be yet further extended.

It had been ascertained that the enemy was preparing a new defensive system known as the Hindenburg line, which, branching off from his original defenses near Arras, ran southeastward for twelve miles to Queant and thence passed west of Cambrai toward St. Quentin. Various "switches" branching off from this line were also under construction. The enemy's immediate concern appeared to be to escape from the salient between Arras and Le Transloy, which would become increasingly difficult and dangerous to hold as our advance on the Ancre drove ever more deeply into his defenses. It was also evident, however, from the preparations he was making, that he contemplated an eventual evacuation of the greater salient between Arras and the Aisne Valley, northwest of Rheims.

Constant watch had accordingly been kept along the whole front south of Arras, in order that instant information might be obtained of any such development. On March 14 patrols found portions of the German front line empty in the neighborhood of St. Pierre Vaast Wood. Acting on the reports of these patrols, during that night and the following day our troops occupied the whole of the enemy's trenches on the western edge of the wood. Little opposition was met, and by March 16 we held the western half of Moislains Wood, the whole of St. Pierre Vaast Wood, with the exception of its northeastern corner, and the enemy's front trenches as far as the northern outskirts of Sailly-Saillisel.

Meanwhile, on the evening of March 15, further information had been obtained which led me to believe that the enemy's forces on our front south of the Somme had been reduced, and that his line was being held by rearguard detachments supported by machine guns, whose withdrawal might also be expected at any moment. The corps commanders concerned were immediately directed to confirm the situation by patrols. Orders were

thereafter given for a general advance, to be commenced on the morning of March 17, along our whole front from the Roye Road to south of Arras.

Bapaume and Peronne

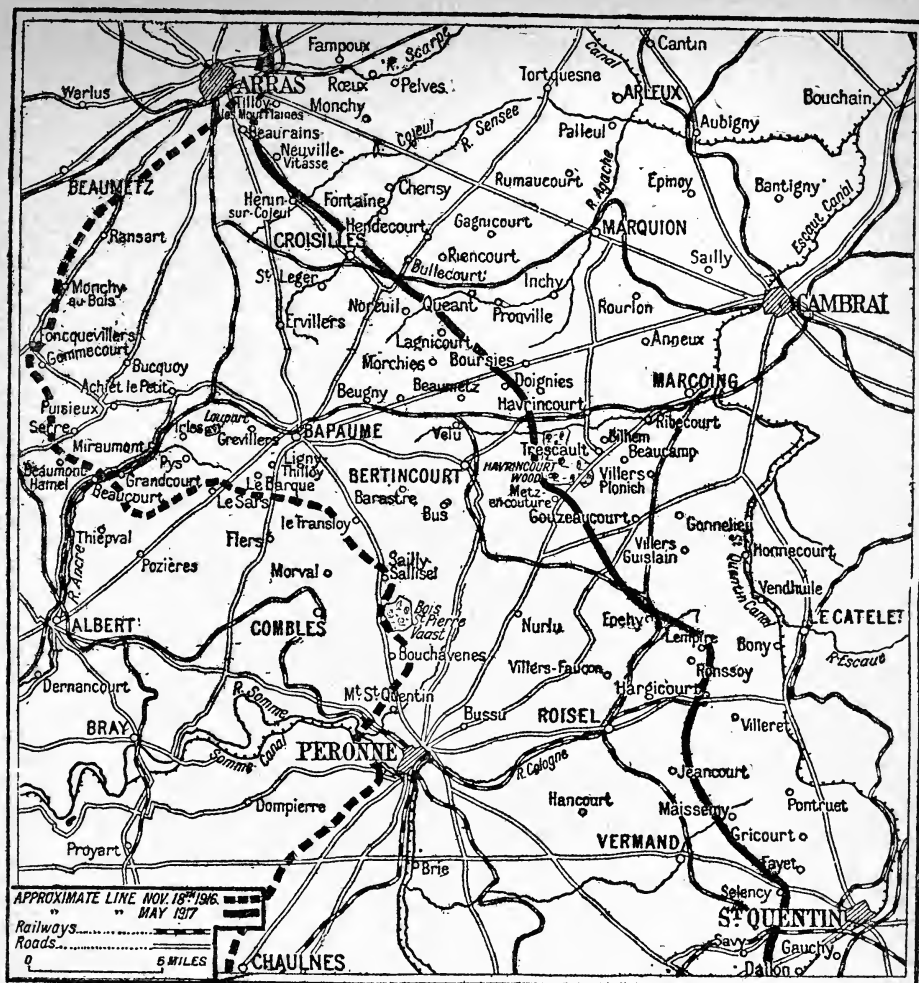

Except at certain selected localities, where he had left detachments of infantry and machine guns to cover his retreat, such as Chaulnes, Vaux Wood, Bapaume, and Achiet-le-Grand, the enemy offered little serious opposition to our advance on this front, and where he did so his resistance was rapidly overcome. Before nightfall on March 17 Chaulnes and Bapaume had been captured, and advanced bodies of our troops had pushed deeply into the enemy's positions at all points from Damery to Monchy-au-Bois. On our right our allies made rapid progress also and entered Roye.

On March 18 and subsequent days our advance continued, in co-operation with the French. In the course of this advance the whole intricate system of German defenses in this area, consisting of many miles of powerful, well-wired trenches which had been constructed with immense labor and worked on till the last moment, were abandoned by the enemy and passed into the possession of our troops.

At 7 A. M. on March 18 our troops entered Péronne and occupied Mont St. Quentin, north of the town. To the south our advanced troops established themselves during the day along the western bank of the Somme from Péronne to just north of Epenancourt. By 10 P. M. on the same day Brie Bridge had been repaired by our engineers sufficiently for the passage of infantry in single file, and our troops crossed to the east bank of the river, in spite of some opposition. Further south French and British cavalry entered Nesle.

North of Péronne equal progress was made, and by the evening of March 18 our troops had entered the German trench system known as the Beugny-Ypres line, beyond which lay open country as far as the Hindenburg line. On the same day the left of our advance was extended to Beaurains, which was captured after slight hostile resistance.

By the evening of March 19 our infantry held the line of the Somme from Canizy to Péronne, and infantry outposts and cavalry patrols had crossed the river at a number of points. North of Péronne our infantry had reached the line Bussu, Barastre, Velu, St. Leger, Beaurains, with cavalry in touch with the enemy at Nurlu, Bertincourt, Noreull, and Heninsur-Cojeul. Next day considerable bodies of infantry and cavalry crossed to the

SCENE OF THE GERMAN RETREAT ON THE ANCRE AND SOMME

east of the Somme, and a line of cavalry outposts with infantry in support was established from south of Germaine, where we were in touch with the French, through Hancourt and Nurlu to Bus. Further north we occupied Morchies.

Difficulty of Communications

By this time our advance had reached a stage at which the increasing difficulty of maintaining our communications made it imperative to slacken the pace of our pursuit. South of Péronne, the River Somme, the bridges over which had been destroyed by the retreating enemy, presented a formidable obstacle. North of Péronne the wide belt of devastated ground over which the Somme battle had been fought offered even greater difficulties to the passage of guns and transport.

At different stages of the advance suc-

cessive lines of resistance were selected and put in a state of defense by the main bodies of our infantry, while cavalry and infantry outposts maintained touch with the enemy and covered the work of consolidation. Meanwhile, in spite of the enormous difficulties which the condition of the ground and the ingenuity of the enemy had placed in our way, the work of repairing and constructing bridges, roads, and railways was carried forward with most commendable rapidity.

Increased Enemy Resistance

North of the Bapaume-Cambrai road, between Noreuil and Neuville-Vitasse, our advance had already brought us to within two or three miles of the Hindenburg line, which entered the old German front-line system at Tilloy-lez-Mofflaines. The enemy's resistance now began to increase along our whole front, extending gradually southward from

the left flank of our advance, where our troops had approached most nearly to his new main defensive position.

A number of local counterattacks were delivered by the enemy at different points along our line. In particular, five separate attempts were made to recover Beaumetz-lez-Cambrai, which we had captured on March 21, and the farm to the north of the village. All failed, with considerable loss to the enemy.

Meanwhile, our progress continued steadily, and minor engagements multiplied from day to day all along our front. In these we were constantly successful, and at small cost to ourselves took many prisoners and numerous machine guns and trench mortars. In every fresh position captured large numbers of German dead testified to the obstinacy of the enemy's defense and the severity of his losses.

Our cavalry took an active part in this fighting, and on March 27 in particular carried out an exceedingly successful operation, in the course of which a squadron drove the enemy from Pillers Fauçon and a group of neighboring villages, capturing twenty-three prisoners and four machine guns. In another series of engagements on April 1 and 2, in which Savy and Selency were taken, and our line advanced to within two miles of St. Quentin, we captured ninety-one prisoners and six German field guns. The enemy's casualties were particularly heavy.

On April 2 also an operation on a more important scale was undertaken against the enemy's positions north of the Bapaume-Cambrai road. The enemy here occupied in considerable strength a series of villages and well-wired trenches, forming an advance line of resistance to the Hindenburg line. A general attack on these positions was launched in the early morning of April 2 on a front of over ten miles, from Doignies to Henin-sur-Cojeul, both inclusive. After fighting which lasted throughout the day the entire series of villages was captured by us, with 270 prisoners, four trench mortars, and twenty-five machine guns.

By this date our troops were established on the general line Selency, Jeancourt, Epehy, Ruyaulcourt, Doignies, Mercatel, Beaurains. East of Selency, and between Doignies and our old front line east of Arras, our troops were already close up to the main Hindenburg defenses. Between Selency and Doignies the enemy still held positions some distance in advance of his new system. During the succeeding days our efforts were directed to driving him from these advanced positions and to pushing our posts forward until contact had been established all along our front south of Arras with the main defenses of the Hindenburg line. Fighting of some importance again took place on April 4 and 5 in the neighborhood of Epehy and Havrincourt Wood, in which Ronssoy, Lempire, and Metz-en-Couture were captured by us, together

with 100 prisoners, two trench mortars, and eleven machine guns.

Tribute to Officers and Men

Certain outstanding features of the past five months' fighting call for brief comment before I close this report. In spite of a season of unusual severity, a Winter campaign has been conducted to a successful issue under most trying and arduous conditions.

Activity on our battle front has been maintained almost without a break from the conclusion of last year's offensive to the commencement of the present operations. The successful accomplishment of this part of our general plan has already enabled us to realize no inconsiderable installment of the fruits of the Somme battle, and has gone far to open the road to their full achievement. The courage and endurance of our troops have carried them triumphantly through a period of fighting of a particularly trying nature, in which they have been subjected to the maximum of personal hardship and physical strain. I cannot speak too highly of the qualities displayed by all ranks of the army.

I desire also to place on record here my appreciation of the great skill and energy displayed by the army commanders under whose immediate orders the operations described above were carried out. The ability with which the troops in the Ancre area were handled by General Sir Hubert Gough, and those further south, on our front from Le Transloy to Roye, by General Sir Henry Rawlinson, was in all respects admirable.

The retreat to which the enemy was driven by our continued success reintroduced on the western front conditions of warfare which had been absent from that theatre since the opening months of the war. After more than two years of trench warfare considerable bodies of our troops have been engaged under conditions approximating to open fighting, and cavalry has been given an opportunity to perform its special duties.

Our operations south of Arras during the latter half of March are, therefore, of peculiar interest, and the results achieved by all arms have been most satisfactory. Although the deliberate nature of the enemy's withdrawal enabled him to choose his own ground for resistance, and to employ every device to inflict losses on our troops, our casualties, which had been exceedingly moderate throughout the operations on the Ancre, during the period of the retreat became exceptionally light. The prospect of a more general resumption of open fighting can be regarded with great confidence.

The systematic destruction of roads, railways, and bridges in the evacuated area made unprecedented demands upon the Royal Engineers, already heavily burdened by the work entailed by the preparations for our Spring offensive. Our steady progress, in the face of the great difficulties confronting us, is the best testimony to the energy and thoroughness with which those demands were met.

The bridging of the Somme at Brie, to

which reference has already been made, is an example of the nature of the obstacles with which our troops were met and of the rapidity with which those obstacles were overcome. In this instance six gaps had to be bridged across the canal and river, some of them of considerable width and over a swift-flowing stream. The work was commenced on the morning of March 18, and was carried out night and day in three stages. By 10 P. M. on the same day footbridges for infantry had been completed, as already stated. Medium type bridges for horse transport and cavalry were completed by 5 A. M. on March 20, and by 2 P. M. on March 28, or four and a half days after they had been begun, heavy bridges capable of taking all forms of traffic had taken the place of the lighter type. Medium type deviation bridges were constructed as the heavy bridges were begun, so that from the time the first bridges were thrown across the river traffic was practically continuous.

Roads and Railways

Throughout the past Winter the question of transport, in all its forms, has presented problems of a most serious nature, both in the battle area and behind the lines. On the rapid solution of these problems the success or failure of our operations necessarily largely depended.

At the close of the campaign of 1916 the steady growth of our armies and the rapid expansion of our material resources had already taxed to the utmost the capacity of the roads and railways then at our disposal. Existing broad and narrow gauge railways were insufficient to deal with the increasing volume of traffic, an undue proportion of which was thrown upon the roads. As Winter conditions set in these rapidly deteriorated, and the difficulties of maintenance and repair became almost overwhelming. An increase of railway facilities of every type and on a large scale was therefore imperatively and urgently necessary to relieve the roads. For this purpose rails, material, and rolling stock were required immediately in great quantities, while at a later date our wants in these respects were considerably augmented by a large program of new construction in the area of the enemy's withdrawal.

The task of obtaining the amount of railway material required to meet the demands of our armies, and of carrying out the work of construction at the rate rendered necessary by our plans, in addition to providing labor and material for the necessary repair of roads, was one of the very greatest difficulty. Its successful accomplishment reflects the highest credit on the Transportation Service, of whose efficiency and energy I cannot speak too highly. I desire to acknowledge in the fullest manner the debt that is owed to all who assisted in meeting a most difficult situation, and especially to Major Gen. Sir Eric Geddes, Director General of Transportation, [General Geddes became a member of the British Government July 2 as First Lord of

the Admiralty,] to whose great ability, organizing power, and energy the results achieved are primarily due. I am glad to take this opportunity also to acknowledge the valuable assistance given to us by the Chemin de Fer du Nord, by which the work of the Transportation Service was greatly facilitated.

I wish also to place on record here the fact that the successful solution of the problem of railway transport would have been impossible had it not been for the patriotism of the railway companies at home and in Canada. They did not hesitate to give up the locomotives and rolling stock required to meet our needs, and even to tear up track in order to provide us with the necessary rails. The thanks of the army are due also to those who have accepted so cheerfully the inconvenience caused by the consequent diminution of the railway facilities available for civil traffic.

The various other special services, to the excellence of whose work I was glad to call attention in my last dispatch, have continued to discharge their duties with the same energy and efficiency displayed by them during the Somme battle, and have rendered most valuable assistance to our artillery and infantry.

I desire also to repeat the well-merited tribute paid in my last dispatch to the different administrative services and departments. The work entailed by the double task of meeting the requirements of our Winter operations and preparing for our next offensive was very heavy, demanding unremitting labor and the closest attention to detail.

The fighting on the Ancre and subsequent advance made large demands upon the devotion of our medical services. The health of the troops during the period covered by this dispatch has been satisfactory, notwithstanding the discomfort and exposure to which they were subjected during the extreme cold of the Winter, especially in the areas taken over from the enemy.

The loyal co-operation and complete mutual understanding that prevailed between our allies and ourselves throughout the Somme battle have been continued and strengthened by the events of the past Winter, and in particular by the circumstances attending the enemy's withdrawal. During the latter part of the period under review a very considerable tract of country has been won back to France by the combined efforts of the allied troops. This result is regarded with lively satisfaction by all ranks of the British armies in France. At the same time I wish to give expression to the feelings of deep sympathy and profound regret provoked among us by the sight of the destruction that war has wrought in a once fair and prosperous countryside. I have the honor to be, my Lord, your Lordship's obedient servant,

D. HAIG,

Field Marshal Commanding in Chief, British Armies in France.

The Mesopotamian Disaster

The British Commission's Scathing Report on Negligence of High Officials and Generals

THE commission appointed by the British Government in August, 1916, to inquire into the disastrous Mesopotamian expedition in 1915-16, submitted its report June 26, 1917, and it proved to be one of the most sensational revelations of the war.

The commission consisted of Lord George Hamilton, G. C. S. I., Chairman; Lord Donoughmore, Lord Hugh Cecil, M. P.; Admiral Sir Cyprian Bridge, General Sir Neville Lyttelton, Sir Archibald Williamson, M. P.; John Hodge, M. P., and Commander Josiah Wedgwood, M. P.

The report is of such length that it would be impracticable to publish it in full, hence only a summary of certain questions can be given. The commission's findings as to the first abortive advance on Bagdad are as follows:

The advance to Bagdad under the conditions existing in October, 1915, was an offensive movement based upon political and military miscalculations and attempted with tired and insufficient forces and inadequate preparation. It resulted in the surrender of more than a division of our finest fighting troops, and the casualties incurred in the ineffective attempts to relieve Kut amounted to some 23,000 men. The loss of prestige associated with these military failures was less than might have been anticipated owing to the deep impression made throughout and beyond the localities where the combats occurred by the splendid fighting power of the British and Indian forces engaged.

Various authorities and high officials are connected with the sanction given to this untoward advance. Each and all, in our judgment, according to their relative and respective positions, must be made responsible for the errors in judgment to which they were parties and which formed the basis of their advice or orders.

The weightiest share of responsibility lies with Sir John Nixon, whose confident optimism was the main cause of the decision to advance. The other persons responsible were: In India, the Viceroy (Lord Hardinge) and the Commander in Chief, (Sir Beauchamp Duff); in England, the Military Secretary of the India Office, (Sir Edmund Barrow,) the Secretary of State for India, (Austen Chamberlain,) and the War Committee of the Cab-

inet. We put these names in the order and sequence of responsibility. The expert advisers of the Government who were consulted also approved the advance and are responsible for their advice, but the papers submitted to us suggest that the approval of the naval and military experts was reluctant and was perhaps partly induced by a natural desire not to disappoint the hopes of advantage to the general situation which the Government entertained. It is, however, notable that the experts unanimously anticipated no difficulty in the advance on Bagdad, but only in holding it.

We have included the War Committee of the Cabinet and the Secretary of State for India among those upon whom responsibility for this misadventure rests. It is true that the War Committee and the Secretary of State acted upon the opinion of their expert military advisers, and that the Secretary of State only gave his assent to the advance after he had received an assurance from the General on the spot that he had an available force sufficient for his purpose. But so long as the system of responsible departmental administration exists in this country those who are political heads of departments in time of war, whether they be civilian or military, cannot be entirely immune from the consequences of their own action.

The Cabinet from the first laid down the principle, from which it never departed, that questions jointly involving civil and military policy should, in existing circumstances, only be decided by the Cabinet. This authority it exercised throughout, though at times it largely delegated its powers to the War Committee of the Cabinet.

The Siege of Kut

The commission does not deal at any length with the conditions in Kut during its siege, but it publishes, as an appendix, an account of the siege by Colonel Hehir, principal medical officer to the besieged force.

The Turks closed in on General Townshend on Dec. 7, and at first their assaults were numerous and severe; but after three days' fighting about Christmas the enemy was repulsed with such heavy losses that no serious attempts to storm the town were made for the remainder of the siege. The real enemy was starvation, and this compelled the surrender of

the place on April 29, 1916, after a most gallant and tenacious defense of 147 days.

The following extracts from Colonel Hehir's paper show the straits to which the garrison was reduced:

During the last month of the siege, men at fatigues, such as trench-digging, after ten minutes' work had to rest a while and go at it again; men on sentry-go would drop down, those carrying loads would rest every few hundred yards; men availed themselves of every opportunity of lolling about or lying down. There were instances of Indians returning from trench duty in the evening seemingly with nothing the matter who lay down and were found dead in the morning—death due to starvation asthenia. Men in such a low state of vitality can stand little in the shape of illness—an attack of diarrhoea that they would have got rid of in a day or so at the beginning of the siege often ended fatally—all recuperative power had gone. At the end of the siege I doubt whether there was a single person equal to a five-mile march, carrying his equipment. Personally, up to the middle of March I could make a complete inspection of the front-line trenches and fort (about five miles) in the morning; I had then to halve it, and at the end of April, while doing even half, I had to rest on the way. Practically all officers were in the same condition of physical incapacity.

The behavior of the troops throughout the siege was splendid. The defaulter's sheet of the British soldier was a *carte blanche*, and there was no grumbling; there was almost a complete absence of suicide and insanity.

The difficulties in rationing the Indian troops were much enhanced by caste prejudices as to food. For a long time many of them refused to eat horse or mule flesh. Had it not been for this, these animals could not only have been used as food for the men, but the grain they consumed could have been devoted to the same purpose.

Right up to the end of the siege General Townshend and his brigadiers retained the confidence and allegiance of their men. After the terms of surrender had been settled and the Generals were departing in a steamboat as prisoners of war their men formed up along the riverside and gave them a parting cheer as a proof of their unbroken loyalty.

Equipment and Commissariat Deficiencies

Every General who appeared before the commission agreed that the Mesopotamian expedition was badly equipped. Sir Beauchamp Duff informed it that the Indian Army, which furnished the expedition, was organized only for semi-savage fighting, was not well found for an overseas expedition, to

a large extent had second-rate equipment, and was "backward in every particular."

The unpreparedness of the Indian Army for its task in Mesopotamia was primarily due to a long-standing policy of economy and restriction of military preparation to the needs of frontier warfare, for which the Home and Indian Governments were, of course, responsible, and not Sir Beauchamp Duff and the General Staff at Simla. But the unpreparedness for overseas warfare was well known to the Indian military authorities, and when they undertook the management of an expedition which was to fight against Turkey supported by Germany they ought immediately to have striven energetically to bring the equipment of the expedition up to the standard of modern warfare. Serious defects in military equipment, resulting in unnecessary suffering and casualties among the troops, were allowed to persist month after month during the first fourteen months of the campaign, when the Indian Government was responsible for its management.

The commission's finding on this part of its inquiry is:

"During the period for which the Indian Government was responsible, the commissariat of the expedition cannot be said to have been up to the standard of our army in France, but there was no general breakdown. The ration originally supplied to the Indian troops was deficient in nutritive qualities, and a serious outbreak of scurvy ensued.

"In other essentials the expedition was badly and insufficiently equipped, and little if any effort was made to remedy deficiencies until the War Office took over the expedition."

Disputes with the Home Government

The history of the supply of reinforcements to the force is a melancholy tale of altercation between London and Simla. Although up to the time of the advance on Bagdad the expedition was always numerically strong enough to cope with the Turkish forces, yet this result was only attained after protracted wrangling between the Governments at home and in India, neither of whom appeared willing to accept the task of reinforcing an expedition for the success of which they were jointly responsible.

Transport

The findings as to transport are:

1. From the first the paramount importance both of river and railway transport in Mesopotamia was insufficiently realized by the military authorities in India.

2. A deficiency of river transport existed from the time the army left tidal water and advanced up river from Kurna. This deficiency became very serious as the lines of communication lengthened and the numbers of the force increased.

3. Up to the end of 1915 the efforts made

to rectify the deficiency of river transport were wholly inadequate.

4. For want of comprehensive grasp of the transport situation, and insufficiency of river steamers, we find the military authorities in India are responsible. The responsibility is a grave one.

5. River hospital steamers were an urgent requirement for the proper equipment of the expedition, and were not ordered until much too late.

6. With General Sir J. Nixon rests the responsibility for recommending the advances in 1915 with insufficient transport and equipment. The evidence did not disclose an imperative need to advance without due preparation. For what ensued from shortage of steamers both as concerns suffering of the wounded and military losses General Sir John Nixon must, in such circumstances, be held to blame.

7. During the first four months of 1916 the shortage of transport was fatal to the operations undertaken for the relief of Kut. Large reinforcements could not be moved to the front in time to take part in critical battles.

Medical Breakdown

The commission adopts the principal conclusions of the Vincent-Bingley Commission, which were that from a very early stage in the campaign the sick and wounded underwent avoidable discomfort and at times great suffering, owing to deficiencies in medical arrangements, especially as regards river hospital steamers, land ambulance transport, hospitals, and medical personnel and equipment. The sufferings of the wounded from these defects became aggravated after the battle of Ctesiphon, and culminated during the Kut relief operations early in January, 1915, when there was a complete breakdown of the medical arrangements. For these deficiencies the Vincent-Bingley Commission divides responsibility between the authorities in India and Mesopotamia.

No river hospital steamers were provided for what it was known must be largely a riverine campaign. Consequently, until 1916, the sick and wounded had to use ordinary river transport steamers. These were always overburdened with ordinary transport work, were not infrequently used for carrying animals, and it was not always possible properly to clear them of their accumulations of filth and dung before they were used for sick and wounded troops. No wheeled ambulance transport was provided. It follows that ordinary army transport carts were the only vehicles available for the sick and wounded where land transport was necessary. There is an overwhelming mass of evidence as to the inhumanity of using these carts for the wounded. Padding for them was not always available. In some cases dead bodies were even used as cushions. Even when padded they were cruel and dangerous for certain

classes of wounded. All this must have been well known to Surgeon General Babbie, or might have been easily ascertained by inquiry or experiment. His only action in regard to developing a more suitable vehicle than the bullock tonga was to ask the Maharajah of Benares to provide a special corps of pony tongas, none of which was, however, available in Mesopotamia till long after Sir W. Babbie had left India.

Official Want of Frankness

In matters affecting the sick and wounded the want of frankness has painfully impressed the commission. A number of instances is given in which defects in medical arrangements were not reported. Perhaps the most striking of these is in connection with the medical breakdown after Ctesiphon, when over 3,500 wounded had to be removed from the battlefield to the river bank, in some cases a distance of ten miles, without proper ambulance transport, and with an insufficiency of medical personnel, of food, and of comforts, so that a large proportion of the wounded had to make their way on foot in spite of their injured condition. When they arrived at the river the available steamer accommodation was gravely inadequate.

How one of these river convoys arrived at Basra is thus described by Major Carter, the medical officer in charge of an ocean hospital ship, which was waiting at Basra to receive the wounded:

"I was standing on the bridge on the evening when the Medjidieh arrived. She had two steel barges, without any protection against the rain, as far as I remember. As this ship, with two barges, came up to us I saw that she was absolutely packed, and the barges, too, with men. The barges were slipped and the Medjidieh was brought alongside the Varella. When she was about 300 or 400 yards off it looked as if she was festooned with ropes. The stench when she was close was quite definite, and I found that what I mistook for ropes were dried stalactites of human faeces. The patients were so huddled and crowded together on the ship that they could not perform the offices of nature clear of the edge of the ship, and the whole of the ship's side was covered with stalactites of human faeces. This is what I then saw. A certain number of men were standing and kneeling on the immediate perimeter of the ship. Then we found a mass of men huddled up anyhow—some with blankets and some without. They were lying in a pool of dysentery about thirty feet square. They were covered with dysentery and dejecta generally from head to foot. With regard to the first man I examined, I put my hand into his trousers and I thought he had a hemorrhage. His trousers were full almost

to his waist with something warm and slimy. I took my hand out, and thought it was blood clot. It was dysentery. The man had a fractured thigh, and his thigh was perforated in five or six places. He had apparently been writhing about the deck of the ship. Many cases were almost as bad. There were a certain number of cases of terribly bad bed sores. In my report I describe mercilessly to the Government of India how I found men with their limbs splinted with wood strips from 'Johnny Walker' whisky boxes, 'Bhoosa' wire, and that sort of thing."

"Question.—Were they British or Indian?—A.—British and Indian mixed."

The withdrawal of the wounded to Basra, which resulted in such appalling conditions, was officially reported to the Secretary of State as follows:

"Wounded satisfactorily disposed of. Many likely to recover in country, comfortably placed in hospitals at Amara and Basra. Those for invaliding are being placed direct on two hospital ships that were ready at Basra on arrival of river boats. General condition of wounded very satisfactory. Medical arrangements under circumstances of considerable difficulty worked splendidly."

Surgeon General Hathaway, the principal medical officer in Mesopotamia, who was responsible for drafting the above telegram, afterward sent to India a detailed report of the evacuation of the wounded; and the commission says: "Nobody reading that report would gather that anything untoward had happened, or that the wounded had undergone any special or avoidable sufferings."

Medical Findings

The medical provision for the Mesopotamia campaign was from the beginning insufficient; by reason of the continuance of this insufficiency there was a lamentable breakdown, causing severe and unavoidable suffering to the sick and wounded after the battle of Ctesiphon and the battles in January, 1916; there was amelioration in March and April, 1916; but since then the improvement has been continual, until it is reasonable to hope that now the medical provision is satisfactory. The main deficiencies were in river hospital steamers, medical personnel, river transports, and ambulance land transport.

The Secretary of State showed an earnest and continuous anxiety as to the condition of the wounded, and the only comment that can be made upon his procedure is that he did not fully utilize the official powers at his disposal for the purpose of disposing at an earlier period an investigation into the treatment of the wounded in Mesopotamia.

To Lord Hardinge of Penshurst, as Viceroy, belongs the general responsibility attaching to his position as the head of the Indian

Government. In regard to the actual medical administration he showed throughout the utmost good-will, but, considering the paramount authority of his office, his action was not sufficiently strenuous and peremptory.

A more severe censure must be passed upon the Commander in Chief in India, who failed closely to superintend the adequacy of medical provision in Mesopotamia. He declined for a considerable time, until ultimately forced by the superior authority of the Viceroy, to give credence to rumors which proved to be true, and failed to take the measures which a subsequent experience shows would have saved the wounded from avoidable suffering.

The commission's findings as to the division of responsibility are:

"The division of responsibility between the India Office and the Indian Government, the former undertaking policy and the latter the management of the expedition, was, in the circumstances, unworkable. The Secretary of State, Austen Chamberlain, who controlled the policy, did not have cognizance of the capacity of the expedition to carry out the policy. The Indian Government, which managed the expedition, did not accompany developments of policy with the necessary preparations, even when they themselves proposed those developments. The scope of the objective of the expedition was never sufficiently defined in advance, so as to make each successful move part of a well-thought-out and matured plan."

The Indian Military administration is found to be faulty, and radical military reforms are recommended.

Censure of Indian Government

The commission differentiates between the error of judgment shown by the Indian Government in its advocacy of the advance to Bagdad, which might have happened in any campaign, and its failure adequately to minister to the wants of the forces employed in Mesopotamia.

"This failure," it says, "was persistent and continuous, and practically covered the whole of the period during which the Indian Government was intrusted with the management of the expedition. With the knowledge of the facts which we now possess and of the extent and scope of the preparations of the War Office since it undertook the management of the campaign, it is impossible to refrain from serious censure of the Indian Government for the lack of knowledge and foresight shown in the inadequacy of its preparations and for the lack of readiness to recognize and supply deficiencies. It ought to

have known, and with proper touch with the expedition it could have known, what were its wants and requirements. It is true that its military system was cumbersome and inept. It was, however, within the power of the Viceroy and the Commander in Chief to have established a more effective procedure and a closer touch with the expedition itself."

The report produced a profound sensation and was followed shortly afterward by the resignation of Austen Chamberlain, Secretary for India, and this action caused a partial reorganization of the Ministry and the War Council.

Lord Hardinge's Defense

Lord Hardinge, Viceroy of India from 1910 to 1916 and now Permanent Under Secretary for Foreign Affairs, replied in the House of Lords to the criticisms passed upon him by the Mesopotamia Commissioners. The following were the chief points in his speech:

1. The War Effort of India.—The commission did not give sufficient prominence to the unexampled effort made by India at the outset of the war and to the generosity of her contributions, which could not fail to hamper her further operations elsewhere.
2. Internal and Frontier Affairs.—Adequate weight was not given in the report to the risks and preoccupations of the Government of India during 1914 and 1915 in connection with internal and frontier affairs.
3. The Military Budget.—The financial side of the pre-war military administration was in excess of the maximum fixed by the Nicholson Committee. In the light of after events, he recognized that possibly all ordinary financial considerations ought to have been sacrificed if the Secretary of State and India Council would have agreed.
4. The Advance on Bagdad.—The full telegraphic correspondence showed that the Government of India was strongly opposed to an advance on Bagdad without reinforcements. It might be contended that it ought to have maintained its veto, but he asked whether such a course would have been justified in view of the obvious political advantages of the capture of Bagdad, of the strong pressure from home, and of the unanimous military opinion in favor of it.
5. The Inadequacy of River Transport.—This was only revealed when it was too late to make it good, although everything possible was done to remedy it.
6. The Medical Breakdown.—He could only confess to having been completely deceived by the misleading reports received from the front, and to that extent he must accept full responsibility. But the moment the truth dawned upon him he made every effort within his power to remedy the situation.

Lord Hardinge said that the British

garrison in India at the beginning of the war was reduced to about 150,000 men; 80,000 British and 210,000 Indian troops had been sent away.

In the Summer of 1914 "the Indian Army was at war strength, the magazines were full, the equipment was complete." Indeed, India sent abroad 70,000,000 rounds of small-arm ammunition, 60,000 rifles, more than 550 new guns, and over 3,500 combatant officers, with tents, boots, saddlery, clothing, &c.

"India was bled absolutely white during the first weeks of the war," said Lord Hardinge, and when the Mesopotamia campaign was started the sacrifices were severely felt. Repeated demands for troops, drafts, airplanes, machine guns, bombs, &c., were for the most part refused by the War Office or given with a sparing hand owing to the greater need in France.

In speaking of the dangers in India in the early part of the war, Lord Hardinge said:

"Conspiracies were discovered at Delhi, Lahore, and elsewhere. Revolutionaries sought to undermine the loyalty of the Indian troops. In the Spring of 1915 no fewer than 7,000 revolutionaries returned from the United States and Canada who instigated murder and terrorism in the Punjab, where there were arrests in one week of 3,500 hooligans. Later a German conspiracy in Bengal aimed at rebellion on Christmas Day, 1915. The Bay of Bengal was patrolled. For ten days every officer had to be at his post. Troop trains waited at big railway junctions. That year, 1915, was a very anxious one for India."

Mr. Chamberlain's resignation was announced in the House of Commons in an intensely dramatic climax July 12. Mr. Chamberlain gave a detailed account of the part which he had played in the control of operations in Mesopotamia. He began by repudiating any suggestion that General Sir Edmund Barrow, Military Secretary at the India Office, had in any way exceeded his powers in recommending an expedition to Mesopotamia. He reviewed stage by stage the communications which passed between the Government of India, the India

Office, and Sir John Nixon, both before and during the advance from Kut. The report of the commission, he was able to show, condensed some of the telegrams which passed and omitted important passages from others. One example was the suppression of the political reasons mentioned in the telegram of Oct. 5 as making the occupation of Bagdad desirable. These reasons, Mr. Chamberlain disclosed, were the activity of German emissaries in Persia, the pressure on Afghanistan, and the situation in the Balkans and the Dardanelles. At the same time, he made it clear that Sir John Nixon urged the advance for military reasons, provided that he was properly reinforced. The problem, according to the General Staff, was not to get to Bagdad but to remain there.

In the course of a history of the discussions and correspondence on the possibility of providing reinforcements to hold the city and the probable effects of a compulsory retirement, Mr. Chamberlain referred to the attacks made on Mr. Asquith and his colleagues for deliberately embarking on a hazardous gamble. The attacks, he said, were based on a mutilated telegram, which attributed to the Cabinet the declaration that "we are in great need of a striking success in the East."

Again filling the gaps, he revealed the fact that these words were preceded in the original message by the statement that Persia was drifting into the war on the side of the enemy and the Arabs were wavering.

Mr. Chamberlain summed up the case for authorizing the advance on Bagdad as follows:

"The capture of Bagdad might be a decisive factor in preserving peace in the Middle East and up to and on the Indian frontier.

"The Cabinet was told by every military adviser whom it consulted that the operation was perfectly feasible.

"No one of these authorities questioned the sufficiency of the force under Sir John Nixon's orders for the purpose, nor was any doubt suggested as to the capac-

ity of his supply and transport departments to sustain the operations.

"The problem the Cabinet had to consider was whether the possibility of an eventual withdrawal outweighed the advantages of an immediate and apparently assured success.

"The Cabinet decided that it did not, and after ascertaining that the Government of India concurred in this view, the orders for the advance were issued by us."

From the military and political aspects of the operations Mr. Chamberlain passed to the collapse of the hospital arrangements, and remarked that it was both lamentable and inexcusable. "I cannot say one word," he confessed, "to excuse or to palliate the horrible breakdown." His personal plea was that he was entirely ignorant of it until the damage had been done.

In the course of a defense of Sir William Meyer and others who held responsibility in the Government of India, Mr. Chamberlain protested vigorously against efforts to cast odium on Lord Hardinge, "the most popular Viceroy that India has ever had," because the military administration to which he trusted broke down under a great strain. It would be an evil day for the country, he declared, if, because of any errors of judgment or any miscalculation for which others were as much responsible as he, a great public servant was to be hounded out of public life without a trial and without a hearing, in answer to the clamors of an ill-informed and passionate mob.

Mr. Bonar Law announced in the House of Commons on July 18 that the Government did not propose to take action in regard to the civilians criticised in the commission's report, that the resignation of Lord Hardinge would not be accepted, and that the soldiers would be dealt with in the ordinary way by the Army Council. The Government's decision regarding Lord Hardinge was challenged by Mr. Dillon on a motion of adjournment, which, however, was defeated after a vigorous debate by 176 votes against 81, a Government majority of 95.

Report on the Capture of Bagdad

General Maude's Official Narrative of the
Fighting From August, 1916, to March, 1917

GENERAL SIR STANLEY MAUDE, commanding the Mesopotamian Expeditionary Force, officially described in a dispatch dated July 10, 1917, the operations which culminated in the capture of Bagdad and the conquest of a large area north of the city, thus retrieving the ill-starred expedition of the year before which resulted in the surrender of a British army at Kut, and proved one of the most serious disasters which befell the British during the war.

The dispatch covers the seven months from the end of August, 1916, to March 31, 1917—three weeks after the fall of Bagdad. The first half of this period was devoted to the work of preparation, the active operations beginning in the middle of December. In his summary of the results achieved Sir Stanley Maude says:

During the second period fighting was strenuous and continuous, and the strain imposed upon all ranks, both at the front and on the lines of communication, severe. The nature of the operations has been as varied as it has been complex, and the training of the troops has been tested, first in the fierce hand-to-hand fighting in trench warfare round Kut and Sannaiyat, and later in the more open battles which characterized the operations in the Dahra Bend, the passage of the Tigris, the advance on Bagdad, and subsequent actions.

From this ordeal they have emerged with a proud record, and have dealt the enemy a series of stinging blows, the full significance of which will not be easily effaced. British and Indian troops working side by side have vied with each other in their effort to close with the enemy.

Recalling that the area over which the responsibilities of the army extended was a wide one, embracing Falahiyeh, on the Tigris; Ispahan, (exclusive,) in Persia; Bushire, on the Persian Gulf, and Nasariyeh, on the Euphrates, the dispatch proceeds:

Briefly put, the enemy's plan appeared to be to contain our main forces on the Tigris, while a vigorous campaign, which would di-

rectly threaten India, was being developed in Persia. There were indications, too, of an impending move down the Euphrates toward Nasariyeh. It seemed clear from the outset that the true solution of the problem was a resolute offensive, with concentrated forces, on the Tigris, thus effectively threatening Bagdad, the centre from which the enemy's columns were operating.

At the beginning of December the enemy still occupied the same positions on the Tigris front which he had held during the Summer, and it was decided first to secure possession of the Hai River; secondly, to clear the Turkish trench systems still remaining on the right bank of the Tigris; thirdly, to sap the enemy's strength by constant attacks, and give him no rest; fourthly, to compel him to give up the Sannaiyat position, or in default of that to extend his attenuated forces more and more to counter our strokes against his communications; and, lastly, to cross the Tigris at the weakest part of his line as far west as possible, and so sever his communications.

The Hai position was seized with little difficulty in the middle of December, but the clearing of the Khadairi Bend, which was undertaken on Jan. 6, involved severe hand-to-hand fighting, and it was not until Jan. 19 that the enemy, who had suffered heavy losses, was finally driven out.

Capture of Hai Salient

On Jan. 11, while Lieut. Gen. Cobbe was still engaged in clearing the Khadairi Bend, Lieut. Gen. Marshall commenced preparations for the reduction of the Hai salient—the extensive trench system which the Turks held astride the Hai River near its junction with the Tigris, and for a fortnight we gained ground steadily in face of strong opposition, until, on the 24th, our trenches were within 400 yards of the enemy's front line.

On the 25th the enemy's front line astride the Hai was captured on a frontage of about 1,800 yards. On the eastern (or left) bank our troops extended their success to the Turkish second line, and consolidated and held all ground won in spite of counterattacks during the day and following night. The enemy lost heavily, both from our bombardment and in violent hand-to-hand encounters. On the western (or right) bank the task was a severe one. The trench system was elaborate, and offered facilities for counterattack. The enemy was in considerable strength on this bank, and guns and machine guns in skillfully concealed po-

sitions enfiladed our advance. Our objective was secured, but the Turks made four counterattacks. The first was repulsed; the second reached the captured line, and was about to recapture it when a gallant charge across the open by the Royal Warwicks restored the situation; the third was broken up by our artillery fire; the fourth, supported by artillery and trench mortars, forced our infantry back to their own trenches.

On the 26th the assault was renewed by two Punjabi battalions with complete success, and the captured trenches were at once consolidated. Subsequently our gains were increased by bombing attacks and with the bayonet in face of stubborn opposition, and a counterattack in the afternoon was repulsed by our artillery. Meanwhile our troops had considerably increased their hold on the enemy's position east of the Hai by bombing attacks, though their progress was hampered by the battered condition of the trenches and by the numbers of Turkish dead lying in them. On this bank the first and second lines, on a frontage of 2,000 yards, were captured by the 27th, and on the following day the whole of the front line had been secured on a frontage of two miles and to a depth varying from 300 to 700 yards, the enemy withdrawing to an inner line. On the 27th and 28th our troops penetrated further into the Turkish defenses west of the Hai by bombing attacks supported by artillery barrage, and consolidated their position in the first four lines of trenches on a frontage of 600 yards. On the 29th they secured more trenches by means of infantry raids supported by artillery.

After a short pause to readjust our dispositions, the centre of the enemy's third line on the eastern (or left) bank of the Hai was successfully assaulted by the Cheshires on Feb. 1. Bombers pushed rapidly east and west until the whole trench had been secured from the Tigris to the Hai on a front of about 2,100 yards, and an attempted counterattack was broken by our artillery. The enemy's casualties were heavy and many prisoners were taken. On the western (or right) bank the two Sikh battalions captured the enemy's position on a front of 500 yards, but our troops—especially the left of the attack—were subjected to artillery and machine-gun fire in enfilade. The trench system was complicated and difficult to consolidate, and it was not long before the Turks delivered a counterattack in strength. The most advanced parties of our infantry met the enemy's charge in brilliant style by a countercharge in the open, and casualties on both sides were severe. The preponderance of weight was, however, with the enemy, and our troops, in spite of great gallantry, were forced back by sheer weight of numbers to their original front line.

On Feb. 3 the Devons and a Ghurka battalion carried the enemy's first and second

lines, and a series of counterattacks by the Turks, which continued up till dark, withered away under our shrapnel and machine gun fire. Our troops east of the Hai co-operated with machine gun and rifle fire, and two counterattacks by the enemy on the left bank of the Hai during the day were satisfactorily disposed of. In the evening there were indications that he was contemplating withdrawal to the right bank, and by daybreak on the 4th the whole of the left bank had passed into our possession. The enemy was found to have fallen back to the licorice factory and a line east and west across the Dahra Bend.

During this period the splendid fighting qualities of the infantry were well seconded by the bold support rendered by the artillery, and by the ceaseless work carried out by the Royal Flying Corps. These operations had again resulted in heavy losses to the enemy, as testified to by the dead found, and many prisoners—besides arms, ammunition, equipment, and stores—had been taken, while the Turks now only retained a fast vanishing hold on the right bank of the Tigris.

Dahra Bend Cleared

Feb. 6 to 8 were days of preparation, but continuous pressure on the enemy was maintained day and night. On the ninth the licorice factory was bombarded, and simultaneously the King's Own effected a lodgment in the centre of the enemy's line, thereafter gaining ground rapidly forward and to both flanks. Repeated attacks by the enemy's bombers met with no success, and two attempted counterattacks were quickly suppressed by our artillery. Further west the Worcesters, working toward Yusufiyah and west of that place, captured some advanced posts, trenches, and prisoners, and established a line within 2,500 yards of the Tigris at the southern end of the Shumran Bend.

On Feb. 3 the Devons and a Ghurka batwest of the licorice factory, who had been subjected all night to repeated bombing attacks, began early to extend our hold on the enemy's front line. This movement was followed by a bombardment directed against machine guns located at Kut and along the left bank of the Tigris, which were bringing a galling fire to bear against our right. During this the Buffs and a Ghurka battalion dashed forward, and, joining hands with the King's Own on their left, the whole line advanced northward. As communication trenches did not exist, any movement was necessarily across the open, and was subject to a hot fire from concealed machine guns on the left bank, but, in spite of this, progress was made all along the front to depths varying from 300 to 2,000 yards, our success compelling the enemy to evacuate the licorice factory. He withdrew to an inner line, approximately two and a half miles long, across the Dahra Bend, with advanced posts strongly held, and was finally inclosed in the Dahra Bend by Feb. 13.

An attack against the enemy's right centre offered the best prospects of success, and this involved the construction of trenches and approaches for the accommodation of troops destined for the assault. Early on Feb. 15 the Loyal North Lancashires captured a strong point opposite our left, which enfiladed the approaches to the enemy's right and centre, the retiring Turks losing heavily from our machine-gun fire. An hour later the enemy's extreme left was subjected to a short bombardment and feint attack. This caused the enemy to disclose his barrage in front of our right, and indicated that our constant activity on this part of his front had been successful in making him believe that our main attack would be made against that part of his line. Shortly after the Royal Welsh Fusiliers and South Wales Borderers carried the enemy's right centre in dashing style on a front of 700 yards, and extended their success by bombing to a depth of 500 yards on a frontage of 1,000 yards, taking many prisoners. Several half-hearted counterattacks ensued, which were crushed by our artillery and machine guns, and it became evident that the enemy had strengthened his left and could not transfer troops back to his centre on account of our barrage. A little later the enemy's left centre was captured by the Buffs and Dogras, and, pushing on in a north-easterly direction to the bank of the Tigris, they isolated the enemy's extreme left, where about 1,000 Turks surrendered.

Heroic Infantry

By nightfall the only resistance was from some trenches in the right rear of the position, covering about a mile of the Tigris bank, from which the enemy were trying to escape across the river, and it had been intended to clear these remaining trenches by a combined operation during the night; but two companies of a Ghurkha battalion, acting on their own initiative, obtained a footing in them and took 98 prisoners. By the morning of the 16th they had completed their task, having taken 264 more prisoners. The total number of prisoners taken on the 15th and 16th was 2,005, and the Dahra Bend was cleared of the enemy.

Thus terminated a phase of severe fighting, brilliantly carried out. To eject the enemy from this horseshoe bend, bristling with trenches and commanded from across the river on three sides by hostile batteries and machine guns, called for offensive qualities of a high standard on the part of the troops. That such good results were achieved was due to the heroism and determination of the infantry, and to the close and ever-present support rendered by the artillery, whose accurate fire was assisted by efficient airplane observation.

The enemy had now, after two months of strenuous fighting, been driven entirely from the right bank of the Tigris in the neighborhood of Kut. He still held, however, a very strong position, defensively, in that it was

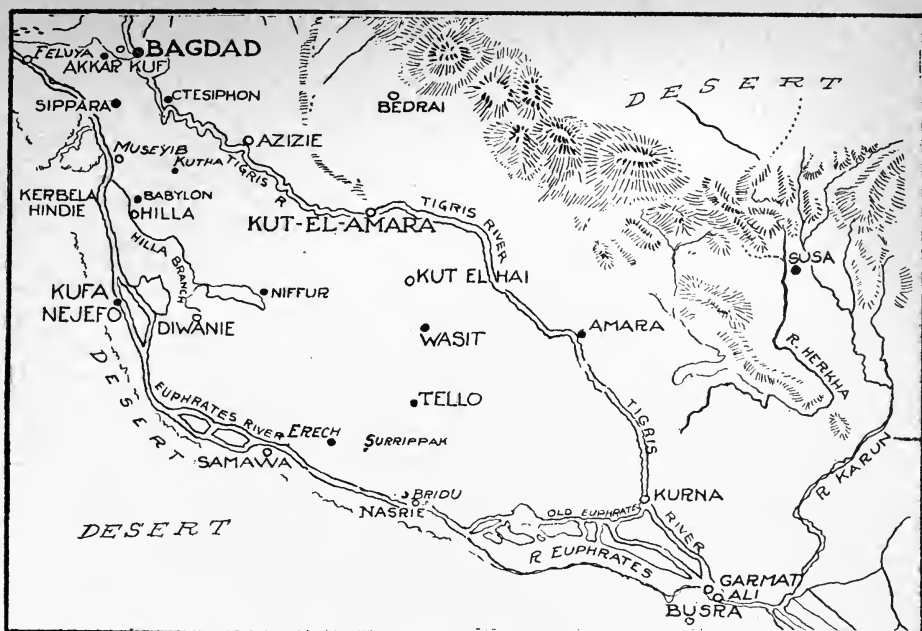

protected from Sannaiyat to Shumran by the Tigris, which also afforded security to his communications running along the left bank of that river. The successive lines at Sannaiyat, which had been consistently strengthened for nearly a year, barred the way on a narrow front to an advance on our part along the left bank, while north of Sannaiyat the Suwaikieh Marsh and the Marsh of Jessan rendered the Turks immune from attack from the north.

On the other hand, we had, by the application of constant pressure to the vicinity of Shumran, where the enemy's battle line and communications met, compelled him so to weaken and expand his front that his attenuated forces were found to present vulnerable points, if these could be ascertained. The moment then seemed ripe to cross the river and commence conclusions with the enemy on the left bank. To effect this it was important that his attention should be engaged about Sannaiyat and along the river line between Sannaiyat and Kut, whilst the main stroke was being prepared and delivered as far west as possible.

Storming of Sannaiyat

While Lieut. Gen. Marshall's force was engaged in the Dahra Bend, Lieut. Gen. Cobbe maintained constant activity along the Sannaiyat front, and as soon as the right bank had been cleared orders were issued for Sannaiyat to be attacked on Feb. 17. The sodden condition of the ground, consequent on heavy rain during the preceding day and night, hampered final preparations, but the first and second lines, on a frontage of about 400 yards, were captured by a surprise assault with little loss. Before the captured trenches, however, could be consolidated they were subjected to heavy fire from artillery and trench mortars, and were strongly counterattacked by the enemy. The first counter-attack was dispersed, but the second regained for the enemy his lost ground, except on the river bank, where a party of Ghurkhas maintained themselves until dusk, and were then withdrawn. The waterlogged state of the country and a high flood on the Tigris now necessitated a pause, but the time was usefully employed in methodical preparation for the passage of the Tigris about Shumran.

On Feb. 22 the Seaforths and a Punjabi battalion assaulted Sannaiyat, with the same objective as on the 17th. The enemy were again taken by surprise, and our losses were slight. A series of counterattacks followed, and the first three were repulsed without difficulty. The fourth drove back our left, but the Punjabis, reinforced by an Indian Rifle battalion and assisted by the fire of the Seaforths, who were still holding the Turkish trenches on the right front, re-established their position. Two more counterattacks which followed were defeated. As soon as the captured position had been consolidated two frontier force regiments assaulted the trenches still held by the enemy

MAP OF REGION TRAVERSED BY THE BRITISH EXPEDITION THAT CAPTURED BAGDAD

in prolongation of, and to the north of, those already occupied by us. A counterattack forced our right back temporarily, but the situation was restored by the arrival of reinforcements, and by nightfall we were in secure occupation of the first two lines of Sannaiyat. The brilliant tenacity of the Sea-forts throughout this day deserves special mention.

Feints in connection with the passage of the Tigris were made on the night of the 22d-23d opposite Kut and at Magasis, respectively. Opposite Kut preparations for bridging the Tigris opposite the licorice factory, under cover of a bombardment of Kut, were made furtively in daylight, and every detail, down to the erection of observation ladders, was provided for. The result was, as afterward ascertained, that the enemy moved infantry and guns into the Kut peninsula, and these could not be retransferred to the actual point of crossing in time to be of any use. The feint at Magasis consisted of a raid across the river, made by a detachment of Punjabis, assisted by parties of sappers and miners and of the Sikh Pioneers. This bold raid was successfully carried out with trifling loss, and the detachment returned with a captured trench mortar.

Tigris Crossed

The site selected for the passage of the Tigris was at the south end of the Shumran Bend, where the bridge was to be thrown, and three ferrying places were located immediately downstream of this point. Just before daybreak on Feb. 23 the three ferries

began to work. The first trip at the ferry immediately below the bridge site, where the Norfolks crossed, was a complete surprise, and five machine guns and some 300 prisoners were captured. Two battalions of Ghurkhas, who were using the two lower ferries, were met by a staggering fire before they reached the left bank, but in spite of losses in men and pontoons they pressed on gallantly and effected a landing. The two downstream ferries were soon under such heavy machine-gun fire that they had to be closed, and all ferrying was subsequently carried on by means of the upstream ferry.

By 7:30 A. M. about three companies of the Norfolks and some 150 of the Ghurkhas were on the left bank. The enemy's artillery became increasingly active, but was vigorously engaged by ours, and the construction of the bridge commenced. The Norfolks pushed rapidly upstream on the left bank, taking many prisoners, while our machine guns on the right bank, west of the Shumran Bend, inflicted casualties on those Turks who tried to escape. The Ghurkha battalions on the right and centre were meeting with more opposition, and their progress was slower. By 3 P. M. all three battalions were established on the east and west line one mile north of the bridge site, and a fourth battalion was being ferried over. The enemy attempted to counterattack down the centre of the peninsula and to reinforce along its western edge, but both attempts were foiled by the quickness and accuracy of our artillery. At 4:30 P. M. the bridge was ready for traffic.

By nightfall, as a result of the day's operations, our troops had, by their unconquerable valor and determination, forced a passage across a river in flood, 340 yards wide, in face of strong opposition, and had secured a position 2,000 yards in depth, covering the bridgehead, while ahead of this line our patrols were acting vigorously against the enemy's advanced detachments, who had suffered heavy losses, including about 700 prisoners taken in all. The infantry of one division were across and another division was ready to follow.

Kut Reoccupied

While the crossing at Shumran was proceeding, Lieut. Gen. Cobbe had secured the third and fourth lines at Sannaiyat. Bombing parties occupied the fifth line later, and work was carried on all night making roads across the maze of trenches for the passage of artillery and transport. Early on Feb. 24 our troops in the Shumran Bend resumed the advance, supported by machine guns and artillery from the right bank. The enemy held on tenaciously at the northeast corner of the peninsula, where there is a series of nalas in which a number of machine guns were concealed, but after a strenuous fight, lasting for four or five hours, he was forced back, and two field and two machine guns and many prisoners fell into our possession. Further west our troops were engaged with strong enemy forces in the intricate mass of ruins, mounds, and nalas which lie to the northwest of Shumran, and rapid progress was impossible, but toward evening the enemy had been pushed back to a depth of 1,000 yards, although he still resisted stubbornly.

While this fighting was in progress the cavalry, the artillery, and another division crossed the bridge. The cavalry attempted to break through at the northern end of the Shumran Bend to operate against the enemy's rear along the Bagdad road, by which airplanes reported hostile columns to be retreating, but strong Turkish rearguards intrenched in nalas prevented them from issuing from the peninsula. During this day's fighting at Shumran heavy losses had been inflicted on the enemy, and our captures have been increased in all to four field guns, eight machine guns, some 1,650 prisoners, and a large quantity of rifles, ammunition, equipment, and war stores. The gunboats were now ordered upstream from Falahiyyeh, and reached Kut the same evening.

While these events were happening at Shumran, Lieut. Gen. Cobbe cleared the enemy's sixth line at Sannaiyat, the Nakhallat, and Suwada positions, and the left bank as far as Kut without much opposition.

The capture of the Sannaiyat position, which the Turks believed to be impregnable, had only been accomplished after a fierce struggle, in which our infantry, closely supported by our artillery, displayed great gallantry and endurance against a brave and determined enemy. The latter had again suffered severely. Many trenches were

choked with corpses, and the open ground where counterattacks had taken place was strewn with them.

Flight of the Turks

Early in the morning of Feb. 25 the cavalry and Lieut. Gen. Marshall's force moved northwest in pursuit of the enemy, whose rearguards had retired in the night. The gunboats also proceeded up stream. Our troops came in contact with the enemy about eight miles from Shumran and drove him back, in spite of stubborn resistance, to his main position two miles further west, where the Turks, strong in artillery, were disposed in trenches and nalas. Our guns, handled with dash, gave valuable support, but were handicapped in this flat country by being in the open, while the Turkish guns were concealed in gun pits. After a severe fight our infantry gained a footing in the enemy's position and took about 400 prisoners. The cavalry on the northern flank had been checked by intrenched infantry and were unable to envelop the Turkish rearguard. The Royal Navy, on our left flank, co-operated with excellent effect in the bombardment of the enemy's position during the day.

On the 26th one column, following the bend of the river, advanced to force any position which the enemy might be holding on the left bank of the Tigris, while another column of all arms marched direct to the Sumar Bend in order to intercept him. His retreat proved, however, to be too rapid. Stripping themselves of guns and other incumbrances, the Turks just evaded our troops, who had made a forced march across some eighteen miles of arid plain. Our cavalry came up with the enemy's rear parties and shelled his rearguard, intrenched near Nahr Kellak.

The gunboat flotilla, proceeding upstream full speed ahead, came under very heavy fire at the closest range from guns, machine guns, and rifles, to which it replied vigorously. In spite of casualties and damage to the vessels, the flotilla held on its course past the rearguard position, and did considerable execution among the enemy's retreating columns. Further upstream many of the enemy's craft were struggling to get away, and the Royal Navy pressed forward in pursuit. The hostile vessels were soon within easy range, and several surrendered, including the armed tug Sumana, which had been captured at Kut when that place fell. The Turkish steamer Basra, full of troops and wounded, surrendered when brought to by a shell which killed and wounded some German machine gunners. His Majesty's ship Firefly, captured from us during the retreat from Ctesiphon in 1915, kept up a running fight, but, after being hit several times, she fell into our hands, the enemy making an unsuccessful attempt to set fire to her magazine. The Pioneer, badly hit by our fire, was also taken, as well as some barges laden with munitions. Our gunboats were in touch with and shelled the retreating enemy during

most of the 27th, and his retirement was harassed by the cavalry until after dark, when his troops were streaming through Aziziyyeh in great confusion.

Hussars' Brilliant Charge

The pursuit was broken off at Aziziyyeh, (fifty miles from Kut and half way to Bagdad,) where the gunboats, cavalry, and Lieut. Gen. Marshall's infantry were concentrated during the pause necessary to reorganize our extended line of communication preparatory to a further advance. Lieut. Gen. Cobbe's force closed to the front, clearing the battlefields and protecting the line of march. Immense quantities of equipment, ammunition, rifles, vehicles, and stores of all kinds, lay scattered throughout the eighty miles over which the enemy had retreated under pressure, and marauders on looting intent did not hesitate to attack small parties who stood in their way.

Since crossing the Tigris we had captured some 4,000 prisoners, of whom 188 were officers; thirty-nine guns, twenty-two trench mortars, eleven machine guns, his Majesty's ships *Firefly*, *Sumana*, (recaptured), *Pioneer*, *Basra*, and several smaller vessels, besides ten barges, pontoons, and other bridging material, quantities of rifles, bayonets, equipment, ammunition and explosives, vehicles, and miscellaneous stores of all kinds. In addition, the enemy threw into the river or otherwise destroyed several guns and much war material.

On March 5, the supply situation having been rapidly readjusted, Lieut. Gen. Marshall marched to Zeur, (eighteen miles,) preceded by the cavalry, which moved seven miles further to Lajj. Here the Turkish rearguard was found in an intrenched position, very difficult to locate by reason of a dense dust storm that was blowing and of a network of nalas, with which the country is intersected. The cavalry was hotly engaged with the enemy in this locality throughout the day, and took some prisoners. A noticeable feature of the day's work was a brilliant charge made, mounted, by the Hussars straight into the Turkish trenches. The enemy retreated during the night.

The dust storm continued on the 6th, when the cavalry, carrying out some useful reconnaissances, got within three miles of the Diala River, and picked up some prisoners. The Ctesiphon position, strongly intrenched, was found unoccupied. There was evidence that the enemy had intended to hold it, but the rapidity of our advance had evidently prevented him from doing so. Lieut. Gen. Marshall followed the cavalry to Bustan, (seventeen miles,) and the head of Lieut. Gen. Cobbe's column reached Zeur.

On March 7 our advanced guard came in contact with the enemy on the line of the Diala River, which joins the Tigris on its left bank, about eight miles below Bagdad. As the ground was absolutely flat and devoid of cover, it was decided to make no

further advance till after sunset. Our gunboats and artillery, however, came into action against the hostile guns.

Gallant North Lancashires

Measures for driving the enemy's infantry from the Diala were initiated on the night of March 7-8. It appeared as though the enemy had retired, but when the first pontoon was launched it was riddled by rifle and machine-gun fire. A second attempt was made with artillery and machine-gun co-operation. Five pontoons were launched, but they were all stopped by withering fire from concealed machine guns. They floated down stream, and were afterward recovered in the Tigris River with a few wounded survivors on board, and further ferrying enterprises were for the time being deemed impracticable. It now became evident that, although the line of the Diala was not held strongly, it was well defended by numerous guns and machine guns skillfully sited, and the bright moonlight favored the defense. To assist in forcing the passage a small column from the force under Lieut. Gen. Marshall was ferried across the Tigris in order to enfilade the enemy's position with its guns from the right bank of that river.

During the night of the 8th-9th, after an intense bombardment of the opposite bank, an attempt was made to ferry troops across the Diala River from four separate points. The main enterprise achieved a qualified success, the most northern ferry being able to work for nearly an hour before it was stopped by very deadly rifle and machine gun fire, and we established a small post on the right bank. When day broke this party of seventy of the Loyal North Lancashires had driven off two determined counterattacks and were still maintaining themselves in a small loop of the river bend. For the next twenty-two hours, until the passage of the river had been completely forced, the detachment held on gallantly in its isolated position under constant close fire from the surrounding buildings, trenches, and gardens, being subjected to reverse as well as enfilade fire from distant points along the right bank.

On the 8th a bridge was constructed across the Tigris, half a mile below Bawi, and the cavalry, followed by a portion of Lieut. Gen. Cobbe's force, crossed to the right bank in order to drive the enemy from positions which our airplanes reported that he had occupied about Shawa Khan, and northwest of that place, covering Bagdad from the south and southwest. The advance of our troops was much impeded by numerous nalas and water cuts, which had to be ramped to render them passable. During the forenoon of the 9th Shawa Khan was occupied without much opposition, and airplanes reported another position one and a half miles to the northwest, and some six miles south of Bagdad, as strongly held. Our attack against this developed later from the south and

southwest in an endeavor to turn the enemy's right flank. The cavalry, which at first had been operating on our left flank, withdrew later, as the horses needed water; but our infantry were still engaged before this position when darkness fell, touch with the enemy being kept up by means of patrols, and the advance was resumed as soon as indications of his withdrawal were noticed.

City Entered

On the morning of March 10 our troops were again engaged with the Turkish rear-guard within three miles of Bagdad, and our cavalry patrols reached a point two miles west of Bagdad railway station, where they were checked by the enemy's fire. A gale and blinding dust storm limited vision to a few yards, and under these conditions reconnaissance and co-ordination of movements became difficult. The dry wind and dust and the absence of water away from the river added greatly to the discomfort of the troops and animals. About midnight patrols reported the enemy to be retiring. The dust storm was still raging, but, following the Decauville Railway as a guide, our troops occupied Bagdad railway station at 5:55 A. M., and it was ascertained that the enemy on the right bank had retired upstream of Bagdad. Troops detailed in advance occupied the city, and the cavalry moved on Kadhimain, some four miles northwest of Bagdad, where they secured some prisoners.

On the left bank of the Tigris Lieut. Gen. Marshall had during the 9th elaborated preparations for forcing the passage of the Diala. At 4 A. M. on the 10th the crossing began at two points a mile apart, and met with considerable opposition, but by 7 A. M. the East Lancashires and Wiltshires were across and had linked up with the detachment of Loyal North Lancashires which had so heroically held its ground there. Motor lighters carrying infantry to attack the enemy's right flank above the mouth of the Diala grounded lower down the river, and took no part in the operation. The bridge across the Diala was completed by noon, and our troops, pushing steadily on, drove the enemy from the riverside villages of Saidah, Dibaiyi, and Qararah—the latter strongly defended with machine guns—and finally faced the enemy's last position covering Bagdad along the Tel Muhammad Ridge. These operations had resulted in the capture of 300 prisoners and a large quantity of arms, ammunition, and equipment, while severe loss had been inflicted on the enemy in killed and wounded, more than 300 of his dead being found by our troops.

During the night of March 10-11 close touch with the enemy was maintained by patrols, and at 1:30 A. M. on the 11th it was reported that the Turks were retiring. The Tel Muhammad position was at once occupied, and patrols pushed beyond it, but contact with the enemy was lost in the dust storm.

Early on the 11th Lieut. Gen. Marshall advanced rapidly on Bagdad, and entered the city amid manifestations of satisfaction on the part of the inhabitants. A state of anarchy had existed for some hours, Kurds and Arabs looting the bazaars and setting fire indiscriminately at various points. Infantry guards provided for in advance were, however, soon on the spot, order was restored without difficulty, and the British flag hoisted over the city. In the afternoon the gunboat flotilla, proceeding up stream in line ahead formation, anchored off the British Residency, and the two forces under Lieut. Gens. Marshall and Cobbe provided for the security of the approaches to the city, being disposed one on either bank of the river.

For more than a fortnight before we entered Bagdad the enemy had been removing stores and articles of military value and destroying property which he could not remove, but an immense quantity of booty, part damaged, part undamaged, remained. This included guns, machine guns, rifles, ammunition, machinery, railway workshops, railway material, rolling stock, ice and soda water plant, pipes, pumps, cranes, winches, signal and telegraph equipment, and hospital accessories. In the arsenal were found, among some cannon of considerable antiquity, all the guns (rendered useless by General Townshend) which fell into the enemy's hands at the capitulation of Kut in April, 1916.

Care of Sick and Wounded

On the right bank of the Tigris the retreating enemy had intrenched a strong position south of Mushaidie railway station, some twenty miles north of Bagdad. A force under Lieut. Gen. Cobbe carried this on March 14, after a brilliant charge by the Black Watch and Ghurkhas. At Mushaidie station the enemy made his last stand, but the Black Watch and Ghurkhas rushed the station at midnight, and pursued the enemy for half a mile beyond. The enemy's flight was now so rapid that touch was not obtained again, and on March 16 our airplanes reported stragglers over a depth of twenty miles, the nearest being twenty-five miles north of Mushaidie.

On the same day a post was established on the right bank of the Diala, opposite Baqubah, thirty miles northeast of Bagdad, and four days later Baqubah was captured. On March 19 our troops occupied Feluja, thirty-five miles west of Bagdad, on the Euphrates, driving out the Turkish garrison. The occupation of Feluja, with Nasariyeh already in our possession, gave us control over the middle Euphrates from both ends. During the remainder of the month minor operations were undertaken on the Diala, pending the arrival of the Russian forces advancing from Persia. The total number of prisoners taken during the period Dec. 13 to March 31 was 7,921.

TABLE OF CONTENTS AND INDEX

Volume VI.

[SECOND PART]

July—September, 1917

Pages 1-570

[Titles of articles appear in *italics*]

A

ADDISON, (Dr.) Christopher, on munitions output, 224; on aircraft manufacture in England, 514.

ADLER, (Dr.) Friedrich, decision of Austrian Parliament on trial, 226; summary of his own defense of assassination of Count Stuerghk, 330.

Adventures of Submarine Victims, 95.

AERONAUTICS, plans for creation of U. S. air fleet; use of Wright field at Dayton by Govt., 13; feats of aviators over Mes-sines Ridge, 40; accounts of air raids on England from May 23 to June 16, 76; air-planes shot down on western front during April and May; Major Rees on British and French supremacy, 78; on length of training for pilot, 79; description of his own capture by Prince Karl Friedrich, 79; fight on western front described, 80; tribute to work of Lafayette Escadrille at Verdun, by L. Cammen, 81; appropriation for air fleet passed by House, 226; use of airplanes and hydroplanes in detecting submarines, discussed by T. G. Frothingham, 249; Govt. training camps in Canada, 289; tactical value of aircraft in three years of war, 427; U. S. appropriation for aviation corps; H. Coffin on work ahead of Aircraft Board; Dr. Addison on aircraft manufacture, 514; account of attacks on London and Paris, 516; meeting called by Lloyd George to consider reprisals, 517; French raid in reprisal; bombing of Krupp works, 518; British raid on Ghisteltes; list of air raids since May 1, 519; losses, Italian raids, 520; "Early Raids of Note," "German Airman's Story of a Raid on London," 521; "Ear Disturbances Suffered by Aviators," 523; Congressman Tilson on "Airplanes and Gas Bombs," 525.

AFRICA, *see* GERMAN East Africa.

AGRICULTURE, T. P. O'Connor on land under cultivation in England and Ireland, 275; work by French authorities in restoring lands devastated by Germans, 347.

AIMS of the War, Pres. Wilson's Flag Day address, 1; Pres. Wilson's note to Russia, 49; first address of Dr. Michaelis, 197; speech of Lloyd George at Glasgow, 261; Baron Sonnino on Italy's aims, 263; stated in French reply to Russian demand for statement, 264; speech in Deputies by R. Viviani, 277; reply of Bethmann Hollweg to Pan Germanist protest against narrow view of utilization of victories, 353; P. Scheidemann on leading factors, 449; address at Madison Barracks by Secretary Lansing on aims of U. S., 455; Sen. Borah on U. S. aims, 460; views of H. H. Asquith, 466; France accused by Dr. Michaelis of making secret treaty with Russia aiming at conquest, in reply to Lloyd George, 467; Baron Sonnino on Italian attitude toward Balkan issues, 476; statement given out by Admiral of Italian Navy, 477.

WHY WE WENT TO WAR

President Wilson's Flag Day Address Explains the Grievance of the United States Against Germany

President Wilson delivered an address at Washington, June 14, at a Flag Day celebration, in which he set forth in detail the reasons why the United States went to war with Germany. He spoke as follows:

MY FELLOW-CITIZENS: We meet to celebrate Flag Day because this flag which we honor and under which we serve is the emblem of our unity, our power, our thought and purpose as a nation. It has no other character than that which we give it from generation to generation. The choices are ours. It floats in majestic silence above the hosts that execute those choices, whether in peace or in war. And yet, though silent, it speaks to us—speaks to us of the past, of the men and women who went before us and of the records they wrote upon it. We celebrate the day of its birth; and from its birth until now it has witnessed a great history, has floated on high the symbol of great events, of a great plan of life worked out by a great people. We are about to carry it into battle, to lift it where it will draw the fire of our enemies. We are about to bid thousands, hundreds of

thousands, it may be millions, of our men, the young, the strong, the capable men of the nation, to go forth and die beneath it on fields of blood far away—for what? For some unaccustomed thing? For something for which it has never sought the fire before? American armies were never before sent across the seas. Why are they sent now? For some new purpose, for which this great flag has never been carried before, or for some old, familiar, heroic purpose for which it has seen men, its own men, die on every battlefield upon which Americans have borne arms since the Revolution?

These are questions which must be answered. We are Americans. We in our turn serve America, and can serve her with no private purpose. We must use her flag as she has always used it. We are accountable at the bar of history and must plead in utter frankness what purpose it is we seek to serve.

Items of the Indictment

It is plain enough how we were forced into the war. The extraordinary insults and aggressions of the Imperial German Government left us no self-respecting choice but to take

up arms in defense of our rights as a free people and of our honor as a sovereign Government. The military masters of Germany denied us the right to be neutral. They filled our unsuspecting communities with vicious spies and conspirators and sought to corrupt the opinion of our people in their own behalf. When they found that they could not do that, their agents diligently spread sedition among us and sought to draw our own citizens from their allegiance—and some of those agents were men connected with the official embassy of the German Government itself here in our own capital. They sought by violence to destroy our industries and arrest our commerce. They tried to incite Mexico to take up arms against us and to draw Japan into a hostile alliance with her—and that, not by indirection, but by direct suggestion from the Foreign Office in Berlin. They impudently denied us the use of the high seas and repeatedly executed their threat that they would send to their death any of our people who ventured to approach the coasts of Europe. And many of our own people were corrupted. Men began to look upon their own neighbors with suspicion and to wonder in their hot resentment and surprise whether there was any community in which hostile intrigue did not lurk. What great nation in such circumstances would not have taken up arms? Much as we had desired peace, it was denied us, and not of our own choice. This flag under which we serve would have been dishonored had we withheld our hand.

But that is only part of the story.

We know now as clearly as we knew before we were ourselves engaged that we are not the enemies of the German people and that they are not our enemies. They did not originate or desire this hideous war or wish that we should be drawn into it; and we are vaguely conscious that we are fighting their cause, as they will some day see it, as well as our own. They are themselves in the grip of the same sinister power that has now at last stretched its ugly talons out and drawn blood from us. The whole world is at war because the whole world is in the grip of that power and is trying out the great battle which shall determine whether it is to be brought under its mastery or fling itself free.

Germany's Military Masters

The war was begun by the military masters of Germany, who proved to be also the masters of Austria-Hungary. These men have never regarded nations as peoples, men, women, and children of like blood and frame as themselves, for whom Governments existed and in whom Governments had their life. They have regarded them merely as serviceable organizations which they could by force or intrigue bend or corrupt to their own purpose. They have regarded the smaller States, in particular, and the peoples who could be overwhelmed by force as their natural tools and instruments of domination. Their purpose has long been avowed. The statesmen of other nations, to whom that purpose was incredible, paid little attention; regarded what German professors expounded in their classrooms and Ger-

man writers set forth to the world as the goal of German policy, as rather the dream of minds detached from practical affairs, as preposterous private conceptions of German destiny, than as the actual plans of responsible rulers; but the rulers of Germany themselves knew all the while what concrete plans, what well-advanced intrigues lay back of what the professors and the writers were saying, and were glad to go forward unmolested, filling the thrones of Balkan States with German Princes, putting German officers at the service of Turkey to drill her armies and make interest with her Government, developing plans of sedition and rebellion in India and Egypt, setting their fires in Persia. The demands made by Austria upon Serbia were a mere single step in a plan which compassed Europe and Asia, from Berlin to Bagdad. They hoped those demands might not arouse Europe, but they meant to press them whether they did or not, for they thought themselves ready for the final issue of arms.

Austria-Hungary a Pawn

Their plan was to throw a broad belt of German military power and political control across the very centre of Europe and beyond the Mediterranean into the heart of Asia; and Austria-Hungary was to be as much their tool and pawn as Serbia or Bulgaria or Turkey or the ponderous States of the East. Austria-Hungary, indeed, was to become part of the Central German Empire, absorbed and dominated by the same forces and influences that had originally cemented the German States

themselves. The dream had its heart at Berlin. It could have had a heart nowhere else! It rejected the idea of solidarity of race entirely. The choice of peoples played no part in it at all. It contemplated binding together racial and political units which could be kept together only by force — Czechs, Magyars, Croats, Serbs, Rumanians, Turks, Armenians—the proud States of Bohemia and Hungary, the stout little commonwealths of the Balkans, the indomitable Turks, the subtle peoples of the East. These peoples did not wish to be united. They ardently desired to direct their own affairs, would be satisfied only by undisputed independence. They could be kept quiet only by the presence of the constant threat of armed men. They would live under a common power only by sheer compulsion and await the day of revolution. But the German military statesmen had reckoned with all that and were ready to deal with it in their own way.

The Present Situation

And they have actually carried the greater part of that amazing plan into execution. Look how things stand. Austria is at their mercy. It has acted, not upon its own initiative or upon the choice of its own people, but at Berlin's dictation ever since the war began. Its people now desire peace, but cannot have it until leave is granted from Berlin. The so-called Central Powers are in fact but a single power. Serbia is at its mercy, should its hands be but for a moment freed; Bulgaria has consented to its will, and Rumania is overrun. The Turk-

ish armies, which Germans trained, are serving Germany, certainly not themselves, and the guns of German warships lying in the harbor at Constantinople remind Turkish statesmen every day that they have no choice but to take their orders from Berlin. From Hamburg to the Persian Gulf the net is spread.

German Cry for Peace

Is it not easy to understand the eagerness for peace that has been manifested from Berlin ever since the snare was set and sprung? Peace, peace, peace has been the talk of her Foreign Office now for a year and more; not peace upon her own initiative, but upon the initiative of the nations over which she now deems herself to hold the advantage. A little of the talk has been public, but most of it has been private. Through all sorts of channels it has come to me, and in all sorts of guises, but never with the terms disclosed which the German Government would be willing to accept. That Government has other valuable pawns in its hands besides those I have mentioned. It still holds a valuable part of France, though with slowly relaxing grasp, and practically the whole of Belgium. Its armies press close upon Russia and overrun Poland at their will. It cannot go further; it dare not go back. It wishes to close its bargain before it is too late, and it has little left to offer for the pound of flesh it will demand.

The military masters under whom Germany is bleeding see very clearly to what point fate has brought them. If they fall back or are forced back

an inch their power both abroad and at home will fall to pieces like a house of cards. It is their power at home they are thinking about now more than their power abroad. It is that power which is trembling under their very feet; and deep fear has entered their hearts. They have but one chance to perpetuate their military power or even their controlling political influence. If they can secure peace now with the immense advantages still in their hands, which they have up to this point apparently gained, they will have justified themselves before the German people; they will have gained by force what they promised to gain by it—an immense expansion of German power, an immense enlargement of German industrial and commercial opportunities. Their prestige will be secure, and with their prestige their political power. If they fail, their people will thrust them aside; a Government accountable to the people themselves will be set up in Germany as it has been in England, in the United States, in France, and in all the great countries of the modern time except Germany. If they succeed they are safe and Germany and the world are undone; if they fail Germany is saved and the world will be at peace. If they succeed America will fall within the menace. We and all the rest of the world must remain armed, as they will remain, and must make ready for the next step in their aggression; if they fail the world may unite for peace and Germany may be of the union.

Do you not now understand the new intrigue, the intrigue for peace,

and why the masters of Germany do not hesitate to use any agency that promises to effect their purpose, the deception of the nations? Their present particular aim is to deceive all those who throughout the world stand for the rights of peoples and the self-government of nations; for they see what immense strength the forces of justice and of liberalism are gathering out of this war.

Tools of Peace Propaganda

They are employing liberals in their enterprise. They are using men, in Germany and without, as their spokesmen whom they have hitherto despised and oppressed, using them for their own destruction—Socialists, the leaders of labor, the thinkers they have hitherto sought to silence. Let them once succeed and these men, now their tools, will be ground to powder beneath the weight of the great military empire they will have set up; the revolutionists in Russia will be cut off from all succor or co-operation in Western Europe and a counter-revolution fostered and supported; Germany herself will lose her chance of freedom, and all Europe will arm for the next, the final, struggle.

The sinister intrigue is being no less actively conducted in this country than in Russia and in every country in Europe to which the agents and dupes of the Imperial German Government can get access. That Government has many spokesmen here, in places high and low. They have learned discretion. They keep within the law. It is opinion they utter now, not sedition. They proclaim the liberal purposes of their masters; declare this a foreign war which can touch America with no danger to either her lands or her institutions; set England at the centre of the stage and talk of her ambition to assert economic dominion throughout the world; appeal to our ancient tradition of isolation in the politics of

the nations, and seek to undermine the Government with false professions of loyalty to its principles.

But they will make no headway. The false betray themselves always in every accent. It is only friends and partisans of the German Government whom we have already identified who utter these thinly disguised disloyalties. The facts are patent to all the world, and nowhere are they more plainly seen than in the United States, where we are accustomed to deal with facts and not with sophistries; and the great fact that stands out above all the rest is that this is a people's war, a war for freedom and justice and self-government among all the nations of the world, a war to make the world safe for the peoples who live upon it and have made it their own, the German people themselves included; and that with us rests the choice to break through all these hypocrisies and patent cheats and masks of brute force and help set the world free, or else stand aside and let it be dominated a long age through by sheer weight of arms and the arbitrary choices of self-constituted masters, by the nation which can maintain the biggest armies and the most irresistible armaments—a power to which the world has afforded no parallel and in the face of which political freedom must wither and perish.

For us there is but one choice. We have made it. Woe be to the man or group of men that seeks to stand in our way in this day of high resolution when every principle we hold dearest is to be vindicated and made secure for the salvation of the nations. We are ready to plead at the bar of history, and our flag shall wear a new lustre. Once more we shall make good with our lives and fortunes the great faith to which we were born, and a new glory shall shine in the face of our people.

General Pershing in France

Advance Guard of American Expeditionary Force On the Way to the Front

MAJOR GEN. JOHN J. PERSHING, who is to command the American expeditionary force on the western front, arrived safely in England on June 8 with his staff of 53 officers and 146 men, including privates and civilian attachés. On landing at Liverpool from the White Star liner Baltic, he gave the following message to the British public:

We are very proud and glad to be the standard bearers of our country in this great war for civilization and to land on British soil. The welcome which we have received is magnificent and deeply appreciated. We hope in time to be playing our part—and we hope it will be a big part—on the western front.

The American commander was received by a British General with a guard of honor and a regimental band, which played "The Star-Spangled Banner." The British Admiralty was represented by the Admiral in command of the port and the municipal authorities by the Lord Mayor of Liverpool. After these greetings were concluded General Pershing left for London by special train, the official state car being attached for him to travel in; and on arrival in London he was received by Lord Derby, Secretary of State for War; General Lord French, other high officers of the British Army, the United States Ambassador, and Admiral Sims of the United States Navy. At every stage the British Government showed every possible mark of honor to America's commander, while the greetings of the people were warmly enthusiastic.

The following day General Pershing and his entire personal staff were received by King George at Buckingham Palace. General Lord Brooke, commander of the Twelfth Canadian Infantry Brigade, presented the American commander to the King, who said to him:

It has been the dream of my life to see the two great English-speaking nations more closely united. My dreams have been real-

ized. It is with the utmost pleasure that I welcome you, at the head of the American contingent, to our shores.

Later King George chatted for a few moments with each member of Pershing's staff. He conversed with the General for a quarter of an hour, shaking hands enthusiastically as they parted. A series of calls and entertainments followed the ceremony at the palace. On June 11 General Pershing and Ambassador Page took luncheon with King George and Queen Mary, spending nearly two hours at the palace. After luncheon the King and Queen showed the visitors through the historic rooms and about the palace grounds. From the palace General Pershing went to the War Office, where members of his personal staff had been in conference for several hours with representatives of their corresponding departments in the British Army. The officer who represents the American military air service devoted two hours to discussing plans for co-operation with the British service.

In the afternoon General Pershing visited the House of Commons. He sat in the Distinguished Visitors' Gallery for a time, and later took tea on the Terrace as a guest of members. In the evening he took dinner with Ambassador Page at his residence to meet members of the British Cabinet and naval and military officers. Among the guests were Premier Lloyd George, Arthur J. Balfour, Lord Derby, Lord Robert Cecil, Viscount French, Admiral Sir John R. Jellicoe, Vice Admiral William S. Sims, U. S. N., and General Jan Smuts.

The first opportunity General Pershing had of observing British Army methods was on June 12, when he was taken to a training camp to watch instruction in trench warfare. Afterward he was the War Secretary's guest at luncheon. In the evening the General and eighteen members of his staff were the guests of the British Government at a formal dinner

at Lancaster House, a Government building devoted solely to purposes of state entertainment of distinguished visitors. There were thirty other diners, including eight members of the Cabinet. The Prime Minister sat at the first of six round tables in the sumptuous dining hall. The other tables were presided over by Lord Curzon, Lord President of the Council; Viscount Milner, member of the War Cabinet; the Right Hon. George M. Barnes, Pensions Minister; the Earl of Derby, Secretary for War, and Sir Alfred Mond.

The dinner was not an elaborate affair, the menu conforming strictly to the prescribed war rations. There were no speeches, but toasts were drunk to the King and the President. Early in the evening, before Major Gen. Pershing left his hotel, ex-Premier Asquith called on him.

Enthusiasm in France

An even more thrilling welcome awaited General Pershing on French soil. "I salute the United States of America, which has now become united to the United States of Europe," from the lips of General Dumas, commanding the northern region, were the first words that greeted Pershing as he stepped ashore at Boulogne on the morning of June 13. It was the first time in history that a soldier wearing the American uniform had landed on the European Continent with sword in hand for the purpose of using it against an enemy. As Pershing himself said, it was a historic moment.

The scenes that greeted him, the reception that followed, both at Boulogne and in Paris, were both historic and deeply significant. Drawn up on the landing quay was a detachment of French infantry in battle uniform. They came only recently from the trenches. As the American chief greeted their colors, they came to salute and stood like iron statues as he passed slowly down the line. Pershing's face showed his emotion. They were all grizzled or middle-aged veterans. There was not a youth among them—that little detachment of the army of France. Their faces, too, showed

eagerness at his coming, and the few Americans who were there felt heart-throbs of pride at the splendid way in which their leader fitted into the picture. As the boat neared the landing stage Pershing's figure stood out prominently from the centre of his staff, and the common French utterance was: "Truly, here comes a man!"

Among the officials that met him were René Besnard, Under Secretary of State for War; Brig. Gen. Pelletier, who is chief of the French Mission to the American expeditionary force; General Dupont, who represented General Pétain; General Dumas, commanding the region of the north; Sir George Fowke, representing Sir Douglas Haig; Captain Baron de Courcel, who was to act as Pershing's official interpreter; also the Military Governor of Boulogne, and representatives of the French and British Navies. The American War Department was represented by Captain Boyd, Military Attaché.

After a drive through Boulogne, where great crowds gathered in all the streets, the entire staff departed by special train for Paris. Immediately after the start, General Pershing received the French newspaper men in his private car, and afterward the representatives of the American press. To the former he said, after expressing his pleasure at landing in France: "The reception we have received is of great significance. It has impressed us greatly. It means that from the present moment our aims are the same." To the Americans he declared that this arrival of the advance guard of the American Army "makes us realize the fullest importance of American participation. America has entered the war with the fullest intention of doing her share no matter how great or how small that share may be. Our allies can depend on that."

Stirring Reception in Paris

The reception at Paris was by far the greatest given to anybody since the outbreak of the war. From the moment the fortifications were reached every house-top, wall, and window was filled with cheering thousands. At the Gare du

Nord special cordons of troops lined the platforms, while dense ranks of soldiers flanked every street for blocks and patrolled the route of the party all the way to the Hotel de Crillon, in the Place de la Concorde, where the General made his temporary headquarters. Paris turned out literally tens of thousands, and it seemed every one was waving an American flag, while cries of "Vive l'Amerique!" became a sustained roar all the way from the Gare du Nord to the Boulevards. General Pershing was visibly affected by the welcome as he stepped from the train. Bands in the station played "The Star-Spangled Banner" and the "Marseillaise." Those who greeted him were Marshal Joffre, M. Viviani, M. Painlevé, Minister of War; Generals Foch and Dutail, Ambassador Sharp, and all the attachés of the American Embassy.

To the masses in the streets as they followed the automobiles from the Gare it seemed the coming of Pershing was veritably the coming of an army. Here was America to help them, America, which had always stood in popular imagination as the symbol of incredible wealth and greatness. In the person of the simply dressed American General they cheered the whole American Army—millions strong, if need be, to carry the war to victory.

In the evening Ambassador Sharp gave a dinner at the American Embassy, where the General met the chief members of the French Cabinet and officers of the army and navy.

Pershing at Napoleon's Tomb

Among the most moving episodes was Pershing's visit to the tomb of Napoleon, in the Hôtel des Invalides, on June 14, for here was witnessed the impressive scene of the American commander standing with uncovered head at the resting place of the world's most famous soldier. Pershing, accompanied by his staff, was received at the Hôtel des Invalides by General Niox, the military commander of the historic monument, and General Malterre. As the American party entered the spacious grounds leading to the building they encountered a number of

veterans of the French wars who have their home at this institution. One of these was a grizzled soldier of the Crimea, who still wore the ancient uniform and carried on his breast decorations of the old days. As the veteran saluted General Pershing the General stopped and extended his hand, saying: "It is a great honor for a young soldier like myself to press the hands of an old soldier like yourself, who has seen such glorious service."

Passing into the Invalides, General Niox conducted the American commander within the vast rotunda with its walls hung with battle flags, and thence the party proceeded below to the crypt where the sarcophagus of Napoleon reposes. Entrance to the crypt is rigorously restricted, and it is seldom that any one is admitted except crowned heads or former heads of States, as in the case of ex-President Roosevelt when he visited Paris.

General Pershing and his staff were conducted to the crypt by Marshal Joffre, who followed the precedent laid down by Napoleon, that only a Marshal of France might remain covered in his presence. The great key was inserted in the brass door of the crypt. Marshal Joffre and General Niox drew aside while General Pershing faced the door alone. He took a deep breath, stepped suddenly forward, and with a single motion threw his arm straight out and turned the key. In a tiny alcove at one side of the crypt the Governor of the Invalides unlocked the case, drew out the sword, and raised it to his lips. Then he presented the hilt to General Pershing, who received it, held it at salute for a moment, and then kissed the hilt. The same ceremony was followed with the cross of the cordon of the Legion of Honor, General Pershing holding the cross to his lips before passing it back to the Governor. This was the most signal honor France ever bestowed upon any man. Before this occasion not even a Frenchman ever was permitted to hold the historic relics in his hands. Kings and Princes have been taken to the crypt that holds the body of the great Emperor, but they only viewed the sword and cross through the plateglass of the case in

which they rest. The relics had not been touched since the time of Louis Philippe.

Visit to President Poincaré

After his visit to the Invalides General Pershing made a formal call on Ambassador Sharp, and was then escorted with military honors to the Elysée Palace to be presented to President Poincaré. At 1:30 o'clock the President and Mme. Poincaré gave a state breakfast in honor of the American commander. Other guests were Premier Ribot, Paul Painlevé, Minister of War; Marshal Joffre, René Viviani, Minister of Justice, and Ambassador Sharp.

General Pershing received a remarkable greeting from the Deputies when he entered the diplomatic box in the Chamber of Deputies at 3 o'clock, just before Premier Ribot rose to tell the Chamber what the Allies purposed doing in Greece. The first part of the session partook of the nature of an official parliamentary reception to General Pershing, the United States figuring in M. Ribot's speech and being the theme of an eloquent oration by M. Viviani. Once they were aware of General Pershing's entry, the Deputies rose and stood, cheering, until the General bowed his acknowledgments. Then the galleries caught up the enthusiasm and violated the tradition of the House by joining in the applause. The Deputies again rose and turned toward General Pershing, cheering, when M. Ribot finished his speech by quoting President Wilson's phrase in his message to Russia: "The day has come to conquer or submit," and declaring: "We will not submit; we will vanquish." M. Viviani followed M. Ribot, describing the spirit of the United States and the principles for which both republics were fighting. General Pershing was compelled to respond to another demonstration after M. Viviani's speech, and at 4 o'clock he left the Chamber, followed by a storm of cheering.

Premier Ribot said in the course of his speech:

The people of France fully understand the deep significance of the arrival of General Pershing in France. It is one of the greatest events in history that the people of the United States should come here to struggle, not

in the spirit of ambition or conquest, but for the noble ideals of justice and liberty. The arrival of General Pershing is a new message from President Wilson, which, if that is possible, surpasses in nobility all those preceding it.

The people of Paris gave Pershing and Joffre a remarkable reception on the morning of June 15, when the two Generals stood bareheaded together on the balcony of the Military Club, looking down on the excited crowd on the Place de l'Opéra. "Vive Joffre, who saved us from defeat! Vive Pershing, who brings us victory!" cried an excited girl, clinging to the arm of a be-medaled permissionaire, in a brief moment of silence, and at her words cheering burst forth tenfold only to cease long after the club balcony was vacant and the crowd was at last convinced that its two idols had definitely withdrawn.

A Wreath for Lafayette

General Pershing's personal program of official calls, dinners, and ceremonies came to an abrupt end in the afternoon after he visited Picpus Cemetery, where he placed a huge wreath of American Beauty roses on the tomb of Lafayette. Then he announced definitely that next day he intended to get down to work at the headquarters of the American Army, which was already in full operation, in the Rue de Constantine. The ceremony at the tomb was very brief, simple but impressive. With half a dozen officers of his staff he motored to the cemetery, where he was received only by the Marquis and the Count de Chambrun, descendants of Lafayette, who conducted him to the tomb. The wreath was carried behind by two orderlies. The Marquis de Chambrun said a few words welcoming General Pershing, who replied simply, expressing the great pleasure of every American to visit the tomb of one who had done so much for the United States—to pay a tribute of devotion which sealed friendship forever. Then the wreath was placed on the slab, while General Pershing and the officers stood at salute. The streets along the route to and from the cemetery were lined, as usual, with crowds, whose cheers seemed to indicate their appreciation of General

Pershing in this symbolic fashion repaying the debt of Lafayette.

General Pershing spent his third and last day in Paris before leaving for the front in making official calls, paying a visit to Marshal Joffre, with whom he had luncheon, and visiting the Senate. During his visit to the Senate there were scenes of enthusiasm similar to those in the Chamber of Deputies on the previous day. The Senators stood when General Pershing appeared in the diplomatic box, accompanied by the American Ambassador, and applauded him for several minutes. The General had to bow his acknowledgments repeatedly.

M. Ribot, the Premier, alluded to the presence of the distinguished American soldier, and called on Foreign Minister Viviani to address the Senate. M. Viviani, speaking at first with restraint, launched with great beauty of expression into an oration, in which he described the refusal of the United States to see the ideals of civilization, of democracy, and of right in battle with destructive forces without taking her part, which, he declared, was a great and noble part. The speaker was frequently interrupted by applause, and at the close of his address all the members of the Senate stood and, turning again toward General Pershing, clapped their hands and shouted, "Vivent les Etats Unis." General Pershing rose and bowed several times before the demonstration subsided.

The Senate took a recess of half an hour, so that the members might be introduced to General Pershing, and Antonin Dubost, President of the Senate, escorted him through the immense lobby of the Luxembourg Palace, introducing him to the members, Baron D'Estournelles de Constant assisting in the presentations.

Organizing for the Front

With the great series of official and popular greetings at an end General Pershing set to work to establish his headquarters in France. Marshal Joffre was designated by the French Minister of War to continue his work, begun in Washington, of assisting to organize American participation in the war. He

will, therefore, be the representative of the French Government in co-operating with the American Commander, Lieut. Col. Fabry, as Chief of Staff, and Lieutenant de Tesson as aid, both members of the French War Commission to the United States, continue with the Marshal. According to a statement made by the War Department at Washington on June 13, General Pershing, in conference with French army heads, will determine where the American expedition shall be sent, and his recommendations, which will be practically final, will be approved by the authorities at Washington. He will be an independent commander, like Field Marshal Haig, necessarily co-operating with the French high command while on French soil.

General Pershing was preceded to France by various special units of the American Army, and on May 24 the first United States combatant corps went to the front under Captain E. I. Tinkham, who won the War Cross at Verdun, and Lieutenant Scully of Princeton. It was a proud moment when the first detachment of the American field service, consisting mainly of Cornell undergraduates, departed for the Aisne battlefield. They were armed with carbines, attired in khaki uniforms, and drove American five-ton motor cars. As they left, the Stars and Stripes, floating over the cantonment in a historic French forest, spread out in the breeze, and other contingents cheered them on their way. Other American sections, drilling in preparation for active participation in the fighting, included detachments from Andover, Dartmouth, Harvard, Johns Hopkins, Yale, Chicago, and Williams College, while a large body from Princeton is awaiting organization. Most of them intended to serve with the American Ambulance Corps, but selected the fighting corps after the United States decided to enter the war.

An official statement issued by the British War Office on May 28 said that, counting the Americans serving in the British and French armies and the additional units ordered to France, there would shortly be 100,000 Americans in

France, and, further, that 3,500 war airplanes would be constructed and 6,000 aviators trained in the United States this year. The statement added that flotillas of destroyers were co-operating with the Entente Allies in the submarine zone, that one army division, a force of marines, and nine regiments of engineers had been ordered to France, and that 10,000 doctors

and many nurses had been ordered to England, hundreds of these having already arrived. "Together with the Americans already serving in the British and French armies," the announcement explained, "these additional units will shortly give a total of 100,000 Americans in France, equaling five German divisions."

America's Army in the Making

THE work of pulling together the different lines of organization which will result in the formation of a United States Army fighting in Europe has been proceeding gradually and methodically. Explaining the Government's military plans, Secretary of War Baker, in a statement on May 9, said that all the forces raised for the war were to be dovetailed into one great army machine of more than 1,200,000 men when the National Guard had been raised to full war strength, when the regular army had been similarly increased and strengthened, and when the first draft of 500,000 men for the national army had been raised. This army would consist of about forty divisions.

Under the National Defense act of June 3, 1916, the full war strength of the regular army was fixed at 293,000 men, and of the National Guard at 409,000, but recruiting for both branches has been below requirements. On April 1, 1917, the regular army still needed 183,898 men, but the number of enlistments on June 18 had reached only 120,815. In some States the National Guard actually showed a decrease through discharges. It, therefore, became obvious that more than the 500,000 men, as originally intended, would have to be drafted. General Crowder told the Senate Military Affairs Committee on June 4 that the number then required was 625,000, and to obtain this number it would be necessary to draft at least 900,000 and possibly 1,500,000, because of expected exemptions. The additional 125,000 would be needed to fill up vacancies in the army

and to keep the training camps in continuous operation.

The President on May 14 had already approved the completed plans for the immediate expansion of the regular army to its full war strength of 293,000 men through the formation as rapidly as possible of all the new units authorized by the National Defense act of June 3, 1916. To accomplish this forty-five new regiments of infantry, cavalry, and field artillery are being organized. This increase, as contemplated by Congress in 1916, was to have been obtained in five equal increments in a five-year period. The orders issued by the President now call for the formation of twenty-seven regiments of infantry, twelve of field artillery, and six of cavalry. When these have been obtained the army will comprise sixty-four regiments of infantry, twenty-one of field artillery, and twenty-five of cavalry—a total of 110 regiments—exclusive of coast artillery, staff corps, and special service units. There will be 3,379 officers and 127,985 men in the infantry, 1,325 officers and 37,175 men in the cavalry, and 897 officers and 26,748 men in the field artillery. The entire regular army will comprise more than 12,000 officers and 293,000 men. Previously there had been thirty-seven regiments of infantry, nine regiments of field artillery, and nineteen regiments of cavalry. The new infantry regiments will be known as the Thirty-eighth to the Sixty-fourth, inclusive; the new field artillery will be the Tenth to the Twenty-first, inclusive, and the new cavalry, the Twentieth to the Twenty-fifth, inclusive.

Expanding the Army

The expansion of the army is being accomplished by the conversion of each existing battalion into a full regiment. When the expansion is complete, the regular army will have seven full divisions, including the four infantry and two cavalry divisions regarded as essentially troops of the mobile army. A full war strength division is maintained in the Philippines and additional forces are in the Panama Canal Zone and Hawaii.

Secretary of War Baker in a statement with reference to the regular army says:

The Cavalry, Engineers, Coast Artillery, Signal Corps, and Quartermaster Corps of the regular army have already been brought to war strength.

Forty-five thousand recruits are needed at once to complete the new regiments of infantry and field artillery.

Twenty-five thousand additional recruits are desired at the earliest practicable date to fill vacancies in order that the war strength of 300,000 men may be maintained.

Facilities are in readiness for placing these 70,000 men under proper training.

The expansion of the National Guard has also been planned on the principle of enlarging existing units and forming new ones. Including naval militia the total authorized is 433,800. This force is being formed on the basis of 800 guardsmen for each Senator and representative. For the 531 Senators and representatives this allotment would give 424,800 men. Adding 9,000 for the insular possessions, and subtracting 24,700 reserved for the naval militia, gives a total of 409,100 for the National Guard. There were recently fewer than 200,000 in the guard.

In accordance with President Wilson's orders, Brig. Gen. William A. Mann of the General Staff, as Chief of the Division of Militia Affairs, has sent to each Adjutant General complete information about the quota assigned for each State, the units to be comprised, and the order in which the units shall be organized. The War Department, in an explanation of what had been done, added:

Notwithstanding such action some States have undertaken the organization of units which cannot be utilized in the formation of

complete higher tactical units. While it is much to be desired to take full advantage of the patriotic interest stirring in the country, such advantage can only come through a co-ordination and regulation in keeping with a general and basic plan.

The War Department and the Militia Bureau are vitally concerned in getting the best value from the National Guard and to that end have perfected, as far as practicable, definite plans, for which co-operation on the part of State officials and representatives is urgently desired.

All persons desiring to offer their services in the National Guard, and especially those interested in raising new units, are requested to communicate with the Adjutant General of their State and to be governed by the wishes of the State authorities in carrying out the announced policy of the War Department in the organization and acceptance of such troops.

For the training of the new draft armies plans have been adopted to build sixteen cantonments, which will practically be cities. Here accommodation will be provided for 600,000 conscripts. The building of the sixteen soldier cities is under the direction of Colonel Littel, Chief of Cantonment Construction.

Training Thousands of Officers

Sixteen camps in different parts of the United States for the training of officers began work on May 15, the number of trainees in attendance being 40,000. The preliminary training was concluded about five weeks later. During this period only engineers received special instruction; all the other officers were formed into infantry regiments, and trained as infantry. The second training period began on June 18, when the future officers began to specialize in the different branches of the service. They now ceased to be "rookies." The second period of training is to conclude about the middle of August, a week or two before the first 500,000 men of the draft army will be called to the colors.

But as officers will be required for the second 500,000 men the War Department has already completed plans for a second series of officers' training camps. Brig. Gen. Henry P. McCain, Adjutant General of the army, on June 2 issued the following statement:

To provide officers for the drafted forces of the national army, the War Department has adopted the policy of commissioning new

officers of the line (infantry, cavalry, field and coast guard artillery) purely on the basis of demonstrated ability, after three months' observation and training in the officers' training camps.

To provide officers for the first 500,000 the War Department has put into operation sixteen officers' training camps, with about 40,000 men in attendance. These sixteen camps correspond to the territorial divisions in which the national army will be raised. The present camps will provide line officers sufficient in quantity and quality for the first 500,000 and a reserve for that increment. It is proposed to officer further increments raised under the draft by promotion from the ranks of the regular army, the National Guard, and drafted forces previously in service.

The second series of officers' training camps will be held beginning Aug. 27, with the definite mission of producing a body of line officers capable of filling all places in the grades above Lieutenant and many places in the Lieutenant grades of the second 500,000 troops. These camps will open on Aug. 27, 1917, and the training period will last until Nov. 26, 1917.

The President has commissioned officers by the hundred for the Officers' Reserve Corps, until its total strength is now in the neighborhood of 10,000. Many promotions have become necessary, and on June 8 President Wilson raised three Brigadier Generals (John F. Morrison, Charles G. Morton, and William L. Sibert) to the rank of Major General, while eighteen new Brigadier Generals and three new Lieutenant Colonels were also nominated. In making these promotions the President disregarded strict seniority and went down the list in search of "live wires," promoting several officers by selection.

A Great Air Fleet

The creation of a great American air fleet has begun. Three aviation fields are

under construction and cadets are in training at the preliminary aviation schools established in six representative engineering colleges and universities. The Aircraft Production Board announces also that a site has been selected in France for the final training of the first aviators graduated from the American fields.

Work has been begun on a big four-squadron aviation field at Dayton, Ohio, and "it is significant," says Howard E. Coffin, Chairman of the Aircraft Production Board, "that this Dayton field of 2,500 acres, built to accommodate the largest group of aviation students to be trained in the great project on which America has now set forth, should be on the site of the original field on which the Wrights developed their first successful airplanes. The original Wright hangar, placed on a modest tract of eighty-six acres, which constituted the Wright experimental field, is set within the boundaries of the big new Government field."

A statement by the Council of National Defense says in regard to aviation policy:

The immediate policy involves, roughly, a program for the first year of turning out in American factories about 3,500 air machines, including both training and battle types, and the establishment of schools and training fields with sufficient capacity not only to man these machines but to supply a constant stream of aviators and mechanics to the American forces in Europe.

Brig. Gen. George O. Squier, Chief Signal Officer of the United States Army, who directs the aviation service, informed Congress on June 15 that \$600,000,000 was needed as an initial appropriation for America's air fleet.

Putting the Conscription Law Into Operation

THE first step in putting into operation the select conscription law, officially known as "an act to authorize the President to increase temporarily the military establishment of the United States," which was approved on May 18, 1917, was to register all male residents

who had reached the age of 21 years but who were not yet 31 years of age. The President by a proclamation, dated May 18, fixed June 5 as the day of registration.

When it became apparent that men who came under the law were leaving, or

endeavoring to leave the country, the President on June 1 issued another proclamation warning all persons subject to registration who withdrew from the United States for the purpose of evading registration that they would be prosecuted on their return and be liable to one year's imprisonment.

The registration blank contained twelve questions covering among others, name, address, age, nationality, birthplace, and occupation, and concluding with the interrogation, "Do you claim exemption from draft (specify grounds)?" The official estimate by the Census Bureau of the number of men who should register was 10,264,867, and they were directed to appear at their polling booths and other places usually employed for elections.

Registration day passed off quietly. Although trouble was expected from anti-conscriptionists, there was practically no disorder. A few arrests were reported, but the method employed by the young men who were opposed to conscription was in nearly every case simply to neglect to register. An official statement given out by the Committee on Public Information on the evening of June 5, said in part:

Nearly 10,000,000 Americans of military age registered today for service in the army against Germany. The registration was accomplished in a fashion measuring up to the highest standards of Americanism. The young men came to the registration places enthusiastic; there was no hint of a slacking spirit anywhere except in a few cases where misguided persons had been prevailed upon to attempt to avoid their national obligation.

From every State reports were received showing that the sporadic conspiracies to thwart the first step toward the mobilization of as large an army as the country may need to bring the war to a victorious conclusion had failed utterly. The Department of Justice had a tremendous machinery ready to cope with these conspiracies, but it proved to be unnecessary.

Arrangements had been made by the De-

partment of Justice and the War Department to secure immediate telegraphic reports upon any outbreaks or troublesome occurrence.

The spirit of the young men from whom the fighting forces are to be selected was evidenced in their attitude toward Question 12 on the registration blanks, which asked if exemption was claimed. In thousands of cases young men availed themselves of their right to ignore this question and to leave it entirely for the Government to decide whether they should be selected. This spirit was evidenced again in the receipt during the day of numerous requests from diplomatic and consular officials of the United States for additional registration cards to be used by citizens who are now in other countries; this fact was impressive because registration is voluntary on the part of Americans resident abroad.

Provost Marshal General Crowder, on June 16, gave figures to show the results of the registration. With the reports from Kentucky, New Mexico, and Wyoming still missing, the number registered was 9,401,314. It was estimated that the missing States would add at least 265,000 to this number, and that the grand total would be not less than 9,666,000. This, the War Department considered, would represent a registration of slightly more than 100 per cent. of the census figures, as a careful tabulation showed that there were at least 600,000 men in the service of military age who were not compelled to register, although they were included in the census estimate.

From various parts of the country plots and conspiracies to avoid or oppose the draft were reported. In many places those who had failed to register were rounded up and given another chance to enroll. There were also some arrests. Anarchist agitators were the most troublesome, and one of them, Louis Kramer, was sentenced by the Federal Court in New York to three years' imprisonment for conspiracy to dissuade men of conscript age from registering.

America's Fleet in Being

THE United States Navy began to render the Allies assistance almost from the first day of America's entrance into the war. The whereabouts

of the Atlantic Fleet have been shrouded in secrecy, but announcements have been made regarding the movements of certain units. On June 6 the French

of the 'New Draft Armies

(Photo Bain News Service)

Minister of Marine stated that American warships had anchored off the French coast. The same day the flotilla of American destroyers under Rear Admiral Sims, who has been promoted to the rank of Vice Admiral, completed their first month of war service. In the course of a speech in the House of Commons, on May 25, Prime Minister Lloyd George referred to the work of the United States Navy in these words:

We owe a very considerable debt of gratitude to the great American people for the effective assistance they have rendered and the craft they have placed at our disposal. Now that the American Nation is in the war it is easier to make arrangements for the protection of our mercantile marine than it was before.

The American destroyers have been assigned to work hand in hand with the British squadrons, being virtually assimilated into the British naval machinery. A destroyer is usually out for four or five days, and then returns to port for two or three days while coaling and loading supplies. The Americans take their turn with the British boats in all routine work of patrol and convoy. The work, although largely routine, is interesting, and the Americans have never yet found time hanging heavy on their hands. The lookout must be constant, and eyes must be trained to an unbelievable degree of keenness. The young Americans take zealously to this business of finding the periscopic needles in the nautical haystack, and daily reports of submarines sighted, of observations made, of wireless warnings sent broadcast, show that

the American boats are already making an average of results almost as satisfactory as the long-experienced English boats with which they are operating. An assignment to convoy a liner "from home"—that is, from an American port—is regarded as an especially choice morsel. A transatlantic liner which sights the American flag approaching to escort her to land never fails to respond with a great waving of flags and handkerchiefs from her decks, and there is a fine exchange of wigwag signals in lieu of handshakes.

Admiral Sims, it was officially announced in London on June 19, had been appointed by the British Admiralty to take general charge of the allied naval forces in Irish waters during the absence of the British naval Commander in Chief. Admiral Sims accordingly hoisted his flag as allied senior officer commanding.

By an act of Congress, approved by the President on May 22, the enlisted strength of the navy and Marine Corps was increased to 150,000 and 30,000 men, respectively. A substantial increase in the pay of enlisted men and a temporary increase in the commissioned personnel were provided for. Secretary of the Navy Daniels on June 8 said that the navy was so popular that recruits had come in far more rapidly than had been expected. Since Jan. 1 about 60,000 recruits have been added to the service. The Marine Corps has also made good progress. On May 16 it had 21,864 officers and enlisted men.

Food Crisis in the United States

PRESIDENT WILSON has exerted all his authority during the month to secure measures to cope with an impending food crisis in the United States. In a statement issued on May 19 he declared that it was absolutely necessary to place unquestionable powers in his hands to prevent hoarding and speculation, and generally to regulate the distribution and consumption of food.

Herbert C. Hoover, whom the Presi-

dent has designated as Food Administrator, stated officially on June 2 that America's allies would require 971,000,000 bushels of bread and fodder grains out of the next harvest and, in addition, provision must be made for the grain ships destroyed by submarines. It would be impossible for North America, Mr. Hoover added, to furnish all of the 971,000,000 bushels, but the major load must fall on us.

At a conference in Washington on June 13, which was attended by Mr. Hoover, representatives of organized labor, and about twenty-five Congressmen, the statement was made that the present cost of living probably could be reduced about 30 per cent. in a comparatively short time if President Wilson received the powers he demanded. It was said that hundreds of millions of dollars were being wasted in getting foodstuffs from the producer to the consumer; that speculators and illegitimate middlemen were getting the greater part of this wastage, and that poorly organized methods of transportation and distribution were to blame in no small measure for the rest.

President Wilson made clear his decision in this matter by publishing a letter which he had written on June 12 to Mr. Hoover and which was issued on June 16:

My dear Mr. Hoover: It seems to me that the inauguration of that portion of the plan for food administration which contemplates a national mobilization of the great voluntary forces of the country which are ready to work toward saving food and eliminating waste admits of no further delay.

The approaching harvesting, the immediate necessity for wise use and saving not only in food, but in all other expenditures, the many undirected and overlapping efforts being made toward this end, all press for national direction and inspiration. While it would in many ways be desirable to wait complete legislation establishing the food administration, it appears to me that so far as voluntary effort can be assembled we should not wait any longer, and therefore I would be very glad if you would proceed in these directions at once.

The women of the nation are already earnestly seeking to do their part in this our greatest struggle for the maintenance of our national ideals, and in no direction can they so greatly assist as by enlisting in the service of the food administration and cheerfully accepting its direction and advice. By so doing they will increase the surplus of food available for our own army and for export to the Allies. To provide adequate supplies for the coming year is of absolutely vital importance to the conduct of the war, and without a very conscientious elimination of waste and very strict economy in our food consumption we cannot hope to fulfill this primary duty.

I trust, therefore, that the women of the country will not only respond to your appeal and accept the pledge to the food administration which you are proposing, but that all

men also who are engaged in the personal distribution of foods will co-operate with the same earnestness and in the same spirit. I give you full authority to undertake any steps necessary for the proper organization and stimulation of their efforts. Cordially and sincerely yours, WOODROW WILSON.

The extent to which speculation had been rife since the beginning of 1917 was described by Mr. Hoover when he appeared, on June 19, before the Senate Committee on Agriculture to explain the Food Administration bill. In the last five months, he said, on the item of flour alone \$250,000,000 had been extracted from the American consumer in excess of normal profits. Mr. Hoover then uttered this warning:

We now have a high cost of living beyond the abilities of certain sections of the population to withstand and to secure proper nourishment from the wage levels. Unless we can ameliorate this condition and unless we can prevent further advances in prices, we must confront further an entire rearrangement of the wage level, with all the hardships and social disturbances which necessarily follow. We shall in this turmoil experience large loss in national efficiency at a time when we can least afford to lose the energies of a single man.

President Wilson, it was announced on June 19, had decided to exercise in full the powers conferred upon him by the embargo clause in the espionage law and thereby make it impossible for neutral countries or the allies of America to export from this country so much as a bushel of wheat or the smallest quantity of any other essential commodity without obtaining a license and the approval of an Exports Council, to be composed of Herbert C. Hoover and representatives of the Departments of State, War, Navy, and Commerce. The statement to this effect was made through Secretary Redfield of the Department of Commerce:

The procedure of issuing an export license will be about as follows: The President's proclamation will designate the particular articles under control and countries to which such controlled articles may be exported under license. The quantity of the particular commodity to be exported under license will be decided by the Exports Council, and upon the advice of the departments concerned, and with such facts as may be presented by the trade expert dealing with that particular commodity. After the amount has been determined, the Division of Export Licenses will then restrict the amount licensed to the

amount determined upon by the Exports Council.

President Wilson has assumed full responsibility for the decisions which are

to be made, and in reaching his conclusions he will have at his disposal all of the information and advice of Secretary of State Lansing and Mr. Hoover.

The First United States War Loan

THE first popular offering of bonds for the war—in the sum of \$2,000,000,000—closed June 15, 1917, in a large oversubscription, the total amount subscribed exceeding \$2,900,000,000. There were nearly 3,000,000 individual subscribers. It was the largest bond offering in the history of the United States, and the individual subscriptions exceeded several times the largest total ever before recorded in this country.

The loan was known as "The Liberty Loan." The interest rate was $3\frac{1}{2}$ per cent., and the amount was limited to \$2,000,000,000. Allotments were made of the sums expected from each of the twelve Federal Reserve Districts, and in every case, with one exception, these amounts were largely exceeded. The official figures have not been issued at this writing, (June 20,) but semi-official reports show the following subscriptions in the various Reserve Districts:

District.	Minimum Allotment.	Estimated Subscription.
New York.....	\$600,000,000	\$1,050,000,000
Philadelphia ...	140,000,000	225,000,000
Boston	240,000,000	300,000,000
Richmond	80,000,000	100,000,000
Atlanta	60,000,000	58,582,000
Chicago	260,000,000	355,000,000
Cleveland	180,000,000	276,286,950
St. Louis.....	80,000,000	90,000,000
Minneapolis....	80,000,000	62,000,000
Kansas City....	100,000,000	100,000,000
Dallas	40,000,000	48,000,000
San Francisco..	140,000,000	180,000,000
Total.....	\$2,000,000,000	\$2,844,868,950

The last days of the loan campaign were marked by picturesque propaganda. In many cities bells were rung and whistles blown to indicate progress of the subscriptions; enormous clocks were conspicuously placed to show how the totals were mounting; women and men all over the country delivered addresses at street corners and in public places, advocating subscriptions; flaming and appealing posters were everywhere displayed, and all the newspapers inserted large advertisements gratuitously. The Liberty Bell at Independence Hall in Philadelphia was rung for the first time in half a century on the last day, and as the broken bell pealed the sound was taken up at the same time by other bells in all parts of the country.

Secretary of the Treasury McAdoo visited the leading cities in advocacy of the loan, and everywhere met with an enthusiastic reception. Large corporations, railroads, industrial, commercial, and banking institutions made subscriptions for their employes, allowing them to subscribe on the installment plan, in this way giving the loan a wide distribution. Banks and bond houses all over the United States put all the machinery and energy of their sales organization behind the loan without charge, and this one fact contributed in no little degree to its success. There was much gratification over the large oversubscription, and especially because of the large number of individual subscribers.

CURRENT HISTORY CHRONICLED

PERIOD ENDED JUNE 20, 1917

BRITISH ELECTORAL REFORM: VOTES FOR WOMEN

THE Representation of the People bill, introduced in the House of Commons by Mr. Long, is in its way more radical even than the first great Reform bill of 1832, which brought about the downfall of the Duke of Wellington, the victor of Waterloo, who violently opposed it; much greater than the Reform bill of 1867, which enfranchised the artisan class and added over 3,000,000 to the voters of the nation; greater by far than the Reform bill of 1885, which was, in the main, a redistribution bill, reappportioning the seats in Parliament in accordance with the population.

The effect of the new Reform bill may be summarized as follows: There were in 1915 8,357,000 male voters on the registers; the present bill will add over 2,000,000 male voters to this number; but far more striking is the addition of over 6,000,000 women voters, in accordance with the following clauses of the bill:

1. A woman shall be entitled to be registered as a Parliamentary elector for a constituency, (other than a university constituency,) if she has attained the age of 30 years, and is entitled to be registered as a Local Government elector in respect of land or premises in that constituency, or is the wife of a husband entitled to be so registered.

2. A woman shall be entitled to be registered as a Parliamentary elector for a university constituency if she has attained the age of 30 years, and would be entitled to be so registered if she were a man.

3. A woman shall be entitled to be registered as a Local Government elector for any Local Government electoral area where she would be entitled to be so registered if she were a man; provided that a husband and wife shall not both be qualified as Local Government electors in respect of the same property.

The age limit was adopted because the bill could not have been passed without it. The reason for the apparent discrimination against women in the matter of age seems to be that, with the destruction of male voters now going on at the front, the women would vastly preponderate at

the polls if they, like the men, were allowed to vote at the age of 21, and it was thought safer to give time for the equalization of the sexes numerically.

CONSTANTINE AND HIS DYNASTY

CONSTANTINE of Greece, who has lost his throne, reversed the policy of his father, George I., King of the Hellenes, who was strongly pro-English, and who succeeded Otho of Bavaria when the Greeks drove him out of the country in 1862. The Greek Nation thereupon, by a plebiscite, elected, as King, Prince Alfred, son of Queen Victoria, the Duke of Edinburgh; and, when he refused the throne, requested Great Britain to nominate a candidate. The British Government chose Prince Christian William Ferdinand Adolphus of Schleswig-Holstein-Sonderburg-Glücksburg, who was recognized by the powers on June 6, 1863, and for whom the Conference of London, in August, 1863, created the style, King of the Hellenes, at the same time making Greece a present of the Ionian Islands, which contain about one-tenth of the population of Greece.

Just before his nomination the new Greek King's sister, Princess Alexandra, had married the Prince of Wales, afterward King Edward VII., and it has been repeatedly affirmed and denied, in the House of Commons, that Queen Alexandra's protection kept her nephew Constantine on the throne long after his policy had become an open danger to the Allies at Saloniki.

Shortly after George of Denmark became King of the Hellenes, his father succeeded to the crown of Denmark, while another sister, Princess Dagmar, married the future Czar Alexander III. of Russia; she, also, as Dowager Empress Marie of Russia, was supposed to uphold Constantine, who is further allied with several of the Russian Grand Ducal families, his mother having been the daughter of Grand Duke Constantine, his

sister having married the Grand Duke George Mikhailovitch, while his brother Nicholas married the Grand Duchess Helena Vladimirovna. From each of the three powers which guarantee the constitutional Government of Greece, King George received a personal allowance of \$20,000 yearly.

VISITING COMMISSIONS

LORD NORTHCLIFFE, proprietor of The London Times, The London Mail, and other publications, arrived at New York June 12 to take up the duties of head of the British Commission to the United States, which post had been tendered him by Premier Lloyd George. His duties are to co-ordinate the work of the various British organizations already engaged in the task of supplying British war and other needs. His appointment is not a diplomatic position. Each of the allied Governments has numerous commissions engaged in various duties of assembling and procuring supplies in this country. The head of the French Commission is André Tardieu. Baron Moncheur, former Belgian Minister to the United States, arrived at New York with a Belgian Commission June 16. A commission of Russians consisting of forty members, headed by Boris A. Bakmetieff, arrived at Seattle June 13; this commission was appointed prior to the fall of the Milukoff Cabinet.

* * *

THE IRISH CONVENTION

THE Irish convention which will deliberate during the Summer to endeavor to reach an agreement on a form of home rule will consist of 101 members. The British Government, seeking to secure for this convention representatives of the everyday life of Ireland, invited the Chairmen of every County Council and county borough, while, in addition, invitations had been extended to the Chairmen of small towns and urban districts in each of the four provinces to appoint two members to the convention.

The convention will also include four Roman Catholic Bishops, together with the Primate, Dr. Crosier, and the Archbishop of Dublin, Dr. Bernard, representing the Protestant Church of Ireland,

and Dr. John Irwin, Moderator of the Irish Presbyterian Assembly. Commerce will be represented by the Chairmen of Chambers of Commerce in Dublin, Belfast, and Cork, while five representatives of labor will be sent by the trade councils of Dublin, Belfast, and Cork, and trade unions.

Political parties will be represented as follows: Five Nationalists, five Ulster Unionists, two O'Brienites, two Irish representative peers, five Southern Unionists, and five Sinn Feiners or Separatists. As to Sinn Feiners, the spokesmen of the Separatists' bodies had stated they would not enter the convention, but the Government reserved five places for them. Fifteen additional members will be nominated by the Government from among leading Irishmen of all sections.

* * *

SOCIALIST EFFORTS FOR PEACE

THE International Socialist Conference, which was summoned to meet at Stockholm in May, but which was delayed because delegates from important countries would not attend or were not permitted by their Governments to go to Stockholm, has taken on a more important aspect since the Russian Council of Workmen's and Soldiers' Delegates assumed the responsibility for summoning the assembly. The Russian Provisional Government has indorsed the invitation. The British and French Governments have granted passports to Socialist delegates, including so ardent a pacifist as Ramsay MacDonald, evidently because the Socialists of the allied countries command a majority of the votes in the conference and for them not to attend would give the delegates from the central countries a chance to dominate the gathering. The Dutch-Scandinavian Socialist Committee at Stockholm has been holding a series of preliminary consultations and informal discussions with Socialists from the different belligerent countries, and has succeeded in eliciting from the German majority Socialists, who, under Scheidemann's leadership, are supporting their Government, a statement of their peace terms. This statement has been condemned by prominent anti-Government leaders among German

Socialists, on the ground that it merely represents German imperialism. At the conference, which has been called for July 8, Germany has twenty votes, but they are divided equally between the Scheidemann group and the minority, which includes Kautsky, Haase, and Bernstein. The United States Government refused to issue passports to Morris Hillquit, Algernon Lee, and Victor L. Berger, the delegates chosen by the Socialist Party of America.

* * *

CHAOS GROWING IN AUSTRIA-HUNGARY

COUNT MORITZ ESTERHAZY has completed the formation of a new Hungarian Cabinet, in which all parties opposed to the policies of Count Tisza are represented, Count Albert Apponyi being Minister of Education, while Count Karolyi has so far refused to take office. Hungarian feeling both against Germany and against the German dominance of Austria is reported as steadily growing; but the rock in the channel is the Slav question. More than half the population of Hungary is either Slav or Rumanian, and is held in political helotry by the dominant Magyars. Without the help of Germany and of the Austrians in Germany the Magyars would inevitably be submerged in the rising flood of Slavdom.

The difficulties of the Austrian half of the Dual Monarchy—which, since 1866, has been the weaker half—are also rapidly growing. The Southern Slavs, agitation among whom was one of the causes of the war, are restive under the Germanizing pressure of the Vienna Government, while the Northern Slavs—the Czechs of Bohemia, the Moravians, and Slovaks—are practically in open rebellion, and these two Slav groups far outnumber the German factions in Austria, as the non-Magyars outnumber the Magyars in Hungary.

German and Magyar domination has only been maintained by franchise laws, and now, as in Prussia, there is strong pressure for the establishment of a widely extended franchise. If this were done, the domination of both Magyars and German-Austrians would come to an end. Even now, in the Reichsrat, 233 Germans

—who are divided into mutually antagonistic parties—are faced by 263 Slavs and Italians, the Slavs including 108 Czechs, some 80 Galician Poles, and a certain number of Ruthenians, Slovenes, Dalmatians, Croatsians, and Italians. On June 19 the Poles in the Austrian Parliament refused to vote for the war budget and forced the Austrian Premier, Count Clam-Martinic, to resign; the Poles are seeking independence.

* * *

TWO GERMAN REFORMS

THE German Federal Council has decided upon the repeal of two of the main features of "exceptional legislation" in Germany, the Jesuit act and the language paragraph, the first of which forbade members of the Society of Jesus to establish themselves in Germany, while the second forbade the use in public meetings of any language but German, except in the case of international congresses and election meetings. This decision is final, and will not be referred to the Reichstag, as that body is formally regarded as having already given its consent, having voted in favor of the abolition of the Jesuit act in 1894, and again in 1899, and in favor of the repeal of the language paragraph in 1908. On all three occasions, however, the Federal Council refused to ratify the decision of the House, whose vote has, therefore, been overruled until now.

The language paragraph was directed against the Polish and Danish subjects of the empire and the inhabitants of Alsace-Lorraine, and was considered necessary, in view of the German custom of arranging for a State official to be present at any public meeting, so as to intervene in the event of any inadmissible utterance.

The Jesuit act dated from 1872 and marked the beginning of the famous Kulturkampf. The aggressive policy of the Vatican at that time had aroused Protestant opinion, and its claim as to the precedence of ecclesiastical over secular jurisdiction had given rise to the conviction that, as Herr Rudolf Delbrück, the then Secretary of State, stated in the Reichstag at the time, the young German

Empire must be protected from the disintegrating effect of international influences on the imperial consciousness being evolved in its midst. The Society of Jesus and its kindred organizations were, therefore, forbidden to establish themselves in Germany, their existing settlements were ordered to be broken up within six months, and Jesuits of non-German nationality were permitted to reside only in certain districts, and were liable to banishment at any time.

OUR GERMAN AND AUSTRIAN SHIPS

GERMAN merchant vessels numbering about 100 and representing a gross tonnage of about 600,000 were taken under the control of the United States Government on April 6, the German crews being removed and turned over to the immigration authorities. Customs officials took over the ships at Porto Rico and Hawaii, while the War Department had earlier taken possession of German merchant ships in the Canal Zone, the Navy Department taking control of the German raiders at Philadelphia. It is estimated that, while the German ships now controlled by the United States Government cost more than \$50,000,000, they now represent, even in their present damaged condition, considerably over \$100,000,000; and while practically every ship was more or less damaged, by orders emanating from the German Embassy, the injuries, except in one or two cases, were much less serious than had been feared. The Kronprinzessin Cecilie was probably the most seriously damaged, while the Liebenfels, sunk in Charleston Harbor, was almost intact, except for the opening of the seacocks.

Fourteen Austrian ships, of a gross tonnage of 67,807, were also taken over, the largest being the Martha Washington, 8,312 tons; the Dora, 7,037 tons; the Lucia, 6,744 tons, and the Ermy, 6,515 tons. The first two were in New York, the third at Pensacola, and the fourth at Boston. Of these fourteen Austrian ships, eight belonged to the Union Austriaca di Navigazione. The four Hamburg-American liners seized at Colon—the Grönewald, Sachsenwald, Savoja, and Prinz Sigismund—were first moved to

Gatun Lake, in order that the fresh water might kill the barnacles accumulated on their hulls.

Rush repairs were immediately begun on all the ships except those at Honolulu, H. T., and the Vaterland at New York, the latter being too large for any American dry dock. By a unanimous Senate resolution, no suit for compensation may begin until one year after peace is made.

CANADA'S CONSCRIPTION BILL

A BILL has been introduced in the Canadian Parliament providing for compulsory military service for men between the ages of 20 and 45. According to the bill, drafts shall be called out by the Governor in council in precedence of youth and lack of home entanglements. Ten classes are provided in which age and dependents (confined to wives and children) are given the preference. When a certain class is called out by proclamation those who fall under that class are bound to respond to the call. Those who do not may be designated as deserters and held liable to imprisonment not exceeding three years. The proposition is bitterly opposed in the Province of Quebec, especially by the French Catholics. An effort was made to form a coalition Cabinet to pass the measure without party division, but it failed.

* * *

THE FIJI ISLANDERS IN THE WAR

THE Fijians, whose archipelago became British territory in 1874, have actively entered the world war, a group of sturdy Fijians recently disembarking at Vancouver and passing through Canada on their way to France, where they will act, however, not as belligerents, but as stevedores on the wharfs of France. But a larger contingent may follow, trained for war. Many of the Polynesian races, to which the Fijians belong, are splendidly built. At the Columbian World's Fair the prize for physical perfection was awarded to a South Sea Islander, and the average among some of these races is the highest in the world both for stature and for all-round physical development.

These Fijians are, however, not the first group of Polynesians to take an active part in the war; a strong force of fully trained Maoris, who are also of the Polynesian race, accompanied the "Anzac"—Australian and New Zealand Army Corps—to Gallipoli and served with great gallantry. And the entry of the United States into the war has made belligerents of the large Polynesian population of Hawaii. All over the vast South Sea archipelagos the Polynesian race is singularly uniform, except in certain regions, where there is an infusion of Malay or Melanesian blood; the group of languages which covers this area, while they have been separated by vast spaces of ocean for unnumbered centuries or millenniums, are nevertheless quite evidently very closely related.

* * *

NEVER HEARD OF THE WAR

THE Japan Chronicle notes the fact that recently a Japanese girl came to Kobe to work in the house of an English lady. A portrait of a young man in khaki stood on the mantelpiece of one room, and as the mistress speaks Japanese fluently, the girl asked about him and his uniform. On being told that he was fighting in the great war in Europe, she asked, "What war?" Further inquiry showed that this young woman, though quite intelligent, had never heard of the war. She herself had lost her father in the Russo-Japanese War when she was about 7 or 8 years old, and her mother had had a terrible struggle to maintain the family. But she had not heard of any war being waged at present, nor had she heard any one talk of the war or refer to it in any way.

* * *

FOREIGN-BORN MEN IN AMERICA

THE foreign-born white males 21 years of age and over in the United States in 1910 totaled 6,646,817, of whom 3,034,117 were naturalized and 2,266,535 were aliens; 570,772 had first papers and 775,393 failed to report citizenship. The increase in total foreign population in ten years from 1900 was 35.5 per cent.; there was only 6.6 per cent. increase in the number naturalized, but an increase

of 147.7 per cent. in the number of aliens. The total number of aliens admitted in 1916 was only 298,826, and 129,765 departed.

In 1910 the percentage of foreign-born males over 21 years of age in the United States who had been naturalized was distributed as follows: Ireland, 67.8; Canada, 51; Russia, 26.1; Italy, 17.7; England, 59.4; Germany, 69.5; Sweden, 62.8, and Scotland, 56.5.

Figures just compiled by the Bureau of the Census show the total number of alien inhabitants in the United States of the nationalities with which this country is at war or which are allied with Germany, to be 4,662,000, constituting 4½ per cent. of the total number of inhabitants. The distribution is as follows, and contains all men, women, and children born in the countries named:

Germany	2,349,000
Austria	1,376,000
Turkey	188,000
Bulgaria	11,000

The number of male aliens 21 years of age and over would be about 964,000, or about 3.2 per cent. of the total number of male inhabitants of the United States 21 years of age and over, and the distribution of these males according to country of birth is:

Germany	136,000
Austria	447,000
Hungary	280,000
Turkey	93,000
Bulgaria	8,000

Up to 1910 most of the Germans were naturalized, but the Austrians and Hungarians did not seem so ready to amalgamate with the Americans and become citizens.

DIFFICULTIES BEFORE THE NEW SPANISH MINISTRY

EDUARDO DATO heads the new Ministry, pledged to preserve the neutrality of Spain. His immediate predecessor, Marquis Manuel Garcia Prieto, held office only since April 19, when Count de Romanones resigned, declaring that acquiescence in Germany's ruthless submarine campaign was endangering the very life of the Spanish Nation and that Spain should forthwith join the En-

tente Allies. Eduardo Dato was Premier when the war broke out. Germany tried hard to induce him to assume an attitude of open hostility toward France, mobilizing troops south of the Pyrenees, and thus compelling Joffre to withdraw large forces from the defense of Paris and the Marne. Dato, though considered pro-German, refused the offer of Gibraltar and Morocco and held Spain to a rigid neutrality.

The Premier's position is highly precarious. Spain, with a population of only 20,000,000, has ten organized political parties whose Parliamentary combinations are exceedingly unstable. The ultra-Conservatives, who include the nobility, the Church, and army, are openly pro-German, the army upholding militarism and a military caste, while the German bait of temporal power for the Pope is intended to capture the Church. Other groups still resent the French invasion during the Napoleonic wars, and are not pro-English, in spite of Wellington's help at that time, because of England's holding Gibraltar.

The Liberals, the Republicans, and the moderate Socialists, who are all grouped together as Reformists, are strongly pro-ally, Señor Lerroux, Deputy for Barcelona, having said, on April 30, that Spain's moral ascendancy over Latin America has already passed to the United States; that this moral loss would be followed by economic loss, and that, by failure to enter the war on the side of the Allies, Spain showed her impotence, fear, and incapacity. But a lively German propaganda still dominates the Conservatives, whom Dato leads. This German domination is provoking widespread revolutionary protest in Catalonia, Asturias, and elsewhere throughout Spain. On June 18 it was reported that the Province of Catalonia, which embraces the City of Barcelona, was in a political ferment and threatened to secede from Spanish dominion. Authentic reports from Madrid on June 18 indicated that demand for radical reforms was acute all over Spain and that a thorough liberalization of the electoral, military, and economic laws was inevitable.

ESPIONAGE AND EMBARGO ACT

THE Espionage act, as finally passed by Congress, is much wider in its scope than its title indicates, although it does not go so far in many directions as the Administration desired. The most serious clash between the Executive and the Legislature was with regard to a press censorship. Despite the urgent appeals of the Administration, Congress refused to set up a censorship, thus leaving the newspapers of the United States practically the only ones in a belligerent country not subject to the official blue pencil. The Espionage act prescribes death or long imprisonment as the punishment for convicted spies, penalizes interference with foreign commerce, provides for the enforcement of neutrality, authorizes the seizure of shipments of arms designed for unlawful purposes, fixes penalties for injuring vessels in foreign commerce and for disturbing foreign relations, and sets forth new restrictions upon passports. Other important provisions deal with censorship of mails and the extension of the use of search warrants, and confer on the President authority to embargo exports. The embargo feature puts into the hands of the Executive a weapon by which it is intended to stop supplies from entering Germany through neutral countries.

* * *

BRAZIL PREPARES TO ENTER THE WAR

WHILE Brazil has definitely ranged herself on the side of the United States and the Entente Powers, it is somewhat difficult to give an accurate legal definition of her position. Brazil is not at peace with Germany; she is not neutral; she is not an active belligerent. At the end of May the Brazilian Foreign Minister declared: "Brazil declares war on nobody. It is Germany which declares war on all neutrals. * * * Our Government is not free to declare war; that is for Congress to decide."

The Brazilian Chamber on May 23 passed the first reading of the Administration measure revoking Brazil's neutrality in the war between Germany and the United States by a vote of 136 to 3.

Thereupon Brazil began to take active war measures. The Chamber of Deputies authorized the Government to utilize German ships in Brazilian ports, and on June 2 President Braz signed a decree carrying this into effect. Forty-six German merchant ships were laid up in Brazilian ports early in the war, aggregating 240,779 tons displacement. The largest of these is the Hamburg-American liner *Blücher*, of 12,350 tons; while thirty-three of the vessels are of more than 4,000 tons each. A second step was the opening of Brazilian ports to all Entente warships, including those of the United States. A third step was the development of measures whereby Brazil will share with the United States Navy the policing of the South Atlantic, thus liberating many English and French ships to fight in the North Sea and the Mediterranean.

It will be remembered that Brazil, once a colony of Portugal, and still using Portuguese as its official language, is one of the largest countries in the world, with an area of 3,218,991 square miles and a population approaching 20,000,000, being exceeded in area only by the British Empire, the Russian, French, and Chinese dominions, and the United States. Most of South America is preparing to follow Brazil's lead, while in Central America only Costa Rica and Salvador still maintain relations with Germany.

GENERAL PERSHING CARRIES AMERICA'S SWORD TO EUROPE

SINCE the national existence of the United States began, General Pershing is the first soldier of the Republic to draw the sword of America on a European battlefield, though a full army corps of young Americans have been fighting in the battlefields of France under the flags of France and England. In the Colonial period, during the wars waged between 1689 and 1763—King William's war, Queen Anne's war, and the war of the Austrian succession, precipitated by the attack of Frederick the Great against Maria Theresa—all officers in the British colonies in America were, of course, officers of the English Crown, and it may be held that for this

reason they took part in European wars, though fighting in America. Thus, Washington and Clive were at the same time fighting on the same side in the same war, though the one was engaged at Pittsburgh, the other at Plassey, in Lower Bengal. In this war both Cuba and the Philippines were taken by England from Spain, but were returned when peace was made.

In the Barbary wars, from 1802 to 1806, the United States was at war in the Old World, on the north coast of Africa. The Pasha of Tripoli, who had collected tribute from the United States, declared when payment of this tribute was stopped that "we are all hungry, and if we are not provided for we soon get peevish," and opened a war against the United States. There was naval fighting in European waters when John Paul Jones, leading a little fleet fitted out by France, cruised in the North Sea and took the British ship *Serapis* in September, 1779. Since the United States was then allied with France, it may be said that Paul Jones carried the sword of America to Europe.

The war of 1812 was directly caused by the great European struggle against Napoleon, but the United States was no longer allied with France. Indeed, it was openly declared in Congress that the United States "ought to fight France also." So General Pershing opens a new page, carrying the sword of America to the battle plains of Belgium and France.

* * *

POLYGLOT ARMIES OF THE ENTENTE

THE forces of humanity are, in the most literal sense, fighting against the tyranny of the Central Empires; practically every race, creed, and color under the sun is represented in the Entente armies, whether already in the field or in training camps. France's Foreign Legion is already a congress of races; but there are also, in the armies of the French Republic, representatives of half a dozen African and Asian stocks, including the troops of Arab and Moorish blood, from Algeria, Tunis, and Morocco, who fought valiantly in the Champagne offensive; and, at Verdun, the coal-black

sharpshooters from Senegal and the Upper Niger—territories largely opened up by Gallieni and Joffre—and the Colonials from French Farther India, from the territories of Tonking. Many Chinese are also working for France, in the munition shops and in the fields.

England's army is even more varicolored, as England's Empire is more widely extended; and it should be remembered that, with the exception of Great Britain—that is, England, Scotland, and Wales—the armies of England, including the large contingents from India, are all volunteers. Fighting with the Colonials are Red Indians from the Canadian Northwest, Polynesians and Maoris—aboriginal New Zealanders—and, in the Imperial Army of Britain, there are representatives of a dozen nations of India, and of one at least, the Gurkas, who do not owe political allegiance to England, but who cross over the frontier from Nepal, to enlist in the British Indian army, because it offers a career to these hereditary fighting men.

In Africa, side by side with the Britons and the Boers, led by Generals like Louis Botha and Smuts, who, not so long ago, were fighting against England, there are representatives of several South African races, of the Kaffir stock, who are quite distinct from the negro races of Equatorial Africa. Besides the Christian religion, there are represented, among these troops, Brahmanism, Buddhism, Mohammedanism, Jainism, and a dozen forms of paganism and fetich worship.

* * *

HENRY P. DAVISON of J. P. Morgan & Co. has been appointed Chairman of the Red Cross War Council by President Wilson. It is proposed to raise \$100,000,000. With Mr. Davison on the War Council will be William H. Taft,

Edward N. Hurley of Chicago, former Chairman of the Federal Trade Commission; Cornelius N. Bliss, Jr., Charles D. Norton, Grayson M. P. Murphy of New York, and Eliot Wadsworth of Boston, Chairman of the Executive Committee of the American Red Cross.

* * *

THE total amount of income taxes collected in the United States from the civil war law in the ten years it remained on the statute books, 1863 to 1873, was \$346,762,000, as against \$330,565,628, the total amount collected in the single year ended June, 1917.

* * *

WAR INSURANCE LOSSES

THE United States War Risk Insurance Bureau up to May 23, 1917, had issued policies totaling \$504,003,016, with net losses of \$5,844,531; total premiums, \$10,300,355. The following were the losses:

	1915.			Total.
Vessel.	Hull.	Cargo.		
Evelyn	\$100,000	\$301,000.00		\$401,000.00

Total losses \$5,903,587.10

Military Review of the Month

Period From May 18 to June 18, 1917

By J. B. W. Gardiner

Formerly Lieutenant Eleventh U. S. Cavalry

[See map of Italian front Page 31, and of Ypres front on Page 36]

AS last month's review was being written, one of the fiercest Italian battles of the war was being fought on the front between Tolmino and the sea. The Italian objective was the Carso Plateau, on which they already had a foothold, obtained shortly after the fall of Gorizia last year. Instead of attacking here, however, they began operations on the Isonzo between Tolmino and Gorizia, thereby following the same strategy which has marked all the later battles of the Entente. Two points were particularly selected for the attack: The first Canale, and the second Plava. After a very heavy bombardment the Italians, who were on the west bank of the river, surged across and established themselves on the east bank. Vodice Ridge, close to the river and just to the north of Mount Cucco, was taken and Mount Cucco itself occupied.

For days there was fighting of the heaviest character. The Austrians counterattacked heavily in an effort to throw the Italians back across the river, and, when this failed, began a minor attack in the Trentino in order to divert attention. In both, however, they were unsuccessful. The Italians had their object thoroughly in mind and were not to be distracted from it.

Fighting on the Carso

Then the scene of operations was suddenly shifted south of the valley of the Vipacco. It was the much discussed plan of the oscillating attack. As in most other cases where it has been tried, it was successful. The work on the Carso was brilliantly performed. The front attack extended from Castagnavizza to the sea. There was no attempt to advance the entire Carso line. It was not necessary, nor could sufficient concentration of guns and shells have been made.

The Carso is a hairpin-shaped plateau

which generally parallels the seacoast. The distance from the southern edge to the seacoast varies considerably, in some cases being several miles, in others practically nothing, the sides of the plateau sloping down to the water's edge. The surface of the Carso is broken and rough, honeycombed with natural caverns of varying size, the plateau being of volcanic origin and calcareous in nature. It is the great barrier to Trieste from whatever direction a land attack might come, and must be occupied in its entirety before Trieste can be taken.

The advance, after the most severe fighting, was for a depth of nearly a mile, and many thousands of prisoners were taken. The Italians finally reached a point about half way up the western slopes of the Hermada Hill, or Hill 323. This hill is the key to the entire situation. It is a nearly isolated height about 1,000 feet above sea level, which dominates the Adriatic and both the highway and the railroad which run along the coast at the base of the tableland. Its capture would give the Italians almost perfect observation for a distance of five miles, whereas, as matters now stand, the Austrians are in a position to observe every preparation the Italians put under way. This is always a matter of cardinal importance because it is on perfection of observation that any success in this war is based.

In this case it is of particular importance in view of the railroad and supply situation. The Carso is bounded by two railroads, one generally following the line of the Vipacco on the north and the other on the south, running along the seacoast, the latter branching at Nabresina. The plateau itself is not touched by any railroad. A few indifferent dirt roads pass over it, which, after consider-

able winding, connect with one of the two railroads. The only road of moment which crosses the Carso runs from Nabresina through the village of Comen to Scherbina, a rail junction in the Vipaco Valley. Once Hermada Hill is in Italian hands, this road with its southern connection is not alone under observation but under reasonably close artillery fire.

The Italian attack lasted for eighteen days without pause. It was the longest and most sustained offensive yet carried on by any of the belligerents, and the fact that the Italians were able to continue for such a great length of time speaks exceedingly well for their transport system. After that time the attacks gradually lessened and then died down. Since then they have not been renewed.

The Austrians were able to strengthen their line greatly at the expense of the Russian front. This latter front was still inactive, with no prospect of its becoming otherwise, and men could be taken without danger. This was done freely, and several divisions were recognized as having been on the Russian front a short time before. This in itself is sufficient reason for the final halting of the Italian offensive. After several days the Austrians, who had refused to admit that Italy had moved forward at all, counterattacked and reported that all their lost positions (which up to this time had not been lost) were recovered. But while it is probably true that some gains were made, it is unlikely that any serious reclamation of ground took place. The claims made were too vague.

Battle of Messines Ridge

The event of the month on the western front was the British attack between the Ypres salient and Armentières. The defeat of the German attempt to reach Calais, known as the battle of Ypres, left the lines most peculiarly shaped. A great wedge bulged out into the German lines east of Ypres, with the flanks beaten back, one as far west as Furnes on the Ypres Canal, the other well to the west of the village of Wytschaete. From Wytschaete the line curved about Mes-

sines, and then continued on east of Armentières. The British attack was launched from Hill 60, just west of Zillebeke, to a point south of Warrenton on the Lys River. The object of the attack was twofold: first to straighten out the British lines from Ypres south and remove the danger of having the southern side of the Ypres salient crushed in. This danger was always present, and if such an attack should succeed there would be an immediate possibility of the Germans being able to continue the drive to Calais.

There was the second consideration of improving the line from the standpoint of terrain. This section of Belgium and of France is extremely flat. There are but few points which rise more than seventy-five feet above the sea; indeed, this is almost the exact level of the entire belt. Between Wytschaete and Messines, however, there is a distinct ridge which varies in height from 260 feet to about 190. This ridge, together with Hill 60, the British had most thoroughly and carefully mined. In fact, from the extent to which preliminary work was carried it must have been begun nearly a year ago. Its importance justified this measure, and all the work that was involved. There is not an artillery position within ten miles of this section of the British front after this ridge has been eliminated. It is impossible for the Germans to move any considerable body of troops or to move their guns, whether in reinforcement or withdrawal, without the entire operation opening out under the British eyes. On the other hand, in order for the British to make the most important concentrations unobserved, it is only necessary to keep German airplanes away, and the work can be done in complete concealment.

The fighting was begun by setting off the mines, which had been so placed and so carefully constructed that the entire German front positions were destroyed. Immediately the artillery began, and in a short time the infantry went forward. The Germans had full warning of the attack. The action of the artillery, which was of very heavy calibre, for some days

before the infantry went into action, was in itself a warning that an attack was pending. In spite of this the resistance was not up to the German mark. The entire command seems to have been thrown into a panic by the explosion and was unable to fight effectively. At an absurdly small loss the infantry took these two villages, Wytshaete and Messines, and occupied the entire ridge between. Over 7,000 prisoners were captured in the operation—more than the total British loss. The entire British objective was gained; at no point was a reverse suffered. This meant the occupation of the entire ridge and to a large extent the flattening out of the old salient.

Later operations showed almost immediately the value of the positions which the British had gained. The weight of British artillery fire, directed partly from the new observation posts and partly by airplane, forced the abandonment of several lines of trenches almost without the infantry going into action at all. This was particularly the case between the Lys River and the village of St. Yvon, where the Germans fell back solely because of the effects of the artillery.

The final result of this fighting as it stands at the moment of writing is that the British have cleaned out the old salient in its entirety and have drawn a straight line from Hill 60, east of Zillebeke, to a point east of Armentières. To the north the old salient still exists. But in this case the Germans have to launch their attack across the Furnes Canal, which stretches out before the British lines; judging from former experience, this is apt to prove an impassable obstacle with the important artillery positions all in British hands.

The British attack, however, did a great deal more than straighten out the dangerous southern salient. It will eventually mean the abandonment by the Germans of the triangular strip of territory, the vertices of which are Hill 60 on the north, Comines on the east, and Warrenton on the south. This triangle is bounded on its eastern sides by the Ypres

Canal and the River Lys. The ground embraced by it is exceedingly low without a single elevation. It is nothing like the rolling country found in Artois further south. It is absolutely flat, except for a gentle slope from west to east. There is no cover, there are no positions from which a German attack can be launched. That the British have not yet launched another attack does not mean that they are not in a position to take advantage of this situation. But the lesson had been dearly bought with experience, that liberal use of the mechanics of war is to be economical in human lives. The British output of shells is sufficient to permit them to be used lavishly, and this the British are prepared to do. It is a question, however, of accumulating them in the gun positions—of transportation. It is this accumulation which is going on now, and when it is deemed sufficient, the Germans are almost certain to feel the weight of another torrent of steel.

The capture of this triangle will push well out into the German positions a deep wedge several miles beyond their present lines. It will endanger both Lille on the south and the Germans about the Ypres salient on the north. Their lines before Armentières will be taken almost directly in the rear and the whole line as far south as Lens endangered. The situation created in the German lines by this recent success, though generally local, is still the most interesting from the standpoint of possible developments, and will bear the closest watching.

Further south the fighting has come to a standstill. After taking Bullecourt, for which the struggle was most intense and most bitterly contested, the British found that they were unable to advance further. Heavy counterattacks held them in place and even wrested from them isolated sections of trenches which they had won at so great a cost. On the whole, however, both sides have been fought to a standstill with but little to choose. On the French front matters are in very much the same state, and the fighting has generally ceased on a large scale. Attacks by the Germans—all fruitless—

against the Chemin des Dames have been the only outstanding features.

Situation in the Balkans

The most hopeful thing from the standpoint of the Allies has been the abdication of the Greek King Constantine with his heir apparent in favor of the second son. For many months Constantine has been a thorn in the side of Sarraïl's army before Saloniki. The latter has been afraid to make any serious attempt to move forward lest the Greek Army under the King's directions sever his lines of communications behind him. This fear is now removed and there is nothing to prevent an offensive movement should he care to make it.

It is extremely doubtful if this attempt will be made at the present time. A change of plan is under way now on this front from which anything may develop. It would surprise no one if the main part

of the armies which now hold this front should be withdrawn for service in other fields—possibly the Near East—leaving only a covering force of sufficient strength to hold the Bulgarians in check. This force will of course be assisted in part at least by the Greek Army, and could be safely left to look after the position of the Entente, while close to 750,000 men could be detached.

As matters now stand, the task before the Saloniki army of moving up either the Vardar, the Struma, or the Cerna against Nish seems well nigh hopeless. Such a movement could only be begun with Russia sufficiently active to prevent withdrawals from her front. As this is far from being the case, it is not apparent just what use the army is in its present location. All indications point to a complete readjustment of this entire situation in the near future.

Progress of the War

Recording Campaigns on All Fronts and Collateral Events
From May 19 Up to and Including June 18, 1917

UNITED STATES

Announcement was made on May 19 that a regiment of American marines under Colonel Doyen would be sent to the fighting front at the earliest practicable moment. On June 7 the French Ministry of Marine announced the arrival of American warships off the French coast, and the collier Jupiter arrived at a port in France with wheat and other supplies for the American troops. On June 8 announcement was made that one thousand naval aviators had arrived in France. On the same day Major Gen. Pershing reached London, and went from there to Paris. Several hospital units arrived in Europe.

The State Department refused passports to delegates to the International Socialist Conference at Stockholm.

An Italian Commission headed by Prince Ferdinand of Udine conferred with American officials in Washington on the conduct of the war, and a Belgian Commission headed by Baron Moncheur reached this country and was received by President Wilson. Lord Northcliffe was sent from England to act as head of the British Commission.

Congress passed an Espionage bill with an embargo clause giving the President power to control exports.

Between 9,000,000 and 10,000,000 men registered on June 5 in compliance with the army draft law.

Subscriptions to the Liberty Loan, closed June 15, reached a total of almost \$2,900,000,000.

SUBMARINE BLOCKADE

The British official statement for the week ended May 19 showed that eighteen merchant ships of over 1,600 tons each had been sunk; for the week ended May 26, eighteen vessels; for the week ended June 2, fifteen, and for the week ended June 9, twenty-two ships of more than 1,600 tons.

On May 22 announcement was made that Denmark had lost 150 ships since the beginning of the war through submarines or mines.

Germany sent a conciliatory reply to Spain's protest concerning the sinking of the *Patricio*, offering an indemnity and a salute to the Spanish flag. Two other Spanish ships, the mail steamer *C. De Elizaguirre* and the steamship *Begona*, were sunk. More than eighty lives were lost on the

Eizaguirre. Pro-ally demonstrations were held in Madrid.

Several Swedish grain ships were sunk. In reply to a protest from the Swedish Government, Germany expressed regret. A Swedish ship engaged in the work of the Belgian Relief Commission was also sunk. Three American sailing vessels, the *Dirigo*, the *Frances M.*, and the *Barbara*, were sunk.

The British hospital ship *Dover Castle* was sunk, but all the patients on board were saved. One hundred ninety men lost their lives in the sinking of the South Atlantic liner *Sequana*. The *Leyland* liner *Anglian* and the British steamship *Southland* were sunk.

A French submarine sank an enemy submarine as it was coming out of Cattaro harbor on June 2, escorted by a torpedo boat. Nicaragua and Haiti severed relations with Germany.

The Brazilian steamer *Tijuca* was sunk. Following the recommendation of President Braz, the Brazilian Chamber of Deputies passed a bill authorizing the revocation of neutrality in the war between the United States and Germany, and authorized the seizure of German ships in Brazilian ports.

CAMPAIGN IN EASTERN EUROPE

May 20—Russians repulse German attacks east of Kalncem.

June 2—Germans bombard Russian positions at Kredo and Brody.

June 4—Russian scouts raid German lines near Kovel and Pnevli.

CAMPAIGN IN WESTERN EUROPE

May 19—Germans launch strong attack on the Aisne; small force reaches French lines northwest of Braye-en-Laonnois.

May 20—British break into Hindenburg line on a front of over a mile between Fontaine-les-Croisilles and Bullecourt; Germans seize French trenches on a 216-yard front on the *Chemin-des-Dames*.

May 22—French repulse strong attacks against new positions in Western Champagne, north of Mont Carnillet, and against the heights of Casque and the Teton; Germans bombard Rheims.

May 23—French seize the last heights dominating the valley of the Ailette River and enlarge their positions on the northern slopes of the Vauclerc and Californie Plateau.

May 24—French check German assault on Vauclerc Plateau.

May 25—Germans penetrate French lines near Braye, but lose most of the ground later; British make gains southeast of Loos.

May 26—French extend their gains on both sides of Mont Carnillet.

May 27—Germans pierce French lines at the eastern end of the Moronvilliers Range; British gain near Fontaine-les-Croisilles.

May 28—Germans fail in three attempts to wrest Moronvilliers Heights from the French.

May 30—Germans attack French trenches south of Mont Blond, but are driven back; fighting resumed south of St. Quentin.

June 1—Berlin reports unusual activity in the region of the sand dunes on the Belgian coast, at the Ypres salient, and in the sector of Wytschaete; Germans attack on the Aisne and penetrate French trenches near the Laffaux mill, but lose most of their gains; French capture a German outpost south of Chevreux.

June 2—General von Hindenburg announces that the French and British offensive has come to a definite conclusion; French War Office reports capture of 52,000 prisoners and an enormous amount of war material since April 1.

June 3—British advance near Lens, but are forced back by German counterattacks; Germans enter British lines near Chérisy, but are driven out.

June 6—British attack Arras line from Roeux to Gavrelle and carry German positions on a front of about a mile on the western slopes of Greenland Hill, north of the Scarpe; Germans attack on the Aisne and make small gains near Braye-en-Lannois.

June 7—British smash salient south of Ypres with a terrific blow, preceded by gigantic mine operations, and win Messines, Wytschaete, Oostaverne, and other strongly fortified positions that had been held by the Germans for two and a half years.

June 8—British organize new positions south of Ypres and repulse German counterattacks.

June 9.—Germans make counterattack on a six-mile front east of Messines and near Klein Zillebeke, but are repulsed; Canadians penetrate German lines on a front of two miles south of Lens; French repel attacks along the *Chemin-des-Dames*.

June 10—British make further gains at several points south of Ypres.

June 11—British capture German trench system on a front of about a mile near La Poterie farm.

June 13—British sweep forward on a front of about two miles east and northeast of Messines and occupy Gaspard.

June 14—German troops in the Messines region abandon their positions between St. Yves and the River Lys.

June 15—British force Germans out of new positions east and south of Messines and capture a further portion of the Hindenburg line northwest of Bullecourt.

June 16—British driven back in counterattacks east of Loos and from second line trenches northwest of Bullecourt, but make gains south of Ypres.

June 17—Germans penetrate French salient northwest of Hurtebise Farm, but French

retake all except a small part of the first line.

June 18—British fall back east of Monchy-le-Preux; French capture a German salient in Champagne between Mont Carnillet and Mont Blond.

ITALIAN CAMPAIGN

May 19—Italians take Hill 652 on Monte Vodice; Austrians admit loss of Monte Kuk.

May 20—Italians extend their positions on Hill 652 and break into Austrian lines east of Gorizia.

May 23—Italians recapture positions penetrated by the Austrians in the Travignolo Valley.

May 24—Italians break through Austrian lines from Castagnavizza to the sea, capturing Boscomalo, Jamiano, and strong heights east of Pietrarossa and Bagni, and advance in the San Marco, Monte Santo, and Vodice areas.

May 25—Italians capture fortified heights north of Jamiano and gain ground south of Jamiano to the sea.

May 26—Italians capture a strong network of trenches from the mouth of the Timavo River to a point east of Jamiano, take heights between Flondar and Medeazza, and trenches around Castagnavizza.

May 27—Italians smash through Austro-Hungarian positions between Jamiano and the Gulf of Trieste, driving across the Monfalcone-Duino Railroad to Medeazza, and carry the heights at the head of the Palliova Valley.

May 28—Italians cross the Timavo estuary and occupy San Giovanni.

May 31—Austrians fail in attack north of the Tonale Ridge, on the northern side of Monte Pizzul, and in the Rocolana Valley.

June 1—Italians defeat Austrian attempts to recapture heights in the Vodice area.

June 4—Italians drive Austrians from captured advanced positions on the western slopes of San Marco.

June 5—Italians repulse massed attacks south of Gorizia from Dosso Faiti to the sea and take advance positions in the sector between Castagnavizza and Jamiano.

June 6—Austrians regain positions before Flondar, south of Jamiano.

June 7—Austrians report successful attacks near Jamiano and defeat of Italian attacks between the Vipacco Valley and the sea.

June 11—Italians begin new offensive on the Asiago Plateau and seize Monte Ortigara and the Agnello Pass.

June 16—Italians in the eastern Trentino carry Corno Cavento.

June 18—Italians advance northeast of Jamiano and repulse attacks on Monte Mosciagh, on the Asiago Plateau, and on Hill 652 in the Vodice.

BALKAN CAMPAIGN

May 20—Russians repulse German attacks on the Rumanian front east of Koverka.

May 27—British bombard German positions near Livanovo.

May 31—Italians in Albania occupy Cerevoda, Velisest, Osaja, and Cafa.

June 7—Rumanians show activity on the Dobrudja front; gun duels in Macedonia on the right bank of the Vardar and south of Huma.

June 16—French cavalry occupies five towns in Northern Thessaly.

June 17—British evacuate several villages on the Bulgar front, after setting them afire; French extend the occupation of Thessaly.

AERIAL RECORD

Danube towns were raided by the Germans and many persons were killed in Ismail, Bessarabia.

Many great raids, in which hundreds of machines took part, occurred on the western front. The British dropped bombs on Ostend, Zeebrugge, Bruges, and Niemunster. Ghent was also raided and St. Peter Station partly destroyed. The London morning papers on June 2 announced that 713 airplanes were shot down on the western front in May, of which 442 were German and 271 British and French. On June 5 the French raided eleven points behind the German lines, including the City of Trèves, in Rhenish Prussia. The Lafayette Escadrille, composed chiefly of Americans, fought fifteen battles in the last two weeks of May.

The Zeppelin L-43 was destroyed by British naval forces in the North Sea.

Many lives were lost and hundreds of persons injured in raids on England. On May 23 the eastern counties were attacked and one man killed. On May 26 seventy-six persons were killed and 174 injured in the Folkestone raid. Three machines were shot down. One hundred and four persons were killed and 408 hurt in a raid on June 13. On June 17 two lives were lost and sixteen persons injured. One Zeppelin was brought down.

NAVAL RECORD

A French torpedo boat flotilla put to rout a flotilla of German destroyers on May 20. One French craft was damaged.

British warships bombarded Ostend and Zeebrugge. In a running fight between six German destroyers and the British squadron one German destroyer, the S-20, was sunk and another damaged.

Japanese light craft arrived in the Mediterranean Sea to help in fighting submarines.

Thirteen Bulgarian ships bombarded Kavala. A Russian squadron, cruising along the Anatolian coast on May 29, bombarded four ports and destroyed 147 sailing ships loaded with supplies.

British warships captured Fort Saliff on the Red Sea.

The American steamer *Mongolia* fired four shots at a German submarine which discharged a torpedo at the liner on June 1. Neither the *Mongolia* nor the submarine was damaged. The American ship *Silver Shell* had a running battle with a submarine in the Mediterranean on May 30. After an exchange of sixty shots the submarine disappeared. The *Standard Oil steamer Moreni* was sunk after a two-hour battle with a submarine, and four of her crew were lost.

RUSSIA

The reorganized Cabinet of the Provisional Government, on May 19, declared itself a unit for general peace only, and no annexations or indemnities.

A congress of the Swedish political party passed a resolution favoring complete separation of Finland from Russia.

On June 1 the Kronstadt Committee of the Council of Workmen's and Soldiers' Delegates repudiated the Provisional Government and decided to assume control of Kronstadt. The committee surrendered on June 6, but their decision was reversed on June 11 by agitators, who declared that the declaration of independence was still in force.

A. I. Konovloff, Minister of Commerce and Trade, resigned because of disagreement with M. Skobelev, the Labor Minister, concerning economic and financial questions. Many strikes occurred in Petrograd. General Michael V. Alexeieff resigned as Commander in Chief of the Russian Armies, and General Brusiloff succeeded him. General Goutor took Brusiloff's place on the southwestern front.

An American diplomatic commission, headed by Elihu Root, and a railroad commission, headed by John F. Stevens, arrived in Petrograd. President Wilson sent a note to the Provisional Government outlining the objects and ideals of the United States in the war. These principles were approved in a note sent by Great Britain.

The Council of Workmen's and Soldiers' Delegates, in reply to Austrian overtures, made in a telegram from Prince Leopold of Bavaria, adopted a proclamation expressing opposition to a separate peace. Robert Grimm, a Swiss Socialist who acted as Germany's agent in a new peace move, was expelled from the country.

On June 17 the Duma, in secret session, voted for an immediate offensive by Russian troops.

GREECE

On June 12, in response to the demand of the protecting powers—France, Great Britain, and Russia—King Constantine abdicated in favor of his second son, Prince Alexander. Entente forces landed at Piraeus and Castella, and occupied the heights near Phalerum Bay. French cavalry occupied a number of towns in Northern Thessaly, and the populace of Larissa went over to the Venizelos Government. M. Jonnart, the High Commissioner of the protecting powers, issued a proclamation guaranteeing popular liberty.

MISCELLANEOUS

A revolt occurred in China as the result of the dismissal of Premier Tuan Chi-jui. The rebellious provinces, under the leadership of General Chang-Hsun, demanded the dismissal of the National Assembly, the revision of the Constitution, the dismissal of the President's advisers, the reinstatement of Tuan Chi-jui, and war against Germany. The United States Government sent a friendly message to the Foreign Office urging tranquillity.

The Spanish Cabinet headed by Marquis Prieto resigned and a new one was formed by Eduard Dato. A revolution in the army was averted by the Premier granting infantry officers the right to form committees of defense.

Count Tisza resigned as Premier of Hungary after a struggle over electoral reforms. Count Esterhazy succeeded him.

An attempt to form a Coalition Ministry in Canada failed. E. P. Patenaud, Secretary of State, resigned because of his opposition to conscription.

Lord Devonport resigned as Food Controller in England and was succeeded by Baron Rhondda. Colonel Churchill succeeded Viscount Cowdray as Chairman of the British Air Board.

The Grand Dukes of Mecklenburg-Schwerin and Mecklenburg-Strelitz consented to far-reaching revision of the Constitutions of the duchies.

The French Chamber of Deputies, in secret session, adopted a resolution declaring that peace conditions must include the liberation of territories occupied by Germany, the return of Alsace-Lorraine to France, and just reparation for damage done in the invaded regions.

Italian Offensive on the Carso and Isonzo Fronts

[See rotogravure map opposite Page 31]

DURING the latter half of May, 1917, General Cadorna's forces on the Isonzo and Carso fronts made one of the most remarkable drives of the year—an assault that lasted eighteen days, with all its original fury. The fighting took place amid the peaks and chasms north of Gorizia, and on the volcanic Carso plateau to the south, a region of desolate rocks and caves, where all the water for the soldiers had to be brought by building an aqueduct, bit by bit, as the army advanced. This land of caves and hiding places had been fortified by the Austrians and complicated with broad areas of barbed wire, behind which enormous 10-inch guns and innumerable machine guns swept every path of approach.

The Italians won victories despite these odds. They took heavy guns up mountains hitherto ascended only by Alpine climbers who roped themselves together. They swung bridges from one peak to another. They built trenches, fortifications, roads, tunnels, retaining walls 10,000 feet above sea level; all this in the face of an enemy fighting desperately on the defensive.

When the campaign on the Isonzo closed last November the town of Gorizia and 43,000 Austrians had been captured, and the Italian front, from Plezza on the north, just over the frontier, skirted the Monte Nero heights of the Julian Alps to the bridgehead of Tolmino, (Monte Cucco,) swung along the same range east of Gorizia, passed over the plain south of that city, and, crossing the Vipacco, struck across the north-west corner of the Carso plateau to the sea, two miles from Duino, the Summer home of Prince Hohenlohe, and fourteen miles northwest of Trieste.

This was the situation when the Italians on May 12 began a heavy bombardment of the Austrian positions from

Tolmino to the sea, which two days later became concentrated across the Isonzo, five miles north of Gorizia, where the Austrians by their defenses on the Kuk, 611 meters high, and on the Vodice, 524 meters, still kept the Italians on the right bank of the stream. On May 13 there was also a concentration of fire on the Carso front, south from the Italian positions of Volkovniak, 343 meters, and Dosso Fauti, 432 meters, against which the Austrians later made counterattacks.

Then on Monday morning, May 14, the Italian infantry crossed the river in several detachments, deployed on the left bank, and stormed the ascent of Monte Cucco. The following day they advanced east of Gorizia and also on the Carso to the south. On the 16th they captured the wooded heights on the east bank of the Isonzo and took several small villages with more than 3,000 prisoners. The 17th found the Italians fighting their way toward the mountain crests of Vodice and Monte Santo. Heavy British artillery had been added to the Italian armament. Duino was captured that day. Perceval Gibbon, an eyewitness of part of the fighting, wrote:

"The picturesque point is Monte Santo. It is a steep cone, with slopes like the side of a roof, and on the summit straggle white buildings of a monastery long since shot to ruins. A single cypress, black and monumental, stands not far from the shattered walls of the cloister, clear-cut against the shell-vexed sky. About it a frenzy of shells roars and blazes. Our barrage and theirs mingle in a hellbroth of fire and smoke, through whose tempestuous fog emerges at moments that single statuesque tree, monumentally and tragically faithful to its duty of sentinel over the graves of forgotten saints. But slowly the Italian lines are crawling uphill, paying with their valorous lives for every yard of progress. If in England anybody doubted Italy's ca-

capacity for liberal sacrifice or her intention toward victory at all costs, he is now answered."

By stubborn and sustained assaults on the Carso the Italians on May 23 finally broke through the Austro-Hungarian lines on a front of six miles from Castagnavizza to the sea, taking more than 9,000 prisoners, with the town of Jamiano and the strong heights east of Pietrarossa and Bagni. The next day enlarged this success, and on the 25th the Italians took the heights between Flondar and Medeazza and a strong network of trenches extending from the mouth of the Timavo River to a point east of Jamiano.

On May 27 General Cadorna's forces smashed through the Austro-Hungarian positions between Jamiano and the Gulf of Trieste, passing the Monfalcone-Duino Railway northeast of San Giovanni and establishing themselves within a few hundred yards of Medeazza. North of Plava they carried the heights at the head of the Palliova Valley, thus joining their Monte Cucco lines with those of Hill 363. This day's work brought the Italians within eleven miles of Trieste. The next day these results were consolidated by crossing the Timavo estuary and occupying the village of San Giovanni. In the northern section the Austrians were hunted out of their subterranean chambers and many prisoners added to the total, which, by this time, amounted to about 25,000.

The Austrian losses in killed, wounded, and missing between May 14 and 29 were estimated at 85,000, and included five Generals and forty high officers. A hundred cannon were taken or destroyed. Perceval Gibbon, writing on the 29th, described the scene on the Carso:

"Everywhere there is evidence of the ghastly Austrian losses. There are whole areas of ground over which the fight stamped its way southeast of Jamiano and Hudilog and along the battleground

parallel with Castagnavizza Road which are littered with bodies clad in that dull gray which is Austria's fighting color. There, for the first time during this offensive, one sees what was so common on the Somme—steel helmets of the enemy lying about, many smashed or drilled by bullets."

Two days later the same correspondent added a curious bit of authenticated history:

"The Italians have just completed examination of two railway tunnels upon the line to Trieste, one 200 yards long, the other slightly less. Both had been turned into shelters for troops and very completely equipped. The roofs are pierced with long ventilating shafts, and water mains have been carried in. There is a mass of arms and ammunition here, and numbers of machine guns.

"It is here that they discovered what was never certainly known upon this front, though frequently rumored, namely, machine gunners chained and padlocked to their guns. I understand they have been officially photographed. Each man has a light steel chain of twisted links, like a dog chain, shackled around one ankle and fastened to the tripod of the gun, and a similar chain padlocked around his waist and linked up to the barrel. These prisoners state that the object is to prevent them leaving the gun in Italian hands when falling back before an attack. Another explanation is suggested by the fact that the chief forces on this southern edge of the Carso consist of Rumanians."

With the beginning of June the Italian offensive abated and the Austro-Hungarians began a series of heavy counterattacks, in which the daring Honveds did some terrific fighting and took many prisoners—Vienna claimed 27,000.

The net result of the month's fighting, however, is a considerable gain for the Italian forces.

The Battle of Messines Ridge

A British Victory That Began With the Explosion of Enormous Mines

THE action of June 7, 1917, in which the British by one terrific blow smashed the strong German salient south of Ypres, was one of the most spectacular and thrilling episodes of the war. It took place in the little corner of Belgium where the allied armies had held the enemy checkmated for two and a half years, and where, all that time, they had been harassed by German guns on the Messines-Wytschaete Ridge.

For nearly two years several companies of Australian, New Zealand, and British sappers had been patiently burrowing under this low range of hills, placing beneath them nineteen powerful mines containing a total of more than 1,000,000 pounds of ammonite. Great charges of this new explosive had been in a firing position for fully twelve months, yet the secret was kept and the dangerous work went on under the German fortifications. At 3:10 in the morning of June 7 the whole series of mines was discharged by electric contact, blowing off the hilltops in a vast flame-burst of volcanic fire, rocking the ground for miles as in an earthquake, and emitting a roar that was distinctly heard in England by Lloyd George, listening for it at his country home 140 miles away.

At the same time the whole salient was subjected to the most intense shellfire of the whole war, the climax of nearly two weeks of artillery preparation. In the wake of this infernal rain came the infantry battalions of General Haig under Sir Herbert Plumer, dashing forward with rifle and bayonet. Before the day was over the whole of Messines Ridge was securely in British hands, with more than 7,000 prisoners and many guns. The German casualties were estimated at 30,000. Those of the British were about 10,000.

The attack was divided into three phases. The battle opened with the explosion of the mines at dawn, which was

the signal for the artillery. Large portions of the German front and support trenches, dugouts, and mining systems went up in smoke. The German front line over the entire distance of ten miles was captured in a few minutes.

The second phase was the storming of the Messines-Wytschaete Ridge, which was accomplished with little loss three hours after the attack began. The British went forward in a concerted rush along the whole sector south of Ypres, from Observation Ridge to Ploegsteert Wood, north of Armentières. The third and final phase, later in the day, was the assault of the rear defenses, which ran across the base of the salient formed by the ridge itself. Here the British found the enemy in greater strength, and the fighting was very fierce. Nevertheless, by nightfall the village of Oostaverne and the whole rear position—along a front of five miles and at a depth of nearly three miles—had fallen into British hands. The day's work was the largest since Vimy Ridge. It was achieved by the British Second Army, under General Sir Herbert C. O. Plumer, and his force included English, Irish, Australian, and New Zealand troops.

Official Report of Battle

The British War Office summarized the action as follows in its report of June 8:

The position captured by us yesterday was one of the enemy's most important strongholds on the western front. Dominating as it did the Ypres salient and giving the enemy complete observation over it, he neglected no precautions to render the position impregnable. These conditions enabled the enemy to overlook all our preparations for attack, and he had moved up reinforcements to meet us. The battle therefore became a gauge of the ability of the German troops to stop our advance under conditions as favorable to them as an army can ever hope for, with every advantage of ground and preparation and with the knowledge that an attack was impending.

MAP OF YPRES REGION SHOWING GROUND GAINED BY BRITISH IN BATTLE OF MESSINES RIDGE

The German forward defenses consisted of an elaborate and intricate system of well-wired trenches and strong points forming a defensive belt over a mile in depth. Numerous farms and woods were thoroughly prepared for the defense, and there were large numbers of machine guns in the German garrisons. Guns of all calibres, recently increased in numbers, were placed to bear not only on the front but on the flanks of an attack. Numerous communicating trenches and switch lines, radiating in all directions, were amply provided with strongly constructed concrete dugouts and machine-gun emplacements designed to protect the enemy garrison and machine gunners from the effect of our bombardment. In short, no precaution was omitted that could be provided by the incessant labor of years, guided by the experience gained by the enemy in his previous defeats on the Somme, at Arras, and on Vimy Ridge.

Despite the difficulties and disadvantages which our troops had to overcome, further details of yesterday's fighting show that our first assault and the subsequent attacks were carried out in almost exact accordance with the timetable previously arranged. . . .

Following on the great care and thoroughness in preparations made under the orders of General Sir Herbert Plumer, the complete success gained may be ascribed chiefly to the destruction caused by our mines, to the violence and accuracy of our bombardment,

to the very fine work of the Royal Flying Corps, and to the incomparable dash and courage of the infantry. The whole force acted in perfect combination. Excellent work was done by the tanks, and every means of offense at our disposal was made use of, so that every arm of the service had a share in the victory.

"The British had to level many bits of woodland, and then they sprayed these woods with drums of blazing oil, which burned them away and made attacking across what would be considered impregnable natural defenses almost an easy matter. The communication trenches were so damaged that it was impossible for the Germans to make their way along them in daylight except on all fours. Ration parties attempting at night to come up over the open were badly cut up by the constant British fire.

Described by Philip Gibbs

Philip Gibbs, the war correspondent, cabled a vivid story on the day of the battle, saying in part:

"For five days at least many Germans were pinned to their tunnels as prisoners of fire. No food reached

them. There was no way out through these zones of death. A new regiment, which tried to come up last night, was broken and shattered. A prisoner says that out of his own company he lost fifty to sixty men before reaching the line. For a long way behind the lines the British heavy guns laid down belts of shell fire, and many of the enemy's batteries kept silent.

"The British gunners smothered the German batteries whenever they were revealed to the airmen. Those flying men have been wonderful. A kind of exaltation of spirits took possession of them, and they dared great risks and searched out the enemy's squadrons far over his lines. In five days from June 1 forty-four separate machines were sent crashing down, and this morning very early flocks of airplanes went out to blind the enemy's eyes and report the progress of the battle.

"In the darkness queer monsters moved up close to the lines, many of them crawling singly over the battle-fields under cover of woods and ruins. They were the tanks, ready to go into action on the great day of the war, when their pilots and crews have helped by high courage to a great victory.

"Last night all was ready. The men, knowing the risks of it all, (for no plans are certain in war,) had a sense of oppression, strained by poignant anxiety. Many men's lives were on the hazard of all this. The air was heavy as if nature itself was full of tragedy. A Summer fog was thick over Flanders and the sky was livid. Forked lightning rent the low clouds and thunder broke with menacing rumblings. Rain fell sharply, and on the conservatory of the big Flemish house, where officers bent over their maps and plans, raindrops beat noisily.

March Over Dark Roads

"But the storm passed and the night was calm and beautiful. Along the dark roads and down the leafy lanes columns of men were marching and brass bands played them through the darkness. Guns and limber moved forward at a sharp pace. "Lights out," rang the challenges of sentries to staff cars, passing beyond

the last village and nearer to the line. Masses of men lay sleeping or resting in the fields before getting orders to go forward into the battle zone.

"All through the night the sky was filled with vivid flashes of bursting shells and with the steady hammer-strokes of guns. From an observation post looking across the shoulder of Kemmel Hill straight to Wytschaete and Messines Ridge I watched this bombardment for that moment when it should rise into a mad fury of gunfire, before the troops, lying in those dark fields, should stumble forward.

"The full moon had risen, veiled by vapors until they drifted by and revealed all her pale light in a sky that was still faintly blue, with here and there a star. The moon through all her ages never looked down upon such fires of man-made hell as those which lashed out when the bombardment quickened. That was just before 3 o'clock.

"The drone of a night flying airplane passed overhead. The sky lightened a little and showed great black smudges like ink blots on a blue silk cloth where the British kite balloons rose in clusters to spy out the first news of the coming battle.

Ridges Go Up in Fire

"The cocks of Flanders crowed, and two heavy German shells roared over Kemmel Hill and burst somewhere in the British lines. A third came, but before its explosion could be heard all the noise there had been, all these separate sounds of guns and high explosives and shrapnel were swept into a tornado of artillery which now began.

"The signal for its beginning was the most terrible, beautiful thing, the most diabolical splendor I have seen in the war. Out of the dark ridges of Messines and Wytschaete and that ill-famed Hill 60, for which many of Britain's best have died, there gushed up enormous volumes of scarlet flame from exploding mines and of earth and smoke, all lighted by flame spilling over into fountains of fierce color, so that the countryside was illuminated by the red light.

"Where some of us stood watching, aghast and spellbound by this burning horror, the ground trembled and surged violently, too. Truly the earth quaked. A boy, who came back wounded, spoke to me about his own sensations: 'I felt like being in an open boat in the rough sea. It rocked up and down, this way and that.'

"Thousands of British soldiers were rocked like that before they scrambled up and went forward to the German lines—forward beneath that tornado of shells, which crashed over the enemy's ground with a prolonged tumult.

"Just as the day broke with crimson feathers unfolding in the eastern sky and flights of airmen, following other flights above the troops, rockets rose from the German lines. They were distress signals, flung up by men who still lived in that fire zone—white and red and green. They were calling to their gunners, warning them that the British were upon them. Presently there were no more of them, but others, which were ours, rose in places which had been German."

The Scene of Destruction

Two days later the same correspondent visited Wyttschaete Wood and looked down into the vast mine craters. Here is his description of the captured German trenches:

"They are horribly smashed, so that only bits of trench and a few traverses here and there and concrete emplacements, knocked sideways above the closed entrances of deep tunnels and dugouts, remained among the shell craters. Some bodies of German soldiers lie amid this vast midden of war, their dead faces as gray as their tunics—but not many of them. Most of those killed were buried as they died, buried under the masses of earth flung up by exploding shells, buried in their tunnels, which fell in upon them as they crouched under the drumfire of the British guns hiding deep in those subterranean chambers, buried by the wild upheaval of mines which opened the earth beneath them with yawning chasms a hundred yards wide and sixty feet deep.

"Bits of tunics, bits of rifles, rags and tatters of equipment, weapons and human flesh lie in holes and pools, protruding from rubbish heaps of the chaotic earth ravaged by British gunfire. Looking down into the mine craters, the vast Peckham crater or that by Maedelstede Farm, where the primitive blue clay had been flung up above the topmost strata, I agreed with that German officer who came back dazed as a prisoner and said: 'This is more than human nature itself can suffer.'

How the Mines Were Sprung

"On the night of June 7 the Australian tunnelers, who had waited for the moment when their year's work would be accomplished by the touch of a little spring on a metal plate from which an electric wire ran to a mine shaft below Hill 60, assembled in a dugout not far away. They waited for that moment at dawn with nerves strung tensely, deeply excited, though very quiet, at this frightful expectation. They knew exactly the explosive power of those tons of ammonal packed under the enemy's position. There was always the risk of misadventure, the appalling risk of failure, because it is tricky business, this work of a man-made earthquake.

"The metal disk was touched. In just one tick of time there was the noise of earth in travail, the rending, rushing noise breaking out into a vast roar, as though a cliff were falling down a precipice.

"Hill 60 opened and let forth a great eruption of flaming clods. Some English troops took Hill 60 after this explosion, which flung some of them to the ground as they rose at the signal of attack. Below Mount Sorrel and Armagh Wood groups of Württembergers and Jägers rose from holes in the stricken earth and held up trembling hands, asking for mercy. They still shook with terror of the mines. Not many of them showed any will to fight. Some of them had to be searched for below ground, cowering in dark pits which had been good, deep dugouts and observation posts with heavy concrete protection. Now all were smashed like those I saw by Wyttschaete Wood.

"Just south of these men, astride the Ypres-Comines Canal, a number of London troops were fighting forward to the ruins of a famous white château south of the canal on the west of Hollebeke. It was the Château Matthieu. The Germans here did not surrender without a desperate resistance."

Fighting in Rear Trenches

Another correspondent, describing the fighting in detail, says that Dam Strasse, a street of houses built of great blocks of concrete six feet thick, gave the British officers great anxiety, as they expected to meet stiff resistance here; but they found that the shellfire had been so amazing as to shatter many of these blockhouses, so that the garrison was cowed and surrendered by hundreds.

The first check came outside the ruin of an estaminet, in which a party of Germans with machine guns and rifles were determined to sell their lives dearly. They poured fire into the British, who suffered a good many casualties here, but would not be balked, whatever the cost. They took what cover they could and used their rifles to riddle the place with shot. One by one the Germans fell and their fire slackened. Then the British charged the ruins and captured all those who still remained alive.

Fresh waves of men came up and went forward into Ravine Wood, with its tattered trunks and litter of broken branches. There was another fight, very fierce and bloody, between some South Country troops and German soldiers of the Thirty-fifth Division, who attempted a strong counterattack. The Englishmen had their bayonets fixed, and at a word from the officers they made a quick, grim dash at the Germans advancing upon them through Dead Wood with their bayonets ready also. So that morning sun gleamed upon all this steel. The bayonets crossed. The men of Kent went through the enemy, thrusting and stabbing, but, though they saw red in that hour, they gave quarter to the men who dropped their rifles and cried "Kamerad." The German losses here were very heavy.

An eyewitness gives this account of the armored tanks and the marvels achieved by aviators:

"Several tanks came up to share in the fighting and climbed over all this broken ground, but did not find much work to do. All along the battle line these brown beasts were nosing about, crawling through the slough, pitching and tossing over the cratered earth and rearing their long snouts over sandbag barricades. Their pilots and crews were out for any kind of adventure over any kind of ground. They did not have many casualties and would have been more successful if the infantry had wanted more help from them, but the guns had done most of the work beforehand.

"The completeness of this victory, the march through of the troops, and the utter despair of the German troops were due in an overwhelming way to the guns and the gunners who served them. It is only right and just that the highest tribute should be paid to these men, who worked day and night for nearly a fortnight under an intense strain and infernal noise, without sleep enough to relieve the nerve rack, and always in danger of death. The gunner officers are hoarse with shouting under fire.

"They were for the moment hollow-eyed with bodily and mental exhaustion. The ammunition carriers worked themselves stiff in order to feed the guns. They used up an incredible number of shells. The gunners of one division alone fired 180,000 shells with their field batteries and over 46,000 with their heavies. On the same scale has been the ammunition expenditure of all the other groups of guns.

Guns Move to New Positions

"A historic scene, intensely thrilling, took place after the troops gained the high ground of Wytshaete and Messines. An order was passed along to all batteries. Horses standing by were harnessed to the guns, and limbers of the field batteries were lined up. Then half way throughout the battle the old gun positions were abandoned after two and a half years of stationary warfare in a salient searched every day of that time by German shells fired by direct observation from the ground just taken.

"The drivers urged on their horses. They drove at a gallop past the old

screens, and out of camouflaged places where the men had walked stealthily, and dashed up the slopes. The infantry stood by to let them pass, and from thousands of men, these dusty, hot, parched soldiers who were waiting to go forward in support of the first waves of the assaulting troops, there rose a great following cheer which swept along the track of the gunners and went with them up the ridge, where they unlimbered and got into action again for the second phase of the fighting down the further slope. Never before in this war has there been anything like this in excitement and sense of victory.

Amazing Feats of Aviators

"As the scouts of the gunners, as their watchers and signalers, were the boys of the Royal Flying Corps. They were uplifted with a kind of intoxication of enthusiasm, and youthful madness took possession of them. One man's flight, told in his own dry words, is like a wild nightmare of an airman's dream. He flew to a German airdrome and circled around. A German machine gun spat out bullets at him. The airman saw it, swooped over it, and fired at the gunner. He saw his bullets hit the gun. The man ceased to fire, screamed, and ran for cover. Then the airman flew off, chased trains and fired into their windows.

"He flew over small bodies of troops on the march, stopped, fired, and scattered them. Afterward he met a convoy going to Comines, and he circled over them hardly higher than their heads and fired into them. Near Warne-ton he came upon troops massing for a counterattack and made a new attack, inflicting casualties and making them run in all directions.

"Another man found himself under fire by Archies mounted on lorries. He dived and fired on the gunners, who ran away and hid. One flying man attacked

and silenced four machine-gun teams in strong emplacements. Others cleared trenches of German soldiers, who scuttled like rabbits into dugouts. They fired everything they carried, anything which would kill the enemy or destroy his material. Having used up all his Lewis gun ammunition upon the marching troops, one lad fired his signal rockets at the next group of men he saw.

"They flew at the field gunners and put them to flight, at heavy guns crawling along the roads on caterpillar wheels, at transport wagons, motor lorries, and one motor car, whose passengers, if they live, will never forget that sudden rush of wings four feet overhead, with a spasm of bullets about them. The airplane was so low that the pilot thought he would crash into the motor car, but he just planed clear of it as the driver steered it sharply into a ditch, where he overturned with the five occupants. The airman went on his journey, scattered 500 infantry, and returned home after a long flight, never higher than 500 feet above the ground.

"In this battle of Messines there was not anybody of the British Army who did not spend all his strength and take all risks with a kind of passionate exaltation of spirit. * * * It is the greatest and cheapest achievement of the British arms throughout this war, though the loss of so many gallant men is sad enough, God knows. And for the enemy it is as hard a blow as our taking of Vimy Ridge two months ago, when he was staggered by his losses."

The battle of Messines Ridge took from the Germans the last commanding natural position opposite the British lines. Bapaume and Vimy and Messines Ridges, as well as Monchy Plateau, five miles east of Arras, were all captured by the British within three months, and this has materially changed the military situation on the western front.

Storming of the Aisne Quarries

By Wythe Williams

[In a cable dispatch to THE NEW YORK TIMES, May 25, 1917.]

REGARDING the offensive on the Rheims-Soissons front, which began on April 16, 1917, I am permitted to state that it was the biggest concentrated effort yet made by the French Army, although at first glance it seemed to have accomplished less material result than any other offensive, except the long-ago offensive in the Champagne, which can be classified as a failure. I think all the army experts will admit that the result needs explanation. Yet, as the explanation was made to me while going over the ground, it was both logical and good, and in summing it up I believe that the offensive will in later histories be considered as a success.

In the first place, the ground chosen was the toughest proposition anywhere on the front, yet it was essential to take the offensive there, for the very reason that it was necessary to keep on bending back the line on which the Germans had already taken the initiative by their retreat.

I visited Soissons for the first time in September, 1914, just after the battle of the Marne and just at the beginning of the battle of the Aisne. * * * We talked confidently about when the Germans were once disengaged from their "quarries" and another retreat from the Aisne would begin, just as had happened from the Marne. But the Germans remained in those same quarries for two years and seven months. Day by day from September, 1914, more guns, bigger guns, concentrated their fire upon them; but they held out. Week by week, month by month, year by year, more guns and bigger guns and still bigger guns were added, until there was an unbroken line of guns that in April of this year opened the heaviest fire the world has ever known, pouring 18,000 tons of high explosives upon the quarries day after day; and still they held out—almost intact—

until they finally were taken by storm by the French infantry going up on the hill-sides wave after wave, driving out the Germans with bayonets and gas bombs.

I have often heard remarks in the last few weeks that the chief trouble with the recent offensive was that the artillery fire was ineffective. Yes, it was ineffective, but now that I have seen those quarries, I know why. Until the orders arrived for the infantry to advance and take those quarry heights "at all costs" the Germans were quite as safe there as in a submarine far below the surface of the sea.

Vast Underground Fortresses

I went down into one of the quarries. The opening was a tiny hole in solid granite. I went down and down in pitch blackness. The officer and I stumbled down, fumbling at solid rock walls. A soldier came up to meet us with an electric lamp, and below we could see a line of wooden steps, at least a hundred of them. Then we came into a great arched cavern that led into another similar one, and then to another, and then into long galleries and through dark, narrow passages, where we had to stoop low, only to come into other caverns with exits leading in various directions, and so on until, at least half a mile toward the German rear, from where we entered, we walked out again into daylight. That quarry alone was big enough to secrete 5,000 German soldiers, who poured from a dozen similar exits when the French infantry advanced.

Every gallery of these underground fortresses the Germans raked with machine guns when stormed. The artillery positions were so constructed that the guns could be whirled behind granite walls whenever necessary to avoid destruction by the concentrated French fire.

They were the strongest defenses I have ever seen. They made every other fortress, every trench line, every concrete

abri I have visited seem weak. And now they belong to the French—all of them. True, they were only a little way from the old front line, and now the front French line is just a little further beyond. The French paid dearly for them. Their orders were to capture them "at all costs." They simply had to have them, and now that they have them, it does not seem to me the offensive can in any respect be called a failure.

The positions on that front are now entirely reversed. Before the French had all the bad positions and the Germans the good ones in the quarries and on the hill crests. Besides, the French had the River Aisne at their backs, which was always an uncomfortable thought. Now the Germans have all the bad positions. They are down in the hollows and have another river—a branch of the Oise—behind them.

Also, in the offensive between Soissons and Rheims the French alone took 30,000 prisoners, while the entire offensive bagged 55,000 and a total of 600 cannon and 1,200 mitrailleuse.

In the light of the dwindling man power on both sides, 55,000 prisoners means nearly five divisions, and is considerable.

All along the line the French have undoubtedly got the upper hand. So far as I am able to learn their air service is once more supreme, and as for the artillery, both field and heavy guns are now positively dominant over the enemy, as has been the case, in fact, ever since the Somme.

Indeed so perfect is the munition organization that now every army corps has a supply station directly behind it, where there is a platform 350 yards long, just for discharging heavy shells, another platform the same length for light shells, another for engineers' supplies, another for macadam for roads, and another for food.

I was permitted to witness one of the engagements, beginning with the tuning up of the heavy guns until after the infantry had advanced—in this case up a steep hillside—and captured the positions. As drama it was the most superb I ever witnessed. On the opposite hill-

side, probably two miles distant, I stood with the General commanding the army corps who was conducting the operations. It was about 3 o'clock on a cloudy afternoon. I took a position sprawling on a grass patch at the top, with my back against a bush blending in color tone with my clothing, and got my glasses carefully adjusted for the performance about to begin. Although it was cloudy there was no haze, and the absence of sunshine made everything stand out more clearly.

An Impressive Stage Setting

The hillside dropped straight before us, and then, stretching away, was a great panorama of wooded valleys, meadows, a winding river, and a steep rise of a bare, shell-marked slope opposed. In the centre of the slope was the remnant of a town, but only a remnant. All we could make out was a few piles of stones against the red earth. Near the top of the hill ran a darkish line that marked the French trenches, and beyond, over the crest, were the Germans. In the valley at our feet, in the woods and meadows, were French cannon—but we could see none of them, all were so carefully concealed. Immediately overhead were a couple of large observation balloons, one attached by ropes to an automobile that guided it from a road on the side of our hill, the second guided from a boat in the river. All about circled airplanes, both observation machines and avions de chasse. There were at least a dozen, some keeping near the balloons and others swooping high and low over the German lines on the hill opposite.

There was a constant boom of cannon that, in connection with the cloudiness of the day, seemed more like the rolling of thunder than artillery—especially as the wind was away from us. We could not hear the sound of the shells leaving the guns until the reports first detonated across the valley. But we could constantly see the bursts of smoke where the shells were exploding beyond the crest.

But this thunder of guns was only a minor overture. The General explained that the real performance was scheduled to begin at exactly 3:30 P. M. I

asked how long it would last, and his laconic reply was: "Until we take their positions."

It is estimated that in that comparatively small sector of the contemplated attack—it was not more than a couple of miles in breadth—there were seven to eight hundred guns, but for this preliminary attack probably not more than 300 were in action. The remainder, reserved for the signal of infantry advance, would then turn on a barrage fire, so hot that the Germans could not bring up reinforcements.

The artillery had been pouring explosives into those German positions for several days, it was explained to me. Already they were all pretty badly demolished. It was not considered that the infantry would have much trouble—except from concealed machine guns. That was what the guns were hunting then. The Germans evidently knew what was coming, but I wondered, nevertheless, at the lightness of their artillery reply.

The day became darker, so dark, in fact, that down at our feet we could see bright flashes from the nearest guns. The General commanding the brigade leaned carelessly against a tree near me, holding a watch in his hand. * * *

I was fascinated by my watch as it ticked around to that fatal 3:30. At the very tick of the second a blast of fire went up that shook the hill we were sitting on. Those 500 remaining guns must all have been fired simultaneously, and then on until the end of the performance there was one continual, awful roar of explosive. The hillside opposite, which we could see so clearly a whole minute before, was now completely blotted out in a vast roll of heavy smoke. Even with the glasses we could distinguish absolutely nothing.

I looked down into the valley and the sparks of guns were so bright and fast I could not count them. The meadows and woods seemed alive with guns, distinguished only by rapid, short flashes of flame. I fixed my glasses on just one little portion of the open field and tried to count the flashes, but gave it up as quite impossible. There were too many

flashes from different portions of the field at the same second. It looked as though the field were suddenly alive with a swarm of fireflies—that fire was the winking of the guns as they sent out their shells.

All in Motion at the Signal

I glanced overhead. Simultaneously with the signal of attack both balloons sailed majestically forward until they now hung out before us over the valley, guided by the ropes that attached them to the automobile and the river boat. The fleet of airplanes, doubled in number, still circled about them and now swooped low over the German positions to report back how the infantry was getting on.

I looked across at the hillside. Just at the crest I could see three rockets going up. The officer explained that it was the infantry's signal to the artillerymen, asking them to place shells just in advance of that spot. At another point on the crest three more rockets appeared, then three more still further on.

Through that impenetrable bank of heavy smoke I tried to visualize the companies of infantry going up to the crest, meeting the enemy, hurling hand grenades, and using bayonets, finding fierce resistance where the machine guns were hidden, and then sending up their rockets to show their gunners behind just where to send them aid. And I noted that wherever the signal rockets went up almost immediately after there would come a great spurt of black smoke.

I went forward late the following afternoon, not to lines which even then were too unsafe, but behind them through the forest from which the Germans had been driven. It was a strange, unforgettable sight. The entire forest bed was of long, slender green leaves and tiny white flowers, lilies of the valley. Resting on a bed of green leaves, as far as one could see, were the bodies of German soldiers. A strange, compelling, and arresting odor filled the air, an odor indescribably sweet and unspeakably horrible. It was a combination of the lilies of the valley and the dead.

Emperor Charles's Throne Speech

In the Austrian Reichsrat on May 31, 1917

For the first time since the beginning of the war the Austrian Parliament at Vienna was convened by the Emperor on May 31 in the Grand Hall of Ceremonies in the Imperial Hofburg. Many Deputies appeared in picturesque national costumes, and the entry of Emperor Charles was greeted with three enthusiastic "hochs," which were repeated when he took his seat on the golden throne under a red and gold canopy, while the Empress and Archduchesses ranged themselves on the dais beside him. The Emperor read his speech in a resonant voice. It was his first Parliamentary address since his accession.

Emperor Charles began with an affectionate tribute to the memory of Emperor Francis Joseph, and continued:

SUMMONED in a fateful time to direct the State, I, from the beginning, have been conscious of the immense seriousness of the task Providence has laid on my shoulders. I feel, however, within me, the will and power loyally to discharge my duties as ruler, following the example of my illustrious predecessor, and to do justice, with God's help, to my sublime office.

The interests of the State shall no longer be deprived of that effective furtherance which zealous co-operation of a popular assembly rightly comprehending its power, judicious and conscientious, can provide. I have summoned you, honorable gentlemen, to exercise your constitutional activity, and I heartily welcome you today on the inauguration of your work.

In full consciousness of the constitutional duties taken over from my illustrious predecessor, and from my own deepest conviction, I desire solemnly to declare to you my unalterable will to exercise my right as ruler at all times in a truly constitutional spirit and to respect inviolably liberties according to the fundamental law and to preserve unabridged to the people that share in the formation of the State's will which the prevailing Constitution provides for.

In the loyal co-operation by my people and its representatives, I see support for the success of my activity, and I think that the welfare of the State, whose glorious existence has been maintained in the storms of a world war by the grim cohesion of its citizens, cannot in times of peace be more securely

rooted than in the unassailable rights of a mature, patriotic, and free people.

Mindful of my obligation to the Constitution and adhering to my intention expressed immediately on my accession to fulfill this obligation freely, I must at the same time keep in mind the provisions of the fundamental law which places in my hands alone the decisions to be taken at the great moment of the conclusion of peace. I am, however, convinced that a happy development of our constitutional life after the unfruitfulness of the past years and after the exceptional political conditions of war time—apart from the solution of the Galician question, for which my illustrious predecessor has already indicated the way—is not possible without expanding the Constitution and the administrative foundations of the whole of our public life, both in the State and in the separate kingdoms and countries, especially in Bohemia.

I trust that recognition of your serious responsibility for the formation of political conditions and your belief in the happy future of the empire, splendidly strengthened in this terrible war, will give you, honorable gentlemen, strength, in union with me, speedily to create conditions giving scope to free national and cultural development of equally privileged people. From these considerations I decided to postpone taking the constitutional oath until the time, which I hope is not far distant, when the foundation of a new, strong, and happy Austria will again for generations to come be firmly consolidated internally and externally.

Today, however, I declare I shall always be the just, affectionate, and conscientious ruler of my dear peoples in

the sense of the constitutional idea which we have taken over as a heritage from our forefathers and in the spirit of that true democracy which, during the storms of a world war, has wonderfully stood the ordeal of fire in the achievements of the entire people at home and at the front.

We are still in the midst of the mightiest war of all times. Let me, from your midst, with thankful heart offer my imperial greeting to all the heroes who for nearly three years on our far-flung fronts have loyally discharged the heavy duty, and on whose iron resistance between the Alps and the Adriatic the renewed desperate enemy attack even now is breaking to pieces.

Our group of powers did not seek the sanguinary trial of strength of this world war. Aye, more than that, it has, from the moment when, thanks to the imperishable achievements of the allied armies and fleets, the honor and existence of our States no longer appear seriously threatened, openly and without ambiguity made known its readiness for peace, guided by the firm conviction that the true formula of peace can only be found in the mutual recognition that the positions have been gloriously defended.

The future life of the peoples should, in our view, remain free from animosity and thirst for revenge, and for generations there should be no need to employ what may be called the last resource of the State. But this high aim of humanity can only be attainable by such a conclusion to the war as will correspond to that peace formula.

The great neighboring people to the east, to whom old friendship united us, is gradually becoming conscious of its true aims and tasks, and it lately appears to approach this point of view and seek from an obscure impulse a direction of policy which will save the treasures of the future before they have been devoured by a senseless war policy. We hope that, in the interest of humanity, this process of internal reformation will manifest itself externally in a strong development of will, and that such enlightenment of the public mind will also extend to the other enemy countries.

While our group of powers is fighting

with irresistible force for honor and existence, it is and remains toward every one who honestly abandons the intention to threaten us readily prepared to cease hostilities, and whoever wishes to reopen better and more human relations will certainly find our side ready in a conciliatory spirit. In the meantime, however, our fighting spirit will not relax; our sword will not become blunt.

In true co-operation with our old ally, the German Empire, and the allies whom our just cause won during the war, we shall remain ready to force, if necessary by arms, a good end to the war, which we should like to be able to attribute to a victory of reason.

I deplore the increasing sacrifices which the long duration of the war imposes on our population. I deplore the blood of my brave soldiers, the privations of brave citizens, and all the distress and hardships which are heroically endured for the sake of the beloved Fatherland. The efforts of my Government, supported by well-trained officials, are incessantly directed toward facilitating the maintenance of the population—whose loyalty to the State and public spirit find my thankful recognition—and toward guaranteeing that the stock of food will be made to go around by suitable organization. * * *

Always remember, however, that the strength of the monarchy is rooted not the least in its historic associations, and that only affectionate regard for it can maintain and develop its living strength. Therefore, I hope you will zealously cultivate a loyal sense of unity with the countries of my Hungarian holy crownland, which has recently proved itself one of the principal supports of the monarchy.

Honorable gentlemen of both houses, once again accept my cordial greetings. It is a great moment which brings a new ruler for the first time face to face with the people's representatives. May it be the beginning of a time of flourishing progress, a time of power and prestige for venerable Austria, and of happiness and blessings for my beloved peoples. God grant it!

War Aims of Allies Restated

RUSSIA'S revolution and the entry of the United States into the war brought about a restatement of the purposes of the war by the Allies. The Russian Council of Workmen's and Soldiers' Delegates had previously forced the Russian Provisional Government to modify its original declaration of its war aims by forcing the retirement of Milukoff and the entire reconstruction of the Cabinet, with the more radical Socialists in control. The declaration of the new Government was summed up in the phrase, "Peace without annexations or indemnities on the basis of the rights of nations to decide their own destiny." On June 5 this policy was again announced in a call for an international Socialist peace conference issued by the Russian Central Federations and Socialist Parties, accompanied by a demand that Russia's allies in the war restate explicitly their war aims.

The first response to this demand was made in the British Parliament by Lord Robert Cecil in reply to a question from a pacifist member of the body, Philip Snowden.

The debate was originated by Mr. Snowden, who moved the following amendment on May 16:

That this House welcomes the declaration of the new democratic Government of Russia, repudiating all proposals for imperialistic conquest and aggrandizement, and calls on his Majesty's Government to issue a similar declaration on behalf of the British democracy, and to join with the Allies in conformity with the Russian declaration.

Mr. Snowden wanted to know whether the treaty made with the old order in Russia was still binding or whether it had been rendered void by the revolution; also whether the British Government accepted the declared policy of the new Russian Government in regard to war aims.

Lord Cecil on Russia's Peace Program

The address of Lord Cecil in reply follows:

WHATEVER there may be in store for Russia in history, she will at any rate have the credit of having carried through, by practically the unanimous wish, so far as an outsider is permitted to judge, of the whole of her people and of every class of her people, a revolution which has been stained with far less bloodshed than any movement comparable with it in size. I am anxious to make that clear, because, of course, in dealing with this declaration, possibly some phrase might escape me which would appear to be a criticism. I am anxious to avoid any chance of that being said. It is quite true that the phrase which is thought to crystallize the new policy is the phrase, "No annexation and no indemnity." The honorable member for Leicester says that the word "annexation" is a mistranslation—at any rate, a completely wrong version

of what is meant. I am disposed to agree with him.

But what would the real policy of "no annexation" mean? Take Arabia. Arabia has declared its independence from Turkey. No human being would suggest that we should use our power of influence to place Arabia again under the domination of Turkey. Take Armenia. I do not know whether it is yet realized what Armenia really meant and what crimes were committed upon Armenia. Here is a statement which says:

"Of the 1,800,000 Armenians who were in the Ottoman Empire two years ago 1,200,000 have been either massacred or deported. Those who were massacred died under abominable tortures, but they escaped the longer agonies of the deported. Men, women, and children, without food or other provisions for the journey, without protection from the climate, regardless of age or weakness or disease, were driven from their homes

and made to march as long as their strength lasted or until those who drove them drowned or massacred them in batches. Some died of exhaustion or fell by the way; some survived a journey of three months and reached the deserts and swamps along the middle Euphrates. There they have been abandoned, and are dying now of starvation, disease, and exposure"—I am afraid they are dead now, because this was written some months ago. "A recent report tells of a group of survivors at Abu Herrera, mostly women, children, and a few old men, who had been without food for seven days."

The most imperialistic annexation would be of benefit to the people who suffered such crimes as that. Take the case of Syria and Palestine. Although in Syria the numbers are not so great, yet there in substance the same thing has taken place. I confess I have some hesitation in denouncing annexation if it means that no territory which has been taken by force during this war is not to be restored to its original owners. If that is what is meant, then I am certainly unable to accept the policy of no annexation. May I give a few examples? The favorite example referred to is that of the German African colonies. I do not say that we attacked the German African colonies in order to rescue the native from misgovernment. We did it as part of the war against Germany. I do not say that it would have been right in any circumstances to go to war in order to rescue the African population from misgovernment by Germany. But having rescued them, are you to hand them back? That is a very different question, which requires to be carefully considered.

German East Africa

Just let me read one or two descriptions, because I am not sure that this is always realized. This, for instance, is from a description given to us this year as to the treatment of carriers in German East Africa:

"Many carriers are dying of cold. The treatment of carriers lately by the Germans has been terrible; their carriers include our Indian soldier prisoners of war, and many wretched villagers, young

boys, old men, and women; in fact, they catch those who cannot run away. They chain them together, and just work them until they die of starvation and exhaustion. In following upon Wahle's track from Walangali to Lupembe we kept finding dead and dying carriers. Nor after an action do they trouble any more about their wounded Askari, but just leave them to die.

"The great aim of German policy in German Southwest Africa as regards the native is to reduce him to a state of serfdom, and, where he resists, to destroy him altogether. The native, to the German, is a baboon, and nothing more. The war against the Hereros, conducted by General Trotha, was one of extermination; hundreds—men, women, and children—were driven into desert country, where death from thirst was their end; those left over are now in great locations near Windhuk, where they eke out a miserable existence; labor is forced upon them, and, naturally, unwillingly performed. Again with the Hottentots—their treatment is still more barbarous, as the Germans are fully determined to root out that race lock, stock, and barrel."

I do not know, of course, and it is impossible to say, what we may not be forced to do at the end of the war; but if there is any measure of success I confess I should regard with horror the idea of returning natives who have been freed from a Government of that kind. What about Poland? I think we are all agreed that it was desirable to set up an independent Poland. Is there to be no annexation there? Are you to say really that Germany, having taken two provinces from France, they shall not be restored? Take Italia Irredenta. Are we really to commit ourselves to the proposition that under no circumstances would we restore to Italy provinces populated by Italians? I should regret any acceptance of short, misleading phrases. Mr. Whyte referred to another phrase—"No peace with the Hohenzollerns." There is a great deal in that that is very attractive to any ordinary British mind, but at the same time I agree with him that it is too attractive to be quite true—at any rate, to be quite prudent as a

definition of national policy. It may be quite true that it would not be a good ground for going to war to accomplish acts of justice and reparation such as I have described, yet it is quite a different thing to ask to resign and abandon the fruits which every one must recognize are desirable achievements.

"No Indemnity" Cry

About "No indemnity" I confess that for us to talk about not wishing for any indemnity seems to me a little difficult. What about Belgium? Does the honorable member say no indemnity to Belgium?

Mr. Snowden—We have always demanded as an essential of any settlement the restoration to Belgium of its independence, and not only that, but of all the damage that has been done.

Lord R. Cecil—What about Serbia? What about the northern provinces of France? Are we to rule out definitely all reparation for the destruction of peaceful merchant vessels by submarines? I certainly am not prepared to do it. Mr. Snowden said the allied Governments should rewrite their reply to President Wilson and issue a new note in very different terms. He proceeded to give a description of the note, which, indeed, I read in the German papers, but which is altogether at variance with the terms of the note. The one statement in the note which I suppose is objected to is that referring to the turning out of Europe of the Ottoman Empire. I remember the time when it was one of the greatest doctrines of the most progressive forces in this country that the Turks were to go out bag and baggage. It was only we benighted Tories who ever said anything for the Turks in those days. We are all agreed there is nothing to be said for the Turks now. If that is the only sentence which the honorable member thinks conflicts with the general spirit of the declaration made by the Council of Workmen, I cannot see that there is any ground for saying there is any substantial difference of opinion between any of those who have spoken in this debate. I confess that at this moment it does not seem to me that it would

be desirable for us to ask for terms of peace from Germany. There is a well-known French proverb, *Que messieurs les assassins commencent*, (let the murderers begin.)

Bethmann Hollweg's Speech

To judge by the German Chancellor's speech, there is no inclination on the part of the Germans even to state what terms of peace they are ready to accept. As far as I can see, what has happened in Germany now is what has happened in every domestic controversy in that country for the last forty or fifty years. There is a popular demand for some reform, an appearance by the Government that they are going to yield and make terms, a protest generally couched in very offensive terms from the Junker party, and an immediate surrender by the Government to the Junkers. That is really the meaning of Bethmann Hollweg's speech in the Reichstag yesterday, and until that spirit has been exorcised from Germany it appears to me to be ludicrous—apart from want of dignity—to suggest that we should ask for terms from the German Emperor.

We of the Allies are determined not to accept a peace that will be no peace. It must be a peace just and durable. I am a great adherent of the idea of a league of nations, but before there can be, in the most sanguine mind, the slightest expectation of its success, you must first establish a sound, just, equitable peace. The honorable member quoted some phrase about patriotism. I think the last word on that subject was said by Miss Cavell when she was under sentence of death. "Patriotism is not enough," she said. I agree; but you do not want less than patriotism; you want more—you want the condition, and this must be the foundation of any peace we make—justice, chivalry, respect for obligations, and respect for the weak. If we can secure peace founded on this central doctrine, I shall be glad to co-operate with any honorable member of the House to erect what barriers may be possible against the recurrence of a devastating war such as the present is.

President Wilson's Note to Russia

The Allies, however, seemed to have agreed that the formal reply should be made by the United States. This was done in a note cabled to Russia May 26, but its publication was delayed until June 10. The note follows:

IN view of the approaching visit of the American delegation to Russia to express the deep friendship of the American people for the people of Russia and to discuss the best and most practical means of co-operation between the two peoples in carrying the present struggle for the freedom of all peoples to a successful consummation, it seems opportune and appropriate that I should state again, in the light of this new partnership, the objects the United States has had in mind in entering the war. Those objects have been very much beclouded during the last few weeks by mistaken and misleading statements, and the issues at stake are too momentous, too tremendous, too significant for the whole human race to permit any misinterpretations or misunderstandings, however slight, to remain uncorrected for a moment.

The war has begun to go against Germany, and in their desperate desire to escape the inevitable ultimate defeat those who are in authority in Germany are using every possible instrumentality, are making use even of the influence of groups and parties among their own subjects to whom they have never been just or fair or even tolerant, to promote a propaganda on both sides of the sea which will preserve for them their influence at home and their power abroad, to the undoing of the very men they are using.

The position of America in this war is so clearly avowed that no man can be excused for mistaking it. She seeks no material profit or aggrandizement of any kind. She is fighting for no advantage or selfish object of her own, but for the liberation of peoples everywhere from the aggressions of autocratic force. The ruling classes in Germany have begun of late to profess a like liberality

and justice of purpose, but only to preserve the power they have set up in Germany and the selfish advantages which they have wrongly gained for themselves and their private projects of power all the way from Berlin to Bagdad and beyond. Government after Government has by their influence, without open conquest of its territory, been linked together in a net of intrigue directed against nothing less than the peace and liberty of the world. The meshes of that intrigue must be broken, but cannot be broken unless wrongs already done are undone; and adequate measures must be taken to prevent it from ever again being rewoven or repaired.

Of course, the Imperial German Government and those whom it is using for their own undoing are seeking to obtain pledges that the war will end in the restoration of the status quo ante. It was the status quo ante out of which this iniquitous war issued forth, the power of the Imperial German Government within the empire and its widespread domination and influence outside of that empire. That status must be altered in such fashion as to prevent any such hideous thing from ever happening again.

We are fighting for the liberty, the self-government, and the undictated development of all peoples, and every feature of the settlement that concludes this war must be conceived and executed for that purpose. Wrongs must first be righted, and then adequate safeguards must be created to prevent their being committed again. We ought not to consider remedies merely because they have a pleasing and sonorous sound. Practical questions can be settled only by practical means. Phrases will not accomplish the result. Effective readjustments will; and whatever readjustments are necessary must be made.

But they must follow a principle, and that principle is plain. No people must be forced under sovereignty under which it does not wish to live. No territory must change hands except for the purpose of securing those who inhabit it a

fair chance of life and liberty. No indemnities must be insisted on except those that constitute payment for manifest wrongs done. No readjustments of power must be made except such as will tend to secure the future peace of the world and the future welfare and happiness of its peoples.

And then the free peoples of the world must draw together in some common covenant, some genuine and practical cooperation that will in effect combine their force to secure peace and justice in the dealings of nations with one another. The brotherhood of mankind must no longer be a fair but empty phrase; it must be given a structure of force and reality. The nations must realize their common life and effect a workable part-

nership to secure that life against the aggressions of autocratic and self-pleasing power.

For these things we can afford to pour out blood and treasure. For these are the things we have always professed to desire, and unless we pour out blood and treasure now and succeed, we may never be able to unite or show conquering force again in the great cause of human liberty. The day has come to conquer or submit. If the forces of autocracy can divide us they will overcome us; if we stand together, victory is certain and the liberty which victory will secure. We can afford, then, to be generous, but we cannot afford, then or now, to be weak or omit any single guarantee of justice and security.

WOODROW WILSON.

Entente Peace Terms Defined

MORE precise definition of France's aims was given by the Chamber of Deputies on June 5, when, by a vote of 453 to 55, a resolution was adopted in the following terms:

The Chamber of Deputies, the direct expression of the sovereignty of the French people, salutes the Russian and other allied democracies, and indorses the unanimous protest which the representatives of Alsace-Lorraine, torn from France against their will, have made to the National Assembly. It declares that it expects from the war imposed upon Europe by the aggression of imperialist Germany the return of Alsace-Lorraine to the mother country, together with liberation of invaded territories and just reparation for damage.

Far removed from all thoughts of conquest and enslavement, it expects that the efforts of the armies of the republic and her allies will secure, once Prussian militarism is destroyed, durable guarantees for peace and independence for peoples great and small, in a league of nations such as has already been foreshadowed.

Confident that the Government will bring this about by the co-ordinated military and diplomatic action of all the Allies and rejecting all amendments, the Chamber passes to the order of the day.

Speaking to the resolution, Premier Ribot said:

When the hour for supreme decisions strikes it will be for representatives of the country to determine the conditions of peace. We wish to bring about the triumph of the rights of the peoples and the ideas of

justice and liberty. Do not let us be deceived by formulae whose makers hide themselves and who wish to spread the conviction that we seek conquest. We ask only that what is ours be returned to us. We demand that the provinces which never ceased to be French be restored to us.

The resolution which the Government asks you to pass demands a reparation, which none can contest, for appalling damages. The universal conscience will ratify these pretensions.

Appealing to what has been said by the President of the great Republic of the United States, we wish to establish in stable fashion justice and right for all nations, guarantees for tomorrow, for our children against the renaissance of barbarism. If we fall back into our old differences the danger might be great, but France united cannot be vanquished.

I ask you in the name of the Government, in the name of France, that your vote be unanimous.

British and Italian Aims

The following note was forwarded on June 11 by the British Government to the Russian Provisional Government's request for a statement of war aims:

In the proclamation to the Russian people inclosed with the note it is said that free Russia does not purpose to dominate other peoples or take from them their national patrimony or forcibly occupy foreign territory. In this sentiment the British Government heartily concur. They did not enter the war as a war of conquest; they are not continuing it for such object. Their purpose at

the outset was to defend the existence of their country and enforce respect for international engagements. To those objects have now been added that of liberating populations oppressed by alien tyranny.

They heartily rejoice, therefore, that free Russia has announced her intention of liberating Poland, not only Poland ruled by the old Russian autocracy but equally that within the dominion of the Germanic Empires. In this enterprise the British democracy wish Russia godspeed.

Beyond everything we must seek such settlement as will secure the happiness and contentment of peoples and take away all legitimate causes of future war.

The British Government heartily join with their Russian allies in their acceptance and approval of the principles laid down by President Wilson in his historic message to the American Congress. These are the aims for which the British peoples are fighting. These are the principles by which their war policy is and will be guided.

The British Government believe that, broadly speaking, the agreements they have from time to time made with their allies are conformable to these standards, but if the Russian Government so desire they are quite ready, with the allies, to examine and, if need be, to revise these agreements.

An official communication, dated June 13, which was received in Washington from the Italian Government read:

In Italian political circles it is felt that the attitude of the Allies toward Russia warrants them in questioning the Russian Government concerning intentions of Russia.

The message of President Wilson has so thoroughly cleared the situation it is impossible honestly to connect the alleged democratic views of the Russian Government with the pacifist advances of the Central Powers.

The consent on the part of England, in the name of all the Allies, to revise the conditions of the alliance excludes every pretext whatsoever of the Russian extremists of evading the duty to fight against Germany and Austria.

In view of these declarations of the Allies, it is felt that the Russian Government cannot further delay its decision in order to render the pro-German tendencies of a part of the Russian population vain.

Russia must free herself from the dangerous position she is in now, especially for the sake of Russian freedom.

This was supplemented by an unofficial statement made in Washington to the effect that the Entente Powers had carefully examined the situation and reached these conclusions:

1. That the position occupied by Russia affects the entire plans of the Allies, especially as regards military operations in the near future contemplated by England, France, and Italy.

2. That nothing Russia does can irreparably damage the cause or the interests of the Allies.

3. That Japan can be counted upon to prevent Russia from forming an alliance with Germany or with giving aid to the Central Powers.

Allies' Position Unsatisfactory to Russian Socialists

The replies of the Allies to the request for the war aims was not satisfactory to the Russian Socialists. Their newspapers acutely criticised the replies. The most important and decisive comment was printed June 15 in the *Ivestia*, the official bulletin of the Council of Workmen's and Soldiers' Delegates, in these words:

Mr. Wilson is mistaken if he thinks that such ideas can find reception in the hearts of a revolutionary people. The Russian revolutionary democracy knows very well that the road to the passionately awaited universal peace lies only through a united struggle of the laboring classes with the imperialists of the world. It is quite easy to understand what feelings will be called forth by the strange pretense of describing the ever-growing spirit of brotherhood and peace in the international Socialist, as also a German intrigue. The French and English notes will undoubtedly not call forth enthusiasm among the revolutionary democracy.

That these views represent the dominating thought of the party in control in Russia at the time was confirmed by the following reply to a letter from the Executive Committee of the Workmen's and Soldiers' Council addressed to it by Albert Thomas, the French Minister of Munitions; Arthur Henderson, British Minister without portfolio, and Emile Vandervelde, Belgian Minister of Munitions, expressing surprise that a call had been issued by the council for an international conference to consider peace before the negotiations between the British, French, and Belgian delegations and the council had been concluded.

"The Russian revolution," says the statement, "which is a revolt of the people not only against the tyranny of Czarism, but also against the horrors of the world war, the blame for which falls upon international imperialism, has placed before all countries, with extraordinary acuteness, the urgent need of concluding peace.

At the same time the Russian revolution

has indicated to the nations a way for realizing this problem, notably a union of all the working classes to combat all attempts of imperialism to prolong the war in the interests of the wealthy classes and to prevent peace without annexations or indemnities.

The working classes of all countries can easily come to a speedy solid agreement only if they are inspired with their own interests and remove the aspirations of imperialists and militarists, who often hide their true face under a seductive mask. It is evident that the conference can become the turning point in the terrible epoch of fratricidal war only if the members of the conference are imbued with these ideas. And it is no less evident that all the questions you have raised cannot be the subject of discord or a motive for a continuation of the war.

Having recognized the right of nations to dispose of their destiny, the members of the conference will come to an understanding without difficulty regarding the future of Alsace-Lorraine and other regions. Moreover, the working classes, relieved of the mutual distrust with which the imperialists have envenomed them, will agree regarding the means of granting compensation and the amount of such compensation to the countries devastated by war, like Belgium, Poland, Galicia, and Serbia. But it goes without saying that such compensation must have nothing in common with the contribution which is imposed on the conquered country.

Regarding your statement that it is impossible for you to break the secret union—this statement evidently is based on a misunderstanding, for the Council of the Workmen's and Soldiers' Delegates claims from no party as a preliminary condition the renunciation of the policy already pursued by it. The council expects from the conference of the Socialists of the belligerent and neutral countries the creation of an Internationale, which will permit all the working classes of the whole world to struggle in concert for a general peace and break the bonds which unite them by force to the Governments and the classes imbued with imperialistic tendencies which prevent peace.

The Council of the Workmen's and Soldiers' Delegates also considers it futile for parties to make it an absolute condition of their taking part in the conference that the preliminary consent of other parties shall be obtained to any obligatory decision, for that would give rise to irreconcilable contradictions on questions an amicable discussion of which might lead to a solution acceptable to both parties.

Regarding your desire to obtain a previous complete agreement between the allied Socialists, the way in which we put the problem renders futile any such understanding. We consider that the conference can succeed only if the Socialists consider themselves, not the representatives of the two belligerent

parties, but the representatives of a single movement of the working classes toward a common aim of a general peace.

Teutonic Efforts for Peace

The Central Powers' efforts to bring about a separate peace with Russia failed, despite the fact that the peace sentiment among the Russian people is both intense and widespread. One of the most daring peace moves made by Germany was that disclosed by the Council of Workmen's and Soldiers' Delegates on June 9. The council's statement read:

The Commander in Chief of the German armies on the Eastern front has sent to our troops a wireless message proposing to indicate to them a way toward an honorable peace and a means for ceasing to wage war without a rupture with the Allies. The German General talks this way because he knows that the Russian revolutionary troops would reject with indignation any overt proposal for a separate peace.

That is why the enemy Commander in Chief invites our armies to a separate armistice and proposes that we should enter into secret pourparlers with the German military leaders on the Eastern front. In his wireless telegram the German General declares that a separate armistice does not offer Germany any advantage. But this is untrue, for, in speaking of the inactivity of the German Army on the Russian front, the German General forgets what Russia cannot forget, notably the Russian defeat on the Stokhod. The German General has forgotten that the Russian troops know whither the divisions and heavy batteries are being taken from our front. The German General has forgotten that we in Russia hear the sound of the bloody battles which are being fought on the Franco-British front. He has forgotten that Russia knows that the overthrow of her allies would mean the overthrow of Russia and the end of her political liberty.

Further light was thrown on the peace manoeuvres of the Central Powers by the following dispatch, dated June 7, from Jassy, the temporary Rumanian capital, to The London Daily Chronicle:

Following up their earlier attempts in this region to seduce the Russian troops, the enemy on the Russo-Rumanian front has now sent delegates to demand an armistice preparatory to the discussion of peace terms. Over 100 delegates have arrived on the front of the Russian Ninth Army under the protection of a white flag. They include several officers—two of high rank, one being an Austrian Prince.

The delegates bore letters from General Roher, commanding the Austrian army group facing the Ninth Army, and also from German army commanders on the Rumanian

front, stating that the delegates are duly accredited, and that they have been dispatched with the full consent of the Austrian and German commanders. The peace envoys stated that they had been selected by the various Austrian divisions on the Rumanian front. There are no Germans among them.

The delegates, blindfolded, were taken into the Russian lines, where the regimental officers' and soldiers' committee claimed them, maintaining that it was the soldiers' right, under the new régime, to discuss and consider the question of an armistice. Ultimately the Russian soldiers' committee waived their claim, and the delegates were sent to the Ninth Army headquarters.

There the commander took a dignified attitude. He stated simply that he was a soldier and could therefore listen to no peace proposals, and said it was a matter for the Russian Government. He also refused the delegates' request that the Russians should appoint military delegates to arrange an armistice preparatory to the formulation by the Austrians of peace terms.

The Russian commander released two of the higher officers, including the Austrian Prince, and sent them back to the Austrian lines bearing a letter in which it was announced that he declined to entertain the request for an armistice, saying that he had no authority to negotiate, and adding that he intended to treat the envoys as prisoners of war.

Another peace move was that initiated by the German Catholic clergy. According to Mgr. Baudrillart, rector of the Catholic Institute in Paris, there was held at Olten on May 18 a meeting of

Swiss Catholics summoned by the German Centre Deputy Erzberger, (Mathias Erzberger, leader of the Clerical Centre in the Reichstag.) The latter obtained the assistance of Swiss Catholics with a view to taking action with the Entente bishops in favor of an early peace. A professor of international law of Lausanne was charged with the task of sounding the French Catholics, and even some of the French bishops. Others declared themselves sure of obtaining the support of certain Italian bishops.

On the other hand, the newly appointed Governor General of Belgium, General von Falkenhausen, in an interview published in Berlin on June 5, took up the position that it was no time to talk peace.

The Kaiser, in a speech to the Brandenburg troops a couple of days later, said:

The enemy is seeking a decision. We await it calmly, placing our trust in God, who heretofore has graciously protected and aided us. Our enemy will be compelled to sacrifice men until he is exhausted and lays down his arms.

You must hasten his exhaustion. When this is accomplished you will have won for the German people the position which they are entitled to occupy. Peace will be dictated through you.

Russia's Perilous Transition Stage

The Paralysis of Military Operations

RUSSIA was the scene of dramatic episodes during the month ended June 20, 1917. At times the situation seemed so critical that all except the most sanguine lost hope of avoiding anarchy or civil war between the radicals and conservatives. The first comforting word came on May 26 in the report that the All-Russian Council of Peasant Deputies, which consisted of real agricultural workers, with no politicians or professional agitators as members, had declared against a separate peace and demanded the vigorous prosecution of the war under a firm Government. Krensky, Minister of War, the outstanding

figure of the revolution in the firmness, consistency, and courage of his efforts for law and order and for fidelity to the Entente Allies, rose to the crisis; his eloquent patriotism aroused a popular response and prevented the complete collapse of the army and navy.

Complete economic collapse was threatened at the beginning of June by the exorbitant demands of labor. In many of the factories the demands by the workmen for increased wages were actually greater than the entire profits of the factories under the best conditions of production. The workmen, through their committees, were in virtual command of

the factories, and all business had to be submitted to them for approval. Wages in a majority of the factories were increased from 100 to 150 per cent. But there has yet been no offset by an advance in prices of the output.

In one of the works in Petrograd the workmen demanded the immediate payment of 13,000,000 rubles—normally \$6,500,000—to cover an increase of 15 kopecks per hour for each workman since the beginning of the war. The Directors of the organization immediately communicated with the Government and asked to be placed under voluntary arrest as protection against the threats of the workmen, which, as usual, accompanied the demand. The Directors were for two days housed in the Ministry of Justice. The Government finally informed the Directors that the matter would be considered, and, with the demand of the workmen held temporarily in abeyance, the Directors returned to the factory.

An eight-hour day was everywhere established. In eighteen metal establishments in the Donets district, with a capitalization of 195,000,000 rubles and annual profits of 75,000,000, the workmen had demanded an increase of 240,000,000 rubles. The owners had agreed to 64,000,000, but the workmen refused to accept this. In some of the works the owners decided to cede all the profits to the workmen, but this did not meet their exorbitant demands. The demands in Southern Russian factories aggregate 800,000,000 rubles. In the Urals the increase in wages demanded reaches 30,000,000 rubles, while the annual business does not exceed 200,000,000.

New Army Regulations

The disciplinary regulations of the Russian Army, as promulgated May 27 by the new Government, constitute a document of historic interest as betokening the attitude of advanced Socialists toward a national army. They are entitled "A Decree Regarding the Fundamental Rights of Men in the Fighting Services." The wording throughout is so chosen as to include every one, from Generals and Admirals down to drummer boys, in an absolute equality of rights. The decree is a document of eighteen

paragraphs. The first three lay down that all fighting services men shall enjoy all the rights of free citizens, but must regulate their conduct by the requirements of the service and of discipline. They are to have the right to belong to any political party and to speak, write, or publish anything whatsoever on any political, religious, social, or other subjects, within the scope of the ordinary laws. The fourth paragraph gives full religious freedom; no man is compelled to attend any forms of prayer anywhere.

The next two safeguard correspondence and printed matter: "All printed matter, periodical or otherwise, without any exception, must be delivered without hindrance to the addressees." The seventh allows the uniform to be discarded except when on actual service, with some exceptions as to garrisons in the war zone. The eighth paragraph runs: "The relations between fighting services men must be based, with strict regard for military discipline, upon the sentiment or dignity of citizens of free Russia and upon mutual confidence, respect, and politeness." The next three paragraphs abolish various details of service as formerly practiced, such as fixed formulas for replies to superiors, the use of soldier servants, orderlies, &c. The twelfth runs: "The compulsory salute, whether for individuals or commands, is abolished. For all fighting services men, in its place, is instituted a voluntary mutual greeting." Exception is made for such cases as parades and ceremonial occasions. The thirteenth gives freedom outside duty hours to quit barracks or ships on merely announcing such an intention to superiors.

The fourteenth says that no one can be subjected to punishment without trial, but in actual fighting conditions the superior has the right, on his own personal responsibility, to take all measures, even to the use of armed force, against such as do not fulfill his orders. The next three paragraphs relate to punishments, which must nowise offend against the sense of honor or dignity. A special note abolishes the form of punishment known as standing under arms. The use of any form of punishment ex-

cept such as is indicated in the code is a criminal act, for which the offender must be put on trial. No fighting services men can in any circumstances be subjected to physical punishment of any kind. The last paragraph alone contains some hint that commanding officers exist to command. By paragraph eighteen superiors have the right to make appointments and temporarily remove from appointments, and to issue orders concerning fighting activity or the preparations therefor, but all matters concerning the internal economy of the regiment or ship are in the hands of elective committees. These, by the regulations already published, consist of men and officers, the latter being limited to one-fifth of the number of men elected to a company or regimental committee.

Action of Soldiers' Delegates

On May 30 the Congress of Delegates from the front voted the following resolutions:

First, the army in the trenches declares that it is indispensable to take every measure to put an end as quickly as possible to the international carnage and conclude peace without annexation or indemnities, on the basis of the right of all nations to dispose of themselves, proclaiming at the same time the watchword, "Whoever wishes for peace must prepare for war."

Second, the army, pointing out that the Russian soldiers have been fighting hitherto under conditions infinitely worse than those of the Allies, that the Russian soldier has had to march almost unprotected against the enemy's bullets and break with bare hands the barbed wire entanglements, which the Allies and the enemy pass freely after artillery preparation, declares that the Russian front must be provided with munitions and everything necessary to maintain the principle, "The more metal, the less gun fodder."

In conclusion the congress declared that the army appealed to all to whom free Russia is dear to rally around the Council of Workmen's and Soldiers' Delegates and the Provisional Government and not to permit "adventurers to let the army become manure for foreign fields."

The Cossacks in the Ural district held a convention and passed a resolution to give their unqualified support to the temporary Government. They also issued an appeal to all citizens of free Russia to follow their example. Among the decla-

rations contained in the appeal were the following:

"You must remember that the enemy is watching our interior disorganization. Away with fraternization and disorders! We have only one front—our own and that of our allies. The army must not remain quiet, but must help the Allies by advancing."

Seizure of Kronstadt Fortress

A most serious step was taken June 1, when the Workmen's and Soldiers' Delegates defied the Provisional Government and decided to assume control of Kronstadt, the great fortress which defends Petrograd. Two days later it was announced that the Provisional Government had decided that firm measures must be taken to compel the seceders to yield, and two Cabinet Ministers were sent to Kronstadt.

A few days later it was announced that the matter had been adjusted and that the Provisional Government had re-established its authority there. The climax was reached in the crisis June 2, when a parade of armed anarchists calling for the Commune and war on capitalists marched through the streets of Petrograd carrying black banners inscribed: "Down with Authority!" "Long Live the Social Revolution and the Commune!" There was no interference from the authorities.

This seemed the turning point of the frenzy of unrest, for from that time the news became more reassuring.

On June 5 it was announced that General Michael V. Alexeieff, Commander in Chief of the Russian Armies, had resigned. General Brusiloff, Commander in Chief of the Armies of the Southwestern Front, was appointed to succeed him.

General Goutor replaced Brusiloff as commander on the southwestern front.

General Alexeieff was appointed Commander in Chief on April 15, soon after the retirement of Grand Duke Nicholas from that post. General Brusiloff a few weeks previously resigned from his position as Commander in Chief of the Armies on the Southwestern Front, but withdrew his resignation after a conference at Petrograd.

People's Call for Action

On June 8 the alliance of all Russian commercial, industrial, and banking institutions held its first meeting. After a discussion of the political situation and speeches by the Belgian Minister to Russia and representatives of the French Embassy it was unanimously resolved to address to the Entente Allies a declaration rejecting emphatically all possibility of Russia concluding a separate peace. The resolution also expressed confidence in an approaching decisive victory over the Central Powers.

A resolution calling upon the army to submit itself to discipline and defend revolutionary Russia was adopted by the Congress of Peasants in session on June 8, in these words:

The peasants aspire to an equitable peace without humiliating annexation or indemnity and with the right of each nation to dispose of itself. International relations and treaties should be submitted to the control of the peoples interested. Disputes should be settled by an international tribunal, and not by force. The congress approves the union of workers and appeals to the peasants of all countries to force their Governments to renounce annexations and indemnities.

The congress considers that it is its duty energetically to defend its country, recoiling before no sacrifices in order to sustain the fighting strength of the army and the struggle for the safety of the patrimony of the Russian people. The congress summons the army to submit itself to discipline and defend revolutionary Russia, of peasants, and workers. It grants its benediction to this war, and will not forget the blood which has been shed.

Minister of War Kerensky ordered that the resolution be read to all ranks of the army and navy. Two hundred girl students of the Petrograd Technical Institute entered their names on the rolls of a female regiment which was raised by Ensign Butchkareff. The aim is to start to the front and to fight in all respects under the same conditions as men. Scores of girls and women, anxious to fight, appeared at the offices of the League of Equal Rights for Women, which has expressed its approval of Lieutenant Butchkareff's plan.

The Constituent Assembly

On June 12 a council of sixty-one members under the Presidency of Kokashkine,

a member of the Duma, met to prepare for the Constituent Assembly. This Assembly will not only draft Russia's permanent Constitution, but will also solve certain immediate problems, the chief of which are the questions of nationalities and the conditions of the transfer of the lands of the nobles to the peasantry. In this preparatory council sat a group of constitutional specialists, also deputies from the army and from all the political parties, representatives of Jews, Ukrainians, Poles, and other races, and also a representative of the women, the famous feminist, Mme. Shishkin Yavein.

The voting age was fixed at 20, with secret, direct voting by both sexes, and 18 years for soldiers.

An important reform proclaimed June 12 is the introduction of the small unit of local self-government, in which all classes may participate equally. Heretofore the smallest of such units was the district Zemstvo, which administered a very large area, cantons and communes having purely peasant administrations. Henceforth the cantons will be administered by representatives of all classes voting equally.

These reforms, though they were proclaimed autocratically by the Provisional Government, were enthusiastically received, as they satisfy the historic national demands, which the former Government repeatedly promised, but never fulfilled.

It was decided to allow the former Emperor and members of the imperial family the privilege of voting.

On June 14, as evidence of the growing confidence of the Government, a decree was issued declaring all acts of military disorder to be insubordination, including refusal to fight and also incitement to fight against the Government. Such acts, says the decree, are punishable by long sentence to servitude in the penitentiary and the deprivation of rights to property and also the right to receive land under the coming land redistribution.

General Denikine, former Chief of Staff, was nominated to succeed General Gurko who had resigned his command of the armies on the western front.

The conflict caused by Finland's claim that the rights of the former Emperor as Grand Duke of Finland did not pass automatically to the Provisional Government was satisfactorily settled by a new law which will be valid until Russo-Finnish relations are permanently regulated by the Constituent Assembly. The right to decide all State transactions, excepting affairs affecting Russian subjects, and also the right to fill the date

for the opening and closing of the Finnish Diet is conceded to the Finnish Senate. Finland also gets the right of legislative initiative, the right to confirm the budget, revoke administrative decrees, summon the Ecclesiastical Council, and, finally, the right to pardon offenders, counted in almost all countries as a sovereign prerogative. The law practically confers on Finland complete internal autonomy.

The American Mission in Russia

THE American Commission to Russia headed by Elihu Root, former Secretary of State, reached Petrograd via Vladivostok on June 13. The commission was cordially received and housed in the former Winter Palace of the Czar.

On June 15 the American Ambassador, David R. Francis, presented the Root mission to the Council of Ministers in Marinsky Palace, explaining that the members of the mission had come to Russia to discover how America could best co-operate with its ally in forwarding the fight against the common enemy. The presentation was very informal. M. Kerensky, the Minister of War, just back from the front, wore the khaki blouse of a common soldier.

Mr. Root's First Address

The Ministers listened with rapt attention to Mr. Root's address, which was as follows:

Mr. President and Members of the Council of Ministers: The mission for which I have the honor to speak is charged by the Government and people of the United States of America with a message to the Government and people of Russia. The mission comes from a democratic republic. Its members are commissioned and instructed by a President who holds his high office as Chief Executive of more than 100,000,000 free people by virtue of popular election, in which more than 18,000,000 votes were freely cast, and fairly counted pursuant to law, by universal, equal, direct, and secret suffrage.

For 140 years our people have been struggling with the hard problems of self-government. With many shortcomings, many mistakes, many imperfections, we still have maintained order and respect for law, individual freedom, and national independence. Under the security of our own laws we have

grown in strength and prosperity. But we value our freedom more than wealth. We love liberty, and we cherish above all our possessions the ideals for which our fathers fought and suffered and sacrificed that America might be free.

We believe in the competence of the power of democracy and in our heart of hearts abides faith in the coming of a better world in which the humble and oppressed of all lands may be lifted up by freedom to a heritage of justice and equal opportunity.

The news of Russia's new-found freedom brought to America universal satisfaction and joy. From all the land sympathy and hope went out to the new sister in the circle of democracies. And the mission is sent to express that feeling.

The American democracy sends to the democracy of Russia a greeting of sympathy, friendship, brotherhood, godspeed. Distant America knows little of the special conditions of Russian life which must give form to the Government and laws which you are about to create. As we have developed our institutions to serve the needs of our national character and life, so we assume that you will develop your institutions to serve the needs of Russian character and life.

As we look across the sea we distinguish no party, no class. We see great Russia as a whole, as one mighty, striving, aspiring democracy. We know the self-control, essential kindness, strong common sense, courage, and noble idealism of the Russian character. We have faith in you all. We pray for God's blessing upon you all. We believe you will solve your problems, that you will maintain your liberty, and that our two great nations will march side by side in the triumphant progress of democracy until the old order everywhere has passed away and the world is free.

One fearful danger threatens the liberty of both nations. The armed forces of a military autocracy are at the gates of Russia and the Allies. The triumph of German arms will mean the death of liberty in Russia. No enemy is at the gates of America, but America has come to realize that the triumph of

German arms means the death of liberty in the world; that we who love liberty and would keep it must fight for it, and fight for it now when the free democracies of the world may be strong in union, and not delay until they may be beaten down separately in succession.

So America sends another message to Russia—that we are going to fight, for your freedom equally with our own, and we ask you to fight for our freedom equally with yours. We would make your cause ours, and, with a common purpose and mutual helpfulness of a firm alliance, make sure of victory over our common foe.

Mr. Root then added: "You will recognize your own sentiments and purposes in the words of President Wilson to the American Congress, when on the 2d of April last he advised a declaration of war against Germany," and he quoted from that address, closing as follows:

That partnership of honor in the great struggle for human freedom the oldest of the great democracies now seeks in fraternal union with the youngest. Practical and specific methods and the possibilities of our allies' co-operation the members of the mission would be glad to discuss with the members of the Government of Russia.

The Minister of Foreign Affairs, M. Terestchenko, who rose from a sickbed to attend the presentation, responded without notes, expressing great joy in welcoming the commission from America. He said that Russia's revolution was based on the wonderful words uttered by America in 1776. He read part of the Declaration of Independence and exclaimed:

"Russia holds with the United States that all men are created free and equal."

M. Terestchenko sketched the history of the Russian revolution briefly, saying that the Russians, enslaved for centuries, threw off all the old order just as the wind blows Autumn leaves from the forest. Russia now faces two problems, said the Minister, the necessity of creating a strong democratic force within its boundaries and the fighting of an external foe. Then he declared for war and expressed unbounded confidence in the power of Russia to meet the situation.

The text of President Wilson's note to the Russian Government explaining the aims of the Root Commission was made public June 18, and is as follows:

The High Commission now on its way from this country to Russia is sent primarily to manifest to the Russian Government and people the deep sympathetic feeling which exists among all classes in America for the adherence of Russia to the principle of democracy, which has been the foundation of the progress and prosperity of this country. The High Commissioners go to convey the greetings of this Republic to the new and powerful member which has joined the great family of democratic nations.

The Commissioners who will bear this fraternal message to the people of Russia have been selected by the President with the special purpose of giving representation to the various elements which make up the American people and to show that among them all there is the same love of country and the same devotion to liberty and justice and loyalty to constituted authority. The commission is not chosen from one political group, but from the various groups into which the American electorate is divided. United, they represent the Republic. However much they may differ on public questions, they are one in support of democracy and in hostility to the enemies of democracy throughout the world.

The commission is prepared, if the Russian Government desires, to confer upon the best ways and means to bring about effective co-operation between the two Governments in the prosecution of the war against the German autocracy, which is today the gravest menace to all democratic Governments. It is the view of this Government that it has become the solemn duty of those who love democracy and individual liberty to render harmless this autocratic Government, whose ambition, aggression, and intrigue have been disclosed in the present struggle. Whatever the cost in life and treasure, the supreme object should be and can be attained only by the united strength of the democracies of the world, and only then can come that permanent and universal peace which is the hope of all people.

To the common cause of humanity, which Russia has so courageously and unflinchingly supported for nearly three years, the United States is pledged. To co-operate and aid Russia in the accomplishment of the task, which as a great democracy is more truly hers today than ever before, is the desire of the United States. To stand side by side, shoulder to shoulder against autocracy, will unite the American and Russian peoples in a friendship for the ages.

With this spirit the High Commissioners of the United States will present themselves in the confident hope that the Russian Government and people will realize how sincerely the United States hopes for their welfare and desires to share with them in their future endeavors to bring victory to the cause of democracy and human liberty.

Fruits of Diplomatic Missions

Closing Addresses of French and British Envoys, and Summary of Their Work

MARSHAL JOFFRE and Vice Premier Viviani, with the other members of the French diplomatic mission to the United States, sailed secretly from New York in the night of May 15, and the world knew nothing of their departure until their safe arrival at Brest was announced on May 23. They traveled on the same French steamer that had brought them over, and were conveyed by a French warship. The State Department at Washington issued a note of appreciation to the press, which had imposed a voluntary censorship on itself, for having successfully withheld every detail of news that might have jeopardized the safety of the visitors.

The series of eloquent speeches delivered in the United States by René Viviani, head of the French mission, was recorded at length in the June issue of *CURRENT HISTORY MAGAZINE*, with the exception of the final one in New York, delivered at the official dinner of the Mayor's committee at the Waldorf-Astoria.

Viviani's Waldorf Speech

After paying a graceful tribute to New York and to the American people, M. Viviani recalled again the deeds of Joffre at the battle of the Marne, and continued:

Well, what did we make manifest to the whole world? Two qualities: One which all men knew who know the glorious traditions of France throughout the ages—dash, intrepidity, valor, contempt of death; but another quality was denied us, that of endurance, that of patience, that of quiet courage; the steady heart and unshaken nerves under the storm of shot and shell. Now, in two battles we combined both qualities as if we would offer them up to the whole world as a homage and a lesson. In August, 1914, we showed what dash French troops possessed in spite of weariness, in spite of the heat of an endless Summer, the exhaustion of three weeks' incessant fighting. Suddenly, miraculously, the whole French Army stood at bay and turned upon its enemy.

And the man who commanded that army had remained calm and impassive. Every evening he telephoned to me, who was then Premier of France, the result of the military operations; at this very moment I can hear his voice come to me over the wires, quiet, grave, unbroken by the slightest emotion. And that voice spoke its unflinching confidence in final victory in spite of all. And when the hour had struck, the moment came, the order was issued, was forwarded to the armies, the Generals; every officer read it to his men: "My children, here we stand. Halt and face the barbarians. Die to the last man rather than retreat another step!"

Such was French dash, French valor. It counted for nothing in German eyes. But the day came when the other virtue was shown, that on which they relied yet less. One day they dreamed Verdun could be taken, not because it was in itself the greatest prize; it would have been no victory—but to drive into France and impose peace—for our enemies think they can let peace loose on the world as they unchain war. And so German armies were piled up on the French front. It was impossible for us to advance against such odds. Our Generals spoke: "Children, not one step back; if you yield a yard, let every yard have its bloody cost for your enemy." And through the endless days and nights, under shot and shell, under the avalanche of shells that tore up the very earth, among their falling comrades, led by their officers, our men held fast, contesting every inch of ground, fighting for months and months without an instant's respite, checking the whole weight of the German Army. And now when we leave our land, when we say those two names—the Marne and Verdun—we mingle in one the two master virtues of our race—valor and patience, courage and endurance.

What yet remains to be done? For three long years the English and the French, sword in hand, have fought, not for England alone, not for France alone, but for humanity, for right, for democracy. For three long years the Russian soldiers in the northern snows, victorious in southern Europe, have fought for the same ideal; for two years seductive, virile Italy has scaled the Alps and shattered with its hands the stony barrier that stifled its liberty; for three years Serbia, murdered, trampled under foot ruthlessly, has fought; for three years heroic Belgium has maintained her honor against a perjured foe. For three long years we have striven, face to face with our enemy, tightened our grasp upon her throat, held our own.

And now, when we are still strong and undismayed, neither worn out nor doubting, still full of force and resource, comes free America to our side, radiant with its democratic ideals and ancient traditions, to fight with us. She read in President Wilson's incomparable message which has gone to the heart of every Frenchman the deep reasons why she could not but enter into this war. Yes; doubtless you had your slaughtered dead to avenge, to avenge the insults heaped on your honor. You could not for one moment conceive that the land of Lincoln, the land of Washington, could bow humbly before the imperial eagle. But not for that did you rise; not for your national honor alone; do not say it was for that. You are fighting for the whole world; you are fighting for all liberty; you are fighting for civilization; that is why you have risen in battle. And just now Mr. Choate said: "The English and French Missions are here to tell us what to avoid and what to do."

And your Mayor expressed in an accurate formula his generous conception of our relations when he said: "America is founded on French idealism and English common law." Nothing could be truer; it is all the truth; I can add nothing to his words. But I will tell you what you can do. You are remote from our battlefields; no Zeppelins can fly above your towns and scatter their bombs over the cradles of your innocent children; German ships are blocked in the Kiel Canal; they cannot defile your waters; at this distance you cannot hear the roar of the cannon. But can you imagine that you are not, in sooth, as close to us, in spite of distance, as we are to you—that Germany is not as near you as she is to us, that the peril is remote! No. The menace of Germany lies where Mr. Balfour so philosophically defined it. He told you that the menace of Germany lies in her scientific organization, and I will attempt to interpret his words in the spirit that prompted them. We are all agreed Prussian militarism must be crushed; so long as the world contains it there is no safety in it for democracy. But what is Prussian militarism? It was not born yesterday; it was not born in 1914. It is an ancient sore. It is the bestial and inhuman expression of a philosophy, the outcome of a whole race so madly intoxicated with conceit, that it imagines it is predestined to dominate the world, and is amazed to see free men dare to rise and contest its rights. And if you had not risen against it, it is not with artillery, not with shells, not with submarines, not with Zeppelins, you would have been attacked.

It is by the methods and spirit of Germany gradually filtering into your brains, impregnating invisibly your hearts, and little by little violating your souls and consciences. That was the hidden danger, the menace of Germany. You realized the peril, and you

have risen to face it, to fight a menace not to you alone, but to all civilization. Now all we free men are one in will. The hour for the liberation of all men has struck at last. All have risen in arms in the good fight, fought by us, by our children, to the bitter end. And we will never falter till victory crowns our aims. And when in far-off days after this war history shall tell why we fought, in days yet ringing with this strife, long after the voice of the cannon is silent, then impartial history shall speak. It will say why all the peoples arose in battle, why the free allied peoples fought. Not for conquest. They were not nations of prey. No morbid ambitions lay festering in their hearts and consciences.

Why then did they fight? To repel the most brutal and insidious of aggressions. They fought for the respect of international treaties trampled under foot by the brutal soldiery of Germany, they fought to raise all the peoples of the earth to free breath, to the ideal of liberty for all, so that the world might be habitable for free men—or to perish. And history will add: "They did not perish. They vanquished. They shattered the ponderous sword that German militarism aimed against the conscience and the heart of all free men." And thus together we shall have won the moral victory and a material one. It is that dawn I greet, that hour of fate I bow my head before. May the soul of Washington inspire our souls; may the great shade of Lincoln rise from its shroud. We are all resolved to battle till the end for the deliverance of humanity, the deliverance of democracy. Rise then, brother citizens, and lift your brows to the level of your flag!

Results of Conferences

Arthur J. Balfour, head of the British mission, delivered his farewell address before the National Press Club at Washington on May 24. The next day he and the other Commissioners crossed into Canada on their way home, after having spent six fruitful weeks in the United States, a longer period than any other Foreign Secretary had been away from London since the Napoleonic wars.

The situation in France depicted by M. Viviani and Marshal Joffre is believed to have been largely responsible for the American Government's decision to send at once an expeditionary force of about 25,000 men, a division of nine regiments of railroad engineers, and six base hospitals. The British visitors, having faced the same problems that now confront America in training large armies for foreign service, were able to clear away many doubts in technical matters.

The most important understandings arrived at were in trade matters. In general it was decided that the United States should give the Allies preferential treatment in commerce. It was agreed that all shipping, so far as possible, should be devoted to emergency transportation, with a view to defeating the German submarine campaign. British trade experts have worked out accurately the amount of ship tonnage needed to continue the flow of life necessities to England and France, and the Federal Shipping Board has a detailed program for meeting that need, with a priority schedule showing the order of importance of the various commodities and the minimum amounts necessary. A definite understanding was reached to cover both American and Canadian wheat for sale to the Allied Wheat Executive Committee, and arrangements were made for full Canadian co-operation through the proposed Food Administration Bureau.

Munitions control and purchase were similarly centralized through the Allied Buying Committee, although without price control. The Council of National Defense charged itself with so increasing manufacture as to provide for the American war army without cutting off exports vitally needed abroad.

It was agreed that the United States would co-operate as far as possible in maintaining the British blockade, and would participate through Consuls in the rationing of Holland and Scandinavia, with a view to preventing American products from reaching firms dealing regularly with the enemy.

The shipping problem, in view of the April ravages of submarines, was the most urgent of all, and the American shipbuilding program was speeded up as a direct result of the British representations on this subject. One of England's greatest shipping experts was summoned across the seas to supply more technical details than the mission possessed. Three members of the British party were left in Washington to continue work on trade problems. Conferences with General Goethals and Mr.

Denman of the Federal Shipping Board helped to shape the plans of that body. Many of the seized German ships were turned over to the French, Italians, and Russians upon the British statement that England had enough tonnage for herself and was strained only to meet the needs of her allies. The Shipping Board, however, decided not to pool all American shipping with the other allies in the International Committee in London, owing to the need of American imports from outside the war zone. Means for curtailing the wasteful use of ocean tonnage, which were communicated by the British envoys, have been embodied in a bill on that and kindred subjects now before Congress.

Balfour in Canada

The British mission remained in Canada until the end of May. The most striking address delivered there by Mr. Balfour was the one before the two houses of Parliament at Ottawa, in which he declared that the British Empire had "staked its last dollar on democracy," and continued:

I know the democracies of the Old World and the New will come out of this struggle, not merely triumphant in the military sense, but strengthened in their own inner life, more firmly convinced that the path of freedom is the only path to national greatness.

Foreign speculators about the British Empire, before the war began, said to themselves that this loosely constructed State resembled nothing that ever existed in history before, that it was held together by no coercive power, that the mother country could not raise a Corporal's guard in Canada, Australia, New Zealand, or wherever you will; that she could not raise a shilling by taxation.

She had no power except the power which a certain class of politician never remembers—the moral power of affection, sentiment, common aims, and common ideals. Even those of us who believed the new experiment of the British Empire was going to succeed felt it was difficult that so vast an empire, so loosely knit, should be animated by one soul, or that the indirect thrill of common necessity should go from end to end.

No greater miracle has ever happened in the history of civilization than the way in which the co-ordinated British democracies worked together with a uniform spirit of self-sacrifice in the cause in which they believed not merely their own individual security but the safety of the empire and the progress of civilization and liberty itself were at stake.

The Italian Diplomatic Commission

THE Italian War Commission, headed by the Prince of Udine, a cousin of the King, was officially received by President Wilson May 24. The members included the following: Prince Udine, eldest son of the Duke of Genoa; Senator Guglielmo Marconi, the inventor of wireless telegraphy; Marquis Birsarelli, Under Secretary for Foreign Affairs; Enrico Arlotta, Minister of Maritime and Railway Transportation, a leading banker of Italy; General Gugliemetti, Military Attaché; Commander Vannutelli, representing the Italian Navy; Alvisè Bragadini of the Transportation Department; C. Pardo of the Department of Industry and Commerce; Gaetano Pietra of the Agricultural Department, and Deputies Ciuffelli and Nitti, former Ministers.

In his formal address to the President, the Prince of Udine said:

I am proud, indeed, Mr. President, belonging as I do to a house which has never conceived royal power otherwise than associated with the most complete liberty of the people, to have been chosen, together with the gentlemen of this commission, to greet you on behalf of my King and cousin. You will read the message which the King of Italy, a faithful interpreter of our country's thought, has addressed to you. Permit me, however, to express the great sympathy and deep admiration which I feel for this great and noble country.

As an Italian, a sailor and a Prince, I consider it a happy omen that I and my colleagues, who have been chosen by the Government from among the worthiest, should be the symbols of the fulfillment of a sincere aspiration of ours. I rejoice that Italy is now united in a brotherhood of arms with the American people and that it will always in the future be united with them by common ideals for the carrying out of the work of liberty and of civilization.

The first conferences with the American Government were held May 28.

The problem of transporting coal to Italy was the most important feature of the discussions. Italy, it was said, needed coal to assure the continued manufacture of guns and ammunition and the maintenance of war industries which had been created since the outbreak of hostilities with Germany. Italy, it was as-

serted at the conference, was not in urgent need of foodstuffs, but did need coal, iron, lumber, agricultural machinery, locomotives, and railroad equipment.

If Italy could obtain coal in the United States it was said that her problem of making brick for use in the construction of mountain dugouts and trenches would be solved. She had heretofore imported brick from the United States because she could not afford to utilize her meagre coal supply in their manufacture.

The American representatives were informed that the industries of Italy had grown during the war. Italy, it was said, was at this time making her own guns, and they had proved to be as effective as those manufactured by the French and Austrians.

Following the conference it was announced that an ample quantity of coal and some other supplies had been assembled at certain ports and were ready for shipment whenever vessels could be obtained.

Prince Udine to the Senate

The Prince of Udine and the Italian mission were received on the floor of the United States Senate May 31. In his address to the Senate he said:

The message of your President, as our sovereign has said, is worthy, by the nobility of its conceptions and the dignity of its form, to rank with the most inspiring pages in the history of ancient and immortal Rome. It was greeted with the enthusiasm of faith when it made clear the objects of the war and defined the aims of American action.

By proclaiming that right is more precious than peace; that autocratic Governments, supported by the force of arms, are a menace to civilization; by affirming the necessity of guaranteeing the safety of the world's democracies; by proclaiming the right of small nations to live and to prosper, America has now, through the action of her President, acquired a title of merit which history will never forget.

Italy entered into the war with aims equal to those which you pursue. Her territory had not been invaded, her insecure boundaries had not been violated. Our people understood that the sacrifice of free nations was the prelude to their own sacrifice, and that we could not remain indiffer-

ent without denying the very reasons of our existence.

Italy wants the safety of her boundaries and her coasts, and she wants to secure herself against new aggressions. Italy wants to deliver from long-standing martyrdom populations of Italian race and language that have been persecuted implacably, and are nevertheless prouder than ever of their Italian nationality. But Italy has not been and will never be an element of discord in Europe, and as she willed her own free national existence at the cost of any sacrifice, so she will contribute with all her strength to the free existence and development of other nations.

By increasing the ruthlessness of submarine warfare and thus rendering navigation unsafe and dangerous, our enemies hope to win the war by increasing misery and suffering. They hope that our powerful ally, Great Britain, will lack food; that France will lack food and men, and that Italy will lack especially food, and that which is more important, coal for the war, for industries, and for railways. The problem of shipping is for all of us the greatest problem of the war.

With our united efforts we shall vanquish all these difficulties, and that which the force of arms, secretly prepared and unexpectedly employed, was not able to accomplish, will not be accomplished by disloyal means on land and water. We shall triumph over all these difficulties if we continue our efforts in brotherly agreement, united by the great duty which we now have voluntarily taken upon us for a cause which is superior to all worldly interests, and which partakes of an almost divine nobility.

The mission of which I have the honor to be the head and in which there are representatives of the Senate of the kingdom, of the Chamber of Deputies, and members of the Government, desires to express through me the liveliest sympathy to the representatives of the American people.

The mission was officially received by the House of Representatives June 2 and the Prince delivered an address expressing warmest appreciation of America's entry into the war, which gave an

assurance of victory. An address was also delivered by Senator Marconi.

The mission was hospitably entertained in various cities.

State of Italian Finances

A résumé of the Italian financial condition before the United States entered the war and granted a loan of \$100,000,000 to the Government at Rome showed that Italy had spent up to Dec. 31, 1916, \$2,783,075,040 for the War Department and \$156,198,335 for the Navy. For the departments of Commerce, Agriculture, Transportation, Colonies, Interior, and Treasury the expenditures amounted in the same period to \$3,200,000,000.

Comparing the future expenditures and the income of the nation, it was calculated that the income would be about \$80,000,000 larger than the expenditures. This result was attained by sound financing, together with the imposition at that time of new taxes. The total loans raised by Italy up to June 15, 1917, during the war is about \$3,000,000,000, chiefly at 5 and 5½ per cent.

Viterio Scialoia, a member of the Italian Chamber, in an address to the American people delivered at Rome June 7, expressed the warmest appreciation of the reception given the mission by the American people, closing with these words:

"The alliance between Italy and America will lead to new and greater commercial relations, new sympathy in spirit and in common political actions with a view to realization of conditions of liberty for the peoples who still suffer from the violence imposed upon their nations by tyrannical Governments, such as Austria, or from violent conquest, such as the conquests of Germany. All this will be a solid basis for the relations of the future, which can never be shaken, as it is impossible to see how even the slightest of differences could arise.

The Facts Supporting President Wilson's War Message

THE historic message of President Wilson, delivered before Congress on April 2, 1917, has been officially published by the Government, with annotations giving the leading facts on which the rupture with Germany was developed, citing the issues in international law, and contrasting the spirit of Prussianism and Americanism. This publication is to be distributed to the schools throughout the country.

In a foreword it announced that the editorial annotations are the work of Professor William Stearns Davis of the History Department of the University of Minnesota, assisted by Professor C. D. Allin and Dr. William Anderson. The official sponsor for the publication adds:

The message is the best possible preparation for all loyal Americans who are studying the causes and justification for the present war, and who are trying to discover the proper mental attitude they themselves should take toward the personal part which they may be called to play in the struggle. * * * Mr. Wilson contrasts the American and Prussian political philosophy and methods of doing things in a way that would become even more convincing if he had been allowed time to enter into specific details. Solemn official promises made only to be broken, conspiracies to burn and blow up American industries, to hamper our manufactures and cripple our Government by strikes and riots, spies in every centre of political and industrial activity, plans made on American soil and financed by German funds to dynamite canals, bridges, and munition factories in Canada, invitations to Mexico in times of peace to join with Germany in dismembering our Union, have led people and President alike to see submarine warfare as but a more flagrant expression of a German State policy running amuck in absolute disregard of every sense of national and international morals and decency and callous to the claims of common humanity.

A military autocracy astride the ruins of Europe and dominant on the seas by virtue of an arm that both serves and reveals its ambitions and irresponsibility has forced America to accept its challenge. A new Monroe Doctrine must be defended on the pathways of the seas and in the fields of Flanders if the Western World is to be preserved as the citadel of a free-developing, forward-looking democracy.

CURRENT HISTORY MAGAZINE, May, 1917, published the official text of the President's war message. Professor Davis's annotations are here reproduced, with brief references to the sentences commented upon. Thus the annotations are here woven into a consecutive thesis, elucidating and amplifying the war message. In explaining the President's opening reference to his choices of policy, which he could not adopt constitutionally without Congressional advice, the editors remark:

There had been only two other periods in the history of the country equally serious—1776 and 1861. Nobody can pretend that there have been any other crises in American history (barring the Revolution and the civil war) when so much that citizens of this country count dear has been at stake. The War of 1812, the Mexican and Spanish wars seem as child's play beside the present exigency. Now, as this message makes clear, the very liberties of the world and the possibilities of peaceful democracies are at stake. If Germany should win this war, and thus become supreme on land and sea, the very existence of free democracies would be imperilled.

President Wilson had the sworn duty to lay the facts before Congress and recommend to it the needful action. The Constitution of the United States prescribes his duties in such emergencies.

It is worthy of note that the Constitution lays this duty and power of declaring war directly upon Congress, and that it can not be evaded by Congressmen by any referendum to the voters, for which not the slightest constitutional provision is made.

Congress performed this duty by voting on the war question as requested. The vote of the Senate was 82 to 6 for war; of the House 373 to 50. Such comparative unanimity upon so momentous a question is almost unparalleled in the history of free nations.

Beginning of Ruthless Policy

The President's reference to the adoption of unrestricted submarine warfare by the German Government is commented upon as follows:

The German Chancellor in announcing this repudiation of all his solemn pledges in the Imperial Parliament, [Reichstag.] on Jan. 31, frankly admitted that this policy involved "ruthlessness" toward neutrals. "When

the most ruthless methods are considered the best calculated to lead us to victory and to a swift victory * * * they must be employed. * * * The moment has now arrived. Last August [when he was, as he himself here admits, allowing the American people to believe that in response to its protest he had laid aside such ruthless methods] the time was not yet ripe, but today the moment has come when we can undertake this enterprise."

And the promise of the German Government, withdrawn on Feb. 1, is referred to in these terms:

The broken Sussex pledge. On May 4, 1916, the German Government, in reply to the protest and warning of the United States following the sinking of the Sussex, gave this promise: That "merchant vessels both within and without the area declared a naval war zone shall not be sunk without warning, and without saving human lives, unless the ship attempt to escape or offer resistance."

Germany added, indeed, that if Great Britain continued her blockade policy, she would have to consider "a new situation."

On May 8, 1916, the United States replied that it could not admit that the pledge of Germany was "in the slightest degree contingent upon the conduct of any other Government," (i. e., on any question of the English blockade.) To this Germany made no reply at all, and under general diplomatic usage, when one nation makes a statement to another, the latest statement of the case stands as final unless there is a protest made.

The promise made by Germany thus became a binding pledge, and as such was torn up with other "scraps of paper" by the German "unlimited submarine warfare" note of Jan. 31, 1917.

Regarding the President's references to the "cruel and unmanly business" of sinking merchant ships, and the "certain degree of restraint" observed at that time, the editors cite these facts:

As to the proper usages in dealing with merchant vessels in war, here are the rules laid down some time ago for the American Navy, (a fighting navy, surely,) and these rules hardly differed in other navies, including the Russian and Japanese:

United States Naval War Code, on treatment of merchant vessels stopped or captured by American men-of-war, (1900 ed., P. 48:)

"The personnel of a merchant vessel captured as a prize are entitled to their personal effects.

"All passengers not in the service of the enemy, and all women and children on board such vessels, should be released and landed at a convenient port at the first opportunity.

"All persons in the naval service of the United States who pillage or maltreat in any manner any person found on board a mer-

chant vessel captured as a prize shall be severely punished."

United States Naval War College, "International Law Topics," 1905, Page 6: "If a seized neutral vessel cannot for any reason be brought into court for adjudication it should be dismissed."

United States Naval War Code, on safety required for persons on a captured vessel, (United States Naval War College, "International Law Topics," 1913, Page 165:) "The destruction of a vessel which has surrendered without first removing its officers and crew would be an act contrary to the sense of right which prevails even between enemies in time of war."

And also Lawrence, (standard authority on international law,) "International Law," Page 406: "It is better for a naval officer to release a ship as to which he is doubtful than to risk personal punishment and international complications by destroying innocent neutral property."

Sinking of Hospital Ships

The President's reference to the sinking of hospital and relief ships was elaborated as follows:

Mr. Wilson was undoubtedly thinking of the cases of the British hospital ships *Asturias*, sunk March 20, and the *Gloucester Castle*. These vessels had been sunk although protected by the most solemn possible of international compacts. The Germans seem to have acknowledged the sinking of the *Asturias* and to have regarded their feat with great complacency. Somewhat earlier in the war the great liner *Britannic* had been sunk while in service as a hospital ship, and the evidence seems to be it was torpedoed by a U-boat, although the proof here is not conclusive. Since this message was written the Germans have continued their policy of murdering more wounded soldiers and their nurses by sinking more hospital ships.

The Belgian relief ships referred to were probably the *Camilla*, *Trevier*, and the *Feistein*, but most particularly the large Norwegian steamer *Storstad*, sunk with 10,000 tons of grain for the starving Belgians. Besides these sinkings, two other relief ships—the *Tunisie* and the *Haelen*—were attacked unsuccessfully.

And to his words, "I was for a little while unable to believe that such things would in fact be done by any Government that had hitherto subscribed to humane practices of civilized nations," this note was added:

No nation assuredly has made prouder claims than Germany to a superior "kultur," or made louder assertions of its desire to vindicate "the freedom of the seas."

His sentence referring to the "wanton and wholesale destruction of the lives of

noncombatants, men, women, and children, engaged in pursuits which have always, even in the darkest periods of modern history, been deemed innocent and legitimate," is elucidated in these words:

Mr. Wilson could have gone further back than "modern history." Even in the most troubled period of the Middle Ages there was consistent effort to spare the lives of non-belligerents. Thus in the eleventh century not merely did the Church enjoin the "truce of God" which ordered all warfare to cease on four days of the week, but it especially pronounced its curse upon those who outraged or injured not merely clergymen and monks, but all classes of women. We also have ordinances from this "dark period" of history forbidding the interference with shepherds and their flocks, the damaging of olive trees, or the carrying off or destruction of farming implements. All this at a period when feudal barons are alleged to have been waging their wars with unusual ferocity.

Contrast also with the German usages this American instance:

On May 12, 1898, Admiral Sampson with the American fleet appeared before Santiago, and conducted a reconnaissance in force to see if Cervera's squadron was in the port, but he did not "subject the city to a regular bombardment" because that "would have required due notice" for the removal of the women, children, and the sick. He did this notwithstanding the fact that a sudden attack, well driven home, would probably have given him the city. In the attack on the forts alone, which he actually made, his ship Captains were carefully charged to avoid hitting the Spanish Military Hospital. (See H. Doc. No. 12, Fifty-fifth Congress, Third Session, Page 368.)

No one certainly has ever accused the American Navy of "hitting soft" or of being unwilling to wage the most strenuous kind of honorable warfare.

American Vessels Destroyed

President Wilson's brief reference to the sinking of American ships calls for this definite list:

American vessels sunk by submarines following German decree of ruthless submarine policy, Jan. 31, 1917.

Following eight or more American vessels which had been sunk or attacked earlier, in most cases in contravention to international law, these ships also had been sunk following the repudiation of her pledges by Germany:

Feb. 3, 1917, Housatonic.

Feb. 13, 1917, Lyman M. Law.

March 16, 1917, Vigilancia.

March 17, 1917, City of Memphis.

March 17, 1917, Illinois.

March 21, 1917, Healdton, (claimed to have been sunk off Dutch coast, and far from the so-called "prohibited zone.")

April 1, 1917, Aztec.

March 2, 1917, Algonquin.

Furthermore, no American should forget the sinking of the William P. Frye on Jan. 28, 1915, by a German raider. This act under normal circumstances would be a *casus belli*. The raider, the Prinz Eitel Friedrich, then impudently took refuge in an American port.

And the American lives lost in such sinkings are summarized as follows:

American lives lost on the ocean during the war. (See Cong. Rec., 65th Cong., 1st sess., p. 1,006.)

American lives have been lost during the sinking of at least twenty vessels, whereof four were American, one Dutch, and one Norwegian. In one or two cases the vessel tried to escape and made resistance, and the loss of life was possibly excusable for the Germans. In the bulk of the cases the destruction was without fair warning and without reasonable effort to give the passengers and crew chance to escape.

Among the more flagrant cases were:

May 7, 1915, Lusitania, 114 Americans lost.

Aug. 19, 1915, Arabia, 3 Americans lost.

Sept. 4, 1915, Hesperian, 1 American lost.

Oct. 28, 1916, Marina, 8 Americans lost.

Dec. 14, 1916, Russian, 17 Americans lost.

Feb. 26, 1917, Laconia, 8 Americans lost.

March 16, 1917, Vigilancia, 5 Americans lost, (United States.)

March 21, 1917, Healdton, 7 Americans lost, (United States.)

April 1, 1917, Aztec, 28 Americans lost, (United States.)

Some on Aztec probably not American citizens, although she was a regular American ship.

In all, up to declaration of war by us, 226 American citizens, many of them women and children, had lost their lives by the action of German submarines, and in most instances without the faintest color of international right.

Losses of Other Neutrals

The President's reference to the destruction of "ships and people of other neutral and friendly nations" is supplemented with these facts:

The Norwegian Legation at London has announced that during February and March, 1917, 105 Norwegian vessels of over 228,000 tons have been sunk, and 106 persons thereon killed, and 222 are missing.

On Feb. 22, 1917, seven Dutch vessels which left an English port on promise of "relative security" from the Berlin authorities, were all attacked by German U-boats and six of them were sunk. Germany has admitted that its boats did the deed, and has expressed "regrets" to Holland, although adding blandly "the incident proves how dangerous it is to navigate the prohibited zone, and gives expression to our wish that neutral

navigators remain in their ports." As a result of this policy of terrorism, the ships of Holland have been practically driven off the seas. Many of them have taken refuge in the harbors of the United States.

Spaniards have been exasperated by the destruction of their vessels, the most recent instance being that of a Spanish ship, with a Spanish cargo, sunk in Spanish waters. Swedish overseas commerce is practically ruined by the fear of their owners at the indiscriminate ruthlessness of the submarine.

The United States Government made an official estimate that by April 1, 1917, no less than 668 neutral vessels had been sunk by German submarines since the beginning of the war. This did not include any American vessels. (New York Times History of the War, May, 1917, pp. 241 and 244.)

"The challenge is to all mankind. Each nation must decide for itself how it will meet it." To these words of the President's war message Professor Stearns adds this summary of what other nations have done:

Practically all the civilized neutral countries of the earth have protested at the German policy. Some, like Brazil, China, Bolivia, and Guatemala, have broken diplomatic relations with Germany.

The neutral States of Europe, fearful of being caught in the horrors of the great war, have protested just as far as they have dared. Holland and Denmark may, of course, at any time see a German army over their borders. Norway and Sweden are hardly in a safe position, but they have made their vehement protest at the German outrages. Spain, which had exercised a forbearance similar to that of the United States, has finally, after futile protests, been obliged (May 18, 1917) to send Germany a note in the nature of an ultimatum, demanding reparation for the past and guarantees for the future.

The statement that the motive of the United States in going to war would be "only the vindication of right" is elucidated thus:

Submarines are such exceptional instruments of warfare that it is held by authorities on international law that they ought never to submerge in neutral waters, otherwise it is impossible for a neutral to control them and be responsible for them as with ordinary visiting warships.

Says Professor Theodore S. Woolsey of Yale, a very high authority:

"I think there can be no doubt that the U-boat is to be regarded as a surface cruiser with no additional rights and privileges and with the same duties and liabilities. Hence in neutral waters it should not submerge. Submergence imperils neutrality by making the performance of neutral duties more ardu-

ous and the evasion of neutral rights easier." (American Journal of International Law, January, 1917, p. 139.)

Arming Merchant Vessels

Concerning armed neutrality and its present impracticability in defending our right to use the seas without suffering "unlawful violence," this comment is offered:

In 1798, on account of the attacks on our commerce by French cruisers and privateers, Congress empowered President John Adams to arm merchant vessels, to let them defend themselves, and to let our warships attack the offending French vessels.

There were several really serious naval battles, (especially when the U. S. S. Constellation took the French frigate *L'Insurgente*, 1799,) and international experts are of the opinion that very probably an actual state of war existed. In any case the country was headed straight into war, and preparations were being made to raise a strong army with Washington again as commander, with Alexander Hamilton under him, while an alliance was being discussed with England. Then at the last moment Napoleon, who had just come to power, had the wisdom to offer terms President Adams could accept. The German Imperial Government had no such wisdom or restraint.

"The German Government," said the President, "denies the right of neutrals to use arms at all within the areas of the sea which it has proscribed even in the defense of rights which no modern publicist has ever before questioned their right to defend."

Editor's annotation:

Before the outbreak of the war the following were the standing orders in the German Navy for dealing with even enemy merchant vessels, and if that was the case how much more consideration should be given to neutrals. The new German orders are a brazen contradiction of their own previous precepts. (German Prize Code, p. 75.)

General orders of German Admiralty staff, Berlin, June 22, 1914. (Note date.)

"If an armed merchant vessel of the enemy offers armed resistance, such resistance may be overcome with all means possible. The crew are to be taken prisoners of war. The passengers are to be left to go free unless it appears that they participated in the resistance." (German Prize Code, p. 68, par. 116.)

"Before proceeding to the destruction of the (neutral) vessel (which has been seized for proper reason) the safety of all persons on board, and, so far as possible, their effects, is to be provided for."

Dr. Wehberg, (great German authority on international law, quoted in American Journal of Int. Law, Oct., 1916, p. 871.)

"The enemy merchant ship has the right of defense against enemy attack, and this right it can exercise against 'visit,' (i. e., being stopped and investigated,) for this indeed is the first act of capture. The attacked merchant ship can indeed itself seize the overpowered warship as a prize."

And still again—

In Oxford, 1913, at a meeting of the Institute of International Law, at which the representatives of Germany, as well as of all other great nations, were present, it was decided as a firm principle:

"Private vessels may not commit acts of hostility against the enemy; they may, however, defend themselves against the attack of any enemy vessel." (American Journal of International Law, vol. 10, 1916, p. 868.)

The President's words, "we will not choose the path of submission and suffer the most sacred rights of our nation and our people to be ignored or violated," are supported with these citations:

Right of American citizens to protection in their doings abroad and on the seas no less than at home. Decided by Supreme Court of United States. (Slaughter House Cases, 16 Wall., 36.)

"Every citizen has the right to demand the care and protection of the United States when on the high seas or within the jurisdiction of a foreign Government."

See Cooley's "Principles of Constitutional Law," third edition, page 273, (standard authority.)

Obviously a Government which can not or will not protect its citizens against a policy of lawless murder is unworthy of respect abroad or obedience at home. The protection of the lives of the innocent and law-abiding is clearly the very first duty of a civilized State.

Declaration of War

In regard to the President's advice that Congress pronounce Germany's action to be "nothing less than war against the Government and people of the United States," the editors remark:

Wars do not have to be declared in order to exist. The mere commission of warlike or unfriendly acts commences them. Thus the first serious clash in the Mexican war took place April 24, 1846. Congress "recognized" the state of war only on May 11 of that year. Already General Taylor had fought two serious battles at Palo Alto and Resaca de la Palma.

Many other like cases could be cited; the most recent was the outbreak of the war between Japan and Russia. In 1904 the Japanese attacked the Russian fleet before Port Arthur, and only several days after this battle was war "recognized."

If the acts of Germany were unfriendly, war

in the strictest sense existed when the President addressed Congress,

With reference to "the granting of adequate credits":

Bills passed by Congress, with dates on which they were presented to President:

April 5, S. J. Res. 1—Declaration of war.

April 17, H. R. 12—Deficiency Appropriation bill for the year ending June, 1917.

April 23, H. R. 2,762—Bond Issue bill.

April 23, H. R. 2,339—Increasing number of midshipmen at Annapolis.

April 23, H. R. 2,008—Extending minority enlistments in the navy.

April 23, H. R. 2,338—Authorizing additional officers for Hydrographic Office.

April 23, H. R. 2,300—Increasing age limit for officers in Naval Reserve.

April 23, H. R. 1,771—Amending Naval Appropriations act for the year ending June, 1917.

May 5, H. R. 2,893—Permitting foreign Governments to enlist their nationals residing in the United States.

May 10, S. J. Res. 42—Authorizing seizure of interned German ships.

May 11, H. R. 13—Army Appropriation bill for the year ending June, 1918.

May 15, H. R. 2,337—Enrollments of aliens in the Naval Reserve.

May 16, H. R. 3,330—Increasing Navy and Marine Corps to 150,000 men.

May 18, S. 1,871—Conscription bill.

Bills in conference on May 17:

April 16, H. R. 11—Sundry Civil Appropriations for the year ending June, 1918.

April 16, H. R. 10—Military Academy Appropriations for the year ending June, 1918.

May 15, S. 2—Espionage bill.

Bills awaiting action of one house:

S. 383—Passed Senate April 9, punishing the destruction of war material.

H. R. 328—Passed House May 9, car shortage.

H. R. 3,971—Passed House May 2, Special War Appropriation bill.

The President said of the Entente Allies: "They are in the field, and we should help them in every way to be effective there." The editors make this comment:

To any one who will reflect upon the subject, it will soon appear to be preposterous folly to suggest that we "go it alone" against Germany, and to fail to give all possible aid to her original enemies. Obviously unless we send munitions, troops, submarine chasers, &c., to France, England, and possibly Russia, since the German high sea fleet does not at present come out, the war for us will mean little more than calling names across the Atlantic—until the European war is ended, and then if Germany has a pound of strength left (and very possibly she might be victorious) she can vent on us all her hate and fury, and exact from us the indemnities

she can not wring from a bankrupt Europe. So obvious is the military necessity of giving every possible help to the present enemies of Germany that those who try to thwart this are almost open to the very grave criminal charge of giving aid and comfort to the enemies of the United States.

Regarding the President's reference to his previous utterances:

On Jan. 22 Mr. Wilson spoke in favor of a league to secure peace. On Feb. 3 he announced he had broken diplomatic relations with Germany, but expressed the earnest hope that issues would not proceed to a clash of arms. On Feb. 26 he asked for "armed neutrality," but still avoided an actual state of war.

Menace of Autocracy

The reference to the menace of "autocratic Governments, backed by organized force which is controlled wholly by their will, not by the will of their people," calls forth the following:

Contrast these two standards: Bethmann Hollweg addressing the Reichstag, Aug. 4, 1914:

"We are now in a state of necessity, and necessity knows no law. Our troops have occupied (neutral) Luxemburg and perhaps already have entered Belgian territory. Gentlemen, this is a breach of international law. The wrong—I speak openly—the wrong we hereby commit we will try to make good as soon as our military aims have been attained.

"He who is menaced as we are, and is fighting for his highest possession, can only consider how he is to hack his way through."

Or Frederick the Great again, the arch prophet of Prussianism, speaking in 1740 and giving the keynote to all his successors: "The question of right is an affair of Ministers. * * * It is time to consider it in secret, for the orders to my troops have been given," and still again: "Take what you can; you are never wrong unless you are obliged to give back." ("Perkins, France Under Louis XV.," vol. 1, pp. 169-170.)

Against this set the words of the first President of the young American Republic, speaking at a time when the nation was so weak that surely any kind of shifts could have been justified on the score of necessity.

Said George Washington in his first inaugural address, (1789): "The foundations of our national policy will be laid in the pure and immutable principles of private morality. There exists in the course of nature an indissoluble union between virtue and happiness, between duty and advantage, between honest policy and public felicity" [and] "the propitious smiles of Heaven can never be expected on a union [or government] that disregards the eternal rules of order and right, which Heaven itself has ordained."

The present war is for a large part being waged to settle whether the American or the Prussian standard of morality is valid.

The phrase applying the same standards of conduct to Governments as to individuals calls forth a brief statement of the nature of the evil in Germany:

The autocratic spirit of the German Emperor is clearly revealed in his own utterances, (cf. p. 11.) The Imperial Government is in form a Government by the Emperor and the Imperial Diet. The dominant factor in the latter is the Federal Council, (Bundesrat,) appointed by the Kings and Princes. Here, as King of Prussia, William II. can make or break any policy. Prussia is the controlling factor, political, economic, and military, in modern Germany. In area it constitutes two-thirds of Germany, and five-eighths of its population and two-thirds of the members of the lower house of the German Congress are Prussians. Within Prussia there is little limit on the power of William II. In a Constitution which his great uncle "decreed" in 1850 the rights of the King and of the Junkers (the feudal military nobles east of the Elbe) are carefully guarded.

The Constitution of Prussia has remained practically unchanged and the electoral districts and three-class voting system of nearly seventy years ago still exist. Liberal industrial and socialistic elements in the great modern cities and manufacturing areas are without adequate representation in the Prussian Diet, and the old country districts are practically "rotten boroughs," where the peasant who votes by voice, not written ballot, is at the mercy of his feudal noble landlord. It is the latter who back the throne and its autocratic power so long as the policy suits their narrow provincial militaristic views formed in the days of Frederick the Great and his despotic father and revived and glorified by Bismarck.

Attitude of German People

It was not upon the impulse of the German people that the Kaiser's Government acted in precipitating the war. The editors of the war message cite the following evidence:

When the crisis was precipitated late in July, 1914, there was a strong peace party in Germany, and earnest protests were made against letting Austrian aggression against Serbia start a world conflagration. In Berlin on July 29, twenty-eight mass meetings were held to denounce the proposed war, and one of them is said to have been attended by 70,000 men. The Vorwärts (the great organ of the Socialists) declared on that day, "the indications proved beyond a doubt that the camarilla of war lords is working with absolutely unscrupulous means to carry out their fearful designs to precipitate an international war and to start a worldwide fire to devastate

Europe." On the 31st this same paper asserted that the policy of the German Government was "utterly without conscience." Then came the declaration of "war emergency," (Kriegsgefahr,) mobilization, martial law, and any expression of public opinion was stifled in Germany.

The German people had not the slightest share in shaping the events which led up to the declaration of war. The German Emperor is clothed by the imperial Constitution with practically autocratic power in all matters of foreign policy. The Reichstag has not even a consultative voice in such matters. The German Constitution (Art. 11) gives to the Emperor specific power to "declare war, conclude peace, and enter into alliances." The provision that only defensive wars may be declared by the Emperor alone puts the power in his hands to declare this and any other war without consulting any but the military group, for no power in modern times has ever admitted that it waged aggressive warfare. William II. declared this war without taking his people into the slightest confidence until the final deed was done.

The whole tendency of responsible German statesmen has been to ignore the people in foreign affairs. The retired Chancellor, Prince von Bülow, defended this policy bluntly on the ground that the Germans were not capable of self-government, saying, "We are not a political people."

As for William II., speeches without number can be cited to show his sense of his own autocratic authority—e. g., speaking at Königsberg, in 1910—"Looking upon myself as the instrument of the Lord, regardless of the views and the opinions of the hour, I go on my way." And another time: "There is but one master in this country; it is I, and I will bear no other." He has also been very fond of transforming an old Latin adage, making it read, "The will of the King is the highest law."

Other Wars of Aggression

"It was a war determined upon as wars used to be determined upon in the old unhappy days," continued the President, "when peoples were nowhere consulted by their rulers and wars were provoked and waged in the interest of dynasties or of little groups of ambitious men who were accustomed to use their fellow-men as pawns and tools." The editors add:

President Wilson probably had in mind such wars as those of Louis XIV., waged by that King almost solely for his own glory and interest and with extremely little heed to the small benefit and great suffering they brought to France. The War of the Spanish Succession (begun in 1701) was particularly such a war. History, of course, contains a great many others begun from no worthier

motive, including several conducted by Prussia and earlier by Philip II. of Spain.

There is abundant evidence that the situation in Europe in July, 1914, was regarded by the German "jingo" party—von Tirpitz, Bernhardi, et al.—as peculiarly favorable. Russia was busy re-arming her army, and her railway system had not yet been properly developed for strategic purposes. France was vexed with labor troubles, a murder trial was heaping scandal upon one of her most famous statesmen, and her army was reported by her own statesmen as sadly unready. England seemed on the point of being plunged into a civil war by the revolt of a large fraction of Ireland.

Such a convenient crippling of all the three great rivals of Germany might never come again. The murder of the Archduke of Austria at Serajevo came, therefore, as a most convenient occasion for a stroke which would either result in great increase of Teutonic prestige or enable Germany to fight with every possible advantage.

There is official Italian evidence that Serbia would have been attacked by the Teutonic powers in August, 1913, if Italy had consented to help the scheme. Her refusal made the Austro-German war lords wait until July, 1914, when they felt the situation favorable enough to be able to strike without waiting for the aid of Italy. (Signor Giolitti, in Italian Parliament, Dec. 5, 1914.)

Ems Incident Recalled

In confirmation of the statement that "a steadfast concert for peace can never be maintained except by a partnership of democratic nations," the method used by Germany to provoke the war of 1870 is cited:

The willingness of Prussian rulers to precipitate war and to throw aside ordinary considerations for peace is best illustrated, of course, by the famous "Ems incident" of 1870.

At that time Bismarck had decided that the quickest way to promote German unity and serve his political schemes was to precipitate a war with France. The inflamed state of public opinion in France against Prussia made the task easy for him. On July 13, 1870, he received a telegram from King William I., telling of an interview he had had with the French Ambassador about a very ticklish matter, and leaving it to Bismarck to decide what facts it was wise to give to the press.

Bismarck, after consulting von Moltke as to the state of the army, deliberately cut down and sharpened the wording of the telegram, very moderately phrased, from the King so as to make it appear that a deliberate insult had been offered the French Ambassador, and then gave out this text of the dispatch for publication. This so enraged Paris public opinion, that war was immediately declared.

Bismarck took great pride in this stroke, and the facts are related in all the standard German histories, as well as many others which copy them.

Bismarck always regarded the manner in which he precipitated this war as a masterpiece of statecraft. It remained a kind of glorious example of true public policy for the next generation of public men in Germany. (See the account by Bismarck himself in his memoirs translated as *Bismarck: The Man and the Statesman*.)

Germany at The Hague

"Only free people can hold their purpose and their honor steady to a common end, and prefer the interests of mankind to any narrow interest of their own."

The great humanitarian aims of The Hague peace conferences of 1899 and 1907 were the limitation of armaments and the compulsory arbitration of international disputes. Unanimity among the world powers was essential to the success of both. None dared disarm unless all would do so. The great democracies, Great Britain, France, and the United States, favored both propositions, but Germany, leading the opposition, prevented their adoption. She agreed with reluctance to a convention for optional arbitration, but refused at the second conference even to discuss disarmament. (See Scott, James Brown, "The Hague Peace Conferences of 1899 and 1907," I., index, "Armaments" and "Arbitration.")

The President's statement that the Russian autocracy, now fallen, was not Russian in origin, character, or purpose, is confirmed with these facts:

The whole autocratic régime has been imposed on a people whose instincts and institutions are fundamentally democratic. The deposed Romanoff dynasty began in an election among the nobles. Peter the Great and the more despotic of his successors created largely by imitation and adaptation of German bureaucracy the machinery with which they ruled. Underneath this un-Russian machinery of despotism Russian communal and local life has preserved itself with wonderful vitality.

During the Russian revolution of 1905-1906 it was perfectly evident that the German Government was doing its uttermost to help the Czar and the old régime. The passage of revolutionary exiles into Germany was constantly hindered; many were arrested by the Prussian police, and all who succeeded in entering Germany were kept under constant espionage.

The Czar and the Kaiser were hand in glove to a large extent before the war broke out. The German White Paper, which was published at the outbreak of the war, containing telegrams which passed personally between Nicholas II. and Wilhelm II., gives repeated

appeals from one to the other as representatives of a common interest.

Intrigues in United States

The reference to the Prussian autocracy's spies and intrigues in the United States is thus elaborated:

Besides undoubtedly many matters which from reasons of public policy the Government has still kept hidden, the House of Representatives Committee on Foreign Affairs when it presented the war resolution following the President's message, went on formal record as listing at least twenty-one crimes or unfriendly acts committed upon our soil with the connivance of the German Government since the European war began. Among these were:

Inciting Hindus within the United States to stir up revolts in India, and supplying them with funds for that end, contrary to our neutrality laws.

Running a fraudulent passport office for German reservists. This was supervised by Captain von Papen of the German Embassy.

Sending German agents to England to act as spies, equipped with American passports.

Outfitting steamers to supply German raiders, and sending them out of American ports in defiance of our laws.

Sending an agent from the United States to try to blow up the International Bridge at Vancaboro, Me.

Furnishing funds to agents to blow up factories in Canada.

Five different conspiracies, some partly successful, to manufacture and place bombs on ships leaving United States ports. For these crimes a number of persons have been convicted, also Consul General Bopp of San Francisco (a very high German official accredited to the United States Government) has been convicted of plotting to cause bridges and tunnels to be destroyed in Canada.

Financing newspapers in this country to conduct a propaganda serviceable to the ends of the German Government.

Stirring up anti-American sentiment in Mexico and disorders generally in that country, to make it impossible for the United States to mix in European affairs.

[N. B.—This last, from a humanitarian standpoint, seems peculiarly outrageous. Germany had not the slightest grievance against the helpless Mexicans. To incite them to revolt against their own Government and to make war on the United States simply involved their misery and probable destruction, in return for a very doubtful and roundabout gain for Germany. The greatest wrong was not to the United States but to Mexico.]

German military usage has been quite in this spirit, however, and approves of such doings. (See German War Code, standard translation, p. 85.)

"Bribery of enemies' subjects, acceptance of offers of treachery, utilization of discon-

tented elements in the population, support of pretenders, and the like, are permissible; indeed, international law is in no way opposed to the exploitation of crimes of third parties."

This, of course, is an outrageous travesty of international law. As Holland ("Laws of War on Land," p. 61) said, speaking of such acts, The Hague Conference "declined to add to the authority of a practice so repulsive" by legislating upon the subject. What would the German people say of America, if our Government hired assassins to murder Kaiser Wilhelm or von Hindenburg?

The Zimmermann Note

The German Government's intrigues, including the attempt to embroil us with Mexico, "have played their part in serving to convince us at last that that Government entertains no real friendship for us, and means to act against our peace and security at its convenience." The facts underlying this statement are cited as follows:

A Prussianized Germany, triumphant in Europe and dominant on the seas, would find its occasion to strike down America in its isolation and make of us the overseas tributary of a new Roman Empire. There can be no question that the future of democracy and of independent national life is hanging in the balance in this struggle.

The famous "Zimmermann note," exposed by our Government March 1, is a document that should stick in the memories of all Americans. Remember, it was composed on Jan. 19, 1917, at a time when Germany and America were officially very good friends, and the date was just three days before Mr. Wilson appeared in the Senate with his scheme for a league to assure peace and justice to the world.

Zimmermann admitted the authenticity of the note, and only deplored that it had been discovered. The significant parts were these:

"Berlin, Jan. 19, 1917.

"On Feb. 1 we intend to begin submarine warfare unrestricted. In spite of this, it is our intention to keep neutral the United States of America.

"If this attempt is not successful, we propose an alliance on the following basis with Mexico: That we shall make war together and together make peace. We shall give general financial support, and it is understood that Mexico is to reconquer the lost territory in New Mexico, Texas, and Arizona. The details are left to you for settlement."

The rest of the dispatch tells the German Minister in Mexico to open secret negotiations with Carranza the moment war with us is certain, and to get Carranza to draw in Japan.

Germany has attempted to apologize for this note by saying that they did not intend to do anything unless we first declared war.

It is a complete retort that decent nations do not go around preparing schemes for the dismemberment of other nations with which they are at peace, and that Zimmermann's whole proposal sprang out of an evil conscience, because he realized that the submarine policy projected was so vile that the United States could not submit to it without utter loss of self-respect, and he did us the justice of believing we were not such extreme cravens as to refuse to fight.

The whole dispatch was so gross a revelation of international immorality that German-American papers immediately denounced it as a forgery, only to have its genuineness brazenly acknowledged and defended by Berlin.

In the presence of such an organized power "there can be no security for the democratic Governments of the world. * * * The world must be made safe for democracy." Comment:

It is worthy of note that although nearly all the nations opposed to Germany concluded the so-called "cooling off" arbitration treaties with the United States, negotiated by Mr. Bryan, Germany, although indulging in certain meaningless talk about "approving the principle" of arbitration, &c., declined to join in the compacts.

There was no arbitration treaty that could be invoked when trouble arose with Germany.

On March 30, 1911, the German Imperial Chancellor had stated openly in the Reichstag that no general arbitration treaty would be useful for Germany, since it afforded no guarantee for a permanent peace. If conditions changed, from the time it was made, he said, then, "every arbitration treaty will burn like tinder and end in smoke." (Quoted in Bernhardt, "Germany and the Next War," p. 33.)

Germany and Fair Play

"We shall, I feel confident," said the President, "conduct our operations as belligerents without passion and ourselves observe with proud punctilio the principles of right and of fair play we profess to be fighting for." The editors add:

"Fair play" has small part in the Prussian military usage, however. (See German War Code, Introduction, par. 3; authorized translation, p. 52.)

"A war conducted with energy cannot be directed merely against the combatants of the enemy State, and the positions which they occupy, but will in like manner seek to destroy the total intellectual and material resources of the latter. Humanitarian claims, such as the protection of men and their goods, can only be taken into consideration in so far as the nature and object of the war permits."

See also Clausewitz, (the Prussian military authority and oft-quoted oracle.) Treatise "On War" (Vom Kriege,) V.: Kap. 14, (3.)

Speaking of the desirability of crushing down a hostile country by requisitions, &c., he commends it because of "the fear of responsibility, punishment, and ill-treatment, which in such cases presses like a general weight on the whole population." This recourse (of requisitions) has "no limits except those of the exhaustion, impoverishment, and devastation of the country."

By this Prussian gospel, not merely is war inevitably "hell," but it is to be made deliberately the lowest stratum of hell, and the means of rendering it such are to be worked out with scientific precision.

Concerning Austria-Hungary's attitude on the submarine issue:

Austria had a serious clash with the United States in the Ancona case late in 1915, when Americans perished, thanks to the ruthless action of an Austrian submarine. In reply to American protests Austria promised to order her commanders to behave with humanity, and (compared, at least, to her German allies) she kept her word with reasonable exactness.

On April 8, however, Austria, probably acting under German pressure, broke off diplomatic relations with the United States without waiting for action by our Government, and the same was done a little later by Germany's other obedient vassal, the Sultan of Turkey.

The President's avowal of our sincere friendship for the German people, as distinguished from their Government, receives this annotation:

There are now two Germanies—the old noble idealistic Germany; the new hard, materialistic nation, created by Prussia. Americans would fain love and recall the former.

Here is what two of their own writers said, men of leadership and insight, speaking very shortly before the war:

Professor Rein of Jena: "A one-sidedness which only esteems material values and an increasing control over nature is destructive in its influence, and this one-sidedness set in during the nineteenth century in Germany. We Germans have ceased to be the nation of thinkers, poets, and dreamers, we aim now only at the domination and exploitation of nature."

And again Professor Paulsen of Berlin: "Two souls dwell in the German Nation. The German Nation has been called the nation of poets and thinkers, and it may be proud of the name. Today it may again be called the nation of masterful combatants, as which it originally appeared in history."

Proofs of President's Patience

"We have borne with their present Government through all these bitter

months, because of that friendship, exercising a patience and forbearance which would otherwise have been impossible." The facts back of this passage are thus arrayed:

No one can accuse Mr. Wilson of the least precipitancy in bringing matters to an issue. Of course, on the contrary, his persistent attempts to bring the German Government to recognize the claims of reason and humanity have caused him to be bitterly criticised. Despite this criticism he has patiently and steadily held to the policy announced a year ago, "to wait until facts became unmistakable and were susceptible of only one interpretation." (Sussex note, April 18, 1916.)

Here is a partial list of the stages in the U-boat campaign:

1. Dec. 24, 1914. Admiral von Tirpitz throws out hints in a newspaper interview of a wholesale torpedoing policy. He directly asks, "What will America say?" This was considerably before the so-called English blockade was causing Germany any serious food problem.

2. Feb. 4, 1915. German Government proclaims a war zone within which any ship may be sunk unwarned.

3. Feb. 10, 1915. Mr. Wilson tells German Government it will be held to "strict accountability" if any American rights were violated in this way.

4. April 22, 1916. German Embassy publishes in New York papers warning against taking passage on ships which our Government had told their people they had a perfect right to take.

5. May 7, 1915. Sinking of Lusitania.

6. May 13, 1915. Mr. Wilson's "first Lusitania" note.

7. May 28, 1915. Germany's reply defending the sinking of the Lusitania.

8. June 9, 1915. Mr. Wilson's "second Lusitania" note.

9. July 21, 1915. Mr. Wilson's "third Lusitania" note, (following more unsatisfactory German rejoinders.)

10. Aug. 19, 1915. Sinking of the Arabic, whereupon von Bernstorff gave an oral pledge for his Government that hereafter German submarines would not sink "liners" without warning.

11. February, 1916. (After still more debatable sinkings.) Germany makes proposals looking toward "assuming liability" for the Lusitania victims, but the whole case is soon complicated again by the "armed ship" issue.

12. March 24, 1916. Sinking of the Sussex, passenger vessel with Americans on board.

13. April 10, 1916. Germany cynically tells United States she cannot be sure whether she sunk the Sussex or not, although admitting one of her submarines was active close to the place of disaster.

14. April 18, 1916. President Wilson threatens Germany with breach of diplomatic rela-

tions if Sussex and similar incidents are repeated.

15. May 4, 1916. Germany grudgingly makes the promise that ships will not be sunk without warning.

16. Oct. 8, 1916. German submarine appears off American coast and sinks British passenger steamer *Stephano* with many American passengers (vacationists returning from Newfoundland) on board. Loss of life almost certain had not American men-of-war been on hand to pick up the refugees.

[From this time until final break several other vessels sunk under circumstances which made it at least doubtful whether Germany was living up to her pledges.]

17. Jan. 31, 1917. Germany tears up her promises and notifies Mr. Wilson she will begin "unrestricted submarine war."

18. Feb. 3, 1917. Mr. Wilson gives Count von Bernstorff his passports and recalls Ambassador Gerard from Berlin.

In all modern history it may be doubted if there is another chapter displaying such prolonged patience, forbearance, and conciliatoriness as that shown by Mr. Wilson and Mr. Lansing in the face of a long course of deliberate evasion and prevarication to them personally, as well as outrage after outrage upon the property, and, still more, upon the lives of very many American citizens.

Germans in America

"We shall happily still have an opportunity to prove that friendship in our daily attitude and actions toward the millions of men and women of German birth and native sympathy who live among us and share our life, and we shall be proud to prove it toward all who are in fact loyal to their neighbors and to the Government in the hour of test."

On April 6, 1917, President Wilson issued a proclamation in which he asserted that "alien enemies" who preserved the peace, kept the laws, and gave no aid to the enemies of the United States "shall be undisturbed in the peaceful pursuit of their lives and occupations, and shall be accorded the consideration due to all peaceful and law-abiding persons, and toward such [persons] all citizens of the United States are enjoined to preserve the peace and to treat them with all such friendliness as may be compatible with loyalty and allegiance to the United States."

In May the Attorney General issued a statement congratulating the country on the friendly relations between Americans and German residents, the absence of disorders, and the necessity of internment only a very small number of persons, (about 125,) an insignificant fraction of the whole number of German citizens in this country.

At almost the same time the cables carried dispatches that the German police had ordered strict measures of oversight and re-

straint for the few Americans remaining in Germany, although all such persons were probably people whose ties with Germany made them almost more at home there than in their nominal country.

"If there should be disloyalty, it will be dealt with with a firm hand of stern repression":

The treason statutes of the United States have seldom been invoked, but they exist and possess teeth.

It is treason to "levy war against the United States, adhere to their enemies, or give them aid or comfort." (Ch. 1, sec. 1, Rev. Stat.) The penalty is death, or imprisonment for at least five years, and a fine of at least \$10,000.

It is "misprision of treason" to know of any treasonable plots or doings and fail to report the same to the authorities. The penalty is seven years' imprisonment. The penalty for inciting a rebellion or insurrection is ten years, and the crime of entering into any correspondence with a foreign Government to influence it in any dispute with the United States, or to defeat any measures taken by our Government, calls for three years' imprisonment. (Ch. 1, sec. 5.) There is also a penalty of six years' imprisonment for any seditious conspiracy to oppose the authority of the United States.

All these laws President Wilson has, by recent proclamation, (April 6, 1917,) reminded the people are in full force.

"Giving aid and comfort to the enemies of the United States" has been defined in the courts (30 Federal Cases, No. 18272,) as:

"In general, any act clearly indicating a want of loyalty to the Government and sympathy with its enemies, and which by fair construction is directly in furtherance of their hostile designs." Such deeds are, of course, liable to all the penalty of treason.

In extreme cases, also, of "rebellion and invasion" the Constitution specifically gives the Government power to suspend the writ of habeas corpus, (Constitution, Art. I., sec. 9, par. 2;) in other words, to arrest and imprison on mere suspicion without trial, and this was actually done in the civil war.

In support of the President's statement that "the right is more precious than peace, and we shall fight for the things which we have always carried nearest our hearts," the editors cite the following contrast:

Abraham Lincoln, (second inaugural address, 1865:)

"With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us finish the work we are in—to bind up another's wounds, to care for him who shall have borne the battle, and for his widow and orphans; to do all which may achieve and cherish a just and

lasting peace among ourselves and with all nations."

Friedrich von Bernhardi, (German Lieutenant General, and acceptable mouthpiece, not of the whole German Nation, but of the Prussian military caste which holds the German Nation in its grip:)

"Might is at once the supreme right, and

the dispute as to what is right is decided by the arbitrament of war," (p. 23.)

["It is outrageous to presume that] a weak nation is to have the same right to live as a powerful and vigorous nation," (p. 34.)

"Which of these two national viewpoints," the editors ask, "is to be allowed to dominate the world?"

A Cry From the Canadian Hills

By LILIAN LEVERIDGE

The author of these heart-searching lines, a Canadian, wrote them for The Daily Ontario as a tribute to her brother, Private Frank Leveridge, a member of the Thirty-ninth Canadian Battalion, who died of wounds in France.

Laddie, little laddie, come with me over
the hills,
Where blossom the white May lilies, and
the dogwood and daffodils;
For the Spirit of Spring is calling to our
spirits that love to roam
Over the hills of home, laddie, over the
hills of home.

Laddie, little laddie, here's hazel and
meadow rue,
And wreaths of the rare arbutus, a-blow-
ing for me and you;
And cherry and bilberry blossoms, and
hawthorn as white as foam,
We'll carry them all to Mother, laddie,
over the hills at home.

Laddie, little laddie, the winds have many
a song
And blithely and bold they whistle to us
as we trip along;
But your own little song is sweeter, your
own with its merry trills;
So, whistle a tune as you go, laddie, over
the windy hills.

Laddie, little laddie, 'tis time that the
cows were home,
Can you hear the kingle-kangle of their
bell in the greenwood gloam?
Old Rover is waiting, eager to follow the
trail with you,
Whistle a tune as you go, laddie, whistle
a tune as you go.

Laddie, little laddie, there's a flash of a
bluebird's wing,
O hush! If we wait and listen we may
hear him caroling.
The vesper song of the thrushes, and the
plaint of the whip-poor-wills,
Sweet, how sweet is the music, laddie,
over the twilit hills.

Brother, little brother, your childhood is
passing by,
And the dawn of a noble purpose I see
in your thoughtful eye.
You have many a mile to travel and many
a task to do;
Whistle a tune as you go, laddie, whistle
a tune as you go.

Laddie, soldier laddie, a call comes over
the sea,
A call to the best and bravest in the land
of liberty,
To shatter the despot's power, to lift up
the weak that fall.
Whistle a song as you go, laddie, to an-
swer your country's call.

Brother, soldier brother, the Spring has
come back again,
But her voice from the windy hilltops is
calling your name in vain;
For never shall we together 'mid the
birds and the blossoms roam,
Over the hills of home, brother, over the
hills of home.

Laddie! Laddie! Laddie! "Somewhere
in France" you sleep,
Somewhere 'neath alien flowers and alien
winds that weep.
Bravely you marched to battle, nobly
your life laid down,
You unto death were faithful, laddie;
yours is the victor's crown.

Laddie! Laddie! Laddie! How dim is
the sunshine grown,
As Mother and I together speak softly in
tender tone!
And the lips that quiver and falter have
ever a single theme,
As we list for your dear, lost whistle,
laddie, over the hills of dream.

Laddie, beloved laddie! How soon should
we cease to weep
Could we glance through the golden gate-
way whose keys the angels keep!
Yet love, our love that is deathless, can
follow you where you roam,
Over the hills of God, laddie, the beauti-
ful hills of Home.

The New Phase of Air Raids On England

BETWEEN May 23 and June 16, 1917, there were five aerial attacks on England in nearly all of which the Germans used airplanes instead of Zeppelins. Two of the raids were particularly serious in the number of civilian lives lost. The first of the series took place on May 23, when four or five German aircraft flew over the eastern counties of England and dropped bombs, killing one man. The second attack, on May 25, resulted in the killing of 76 persons and the injuring of 174; practically all the casualties occurred at Folkestone, on the south-east coast. The principal victims were women and children who had been standing in a long line in the town's busiest street waiting to buy potatoes.

It was 6:30 P. M. when a peculiar humming noise in the sky warned the people of the approach of danger. The German airplanes, numbering about sixteen, were not more than three minutes over the town before they passed away in the direction of the sea. Most of the bombs were dropped on Folkestone. Of the killed twenty-seven were women and twenty-three children; and of the injured forty-three women and nineteen children.

Airplanes of the Royal Flying Corps immediately went in pursuit and the German aircraft were also engaged by the Royal Naval Air Service from Dunkirk on their return journey. The Admiralty reported that three of the enemy airplanes were shot down in mid-Channel.

The attack was methodically organized. The first squadron of five airplanes was followed after short intervals by a second squadron and then a third and fourth, each of which repeated the tactics of the first. Scarcely any part of Folkestone escaped injury. At least sixty bombs were dropped, falling in a shower all over the town. The worst damage done was from a group of bombs which struck the business thoroughfare thronged with people. At one spot here sixteen women,

eight men, and nine children were killed, and forty-two persons were injured. The intervals of comparative quiet after the departure of each squadron of raiders were only broken by the sound of distant firing of naval guns out at sea and were even more harrowing to the populace than were the brief periods when the bombs were actually bursting in the town.

After each visit the people in shelters or cellars asked each other whether this was the last. Hours after the last raider had gone many people kept to their shelters in the belief that more raiders were coming. There was much employment for voluntary relief workers. The hospitals were crowded not only with injured, but with women and children suffering from shock, while the police and constables had their hands full patrolling the devastated districts and attending to the work of rescue, identification, and the hundreds of odds and ends which such a crisis brings to an unprepared town.

Reports from the surrounding district indicated that there were some bombing of neighboring villages, even at some distance, inland. The bombs were dropped, for the most part, as the German airplanes were making a wide circle to approach from the land side.

The third of this series of air raids took place on the evening of June 5, when sixteen German airplanes came over the North Sea and dropped many bombs on the small towns and villages in Essex and Kent. Only fourteen of them returned to their home base, for two were brought down by British guns. Only two persons were killed and twenty-nine injured in the bombarded districts. The raiders met with a lively reception, extra precautions having been taken by the British authorities after the previous raid. The Germans were attacked by British aviators before they had an opportunity to carry out their raiding

intentions to any great extent, and the British anti-aircraft guns were very effective. The official statement said that the raiders also attacked the naval establishments in the Medway. A considerable number of bombs were dropped and a certain amount of damage was done to house property, but the damage done to naval and military establishments was practically negligible.

The worst raid of all was that made upon London on June 13 in the broad daylight of noon. A squadron of German airplanes bombed the East End and the business sections of the city, killing 97 persons and injuring 437. Many of the victims were women and children, 120 of the latter being either killed or injured. The large number of casualties was due to the fact that the eating places in the East End were crowded at the hour of the raid, schools were still in session, and large numbers of people were on the streets. Of the victims, an official announcement stated 55 men, 16 women, and 26 children were killed, while the injured comprised 223 men, 122 women, and 94 children. No damage of a military or naval nature was done. Only one of the attacking airplanes was brought down.

A supplementary official report stated: "The first bombs were dropped on the eastern outskirts of London at about 11:30 A. M. Numerous bombs fell in rapid succession in various districts in the East End. One bomb fell in a railway station, hitting an incoming train. Seven persons were killed and 17 injured here. Another bomb fell on a school, killing 10 and injuring about 50 children. A number of warehouses were damaged and fires were caused. A few bombs also were dropped near North Foreland and opposite the banks of the Thames, four persons being injured. The air raid over London lasted about fifteen minutes. The raiders were engaged by guns of the East London defenses and a large number of airplanes of the Royal Flying Corps and Royal Naval Air Service were sent up as soon as the enemy was reported off the coast. Several engagements took place in the air."

The most tragic episode of the attack was the bombing of a London County

Council School, of which the following graphic description was given by a soldier who went to assist the teachers:

"I found the class mistress, who had got the uninjured children into a passage where, if there came another bomb, they would be less likely to be hurt. She was all alone until I came. Then we both set to get out the uninjured. She brought down two or three from the upper room first, then we went into the classroom where the bomb had sunk into the earth when it exploded. The sight was a terrible one, and but for the excitement it would have been unbearable. Many of the little ones were lying across their desks, apparently dead, and with terrible wounds on heads and limbs, and scores of others were writhing with pain and moaning piteously in their terror and suffering.

"Many bodies were mutilated, but our first thought was to get at the injured and have them cared for. We took them gently in our arms and laid them out against a wall under a shed. I didn't count them, but I should think there were twenty or thirty. I was just wondering what we should do next when some more people came to help, including soldiers, naval cadets, police, and special constables. We were frantic for ambulances and it was impossible to carry them to the hospital, which was half a mile away. Just then two lorries drew up and the driver suggested that he should help. We packed the poor little souls on the lorries as gently as we could and he drove as if he was afraid of something giving away and so at last we got them to the hospital.

"While they were gone I put a sentry on the door, and I can tell you it was a tough job. The women were not in the slightest degree panicky, but they were selfish in their love at first and in their earnestness to get at their own babies endangered by others who were lying on the floor. Some mothers were almost insane with grief, and when they couldn't find their own children would rush through the bodies looking for them, and when you remember that there was a hole in the roof four feet deep and covering the whole area of the classroom it

will be understood what that meant. The worst part of our task was the last—that of picking up the mutilated fragments of humanity.”

Two Zeppelins made an attack on the east coast of England in the night of June 16. The official report said that one of the airships crossed the Kentish coast at 2 A. M. and dropped bombs on a coast town, killing two persons, injuring sixteen, and wrecking a large number of houses. The second airship attacked a coast town of East Anglia, but did no damage before it was engaged by the Royal Flying Corps, brought down in flames, and destroyed.

Thousands of people witnessed the end

of this Zeppelin. The attack by anti-aircraft guns on the dirigible lasted fully half an hour, and people ran from their houses half dressed to watch the fight. When the black object, drifting across the sky from the southeast to the northwest, was seen to burst into flames the spectators cheered tumultuously. It had been first winged by a land gun, and was then finished by an airplane, which the Zeppelin fought to the last with her guns. The dirigible dropped in a field of corn, far from any habitation, and was entirely destroyed. All of the crew were killed and their bodies badly charred. Some of the men appeared to have jumped from the airship.

1,430 Airplanes Shot Down in Two Months

THE intensity of the aerial warfare on the western front is indicated by the figures showing the number of airplanes lost in April and May. A compilation from the British, French, and German official reports shows that 717 airplanes were shot down during April, the Germans losing 369, the French and Belgians 201, and the British 147. During May 713 airplanes were shot down on the western front. The Germans lost 442 and the British and French 271, of which 86 were admitted to have been British and the remainder, by inference, French. Thus, in two months, 1,430 airplanes were destroyed.

How the British and French have gained the supremacy of the air was described by Major L. W. B. Rees of the British Flying Corps, during a visit to Washington. While the Allies' operations are conducted almost entirely beyond the German lines, the Major said, the German machines now cross over the allied lines only rarely in raiding parties. The British fly on three levels with three kinds of machines. The lowest are the artillery directors, who circle about in big figure eights about 6,000 feet above the enemy trenches and flash back directions to the British gunners by wireless. Above them, at 10,000 feet, are the heavy fighters with two men to a machine and

able to keep the air for four hours at a speed of 110 miles per hour. At a height of 15,000 feet are the single-man light fighters, capable of 130 miles an hour and of ascending the first 10,000 feet in ten minutes.

The Germans have given up all attempts to guide their artillery by airplane and seek only to smash up the allied reconnoissance over their lines. Their machines are largely of one class, therefore, fast, heavy fighters, generally biplanes, which are continually seeking to swoop down on the British artillery observers and send them to the ground before the British fighting patrols can reach them. Recently, however, the Germans have developed another light fighting machine, which by climbing to 20,000 feet seeks to overtop the British light fighters and clear them out.

British losses have been running recently as high as thirty to forty machines a day, because of the extraordinary chances taken over the enemy's lines. As a rule they go out in squadrons of six, divided into three pairs and prepared to swoop down in unison on any German machine that may come up.

Major Rees gave it as his opinion that the British had defeated the Germans in every way in the air and deprived them of invaluable reconnoissance power. The

ARMY**

NEAREST RECRUITING STATION

Designed by FRANCES ADAMS HALSTED

COLUMBIA CALLS

Invitation to the young of the nation

*
Awake! we men from dreams of Peace—
No sleep when danger's near,
But sing Old Glory in the breeze—
There are no cowards here!

Our fathers fought; like heroes died,
For years their blood they gave
The home, home and fame to ours—
Awake! Thy country save!

Our day for honor and name
To lift the weak, to lead the free,
America, our blood and soul
Is calling, calling thee.

From North to South; from Sea to Sea,
I hear the answering cry—
"Thy men forever shall be free
For they will live and die!"

Then sing Old Glory to the main
Remember her brave deeds,
For new and old shall never stain
The glory of her folds.

The brave and brave shall lead to us
A worthy host for right—
Then fight and conquer with our arms
And war from Earth take flight.

(Poster by James Montgomery Flagg)

Zeppelin is now practically useless as a military weapon. Germany's whole artillery observation is conducted by means of captive balloons. A short time ago the British and French made a combined attack at 4 P. M. and knocked down every captive balloon from the North Sea to Switzerland. Not for three days did another balloon appear in sight.

Pilots can be trained in about three months, according to Major Rees, and should be from 19 to 25 years old, weighing not much over 160 pounds. The supreme consideration he gave as intelligence and reliability, as the task intrusted to the airmen is of vital impor-

ance. Many American machines are in use in England for training purposes, but none on the fighting line.

The most brilliant of British military aviators has been officially reported killed. He was Captain Albert Ball, D. S. O., who was reported missing early in May and is now known to be buried at a place named Annoeullin. Captain Ball had brought down over forty enemy machines. He was only 21 years of age, was absolutely fearless, but never a reckless flier. General Trenchard of the Royal Flying Corps described him as the most daring, skillful, and successful pilot the Royal Flying Corps ever had.

The Death of Prince Karl Friedrich

When Prince Karl Friedrich, the Kaiser's nephew and royal airman, was brought down on the French front and held prisoner until he died of his wounds, he was visited every day by the Rev. M. Caldwell, a British Baptist minister, who is serving as official Chaplain to the German prisoners in France. The young Prince talked freely to him, describing his capture in these terms:

"I was doing important work for my commander when I was attacked by British aeronauts. I kept on my course at first, but soon found I had to defend myself against their determined onslaught. The contest was keen and exciting. I was hit on my foot, and the pain was intense, but that was not my undoing. My machine was hit in a vital part, and, although I did my utmost to get back to my lines, I was compelled to descend in full view of the Australians. I saw the predicament I would be in when I landed, so decided to burn my machine and run for it. The Australians were too clever for me, and gave me a warm time when I took to my heels. I had a sporting chance, and took it, but I was not a winner. I felt a twitching sensation in my back, and fell forward, done for. The Australians, whose prisoner I became, treated me with the greatest kindness. They are sportsmen, and great men. I have a wonderful admiration for them. If I am anything, I am a sport. I have played tennis with Wilding and other first-class players. I shall never forget the jolly time I had in England when I played them all."

The dying man added: "God is with me. When I was christened the pastor read out a text from the Bible, which he repeated at my confirmation, and gave me as my lifelong message from God. I fear I did not value it enough before I was wounded, but since then it has been a source of consolation to me. It keeps returning to my thoughts. It is, 'If God be with us, who can be against us?' What greater evidence could I have of its truth than the kindness which has been shown me? Now you come daily to speak of God and pray for me. I am grateful to you and all who wish me well. I lie here a helpless prisoner, but I have no regrets. I did my best for my country, and I am not sorry I am finished with the war. I want to live. I am young, and when the war is over, I shall go back and help to build up my nation again."

A Great Fight in the Air

[Described by a British War Correspondent at the Front

THIS is the story of how five British airplanes fought twenty-seven Germans and beat them, sending eight to earth crashing, crippled or in flames. It was on Saturday, May 5, 1917, a day of great heat, when there was a haze so thick that you could hardly see the ground from a height of 2,000 feet. Our men had started fairly late in the afternoon, and at 5 o'clock were well over in enemy country, when, with the sun at their backs, they saw two enemy machines ahead. They tried to close with the enemy, who made some show of giving fight. It was only a show, however, for as our leading machine drew near the Germans turned and made with all speed for home.

The tactics suggested that the two enemy machines were only decoys, intended to lure our little flotilla as far as possible from its base—and the suspicion was soon confirmed. Even as we started to chase the two flying enemies, out of the haze and void on all sides new fleets came closing in.

The new arrivals flew in three formations, two of which contained eight machines, and the third contained nine, making twenty-five German airplanes, all of a uniform fighting type, to whom the other two, which now ceased to run away, joined themselves, making twenty-seven enemy machines in all.

One of the enemy fleets, taking advantage of the thick air, had passed behind our little squadron and came at it, as from the direction of our own lines, straight between it and the sun—an awkward direction from which to have an enemy flying at you in the late afternoon, when the sun is getting fairly low. The other two fleets came from the southeast and northeast. As they approached they spread out so that our men were ringed around with enemies on every side.

The fight began at about 11,000 feet; but in the course of the things that followed it ranged anywhere from 3,000 to

12,000, up and down the ladders of heaven. And an extraordinary fact is that, all the while that it went on, the German anti-aircraft guns below kept at work. Usually, as soon as airplanes engage overhead, the "Archies" are silent for fear of hitting the wrong man; and whether the German gunners were drunk with excitement at what was going on above them, or whether it was that our machines formed so isolated and compact a mass in the heart of the great maelstrom that it seemed still possible to shoot at them in safety, is not known. At all events, the tumult in the skies was increased by the constant pumping into the tangled mass of shells from the ground.

The actual fighting lasted for a full hour, from 5 to 6 o'clock, an extraordinary time for such a thing, and during all that hour our men fought tooth and nail. And the fight had lasted but a few minutes when we drew first blood, and an enemy machine which Captain A. had attacked went down in flames, with the wings of one side shot away. Then it was Lieutenant B.'s turn. He caught his adversary at close range fairly, and the German airplane went down, turning over and over as it fell straight down 11,000 feet, leaving a trail of smoke behind. Lieutenant C. scored next, his enemy's machine spinning plumb down to where, somewhere below the haze, it must have crashed.

Then, for a moment, it seemed that our luck was turning. Lieutenant B.'s engine gave out and he was "compelled to leave the formation." It is a simple phrase, but what it means is that, helpless and with engine still, the airplane dropped out of the fight from 11,000 feet down to 3,000 feet. It was a dizzying drop, and as he fell, an enemy, seeing him defenseless and scenting easy prey, went after him.

But other eyes were watching. Lieutenant C. saw his crippled comrade slipping downward and saw the German div-

ing after. Quick as a flash he followed, and before the German could do his work the British airplane was almost touching the tail of his machine, and in another second the German turned clean over in the air and then crashed nose foremost down into the abyss.

Then, almost by a miracle, B.'s engine caught its breath again. Once more the machine was under control, and B., who was one of those who were new to the game, climbed and rejoined formation. Some 8,000 feet he had to climb, with the baffled "Archies" blazing at him from below, up into the inverted hell above, where his four comrades were fighting enemies who outnumbered them six to one. Just as he "rejoined" another German fell. It was A.'s second victim of the day, and friend and foe alike saw the machine go, sheeted in flames, down into the gulf.

Then once again it seemed that a throw had gone against us, for, still under control, but with flames bursting from its reserve petrol tank, one of our machines began to drop. Again an enemy, glimpsing an easy quarry, dived for the flaming ruin as it fell, but, quicker than he, A. also dived, and while our crippled machine, still belching flames, slid off, with its nose set for home, the German, mortally hit, dropped like a stone.

It was just retribution. The unwritten laws of this marvelous game prescribe that no honorable fighter attack an enemy in flames. Such an enemy is out of the fight, and has trouble enough for a brave man. The German who dived for our burning machine knew

that he was doing an unchivalrous thing, and it may be that that knowledge unnerved him so that he paid the penalty.

Strangely enough, our burning airplane got home. I have seen the wreckage, with the reserve petrol tank on the roof bearing two bullet holes on one side and great ragged tears on the other where the bullets passed out. The whole tank is scorched and crumpled. The flames had burned away the whole central span of the upper plane. The thick rear main spar was charred and burned through, and two ribs were completely severed and hung with loose, blackened ends. Yet, like a great blazing meteor, it crossed our lines and came to earth, not, indeed, at its own home, but on safe and friendly ground; and, as another airman said to me in admiration, "He made a perfectly topping landing."

Meanwhile the wonderful fight was drawing to a close. The British pilot, Lieutenant D., emptied a belt from his machine gun into an enemy when so close that his wings almost brushed the other's rudder; and the enemy turned turtle, clear over on his back, and, spurted out a thick column of black smoke, went down.

Some of the enemy were already drawing off, but our men were in no mood to let them go. It is harder to get out of a losing fight than it is to begin it, and before the enemy mob could disentangle itself from the battle two more of their machines had gone to earth—one, his third in the fight, falling to Lieutenant C. and one to Lieutenant E.

Then the last four of our machines, still lords of the air, came home.

How American Aviators Saved Verdun

The demand of the United States Government for the production of 3,500 airplanes before the end of 1917, the output to be doubled each succeeding year, as announced by the Council of National Defense, lends added interest to this statement of Leon Cammen, Vice President of the American Aeronautical Society:

ALL we hear of over here are the exploits of the daredevils of the air, the men who have brought down their nineteenth or their twentieth Boche. We don't hear of the less spectacular but fully as valuable work of the men who fly in squadrons against squadrons of the enemy, who do recon-

noissance work or who act as the eyes of the big guns and hover over the section under bombardment spotting the falls of shells and directing the gunners. And it isn't generally known that American fliers are ideal for such work, just as they are unsurpassed for the more thrilling task of single combat.

The point is that the French are not so. There is in France a class of men who are pre-eminent as individual fliers, whose skill and daring may be matched but cannot be excelled even by an American. But this class is limited in number, and back of it the average Frenchman does not make an ideal aviator. It is the American who has shown himself especially adapted to this work.

It was a group of American fliers, the Escadrille Lafayette, who saved Verdun. That surprises you? But it is true. I have it on authority of Frenchmen themselves, army men and fliers, and there is no doubt of the truth. It was at Verdun, too, that military men first realized the value of the airplane for something more than bomb-dropping work. For, you must remember, aviation abroad was not much further advanced at the outbreak of war than it is here today; not so far. At first the planes, just ordinary exhibition machines, were employed to carry bombs to be dropped on enemy territory. It was Verdun that taught their value for reconnaissance and gun sighting.

The attack on Verdun came so suddenly and so unexpectedly that for three or four days the French thought it a feint designed to force the withdrawal of their men from about Ypres so that the Germans might break through to Calais. When the French found that it was a genuine attack they faced, the Germans already had sent their airmen scudding over Verdun and its environs. They had mapped the two railroads—one a broad gauge, one a narrow gauge—that en-

tered Verdun from the southwest and provided the only mechanical road for the entrance of munitions into the fortress and town. How thoroughly they had done their work has been disclosed to me by French officers, who have shown me photographs of the district, revealing that the German shells fell in squares, clearly mapped out by their aviators, so that almost undamaged sections of the town were surrounded by ruins where storehouses and depots had stood, the uninjured parts being residential sections on which the Germans had not wasted a shell.

But they destroyed the railroads, or, rather, made them incapable of service, by almost continuous fire, so that when General Pétain undertook the defense of Verdun he found at hand munitions for less than ten days, and the only means of introducing more a motor road running south from Verdun to Buc. The salvation of Verdun, and probably of France, depended on keeping this road open, yet the German fliers had already begun to speed past Verdun, directing the shell fire of their big guns against just this road. Pétain sent an urgent call for aviators to drive off the German fliers and to confound their artillerymen by depriving them of the services of their flying "spotters."

And they sent him the Escadrille Lafayette, the American fliers who already had made a name for themselves by their daring and hardihood. The Americans went aloft over Verdun and gave battle to the Germans. They drove them back and kept them back so that no man might direct a gun against that road to Buc—"La Voie Sacrée," or the Sacred Road, as the French now call it.

And over it rolled the trains of motors bringing the munitions and supplies that made Verdun a turning point in the war. So much the Escadrille Lafayette accomplished. Do you wonder they want American aviators?

Downfall of King Constantine

THE long diplomatic struggle between King Constantine of Greece and the Entente Allies culminated on June 12 in the abdication of that monarch. He was at once succeeded by his second son, Prince Alexander, as King of the Hellenes.

The opposition of the Entente Allies to Constantine was based upon the allegation that he was not only pro-German in his sympathies, but that he repeatedly tried to bring Greece into the war on the side of the Central Powers. The ex-King, on the other hand, declared that his sole aim was to preserve Greek neutrality and to spare his people from the horrors and miseries of war.

Early in June the Entente Allies had arrived at the conclusion that the time for decisive action had arrived. M. Jonnart, a former Foreign Minister and now a member of the French Senate, was appointed High Commissioner to represent France, Great Britain, and Russia, the three protecting powers of Greece. After visiting Saloniki, the Allies' headquarters and seat of the Provisional Government headed by M. Venizelos, M. Jonnart proceeded to Athens and, on June 11 placed before the Greek Premier, Alexander Zaimis, the demands of the allied Governments. The abdication of King Constantine was insisted upon, and the Crown Prince George was also ruled out on the ground that he shared his father's pro-German leanings. The second son, Prince Alexander, was indicated as acceptable. Alexander, who is only 24 years old, is amenable to the ideas of the protecting powers in regard to the part which Greece should play in the war. M. Jonnart informed the Premier that troops had been placed at his disposal, but that they would not be landed until the King had given his answer.

Premier Zaimis, in his reply to M. Jonnart, said that he recognized the disinterestedness of the protecting powers, whose sole object was to reconstitute the unity of Greece under the Constitution, and that a decision would be taken by the King after consulting with the

Crown Council, composed of former Premiers. On the morning of June 12 Premier Zaimis communicated King Constantine's decision in the following letter to M. Jonnart:

The Minister and High Commissioner of France, Great Britain, and Russia:

Having demanded by your note of yesterday the abdication of his Majesty, King Constantine, and the nomination of his successor, the undersigned, Premier and Foreign Minister, has the honor to inform your Excellency that his Majesty the King, ever solicitous for the interests of Greece, has decided to leave the country with the Prince Royal, and nominates Prince Alexander as his successor.

ZAIMIS.

The deposed monarch's proclamation announcing his abdication, which was posted throughout the streets of Athens, reads:

Obedying the necessity of fulfilling my duty toward Greece, I am departing from my beloved country with the heir to the throne and am leaving my son Alexander my crown. I beg you to accept my decision with calm, as the slightest incident may lead to a great catastrophe.

Before King Constantine's decision was announced, many Greeks, loyal to the Crown, gathered for the protection of the sovereign. On the evening of June 11 2,000 reservists formed a cordon around the palace in his defense, if that should be necessary, and a delegation headed by Naval Commander Mavromichaelis was received by Constantine and pledged the devotion of the army and the people to his cause. The King's only reply was an appeal that they should remain calm. All efforts of agitators to start a manifestation failed, and the army officers announced their intention to obey the order of the Government to take no part in any demonstrations and to maintain peace.

The announcement of King Constantine's abdication made in the British House of Commons by Andrew Bonar Law, Chancellor of the Exchequer, was received with cheers, but a less favorable reception was given his statement that Prince Alexander had succeeded his father. The Chancellor said that Alexander had taken the oath as King of

Greece. "We hope," added the Chancellor, "that this change may make for the restoration of the Constitutional Government of that country. Mr. Bonar Law was asked by Arthur Lynch, member for West Clare: "What does the Government expect to gain by the abdication of the King when it is perpetuating the same abuses under another name?" Mr. Bonar Law replied: "What we hope to gain is a Constitutional Government representing the whole of Greece." John Gordon Swift MacNeill, member for South Donegal, asked if in fact permission had been given to Constantine to abdicate and if, in regard to the fact that he had practically been expelled from the throne, he should be allowed to nominate his successor. The Chancellor replied that it would not be in the public interest to give any more information at present, but that Mr. MacNeill was wrong in saying that his successor had been nominated by Constantine."

Premier Ribot, addressing the French Chamber of Deputies on June 14, said conditions in Greece had become intolerable; that the attitude of Constantine had nullified the Constitution of Greece and amply justified the protecting powers in intervening in such manner as to secure the indispensable unity of the country. "Greece," said M. Ribot, "was divided into two hostile camps, one hostile to the Allies and the other supporting them courageously with Eleutherios Venizelos bearing aloft the real flag of Greece." Great applause greeted the mention of the name of M. Venizelos. M. Ribot then proceeded to explain to the Chamber the advantages which would arise from the new régime in Greece.

Military measures by the Allies were taken simultaneously with M. Jonnart's action at Athens. French and British troops were landed in Thessaly and Corinth, the French War Office announcement on the subject being:

The troops charged with control of the harvests in Thessaly have penetrated that province without difficulty as far as the region of Elassona.

The ex-King and all the members of his family, except the new King, left Athens on June 13, embarking at the

Piræus on a British warship. One of Constantine's private secretaries had previously arrived at Lugano, in Switzerland, to look for a large villa suitable for the exiled royalties. Prince von Bülow, the former German Imperial Chancellor, and several other German diplomatists are staying at Lugano.

A telegram from Berlin on June 15 stated that Emperor William had sent the following message (not confirmed) to one of the Greek diplomatic representatives abroad for transmission to former King Constantine:

I have heard with wrath of the infamous outrage committed by our common enemies upon you and upon your dynasty. I assure you that your deprivation can be only temporary. The mailed fist of Germany, with further aid from Almighty God, will restore you to your throne, of which no man by right can rob you. The armies of Germany and Germany's allies will wreak vengeance on those who have dared so insolently to lay their criminal hands on you. We hope to welcome you in Germany at the earliest opportunity. A thousand cordial greetings from you
WILLIAM.

M. Jonnart, the High Commissioner who brought about the abdication of King Constantine, published on June 16 the following proclamation to the Greek people:

France, Great Britain, and Russia desire the independence, greatness, and prosperity of Greece. They intend to defend the brave little land they have liberated against the united efforts of the Turks, Bulgarians, and Germans. They are here to checkmate the manoeuvres of the hereditary enemies of the kingdom. They will put an end to the repeated violations of the Constitution, of treaties, and the diabolical intrigues which led up to the massacre of soldiers of the Allies.

Yesterday Berlin was in command of Athens and was gradually leading the people under the yoke of the Bulgarians and Germans. We resolved to re-establish the constitutional rights and unity of Greece. The protecting powers, therefore, demanded the abdication of the King. They have no intention of tampering with the constitutional prerogatives; they have other aims, namely, to assure the regular and constitutional progress of the country, to which the late King George, of glorious memory, had always been scrupulously faithful, but which King Constantine had ceased to respect.

Hellenes, the hour of reconciliation has arrived. Your destinies are closely associ-

ated with those of the protecting powers, your ideals are the same as theirs, your hopes are identical. We appeal to your good sense and patriotism.

Today the blockade is raised. Any reprisal against Greeks, to whatever party they belong, will be pitilessly repressed. No breach of the peace will be tolerated. The liberty and prosperity of every one will be safeguarded. This is a new era of peace and labor which is opening before you. Know that, respectful of the national sovereignty, the protecting powers have no intention of forcing upon the Greek people general mobilization.

Long live Greece, united and free!

Following the ex-King's departure from Athens, Entente troops were landed at Piraeus and Castella. Some of the troops occupied the heights near Phalerum Bay, while others marched to Athens. The landing at Piraeus was effected in perfect order. At the suggestion of Premier Zaimis, the Greek superior officer was placed at the disposal of General Sarraill to facilitate the housing of the troops. Senator Jonnart said that they would remain ashore pending their return to resume the struggle against "Greece's traditional foes." He also informed Premier Zaimis that when the war was over and order which the Allies would exact had been re-established,

Constantine would be permitted to resume his throne if such was the will of the Greek people.

The entrance of the United States into the war, it was stated on high authority in London, had a direct and important influence in bringing about the solution of the Greek difficulty. American influence was characterized by the authority in question as a fresh breeze of democracy sweeping out the corners where the autocracies which disregard the claims of their peoples have been sheltering.

Plans for dealing with the situation which King Constantine provoked first began to assume definite shape at the British, French, and Italian conference held in Savoy, when Premier Lloyd George and Paul Painlevé, the French War Minister, found themselves in entire agreement, and the Italian representative was seen to be nearly of the same mind. The execution of the details of the plan was placed in the hands of the French, of course in full collaboration with their allies, and Senator Jonnart was selected to take on the work with whatever support might be necessary from General Sarraill and the Admiral commanding the allied fleets in Greek waters.

Two Offers of Autonomy for Albania

AFTER the occupation of Serbia and Montenegro by the Central Powers in 1916 the northern portion of Albania was overrun by Austrian troops, while the Italian troops continued to hold the southern portion, including the important port of Avlona, (or Valona,) on the Adriatic. Both powers have since issued proclamations offering autonomy to Albania. On March 10, 1917, the official announcement was made in London that Austria-Hungary had issued a manifesto granting the Albanians autonomy under an Austrian protectorate. The London statement asserted that the purpose was to justify a

levy upon Albanians for the Austrian armies.

Dispatches from Rome on June 4 contained the first intimation that Italy also was making a definite offer of this kind to Albania. A semi-official statement informed the world that a proclamation of the unity and independence of Albania—under an Italian protectorate—had been issued "in support of the principle of nationality, which is one of the objects of the Allies in the war." The statement added:

"Since the cessation of Ottoman dominion, Italy has aimed to reconstruct Albania, while Austria has used Albania

as a means to exercise dominion through the Balkans. She promised a deceiving autonomy, which, if accepted, would soon put the country under the Austrian yoke."

Italy has been co-operating in recent months with the British, French, and Serbian forces in the Balkans, and now

WHERE AUSTRIANS AND ITALIANS ARE FIGHTING FOR ALBANIA

has 300,000 men on that front, chiefly beyond the Albanian boundary, in Serbia, where the Allies' Saloniki forces confront the Austro-Bulgarians north of Monastir. This large army was transferred across the Adriatic into Southern Albania with the loss of only one transport and 400 men. Early in June the Italian forces renewed active operations against the enemy at Berat in Albania.

An Italian Deputy, Eugenio Chiesa, who recently journeyed across Albania and Northern Epirus to Saloniki, made this statement to a correspondent in Rome:

"The Italian occupation in Albania and Northern Epirus extends well into the Greek Kingdom. Not only have the Italians occupied Valona and its hinterland, but they have passed a long way to south of the boundary between Greece proper and Northern Epirus at Cape Stylos, and have extended in a northern direction as far as the River Kalamas, opposite the south end of Corfu, which was intended by the thirteenth protocol of the Berlin Congress of 1878 and by the Berlin Conference of 1880 to have been the northwestern frontier of Greece, but which, since the last Balkan wars, has been well within the enlarged northwestern boundary."

The trilingual proclamation of General Ferrero, of which Signor Chiesa gave the correspondent a copy dated April 1, informed the inhabitants that for purely military reasons the Allies had ordered their troops to occupy the region south of the frontier fixed by London. To the north of Valona the Italian occupation goes as far as the River Vojusa, while inland the Italian outposts are at Kalibaki, on the road from Janina to Premeti.

"I am opposed," said Chiesa, "to the permanent occupation of these places, nor do I believe the Italian Government intends to retain them. I consider as sincere the manifesto of the commandant of Valona, but Valona Kanina, the old Arta, north of Valona, the surrounding districts and the Isle of Saseto must remain Italian, not only for strategic but for sanitary reasons, owing to the necessity of draining the pestilential marshes which affect the health of Valona. Venizelos, with whom I spoke at Saloniki, frankly recognized this occupation of Valona, Saseto, and the territory of Valona.

"The Italians have already constructed over 400 kilometers of roads and opened over 125 schools where both Italian and Albanian are taught."

The New Republic of Koritza

Reorganization in Albania

FEW people know that the process of remaking the map of Europe has been begun already by the Entente Allies in Albania. As long ago as Dec. 12, 1916, they established the capital of a free and independent Albanian Republic in the Koritza district. This district at present marks the limits of the embryo State, for the Austrians still hold most of Albania; but it possesses all the machinery of a modern Government—a ruling council, an army 600 strong, postage stamps, paper money, a national flag, foreign alliances, even a budget that covers expenditures.

The French Army was the sponsor of this new-born State. The aim of its foundation was as much strategical as political. At the end of 1916 the Bulgarians were in occupation of the whole district south of Lakes Ochrida and Prespa, and their patrols came as far south as Koritza. The Greeks were in control of the town. They were Royalists, and Koritza was a centre of espionage and contraband. The German mail to and from Athens used to pass through there several times a week. The Austrians had bands of paid komitadjis (irregulars) ranging the whole district.

When the French patrols first reached Koritza they soon found that the hostility of the local Albanians was not so much love of the Austrians as resentment of any fresh incursion of foreigners into their country. By ousting the Royalist Greeks and allowing the proclamation of the independence of Albania with Koritza as capital, the French converted enemies into allies.

Themistocles Ghermeni, a Christian Albanian Nationalist, who was one of the principal chiefs of irregular bands in the pay of the Austrians, was won over so rapidly by this measure that he became Prefect of Police of the new republic. Authority is exercised by an elected council of fourteen members,

seven Mussulman and seven Christian. They raise money by taxation—\$9,000 a month; \$7,000 of this goes to pay their Albanian gendarmerie, of whom a part are fighting by the side of the French against the Austrian paid bands and showing themselves of great use as guides.

The success of the measure of proclaiming, or rather reproclaiming, the independence of Albania is said to be complete. In fact, every power involved in Albania seems to be driven to the conclusion that the Albanians must be humored rather than dragooned. The Italians have proclaimed Albanian independence at Premeti, in their sphere, and the Austrians appear to have done something of the same kind on their side in the north.

It was the Conference of London in 1913 that first founded an independent Albania and put it under the Prince of Wied. He was driven out in May, 1914, by revolution, and succeeded by Essad Pasha as President of the Albanian Republic. In September, 1914, Essad declared war on the Austrians, and has throughout remained a loyal ally of the Entente, though, like other rulers of small States, he has temporarily lost his country and is now in Saloniki. Five hundred Albanians who have followed him are fighting at the front, brigaded with the French.

Though recognized as President of Albania and flying his standard—a black star on a red ground—over his house in Saloniki, Essad Pasha constantly maintains that the present is not the time to decide about the future of Albania. The task of the moment is to eject the Austrian invaders from the country, and the congress of allied powers who settle the terms of peace will do the rest. But he holds strongly the view, nevertheless, that the only satisfactory Albania will be one where the Albanians rule themselves.

Shipping Sunk by Submarines

Record From May 14 to June 13, 1917

THE destruction of merchant shipping by submarines continues to be very considerable. Adequate figures are not available, but the estimates of allied Government officials are alarmingly high. Thus, in the French Chamber of Deputies on May 25, M. Cels, a member of the Marine Committee, gave the following striking figures to show the growing menace of submarine warfare:

	Tons of Shipping Sunk.
1915	1,204,000
1916	2,079,000
1917—first four months only.....	2,400,000

M. Cels said that one method of meeting the submarine menace was to build ships, but in 1916 the whole world's ship-building only reached 1,780,000 tons.

Admiral Lacaze, the Minister of Marine, the same evening made a statement supplementing that of M. Cels. With the captured enemy tonnage and the tonnage purchased and constructed, he said, the allied and neutral tonnage at the beginning of 1917 was about the same as at the beginning of the war. For the first four months of 1917 the total losses might be put at 2,500,000 tons. Taking into account the rate of construction, without being unduly optimistic, the losses for the year, if the submarine warfare continued with the same intensity, would be 4,500,000 tons out of a tonnage of over 40,000,000. With what the Allies were doing in restricting imports they could, with their present tonnage, meet the requirements of the country and assure the transport of war material. The Minister pointed out that the figures of tonnage sunk up to May 23 showed a marked decrease, being only 290,000 tons, and he then gave statistics proving that the German blockade had never been effective, since up to the present the French ports had received as many ships as they could accommodate. These vessels had brought everything of which the country stood in need. During the month of March 4,200,-

000 tons of goods entered French ports, and during April 4,300,000 tons.

The most recent British Admiralty figures show that while there was a decrease in the number of ships sunk for a few weeks, there has been a fresh burst of destructive activity on the part of the German submarines. Continuing the official weekly record of British merchant ships destroyed, as published in the June issue of this magazine, we find:

	Over 1,600 Tons.	Under 1,600 Tons.	Fishing Vessels.
Week ended May 20..	18	9	3
Week ended May 27..	18	1	2
Week ended June 3..	15	3	5
Week ended June 10..	22	10	6
Total for four weeks.	73	23	16

For the previous four weeks the totals were: Ships over 1,600 tons, 120; under 1,600 tons, 55; fishing vessels, 36.

Norway's losses in May also showed a decrease as compared with March and April, the number of ships sunk being 49. Denmark's losses since the war, according to a Copenhagen dispatch of May 22, place the number of ships sunk by submarines or mines at 150, with the death of 210 Danish seamen. A number of Swedish ships have been sunk during the month, but details of size are not available. The Athens newspaper, Patris, on May 28, printed a list of 102 Greek ships, with an aggregate tonnage of 300,000, which had been sunk by German submarines, thus leaving to Greece only 149 ships with a total tonnage of 500,000.

Among the larger ships reported sunk during the month have been the British transport Transylvania, 14,000 tons, with the loss of 413 lives, mainly soldiers; the British steamer Southland, 11,899 tons; the British transport Cameronia, 10,963 tons, with the loss of 140 soldiers, and the British hospital ship, Dover Castle, 8,271 tons.

Among American ships sunk were three sailing vessels: The Dirigo, 3,005 tons, with a cargo valued at \$500,000, on

May 31; the *Frances M.*, 1,229 tons, on May 18, and the *Barbara*, 838 tons, on May 24. According to the skipper of the American schooner *Margaret B. Rouss*, after that vessel was torpedoed in the Mediterranean, the crew of the German submarine robbed him and his crew of every article they possessed when they were in the lifeboat.

Methods of Fighting U-Boats

Admiral Lacaze, in the French Chamber of Deputies, May 26, threw some light upon the methods employed to counterattack the submarines. He said:

I see no reason why I should not speak of these methods in public. It would be childish to think they are unknown to the enemy. They consist of a system of patrol boats, of arming merchantmen with guns, and fitting them with wireless; of seaplanes, nets, mines, smoke-raising devices, and dragnets.

I sought to get patrol boats built here and buy them abroad. I scoured the world over with missions, covering the ground from America to North Cape, from the Cape of Good Hope to Japan, but England had been beforehand. When I entered the Ministry I found 243 patrols. Now we have 532. I have drawn up a scheme which will increase the figure to 900. I continue to buy in London, the world's centre for shipping. I am obliged to do so because our shipyards had been almost completely abandoned; because, as a result of that short-war theory which weighed so regrettably upon all decisions taken at the outset of the war, the yards had been transformed into war material factories to meet the pressing need of the national defense. We have now got back most of the arsenals and a number of private yards, together with skilled workmen.

The guns we mount on the patrol boats have been referred to disdainfully, but you cannot put ten-centimeter guns on a small vessel. A patrol boat on guard, armed with 95-millimeter guns, met two submarines armed with 105-millimeter guns, sank one and put the other to flight.

We have 1,200 dragnets as well as 170,500 curtain nets and 5,000 20-foot float nets, which indicate the presence of submarines. We have special bombs for submarines and apparatus to throw them.

We have organized seaplane posts all around the coasts, so that the zone of action of each post joins that of its neighbor on

either side. By October all merchantmen and patrollers will be fitted with wireless and all merchantmen supplied with guns of as heavy calibre as possible, for which measures programs have been drawn up even beyond what was thought possible.

For building the plates and frames required *M. Loucheur*, Under Secretary for Munitions, in charge of the manufacturing sections, has started up again all the rolling mills. They will be able to supply us with the plates I asked for, and we hope that the merchant marine will also be able to obtain the quantity of plates to which it is entitled.

Speaking in the Chamber of Deputies again on June 7, Admiral Lacaze said that the proportion of submarines sunk had increased to a marked extent. "We are employing," he added, "a very efficient method, and we are able to see the possibility of developing this method so as to render it more efficacious." The Minister, reviewing the submarine situation, said that Germany had announced a blockade and had fixed a certain date. The result had been that the Allies were not blockaded. Their ships had gone wherever it was necessary to go. At no moment could any one say that France had been blockaded, either near at hand or at a distant point.

The Navy Department at Washington has received reports stating that more submarines are being run down, captured, and destroyed than ever before, and although the exact details cannot be divulged, it is known that the American destroyer flotilla, under Rear Admiral *Sims*, has been playing an active part in the work with the British and French fleets. Recently twenty-eight German submarines were captured or destroyed in a single week.

The increased success of the campaign against the U-boats is attributed more to improvements in organization than to any new devices. It is said the presence of American destroyers has enabled the British and French to send some of their small craft to their bases for docking and sorely needed repairs, after virtually continuous service for the last two years.

Hardships of the U-Boat Service

Captain L. Persius, Leading German Naval Critic,
Praises the Men Who Torpedo Merchant Ships

This article from the Berliner Tageblatt has been translated for CURRENT HISTORY MAGAZINE, both on account of its human interest and because it reveals the prevailing German mental attitude toward ruthless submarine warfare.

At present the crews of the German submarines are the objects of particularly warm interest. Of course, their heroic activities have been followed with undiminished attention ever since that notable 22d of September, 1914, when the never-to-be-forgotten Weddigen sent three English armored cruisers to the bottom of the North Sea with well-aimed torpedoes from the U-9. That the "David," the little submarine, is able to give the deathblow to the huge "Goliath," the battleship, and that it possesses powers far exceeding the expectations placed upon this most modern instrument of battle before the war, has been proved by the torpedoing of the ships of the line before the Dardanelles, which put an end to the entire Anglo-French undertaking, in particular, and furthermore by the sinking of many other enemy warships.

But the U-boats have made themselves the centre of attraction only since they have shown their effectiveness in the warfare on commerce. Here an entirely new field was opened to them. On Oct. 26, 1914, the British merchantman Glitra fell a victim to a U-boat (U-17) southwest of Skudenaes on the Norwegian coast. This was the first destruction of a merchant ship by a submarine. Soon others followed on the Atlantic coast of France, in the Irish Channel, &c. The world stared in surprise. The U-boats were attacking the enemy's commerce. That was a novelty never anticipated. During the two and a half years that have passed the feeling of certitude has grown more definite from month to month that the U-boat may be destined to cut off the main artery even of Great Britain, ruler of the seas, through the tying up of her

imports, and that thus the U-boat points to the way in which the "freedom of the seas" may be insured in the future.

If the nation whose existence is most closely connected with the uninterrupted importation of foodstuffs sees that for its own life it must move for the undisturbed peaceful use of the seas even in war times, then the last barrier will fall—i. e., all the paragraphs contrary to civilization, those speaking of prizes, privateering, contraband, &c., must be removed from sea law; in short, the principle that ought to be taken for granted by civilized nations that private property may not be destroyed on the water, as it may not be infringed upon on land in time of war, will be recognized.

The men who are helping create this condition desired in the interests of humanity and the development of culture are the crews of the U-boats. Of course, in order to carry out their task, they need instruments, vessels, and weapons of the most cunning construction. The creators of these things, the shipbuilders and engineers, must not be forgotten when the triumphs of the submarine weapon are brought to mind. Only after the war will the world recognize to its full extent what the German people owes to its U-boat builders and to the constructors of the many pieces of machinery concealed in the U-boats, and what almost incredible technical progress has been made in Germany since the Fall of 1914, not only in the perfection of products, but also in the rapidity with which the desires of the front have been fulfilled. Any one who might be permitted to raise the curtain just a little and to penetrate the veil that now naturally covers everything

connected with U-boat construction would be overwhelmed with the extent of what has been created by German science in every necessary line.

A seaman's lot is never easy. Night and day he is separated from a watery grave only by a thin plank. And yet his existence seems like paradise compared with that of the U-boat man. This man dispenses with what every one regards as indispensable for life—light and air. When the road to hades gapes for the U-boat man it leads through darkness and torment. He knows that he is threatened most by a slow death through suffocation. Everybody else—with exceptions like stokers, men in the magazines, and some others—enjoys the fresh air and looks up and sees above him the broad canopy of heaven when in the roar of the battle he must enter the gates of the Great Beyond. Indeed, in every case, "*Dulce et decorum est pro patria mori.*" But our sympathies will be more deeply moved when we think of the death of the U-boat man.

Of course the U-boat man also sees some of the bright side of life, and it would be wrong to pass by without noting this. On board a big battleship the individual is more or less lost in the crowd. He is only one among the more than 1,100 men composing the crew of a modern ship of the line. On board the U-boat every one is an important personality. There are rarely more than thirty men in a high seas U-boat. So every one, be he sailor or oiler, has several duties to perform; so every one is fully acquainted with all the numerous mechanisms and expert in their use. The commander, watch officer, and chief engineer know every one of their men thoroughly. They stand in a comradesly relationship to them, they share their sufferings and joys in every way. Their food is all cooked in the same kettle and gift cigarettes of the same brand are found between their lips when the boat bobs up for a brief rest and the weather permits. Below decks smoking is not allowed. To be sure, the commander has a tiny room of his own—in which to write his official reports, &c.

But the lack of light and air, the

absence of every comfort, the dangers that menace them every hour, yes, every minute, are the common lot of all U-boat men. There is, however, greater responsibility upon the officers and the chief engineers, although every single U-boat man, sailor and oiler alike, knows that oftentimes a slight oversight or a false move will seal the fate of himself and his comrades.

The most careful selection among the volunteers, who are always offering themselves in great numbers for the U-boat service, is just as important as the long period of training during which the U-boat aspirants are schooled in every branch of their difficult service. They must all be in superior health and be what they call "*fixe Kerle*"—i. e., quick in perception and decision, never timid or hesitating, skilled, and also infinitely serious in their conception of duty, dependable and steadfast. The sailor must be a "thoroughbred seaman," the oiler a perfect mechanic.

The members of the crews are trained at the U-boat school. There they became acquainted with all the complicated apparatus, the expert use of which forms the basis for every success. The pupils are made familiar with the instruments that show the condition of the atmosphere, the trim of the boat and the height and depth, with the functions of the numerous valves, slides and levers, &c., and with the safety and life-saving apparatus, a thorough knowledge of which is indispensable for every U-boat man. In addition to these general points, the submarine sailor must have skill in navigation, in signaling, in serving and launching torpedoes and in handling the deck guns and their ammunition, while the oiler must understand the care of the engines that drive the U-boat above and below the water well enough to enable him, in case of necessity, to take the place of the engineers and, if possible, that of the chief engineer.

Correspondingly greater demands are made upon the officers and the engineers. Every U-boat commander is almost a "superman." He must possess extraordinary gifts of both an intellect-

ual and physical kind if he wants to fill his post with success. To him belongs a quite special talent. The officers' corps of the German Navy includes a number of such "supermen." These commanders are reinforced by an excellent body of engineers, whose loyalty and knowledge already in times of peace had more than once demanded unlimited recognition.

The U-boat commander and chief en-

gineer, manager of the boat and commander of the weapons on board and manager of the engines—that is, the forces that give life to the boat—are supported by a personnel of sailors and oilers capable and filled with the joy of service. They all blend in a whole that firmly binds "a row of brothers" in danger and distress, and that, if a pitiless fate so decides, maintains its firmness in loyal comradeship in death itself.

The Heroic Men of the Athos

By Hughes Le Roux

To the soul of America, on the eve of her entry into the world war, this stirring tale of heroism was dedicated. Printed in *Le Matin*, Paris, it has been specially translated for *CURRENT HISTORY MAGAZINE*.

IT is not enough to say: "Such a liner has sunk, gutted by a German torpedo. * * * The conduct of the crew and of the passengers was splendid. * * *" It is necessary to go further and set forth before the eyes of the world certain explanations which will show what, in this third year of the war, the expression "splendid conduct" means in French.

I wish to place on record the story of how the Athos died, with the tricolor floating from her mizzenmast. The affair took place on Feb. 17, 1917. Launched by an attacking submarine which remained unseen, the torpedo penetrated the liner. The Captain calculated that he had ten minutes to save whatever could be saved.

A torpedoed steamship does not simply sink; she often blows up. She tosses into the air men's bodies, smashed, dismembered, shot forth by the explosion like stones from a sling. On board the Athos there was an engineer officer who made up his mind: "At least, I will prevent that!"

The liner was listing frightfully. By the narrow steel stair, slimy with oil, the officer, whose hand was already mutilated, made his way down into the engine room, from which he knew he would never come forth again. He shut off the valves; he handled the control levers; he

checked the explosion. He sleeps now in the abysses of the sea. This was his choice. His name was Donzel. Let us salute him!

At Hongkong the Athos had embarked a thousand Chinese coolies, the saw-toothed workers who come to France to replace our lacking workmen. They begin their journey under contracts worthy of France and of themselves—a part of their earnings is kept back for their wives, their parents, their children, those whom they love as we love our own kin. These Asiatics were in charge of a French Captain and a dozen Corporals and interpreters.

These officers and interpreters did not say to themselves: "There are four hundred million more Chinese in China! Let us think first of our own lives. They are more valuable." Until the last second they worked to secure the safety of these foreign laborers who had intrusted themselves to France. For themselves, the ship was their coffin. We salute Captain Silvestre and his valorous aids!

The Athos was bringing back to France three German prisoners. They had been taken aboard at the port of Indo-China. They had wormed their way into our colony to whisper words of treason and of hate in the ears of the natives whom France is governing in friendship, guiding them toward a higher justice. Pris-

oners below decks, they were in charge of a Sergeant.

At the moment when the German torpedo pierced the hull of the French ship, this Sergeant thought: "These Germans are human beings. I will not leave them in their cells simply because their fellow-countrymen are infamous." He went below. He had time to open two cabins. He set free two Germans, who succeeded in getting up on deck and jumping into the sea. They were picked up. He, the French Sergeant, was drowned while opening the door of the third cabin to save the third of his enemies.

Dear friends in America, would you not wish, in the list of your Laconia dead, to write the name of Sergeant Moujeau between those of Mrs. Hoy and Miss Hoy—of Sergeant Moujeau, who died in order to bear witness, before the world, that France is the fatherland of honor for all men, good and evil equally?

Further, the Athos had taken aboard a battalion of Senegalese sharpshooters, under the orders of Major Colonna d'Istria. Paris and France know them well today and love them, these black soldiers. In our field hospitals, the hands of our wives and of our daughters have dressed their wounds. France has

taught them to live and die with joy, for a bit of ribbon, for a ray of honor.

They were in numbers on the Athos, and inevitably in the ship's boats and on the rafts there was not room for every one. Their officers organized the work of rescue under rigid discipline. Naturally, these officers elected to remain with those for whom there would not be room, and to go first into the abyss. This, then, is what happened: At the moment when the liner sank, drawn up in ranks as though on parade, Major Colonna d'Istria's Senegalese sharpshooters presented arms. They sank with their hands upon their rifles, with bayonets fixed. They were saluting France. Commandant Dorise, Captain of the Athos, had not left the bridge. He dominated this scene of death by the calmness of his voice and orders. When the sinking ship went under he was thrown from a height of sixty feet. But his soul remained with his ship. He was already a dying man. He was kept afloat in the water by Maurel, the supervisor of the mails, and Ensign Verdelhan, as a bit of glorious wreckage. He was dead when they landed him in Malta, where his grave will be.

This, then, is what did not sink with the Athos!

A Harrowing Sea Story

Captain Chave's Report

ONE of the most heroic and terrible sea episodes of the war is enshrined in the report made by Captain Benjamin Chave to the owners of the British merchant steamer Alnwick Castle, which he had commanded. The Alnwick Castle was torpedoed without warning by a German submarine 320 miles at sea, off the Scilly Isles, in April, 1917, and the crew were left in six open boats at the mercy of wild North Atlantic gales. Some of these boats were never heard of again. The one with Captain Chave contained twenty-nine men, and their awful sufferings are an index to what the missing ones endured before they perished.

The Captain's boat soon lost sight of the others. There were only three men with him who could help him to steer, and one of these soon became delirious. The wind and waves were unsafe for sailing. There was a terrible fight with the sea, and the men were constantly soaked with spray and pierced with the bitter north wind. Water was served out twice daily—each portion about one-third of a condensed milk tin. A can of milk was divided among four men once a day, and a six-pound can of beef was apportioned daily among twenty-nine persons. The men's thirst became terrible, and pitiful appeals for water were made. An

extra ration was served to a few of the weaker men.

The ship had been sunk on a Monday, and on Thursday morning the wind fell for a couple of hours, and several showers of hail fell. The Captain continues:

"The hailstones were eagerly scraped from our clothing and swallowed. I ordered the sail to be spread out in the hope of catching water from a rain shower, but we were disappointed in this, for the rain was too light. Several of the men were getting light-headed, and I found that they had been drinking salt water, in spite of my earnest and vehement order.

"It was with great difficulty that any one could be prevailed on to bale out the water, which seemed to leak into the boat at an astonishing rate, perhaps due to some rivets having been started by the pounding she had received.

"Our water was now very low, and we decided to mix condensed milk with it. Most of the men were now helpless, and several were raving in delirium. The foreman cattleman, W. Kitcher, died and was buried. Soon after dark the sea became confused and angry. I furled the tiny reef sail and put out the sea anchor. At 8 P. M. we were swamped by a breaking sea and I thought all was over. A moan of despair rose in the darkness, but I shouted to them to 'Bale, bale, bale!' and assured them that the boat could not sink. How they found the balers and the bucket in the dark I don't know, but they managed to free the boat while I shifted the sea anchor to the stern and made a tiny bit of sail and got her away before the wind.

"The wind died away about midnight, and then we spent a most distressing night. Several of the men collapsed, and others temporarily lost their reason, and one of these became pugnacious and climbed about the boat uttering complaints and threats. The horrors of that night, together with the physical suffering, are beyond my power of description.

"When daylight came the appeals for water were so angry and insistent that I deemed it best to make an issue at once. After that had gone around, amid much cursing and snatching, we could see that only one more issue remained. One fireman was dead and another nearly so. My steward was almost gone. We tried to pour some milk and water down his throat, but he could not swallow. No one could now eat biscuits, it was impossible to swallow anything solid, our throats were afire, our lips furred, our limbs numbed, our hands were white and bloodless. During the forenoon on Friday another fireman died and my steward died, also a cattleman collapsed and died about noon.

"To our unspeakable relief we were rescued about 1:30 P. M. by the French steamer *Venezia*. A considerable swell was running, and in our enfeebled state we were unable properly to manoeuvre our boat, but the French Captain, M. Paul Bonafacie, handled his empty vessel with great skill and brought her alongside us, sending out a lifebuoy on a line for us to seize. We were unable to climb the ladders, so they hoisted us one by one in ropes until the twenty-four live men were aboard. The four dead bodies were left in the boat, and she was fired at by the gunners of the *Venezia*, in order to destroy her, but the shots did not take effect."

An illustration of the spirit that animates officers of the British merchant service is found in the concluding words of Captain Chave. In spite of the fact that when he was torpedoed he had survivors of another vessel on board, which in its turn had observed another steamer blown up, and that he himself witnessed a further steamer sunk, in spite of the terrible sufferings which he had experienced, he adds: "At present I have not regained fully the use of my hands and feet, but hope to be fit again before arrival in England, when I trust you will honor me with appointment to another ship."

Adventures of Submarine Victims

Eight Spanish sailors from the crew of the British vessel Gravina, which was sunk by a German submarine on Feb. 7, 1917, reached their homes in Barcelona in April. One of them gave the following account of their remarkable experiences:

THE Gravina was struck by a torpedo amidships, and broke in halves.

The fifteen survivors were able to keep afloat by clinging to two bales of corkwood. In about half an hour's time we saw a submarine coming toward us. We shouted, "We are Spaniards, we are Spaniards! Save us!" The submarine came near to us, and many of the crew were on its platform looking at us and laughing at our struggles. We expected to be picked up quickly, but, no, we still had to remain in the water another ten minutes while the submarine officers prepared their cameras to photograph us. Having done this, they proceeded to save us. They threw lifebelts attached to ropes and got us on board. We had been fighting against death for three-quarters of an hour.

We were immediately made to go below through the afterhatch to the part of the submarine used for discharging torpedoes and storing ammunition. In this floating prison we found two companions in misfortune, the Captains of two English steamers sunk by the same submarine.

The monotonous but not tranquil life was disturbed from time to time by a rapid manoeuvre. Some vessel was in sight, and it was necessary to sink it. They forced us to load the torpedo, an operation which was performed with all the repugnance of honorable men. They opened the chamber of the tube, made us lift the torpedo and put it in. Afterward they gave the order to fire, and after a few seconds of anxiety we heard a formidable explosion. The German seamen jumped, laughed, and sang. They had hit the target. During the twelve days that we were on board they sank five vessels, among them a Swedish sailing ship which was sunk by cannon shots.

Generally speaking, we went down at night time, and, although submerged, we always navigated. In the daytime we came up on to the surface of the sea, which, however, they never allowed us to see. We were aware of it by the change of motors. Our region of operation (that is, of the submarine) was for nine days south of Ireland.

On Feb. 15, 1917, we started on the homeward trip to the naval base, as the German seamen informed us. We went up the west side of England, round the north, and then to Jutland, always on the surface, and in three days arrived in the waters of Heligoland. One of us managed to see the engineer's diary, where the following particulars appeared: "Eighteen miles speed on the surface and thirteen miles submerged; 12,000 tons. Crew of thirty," and in each page was noted U-81. Four hours before arriving at the Island of Heligoland they made all the prisoners go up on the deck platform, and they photographed us. They then ordered us down below again to the torpedo room. The port where we landed was not very large. There were about a dozen submarines and four or five destroyers there, but all the quays and jetties bristled with seamen with bayonets fixed. * * *

Three days after our arrival in prison camp we were awakened by cries from the Russians who slept in the hut. Fire had broken out in one hut apart from the others, which served as a dungeon where they shut up prisoners who were rebellious. That day six Russians, one Frenchman, and one Englishman were undergoing this punishment. The prisoners naturally called to be let out, but in vain. The sentry remained unmoved. No doubt he was awaiting orders from his superiors. Those inside the dungeon were being stifled. The Englishman broke the panes of a small window, with the idea of freeing himself and his companions. The sentry, seeing him leaning out of the window, gave him a tremendous bayonet thrust in the chest. The wounded man

fell like lead. A small but revolting struggle then took place. The prisoners attempted to get out, and the German soldier reddened his bayonet again and again with the blood of the men shut up, who saw with horror that the fire was increasing. The conflagration could not be extinguished by the other prisoners until it had done its work. The eight unhappy individuals who occupied the dungeon were corpses. For an hour afterward nothing was heard but shouts of indignation. It looked as if a formidable outbreak would take place. The guards were immediately reinforced, and we were surrounded by a number of German soldiers. The commander of the camp issued an order stating that he was sorry for what had occurred, and that on the following day he would allow the funeral of the victims to take place with ceremony.

It was not all the prisoners who resigned themselves to suffer what was imposed on them. The English, above all, were the most rebellious. One day we were present at a scene which was celebrated with great rejoicing in all the camp. An English seaman, who already had one eye blind as a result of blows they had given him on a previous occasion, refused to obey two officers who ordered him to go to work. They reviled

one another mutually, and finally the Englishman invited them to fight, giving them such punches that as a consequence we saw them for days afterward with their heads bandaged. The German soldiers were the first to scoff at the cowardice of their superiors. The English sailor was condemned to bread and water until the end of the war.

What saddened me most were the seventy old men and thirty children of 12 to 14 years of age, all English except one, who was French; they were youngsters who had been captured on board the vessels sunk, and ran from hut to hut asking for sweets and tobacco. Another day I also suffered a great shock on seeing the English Captain of our steamer Gravina, who had so far received no news from his family, who came up to us to beg bread. "I have always been good to you. Have compassion on me. Give me a little piece of bread, if you can spare it." We certainly had no reason to complain of his treatment of us, and we respected him. We gave him all we could.

[On April 14 the eight Spanish seamen were entrained for the Swiss frontier. All the way they were much struck by the number of wounded and by the general air of depression among the people.]

Come Into the Garden, (of Eden,) Maude

(With Apologies)

[Contributed to The Times of India on the occasion of General Maude's victorious advance in Mesopotamia]

Come into the garden, Maude,
For the black-browed Turk hath flown;
Come into the garden, Maude,
For the fall of Kut atone;
And the "Woodbine" spices are wafted abroad
And the bluff of the Hun is blown.
For the screen of darkness moves
And your star of Glory's high,
Beginning to glow in the light we love
In the light of victory.
To shine in the folds of the Flag we love,
To fight for till we die.

The Threat of "Mittel-Europa"

By Thomas G. Frothingham

"The perennial conflict between land and water transport, between natural and artificial conditions, in which the victory is likely to rest, as heretofore, with nature's own highway, the seas."—Mahan.

GERMANY attained one of her most coveted aims—the "bridge to the East"—when, early in the war, Turkey and Bulgaria joined the Central Powers, and General von Mackensen swept through Serbia, opening up the last European section of the Berlin-to-Bagdad railway. The world at once recognized a menace in Germany's possession of this coveted commercial weapon. It so happens that Admiral Mahan has left on record a dispassionate estimate of the measure of this menace, and his words are of vital interest at this stage of the war.

The Teutonic desire to control the Near East is only a modern form of one of the oldest problems in the world, a legacy of the ancient empires and of the Middle Ages, the dream of Napoleon. Seizure of this source of power by some rival has long been the dread of England. To combat imagined attempts at such control on the part of Russia was Great Britain's self-imposed task for three generations.* The great Slavic Empire, though vainly attempting to find an outlet to the sea, was never a real danger; yet to guard against the imaginary threat of this impending avalanche England unwisely built up Germany into a dominating power and retained Turkey in Constantinople, both designed to be barriers against Russia. Both are now united against Great Britain.

It is this union of Germany and Turkey that makes the present Teutonic control of the passage to the East a serious matter for the whole commercial world. No longer is it a question of the great undeveloped Slavic empire seeking an outlet to the sea; it is a new military and trade weapon already firmly in the grasp

of the most efficient military power ever developed. The Teutons at present dominate the whole Balkan Peninsula, as well as the Dardanelles; Serbia, Montenegro, and Rumania have been overcome in detail and are out of the running. Russia has passed through a revolution, and at present is not to be considered as an active military factor.

The Russian Empire, before the sudden collapse of its armies that came with the revolution, had given promise of checking, and even cutting off, Teutonic domination through the Russian advance in Asia Minor and north of Bagdad. Now all this is at an end—at least for the present. It is true that Bagdad is in British hands, but the consolidation of the great strip of territory from Germany, through Austria-Hungary, the Balkan States, and Asia Minor, to the East may be called an accomplished fact from a military point of view.

Teutonic control of these territories implies ownership of long lines of land transportation and domination of commerce through them. What danger is there for the rest of the commercial world in this situation, with so great a power ready to use such control to its own advantage? Even under such efficient control, can artificial conditions of land transportation compete with the great natural lanes of the sea? Never in history has this proved possible, yet here are all the elements of the most efficient machinery ever devised to build up such a structure. The foundation of this Germanic edifice is the Bagdad Railroad, originally projected as a line from the Levant to the Persian Gulf, now enlarged into the railway systems reaching from Hamburg on the North Sea to the Euphrates and Tigris Valleys in Asia Minor.

In a paper by Admiral Mahan, published in 1902, from which was taken the quotation at the head of this article, is a most interesting discussion of the military and commercial values of this rail-

*British Foreign Policies and the Present War.—CURRENT HISTORY, May, 1917.

road as originally planned. He sums up the merits of the railway in words that are well worthy of study in the present circumstances:

This new line will have over the one now existing the advantage which rail travel always has over that by water, of greater specific rapidity. It will, therefore, serve particularly for the transport of passengers, mails, and lighter freights. On the other hand, for bulk of transport, meaning thereby not merely articles singly of great weight or size, but the aggregate amounts of freight that can be carried in a given time, water will always possess an immense and irreversible advantage over land transport for equal distances. A water route is, as it were, a road with numberless tracks. For these reasons, and on account of the first cost of construction, water transport has a lasting comparative cheapness, which, so far as can be foreseen, will secure to it forever a commercial superiority over that by land. It is also, for large quantities, much more rapid; for, though a train can carry its proper load faster than a vessel can, the closely restricted number of trains that can proceed at once, as compared to the numerous vessels, enables the latter in a given time, practically simultaneously, to deliver a bulk of material utterly beyond the power of the road.

These wise conclusions were drawn from the first project of the railway from the Levant to the Persian Gulf—and these fixed conditions, with which a railway has to contend, are multiplied by length. So it must be kept in mind that even German efficiency has a hard problem to solve in the railroad from Berlin to the East.

A study of the map will show that the proper economic uses of these railway systems are the normal functions of any railroads, to distribute goods brought by water, to deliver goods for shipment by water, and to connect neighboring countries. Under such natural commercial conditions, as pointed out by Admiral Mahan, the great bulk of freight shipped for long distances would not use the railways, but no matter what concessions might be made in rates, would be carried over the seas. Railways can never compete with waterways.

So the conclusion is obvious that, under natural conditions, even though these railways may be under Teutonic control, they are of great value to the countries through which they run; but that, while

of great advantage to German trade, they are not a source of undue power to Germany. Such power, which Germany has unquestionably sought, can therefore only be founded on artificial conditions.

Is there, then, any dangerous power in the conditions which have been created by Germany? That there is a danger would only be denied by one who is blind to German methods and German ambitions. This should be stated as baldly as possible. Germany aims to establish such a control over these regions that all commercial gains shall be hers, and the other nations be excluded. The ruthlessness and tenacity of purpose of Germany have been so plainly shown that it is no wonder Germanic control of "Mittel-Europa" is widely held to be the greatest menace of the war.

But, as is often the case, this dread has become exaggerated. In fact, it has been allowed to grow out of all proportion to the other great interests at stake in this war. There are counteracting forces that tend to make the situation normal. There has been so much fear of Germanic control of the passage to the East that the hardships for Germany and her allies of such enforced conditions have not been considered.

Germany's commerce would suffer from this restricted traffic. To hold their own, even with all possible favoritism shown to them, the German merchants must make proper use of the waterways or submit to a ruinous tax on their trade. The same is true of Germany's friends and allies—and this leads at once to natural conditions of commerce.

With German merchants and the merchants of her friendly States the worst sufferers, how is it possible to attempt to confine traffic to the railways? Yet such must be the basis of any abnormal German domination in the East. Consequently, leaving all the other nations out of consideration, the interests of Germany and her allies are against the misuse of control that has been so widely considered the dangerous threat in the present conditions.

There is another restraint on this much-feared Teutonic influence. To be

maintained at all such a central control must be that of nations closely united and unanimous in purpose. Where can this be found in these regions? With all the diversities of interest, with the antagonisms of races and religions, is it possible that Germany has built a harmonious machine that has accomplished what has never been done in history—diverted the bulk of commerce from the sea to the land?

Studying the question in this way from conditions that have prevailed throughout all history—and still exist—we realize that this issue must not be magnified and

allowed to cloud our minds. The military results secured by Germany should not be underestimated, but neither should they be misunderstood. In 1915 the Teutonic allies were practically besieged. Since then Hindenburg and his lieutenants have not only raised this siege, but have conquered great areas of territory rich in much-needed supplies. With Russia paralyzed by revolution, all serious opposition to the German armies in the East is for the time ended. These are serious and far-reaching military conditions, but they must not be distorted into anything worse.

Prices in 1914 and 1917

IN the United States Senate on May 2 Senator Gallinger of New Hampshire presented a table prepared by the Old Dutch Market Company showing a comparison of prices in April, 1914, with those of April, 1917. It revealed the fact that the average increase was 85.32 per cent. The table is as follows:

COMPARISON OF RETAIL PRICES OF FOODS DURING APRIL, 1914, BEFORE THE WAR, AND APRIL, 1917

	April, April, Inc.	
	1914.	1917. P.C.
GROCERIES

Total increase, 5,119 per cent.

Average increase on all items shown on this list, 85.32 per cent.

China and the World War

By Gardner L. Harding

Author of "Present Day China"

THE months following Feb. 1, 1917, not only—by bringing America into the great war—changed the face of the Western Hemisphere; they made a lasting alteration in the Far East also. On Feb. 9, Wu Ting-fang, Foreign Minister of the Chinese Republican Government, handed a note to Admiral von Hintze, the German Minister to Peking, that made a rupture between the Chinese and German Governments ultimately inevitable. Six days before President Wilson had issued an appeal urging neutral powers everywhere to show their abhorrence of Germany's new campaign of unrestricted submarine warfare by breaking off relations with the German Government. China's response was therefore of special interest to Americans, especially as, accompanying a copy of the note to Germany, a special note was handed to Dr. Reinsch, the American Minister to Peking, in which there appeared the following significant words:

China, being in accord with the principles set forth in your Excellency's [President Wilson's] note, and firmly associating itself with the United States, has taken similar action by protesting energetically to Germany against the new blockade measures. China also proposes to take such other action in the future as will be deemed necessary for the maintenance of the principles of international law.

The sentences of greatest weight in Dr. Wu's first note to Germany were these:

The new measures of submarine warfare inaugurated by Germany are imperiling the lives and property of Chinese citizens even more than the measures previously taken, which have already cost China many lives and constitute a violation of international law. * * * If, contrary to expectation, this protest be ineffective, China will be constrained, to its profound regret, to sever diplomatic relations.

China's reasons for taking this stand were amply covered by specific ills and grievances at Germany's hands, and by the wider strategy of China's own political position. For specific grievances, China

had a death roll of over 200 peaceful merchant seamen, lost on neutral and belligerent ships at the hands of German submarines. In principle also the ambitious and rapidly developing Chinese mercantile communities, whose cornerstone of commercial progress is unrestricted access to the high seas, had begun to distinguish sharply by Feb. 1 between the salutary restraint of allied policing and the indiscriminate outrages of German piracy. The Allies, furthermore, were the principal guarantors of China's integrity and autonomy, and in the closer association with them which thus became so opportune, China's assurance of a place at the peace conference, which she might expect as an actual and belligerent ally, was the third major element which induced her Government to take its first step toward war.

Influenced by America

Lastly, China's move was due to her increasing and always sympathetic responsiveness to the foreign policy of the United States, the only power which today holds no concessions or spheres of interest in her sovereign territory, and has exacted no punitive indemnity from her Government. For China, on America's invitation, capably and energetically presented to the Peking Government by Dr. Reinsch, not only took the first step toward breaking off relations with Germany, but incidentally, for the first time in her modern history, assumed in a diplomatic note a position of active interest and presumptive interference in the affairs of European nations.

The German answer to China's note did not reach Peking till the first days of March, though by Feb. 25, Dr. Yen, China's Minister to Berlin, announced that the German Government had assured him orally that Germany could not alter her submarine campaign. By March 9, however, Admiral von Hintze had handed to the Chinese Government a

formal refusal to accede to China's demands, offering merely the barren assurance that Germany was willing to open negotiations so as better to "respect the lives of Chinese and their property," * * * "hoping" that China would not break off diplomatic relations, and "promising" that Germany would do her utmost to secure China's participation in the peace conference if friendly relations between the two countries were maintained.

China's attitude, in the meantime, had substantially matured toward the final rupture. Three factors, in the main, brought her to this decision. The Japanese Government, through Baron Motono, its Foreign Minister, had publicly announced that it would put no obstacle in the way of China's independent action. Tuan Chi-jui, then Prime Minister of China under President Li Yuan-hung, had assured the nation that the Allies were prepared to guarantee China adequate concessions upon her becoming a belligerent. Chief among these concessions, as stated by Premier Tuan, were the abrogation of the Boxer indemnities (roughly, \$15,000,000 in 1916) for the period of the war, and possibly for an even longer period; the extension to China of the right to raise her customs duties above the statutory 5 per cent. now allowed on a diminishing scale of price levels dating back more than ten years, and the removal of the foreign troops installed after the Boxer outrages along the Peking-Mukden Railroad. And, thirdly, under the influence of these guarantees and the possibility of gaining even further concessions, and encouraged by relief from Japanese constraint, China's disputing factions took a larger view of their country's welfare and gave the issue with Germany a clear field for immediate decision.

Diplomatic Relations Severed

That decision was a foregone conclusion. Every politically important element in China's limited but energetic sphere of public life was in favor of breaking off with Germany. The President and the Prime Minister, the Cabinet, and the military parties of the north, and particularly the radically inclined

Parliament, largely representing the ideas of the southern parties, all decisively ratified this momentous step. Scattered elements opposed it, such as a group of radicals led by the famous ex-President Sun Yat-sen, but the southern parties as a whole approved it and backed it. This was clearly shown when, on March 11, Premier Tuan Chi-jui appeared before both houses of Parliament and put the question of rupture with Germany to a final vote. The outcome, a majority of 158 to 37 in the Senate and 331 to 87 in the House, or a joint support of the Premier's policy by 4 to 1, manifested impressively the decision of liberal China and gave the Government an immediate mandate to break off relations with Germany.

Thereupon, on March 14, Dr. Wu Ting-fang handed to Admiral von Hintze a final note, of which the closing words effectually put China's position as follows:

It [the German reply] is therefore not in accord with the object of that [the Chinese Government's] protest; and the Government of China, to its deep regret, considers its protest to be ineffectual. It is therefore constrained to sever the diplomatic relations at present existing with the Imperial German Government.

Admiral von Hintze was at once given his passports, and China inaugurated her new status toward Germany by seizing German merchant ships at her ports, including six at Shanghai, and interning their crews on shore. Germany's immediate loss through her rupture with China went much further than this, however. China had been the centre and the base of extensive plotting and propaganda in the German cause throughout the Far East. The mutiny at Singapore, seditious propaganda in India, and the mysteriously financed Mongolian bandits who roved along the Siberian border during the first two years of the war are instances of Germany's opportunity, if not of her actual achievements, in the way of using China's neutrality as a safe and convenient shield for the virtual war measures with which we became somewhat earlier so disagreeably familiar in America. With the loss of China's friendship, all this was substantially curtailed.

Loss of Trade Advantages

There is still to be considered Germany's loss of an economic base there. Germany had 244 companies in China at the beginning of the war, with a total capitalization of over a quarter of a billion dollars. Her trade had increased by 120 per cent. in the eight years preceding the war, years in which American trade had remained practically stationary. It was also of a carefully planned strategic quality, specializing in engineering afield in inland China and in representing the firms of many other nations as middlemen in the treaty ports. It had ballasted its favored position everywhere with special concessions; thus it had to lose not merely its own material substance, but just the sort of imponderable advantage derived from long penetration which is hardest to recover; and which China's unfriendliness at once enormously accentuated.

The positive advantage to the Allies of China's rupture with Germany was much less obvious, but it was by no means insignificant. China had by Feb. 1 already sent some 100,000 of her sons as industrial workmen in Government shops, controlled establishments, and war munition factories in general behind the battle lines in France. The closer association with the Allies that became opportune after March 14 opened the way immediately to increase this service far beyond previous plans; so that China's vast labor supply was again drawn upon, and estimates were made for its utilization by the allied Governments in a non-combatant army of 200,000, or even 250,000 men. England also commenced to recruit Chinese labor, in close co-operation with the Chinese Government, not only for service in the factories—and on the farms—of Europe, but for her great construction works in Mesopotamia; while in another extreme of the world's climate Russia, too, enlisted thousands of Chinese woodsmen and northern peasants to serve her agricultural needs as loggers and farm hands in Siberia and Russian Mongolia.

Though there was no immediate prospect, or desire, even after China might

declare war on Germany, of sending Chinese troops to Europe, the prospective disposal of China's enormous stocks of iron and coal, as well as those of tin and antimony, of which latter China produces a substantial portion of the world's annual yield, constituted a really estimable allied advantage. Her 500,000-ton* production of iron ore and her 13,000,000-ton* production of coal, both of excellent quality, were each factors in the economic scale in a world reduced to the ultimates in men and metal.

Beginning of Internal Disorder

China's own domestic political situation, stabilized by the crisis of March 14, became less and less stable, however, as that crisis receded. In that situation there were three capital factors. Dominance in China in a military sense was held by the Prime Minister, Tuan Chijui, who was also Minister of War and leader of the conservative party of the Generals and old officials generally known (though the designation is not quite accurate) as the northern party. Dominance in a political sense was held by the liberals, led by the President, Li Yuan-hung, an ex-General of the first revolution and a mid-Chinaman from the Yang-tse Province of Hupeh, and backed up by a Cabinet representing the constructive and liberal forces, as distinct from the radicals, of the Republican Government. The third major force, the radical element which was mainly responsible for the first revolution, in 1911, was intrenched in control of the Senate, and held the balance of power, with the assistance of so-called independents, in the House of Representatives.

As the question of China's entrance into the war drew, during April and May, more and more urgently to a decision, sharp and irreconcilable differences between these parties began to be revealed. Already there had been one crisis, between March 6 and 8, when the Prime Minister, in the heat of a disagreement with the President, had left the capital and conducted the Government indepen-

*Approximate estimates. See China Year Book, 1916.

dently from Tien-tsin. The issue then was whether or not Tuan Chi-jui had the right to send a telegram to Tokio which virtually broke off relations with Germany, without consulting Parliament, through the agency and under the tutelage of Japan. President Li eventually induced him to return to the capital and submit the question to Parliament, with the result that China broke with Germany quite as decisively, but independently, with respect to any foreign advice or control whatsoever.

Early in May the Prime Minister began to press for China's immediate entrance into the war. The President's party and the radical parties demurred, first, because they professed not to know positively what guarantees the Allies were prepared to give, and, secondly, because they feared—so they asserted—the plenary powers which a state of war would place in the hands of the Premier and his reactionary followers. A military conference of the chief northern Generals, which had been summoned to the capital in April, gave color to the general fears of a reactionary ascendancy by making frequent and vigorous demands for intervention. At length the Premier invited them to meet with the Cabinet, and on May 2 it was announced that the Cabinet was unanimously committed to an immediate declaration of war against Germany.

Drifting Toward Rebellion

On May 10 the Premier appeared before Parliament, and amid scenes of great disorder, and in a session surrounded by soldiers and crowds friendly to the northern party, vehemently urged an unconditional and immediate declaration of China's belligerency on the side of the Allies. After stormy sessions lasting the greater part of the night, Parliament voted down the Premier's policy. The press of the southern parties thereupon directly accused the Premier of seeking the war only as an excuse for instituting martial law and assuming control of the Government. The Premier rejoined by summarily arresting the editor of the leading radical paper in Peking, the bilingual English and Chinese Peking Gazette, who had also accused Tuan of con-

niving at Japanese ascendancy over China's war policy. On this the President acted with equal promptness, and on May 23 dismissed Tuan Chi-jui from office.

Tuan's dismissal was the signal to the northern Generals not merely to endeavor to recover their lost prestige, but to rise in actual rebellion against the Government. President Li attempted to conciliate them by appointing as Premier on May 29 Li Ching-hsi, nephew to the great statesman Li Hung Chang and one of their own leaders; and Parliament ratified his nomination by a decisive and obviously conciliatory majority. But the northern Generals, after seizing every trunk railroad to Peking and after placing their own soldiers around the President's immediate person in Peking, declared on June 3 that they no longer recognized Li Yuan-hung's authority and appointed a Provisional Government, with Hsu Shih-chang, former Premier under Yuan Shih-kai and Viceroy in Manchuria under the Imperial Government, as Dictator. They then issued a proclamation from Tien-tsin reiterating their demand for China's immediate entrance into the war, but insisting that that action must be accompanied by the dismissal of Parliament, the extinction of the almost completed liberal Constitution, and the reinstatement of Premier Tuan Chi-jui. They disclaimed vigorously any desire to set up a monarchy and professed themselves on June 5 to be loyal to the republic.

The situation remained a complete deadlock. On June 7 the American Government dispatched the following note to Peking, the first word to be received from any of the powers, which lent the full weight of American influence to the cause of conciliation:

The United States Government learns with the most profound regret of the dissensions in China and expresses a sincere desire that tranquillity and political co-ordination be forthwith established.

The entry of China into the war, or the continuance of the status quo in her relations with the German Government, are matters of secondary importance. China's principal necessity is to resume and continue her political entity and proceed along the road to national development. In China's form of govern-

ment, or the personnel which administers the Government, America has only the friendliest interest, and desires to be of service to China.

America expresses the sincere hope that factional and political disputes will be set aside and that all parties and persons will work to re-establish and co-ordinate the Government and secure China's position among nations, which is impossible while there is internal discord.

On the same day Secretary Lansing added to the salutary impression of this note by vehemently disclaiming the statement that America had given any aid or encouragement to the rebellion. On June 11 Dr. George Morrison, British adviser to the Chinese President, added an intimation of the policy of his Government by urging "in the strongest possible manner the retention of Parliament" and by saying directly to President Li Yuan-hung, "You must retain Parliament." Professor Ariga, the Japanese adviser, gave the less decisive advice that President Li had the right to dismiss Parliament if he wished to do so.

The American adviser, Dr. W. Willoughby, interviewed in Tokio, summed up the situation in the following words: "I look for turmoil of long duration between militarism and constitutionalism"; during which, it would seem to be inferred, China's genuinely serviceable participation in the war will be indefinitely delayed.

[EDITORIAL NOTE.—A dispatch from Peking, dated June 13, announced that the Presidential mandate dissolving Parliament had been signed by Ching Chao-chung as Acting Premier, and that it was believed that the dissolution would bring about civil war, as the leaders in the southern provinces had telegraphed President Li Yuan-hung that they no longer recognized his authority, despite the fact that the President had accompanied the dissolution mandate with a long statement attempting to justify his action. The President again called into conference at the palace Dr. George Morrison and Professor Nagao Ariga, who repeated the advice they had previously given. The President said that he had already placed his seal on the mandate, and asked what he could do, declaring that he could not obtain the signature of any of the members of the Cabinet to the document. Dr. Morrison replied that the President had better tear it up. Professor Ariga said that if the President was unable to obtain a countersignature of a member of the Cabinet he should get one from the head of the judiciary.

A Tokio dispatch of June 12 stated that the alleged failure of the United States Government to consult Japan before presenting its note to China had caused considerable resentment in Japan. Secretary of State Lansing on June 13 authorized the statement that the text of the note as first published in Japan was false and that the irritation expressed by the Japanese press had been caused by the fabricated text. The correct text was obtained later and accurately printed in the Japanese newspapers. Nevertheless, the latest dispatches show that Japanese opinion holds that the United States should be asked to recognize Japan's special position in China in order to prevent future misunderstandings.]

Better to Die

By FLORENCE EARLE COATES

Better to die, where gallant men are dying,
Than to live on with them that basely fly:
Better to fall, the soulless Fates defying,
Than unassailed to wander vainly, trying
To turn one's face from an accusing sky!

Days matter not, nor years to the undaunted;
To live is nothing,—but to *nobly* live!
The poorest visions of the honor-haunted
Are better worth than pleasure-masks enchanted,
And they win life who life for others give.

The planets in their watchful course behold them—
To live is nothing,—but to nobly live!—
For though the Earth with mother-hands remold them,
Though Ocean in his billowy arms enfold them,
They are as gods, who life to others give!

[OFFICIAL REPORT]

Story of the Russian Upheaval

By Christian L. Lange

Secretary of the Interparliamentary Union and Correspondent of the Carnegie Endowment for International Peace

Dr. Lange, a resident of Christiania, has served in the Norwegian Parliament, and was a member of the Second Hague Conference. The report here printed (with minor omissions) is the result of a special investigation in Russia undertaken by Dr. Lange at the instance of the Carnegie Endowment. It was written April 20, 1917, before the resignation of Milukoff and the reorganization of the Provisional Government.

I LEFT Christiania on March 12, when as yet nothing was known at all about what was going on at Petrograd. At Stockholm, where I stopped two days to meet the Interparliamentary Group of the Riksdag, I read telegrams about the riots in the Russian capital. I also learned of the adjournment of the Duma.

The journey to Russia is now [Spring of 1917] very long, the Baltic being impassable. One has to go north by rail for forty hours. I left Stockholm Wednesday, March 14, in the afternoon, and only Friday morning I reached the frontier at Haparanda. In the train I had already seen the first communication from the Executive Committee of the Duma that it had seized the reins of Government, that the Czar's Ministers were in prison, that the Petrograd garrison had joined the Duma, and that the town was quiet.

At Tornea, the Finnish railway terminus, we were examined by the Russian gendarmerie, as usual at European frontiers during the war. I had a laissez-passer from the Russian Minister at Christiania and was not even searched, and I heard from my fellow-travelers that their examination had also been very lenient. The people at the station knew less of what had passed at Petrograd than we. They had not seen the first communiqué, and the Finnish woman who kept the bookstall at the station was delighted when I slipped to her a Swedish paper which gave the text of the document.

Our excitement reached its pitch when we slowly came up to the platform at Bielo-Ostrov, where the customs and passport examinations take place. We

were standing ready with our bags, luggage tickets, passports, and everything—the platform was empty, not a human being to be seen. Then, all of a sudden, the carriage door opens, enters a little dwarf, no taller than my writing desk, and he cries out as he rolls down along the corridor: "Liberty is supreme. All the gendarmes are sent to prison to Petrograd. No more passports, no customs. Only liberty reigns!"

He was our herald of the revolution! And he proved true. The train left at once, without any examination at all, and within two minutes we all carried, God knows how, red badges in our buttonholes. I got mine from the carriage maid, who tore asunder a piece of red flag cloth and freely distributed the pieces, and she at once became very communicative. There had been a strike for some hours on the railway lines, a strike of pronounced political character. The men had insisted on the removal of some high Russian officials in the railway administration. As soon as they had obtained satisfaction, they returned to work. This accounted for the delays we had had and still had.

Conditions in Petrograd

On our arrival at Petrograd we found the city quiet. We met some soldiers patrolling the streets; here and there we saw groups of young students with white bands around the left arm bearing in red the letters G. M. (Militia Guard) and a gun thrown across the shoulder. Once or twice we met some persons returning from a dinner party. Otherwise the streets were as if dead, not a horse and carriage, nor a tram. When we had crossed the

great bridge we saw the dreary ruins of the big police court on the Lieteny Prospect, (one of the main thoroughfares.) It had been burned, but otherwise no traces of destruction were to be seen so far. The popular exasperation had turned against the police and its headquarters. Unfortunately, some very important documents were destroyed at the same time; not only the états civils, the registers of the population, their age, status, and so on, but also the archives of the secret police have in part been destroyed, so it is now one of the difficult tasks of the new administration to trace the agents provocateurs, who were everywhere.

As I walked along the Nevsky, I met a procession of workmen, soldiers, and women singing the revolutionary hymn—an old song, I was told—sung to a tune evidently borrowed from the “Marseillaise,” but in rather a depraved setting. The text may be rendered as follows

Let us give up the ancient world.
 Let us shake its dust from our feet.
 We want no idol in gold.
 We hate the palace of the Czars.
 We will go to our suffering brethren.
 We will go to those who are starving.
 With them we execrate the felon,
 And we will challenge him to fight.
 March, march, workmen, forward!

The procession carried red banners, on which was written “Land and Liberty,” “Down with Autocracy,” &c. It was a revolutionary sight, but at the head of the procession in the very middle of the street I saw a strange sight. High up in a car drawn by a horse a man was standing, turning, turning incessantly his cinematograph, preparing his “Films of the Russian Revolution.” Then I understood that I was really a witness of historic events, but also that all danger was passed. Petrograd had settled down to civilized life.

Czar's Dread of War

The revolution of 1917 was inevitable. I remember very well that, when at Petrograd in February, 1914, I was told by Milukoff that the Czar Nicholas had “une peur bleue de la guerre,” because he very well realized that there had been an intimate connection between the war with Japan and the ensuing revolution

of 1905-1906. This dread of the Czar was in Milukoff's eyes one of the guarantees of European peace, at any rate a security against aggressive tendencies on the part of Russia. On the other hand, there was then in Russia great apprehension of German and Austrian aggression, especially in connection with the negotiations which were to come as to the renewal of the Russo-German Treaty of Commerce, which was to expire in 1917. War with the Central Powers was considered as inevitable, and it may have served as an argument for war in 1914 that Russia at any rate had strong allies.

I was told now in 1917 that there had been divided counsels in the Government of 1914. The majority of the Ministers favored war; a minority, represented by Sazonoff, the Ministers of Finance and of Agriculture, Bark and Kriwoshein, were for peace, and the Rietch, which supported the peace policy of Sazonoff, was even prohibited for a time. The Czar was, as usual, vacillating; fits of seeming restiveness alternated with periods of complete apathy, and as it happened his “peur bleue de la guerre” had no decisive importance. Sazonoff was, however, at any rate able to take up an attitude which left the responsibility of aggression with the other side. But there is no doubt that also at Petrograd—as indeed in all capitals—there was a military party pushing toward war. The responsibilities for the war are divided, European, but they should evidently be apportioned in different degrees.

But when the war came, it was immensely popular in Russia. Slavonic nationalism, which was an important element in aristocracy and among the great landowners, turned against Austria-Hungary and Germany, who were bent on crushing the Slavonic sister State, Serbia. The progressive elements saw the immense importance of the dissolution of the league of the three Emperors, formed around the pactum turpe of the partition of Poland, which had held good for upward of a century and a half, and no less the great potentialities which might flow from the alliance with Western democracy. Their hopes were high during the

first year of the war, as letters from Efremoff and from Milukoff at that time testify. They saw in Germany the stronghold of reaction and of militarism in Europe, and trusted that its downfall would be followed by that of Russian autocracy. It has happened otherwise. But at any rate this feeling created a widespread feeling of responsibility for the war, of the necessity of supplementing, as far as in them lay, the shortcomings of the administration and of the bureaucracy.

Work of the Zemstvos

Thus was called into being a spontaneous participation in the war work from the best and most healthy elements within Russian society. The Association of the Zemstvos on one side, a voluntary institution formed by the members of the Municipal Councils of the "Gouvernements," consequently by men versed in local government and in public affairs, combined with the leaders of the great commercial and industrial enterprises to form all sorts of committees outside the administration. In a hundred ways they have been able to help and to prove their efficiency. When Brusiloff prepared his great offensive, he had, of course, to secure his rear. Trenches were to be dug for the eventuality of a retreat. But he could not use his own soldiers, as their offensive force might be sapped if they knew that positions were prepared for a retreat. Then the Association of the Zemstvos at once mobilized 500,000 peasants, who did the work. Another General complained that his companies were suffering through the fact that so many soldiers were called off to become cooks. In a very short time 50,000 men, not fit for military work, but able to do service as cooks, were put at his disposal. In innumerable ways the Industrial Committee has helped to organize the importation of munitions and of raw materials for the war industries.

Middle Class's Influence

Quietly the direction of Russian life and activity during the war was more and more taken over by the middle class itself, and its services appeared all the more brilliant against the dark setting of

the incapacity, the corruption, not to mention the occasional treason, of the old administration. It is, so to speak, the leaders of this activity who have now undertaken also the nominal direction of Russia. The new Premier, Prince Lvoff, was President of the Association of Zemstvos. Gutchkoff, [then,] Minister of War; Konovaloff, [then,] Minister of Commerce and Industry; Chingareff, [then,] Minister of Agriculture, all played leading or prominent parts in the different organizations and committees controlling the private activity for the war, while Milukoff, [then,] Minister for Foreign Affairs, has represented the Russian people before the world, through his work in the press or through his numerous addresses abroad during the war. A new official Russia was silently in formation. It has now risen, shaking off the feeble fetters which Czardom, bureaucracy, and police were trying to lay on a people prepared to work out its own salvation, while the powers of old manifestly proved incapable of their task.

It is impossible to rate highly enough the importance and the influence of the Duma in this silent preparation of the momentous revolution of 1917. If a better horoscope is undoubtedly to be cast for this revolution than for its predecessor of 1905-1906, it is chiefly because the Duma, through its existence alone, has educated Russian public opinion toward common national aims. In the Duma the Russian Nation has found a common symbol, and through the speeches there, especially during the war, the silent desires and hopes of the masses and of the classes have found expression and distinct objects for a national policy. Some of these speeches are so characteristic that they may be cited even here.

Spirit of the Duma

When Milukoff had made his famous attack on Stürmer, an attack which led to the Minister's fall and to the abandonment for the time being of the policy for a separate peace with Germany, Efremoff, leader of the Progressives—an intermediary party between the Octobrists and the Cadets, these latter not by far a radical party—made a speech

in which he said: "There is little use in removing the mushrooms from a rotten trunk, they will sprout again, as soon as weather favors. The only efficient cure is to cut down the rotten trunk." This is pure revolutionary doctrine. And Kerensky once took for his text the famous sculptural groups on the Anitchkoff Bridge on the Nevsky, representing four tamers of horses in different attitudes. He said:

"In the first group you see the tamer dominating his horse; in the second and third group, the horse is more and more freeing itself from its master; in the fourth group the man is on the ground under the hoofs of the horse, who is galloping freely along. The tamer is the Bureaucracy, the horse is the Russian people. It will know how to obtain its liberation."

It would be a great mistake to think that the Fourth Duma was anything resembling a revolutionary assembly. As will be known, the reactionaries and Nationalists, together with the Centre, formed a solid majority against any evolution, even toward Parliamentary Government; even the Octobrists were against Ministerial responsibility. But so glaring was the incapacity of the old régime that a bloc was formed during the war by all the bourgeois parties from the Cadets to the Nationalists. This group united on the single aim of pushing on the war and silently preparing for the moment when the catastrophe for Czarism was to come. The reactionaries dwindled down to insignificance. Even the notorious Purishkevitch, who took service in the army, joined the bloc, and the still more notorious Markoff II. was pictured in a cartoon sitting sulking in his corner as the "only Russian conservative."

This was long before the revolution. The Cadets had to make sacrifices in order to keep this bloc together. Thus they voted, and Milukoff himself spoke, against a proposal of raising the question of Ministerial responsibility before the Duma. "The time was not ripe." Milukoff's attitude then impaired his popularity with the radical elements, and this fact, together with his imperialistic

attitude with regard to the objects of the war, may compromise his position. As a matter of fact, he is rather isolated in the Government. But the bloc was maintained, and the way paved for a united advance, when the movement of action was to come.

Czar Like Louis XVI.

It is doubtful whether the Duma would ever have taken an initiative of revolution, but the fact that even Rodzianko, the moderate Octobrist President of the Duma, was ready to take the chair in the new Executive Committee; that the still more conservative Shulgin was ready to go with Gutchkoff to force Nicholas to abdicate, shows how far the conviction of the necessity of a profound change had spread. Everybody saw that a catastrophe was coming. But they did not know when. Would it be during the war, would it be after? Nobody was able to tell. But they saw the necessity of preparation, of, so to speak, mobilization for the eventuality. The Executive Committee was secretly formed; even the Ministers were designated long ago. Therefore, the decisions could be made so quickly when the supreme moment arrived.

Czardom took upon itself to force matters to an issue. Nicholas Romanoff will probably figure in history as no less a tragical personality than Louis XVI. Indeed, there are several points of resemblance. But above all they are alike in having had consorts whose influence became fatal to them; both partook of the intense unpopularity their wives had incurred. The Empress Alexandra has not been wasteful or extravagant as Marie Antoinette, but her connection with the notorious Rasputin, to whom in her hysteria she became quite submissive, sapped no less the last remnants of loyalty to the dynasty. Rasputin's corpse was buried in the imperial park at Tsarskoe Selo, and it was told that the corpse had been removed to be burned; in order to put an end to this sordid story and to any attempt at beatification of the "Starest," an ikon (a saint's image) was found with the corpse, on the back of which were written the names Alexandra, Olga, Tatyana, &c.—the whole family.

But the supreme trait of similarity between the two ill-fated Queens is their "enemy connection"—Marie Antoinette "l'autrichienne"; Alexandra the German, female cousin of Wilhelm the Kaiser. And unfortunately there is no doubt that the Czaritsa's "enemy connection" was far from innocent. She has not only been active in all the tentative efforts for a separate peace, but I was told in diplomatic circles that on one occasion an offensive movement, fully prepared, had been stopped by a telegram signed by her name. A wireless was in function at Tsarskoe Selo, corresponding with Nauen.

Anybody can see how all this must have killed the last remnants of loyalty, already undermined by the notorious incapacity of the administration to cope with the problems of the war. The continual changes of Ministers proved the vacillation at the head of affairs. Czarism was evidently tottering to its fall.

Quem Deus perdere vult, prius dementat. The Government, in an act of sheer desperation, added open provocation to its glaring faults and shortcomings. By stopping the transport of food to Petrograd it intended to call forth riots in the capital; they were to serve as pretexts for an adjournment of the Duma, for the creation of a practical dictatorship probably in the hands of Protopopoff or of a "strong" General, and lastly for the conclusion of a separate peace. Efremoff told me that one was on the track of a telegram to this effect: "Almost all transports to Petrograd stopped. Everything goes well." Under it the signature of a Minister.

Power of the Proletariat

The form which the provocation took called in the element which made the revolution. The Duma would perhaps have been capable of a coup d'état, and Efremoff told me that in fact this had always been the favorite hypothesis. But the proletariat are willing to pay with their lives. And the proletariat found an associate in the garrison of Petrograd. These two facts are of capital importance; the latter gave the victory to the revolution; both together determined the democratic character of the events,

and it seems as if this characteristic has come to stay. The democratic elements have been very strong in the revolution itself, and these forces are organizing themselves in order to maintain their influence.

The troops at Petrograd combined with the workmen refused to shoot at the people, and turned their guns against the police. The explanation of this extraordinary fact is to be found in the composition of these troops. They were not real garrison soldiers; they were partly older reserve soldiers, recently called to the colors after having passed years in their villages, partly young recruits, who had not yet undergone the influence of the barracks. They were really a peasant democracy, who through their stay in the regiments had developed a certain class feeling, not as soldiers, but as peasant laborers having interests in common with the Petrograd proletariat, among whom many of them probably have found friends or relatives from their own villages. When ordered to fire on the people they immediately protested and fired on the police instead. And the two popular forces then turned to the Duma as the representative of the Russian Nation, asking the National Assembly to take the lead which had fallen from the hands of the Government.

In order to co-operate, the soldiers and workmen organized their council, to which each regiment and each factory sent a delegate. Through an Executive Committee and a delegation they opened negotiations with the Duma, whose Executive Committee, as stated above, was ready to act.

Kerensky Chief Figure

The central figure in this situation became the Duma member for Saratoff, Kerensky, a young barrister. This remarkable man is the leader of the "Revolutionary Socialists"—thus far a misnomer, as they are revolutionary only as the word applies to the method of their action. As long as the autocracy existed they approved of terroristic attempts. After the revolution they declared for parliamentary action and popular propaganda alone, and one of Kerensky's first decrees as Minister of

Justice abolished capital punishment. In their program they can hardly be said to be Socialists; it is rather an agrarian party aiming at the creation of a class of small proprietors, and most of their adherents are peasants and land laborers, while the workers of the towns rally round Tscheidze, who is an orthodox Marxist and whose program appeals to the industrial workingman.

Kerensky was the link between the bourgeois Duma and the Council of Workmen's and Soldiers' Delegates. Through his unique eloquence and moral courage he was able to exert an enormous influence during these first difficult weeks, and the state of his health is a serious matter. It is bad, for he is suffering from tuberculosis of the kidneys, one of which has been removed, alas, very late, for the Russian surgeons had not discovered what was really the matter; it was during a visit to Finland that the very serious state of his health was discovered and the necessary operation undertaken.

He is sitting in the new Government as the representative, but at the same time as the hostage, of democracy. It would be most difficult to find a substitute, and every well-wisher for Russia will hope and pray that he may be spared for the great mission awaiting him. He made an extraordinary impression on me during my conversation with him; a soul of fire, sincere, and truthful to himself, at the same time a powerful intelligence and a born leader. His powers of work are said to be extraordinary. * * *

The Constituent Assembly

The big question, besides the prosecution of the war, is the organization and the convocation of the Constituent Assembly. The Government program says the assembly was to meet "as soon as possible." I suppose the Ministers are likely to put the stress on the last word. Indeed, I hardly spoke with one bourgeois politician without his shaking his head over the impossibility of coordinating the working of this assembly with the active prosecution of the war. They, therefore, sincerely hope to see

the end of the war in the Autumn. But if the end does not come, they are likely to insist on the necessity of postponing the assembly.

On the other hand, the more extreme elements wish to strike the iron while it is hot, and the last proclamation from the council requests the immediate organization of the assembly. The Premier, Prince Lvoff, has said it was to meet within a period of at least three, at most six, months. The problem is not only one of organization; for instance, how are the soldiers at the front to vote, the vote being not only the act of putting a ballot in a box, but a method of contributing to form a real public opinion on a series of very grave questions? There is also the serious difficulty of having a deliberative assembly sitting discussing intricate constitutional and social problems while the greatest war in history is being waged at the frontier. Indeed, it is highly to be desired that the bloodshed might come to an early end, if for no other reasons, lest the future of Russia should be compromised.

Outlook for the Republic

As to the future constitution, there is officially and outwardly absolute unanimity; the cadets, even the progressives, have put the democratic republic on their program. Indeed, no sane politician, at the present juncture, considers any other solution as possible. Monarchy, and especially the dynasty, is compromised beyond remedy; none of the Grand Dukes is to be thought of as Czar, because it would imply dangerous family connections. But bourgeois politicians are far from enthusiastic republicans. They see the danger in such an enormous empire passing at one single step from an autocracy to a republic, and they are not blind to the advantages of monarchy as a symbol of the unity and the indivisibility of the nation. This did not imply any sentimentalism toward the Little Father, and I was told that the existence of this sentiment even among the peasants was greatly exaggerated. There was only cool political calculation in it. Efremoff went to the length of saying to me: "If we only had had a very popular General—"

This would seem a most dangerous experiment. And I know that Milukoff and other cadet leaders reluctantly approved of the republic being admitted to their program.

I imagine that the solution contemplated is a sort of federal republic, based on the nationalities and races within the enormous empire as constituent parts, probably supplemented with local divisions in the Great Russian provinces. This solution, more or less on American lines, can, as in the United States, be combined with a strong executive power. It sounds like a prophecy that the American Constitution has sometimes been defined as a "Czaristic" republic.

Already the Government program had outlined large liberties of speech, of association, even of strike—the first instance, I believe, in history. The last point is of special importance to the industrial workman, and through his participation in the revolution he has also obtained another advantage—the eight-hour day. It is interesting to note that one of the Frères Nobel expressly stated that they were delighted with the result of this régime. Its efficiency was better than the former one with the long hours, which had tempted to passivity and even to sabotage.

These problems of industry are, however, not by far so important to Russia as the all-dominating agrarian problem, which will absorb a great part of the activity and the interests of the Constituent Assembly. In his heart of hearts every Russian is an agriculturist, in his dreams a landed proprietor. "Land and liberty" was written on every second red banner. The soldiers, peasants themselves or peasants' sons, voiced this desire, and everybody realized that it had to be satisfied on a very large scale.

Rural Conditions

The state of the Russian countryside during the war is very curious, and in a certain respect an unexpected one. The absolute prohibition of vodka—very strictly executed—in the Petrograd hotels I saw no stronger drink than kvass, a sort of ginger beer—has stopped the chief expense of the peasants toward luxury; the soldiers' wives and mothers receive Government support; the absence

of workmen creates a great demand for laborers, with a consequent rise of wages; all this combines to create an unknown prosperity in the villages. The peasant girls are able to buy a greater number of those gowns which, hanging new and not yet used in the large wardrobe, are to impress their suitors. They are now said to decline work offered to them with the remark: "I have got gowns enough." The peasants, among them the soldiers on returning from the front or from captivity, will be able to buy land. On the other hand, the great landowners are often unable to work their fields because of the scarcity of labor. They will, therefore, be willing to sell land. So far all seems well.

The danger is that there may be ideas of the laborer's right to own the land he till now has been working on. There will be hot debates about the principle of expropriation and its application. The landowners will say: "Why shall landed property alone be considered as more or less liable to confiscation? Why not as well the industrial plant, or personal property?" Fortunately, immense tracts of land will be at the disposal of the nation in the form of public domains or of land belonging to the monasteries. Here thousands on thousands of peasants can be made proprietors without any great difficulty, and means can perhaps be found of financing also the transfer of private land from the great owners to small holders. Everybody will see the great seriousness of this problem and its bearing on the future of Russia. In this new class of small farmers new Russia will find the basis of its democracy, just as the French Revolution found it for France.

Difficult Racial Problems

The Government program proclaimed the abolition of all disabilities for racial and religious reasons. This principle, loyally executed, will automatically take away the sting in the otherwise so thorny questions of delimitation within the empire, especially in the west, where on the wide plains, the different nationalities—Poles, Ukrainians, Lithuanians, Ests, and other Baltic races—merge imperceptibly one into the other, or in the Caucasus,

where the motley diversity is as great. No doubt, however, there will still be great difficulties in this respect, and more especially this will be the case with the Jews. I had no special opportunity of studying the Semitic problem, and therefore shall only give one piece of information, which shows on one hand its acuity, on the other the apprehensions as to the future.

The leading inspirer of the cadets is said to be an Israelitic Petrograd barrister, Vinaver, a close friend of Milukoff and an exceptionally able man. The Government had nominated him a Senator, member of the High Court, but he declined, because he would not expose the revolution to the risk of being dubbed a "Semitic machination." Generally the Jews took up an attitude of great reserve. Pogroms were still considered as possible.

To return to the problems of nationality, there are two questions under this head which require special treatment, namely, Finland and Poland.

The complete liberation of Finland, the reversal of all laws and decrees issued contrary to the Finnish Constitution, and the proclamation of the right of the Finnish people to decide, through their own representatives, the future relations between Finland and Russia, was on one hand the fulfillment of an old pledge from Russian liberals to the Finns. Especially Milukoff, Rodicheff, now Secretary of State for Finland, and Stakhovitch, now Governor General, had engaged themselves strongly on this line. It was, moreover, a sort of morning gift to Western democracy which has always taken a special interest in progressive Finland. And it was—last, but not least—a stroke of generous and far-sighted policy against the German machinations in Finland, which surely in certain contingencies might have been extremely dangerous: Finland is the glacis of Petrograd.

The Case of Finland

It is no secret that during the war numerous young Finns have crossed the frontier to go to Germany, where hundreds of them have been trained as offi-

cers to lead an eventual Finnish insurrection. It is said that thousands of young men in Finland itself have been equipped in secret for military service: two pairs of boots, a Winter coat, a gun, &c. But it was understood that no movement was to be initiated if the Germans did not succeed in throwing artillery across the Gulf of Finland. Hence the extreme importance of the Riga front.

This movement found chiefly its adherents among the Swedish party in Finland, a political faction decidedly on the wane, but still important because of its strong intellectual and economic position. However, only part of them favored this policy of despair, which really amounted to a driving out of the devil by Beelzebub. Some adherents were also said to have come from the "Old Fennomans," a conservative party which often has been very weak-kneed toward Russia. Their belief in authority as the supreme prop of social life may have brought some of them to admire the Prussian spirit. * * *

[The Swedish Party late in May issued an address demanding a separate republic for Finland, but it received no approval at Petrograd.—Editor CURRENT HISTORY MAGAZINE.]

Finns very well see the realities of the problem—that Russia and Finland are indissoluble for plain geographical reasons. It would be sheer insanity for Finland to rely on the support of Germany, from which it is divided by the sea, while Russia dominates its entire land frontier to the east, while the Russian capital is situated at a distance of only a few miles. Moreover, Finnish industrial merchandise and dairy produce are dependent on the Russian market.

The Finns do not desire their country to be merged in the Russian Empire as one of its constituent parts. They demand a separate existence, a Finnish State at Russia's side, united with the empire through a sort of loose union, giving to Russia only the direction of foreign affairs. The problem is a delicate one, besides entirely new in the history of constitutional law, if Russia is to become a republic, and as the Finns are a difficult race to treat with, tenacious,

sometimes revengeful, it may tax the powers of statesmen on both sides.

Free Poland Possible

The proclamation from the Russian Government to the Poles is the highest bid made during the war for the sympathies of this people, which, after a tragedy of more than a hundred years, can at last look forward with certainty to a future of political independent life for part, if not for the whole, of the race. And this bid is not only a clever diplomatic device made to win the sympathy of the Poles, it is a sincere application of the principle of nationalities. The Russians, of course, wish to see a reunited Poland, including the Polish—but not the Ukrainian—part of Galicia, the whole of Posnania, and the Polish parts of Silesia and West Prussia. Only this enumeration suffices to show what problems will be raised in connection with this program. Germany is far from entertaining any idea of this sort. But if an independent Poland were formed, say, out of Russian Poland and Western Galicia, it would certainly exercise a most powerful attraction on the Poles in the Prussian irredenta. It is incomprehensible how Austria and Germany have been capable of creating their "Kingdom of Poland" after the experience of Austria with an Italian and a Serbian irredenta. The need for Polish soldiers must have been enormous, indeed.

Many will doubt the sincerity of Russia in giving full freedom of action to the Poles as to the future of their new State. I had an opportunity of discussing the question with Efremoff, now a member of the Executive Committee, consequently in close touch with the Government, and his opinion was that, after all, an entirely independent Poland would perhaps represent the best solution for Russia. A buffer State might be useful against Germany, though he saw the danger of the absence of military frontiers, if the principle of international anarchy were still to prevail. But he added that a complete severance from Poland would present certain inner advantages to Russia. Polish nobles had

bought land in Russia, and they were hard masters to the Russian peasants. Many Poles had obtained high situations in Russian administration, and after a very short time their offices had been filled with Poles. It is curious to observe this animosity against a seemingly subject race which has been able to obtain a superior social position. There are parallels in the relation between English and Scots, between English and Irish.

It goes without saying that full separation would raise most difficult problems; Polish industry is dependent on the Russian market; a tariff arrangement would at any rate be necessary. A connection between Poland and Germany would spell economic ruin to Polish industry, as it could not withstand German competition. For this reason alone no Pole in his senses can have seriously entertained the idea of looking westward.

In any case, whether the solution is to be one of complete separation or one of a connection with Russia, there will be the most difficult problems of delimitation. * * *

Able to Keep War Going

There is no doubt that Russia is still able—from an exclusively military point of view—to prosecute the war. Its offensive powers are impaired through lack of munitions and guns. But the new régime has, at any rate, done away with the artificial impediments created by the late Government and the dynasty, and Russia still disposes of great reserves in man power—it was said about forty divisions, at least one million of fully trained men, besides the young recruits now being trained, and one year gives another million—and in officers. Especially there is a large reserve of cavalry officers who might be used also as leaders of infantry. Besides, a potential reserve is to be found in young cultivated Jews who have been trained as soldiers but have not been admitted to serve as officers. They would be able—if need be—to act as garrison officers and in other subsidiary military situations.

The financial position is far from good. The debt is enormous, the paper money

flooding the country is daily increasing in bulk, and the foreign exchange is deplorable, because the exports have practically ceased. But, economically speaking, the position of Russia is probably better than that of any other European country now at war. Agriculture is Russia's chief pursuit; in consequence it is suffering far less than highly industrialized countries like Great Britain, Germany, or France. It can find within its own borders nearly everything it may want. The problem is one of transportation and of organization.

Russia, then, still can certainly go on with the war for years. And its present Government is firmly determined to remain true to the London agreement, and to conclude peace only in common with the other allies. It must not be forgotten that the support of the West-

ern Powers was decisive for the very success of the "miraculous" revolution, that Russia financially is dependent on France and Great Britain, tied to them by "golden chains." The Government and the Duma both are bent on prosecuting the war as one of liberation for Europe in general. Russia has freed itself; now Germany and Austria are to follow suit. This is a conception common to bourgeois liberals and to Socialist workmen. Both regard the two Central Powers as the props of reaction in Europe. The middle classes and the peasants, moreover, consider the war as a means of liberation from the commercial domination of Germany, established by the treaty of 1907.

[Dr. Lange concludes his report with the prediction that Russia will remain true to the Allies.]

The Career of Kerensky

ALEXANDER KERENSKY, the real leader of the Russian revolution, first became Minister of Justice in the Provisional Government and recently succeeded Gutchkoff as Minister of War, achieving wonders in reviving the army as a fighting force during May and June. He was born about thirty-five years ago in Tashkent, a Russian town in Middle Asia. Although of small means, he succeeded in obtaining a university education and becoming a lawyer. From the beginning of his practice he was an energetic defender of workmen and peasants, appearing in their interest when they were arrested and oppressed by agents of the Czar's Government. He included the Jews among his clients, and fought for the rights which the anti-Semitic powers denied them. The climax of his legal career came in 1912, when he represented the workmen in an investigation following the shooting by the police of some sixty strikers in the gold fields along the River Lena. His work in this case made him famous throughout Russia as a friend of the revolutionary forces and an enemy of the autocratic Government.

The lawyer entered public life about four years ago and was elected to the Duma, where he became the leader of the Socialist labor forces. He was constantly under the eye of the Czar's police, who dared not touch him, however, without real provocation, because of his membership in the national body. They thought they had this provocation shortly before the revolution, when Kerensky attacked the Government in a speech in the Duma, and, according to information, the order for his arrest had been prepared when the revolution nullified it.

As a member of the Duma, Kerensky strengthened his attack upon the Czar's Government by exposing the corruption and pro-Germanism among the ruling powers. The Black Hundreds of Russia were so German in their sympathies that they were called the "Prussian leaders," instead of the "Russian leaders," and they were the most intolerant and autocratic of all the factors in the old régime. Kerensky investigated their conduct during the war and made public exposure of their sentiments.

He also turned the spotlight upon wholesale corruption among the officials

who purchased supplies for the army, and by this work did much to hasten the revolution.

When the revolution was making its first rumblings heard, the Czar ordered the dissolution of the Duma, and Kerensky, rising in his place, said: "We will not go. We will stay here." And the Duma stayed.

Kerensky was made Minister of Justice in the original Provisional Government, and one of his first official acts was to issue an order releasing all the political prisoners in Siberia.

His friends testify that one of his out-

standing qualities is tact, and it was by this that he was able, they say, to assist materially in reconciling disputing factions and persuading them to form the present Provisional Government.

Kerensky is described as a slight, moderately tall, blonde man who looks more like an Englishman than a Russian. He is said to be one of the most forceful public speakers in Russia and a clear-thinking man, possessing ability to present his thoughts with compelling logic. His popularity among the masses, according to report, amounts to enthusiastic faith.

Details of the Czar's Abdication

Nicholas II. abdicated the throne of Russia at Pskof Station on March 15, 1917. A correspondent of the Paris Temps has obtained from M. Choulguine, one of the actors in the memorable scene, the following detailed narrative of what took place:

AS our train stopped in the station of Pskof, one of the Emperor's Aids de Camp entered our carriage and said: "His Majesty is awaiting you." We only had to go a few steps to reach the imperial train. I was not in the least moved. We had reached that extreme of physical tension after the days which we had just lived in Petrograd, when nothing can either astonish or seem impossible.

We entered a brightly lighted saloon carriage upholstered in pale green. The Court Chamberlain and General Narischkine were there and the Emperor entered immediately; he was wearing the uniform of one of the Caucasian regiments. He seemed quite calm and shook hands with us; he was in fact more cordial than cold. He sat down and told us to do the same. Gutchkoff sat by him near a small round table; I sat opposite Gutchkoff, Freedericks sat a little further along, and General Narischkine took his seat at a table, ready to take down all that was said, as he had been asked to do by the Emperor. General Russky entered at that moment, apolo-

gized for not having been there when we arrived, bowed to us and took his place next to me, that is, opposite the Czar.

Gutchkoff spoke. I was afraid that he would be pitiless and that he would say something cruel to the Emperor. But I soon felt reassured. Gutchkoff spoke at length and quite easily. The parts of his speech seemed to come in perfect order. He did not refer to the past; but spoke of the present, trying to make his hearer understand how far the country had fallen. He spoke with lowered eyes and his hand on the little table, and so he could not see the face of the Czar, and this made it easier for him to finish his painful speech. He ended it by stating that the only way out of the situation was for the monarch to abdicate in favor of the little Alexis, with the Grand Duke Michael as Regent. At the moment when Gutchkoff was saying these words, Russky leaned toward me and whispered: "This has already been decided."

Then the Emperor spoke. His voice and his gestures were much calmer, much more simple than Gutchkoff's manner and speech had been. Gutchkoff was deeply moved by the momentous nature of the interview, and this made him emphatic. "I have thought a great deal yesterday and today," said Nicholas II., in the same tone of voice as if he had

been speaking of some ordinary business. "Up to 3 o'clock today I was prepared to abdicate in favor of my son, but I have since realized that it would be impossible for me to be separated from him." The Czar here paused slightly, and then continued as calmly: "You will understand me, I hope! That is why I have decided to abdicate in favor of my brother." He was then silent as if he expected some reply.

I then said: "This proposition is a surprise to us; We only considered an abdication in favor of the Czarevitch Alexis. I therefore request to be permitted to have a few minutes' private conversation with Alexandre Ivanovitch (Gutchkoff) so that we may give a considered reply. The Czar consented, and I forget now how the conversation was resumed, but it is a certain fact that we made no difficulties in accepting the objections which were set before us. Gutchkoff said that he did not feel he had the courage to combat the feelings of a father, and considered all pressure impossible on that point. It seemed to me that, on hearing this, a trace of satisfaction passed over the face of the sovereign whom we had just dethroned. * * * We therefore accepted, under these conditions, the Emperor's solution.

He then asked us if we could guarantee with certainty that the act of abdication would bring peace to the country

and not provoke further effervescence. We replied that, as far as it was possible to foresee the future, we did not expect difficulties of that kind. I am not quite certain as to when exactly the Czar retired into the next carriage to sign the act. He came back at about 11:15, holding a few small-sized pieces of paper in his right hand. He said to us: "This is the act of abdication, read it." We read it in low tones. The document was in noble language. I felt ashamed of the text which we had rapidly written down. I, however, asked the Emperor to add to the phrase, "We request our brother to govern in full unity with the representatives of the nation sitting in the legislative assemblies," the following words: "And to give assurance of this on oath to the people." The Czar consented and immediately added what I asked, changing, however the alteration, which finally read, "And to enter with them upon a sworn and inviolable agreement." Thus Michael Alexandrovitch was a constitutional sovereign in the full acceptance of the term. Events have gone beyond the form of government which we were considering.

The act was copied in type on small sheets of paper. * * * Two or three copies were made. The Emperor signed in pencil. * * * When I looked at my watch for the last time it was 11:48.

What Has Paralyzed Russia's Armies

M. Tscheidze's Political Ideal

A British newspaper correspondent recently talked with M. Tscheidze, head of the Petrograd Committee of Workmen's and Soldiers' Delegates, the central revolutionary organization that has its network of committees throughout Russia and the Russian Army. Coming from the man who, with Kerensky, may be said to control Russia's war policy, his ideas may be of far-reaching importance. The correspondent wrote:

M. TSCHSIDZE, in appearance, is our own John Burns in duodecimo. He is a highly educated man and a lawyer. After courtesies, this

brisk little gentleman, sitting sideways on an upright chair, with both hands clasped on the back of it, announced that while with all the will in the world he would answer any question about Russian socialism which I cared to put to him, he would first of all be greatly obliged if I would allow him to address a few questions to me on a matter of very first-rate importance.

His questions did not at that time seem to me of very first-rate importance. I now realize how important they were—nay, how important they are still. Indeed, the future of our relations with

democratic Russia may turn upon the answers which Britain makes by her policy to these questions of M. Tscheidze.

Briefly, his questions come to this: Is it not true that the war has destroyed English liberalism? Is it not a fact that we have surrendered all those liberties for which we profess ourselves to be fighting? What has happened to our right of public meeting, our free speech, our liberty of the press, even to our right of trial by jury? In a word, has not this war forced us to abandon the democratic principle of government which has been Britain's glory for so many years, and obliged us to adopt the Prussian system of a military dictatorship, which we denounce?

Very earnestly did I seek to persuade M. Tscheidze that there is all the difference in the world between democracy's deliberate choice of a certain curtailment of its liberties, in its own general interests, and an absolutist system of government holding in its iron grip a nation which has never been free to decide under what form of government it will live. He saw what I meant, but was not convinced.

His point was that Britain's course had acted as a check to the democratic movement all over the world; that it had tended to discredit the democratic principle, and that those men who were fighting for freedom in other nations felt themselves depressed by Britain's submission to a virtual dictatorship.

"Is it not true," he demanded, "that your soldiers decide what shall be printed and what not?"

"Only in the interests of our strategy," I replied, believing at the time that what I said was true.

"Is it not true," he demanded, "that your soldiers decide what meetings should be held and what suppressed?"

I made a like answer.

"Is it not true that your soldiers seize people and lock them up in prison without trial?"

I flatly denied this, not knowing at the time that Miss Howson, for one, had been so treated—she has now been nineteen months in prison without legal advice and without a trial.

M. Tscheidze then held forth to me on the general question. War, he declared, is the most dangerous enemy of freedom. Rights are surrendered which may never be regained. The man of thought is displaced by the man of action. Reason gives way to force. The destinies of the human race are taken out of the hands of the thinker and intrusted to the soldier. With the soldier in power no one knows what may happen—no one is permitted even to discuss what ought to happen. The soldier only thinks in slaughter and destruction. He has no political instincts, no sense of statesmanship. His one business is to kill. He kills, and keeps on killing till there is nothing more to kill. It is not safe to trust the world to such a man. The thinkers must continue to think. Discussion must be free, so that truth may emerge.

It is a dangerous policy to dismiss the Russian Socialist as a dreamer or to lament, as is done in some quarters, that the people of Russia have fallen victims to the sentimental idealism of Tolstoy. * * * The Russian Socialist believes that the Germans themselves will destroy Kaiserism. He is not, believe me, false to our ideals in this war. The trouble that he causes springs only from the fact that he hungers and thirsts with all the force of his idealism to get what we want by reason and not by force.

The Russian and French Revolutions

1789—1917: Parallels and Contrasts

THE clamor in the fortress of Kronstadt for the immediate trial and punishment of the deposed Czar is a vivid reminder of the French Revolution, in the perilous days at the close of 1792, when Danton, Robespierre, and Marat, the leaders of the extremists, were debating the punishment of Louis XVI., who was condemned to death and executed on Jan. 21, 1793. The charge against Louis XVI. was "treason against the nation"; he had been proved guilty of treasonable communication with Leopold, Emperor of Austria, whose armies were threatening the very life of revolutionary France. The parallel is made closer when we compare the rôle of the former Russian Empress—a German Princess, at heart devoted to the German Emperor and the German cause—with the ill-fated Marie Antoinette, sister of the Austrian Emperor, fanatical upholder of despotic government and fatal counselor of Louis of France. And, just as Marie Antoinette had, with blind and ruinous obstinacy, exercised her baneful fascination over the French King, most of all in the selection of Ministers, so Alexandra of Russia, prompted thereto by Germany's tool, Rasputin, in fact brought about the fall of Nicholas II. by leading him to appoint men like Stürmer and Protopopoff to rule the Russian Empire.

Louis XVI., faced by national bankruptcy brought on by the excesses and fiscal follies of his predecessor, had chosen at first wise men like Turgot and Necker; Turgot, of whom Carlyle said that there was "a whole pacific French Revolution in that head," might have saved France from a revolution of violence by his wise reforms and economies—abolition of the *corvée*, of the internal tolls on the transport of grain, of the ancient guilds which strangled labor; equalization of burdens, abolition of feudal dues, systematized

public education. But all this was brought to nought through the fanatical hostility of Marie Antoinette, whose sulking and pouting induced Louis XVI. to betray and dismiss Turgot. Necker followed, advocating similar reforms, but once more the Queen demanded and obtained his dismissal; and, with the appointment of Calonne and his successors, unscrupulous favorites of Marie Antoinette, the revolution of violence became inevitable. These men were the Stürmers and Protopopoffs of revolutionary France.

Duma and Constituent Assembly

There is a parallel equally close between the succession of assemblies in the two countries. Louis XVI., after Turgot and Necker had been dismissed, tried to govern through the Notables of France, a body of men of the privileged classes, not elected but in effect nominated by the sovereign, who bear a close resemblance to the old Council of the Empire in Russia. When the Notables accomplished nothing, but, on the contrary, blocked every project of reform, there was a general outcry for the summoning of the States General; and from this body was evolved the revolutionary Constituent Assembly. In the same way, the Council of the Empire in Russia gave way before the Imperial Duma, and the Duma did much to bring about the Russian revolution.

The French States General was a reversion to an older form of government that had gradually been forced out of existence by the growing autocracy of the Kings of France. It had been summoned last in 1614. By a curious coincidence, the last great representative assembly in Russia met almost at the same time—in 1613—this being the Constituent Assembly which elected the house of Romanoff. And, as the States General had at first no intention either to dethrone Louis XVI.

or to bring about a revolution, so the Russian Duma expected to open the way not to a republic but to a constitutional monarchy. And in both countries it is practically certain that, had the sovereign wisely and loyally yielded at the critical moment, establishing genuine representative institutions and a Ministry responsible to the representatives of the nation, no revolution would have taken place. In both countries, likewise, the final and fatal opposition came from the foreign Queen and through her dangerous power over the sovereign.

Voltaire and Tolstoy

In Russia, as in France, there was a long preparation for the coming revolution, carried out not by politicians and statesmen, but by a brilliant and impassioned group of philosophical essayists and writers. There is, at first blush, small resemblance between Voltaire, "that leering old mocker," as Lowell called him, and the grimly serious, almost lugubrious Count Tolstoy; but the contrast between them is largely the difference between the Gallic and the Slavonic genius.

We think of Voltaire as an iconoclastic philosopher, jeering at churches; he valued himself rather as a dramatist, a poet, a writer of imagination, and was, without doubt, far prouder of his plays than of his theories. Tolstoy had a like twofold influence. Transcendently great as an imaginative writer, the author of "Anna Karénina," of "War and Peace," of "The Resurrection," he himself held, in his later years, that these things were valueless; that only his moral and political theories had real worth. History has, in a way, indorsed his judgment; for it is to the philosophic anarchism and pacifism of Tolstoy that we owe much of the dominant mood of Russia at this moment, from the seizure of land by the peasants of Pskov and Bessarabia to the dangerous "fraternization" in the trenches, where the youthful soldiers believe that they are carrying out Tolstoy's interpretation of the command "Love your enemies." Tolstoy wrote the gospel which the revolutionaries of Kronstadt and Schluesselburg are trying

to carry out. His tracts are the inspiration of the Lenins and Lomanoffs who are urging Russia to make peace with her enemies, to open the era of universal brotherhood.

But, just as against the philosophical aloofness of Voltaire stood the impassioned anarchism of Rousseau—Rousseau with his "Social Contract," opening with the words, "Man was born free, but he is everywhere in chains," which inspired the opening phrase of the American Declaration of Independence, has his Russian counterparts in Herzen and Bakunin, the real fathers of Russia's revolutionary socialism. Tolstoy, while preaching against political, social, and economic injustice, also preached pacifism and absolute non-resistance; his doctrines, logically followed, could never have led to armed revolt, though they might have inspired and reinforced it. But Herzen and Bakunin were all for action; for the forcible seizure of power by the proletariat, for the formation of such an internationale as the extremists in Petrograd are advocating today. It is true that many of the phrases of the Russian extremists were created by Karl Marx, when he wrote "Capital"; such ideas as the description of the present world conflict as "a capitalistic war"; but the real drive and force of these ideas in Russia is due to the influence and writings of men like Herzen and Bakunin, and their disciples, Prince Peter Kropotkin and Maxim Gorky. It is quite true that Kropotkin's long sojourn in England has made him enthusiastically pro-ally, but that does not cancel his earlier preaching of anarchism. In one sense he is pro-ally because he sees that the democracy of England and France is far closer to the absolute liberty which is his ideal.

Feudalism and Bureaucracy

To a very large degree the French Revolution was a passionate uprising against feudal privilege; against the terrible oppression and depression of the peasantry of France. Immediately after the taking of the Bastille, on July 14, 1789, the downtrodden peasantry throughout France rose in armed insurrection; roving bands plundered and demolished the châteaux of the nobles, filling the

land with a carnival of bloodshed and outrage.

Here we have the first sharp contrast. Russia had no feudal system. And while in France hardly one-fifth of the land was in effective possession of peasant proprietors, in Russia much less than one-fifth was in possession of hereditary landlords who might be compared with the feudal nobles of France. This, because, as a result of the great Act of Emancipation carried out by the Czar, Alexander II., in 1861—two years before Lincoln's Emancipation Proclamation—large masses of the Russian peasantry became landowners, while some four-tenths of Russia's arable land formed the Crown demesne, having, therefore, no landlord but the Czar himself. And, as one of the first acts of the revolutionary Government of Russia was to declare the Crown demesne forfeit, there were, for this enormous tract of over a million square miles, no land-owning nobles to dispossess.

There was an equally sharp contrast between the methods of procedure in the two countries. While France saw wild excesses of outrage and bloodshed in every province, in Russia the very small fraction of the land seized by the peasants was taken without brutality on the one side, without resistance on the other. So far, not a single murder has been attributed to this cause in Russia, though there have been many cases of plunder and incendiarism. The real enemy in Russia was not feudalism, but bureaucracy. It follows that one chief cause of later disorder in revolutionary France—the creation of the class of emigrés, or exile nobles—can have no existence in Russia. The French emigrés, the land-owning nobles who survived the first uprising and massacre in the Summer of 1789, fled across the eastern frontier, largely to Austria and Prussia, and did everything in their power—and successfully—to incite these strongholds of despotism to make war on revolutionary France. One group of emigrés went to Russia.

"The Cause of Kings"

With the emigrés there is another striking contrast between revolutionary

France and revolutionary Russia. In France, war, the tremendous cycle of wars lasting for nearly a quarter century and involving all Europe, Western Asia, Egypt, and, ultimately—in 1812—the United States also, sprang directly from the French Revolution and primarily from the Declaration at Pilnitz, in which the Austrian Emperor and the King of Prussia united in announcing that the cause of Louis XVI. was "the cause of Kings," and that, therefore, revolutionary France must be crushed into subjection. In Russia, on the contrary, the revolution sprang from the war, and directly from the belief that the imperial house of Russia was planning to make common cause with the Austrian Emperor and the King of Prussia—who had become the German Emperor—against the people of Russia and against the democracy in all lands. But in both countries the link between the throne and the central despots was the foreign consort of the sovereign: Queen Marie Antoinette in France and the Hessian Princess who became Czarina Alexandra in Russia.

Moderates and Extremists

In April, 1792, revolutionary France declared war against Austria, Louis XVI. being still nominally King, while Francis II. had succeeded Leopold as Austrian Emperor.

There is a striking resemblance between the parties in the revolutionary France of that year and those in revolutionary Russia today. The Girondists, so called from the Gironde, the department on the Bay of Biscay with Bordeaux as its capital, from which its leaders came, who were also called the men of the Plain, because their seats were on the main floor of the assembly, correspond pretty closely to the group of the Duma, led by Milukoff and Rodzianko, who really planned for Russia not a republic but a limited, constitutional monarchy after the English model; while the Jacobins, so called because they met in a building formerly held by the Jacobin or Dominican friars of Saint Jacques, pretty closely correspond to the extremists who, in Russia, fulminate in the Council of Workmen's and Soldiers' Delegates. The

initial policy of Rodzianko and Milukoff was exactly the policy of Mirabeau; though matters have not reached the point in Petrograd which they had reached in Paris when Mirabeau wished to raise the provinces against the capital, to check the drift toward anarchism.

The parties in the Duma, in fact, adopted the names created in the Assembly of revolutionary France, and there has been exactly the same shifting of the centre of gravity from right to left. And, just as, by 1792, the old party of the Extreme-Right had practically gone out of existence in Paris, so the old Petrograd Extreme-Right has ceased to exist. The Girondists, who had begun as the Constitutional Left-Centre, became the party of the Right; just as the Constitutional-Democrats of Petrograd, called, from the initial and final letters of their name, the C-D-ts or Cadets, who, under the leadership of Milukoff, were the Left-Centre Party in the Imperial Duma, have now become the party of the Right, with the extreme revolutionary Socialists and even the Anarchists, ranged against them on the Left.

Exactly in what way these extremists got hold of the Council of Workmen's and Soldiers' Delegates is not yet clear; but it is quite clear that, in the acts of that body, the soldier delegates have very little part, since, being mere boys without anything more than the most rudimentary education and with no experience of life, they could, in the nature of things, play no real rôle in complicated political discussions. All real power is in the hands of a small group of leaders like Tscheidze and Tseretelli—both of them natives of the Caucasus, of non-Russian origin—while it seems clear that many of their decisions, such as the formula, "Peace without annexations or contributions," are directly inspired by German agents.

It is worth noting that the pacifist-extremists have their exact parallel in revolutionary France: Robespierre, Danton, and Marat were all in favor of peace and very active in opposing the declaration of war against Austria, which virtually opened the great epoch of the Napoleonic wars.

And, just as Danton upset the Girondist Moderates and established the radical Government of the Commune of Paris, so the Council of Workmen's and Soldiers' Delegates at Petrograd has attempted to upset the Provisional Government of the Duma Moderates, though so far unsuccessfully, the expedient of a Coalition Government being at present tried. But the council has just issued a manifesto declaring that, by forming this Coalition Government, they have not, in fact, abated any of their original demands. Danton's ominous words, "The allied Kings march against us. Let us hurl at their feet, as the gauntlet of battle, the head of a King," find their echo in Kronstadt's demand for the "punishment" of Nicholas II.; but it is entirely possible that the Kronstadt demand is simply a German scheme, intended to plunge Russia into a civil war between the extremists and the wiser moderates.

Gallic and Russian Temperament

The moment we try to pair off the leaders in the two revolutions, we are confronted with the fundamental differences in temperament between the Gallic and Slavonic races. That difference has already been strikingly manifested in three things: in the fact, already noted, that confiscation of land in Russia has been carried on without brutality on the one side, and without resistance on the other; in the second fact that, while Louis XVI. fought against the revolution openly and secretly, fairly and treacherously, and owed his death to that resistance, Nicholas II. frankly accepted the Russian revolution at once, never contemplating resistance, but, with evident loyalty and sincerity, wishing Russia all success in her new venture, publicly praying for the welfare of the Government which had deposed him. Thirdly, revolutionary Russia began by abolishing capital punishment, while revolutionary France invented the guillotine. On the one hand, a fiery people, instantly leaping to action, easily rushing into wild, even ferocious, excess; on the other, a people singularly gentle, even phlegmatic, by nature very orderly and slow to violence. This fundamental difference in temperament has

shown itself at every point since the Russian revolution began.

Take, for example, the fighting at Petrograd from March 10 to March 15, when the Czar abdicated. First reports of the numbers killed spoke of thousands. But, when the bodies of "the martyrs of the Russian revolution" came to be interred with solemn ceremonies, they numbered only 182 in all. Without doubt, there were many casualties on the other side, beginning with ex-Minister Stürmer, who was reported to have died of fright, and including numbers of the political police, as well as officers of the army and navy, like General Kashtalinski and Admiral Butakoff, well known in Washington as Russian Naval Attaché when Count Cassini was Ambassador; many of them fanatically murdered in the first delirium of liberty. And there have been lynchings throughout Russia, chiefly of men supposed to be German spies.

But, on the whole, there has been wonderfully little violence. Even the anarchist demonstrations in Petrograd, the revolts at Schlüsselburg and Kronstadt, and the declaration of independence in a southern district—all of them, most probably, engineered by German agents—have been met with only the gentlest handling, with persuasion rather than force, in sharp contrast to the Parisian slaughters during the Red and the White Terrors, or even the comparatively recent holocaust of Parisian Communists in 1871, when, after desperate fighting in the streets, court-martial executions of large batches of prisoners continued for many months, to be followed by numberless sentences of transportation; these incisive measures being taken by the men who founded the Third Republic, the present Government of France.

Kerensky Not Like Danton

In Russia there have been no "massacres of the Champ de Mars," no "September massacres"; the Petrograd Field of Mars, so named after its French counterpart or the older Campus Martius at Rome, has been the scene only of the ceremonial burial of the "martyrs of the revolution." This expresses the profound differences between the Slavonic and the

Gallic temperament which makes direct comparison between the leaders impossible.

* It is true that Alexander Kerensky, the present Minister of War, has been compared to Danton, who played such a heroic part in creating and inspiring the armies of France to fight against the Austrian and Prussian invaders; but, in truth, there is small likeness beyond the fact that both were radical lawyers. Kerensky seems much more truly to resemble the great Carnot, who "organized victory" for France. And men like Tscheidze and Tseretelli, who might conceivably wish to play extremist rôles like those of Marat and Robespierre, are not Russians or Slavs at all but Asiatics from the Caucasus Mountains.

Further, in Russia it is the leaders, the famous Generals, who are urging the nation to fight, while the common soldiers hang back. In France, the men in the ranks were full of militant ardor, while the Generals, like Dumouriez, played traitor, surrendering fortresses to the enemy; even Lafayette at one time lost his nerve and fled to the Austrians, who promptly clapped him into a dungeon, whence only Napoleon's victories delivered him, so that he survived to play a great and worthy part in the Revolution of 1830.

A Characteristic Episode

There is a certain parallel between the internal fighting in France, in La Vendée, and in the south, at Toulon, where Napoleon won his spurs, and the threatened conflicts at Kronstadt and in the Russian Army. But, through the decisive firmness of Kerensky and the Commander in Chief, General Brusiloff, the loyalists seem certain to win, and to win with little or no bloodshed. The sweeping victory of the loyalists was announced from Petrograd on June 11, in a dispatch telling how General Stcherbatoff—one of the four army commanders under Brusiloff, in the great drive of 1916—had given an order to disband, for pacifist disloyalty, a regiment of infantry and two regiments of sharpshooters.

Three regiments of another division were ordered to take up a new position

on the Rumanian front, but refused to do so, and thereupon received an order to disband. The soldiers openly mutinied. The men of one of the regiments arrested the commander and seven officers, tore their badges from their uniforms, and beat two officers, leaving one insensible on the road. Thereupon a loyal committee of soldiers of the whole army, after deliberating with the army staff, decided to take stern measures against the mutineers, whose ringleader was named Philipoff. A resolute General was chosen, having under his command two divisions of loyal cavalry, two battalions of infantry, one light battery, armored motor cars and airplanes. Occupying positions against the mutineers, he sent them an ultimatum, demanding the surrender of their ringleader and commanding them to take up their positions as ordered, and to undertake to serve faithfully in the future.

The mutinous soldiers, seeing that they were surrounded, attempted to negotiate, but at the last moment Philipoff incited

them to new resistance. The loyalist General immediately ordered his guns into action, whereupon the rebels unconditionally accepted the ultimatum and surrendered Philipoff and others, who were carried off to prison in an automobile. The loyal troops, enraged at this clemency, fired at the automobile, but their commander, in order to save the prisoners' lives, jumped into the car, whereupon the firing ceased.

What a striking illustration of Russian gentleness; the whole thing settled, apparently without bloodshed; the sole casualty recorded being one officer beaten into insensibility, while the mutinous ringleaders, instead of being shot after a drumhead court-martial, are sent to prison, the General risking his life to save theirs.

Through all parallels and resemblances this striking contrast of temperaments between the Frenchman and the Russian stands out sharply; throughout, the Russian revolution has been seasoned with mercy.

A Royal Volunteer for the American Army

The Duc d'Orléans, who under different conditions might have been King of France, has offered his services as a volunteer in the United States Army. Early in April he sent the following telegram to Lieut. Col. John P. Nicholson of the Military Order of the Loyal Legion of the United States:

"At the moment when America is entering the war I come to claim the honor and the right to serve the common cause of civilization and humanity. Son of Comte de Paris, veteran of the Federal Army, myself a member of the Military Order of the Legion of the United States, I ask you to take the steps necessary to obtain for me a place under your flag."

The Duc's reference to his father recalls the fact that when the American civil war broke out Louis Philippe d'Orléans, Comte de Paris, joined the United States Volunteers as Captain and Aide de Camp in 1861. He served on the staff of General McClellan in the Army of the Potomac, resigning in July, 1862, and died in 1894 at Stowe House. The commission was forwarded to him from Washington by Secretary W. H. Seward in September, 1861.

Lieut. Col. Nicholson replied to the present Duke, informing him that his tender was received with great enthusiasm by the commanderies of the order, and that it was presented to the President, but that it did not yet appear that there was a willingness to accept volunteers. The President's Secretary had written: "While regretting that the services of the Duc d'Orléans would not seem to be required, the department nevertheless appreciates very highly the Duc's proffer."

Military Operations of the War

By Major Edwin W. Dayton

Inspector General, National Guard, State of New York; Secretary, New York Army and Navy Club

Major Dayton has long had the official recognition of the United States War Department as an expert authority on strategy and tactics. This is the fifth article in a series which he is writing for CURRENT HISTORY MAGAZINE, covering in a rapid narrative all the military events of importance since the beginning of the present conflict.

V.—Second Battle of Ypres—Von Mackensen's Victories

[See map of Ypres region, in "The Battle of Messines Ridge," elsewhere in this issue of CURRENT HISTORY MAGAZINE]

THERE was a general anticipation among the Allies in the early part of 1915 that May Day in that year would be a sort of military New Year's Day. It was confidently predicted that about that time the French Army, and more especially the British Army, would begin an offensive which would drive the invaders out of Belgium and France. The British disappointment at Neuve Chapelle in March was regarded as a premature effort to begin the drive before the plans had been sufficiently matured, but the French successes in Champagne showed the Gallic armies to be well in hand and thoroughly prepared for hard fighting. French troops were holding about 90 per cent. of the long western battle front, and both French and British combined to defend the important salient around Ypres. All the publicists were busy prophesying allied attacks, and only a very few of the really expert writers suggested the possibility of a renewed German attack.

Second Battle of Ypres

In the previous October the first battle of Ypres had been fought, and that tremendous German effort to drive a way through to Calais had ended in defeat when the final charges of the Prussian Guard failed on Nov. 11. Ypres is an important local centre of communications, with important roads radiating northeast, east, and southeast. In April, 1915, the allied lines circled above and beyond the town from four to five miles, except at the south, where the lines from Hill 60 to the Yser Canal were rather less than two miles away.

It will be worth the student's while to trace the position on the map as it was on April 22. Beginning at Yser Canal on the north, French troops were in the trenches which curved eastward through Bixschoote to a point beyond Lange-marck, whence General Alderson's Canadian division with four brigades stretched over the front to a point beyond Grafen-stafel. From the Canadian right the British Twenty-eighth Division occupied the trenches down to the Polygon Wood two miles east of Hooze. At the edge of this wood Princess Patricia's regiment was on the left of General Snow's (Twenty-seventh) division, which carried the line on down east of the Veldhoek Ridge to Hill 60, where at the re-entering angle Snow's right flank joined the Fifth Division of General Morland. The trenches held by the Canadians had originally been dug by the French, and they were wet and shallow. The dead were buried thick in the sides and bottom, so that it was an ugly task to try to improve these positions.

On April 17 seven British mines were exploded under Hill 60 and two British regular regiments captured and held the position. For several days the Germans made almost continuous counterattacks, and both sides lost heavily in the struggle for this little hill, which was important because it would afford the British an opportunity to enfilade some of the German trenches toward Hollebeke on the south. On the 20th the German heavy artillery began to bombard the town of Ypres with the object of blocking the British transport, which was

supplying the positions covering the place, and a large number of civilians were killed.

The First Gas Attacks

Early in the evening of April 22 a light, steady breeze was blowing over the lines from the northeast, when suddenly a low greenish bank of vapor was observed drifting upon the French trenches. Soon a demoralized stream of French colonial soldiers was pouring back from the Bixschoote-Langemarck sector, wild with the terror of an unheard-of attack. The Germans had pumped out of cylinders a large quantity of heavy chlorine gas, which rolled low and thick into the trenches, blinding, choking, and suffocating men utterly unprepared and unwarned. A horrible death came upon hundreds, and those of their comrades able to run broke in gasping horror upon the surprised Canadian reserves in the rear.

The result of this rout was a gap in the allied lines four miles wide, through which the Germans followed the demoralized French troops back to the canal between Boesinghe and Steenstraete. The Canadians were less affected by the gas, but their left flank, held by General Turner's brigade, was compelled to bend back east of the Poelcapelle road to a wood at the right of St. Julien.

Late in the night various units were brought up to fill the gap between St. Julien and Boesinghe, and under the command of Colonel Geddes of the Buffs, this mixed force succeeded in blocking what for some hours at least had been an open road toward Ypres. Providentially, the Germans were so busy forcing a way across the canal near Lizerne that they missed the chance for a smashing drive into the town of Ypres, where the streets, blocked by shell-strewn ruins, were congested by all the transport trains and the mad struggle to straighten out the tangle into which the gas surprise had thrown the whole northern sector. On Friday the Canadian Third Brigade was covering St. Julien, and, despite heavy attacks, lack of food, and low physical conditions following the nausea of the gas, this

heroic force managed to preserve touch with Geddes's right flank.

Early on the morning of the 24th, after a violent artillery attack, the second great gas attack was launched by the Germans. Observers preserved a careful record this time, and we know that it took the deadly green bank of gas two minutes to roll across the ground intervening between the opposing trenches. It rose not above seven feet at most, and was deadliest toward the bottom. The heavy gas rolled down into and penetrated every corner of the trenches. There were then no such defensive appliances as the now familiar gas masks. Wet handkerchiefs, an erect position, and the avoidance of any deep breathing were the only protective measures known, and even these were but slightly understood. Those who inhaled it deeply found their lungs filled with the fluid and suffered terribly; their blue, swollen faces and bulging eyes, added to spasmodic gasping efforts to breathe, made the victims things of horror. More than half a mile to the rear the gas was still strong enough to cause violent nausea and dizziness.

Allies Forced to Retreat

Under this attack the worn-out Canadian Third Brigade gave way and retreated below the Ypres-Passchendele road. Colonel Lipsett's Eighth Battalion made a superb defense of the pivotal position on the hill at Grafenstafel and prevented a German flank attack which would have turned the whole eastern part of the line.

On Sunday morning, the 25th, large British reinforcements had arrived, and a determined effort was made to recover St. Julien; but in spite of the hardest kind of fighting the effort was defeated and the lines forced back to Fortuin. The pivot at Grafenstafel was helped by the addition of fresh regiments, and held; but in the heavy fighting of Monday the Germans won Fortuin and drove the British back another 400 yards behind Hannabeke Brook. The Northumberland brigade and the Lahore division (Indian) suffered a bloody repulse in an effort to retake St. Julien. The Fortieth Pathans (the "Forty Thieves") fought

well and lost not only their Colonel but nearly every British officer.

For a week attacks and counterattacks continued, but by May 3 it became evident that prudence demanded the surrender of some of the ugly angles in the line, and the British shortened their hard-pressed front by a skillful retreat to a new line closer to Ypres. The French Ninth Corps (regulars) had taken position on the east bank of the Yser Canal, and on a curve toward the southeast their right joined the British left west of Shelltrap Farm, half way between St. Julien and St. Jean. The new British position curved east and south through Frezenberg and Hooze to Hill 60. The front between Grafenstafel and Polygon Wood had been withdrawn fully two miles.

On May 5 the Germans took Hill 60, and on the 8th and 9th they drove the British back of the Frezenberg Hill to Verlorenhoek. In this fighting shellfire reduced the First Suffolks to seven men, and the Second Cheshires fought until they had only one officer left. Many other units had similar losses in this period; 900 eight-inch shells fell in the trenches occupied by one regiment of territorials.

Heavy British Losses

On May 13 the First and Third Cavalry Divisions under General de Lisle were desperately engaged in the sector between Hooze and Verlorenhoek. The dismounted cavalry included some of the most famous regiments in British army annals as well as a number of Yeomanry regiments. The divisions fought splendidly and suffered great losses, but were compelled to yield more ground between Bellewaarde Lake and Verlorenhoek. Shelltrap Farm, captured by the Germans, was retaken in a bayonet charge by the Second Essex.

On May 24 the Germans again released gas, this time on a front of three miles from Shelltrap Farm to Bellewaarde Lake. This time the cloud rose much higher and the wind carried it over the lines to the southwest. The troops had by now been furnished with respirators, but more ground was yielded in this sector

when the gas was followed by a storm of shells and heavy infantry attacks. The hard-pressed British lines were saved by the heroic fighting of the cavalry supports, who again suffered great loss. The famous Ninth Lancers lost many officers, including that splendid soldier, Captain Francis Grenfell, who had won the Victoria Cross and greatly distinguished himself in the battles of 1914.

So toward the end of May the second battle of Ypres died away and the bodies of more than a hundred thousand allied soldiers were added to the soil of this hard-held salient in the western battle front. Two years have passed since then, and on this front the lines remain about Ypres almost as Grenfell saw them last. In that Spring of 1915 the man power of the Allies on the battlefields began to gain numerical superiority over the enemy, and that superiority has grown steadily since then. Yet still the German stands there and waits for us.

Campaign in the South

In March and April, 1915, the news vendors throughout the world were at their wits' end to determine who had last captured Hartmanns-Weilerkopf, for that mountain spur changed hands over and over again in the hard campaign fought in the Vosges. The Chasseurs Alpins under Maud'huy fought a series of small battles along the Valley of the Fecht with Colmar, an important railhead, for objective. Numerous small successes seemed to pave the way for a serious drive against the German frontier, but no really great move developed. Throughout the rest of 1915 the lines remained almost exactly as they settled down after the series of minor battles in the late Winter and Spring of that year.

Attacks on St. Mihiel Salient

When the German attack upon Paris was repulsed and thrown back after the battle of the Marne, the invaders still held the strategically important salient south of Verdun, at St. Mihiel, where their guns on the heights at the Fort of the Camp des Romains commanded the plains for miles and the valley of the Meuse below Verdun. In the Spring of 1915 an important item in the French

program was the squeezing out of this salient, and the plan adopted was to drive in the already rather constricted sides. The principal attack was aimed at Les Eparges, a dozen miles north of St. Mihiel, where the Germans had busied themselves since the previous September in fortifying a naturally strong position which defended the lines of communication inside the salient.

On April 5 and 6, in heavy rain, the French infantry attacked with the bayonet, and positions were won and lost all the way up to the summit of the coveted height. On the 8th several French regiments fought their way to the top and held their ground until reinforced on the following day, when the victory was completed. Further to the north the French advanced to Etain, and it appeared as though the German commander would certainly be compelled to fall back upon the high ground in front of Metz; but the demands for a vigorous attack far to the north prevented the development of this campaign, which was destined to make no further progress toward the great German frontier fortress. The Germans were left in possession of the St. Mihiel salient and of the positions circling Verdun and joining the lines of the Crown Prince in the Argonne—positions back of which they were able to prepare for the great attacks upon Verdun in the early part of 1916.

The Campaign in Artois

In May, 1915, two great objectives confronted the British and the French commanders. General Joffre's task was to take Lens and advance toward Douai, Valenciennes, and Namur, while the British target was the great northern city of Lille.

The Germans held their lines about Lens in strong force, and the chalk of the region had been carved into skillful defensive positions. General Foch took command of the French forces in this sector; where seven corps were gathered with 1,100 guns. Opposed to him was von Bülow, outnumbered and outgunned, but in a series of mutually supporting positions of great strength.

On May 9 Foch's guns hurled 300,000 shells upon the German lines between La Targette and Carency. Then the infantry charged and took La Targette, and carried the attack into the streets of Neuville St. Vaast, where the battle raged at close quarters from house to house. The centre pushed on across the Arras-Béthune road, and in the morning hours succeeded in advancing nearly three miles. The left at Carency made slower progress because of the more difficult terrain, but by the day's end the French had made a brilliant advance on a front of about five miles, and had captured over 3,000 prisoners with a large number of machine guns and some cannon.

This battle raged on through the 10th, 11th, and 12th, and on the afternoon of the last day the last survivors of the garrison in Carency surrendered. The cemetery of Neuville St. Vaast and the summit at Notre Dame de Lorette, as well as Ablain, were taken by the French, whose attacks would not be denied.

On May 13 in heavy rain the French continued the attacks, now aimed at Angres, Souchez, and Neuville St. Vaast, and from then on through the rest of the month one after the other of the wonderful series of separate German fortifications were captured. On May 29 Ablain fell, and on the 31st the sugar refinery at Souchez was stormed after changing hands a number of times. Early in June Neuville St. Vaast was taken, but just to the south lay the famous Labyrinth, where the battle raged for a long time in deep galleries, sometimes fifty feet under ground.

Aubers Ridge and Festubert

The British campaign toward Lille was ushered in as a co-operative offensive timed to coincide with the French attacks in Artois. A first objective was the winning of the Aubers Ridge overtopping the old fatal field at Neuve Chapelle. On Sunday, May 9, the First Corps and the Indian Corps advanced upon the southern end of the Bois du Biez, a mile and a half east of Richebourg l'Avoué. The Eighth Division attacked further north, toward Fromelles and the northern slopes of the Aubers Ridge. The artillery had failed properly to prepare the way, and the in-

fantry were stopped by unbroken wire entanglements with heavy resulting losses and little or no gains.

A week later, on the 16th, there was another strong attack east of Festubert, after a bombardment in which the French 75s assisted. There was much close fighting and the bombers of the First Grenadiers did good work. A company of the Scots Guards got too far ahead and was cut off. Some days later its men were found lying with plenty of German dead about them.

This battle of Festubert ended in the last week of May with a net result of having given to the British the enemy's first-line trenches on a front of over 3,000 yards. In addition some second-line trenches were taken, with nearly 800 prisoners and ten machine guns. But despite the extremely heavy losses incurred, the attack had nowhere succeeded in breaking the enemy line. In June the Belgians won a German blockhouse south of Dixmude, and throughout that month and July there was a prolonged struggle for the ruins of the château at Hooge, just east of Ypres. There were several minor battles near Givenchy, Festubert, and Hooge, but invariably the British forces were compelled to abandon sections of enemy trenches won at severe cost. The only big thing on the side of the Allies was the casualty list.

In the early Summer a series of small victories were won in the Vosges by the French Alpine Chasseurs, who captured Metzeral in June, and in July stormed the Sondernach Ridge, pushing their advance close to Münster.

Late in June and early in July the German Crown Prince made four attacks upon the French lines in the Argonne along the Vienne-le-Château and Binarville road. Only small gains resulted, and on July 7 the Kaiser's heir hurled a stronger attack against the hill called La Fille Morte, which was captured, but later retaken by the French. It seemed impossible for the Crown Prince to win any glory in "the day" (*der Tag!*) for which he had openly longed in the years of peace.

It is a difficult thing now for most people to admit what they believed two

years ago. In the Spring of 1915 the consensus of European military opinion was that the Russians were prepared to launch a tremendous campaign with huge armies and adequate equipment. They had won a strong hold in the Carpathians and were supposed to be ready for a crushing invasion of Hungary. Possibly there would be men and guns enough to strike as well toward Southern Germany via Cracow.

Russian Front in 1915

The Russians took Przemyśl on March 22, and on the 25th they crossed the Pruth. Early in April they won the crest of the mountain barrier for all of seventy miles, and Brusiloff was within a few days' march of the Hungarian plains below. In a short campaign of a few weeks in Bukowina the Russians claimed to have captured 70,000 prisoners and many guns. Late in April General von Linsingen feinted toward Stanislaw and succeeded in drawing down that way the Russian mobile reserves.

In December Dmitrieff had dug himself into a good defensive position behind the Donajetz River, and felt so secure that no positions to the rear had been prepared, in case retreat might become needful, for no such possibility seemed to threaten.

The supreme command of the German army groups was given to that idol of the German Army, von Mackensen, who had for the great operation about to be undertaken as many as 2,000,000, and perhaps 2,500,000, men. On April 28 the Austro-German armies lay on the left bank of the Donajetz down to the Cracow-Tarnow Railroad, and thence on the left bank of the Biala down to the mountains below Rapa and Grybow. On that day von Mackensen struck his first blow from his right flank toward Gorlice. May 1 saw the attack developed further north, where, under a tremendous artillery fire, a crossing was effected over the Biala and Crezkowice was taken. Gorlice, too, was stormed, and by the 2d the whole Russian front in this sector was in full retreat toward the Wislowka River, twenty miles in the rear. The Caucasian corps of Irmanov came to Dmitrieff's

help, and the Wislowka was held until May 7, when the Germans forced a crossing at Jaslo. The flank of the army in the Carpathians was turned, and its hurried retreat involved heavy losses, but desperate fighting enabled Brusiloff to get his army clear of its perilous position in the mountains.

FIELD MARSHAL VON MACKENSEN
(© F. O. Koch)

By May 14 the Russians were across the San, and the bridgehead at Jaroslav was defended until men and guns were over. The fortnight had been a costly one for Russia. Her armies had retreated something over eighty miles, and some corps had lost 75 per cent. of their strength.

The Grand Duke Nicholas took over the Russian command. On May 5 a Russian army under General Ewarts turned in a strong counterattack, which, after several days' fighting, drove back a German force advancing toward Ostrowiecz with a loss of 30,000 casualties. Toward the south, too, a vigorous counterstroke made good progress and threatened Kolomea and Czernowitz. The German checks on both flanks did not interfere with von Mackensen's main attack, which developed on May 15 and became one of the great battles of the war.

The Battle of the San

The chief German attack was aimed at the sector between Jaroslav and Przemyśl, and at midnight on the 15th the northern town fell. On the 18th the Russians lost Sieniawa, and in the south von Marwitz captured the railway junctions at Dobromil and Sambor, on the Dniester, and drove on toward the north against the fortifications about Przemyśl. Pushing on, he took Hussakow and Lutkow.

Von Mackensen crossed the San at Radymno and on June 2 entered Przemyśl, which the Russians had held for some two months or more. On June 1 von Linsingen captured Stryj, and the Prussian Guard took prisoners and guns from Brusiloff. On June 7 the same victor forced the Dniester at Zurawno and was well on his way toward Lemberg. Brusiloff turned, and in a three-day battle drove von Linsingen back over the river with the loss of 15,000 prisoners, and some guns.

However, the great German advance continued, and Mosciska, east of Przemyśl, was captured June 14, and the Russians were back on the San, the Tanev, and the Grodek Ponds. By the 16th von Mackensen was advancing toward Rawa Russka, and after taking Javorov his army entered that position as well as Zolkico on June 20. On the 22d the great City of Lemberg was taken, and Galicia was once more in Austrian hands.

At this time the German invasion beginning at the north was approaching Windau on the Baltic Sea, and the German line, curving southeast, reached close to Shavli, and toward the south cut between Suwalka and Grodno; then back on a curve west of Warsaw and across the Vistula at the junction with the Tanev; thence on a broad out curve toward Brody and down to Halicz. In the north, Libau, the seaport, had been taken early in May, and throughout that month and June Courland was being overrun by the German forces, which, before long, were threatening Riga. The British and French efforts to help Russia by a diversion in the west at Festubert

and Souchez were signal failures so far as their effect on the campaign in the east was concerned.

Battles in Front of Warsaw

'After the fall of Lemberg the German General Staff prepared to attack Warsaw, now a dangerous salient for the Russians, with German armies threatening the railway communications both north and south of the ancient Polish capital. The strongly fortified city was the target, but the real object was a much greater thing. The Germans planned not only to capture cities and provinces, but to surround and destroy the field armies opposing their progress. They hoped to induce the Russian commander to commit great forces to the defense of certain important localities where the favorite Hindenburgian tactics might, by far-flung flank movements, surround and capture or destroy them.

A very powerful army was mobilized in the vicinity of Thorn for the great new effort after the capture of Lemberg. In the south the German campaign progressed methodically. Early in July they took Krasnik and Zamosc. In the first week of July the Russians won an important four days' battle along the Lublin highway above Krasnik, capturing 15,000 prisoners and many guns.

Late in June the German army of von Linsingen crossed the Dniester, and on the 28th captured Halicz. The Russians, fighting stubborn rear-guard actions, finally halted on the left (east) bank of the Zlota Lipa, a northern tributary of the Dniester. The battle line further north was temporarily halted along the River Bug, at Kamionka and Sokal, but by the middle of July von Mackensen had his vast force ready to strike new and irresistible blows from Courland in the north all the way down to Galicia. Przasnysz, north of Warsaw, was taken on July 14 by General von Gallwitz, and within the next few days the Germans reached the lines of the Rawka and the Bzura, and the Russians fell back to Blouie, a prepared position fifteen miles west of Warsaw. By July 20 the Russian defense on the north had fallen behind the Narco, a tributary of the Bug north-

east of Warsaw, and by July 23 von Gallwitz won crossings over the Narew and two days later reached the River Bug between Novo Georgievsk and Serock.

Meanwhile von Mackensen was fighting a successful campaign midway between Lemberg and Warsaw. On July

GRAND DUKE NICHOLAS
(© Underwood & Underwood)

18 he captured Krasnostav and Pilaskowice, where he was dangerously close to a vital Russian line of communications—the railway from Lublin through Chulm to Kovel. After a series of hard-fought but nearly always successful actions the Germans south of Warsaw pressed on, and by July 22 had the Vistula bridgehead at Nova Alexandria, following the capture of Radom and a number of other positions west of the great river.

In the far north the German wave rushed on, submerging Tuksum and Windau (July 20) and rapidly threatened Mitau, an important railway junction southwest of Riga. On July 29 von Mackensen cut the railway south between Lublin and Chulm, and on the 30th both towns fell.

Fall of Warsaw and Kovno

On Aug. 4 the Russians who had held the point of the salient at Blouie fell

back through Warsaw, for the sides of the salient were pinching in dangerously, and on Aug. 5 German cavalry entered Warsaw. The successful withdrawal of the large garrison was the forerunner of a long series of similar successes. Over and over again Russian flanks were strongly held while large armies nearly trapped were safely extricated. The campaign went on from victory to victory, but the German Generals were always denied the darling wish of their strategy—the capture or destruction of the armies which they were able to defeat but not to annihilate. On Aug. 4 Ivangorod fell, and the middle of the month the Germans were pressing forward toward the railway Chulm-Brest-Litovsk-Grodno.

On Aug. 17 Kovno was taken, with 20,000 prisoners and 200 guns, after offering a heroic resistance. The fall of this important and strongly fortified city on the Niemen was a deadly blow to the Russian scheme of defense, for it opened the way toward the main railway line from Poland to Petrograd via Vilna.* On Aug. 19 von Beseler (the victor at Antwerp) after a three weeks' siege took Novo Georgievsk with another 20,000 prisoners and more than 700 guns. This great fortress close to Warsaw had been relied upon to withstand a long siege, and meanwhile threaten the communications of German armies pushing east into Russia. The hope was vain in face of von Beseler's great siege guns.

On Aug. 23 Ossowietz fell, and Tykocin, just south of the fortress, was stormed. Two days later the Germans took Brest-Litovsk, the fortress covering the railway to Moscow. On the 26th they captured Bialystok, the great railway centre south of Grodno. Olita, a fortress defending the crossings of the Niemen north of Grodno, fell on the 27th. Further to the north the Germans began an attack against Friedrichstadt in an attempt to force a crossing of the Dvina above Dvinsk. On the last day of August

Lutsk, on the Styr, in Volhynia, was captured, and on Sept. 2 the Germans took Grodno, against which von Beseler's siege artillery had been concentrated. The Russians lost only the rear guard of 2,000 men and a few fortress guns.

Czar Assumes Command

On Sept. 5 the Czar took personal command of all the Russian armies, and sent the Grand Duke Nicholas to command in the Caucasus. Early in September the Russian lines east of Grodno retired to a position reaching from Orany (at the crossing of the Petrograd railway over the Meretchanka River) to Mosty, on the Niemen. On Sept. 18 Vilna, a position of great strategic importance, fell after a brave resistance in which two divisions of the Russian Imperial Guard played a distinguished part. Von Eichorn, the German commander, pushed 40,000 cavalry with 140 guns toward the flank of the Russian position, and the garrison barely effected their escape along the line toward Minsk. By the end of September the Czar's troops were making a stand along a line through Smorgon, between Vilna and Molodetchno, and south to Novo Grodek.

Further southward, von Mackensen reached and captured Pinsk on Sept. 16, but a week earlier the Russians made a surprise attack in front of Tarnopol and along the Sereth, in which they captured 383 officers, 17,000 men, and nearly 100 guns.

That success was continued and the German flank driven back to the Stripa with heavy additional losses. Dubno was retaken, and General Ivanoff seemed for a time to threaten dangerously von Mackensen's right flank.

A long series of battles were fought through the Autumn and early Winter about Czartorysk and Rafadowka, in Volhynia, and along the Rivers Styr, Stripa, and Zlota Lipa, in Eastern Galicia. Above Pinsk the Germans held securely Baranovitchi, an important commercial and railway centre east of Slonim. All efforts failed to capture Dvinsk, and the Dvina marked the limit of German progress toward Petrograd. On the west front of Riga the German

*General Grigorieff was tried by a Russian court-martial and sentenced to fifteen years' imprisonment at hard labor for insufficient measures of defense and absence from Kovno during the siege.

lines curved back west of Babit See and Lake Kanger to the west shores of the Gulf of Riga.

From Riga to Czernowitz the battle front measured about 785 miles, and while the Russians bent the southern end back along the Dniester in the Spring of 1916, when they recaptured Bukowina

from Brody (in Galicia) on to the north, the military frontier has remained almost exactly as the great German victories of 1915 left it. The adequate defense of that frontier, inclosing, as it does, all of Western Russia, required the maintenance on that front of nearly 2,000,000 Austro-German troops.

The Religious Revival in France

By Major William Redmond, M. P.

[Major Redmond died June 9, 1917, from wounds received in action two days before. He was a brother of John Redmond, the Irish Nationalist leader, and had been a member of Parliament for the East Division of Clare since 1892. He was one of the idols of his native land and was beloved alike by friend and opponent. The subjoined article, written shortly before he fell, is here published by arrangement with The London Chronicle.]

WITH all the evil that has followed in its train it is good to find at least one beneficial result from the war. It has led to the revival of religion in a most remarkable way.

As to this, practically every one is agreed, and it is apparent in a hundred directions. Perhaps this revival is most marked of all in France, and there it is attributable in no little degree to the splendid record of the French priests in the army. To many people it seemed a wrong thing that the ministers of the Prince of Peace should be called upon to take up arms and play a part in the terrible work of bloodshed and slaughter which has converted so large a portion of Europe into a veritable shambles. What seemed wrong, and what was from some point of view wrong no doubt, has in the result turned out a blessing.

The spectacle of thousands of priests marching and fighting for the country and the flag has touched deeply the heart of France, and many and many a man who was, perhaps, ready enough to proclaim himself an anti-Cleric will never so describe himself any more. The bravery displayed by the French priests in battle (2,000 have been killed) has been only equaled by their devotion to their holy office. Few things are more appealing than the sight of the soldier-priest turning to administer the last consolations of

religion to his fallen comrades round about. And this has been witnessed on every battlefield of France, and it has its natural effect upon the impressionable French character, and the effect will remain long after the last shot of the war has been fired.

To those who have been brought to France by the war the manifestations of religion everywhere displayed have come more or less as a surprise, especially to those who had been led to believe from the action of many successive French Governments that the Church was more or less a thing of the past in France. It is hard, of course, to judge of the real depth or intensity of religious feeling, but all one can say is that if this can be done by noticing the attendance at church, then the religion of France is today very true and very sincere.

For over a year the writer of these lines has been with the British Army in France and has been billeted in scores of villages and small towns. Everywhere the way in which the civil population thronged the churches on Sundays and holidays was very noticeable, and in the larger towns more noticeable still. It may be that the attacks which the enemy have made on holy places have caused a revulsion of feeling in France. The ruins of Rheims cathedral, Ypres, and so many other churches in the land have stricken the population with remorse and

sorrow. Certain it is, be the real reason what it may, there has been a great revival in the devotion of the French people since war broke out. Of course the cynical will say, "When the devil was sick the devil a saint would be," &c.

The writer has seen more deep and reverent devotion displayed by worshippers inside the walls of semi-ruined churches which had their stained glass windows shattered than ever he has seen before. Probably more fervent prayers have been poured out before broken crosses and shell-torn statues of our Saviour in France and Belgium than were ever offered in peace time before the most beautiful shrines in the whole world. Religion has been perhaps the one thing in all the world so far strengthened and built up afresh amid the horrible ravages of war. That there has been a similar result all over the world and away from the actual scene of war is also apparent.

The fact is that the ruin and carnage have been so stupendous, the sacrifices have been so great, the horrors have been so widespread and have so penetrated into almost every family circle that almost every human being in the world has turned to look for hope and comfort beyond the grave. Miserable indeed is the man or woman who is not assured that that hope and comfort are so to be found, for in sooth this war has made this transitory world but a sorry place! The writer of these impressions has been with a section of the British Army in the field, which numbers very many Catholic soldiers in its ranks. The conduct of these men has undoubtedly had a good effect upon the population wherever they have been stationed. The majority of the soldiers are of Irish nationality, though of English and Scottish and overseas Catholic soldiers there are also not a few. The simple and yet deep faith exhibited by these men upon all occasions made a wonderful impression on the French and Belgian peoples.

It is not at the very best a happy thing to have one's country occupied by foreign troops, even though they come to defend

your soil from the invader. Masses of men overrunning villages and towns and eager for some sort of relaxation from the rigor and hardship of trench life are apt to give trouble, even though well behaved and well disposed in every way. It is always a source of anxiety to the higher command to secure that nothing, even by inadvertence, shall be done by the troops to cause annoyance to the inhabitants of occupied territory. The outstanding feature of the British occupation of France and Belgium has been the fine and chivalrous spirit displayed by the men. They have put themselves on a footing of the best and kindest sort with the people, and complaints of any kind as to their behavior are few and far between.

But, in addition to the relief of the people in finding the troops kind and considerate, imagine the good impression created when the French people find that large numbers of the men are devoted to their own religion and more earnest in their practice of it. When Irish regiments are billeted in a village the church large enough for the villagers becomes at once too small. It is thronged by the soldiers, and the curé finds his congregation enormous, and has, in conjunction with the army Chaplains, to arrange for many services on Sunday. The General commanding a division composed for the most part of Irish Catholic soldiers informed the present writer that his division never left an area without the local authorities, and notably the curé, coming to him to express their appreciation of the good behavior of the troops and their admiration for their earnest devotion to their religion.

There is no doubt that the scourge of war has purified the hearts of many people, and the advent of large numbers of Catholic troops into France has probably helped to bring back to some Frenchmen an appreciation of something which they may have seemed to have almost lost. Thus in one way, and a way of no little importance, the war has wrought a change for the better in France.

Who Pays for the Cost of War

By William A. Wood

IT may be said in a fair spirit that the beliefs of the best of men divide on the problem of the cost of war. It has been shown by Ward in his "Pure Sociology" that war has been a leading factor in the development of that which we call civilization. Unquestionably this is true, if we tabulate the results; but sound reasoning requires that it be shown that there is no better way. There is a better way. Ward's deduction does not mean that he favored war as a means to an end: he simply stated the fact from the point of view of the sociologist. The problem is at once ethical as well as sociological. What has been should not necessarily be continued. The basis of the sociological aspect is human achievement; that of the ethical is the power of the mind; and in the religious field we have the main-springs of human conduct.

A few facts need consideration: The object of nature is function. The object of man is happiness. The object of society is action. Severally and jointly man is equipped with certain potential qualities, both of mind and body, and in the exercise of these faculties he achieves whatever he sets his mind to do. The mind itself is not a force, but it is the directive agent that guides the dynamic qualities of men. In those epochs of civilization which mark the movements of man toward development and progress, that which has proved sturdiest among human qualities is the virtue of the pioneer; and as obstacles have given way before the march of human achievement, the more serviceable and permanent elements of life have been successfully set up. These are not to be lost sight of in the glamour of war. The human race is unconquerable, and in the long run man wins over nature and becomes master of nature and of nature's laws.

Thus we may trace our progress, from its faint beginnings in tribal successes onward to the establishment of those substantial moral gains which connote the

value of the human soul in its struggles with nature. Whatever nature has set up as a hindrance has been largely overcome, but the mistakes which man himself makes constitute a drag on his progress. They check what is otherwise the dominion over nature which man aims to secure, and they do it by heaping up the compound interest assessed against succeeding generations. And in this category war is the great offender. It is true in the laws of biology that the forces of anabolism and katabolism are pitted against each other, but in this conflict of unlike elements the forms of life are born and come to maturity. That fruition is the gift which nature provides for the sustentation of the lives of men. And it is on this basis that man successfully builds, for in the partnership of the individual with others the co-operation of the many rewards the unit with increased fruitage.

Every explosion of powder is costly, if at the end of the range we have a human being, and the cost must be paid for both by the living and the unborn. Every explosion of powder is costly in any case, for the price of the marksman is the price which he pays for the securing of the game. Bows and arrows and repeating rifles cost human labor, and when men shoot arrows and bullets into the air, they must go and pick them up or else make other ones. When they explode shells, they must make new shells in their place. If they keep on firing, some one else must make the ammunition and furnish new guns, for guns wear out as well as shells. When men consume more than they produce, they must soon stop either the production or the destruction. Fireworks once a year cost labor; fireworks for nearly three years that batter forts and dismember bodies must be paid for in the only element that can produce them, namely, human labor.

A nation at war is keeping a ledger, and as the balance is on the debit side, redoubled efforts are necessary to re-

store the equilibrium. No juggling with figures can offset this inexorable law of nature. No human reasoning can compensate nature for the consumption of her resources; nothing but human labor can compensate her. Her bounties contain no values until they are carved out by specific and productive human energy; and when these values are once created in the form of wealth, they fall under the law of katabolism. If man hastens the breaking-up process by recklessness or by war, he must pay for it in continued expenditure of effort, he must pay the cost. When a man borrows anything from nature he may use it or not, as he will; but in any instance what he borrows must be returned to her reservoirs.

War quickly destroys what man produces, but the cost is paid for, not in money, but by labor augmented many times over as a price paid for the follies of men. Constructive labor yields permanent results; war uproots them. Battleships are not paid for by Governments, but by subjects of the nation. A thousand men on a warship produce nothing; the same men in action destroy both ship and enemy. The payment of taxes comes out of human labor; the payment of interest on loans is a double burden, falling on those who now live and labor, and striking hard against those who are later to become creators of the nation's wealth. We are still paying pensions on a war that ended 102 years ago. Wars are paid for in human sacrifice—in human lives; but they are also paid for in sacrifice that eats up the products of man's labor; and when these visible things are shot to pieces, an increase of human energy alone can replace them. Men who build battleships are also paying for the battleships. If the ships go to the bottom, no power on earth can replace them save human labor; and the more ships at the bottom, the greater the drain on the living labor which creates them out of earth's material.

Take an illustration from our national sports, baseball and college football. Who pays the salaries of the twenty-two players on each of the sixteen teams of the major leagues? Who accounts for the cost of training the college men for

their annual seasons on the gridiron? Manifestly those who pay as witnesses of the games. Suppose a quarter of all these men were killed and the same proportion injured for life. Suppose hospitals and nurses were supplied to meet these losses and that they were kept up during the entire season. Suppose fresh players were drawn from the ranks and drafted into the daily slaughter on the diamond or the gridiron in times of peace. Would any man of ordinary judgment infer that this loss constituted no drain on the nation?

You cannot pay for war out of taxes. War is liquidated by the human cost, and by cost is meant that continued outgo of human labor which is the sole source of wealth. In addition to the destruction of the human element and the accompanying blasting of the material element, war makes a steady drain on the future; that is to say, the cost is passed on for many decades, through pensions and interest, and in no sense will nature let up in her demands. We borrow from nature as well as from bankers, and when nature recalls the things we have taken, her mandates are scrupulously carried out. War hastens the destruction of all these elements, speeds up the processes by which wealth is torn to pieces, and when these things are shattered and scattered they must be replaced by human toil and increased human sacrifice. Taxes laid on interest augment the national burden by increasing the tax gatherers, who must be paid out of the national revenues. And in the last analysis the receiver of interest is essentially a non-producer and as such he has to be fed along with those who do the fighting and the destroying.

Man pays for war. It is his creation, and as long as he keeps it up he will have to stand for the game. Governments create war debts, but subjects pay them. Kings and Congresses may declare war, but that is only bequeathing to innocent successors the obligations that must be met. It cost Russia \$600,000,000 to fortify Port Arthur. It cost Japan \$400,000,000 to batter it to pieces. But the cost is not in money; it is in human lives and human wealth, and such destruction

ultimately rolls up what no generation can pay. Seventy cents out of every dollar received by our Federal Government was paid out for military purposes, with the nation still at peace. If the baseball players killed in the supposititious warfare above cited were to leave widows and orphans requiring pensions, who would stand for the increased expense of our national game? The cases are parallel in their economic bearing, and show the principle involved in human loss.

The problem of the cost of war is sociological and must be examined in the light of the forces and resultants of human action. Fire insurance companies pay for losses, but not until after they have collected an adequate fund from the community. Life insurance premiums provide the source out of which

claims are met, else what other source could pay for them? If the companies get interest on loans, that only brings other factors into the problem. The circle is thus widened, but the principle remains the same; namely, that from human labor is drawn the fund that compensates for losses sustained. War raises those losses to the *nth* degree and leaves to posterity the burden of paying for other people's quarrels. The interest claims pile up faster than they can be discharged, and drain away from constructive labor the higher fruits of human toil.

Were half the power that fills the world with
terror,

Were half the wealth bestowed on camps
and courts,

Given to redeem the human mind from error,
There were no need of arsenals or forts.

Nearly 24,000,000 Men Engaged

Sir William Robertson, Chief of the British General Staff, made these noteworthy statements in a dinner speech at the Mansion House, London, in May, 1917:

No two wars and no two battles were ever fought under exactly the same conditions, and no war has ever differed so greatly from its predecessor as does the war in which we are now engaged. Airplanes, for instance, have entirely changed the whole strategical and tactical conduct of operations. The use of enormous masses of heavy artillery is another new factor, and has made efficient preparation for battle dependent upon the most elaborate system of communications and transport, and has demanded the highest qualities of organization in general. During the last five or six weeks, I suppose, we have expended some 200,000 tons of ammunition, which have had to be moved by road, rail, and sea from the factories in England to the guns in France and man-handled probably not less than half a dozen times. As you can imagine, this has entailed a great deal of railway work at the front as well as in England, and the skillful and determined way in which the work has been executed by the railway managers and employees who have assisted us is beyond all praise.

But the greatest peculiarity of all is the colossal size of the armies engaged. In the 1870 war armies were counted by the hundred thousand, and at the battle of Gravelotte, where the heaviest losses were incurred, the total casualties were only about 33,000 men on both sides, while for the whole war the total casualties on both sides were less than half a million. In the present war the killed alone can be counted by the million, while the total number of men engaged amounts to nearly 24,000,000.

In fact, this war is not, as in the past, a war merely of opposing armies, but a war of nations, and there is not today a man or woman in the empire who is not doing something either to help or to hinder the winning of the war. A man of great distinction told me the other day that he estimated the weight of purely military effort at only 25 per cent. of the whole, the remaining 75 per cent. being, strictly speaking, of a non-military nature, and made up of many elements—agriculture, food, shipping, diplomacy, &c. I think he is probably not far wrong, and when people ask me, as they sometimes do, how the war is getting on, I feel inclined to reply, "Why ask me? Why not ask yourself and the remainder of the 75 per cent.?"

The Heroic Death of Dr. Clunet

By Robert de Lezeau

Dr. Jean Clunet, who died of typhus at Jassy, Rumania, in April, 1917, had so memorable a career that the *Paris Figaro* gave a leading place on its first page to the subjoined article, which has been specially translated for *CURRENT HISTORY MAGAZINE*.

ONE of the simplest and most inspiring of heroes has just succumbed to the terrible epidemic of spotted typhus that is ravaging Rumania. He died in the hospital which he had created from the ground up, at the bedside of the sufferers, whom he continued to aid to his last breath with all his science and all his faith: two warring sisters who had become reconciled in his great heart. We who knew him here in Jassy, at the place of his supreme sacrifice, cherish his memory as that of one of the greatest Frenchmen we have ever known.

Jean Clunet was the son of a lawyer who has acquired just renown in the domain of international law. A former hospital interne, assistant in the Medical Faculty, and finally appointed to the Chair of Pathological Anatomy in the Medical College at Nancy, Jean Clunet gave himself up to science with a tireless ardor that engrossed his whole mind and heart. He always had a sort of predestination for sacrifice. Wherever he could devote himself to others, save lives, comfort souls, Clunet was there.

In 1912 he visited Morocco, and one day a native servant who had become attached to him said: "Master, you must leave here—quick, quick, at once! They are going to massacre all the foreigners."

Though he had no duty to perform, Jean Clunet remained. The next day the revolt at Fez broke out, with all its horrors—massacres, lynchings, tortures. With two comrades he found safety in a blind alley, which the insurgents could not capture, though they besieged the entrance. Twenty-four hours later two local officials whom Clunet had cured of illness sent their escorts to rescue him. Once free, he paid no attention to the mobs that were still raging, but went everywhere that the wounded lay. The

dying called him and the living threatened him. Clunet was in his element. He dressed wounds, he performed operations, he saved lives. And when this hard work was done he learned that among the Jewish population, which had taken refuge in dense masses before the Sultan's deer cages, an epidemic was breaking out. He threw himself into this new task, took all the precautionary measures, evacuated the infected cases, disinfected the whole place, and averted the epidemic. And after two months of this intense labor he returned to France feeling that he had had what he went for—a pleasure trip.

The great war broke out, and Clunet was at the front from the first day. A surgeon in the 332d Regiment of the line, he was with the vanguard at the battle of Charleroi. Then came the retreat, in the course of which two orderlies were killed at his side and two horses were struck down at the moment when he was mounting into the saddle. No matter! It was a fine life—there are wounds to care for and well men to comfort. Clunet devotes himself to those around him.

The 332d withdraws as far as the Aisne and Berry-au-Bac. There it is ordered to hold a precarious, untenable position. It digs in, it hangs on, in spite of the intensity of the bombardment and the violence of the rifle fire. Jean Clunet has set up his aid station at the most exposed point, because it is there that he can most quickly get at the wounded. Finally his regiment is forced to withdraw precipitately and cross the Aisne in all haste. Clunet is among the last to go. He has a third horse killed under him and crosses the river by swimming.

On the other side of the Aisne the 332d establishes itself solidly in trenches. The furious fighting abates. Life be-

comes more calm, more monotonous. Clunet grows restless. The day is long with no act of devotion to perform. So, when he hears that an expedition is to be sent to the Dardanelles, he tells himself: "I will go—I am going!" And he goes.

At the Dardanelles Clunet gives the maximum of his energy and devotion. Epidemics multiply, various and deadly. He fights them all. He cleans up the first-line trenches under fire, burying the dead by night. He defends himself, revolver in hand, against the Turkish patrols during that depressing labor, rescuing both the dead and the living. He succeeds in bringing drinkable water to the camp and in establishing, despite a thousand difficulties, a service for hauling away the dead horses and throwing them into the sea.

One day, all in a second, he is struck down by a frightful pain that twists his limbs and sets his brain on fire—it is the dreaded fever, which the colonials know well and which they call the "dingue." He is at the point of death. But men of that mettle do not die so easily. Clunet recovers and leaves the Dardanelles—the last man to get away. Last in retreat, first in advance—that was his chosen place.

Jean Clunet then passed a month at Paris, chiefly in the Pasteur Institute, where he had formerly worked a great deal and where he now profited from all that science had learned regarding contagious diseases. "I prefer contagious cases," he said, "and I don't know why." We, his friends, knew. It was because those were the cases in which the physician ran the greatest risks in treating them. Clunet waited, impatient for the next task of devotion. It came. A violent epidemic of exanthematic typhus was raging in the Serbian Army at Corfu. Clunet said: "I will go—I am going!" And he went.

He was asked first to make a little detour, to go through Saloniki and set up a laboratory there. Clunet sailed on La Provence. The vessel was torpedoed and sinking. The officers, foreseeing the possibility of such a catastrophe, had provided rafts. These were thrown over-

board, and Clunet reached one of them by swimming. He was safe, or would have been, but for the one thought that possessed him—to save others. At the risk of capsizing a hundred times he forces the raft to right and left, haphazard, any way to pick up the shipwrecked men in the water. Five, then ten, then fifteen! Those whom he has snatched from disaster cry to him: "Enough! Enough! We are going to sink." But Clunet estimates that he can still save two more lives. He is determined to save them. Those around him mutter, almost threaten. He still wears his uniform with the chevrons of an officer. He orders silence, commands obedience. The men are silent, they obey, and soon two more unfortunates are hauled aboard the raft.

One of them is grievously wounded in the head. Clunet dresses the wound. But the others must be fed. He succeeds in gathering in several loaves of bread tossing about in the waves, and thirty apples. At the end of eighteen hours a ship appears and rescues them, eighteen hours during which Clunet has sustained the flagging courage of his companions, stimulated their energies, extinguished incipient revolts, dissipated ill-humor, all by force of his own indomitable spirit.

Then came Corfu. To typhus was added dysentery, and both diseases were ravaging the Serbian Army. Clunet remained night and day at the bedside of the sufferers. He was himself stricken with dysentery, but did not cease his work. In his observation of the typhus epidemic he noted that the milk-diet treatment was giving only indifferent results. He substituted a raw meat diet, which succeeded better. He did not return to France until the disease had been stamped out.

Mme. Clunet, his admirable wife, was at the station to meet him. She was in black, but not in mourning. Little by little, with all the tact of an infinite tenderness, she told her husband that their only son, a child of 5 years, had died three days before. To all his voluntary sacrifices was added this involuntary sacrifice, the most cruel, the most dreadful of all. Clunet did not bury himself long in his grief. Only in labor to relieve the sufferings of others could he forget his

own. He learned that an epidemic had broken out in Rumania, that the spotted typhus, with which he had already measured his strength, was claiming its victims there. How could he go anywhere else? He said, "I am going." But this time Mme. Clunet replied simply, "I am going, too." And they went.

In a spacious villa near Jassy, which today bears the name of the Greerul Hospital, Dr. and Mme. Clunet established a hospital for contagious diseases. Here they first treated intermittent fever and spotted typhus, and later, when the epidemic grew worse, typhus alone. Jean Clunet was everything in that asylum of pain—architect, carpenter, glazier, water

carrier, food provider, physician. Bending over the dying, burying the dead, removing vermin from the living, he at last contracted the terrible disease. On the thirteenth day he died. He had asked that he might be buried near the hospital which he had founded. He rests there forever. Even in death he desired to remain at the post which he had assigned to himself.

Jean Clunet left behind him an admirable helpmate. I have never seen grief more noble or more worthy. I bow with respect before this woman, whom the hope of approaching motherhood alone attaches to life. She said to me simply, "If only it is a son!"

A Cardinal's Bombardment Diary

CARDINAL LUCON, Archbishop of Rheims, remained in that city during the bombardment that practically finished the destruction of the cathedral. To a curé in Paris he sent these extracts from his diary:

Holy Tuesday, April 3, [1917].—Intermittent bombardment during the morning; continuous in the afternoon. Between 10 o'clock and midnight a shell wrecks the apse of the Clairmarais Chapel, shatters the statue of the Sacred Heart, crushes the altar, and buries the holy ciborium and ten consecrated wafers beneath a block of stone. The house of the Sisters of St. Vincent de Paul and the Orphanage in the Rue de Bétheny are annihilated by ten big shells.

Good Friday, April 6.—Infernal bombardment from 4 o'clock onward: 7,750 shells! Mme. Beaudet, an admirable Christian, sister of M. le Curé of St. Benoît, killed at 8 P. M. in a motor car, with the wife and daughter of the sacristan of St. Remi, the chauffeur, and a soldier. Five persons killed at Ste. Geneviève as they were leaving their cellar.

Holy Saturday, April 7.—At 4 P. M. the great seminary took fire. No water to extinguish the flames. The firemen dare not approach, for the Germans are dropping four shells a minute on the building, keeping it up throughout the evening and night. Two firemen were killed yesterday, Friday, and two others have had their legs broken.

Easter Day, April 8.—The only divine service was a low mass at 8:30. No vespers. This was fortunate, for at the hour when it is customary to chant them a hellish bombardment began. The Cérès suburb is burned down or knocked to pieces right and left over

the length of half a mile. The church of St. André is ruined, the vaults shattered, and the walls knocked in. Our little seminary receives such a number of shells that it is uninhabitable. The church of St. Benoît had its ceiling destroyed, its walls knocked in, and its porch and belfry wrecked.

Monday, April 9.—Violent bombardment. Six killed, seventeen wounded: 10,000 shells!

Saturday, April 14.—Violent bombardment from 9 to 11 o'clock all around us. Asphyxiating shells on the Rue du Barbatu and Rue du Cloître, where Mlle. Léparqueur is killed; fifteen persons died from asphyxiation. The lay clerk of St. Remi, together with his wife and daughter, also died, poisoned and asphyxiated.

Tuesday, April 24.—From 9 to 10:15 o'clock systematic bombardment of the cathedral with big calibre shells, many of them 305mm., fired at regular intervals. They were all manifestly aimed at the cathedral. A great number hit it, the rest falling beyond it, short of it, to right of it, and on the ruins of the Archbishop's palace to left of it. The cathedral is "assassinated!" The apse outside is "massacred," three flying buttresses are broken, numerous pinnacles truncated or knocked down, the open galleries of the apse of the lofty walls are to a large extent thrown down. The walls have received such injuries that their solidity is imperiled. The towers have been seriously damaged. Lastly, the vaults have fallen in in five places, in the south transept, in the chancel—which is in ruins—and before the pulpit. The font is crushed; the high altar, buried beneath the débris of the vault, is no longer visible. Needless to say, the stained-glass windows have lost the few panes which still remained.

Nesting Mothers of Battle Zone

Bird Life Where Cannons Roar

Nature lovers, weary of the war's horrors, will find a charming interlude in this article, which was contributed to *Land and Water* by H. Thoburn-Clarke, an observant British soldier on the battle front in France.

THE war, with its upheaval of most of our ideas of the effect of gunfire upon the habits of the nature folk, does not appear to have troubled the migrating resident birds of the western battle zone. Already airmen have encountered vast flocks of migrating waders, ducks, and other birds flying at an immense altitude far above the sound of our massed artillery, and this year great flocks of green plover have settled in the marshes, and appear likely to stay for a while. Until early in March I had seen only two or three green plover at a time during all my two years wandering up and down the battle front. Now they have settled down here in dozens, but, so far, I have not seen any of their absurd attempts at a nest, although they are wheeling, dipping, and fluttering in their dainty love flights over the marshes.

Last year wild ducks nested among the reed beds to our left, and brought off large families of young ones. One family numbered ten when it first came off the nest, and it was most amusing to watch the tiny balls of fluff waddling up and down an almost submerged stump of a tree that had been felled by our gunfire. The mother duck would swim up and down watching them anxiously, making angry dashes every now and then at the coot that was occupied with a family of seven black velvet balls of fluff on the other side of the reeds. The two mothers would meet with a rush; the duck would grip hold of a beakful of feathers, while the coot would fight with beak and claws. The fray generally lasted for a few seconds; then the mothers would race back to their broods, each evidently considering that she had triumphed over the other! The scene was repeated at intervals, day after day, but, alas! the two broods grew

daily smaller, until each mother had only one nestling left. Probably the rats had killed and eaten the rest.

At another time I captured a tiny coot and took it to my dugout. I hoped to tame it, but the wee mite developed most extraordinary climbing powers. It literally raced up the walls of the dugout, hurled itself out of boxes and through the entrance, and tore off, making by instinct in the direction of the river. It was caught and brought back, but nothing would tame its restless spirit, so in the evening I crept down to the river, with the small coot carefully tucked into my pocket. I could see nothing of the old bird and her brood. She had apparently left the scene. However, I took the little coot out of my pocket, and allowed him to call. Almost immediately I heard a reply from the reeds on the other side of the river, and the mother coot came swimming toward me. I let the little beggar go, and the last I saw of him was a small black object swimming through the moonlight. He joined his mother, and they both vanished into the shadows of the opposite bank and I saw them no more.

Our gun positions are favorite nesting places for many birds. Whenever we remain in the same place for a few weeks they take possession of the "structures" we use for masking the guns. Last Autumn a blackbird built her nest in the sandbag parapet, and in spite of the storms and the repeated firing of our gun she hatched out three eggs, and, I believe, reared the young ones successfully. At another position—in an orchard this time—another blackbird made her nest among the sandbags; this time only about four feet to the side of the muzzle of the gun, and stuck tight during the whole time we were strafing the Germans, and successfully

hatched all four of her eggs, a surprising feat when one considers the concussion. Not very far away a pair of blackcaps had built their nest in the gnarled stump of an old apple tree. They were unfortunate, for a well-aimed shell during a German evening strafe demolished the apple tree and the nest. Apparently the blackcaps did not trouble, for they built another nest in the next tree stump and hatched out and brought up their young ones safely.

Ammunition wagons have a great attraction for the birds. A pair of sparrows endeavored to construct a nest in an empty one during a dinner hour, when we were resting, and actually followed us to the next rest, but the move on the next day discouraged them and they left us. During one of our stays in a certain part of the front a pair of wrens succeeded in building a nest, and when we were moved half a mile further on the two birds came with the wagon and would no doubt have hatched out their young ones if the fortunes of war had not prevented it. A hedge sparrow had her home in a ruined wagon, and when I found her nest she was patiently feeding a cuckoo larger than herself. The hedge sparrows and their foster child occupied the wagon for a long time, and I have watched the two patiently feeding the cuckoo while the shells were bursting in all directions. At another time I found the nest of a hedge sparrow in the hub of a broken wheel lying in a position that was continually being shelled by the Germans. Evidently she must have stuck tight, for at the time the nest was discovered it had four young ones in it, and the parent birds were feeding their nestlings with serene indifference to the dropping of shrapnel and bursting of shells.

It is extraordinary how fond the birds are of certain localities, and quite a large number of different varieties will nest together. In one wood, somewhat to the rear of our position, during last Summer, a vast number of pigeons, magpies, rooks, and crows were nesting in the taller trees, while various warblers, tree creepers, and tits built their dwellings in the undergrowth. Yet in the early days of

the war the wood had been heavily shelled, and still bore marks of gunfire in the shape of fallen trees. The conflict had been severe enough to have driven the birds to seek some safer abode, but evidently they had clung to the old place and declined to nest anywhere else. The numbers of pigeons seem to increase at an extraordinary rate. Probably the destruction caused by warfare does not equal that in times of peace, while the quantities of mice and rats afford sufficient food for the kestrels and other birds that might prey upon the young nestlings. Sometimes in the height of the nesting season the noise of the nestlings in the various nests was almost deafening, all clamoring loudly for food the instant they heard the beat of their mother's wings. One would almost imagine that each bird's wing had a different sound, in that respect resembling the tread of the human footsteps.

I have always associated the nightingale with a certain railway cutting in Berkshire, where it is possible to hear them singing all night through, but almost impossible to find their nests, and exceedingly difficult to see the bird itself. Out here, however, the shyness has vanished. I have heard of nests in the front-line trenches; of eggs being hatched during a furious bombardment; while close to our billets six pairs had built in a ruined garden, and we watched their nesting with keen pleasure. A blackcap literally sang us to sleep at nights. It perched in a sapling that screens a gun and sang constantly, its vivid notes punctuated with the boom of distant firing. At another place, a reedy remnant of a ruined moat, ten different kinds of birds were nesting in the weeds and rushes that clothed the bank. Tits, far bluer than any British bird, reed warblers, garden warblers, blackcaps, several greenfinches, and many other warblers.

The martins and swallows are, I think, more numerous than in England, and appear as pleased with the ruins as the sparrows and starlings. I have seen house martins' nests built under the cornice of the ruins of a highly decorated drawing room, pink Cupids and blue love knots contrasting strangely with the mud

of the nest. In most villages the peasants are very superstitious about the swallows and house martins, and consider that ill-luck will follow the destruction of a nest. So the swallows and martins are free to build where they like, and I often wonder whether when the ruins are reconstructed they will endeavor to reconcile the birds to a change of dwelling. At present their nests are everywhere. One built on the rack where we hung our clothes, another on a rafter in our harness room, while several occupied a shed in which the gunners were billeted during a "rest." The shed was strafed and a shell broke a large hole in the roof, but failed to explode. The swallows had previously used the doorways as an entrance, but they at once saw the convenience of the shell hole, and almost before the dust of the

broken roof had subsided they were calmly flying in and out with food for their young ones. Possibly young swallows and martins require more food than other nestlings, for the parent birds were feeding them from the earliest dawning until it was almost too dark to see the birds. Yet the baby birds never ceased squealing for more. Shells might burst and shatter the adjoining sheds, even a "dud" pierce the roof that sheltered them, but still they cried insistently. Perhaps that is why the nesting mothers of the battlefields take matters so placidly. They have no time to waste, but must feed their young ones in spite of war's wild alarms, and, after all, it is the quantity of food that matters with the wild folk, and they have enough of that in all conscience at the front.

Professor Harnack Scorns American Ideals

Dr. Adolph von Harnack, Professor of Théology and General Director of the Royal Library, Berlin, delivered a lecture in Berlin on May 19, 1917, on "Wilson's American Ideal of Liberty." After attacking the President's "pacifist, democratic, and plutocratic ideal" as contrasted with the "interior and exterior liberty of Germans," the noted theologian continued:

The hostility of the United States against us is reducible to the inconvenience which was caused to America by German economical efficiency. A second reason is that America feared to lose the enormous capital she had invested in the Entente from the beginning, in the firm belief that the latter would be victorious. Now America is witnessing the chances of victory gradually disappearing, and rushes in to save what is possible.

America conducted silent war against us long before the declaration of war, and never was particular in choosing her means. Wilson and many Americans with him have undergone an ugly development from an honest democratic republicanism to a bedizened emperorumism. In addition, Wilson distinguishes himself by amazing ignorance about Germany. He is an intellectual moralist, but without any depth whatever.

Professor Harnack then quoted extensively from President Wilson's books to show "what startling political, judicial, and ethical metamorphoses the President had passed through, changing his convictions as often as his trousers. Germany must decidedly decline this many-colored uniform of liberty which one can easily picture from Wilson's words and deeds. We don't want liberty, except of our own make and in accord with our history."

RUSSIA'S FIRST REVOLUTIONARY CABINET

The Ministers Are, Top Row, Left to Right: Terestchenko, Shingaroff, G. E. Lvoff, Kerensky, Kon-ovaloff. Bottom Row, Left to Right: Manuiloff, Milukoff, Gutchkoff, Nekrasoff, V. Lvoff.

Deportations Planned in Advance

Belgian Official Memorandum

AN official memorandum presented to the United States Government by M. de Cartier, the Belgian Minister at Washington, and made public June 3, 1917, summarizes the facts of German rule in Belgium, and charges that enforced idleness of the Belgian workingmen was part of a deliberate war policy preparatory to the deportations.

"The cessation of the larger part of Belgian industry is an admitted fact," says the memorandum. "But Germany founds an argument upon this fact as upon an event due to the circumstances of a state of war, and in the presence of which the good intentions of the occupant were powerless.

"However, this is not the case. The depressed condition of Belgian industry is not a case of accident caused by the force of extraneous circumstances unconnected with the action of the German authorities; these authorities are, on the contrary, personally responsible. Their responsibility is double. The German Government is the direct author of the crisis in Belgian industry and labor. The German Government has deliberately prevented the Belgians from applying the remedy.

"Since the occupation of Belgium the German authorities, in spite of their deceitful proclamations, have put into effect the plan worked out in August, 1914, at Berlin, by Dr. W. Rathenau, for the systematic exploitation of all the economic resources of occupied countries to the profit of the war organization of the empire.

The Rathenau Plan

"This plan allowed, notably, the seizure of all stocks of raw materials existing in the occupied territories, and the transfer of them into Germany, in order to avert the consequences of the closure of the seas. This was to be completed by the removal of the implements of labor, and, in general, by the removal

of all means of production which the empire might need for the continuation of the struggle. Economic commissions, attached to all the military authorities in the occupied territories, were to be constituted the agents for putting into execution the Rathenau plan. By this plan—as the German publicists have written on so many occasions with the approval of the censor—the war carried on by the empire would take on the character of an 'economic war.'

"This program was methodically carried out."

The memorandum then cites the German official bulletin of laws and decrees for the occupied territory published at Brussels from the end of August, 1914, containing more than 120 orders relating to economic conditions, many of them commandeering raw materials, finished products, and tools, as well as domestic animals, crops, and seeds.

"The Belgian Government," it continues, "knows that the operation of removing machines and installation was, in several cases, confined to the representatives of German firms who were the direct competitors of the Belgian industries, and that, in at least one instance, in an artificial silk factory, the Belgian firm's secret process of fabrication was ascertained from the factory inspected.

"Numerous Belgian industries have been placed under sequestration without plausible reason.

"Finally, the German authorities, in 1916, placed prohibitive tariffs on the remaining Belgian industries which had still maintained a relative degree of activity through their commercial relations with certain neutral countries—the glass industry and the metallurgic industry.

"These prohibitive measures are of a nature to close to Belgian industry any markets which may have remained open, and even to render impossible all export trade.

"Attention can be called here only to

the principal acts which have marked the German financial policy:

"(a) A war tax of 40,000,000 francs per month for the benefit of the German war treasury—a tax fixed, at first, for one year, the Belgian provinces being jointly and severally responsible, (December, 1914,) with the official promise that there should not be afterward any other war tax. In November, 1915, however, this tax was made permanent. In November, 1916, after nearly 1,000,000,000 francs had been extracted from the country, the tax was increased by the sum of 10,000,000 francs per month, (50,000,000 francs instead of 40,000,000.)

"(b) Imposition of the mark at the forced rate of 1 franc 25 centimes.

"(c) Refusal of the German authorities to accept marks in payment of the war tax, of which a large proportion was required to be paid in francs.

"(d) Absolute prohibition of the exportation of securities, even to pay for commodities necessary for the feeding of the civil population.

"(e) Extortion of marks held as cash reserve by Belgian banks, (the Banque Nationale and the Société Générale,) that is to say, 430,000,000 marks which were transported into Germany (Sept. 12, 1916) with the stipulation of repayment two years after the end of the war at the average rate of exchange of Berlin at that period.

"Any country whatever, if subjected to such a system of exploitation, would find itself overwhelmed by the calamity of unemployment. The number of Belgian workers (men) thus reduced to idleness, in spite of their desire to work, varies between 300,000 and 400,000; if this number (which the German statements tend to exaggerate in order to draw some quibbling argument)—if this number is not greater, it is due only to the prodigies of ingenuity and initiative of the Belgians, who have truly shown themselves in this, as in other spheres, 'the nation that will not die.'"

Next it is shown that the aid dispensed to the victims of the German invasion, amounting to 10,000,000 or 12,000,000 francs a month, has not cost Germany a cent and has been only a small charge on the local budgets of the occupied territory—thus disposing of the oft-quoted German argument that it could not permit such considerable burdens to be placed upon local communities.

Efforts of the Belgian authorities to keep the population from falling into the

habits of idleness so strongly reprobated by the late von Bissing and other apostles of German humanitarianism were thwarted by the German authorities. One of these plans was to require the unemployed who received allowances from charity to take up the study of a trade. The operation of this plan was paralyzed by German interference.

Unemployment Created

"The fact is," the memorandum continues, "that, while artificially creating unemployment in Belgium by the removal of stocks of raw materials and tools and by the restrictions placed upon the commercial activity of the country, the German administration had conceived the idea of enrolling the workers, thus thrown into enforced idleness, in the service of its war industries, either in the requisitioned Belgian factories or in Germany.

"At the beginning of the Summer of 1915 a campaign was started to overcome, in this matter, the passive resistance of Belgian patriotism; the German authorities had had recourse, successively or simultaneously, to the bait of high wages, to intimidation, then to violence, in order to procure the manual labor necessary for their military objects, (see the eighteenth and nineteenth reports of the Belgian Commission of Inquiry in regard to the violation of the law of nations;) but these attempts had failed; very few Belgian workmen had consented to engage themselves in the service of the enemy; of the others, a certain number had been deported to Germany as prisoners as a punishment for their refusal. Then the German administration resolved to prevent, by all means in its power, the Belgian unemployed from finding elsewhere a livelihood or assistance; it counted upon holding them at its mercy by the pressure of the needs and the destitution of their families."

Still more incredible, except on the assumption that Germany had set out to reduce Belgium to such a state that she could make to the world the plea that the Belgians' alternatives were beggary or deportation, was the German opposi-

tion to works of public utility for the benefit of the unemployed. The Province of Luxembourg had completely solved its problem of unemployment by organizing works of improvement of this character when the order of May 2, 1916, was issued, in which the local authorities were directed to abandon these works, on which nearly \$2,000,000 had been spent, because, as the memorandum says, "it was a matter of work for the unemployed." When the Luxembourgers thus thrown out of employment sought work in other communes the German authorities refused to authorize any work where employment was given to workmen from outside communes.

"Thus hunted down," says the memorandum, "in every place where employment could still be obtained in Belgium, the Belgian laboring class, at the end of September, 1916, found itself compelled to fold its arms by order of the German authorities.

"This was the moment chosen by the German Government to decree the deportation of the Belgian unemployed into Germany under the official pretext 'that sufficient occupation for the unemployed could no longer be found in Belgium.'"

The memorandum refutes the German allegation that the British blockade, by shutting out raw materials, was responsible for the economic woes of Belgium, showing that a system of imports of such materials under neutral guarantees failed of adoption because of Germany's refusal to give the guarantee required of her.

Deliberate War Measure

The deportation order of Oct. 3, 1916, to which the Belgian Government contends all Germany's previous policy had been leading up, was essentially a war measure. The memorandum says:

"This character is shown, in the first place, by the authority from which it emanates, and which is, not the civil Government of unoccupied Belgium, but the German General Headquarters. This character is shown, moreover, by the fact that similar orders were given out simultaneously, and by the military au-

thorities also, covering the occupied districts of Poland and Lithuania. In both cases it was only the putting into execution of a general plan tending to complete the entire incorporation of the resources (men as well as goods) of the occupied countries into the war organization of the empire.

"Finally, this character is shown, in an absolutely decisive way, by the correlation, today openly avowed, between the order of Oct. 3, 1916, and the law of December, 1916, ordering the mobilization in Germany itself of the entire able-bodied civil population for the auxiliary service of the army. The deported Belgians have been incorporated into this vast economic military organism by approximately the same legislative claim and for exactly the same ends as the able-bodied male population of Germany; that is to say, to aid the German Army to support the burden of the war and to make a supreme effort."

Not Justified by Danger

While admitting the Belgian people's aversion to the invaders, the memorandum remarks upon their absolute self-control:

"During two years of occupation under a very severe régime, there has been no uprising, no disorder anywhere. All the social authorities, or those who have been placed in such authority, have constantly occupied themselves in recommending calm and patience to the sorely tried people. Moreover, the population has no arms; surrounded by a barrier of death-dealing electric wires, the population is literally held as in a cage. All constitutional liberties, liberty of opinion, of the press, of reunion and of association, are suspended. The danger of disorder is so remote that the German administration has maintained only relatively weak garrisons in Belgium. * * *

"It can be said without exaggeration that such an attack upon the essential rights of humanity had never before been made in modern times by any State calling itself civilized. The brutality and the duplicity with which the measure has been enforced have augmented (if such a thing be possible) this unprece-

dented scandal; they have wrung from Belgium, which seemed to have already reached the limit of the afflictions of a nation at war, a cry of anguish which has caused an echo of horror and indignation from the neutral States.

"Although in 1863 the Instructions for the Armies in the Field, published for the use of the American troops, noted even then that deportation and reduction to servitude of the civil population of conquered States by the conqueror were no longer practiced except among barbaric hordes, the spectacle has been seen in Belgium of the regular army of a powerful empire employed in carrying out me-

thodic slave-raids upon the citizens of a small, captive nation which had entered the war solely for the defense of its independence and for the fulfillment of its international duties. * * *

"No peace is possible, nor durable, without the observance of the elementary rules of right, one of the first of which is respect for the human person.

"No abuse of force can exhaust the resistance of the Belgian people to foreign oppression. All history witnesses that the aspiration of the Belgian people for independence is indomitable and that their endurance will win the mastery over tyranny."

Belgium's New War Industries

THE Belgian Army in 1917 is making its own cannon, its own rifles, its own shells, its own transport wagons, its own saddles and harness. After the heroic battle of the Yser in 1914 it had six divisions of infantry and two divisions of cavalry left to hold a line of approximately eighteen miles, or just about four men to the yard of front; a front where particular vigilance is required because of the German tactics of constant trial attacks. No part of the Allies' line is more closely watched and explored by the enemy's patrols. A weak spot anywhere would provoke an immediate offensive.

Belgium lost all her manufacturing establishments and all her resources in raw materials in the defeat of the Allies at Charleroi and in the retreat from Antwerp, yet M. de Broqueville, Minister of War, with Belgian ingenuity, skill, and perseverance, has built up on the hospitable soil of France artillery and munitions establishments that not only enable the Belgian Army to reply shot for shot to the Germans on the Yser front but also contribute to the armament and supplies of the allied armies.

It was to the United States that M. de Broqueville looked immediately after the termination of the heroic defense of Belgium soil on the Yser for the reconstitution of Belgian industry. Specialists

were sent to purchase American machine tools for the manufacture of everything the army needed, and when the machines arrived mechanics released from military service were ready to operate them. Fourteen thousand workmen are today employed in those establishments.

The invasion found the Belgian Army in the midst of an entire reorganization of its artillery. Siege cannon ordered from the Krupp works in Germany had not been furnished. Millions of cartridges ordered from the same source also had been held up. It was with a disorganized armament and insufficient material that the Belgians held the Germans before Liège. Before Antwerp, in the retreat to Flanders, and in the defense of the Yser, it may be said that the remaining debris of the armament and munitions was exhausted.

The worn-out field guns, brought back in the retreat to the Yser, were partly replaced by French three-inchers, but at that all the Allies were short of their requirements in armament and munitions.

The Belgian Government, with no industries left nor territory remaining out of range of the German guns on which to instill new ones, began in exile to work out its great problem of war supplies. Today it furnishes saddles and harness to the British Army and other supplies

of different kinds to all its allies, including Russia, besides keeping up the equipment of its new army.

The Belgian Army is new in nearly every feature. Of the 120,000 men in the field and 60,000 men who garrisoned the forts, 30,000 fell into the hands of the Germans at Liège and Namur and in the retreat; 30,000 more took refuge in Holland, and were interned for the duration of the war; 14,000 were lost on the Yser, in addition to more than 20,000 killed and wounded in the battles of Liège, Haelen, and St. Trond. There remained neither bases, depots, nor hospitals.

The reorganization was difficult. Unable to call a session of Parliament to revise recruiting laws to accord with

the new situation, the Government could only appeal to the patriotism of refugees in England and France. The response was such as to reconstitute an army of six divisions of infantry and two divisions of cavalry, while 14,000 men were detached for the manufacture of munitions in France and 600 sent to Russia for the same purpose. About 30,000 more men were raised by decree calling up all Belgians eligible for service between 18 and 40 years of age.

A regiment of automobile artillery recruited among the Belgian refugees and trained in Paris was sent to the Russian front, where it played an important part in Brusiloff's offensive in Galicia and Volhynia in the Spring of 1916.

Welding Britain's Empire Closer

Important Results of the Recent Imperial War Conference in London

TO make the British Empire a more solidly united world power was the object of the Imperial War Conference that met in London in May, 1917. England is only one of four countries which constitute the United Kingdom of Great Britain and Ireland, and this kingdom is only part of an empire which embraces five self-governing colonial nations or dominions, besides the great Indian Empire and dependencies all over the world. The problems which the Imperial War Conference considered were twofold—first, to devise some method whereby the empire will be able to act as a political unit without interfering with colonial autonomy; second, to consolidate the material resources of the empire and make it as far as possible economically self-contained.

The readjusting of constitutional relations within the empire was deferred till after the war, but two important decisions were arrived at. The first was that India should be recognized as a member of the "Imperial Commonwealth," and the second that the dominions and India should have the right to "an adequate voice in foreign policy and in foreign relations," which they have

not at present. While the dominions have loyally supported the mother country in the prosecution of the war, it has become obvious that if the self-governing peoples of the empire are to lend material support in future international relations, they should have a share in the shaping of those relations. The number of whites inhabiting the dominions is now nearly 40 per cent. of the population of the United Kingdom, while in regard to material resources and industrial development the dominions are steadily gaining ground.

The importance of the recent conference in London is largely to be found in the fact that the statesmen of Great Britain have now definitely conceded the right of the dominions to an active part in the solving of the empire's problems. Commenting on this subject, the Colonial Secretary, Walter H. Long, in a statement issued on May 3, said:

The resolution with regard to the Constitution of the empire was made the occasion for striking expressions by the various speakers of attachment to the monarchical institutions of the empire and their value for the preservation of imperial unity. In the words of one of the speakers, "The monarchy is the keystone of the imperial arch."

Another set of resolutions dealt with

defense. The British Admiralty is to work out immediately after the war a scheme for the effective naval defense of the empire as a whole. Behind this resolution lies the story of controversy in which the colonial standpoint was most thoroughly sustained by Australia. This dominion some years ago insisted that in addition to the British Navy, whose function was to act as a safeguard against the great rival navies, there should be a distinctly Australian navy, under Australian control, for the defense of Australian waters and trade routes, instead of the then prevalent system of paying a money tribute to the British Admiralty. Australians argued—with increased force after Admiral Fisher's policy of concentrating the British fleet in home waters was adopted—that there must be local protection as well as a system of naval defense against Britain's most likely enemy. Australia eventually had her way, and by the time the war broke out had already created a respectable navy of her own. It was an Australian cruiser, H. M. A. S. Sydney, which finally disposed of the German raider Emden. The concentration of the British fleet in home waters also necessitated relying upon the Japanese Navy for a great deal of convoy and patrol work in the Pacific and Indian Oceans.

Other defense resolutions adopted in London call for the development of a co-ordinated and standardized empire-wide system of producing munitions and other war supplies.

Plans for Economic Union

Most advance was made in laying the foundations of future economic union. On this subject the resolution adopted read in part:

The time has arrived when all possible encouragement should be given to the development of imperial resources, and especially to making the empire independent of other countries in respect of food supplies, raw materials, and essential industries. With these objects in view, this conference expresses itself in favor of:

(1) The principle that each part of the empire, having due regard to the interests of our allies, shall give specially favorable treatment and facilities to the produce and manufactures of other parts of the empire.

(2) Arrangements by which intending emi-

grants from the United Kingdom may be induced to settle in countries under the British flag.

Having regard to the experience obtained in the present war, this conference records its opinion that the safety of the empire and the necessary development of its component parts require prompt and attentive consideration, as well as concerted action, with regard to the following matters:

(1) The production of an adequate food supply and arrangements for its transportation when and where required, under any conditions that may reasonably be anticipated.

(2) The control of natural resources available within the empire, especially those that are of an essential character for necessary national purposes, whether in peace or in war.

(3) The economical utilization of such natural resources through processes of manufacture carried on within the empire.

That it is desirable to establish in London an Imperial Mineral Resources Bureau, upon which should be represented Great Britain, the dominions, India, and other parts of the empire.

All the members of the Imperial War Conference signed an address to the King, which they presented in person on May 3. Part of the address read:

We further considered steps that may be required to insure that victory may not be lost by unpreparedness in times of peace, and so to develop the resources of the empire that it may not be possible hereafter for an unscrupulous enemy to repeat his outrages on liberty and civilization. We shall return to our homes inspired by the magnificent efforts put forth by all classes of your Majesty's subjects throughout the world, confident that the trials and sacrifices borne in common must draw still closer the bonds of imperial unity and co-operation, each in its own sphere, to leave nothing undone which may tend for the honor and welfare of your Majesty and your dominions.

Prime Minister Lloyd George made an important statement in the House of Commons on May 17 when he announced that in future the Imperial Conference would meet annually, instead of every four years, as heretofore, and that at the conclusion of the war there would be a special conference to adjust the constitutional relations of the empire. The new Imperial Council would be composed of the British Prime Minister, other British Cabinet Ministers concerned with imperial affairs, the Prime Ministers of the Dominions, and a specially accredited representative of India, with equal authority.

Britain's Fight on Food Shortage

Public Meals Order, April 15, 1917

LORD DEVONPORT, the British Food Controller, after trying various methods for voluntary conservation of food, finally issued an official order compelling the observation of meatless and potatoless days in hotels and restaurants throughout the United Kingdom, beginning April 15, 1917. The text of this order is as follows:

In exercise of the powers conferred upon him by Regulation 2F of the Defense of the Realm Regulations, and of all other powers enabling him in that behalf, the Food Controller hereby orders as follows:

1. Except under the authority of the Food Controller the following regulations as to foodstuffs shall be observed in every inn, hotel, restaurant, refreshment house, club, boarding house, and place of refreshment open to the general public, (hereinafter referred to as a public eating place,) and by every person having the management or control thereof.

2. (a) No meat, poultry, or game shall be served or eaten on any meatless day. The meatless day in the area comprising the City of London and the Metropolitan Police District shall be Tuesday, and elsewhere in the United Kingdom shall be Wednesday in every week.

(b) No potatoes or any food of which potatoes form part shall be served or eaten on any day except on meatless days and on Fridays.

3. The total quantities of meat, flour, bread, and sugar used in or by any public eating place in any week shall not exceed the gross quantities ascertained in accordance with the following scale of average quantities per meal:

SCALE I.

	Meat.		Sugar.		Bread.		Flour.	
	Oz.	Oz.	Oz.	Oz.	Oz.	Oz.	Oz.	Oz.
Breakfast	2	2.7	2	0				
Luncheon (including middle day dinner) ..	5	2.7	2	1				
Dinner (including supper and meat tea)...	5	2.7	2	1				
Tea	0	2.7	2	0				

4. The following provisions shall have effect as to weight: (a) Two ounces of poultry and game to be reckoned as one ounce of meat. (b) The weight of meat to be the uncooked weight, including bone as usually delivered by the butcher, and the weight of poultry and game shall be the uncooked weight, as usually delivered by the poulterer, without feathers or without skin, as the case may be, but including offal. (c) Twenty-five

per cent. to be added to the weight of meat delivered cooked into the public eating place, and 50 per cent. when delivered cooked and without bone.

(a) Four ounces of bread to be reckoned as three ounces of flour.

(b) Cakes, biscuits, pastries, confectionery, and similar articles, when the ingredients are not otherwise brought into account, to be reckoned as containing 30 per cent of flour and 20 per cent. of sugar by weight.

5. In reckoning the quantities of meat, sugar, bread, and flour for meals served, no account shall be taken of any meal which begins before 5 A. M. or after 9:30 P. M., or, in respect of the meat allowance, of any meal which is served on a meatless day.

6. None of the foregoing provisions of this order except Article 2 (b) relating to potatoes shall apply to food served over the counter of a buffet at a railway station.

7. This order shall not apply to: (a) Any boarding house where the number of bedrooms let and available for letting does not exceed ten; or (b) any public eating place where no meal is served the total charge for which (exclusive of the usual charges for beverages) exceeds 1s. 3d., and where there is exhibited on every tariff card, and also in a conspicuous position in every room where meals are usually served, a notice to the effect that no such meal will be served.

8. The person or persons having the management of any public eating place shall for the purposes of this order keep a register in the form prescribed by the Food Controller, and shall also keep invoices, vouchers, and such other documents relating to foodstuffs purchased and used, meals served, and other matters as the Food Controller may from time to time prescribe.

9. For the purposes of this order, the expression "meat" includes butcher's meat, sausages, ham, pork, bacon, venison, and preserved and potted meats, and other meats of all kinds, but does not include suet, lard, or dripping. The expression "poultry and game" includes rabbits and hares, and any kind of bird killed for food. The expression "flour" shall mean any flour for the time being authorized to be used in the manufacture of wheaten bread. The expression "week" shall mean a calendar week ending on a Saturday midnight.

10. The Regulation of Meals Order, 1916, is hereby revoked as on the date when this order comes into force.

11. If any person acts in contravention of this order or aids or abets any other person in doing anything in contravention of this order, that person is guilty of a summary offense against the Defense of the Realm

Regulations, and if such person is a company every Director and officer of the company is also guilty of a summary offense against those regulations unless he proves that the contravention took place without his knowledge or consent.

12. (a) This order may be cited as the Public Meals Order, 1917. (b) This order shall come into force on April 15, 1917.

An official summary of other food regulations issued by Lord Devonport was sent to the United States Government on May 25, as follows:

No trader, in selling an article, may impose a condition involving the purchase of any other article. No person may acquire supplies of food beyond the needs of his ordinary consumption.

A tradesman shall not sell any article of food where he has reasonable ground for, believing that the quantity ordered is in excess of requirements. The Food Controller may order the inspection of premises in which he has reason to believe that hoarding is taking place.

The maximum price of wheat is fixed at 78 shillings per quarter of 480 pounds; of barley (other than kiln dried) at 65 shillings per quarter of 400 pounds, and of oats at 55 shillings per quarter of 312 pounds.

The extraction of flour from wheat is raised to a basis of 81 per cent.; the percentage of flour from other cereals to be mixed with wheaten flour must not be less than 10 per cent. and not more than 25 per cent. Barley, maize, oats, and rice may be used in the manufacture of bread, but when wheaten flour is used it must not be of the regulation grade. Bread must not be sold until it has been made at least twelve hours. The only loaves allowed are the tin loaf and the one-piece oven-bottom loaf. No currant, sultana, or milk bread may be made. No sugar may be used in bread.

All bread must be sold by weight. All loaves must be one pound or an even number of pounds. No wheat, rye, rice, tapioca, sago, manioc, or arrowroot or products thereof may be used except for human food. No bread or other product of cereals shall be wasted. No maize, barley, or oats or products thereof may be used except for human or animal food.

The Food Controller has taken over all flour mills of the United Kingdom which use wheat in the making of flour, except those with an output of less than five sacks per hour.

No chocolate may be sold or bought retail at a price exceeding 3 pence per ounce, or any other sweetmeats at a price exceeding 2 pence per ounce. The quantity of sugar used by manufacturers other than of jam, marmalade, or condensed milk is reduced to 40 per cent. of the 1915 supply.

The maximum retail price of milk is 2 pence a quart over the price on the 15th of the same month in 1914.

No tea may be packed other than the net weight. After July 1 all tea sold at retail, whether contained in a package or not, shall be sold by net weight. Forty per cent. of the total imports of tea from India and Ceylon are allocated for the purpose of the sale retail at 2 shillings 4 pence per pound. An arrangement has also been made with the Coffee Trade Association to supply a good, sound, pure coffee at a rate which would enable grocers to sell retail at 1 shilling 6 pence a pound.

The Food Controller has taken over all barley, foreign and home grown, other than home-grown barley which has not been kiln dried. The output of beer is limited to the rate of 10,000,000 barrels per annum, as compared with 36,000,000 barrels before the war. The manufacture and sale of malt, or its use by other than a brewer for sale, is prohibited.

Any infringement of an order made by the Food Controller is a summary offense under the Defense of the Realm Regulations, and the offender is liable to imprisonment for six months, with or without hard labor, or a fine of £100, or both.

The order of April 15, it was estimated, would produce a saving of 65 per cent. on meat, 53 per cent. on bread, and 63 per cent. on sugar, as compared with the consumption under preceding regulations.

Lord Devonport's new measures were subjected to bitter criticism. On May 8, in the course of an interpellation in Parliament, he announced the withdrawal of the meatless feature of the order on the ground that it was found to increase the consumption of breadstuffs, the most important item in the whole food-shortage situation.

On June 1, 1917, Baron Devonport resigned his difficult and thankless position as Food Controller.

Food Restrictions in France—Use of Horse Meat

IN France the task of combating the universal food shortage is in the hands of Maurice Viollette, the Minister of Subsistence. On April 22, 1917, he issued an order that there should be one meatless meal each day. The measure was adopted as an experiment, with notice that if it was not successful two meatless days would have to be instituted. It was not successful. On May 17 a new order appeared in the *Journal Officiel* regulating the sale and consumption of meat, as follows:

1. Monday and Tuesday shall be meatless days.

2. On those two days of the week it is forbidden—with the exception named below—to sell meat of any kind, including tripe, fowl, and rabbit.

3. It shall be permissible, however, to sell horse meat every day in the week.

4. These measures apply to all France.

Certain modifications are allowed in cases of illness, and special arrangements are made for shipping meat to the troops. Butcher shops selling horse meat exclusively may do business on the meatless days, but the consumption of horse meat is not allowed in restaurants on those days.

Restrictions regarding the use of flour were embodied by M. Viollette in the following order, issued May 1, 1917. In a report accompanying the decree he stated that a census of food stocks had shown the necessity for scrupulous economy and that the measures adopted were intended to apportion the existing supplies to the real needs of the people with the least possible inconvenience to any class:

Article 1. Beginning on May 10, 1917, millers are forbidden to send from their mills or to place on sale any wheat flour comprising less than 85 per cent. of the wheat used to make it. Besides this flour it shall be lawful to sell only bran and the waste from wheat

grains found unfit for milling. Mixtures of substitute flours with wheat flour, authorized by Article 14 of the order of April 8, 1917, will be made with the flour prescribed by the present article.

Article 2. From the date of publication of this order millers are also forbidden to deliver flour to any one except bakers and farmers who have brought their wheat to the mill to be ground; except, however, that this interdiction shall not apply to makers of health foods and the like, save to the extent determined by rules fixed by the Food Controller. Semoules must be made of Winter wheat and be delivered to pastry makers under regulations established by the said Minister.

Article 3. Biscuit factories shall henceforth work only for the needs of the army, navy, merchant marine, and Department of Public Aid, in accordance with the conditions prescribed under the order of April 19, 1917. They are, however, permitted to exhaust their stocks, though without raising the present prices of their products.

Article 4. Bakers alone are authorized to sell wheat flour at retail in quantities not exceeding 125 grams.

Article 5. Save for the exceptions provided in Articles 2, 3, and 4, wheat flour cannot be employed henceforth for any other purpose than the making of bread. Consequently, within ten days after the publication of the present order every mercantile holder of wheat flour must dispose of it to a baker or place it at the service of the Mayor, who will attend to reimbursing the holder.

Article 6. Within the same period of ten days every baker is expected to place on file at the Mayor's office of the town in which he does business, the name of the miller or millers from whom he intends to get his flour; he cannot be supplied by any other miller, save by authorization of the prefect or sub-prefect.

Article 7. Within the same ten days the owners, directors, or managers of hotels, restaurants, buffets, and other similar establishments must declare at the Mayor's office the name of the baker or bakers from whom they will get their supplies; they cannot buy of any other baker save with the authorization of the prefect or sub-prefect. All bakers are forbidden to sell to any other establishment than those for which they are the regular caterers.

Von Batocki's Bread-Card Methods in Germany

GERMANY continued to suffer from the increasing scarcity of food during the months preceding the harvest of 1917. Early in June the Food Controller, Herr von Batocki, said in a speech before the Reichstag:

In certain provinces the potato crop is much poorer than the reports led us to expect. On the other hand, home consumption by the producers is insufficiently supervised. In the occupied territories the crops are a great disappointment to the German authorities, as seed will hardly germinate in ruined soil. Rumania has given as much as could be expected, but it is less than was hoped for by the German population. The country is almost completely ruined, and the harvest is much inferior to that raised in time of peace.

With respect to Germany's allies, the situation is not much better. For six years the Turks have struggled for their existence and their production has suffered thereby. The Bulgars are in a similar position. In Austria the situation is worse than in Germany. Hungary for three years has had poor crops. The rural population will be subjected to a severe trial. An effort has been made to spare small producers, but this can hardly continue. Three-fourths of the pigs, two-thirds of the cows, and two-thirds of the potato crop are in the hands of the small producers. It is a hard trial, but the rural population will triumph by bearing in mind that the urban population last Winter suffered a still greater trial.

In the discussion which followed, Deputy Schmidt, a Berlin Socialist, expressed the grievances of the city against the rural population. "Do the peasants know," he asked, "that the urban population of the Palatinate is obliged to content itself with a quarter of a pound of potatoes daily for each person?"

The Morgen Post of Berlin said that meat was completely lacking in the metropolis. In Baden, Minister of State Bodman indicated the possibility of meatless weeks next Fall. Bavarian newspapers inserted the following notice:

"In view of the extreme scarcity of potatoes and in view of the fact that Bavarian towns and industrial centres are suffering from this lack, an attempt will again be made to seize all the potatoes available throughout the country."

The Berlin authorities published an

order forbidding the eating of pork on any day but Thursday because of the insufficiency of the stocks. The forging and theft of bread cards became a serious evil throughout Germany. In Berlin a tribunal condemned an individual to three months at hard labor for having stolen 20,000 bread cards. Five new establishments in which false bread cards were being printed were discovered in Berlin. In Dresden there were frauds and speculations in flour. The newspapers asked if it would be possible to continue after Aug. 15 the meat ration of 500 grams, (17.5 ounces.)

German Bread-Card System

[This summary of the German bread-card system was prepared by a London newspaper writer with a view to its possible adoption in England.]

All the ordinary requirements of everyday life are now distributed in Germany by means of the ticket system. The earliest of these tickets was for bread, and was adopted in the Spring of 1915. It should be borne in mind that tickets do not confer on their holders any legal right to the goods to which they refer. There is this difference, however, between bread and other tickets in Germany—that while it was not always certain that the purchaser would be able to obtain butter, potatoes, meat, eggs, &c., he could generally rely on getting his bread ration. That was because quite early in the war the Government took all the wheat in the country under its control. It stands to reason that any system of bread-ticket rationing must be preceded by such a course, for unless there is a central clearing house for supplies the whole system will break down.

In Germany the Central Government decided what the bread rations should be, and issued the necessary regulations for their distribution; but the actual work of providing the population with tickets is undertaken by the local authorities, who are at liberty to adopt

any machinery for the purpose they may choose. In Greater Berlin local Bread Committees have been appointed by the various Borough Councils. There are 107 such committees in the German capital, and they have in hand the bread-ticket system. In the first place, it is the duty of house owners to make a return of all the people living in their houses who are entitled to tickets. The tickets are then issued to the house owners, whose duty it is to distribute them among their tenants, obtaining in each case a receipt which is returned to the Bread Committee.

Tickets are usually issued for a month at a time, and in the early days complaints were loud about petty abuses. On the one hand, tenants deliberately gave unpopular landlords much unnecessary trouble by making them call several times for the delivery of the tickets and the return of the receipts. On the other hand, landlords penalized tenants in arrears with their rent by refusing to issue their tickets until the rent was paid.

Tickets are non-transferable. Yet, though it is a criminal offense to utilize tickets to which the holder is not entitled, it is well-nigh impossible to prevent fraud. Tickets are often stolen, and burglaries at the offices of the Bread Committees are frequent occurrences. But this evil can at least be overcome by great caution. Not so, however, another evil, which greatly weakens the whole system. Nothing can be done to check the illegal sale or bartering of tickets. It seems to be no infrequent occurrence for people in Germany to sell their bread tickets or exchange them for other sorts. Only a high sense of public duty can be effective here. It need hardly be added that unused tickets are expected to be returned to the Bread Committee.

Besides the ordinary bread ticket there is in Germany a supplementary bread ticket. Three categories of the population receive rations over and above those generally current—growing children, ordinary factory workers who are away from home all day, (the so-called "heavy" workers,) and those engaged on particularly hard work, especially in mining and munition making, (the so-

called "heaviest" workers.) The reduced bread ration which came into force in Germany on April 15, 1917, was accompanied by the abolition of the first category of supplementary tickets. The other two are issued to the different works and factories, where they are distributed among the men qualified to receive them.

What happens if a bread ticket is lost? Local practice varies. Some towns will not replace lost tickets at all, while others will partially make good the loss on payment of a fee. But so much red tape is associated with the replacement that the possibility of constant fraud is reduced to a minimum. Besides, too frequent applications for the restoration of lost tickets are bound to raise suspicions with the police.

Another difficult problem is that of providing for the floating population, as, for instance, soldiers on leave, visitors, foreigners, and commercial travelers. Temporary visitors are granted bread tickets for the period of their stay in the locality, after satisfying the local Bread Committee of their bona fides, and presenting a certificate from their own Bread Committee or other local authorities issuing bread tickets. Travelers may obtain travelers' tickets, which are valid all over Germany. It should be noted that local bread tickets have currency only in the locality where they are issued, save only that all the South German States—Bavaria, Baden, Saxony, and Alsace-Lorraine—have agreed to recognize each other's bread tickets.

The form of the tickets varies in each locality. The most common is what may be termed a central trunk surrounded by coupons, each with an amount of bread or flour imprinted upon it. The seller must sever the coupon for the amount sold, and return all the coupons to the Bread Committee. On the basis of these returns the committee determines the quantity of flour to be allowed to the different bakers, each of whom is given a buying permit entitling him to receive his allotted share of flour from the wholesaler.

The system as a whole suffers from two weaknesses which seem inherent, and

it is a little difficult, therefore, to see how they can be overcome. The one is the control of the tickets. It is true that persons leaving the district are bound to notify the Bread Committee, just as the committee is also informed of all the deaths in the neighborhood. But German experience has been that in a great many cases removal notice is not given. What is the result? Unless the landlords are scrupulously careful the Bread Committee goes on issuing bread tickets as before, and improper use is made of them. Toward the end of 1916 it was felt that the number of illegal bread tickets in circulation in Germany was alarmingly large, and a census taken on Dec. 1, 1916, showed that there were four million more bread tickets in use than the total population warranted.

Even greater is the second difficulty—to deal satisfactorily with the producer, i. e., the farmer. If he is too much interfered with he may stop producing altogether. That obviously must be avoided at all costs. Hence a certain latitude is allowed the rural population in Germany in respect of bread rations. They are permitted to consume more bread than the town population. This has been the cause of great bitterness in Germany no less than in Austria and in Hungary. In the last-named country it has been necessary to keep a tight hold on the farmers. In the first place they did not always thrash the whole of their corn. In the second, by collusion with

the local miller, they had more corn ground than their official permits allowed. In the third, by all manner of subterfuges, they fed their beasts on wheat fit for bread. It is asserted that these evils still exist in Hungary.

So far as the consumer is concerned, he must have the assurance that when he presents his ticket to his tradesman the commodity will be forthcoming. Over and over again during the last two years buyers in Germany have had to leave the shops empty-handed. A system of ordering in advance has therefore been developed. The customer places his order with his tradesman, at the same time delivering up his bread-ticket coupon, for which he receives the tradesman's receipt. The tradesman is thus enabled to make provision in advance for each day's business, and when the customer arrives he finds what he wants. But obviously the system is more adapted to better-class neighborhoods. Whether it will work effectively in poorer districts is questionable. Moreover, it does not follow that, though the ration is fixed for the whole country, the quality of the bread is the same everywhere.

At best, rationing by ticket is a makeshift. It undoubtedly minimizes inequalities and reduces waste. But perfect it cannot be, and, imperfect as it is, it needs a large staff for its execution and no little expenditure both on personnel and on tickets.

"The Year's Bravest Englishman"

The Stanhope Medal of the Royal Humane Society was awarded recently to John Paxton, a marine fireman, for a remarkable feat of heroism. Some months ago his vessel was shelled and sunk by a German submarine in the Mediterranean. In the hurry of leaving the vessel Paxton and three other men, none of whom could swim, were left behind. Immediate action was necessary, and Paxton, at once jumping overboard, called on the first man to follow, which he did, and Paxton swam with him to the nearest boat. Returning, he called on the second man, and he also was taken to a boat. Again Paxton came back, and in like manner rescued the third man, and this in spite of the high wind and rough sea.

The medal is awarded annually for what is regarded as the bravest feat of the year. It was presented to Paxton by the Lord Mayor of Liverpool at the annual meeting of the Mercantile Marine Service Association in May.

Jewish Liberty in Rumania

King Ferdinand's Promise

CHARGES of ill-treatment of Jews in Rumania, where more than 250,000 of that faith still live, have been frequent since the removal of the Rumanian capital to Jassy, and there have also been countercharges of pro-German intrigue in connection with Jews who remained in Bucharest under German rule. Agitation of the subject has now led to a clear and important promise of Jewish liberty by King Ferdinand.

On May 11, 1917, a deputation from the Rumanian Jews in Jassy waited upon the King to present to him the assurance of their loyalty. The deputation recounted the grievances of the native Jews and assured him that they would prove in all circumstances that they were an element of order, as sincerely devoted to their native land and to its ruler as was the case in countries where Jews enjoyed full equality. A note handed to the King begged him to take the native Jews under his protection. Accompanying the note was an appeal which the native Jews had distributed in Jassy on May 6.

In this appeal the Jewish Committee set forth the wish for national unity and the victory of the allied armies; they denounced those among them who had shown that they did not share the patriotic views of the nation, and they stated that they relied on the wisdom of the Rumanian people as regarded the solution of their question. This manifesto laid stress on the decision arrived at by the Rumanian Jews at the beginning of the war not to increase the difficulties of the situation by raising their question at the present time. The manifesto concluded as follows: "Having confidence in our fellow-citizens, we will do our duty toward our country, sparing no sacrifice and taking into consideration nothing but the welfare of Rumania."

King Ferdinand made the following reply:

After having been long in close touch with

the daily life of all classes of people in the country, I formed the conviction—and I am pleased to bear testimony to the fact in the present circumstances that I was not mistaken—that all the inhabitants of Rumanian soil, irrespective of differences of origin, of race, or of religion, were actuated by the same exalted ideas of fraternity. This fraternity and community of aspirations constitutes the surest guarantee for the future of the country and the realization of our national ideal. One of the glorious characteristics of our native Princes was that, while preserving their faith in its traditions, they permitted the existence and the celebration of all the religions of their subjects. King Carol was so faithful to this tradition that he, a Roman Catholic, requested that his body might be laid to rest in one of the oldest religious monuments belonging to the worship of our ancestors.

I ascended the throne impressed with the same sentiments. When I undertook the task of uniting all Rumanians under the same flag I realized that that flag must be at the same time a symbol of the union and of the religious, political, and economic freedom of all the sons of the Fatherland. All who have striven for the realization of the aspirations which Rumanians have entertained for so many ages, by shedding their blood, by enduring the difficulties and sacrifices imposed by the war and invasion, whether they are Christians, Jews, or adherents of any other form of belief, will equally have a right to the gratitude of the country and to that of the King, and will enjoy equal rights in a free, great, and flourishing Rumania, closely united, all of us, under the folds of the national flag.

A Jewish demonstration took place on May 13 in Odessa, Russia, where some thousands gathered in front of the Rumanian Consulate to protest against recent ill-treatment of Jews in Rumania. The crowd elected delegates, one of whom presented to M. Grecianu, the Consul General, a written protest against the reported acts of violence. The Consul General telegraphed the protest to Jassy and communicated to the delegates a telegram from Jassy stating that the whole Jewish question was to be dealt with in the current session of the Rumanian Parliament.

The War in Western Asia

By James B. Macdonald

B RITISH and Russian operations in Western Asia are widely dispersed and appear to be unconnected, yet they are all concentric and tend to merge into a single campaign. Each and all have a common objective, and co-operation is secured through the higher commands being kept advised of the plans of the allied war council. To the latter they are units in a single campaign comprising the Russo-Siberian right wing in Armenia and Kurdistan, the Anglo-Indian centre operating from Bagdad, and the Anglo-Anzac left wing advancing through Palestine.

The centre is thrusting as a javelin at Aleppo and the Cilician Gate, and, incidentally, seeking to establish contact with the right wing beyond Mosul. Its Euphrates column will later co-operate effectively with the left wing in Syria. The operations of the centre are of supreme interest, as they threaten to cut the Ottoman Empire in two.

Kut-el-Amara did not fall to the British for the second time as the issue of a hard-fought battle, but rather as the sequence of a successful series of small tactical engagements. These were strictly in accordance with military maxims on minor tactics and are interesting in themselves.

The Tigris, in its course below Bagdad and until it passes beyond Kut-el-Amara, assumes a remarkable series of corrugations inclosing little peninsulas, some of which project into the side held by the British and others into the side held by the Turks. Kut-el-Amara itself is situated at the point of one of these peninsula projections which encroach upon the British side, and it was flanked on either side by a reverse salient peninsula across which the Turks had intrenched themselves to the next bend in the river. They could only protect the town in this way, because if they abandoned these trenches the British, without crossing the river, could fire into Kut-el-Amara from three sides and make its re-

tention impossible. As a further protection, the Turks held some points of vantage on a line running south from the Shamrun bend, which were so situated as to enfilade any direct assault upon the trenches and at the same time to circumvent any flanking movement to the north.

Fall of Kut-el-Amara

Before daybreak on Feb. 15 British infantry rushed some ruins on their left flank, while the machine guns picked off the defenders as they retired. A heavy bombardment followed, and a direct assault was ordered upon the Ottoman right centre. As the infantry approached, the Turks surrendered and the trenches were further extended by bombing. Similar procedure in the afternoon secured the remainder of the trenches. The whole of the Dahra Peninsula, west of the town, had now been captured, with the exception that a few Turks still held out at the extreme tip. After dark these were rushed and surrendered. Meanwhile cavalry cleared the vantage ground to the south and west of the Shamrun bend. These tactical successes were no sooner achieved than the rain came down in torrents—too late to save the Turks. Further operations were stopped for the time being. In all 1,995 prisoners were taken, which for a minor engagement compares with the 1,650 taken by General Townshend at the first battle of Kut-el-Amara, the 1,600 taken by him at Ctesiphon, and the 2,080 taken at Amara.

By way of diversion the operations were next resumed at the Sanna-i-yat Gap, some twenty miles away, and were so far successful that they drew the enemy's attention in that direction. General Sir F. S. Maude now deemed it possible to force a crossing of the Tigris River, which was then in flood, and planned accordingly. Early on the morning of Feb. 23 covering parties were ferried across the river and others later in the day, while the resistance of the Turks was held down by artillery and machine-gun fire. When sufficient clearance had

been obtained, a pontoon bridge was thrown across the 400 yards of flooded river and troops streamed across. By next morning the neck of the Shamrun Peninsula had been captured and 544 prisoners taken. Simultaneously the third and fourth line of trenches at Sanna-i-yat were taken by assault.

The Turks, recognizing that the game was up, evacuated Kut-el-Amara and retired rapidly toward Baghela, their forward base, some twenty-four miles upstream.

Capture of Bagdad

The Anglo-Indian cavalry and horse artillery rode hard for the enemy's right flank, while the infantry engaged his rear guard and the river gunboats harassed his left. On the afternoon of Feb. 26 the gunboats Tarantula, Mantis, and Moth passed the Ottoman Army in retreat and inflicted heavy loss on it. They later captured a number of Turkish steamers and barges and recovered the gunboat Firefly, which had been abandoned in the retreat from Ctesiphon in December, 1915. The pursuit on land was maintained, notwithstanding a sand storm, and came up with the Turkish rear guard at Lajj, who moved on when the Anglo-Indian vanguard attacked from three sides. The cavalry swept through Ctesiphon without opposition and drew rein six miles south of the Diala River, which joins the Tigris eight miles below Bagdad. Ctesiphon was the Winter capital of the Parthians, the redoubtable horsemen who checked the Roman power in the East. It was near here that the Roman Emperor Julian was defeated in 363 A. D. and lost his life. On the opposite bank of the river are the ruins of Seleucia, the capital of the Syrian Kings who succeeded to the empire of Alexander the Great.

The left wing of General Maude's army, under Sir Percy Lake, threw a bridge across the Tigris below its confluence with the Diala, and, crossing over, marched upon Bagdad. After a trying march of eighteen miles in the heat and dust they were confronted with the Turkish intrenchments six miles southwest of Bagdad. These were attacked at once and the defenders driven

back upon their second line, two miles in the rear.

Meanwhile, the centre and right wing under General Kearny met with considerable resistance from the Turks on the Diala front, but succeeded in forcing a passage on the night of March 8, and improved their position next day. On March 10 a concerted assault on both sides of the river drove the Turks back upon the environs of Bagdad, and during the night they evacuated their defenses. At dawn next morning the British entered the city and recovered the guns surrendered at Kut-el-Amara. The Turks abandoned 500 of their wounded and two-thirds of their artillery.

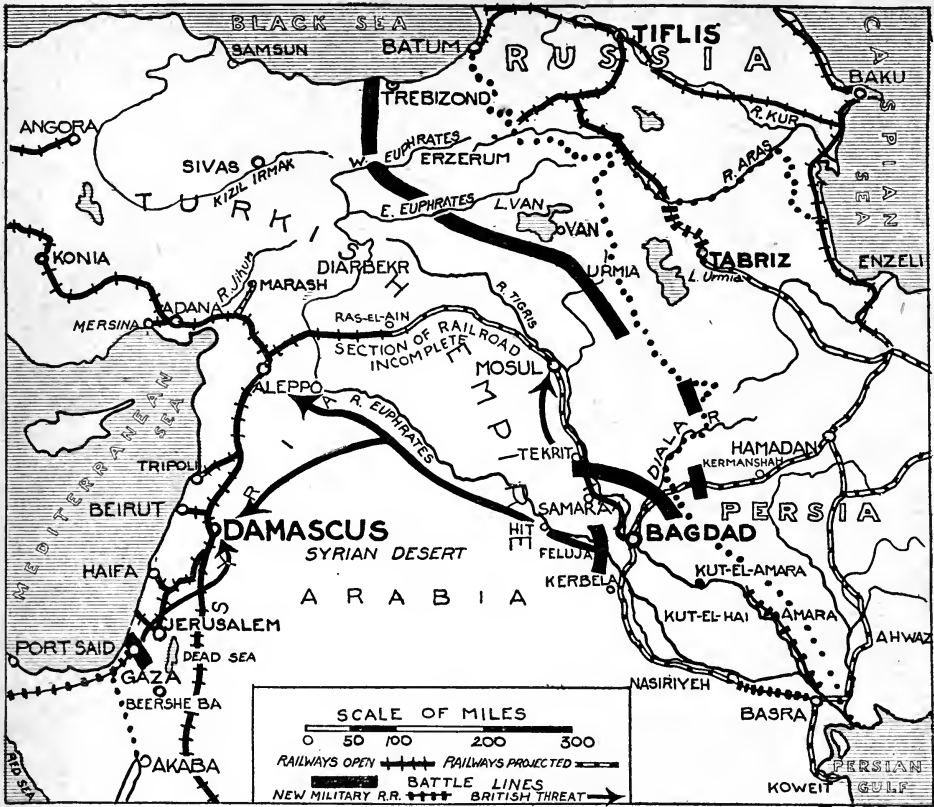

Bagdad is not of strategic importance, situated as it is in the centre of an open plain 200 miles wide and built on both sides of the Tigris. It is connected by canal with the Euphrates, which at this point is only twenty miles distant. This juxtaposition of the two rivers in relation to the City of Bagdad made it impossible for the Turks to retain their hold on the lower Euphrates above Nasiriyeh when their main force on the Tigris withdrew from Kut-el-Amara. The whole of the grain-bearing and irrigable lands of Babylonia, therefore, fell to the British with the capture of Bagdad.

Civil Rule of Babylonia

The British Commander in Chief issued a proclamation to the people of Bagdad stating inter alia: That the British and Bagdad merchants had traded for 200 years with profit and mutual friendship; that the Turks since the time of Midhat Pasha had been profuse with promises of reform and barren of performances; and that the Germans during the twenty years they had been in Bagdad had made of it a centre from which to assail the great British Raj and the mighty Russian Empire. It concludes by emphasizing that the British Government cannot permit this to happen again in Bagdad and calls upon the inhabitants to co-operate with the British civil authorities who will now administer the country.

The Flight from Persia

The Persian boundary hills rise abruptly from the Mesopotamian plain like a natural wall 4,000 to 5,000 feet high.

SCENE OF BRITISH AND RUSSIAN OPERATIONS IN WESTERN ASIA

In this respect they resemble the Himalayas in India, although not so high or so steep. From the western plain two tolerable roads penetrate this mountain barrier, but they are tolerable only in a comparative sense. One is the caravan route from Mosul to Tabriz, and the other is the caravan route from Bagdad to Teheran via Kermanshah and Hamadan. These boundary hills are inhabited by the Kurds, a brave and warlike race who, in the present war, have thrown in their lot with the Turks, but as they acknowledge neither Shah nor Sultan as their suzerain the political boundary between Turkey and Persia in these parts has little meaning.

East of the Kurd country the hills sink down into the Iran Plateau, and there the roads are better, although difficult in places.

The most westerly of the Persian main roads is the one running north and south

from Tabriz to Kermanshah, where it connects at right angles with the Bagdad-Teheran caravan route. The Turkish contingents in Persia were spread out along these roads when the order of recall reached them after their main army commenced its retreat from Kut-el-Amara. One detachment was away to the east of Hamadan, while another was north of Sakhiz. Both had to fall back beyond the crossroads at Kermanshah, and if their arrival at that place did not synchronize then the laggard would be cut off by the Russian vanguard pursuing the leading contingent. This actually happened. The retreat of the Hamadan contingent was so rapid—probably due to the defection of the Kurds—that the Russians entered Kermanshah before the Sakhiz contingent had arrived. The latter, therefore, were cut off and took to the Kurd hills.

Meanwhile the Indian Government has

re-established order and stable conditions within the British sphere of influence in Southern Persia. Sir Percy Sykes, with an Indian escort, marched from Bander Abbas to Ispahan and later to Teheran—a journey of over a thousand miles overland. His mission was to establish a Government in Persia satisfactory to the Entente, and to raise a force of military gendarmerie under Anglo-Indian officers. Both objects have been attained.

Invasion of Palestine

The British Army from Egypt under General Sir Archibald Murray, formerly Chief of the General Staff, having laid down a military railway across the Sinai Desert to Rafa on the Turkish border, embarked upon the invasion of Palestine. The topography of the country, which is familiar to Biblical students, left no doubt as to the route they would take even had there not been the historical precedent of Napoleon's march from Gaza to Acre in 1799, where he was repulsed after a 61-day siege by the Turkish garrison under old Djezzar Pasha, assisted by a British naval contingent under Sir Sidney Smith. The whole of the western side of Palestine is an open plain bordering upon the Mediterranean and flanked on the east by the hills of Hebron, Jerusalem, and Gibeon. Whatever sentimental interest may attach to the famous City of Jerusalem, it is not a military objective in the present campaign; the immediate purpose is to seize Damascus and Beirut, and join hands with the left wing of General Maude's army in Mesopotamia.

The invasion of Palestine commenced with a march of fifteen miles to the Wadi Ghuzzeh, a river five miles south of Gaza, with the object of advancing the railhead. The river was reached without opposition, but as the Turks seemed undecided to stand, and it was desirable to hold them, General Sir Charles Dobell, in command of the advance forces, decided to strike for the town of Gaza. A dense fog delayed the advance, and then the water supply gave out, so that the contemplated manoeuvre had to be abandoned, and a defensive position was taken up midway between

Gaza and the river. The Turks, with 20,000 men, attacked on March 27, but were repulsed everywhere with heavy loss. The British camelry corps completely outfought the Turkish cavalry and captured a General and the entire divisional staff of the Fifty-third Turkish Division. The Turkish losses are estimated at 8,000 men, including 950 prisoners, and two Austrian howitzers were captured. The British losses are given as 400 dead, 200 missing—believed to have fought their way into Gaza and been cut off—and wounded not stated. Their advance column retired on the river, leaving the camelry in contact with the Turks, who showed no disposition to renew the attack.

Gaza has been prominent in the world's history. It was near here that Selim I. of Turkey decisively defeated the Sultan of Egypt in 1517 and led to the Ottoman acquisition of that country. After the Generals of Alexander the Great disagreed as to how they should divide his empire among themselves, Ptolemy gained a sweeping victory over Demetrius, the son of Antigonus, at Gaza in 312 B. C., and this enabled Selucus Nicator, then a refugee in Egypt, to return to his satrapy at Babylon and regain most of the dominion of his great predecessor.

British Aim in Palestine

Syria in bygone days has been conquered by Assyrians, Babylonians, Medes, Persians, Macedonians, Seleucidae, Romans, Arabs, Egyptians, Mongols, and Turks, but never in its long history have such large armies been aligned for battle as are now contending for its possession. To meet the new invasion the Turks have 120,000 men deeply dug in between Gaza and Beersheba, while another army is protecting them from a flank attack upon their communications by the Anglo-Indian force ascending the Euphrates. The Turks consider Syria and Palestine of vital importance to them—not so much that it threatens Egypt as that it is a necessary point d'appui for recovering the holy cities of Mecca and Medina from the Arabs; Jerusalem, also, is a sacred city as well

to the Moslems as to the Christians and Hebrews.

The British, on the other hand, are committed to the policy of setting free the Semitic races in Arabia, Palestine, Mesopotamia, and Syria from Turkish domination, and this policy marches with their own interests in safeguarding India and Egypt. The collapse of Russia, whether temporary or otherwise, will not deter them from their purpose, for India is set on removing the Teuton menace and ending the religious and rapacious prestige of the Turks. India is specially interested in the Euphrates and Tigris Valleys, and her troops are mainly operating in this theatre. Imperial and oversea troops only are engaged in the Holy Land.

The Russian revolution, coinciding with the Ottoman defeats in Palestine and Mesopotamia, enabled the Turks to withdraw troops from Armenia and the eastern front and send them to oppose the British. This had the immediate effect of checking the progress of the latter until they, too, could be reinforced. Particularly it affected the position in Palestine and caused a reversion to trench warfare. Gaza is now a modern fortress flanked by trenches and commanding eminences as far as Beersheba. The country to the south of Gaza is an open plain traversed by the Waddy Guzzeh, (River Gaza,) which at present is dry, although at times a raging torrent. To the west are sand dunes reaching to the Mediterranean, and to the east a range of hills.

At daybreak on April 17 the British advance began under cover of an enfilade fire from a warship and the usual field artillery preparation. The Turkish advance positions were captured on a front of over six miles. Next day advantage was taken of a duststorm to rush up supplies to the front while the movements of the motor transport were obscure to the opposing artillery, and the following morning the bombardment of the main position commenced. The infantry attack was only partially successful, and, although continued next day, was not pushed home, as the frontal position was apparently too strong for direct assault.

A Turkish counterattack in one section of the front by 3,000 infantry and 800 cavalry was broken up through a squadron of British airplanes dropping forty-seven bombs directly on them. When last seen the Turkish cavalry was still flying. Reinforcements have since reached the British commander.

Strategic Considerations

After the fall of Bagdad, the Turks had the choice of two routes along which to retreat—either to ascend the Tigris to Mosul or the Euphrates to Aleppo—and they decided to take both. The Euphrates Valley had been the old caravan road between Syria and Mesopotamia for 3,000 years, and it offered the best march, yet it had few natural defenses to impede a pursuing enemy. Nevertheless, it was necessary to send some troops by this route to delay the British as long as possible while fresh troops were being assembled for the defense of Aleppo, the Amanus Tunnel, and the communications of the Syrian Army. On the other hand, the only hope of extricating the Turkish contingent in Persia was for the main army to retire up the Tigris and attempt to hold on the headwaters of the Diala River until such time as a reunion had been effected with their detached wing. The railway had been completed from Bagdad to Samara, but there was nothing in the way of rolling stock except the construction outfit. Beyond Tekrit a range of hills runs southeast toward the Diala River in the direction of Khanikin, whence the Persian column might be expected to emerge. Here the Turks decided to make a stand.

In Upper Mesopotamia

Sir Stanley Maude's operations from Bagdad are projected upon five lines of advance. His left wing crossing the intervening space between the two rivers—from which Mesopotamia takes its name—seized Feluja on the Euphrates as its starting point. Its immediate purpose is to ascend that river and hold the crossroads at El Deir, which lead to Damascus, Homs, Aleppo, Urfa, Mosul, and Bagdad. Possession of El Deir would afford opportunities for striking at the main communications of the Turks in

Syria and Mesopotamia, since these are both based upon Aleppo, which itself is threatened by this column. The direction of this blow will depend upon the measure of success attained by the other columns in Southern Palestine and the Tigris Valley. Holding the interior position with good lateral communications by means of which one column can assist its neighbor, the strategic advantage lies with the British. Midway between Bagdad and El Deir lies Hit, where there are important oil wells in which Anglo-Dutch capital is interested.

The right wing of General Maude's army was assigned the duty of clearing the Turks from the caravan route between Bagdad and Persia, and further to endeavor to hold up the retreat of their army corps in Persia before it could escape through the famous pass known as "the gate of Zagros." This object it was the aim of the opposing Turkish commander to frustrate. In consequence, the whole of the British centre and right wing became engaged with the enemy at widely dispersed points. The route mapped out for the Anglo-Indian centre was for one column to advance direct on Mosul by the road alongside the Tigris, but to keep in alignment with the other columns, and for another to take the road to Kifri and Erbil, which lies midway between the Tigris and the Kurd hills. This last road strikes the caravan route from Mosul to Tabriz in rear of where the Turks are holding up the main Russian left wing near Rivanduz and preventing a junction between the main allied armies.

The scheme then was for an advance in force by the centre upon Mosul and Rivanduz along three parallel routes, while the right wing secured the Bagdad caravan way into Persia, and the left wing ascended the Euphrates to El Deir and awaited further orders.

The Ottoman forces were disposed as follows: The Thirteenth Army Corps on both banks of the Tigris, the Eighteenth Army Corps between the Tigris and Diala Rivers, the Sixth Army Corps retiring from Persia by the Bagdad caravan route, and another force withdrawing before the British on the Euphrates. The

Jeh-el-Hamrin hills lay diagonally on the flank of General Maude's line of march on Mosul, and by holding them the Turks reckoned not only to delay his advance but to enable their Sixth Army Corps to make good its escape by taking a bypath through the mountains from Kasr-i-Shirin to Kifri in rear of their left flank. These expectations were borne out, but under severe punishment, and it remains to be seen whether in saving the small force in Persia they have not compromised their whole army.

Open warfare prevails in this theatre and the scenes change rapidly. The operations consequently are of particular interest to military students. While progression may appear to be slow on the Tigris and in Syria, such delaying tactics may be considered by the British as an advantage provided their Euphrates column is making good progress toward the vital communications of the enemy. This is an unknown but all-important factor. Meanwhile, we may record the actual progress of the Tigris column.

The Advance on Mosul

The short section of the Bagdad Railway, which from this end is completed as far as Samara, about seventy miles up stream, is built on the west bank of the Tigris, but the road to that town follows the east bank part of the way. The Tigris and its tributary, the Diala, take parallel courses, about fifteen miles distant, as they approach Bagdad, and the road to Persia, as well as the one to the north, both emerge from this narrow area with the Tahwila Canal separating them. All these roads were made use of by General Maude in his advance from Bagdad. His left centre, on the west bank of the Tigris, came up with the enemy's rearguard holding a ridge covering the railway station of Mushaidie, and attacked it during the night of March 14. The engagement was continued next day, when the position was carried and three Turkish divisions defending it retired to the north.

Simultaneously, the right wing crossed the Diala to the east bank and seized the town of Bakuba, through which the main caravan road runs to Khanikin on the Persian border. They also se-

cured the village of Bahriz, through which a subsidiary road runs through Mendeli into Persia.

Meanwhile, the Russians in Persia under General Baratoff continued their

REGION OF RUSSIAN OPERATIONS

pursuit of the Sixth Turkish Army Corps, which had been recalled after the retreat from Kut-el-Amara began, and occupied Kirind on March 17. The Turkish left fell back toward Khanikin to cover the retirement of the Sixth Army Corps. The converging Anglo-Russian armies encountered considerable natural difficulties, for while the Indian troops on the plain were delayed by numerous small canals and rivers, the Russians were traversing snow-clad mountains and confronted with the formidable obstacle of the Paitak Pass to the east of Kasr-i-Shirin. The Turks in the foothills were assembled in strength, for they were battling to avoid the surrender of their Sixth Army Corps, whose retreat was precarious unless the British advance could be delayed. After numerous engagements the British right pushed on, and Shahroban was occupied, fifty-five miles northeast of Bagdad. The Ottoman centre now advanced and the op-

posing forces clashed near Deltawa, when the Turks were repulsed and retired across the River Adhaim, a tributary of the Tigris. The British centre continued its advance and entered Deli Abbas on March 31.

The Turkish Sixth Army Corps, in the meantime, was approaching Kasr-i-Shirin, whence their escape was assured by a side track to Kifri. When they took the latter road, a squadron of Russian Cossacks sped on along the caravan route and established contact with the Indian cavalry on April 2. The main Russian column deflected its course in an endeavor to intercept the Turkish left wing, which was falling back before the British, but they were held up at the crossing of the Diala. Persia is now free of the Ottoman invasion, although some small contingents were cut off in the retirement and sought refuge in the Kurd hills to the west of Bana.

While these events were in progress the Anglo-Indian column on the west bank of the Tigris fought the Turks out of Balad Station, some fifty miles north of Bagdad. General Maude, finding his advance to the north threatened by the Turkish concentration on his flank in the Jeb-el-Hamrin hills, manoeuvred to give them battle. On March 10 he ordered his advance detachments on the west bank of the Diala to fall back, whereupon the Turks, leaving the hills, pressed on after them. During the night General Maude dispatched another force from the east bank of the Tigris to the scene of action, and at daybreak a general engagement commenced against the Thirteenth Turkish Army Corps. The British artillery soon established an ascendancy, but a mirage temporarily interrupted the duel.

When the infantry was brought into action the enemy abandoned their positions, ten miles northeast of Deltawa, and retired rapidly on the Jeb-el-Hamrin hills, leaving 300 dead on the field. Their casualties are reported as 700. The British centre now continued its march, and on the night of April 17 forced the passage of the River Adhaim, which was held by a detachment of the Eighteenth Turkish Army Corps; next day a battle ensued on the east bank of the Tigris,

when the Turks were again routed and 1,250 prisoners taken, but their guns escaped, owing to the exhaustion of the pursuing cavalry from the intense heat and their arduous advance.

Capture of Samara

The operations of the next few days were directed against the enemy's positions on the west bank of the Tigris between Istabulat and Samara. Severe hand-to-hand fighting took place with numerous counterattacks, but in the end the Turks had to yield their carefully prepared intrenchments, together with a 5.9 howitzer, 14 Krupp guns, and 687 prisoners. Their demoralization was due to the enfilade fire of the British artillery posted on the east bank of the river and the threatening manoeuvres of the Indian cavalry on the other flank.

On April 23 Anglo-Indian troops entered Samara, and at the railhead captured 16 locomotives and 240 trucks, while in the town a large quantity of military stores and munitions was secured. The Bagdad-Samara railway is now entirely in the hands of the British and will soon be available to bring up munitions and supplies from Bagdad.

The Turks depend on river transport from Mosul to meet their requirements, but this service is liable to constant attack from British flying squadrons. The Thirteenth Turkish Army Corps ventured to leave the Jeb-el-Hamrin hills in an attempt to relieve the pressure on their

Eighteenth Army Corps, and, marching southwest, came in conflict with the British centre. A force detached from the latter made a night march on April 24 and surprised an Ottoman division on the west bank of the River Adhaim, about seven miles north of its junction with the Tigris. The Turks were routed with the loss of 150 prisoners and many transport mules, ponies, and camels.

A moving fight ensued for the next few days, while the Turks were falling back upon their prepared positions on either side of the River Adhaim where it issues from the Jeb-el-Hamrin hills, some twenty-five miles southeast of Kifri. Early on the morning of April 30 the major portion of the British column, which had crossed the river during the night, stormed and carried the first two lines of the Turkish defenses, including a fortified village, but during a sandstorm they were driven out of the village, only to return and recapture it. The whole of the Thirteenth Turkish Army Corps then retired into the Jeb-el-Hamrin hills, covered by strong rearguards. Their known losses include 359 prisoners and 182 dead. The prevailing duststorm seriously interfered with the artillery and flying corps, and facilitated the Ottoman retreat.

The Eighteenth Turkish Army Corps, after its defeat at Samara, continued its flight to Tekrit, thirty-two miles further up stream. The total loss of this corps during the fighting from April 18 to April 22 is reported as 4,000.

The British in the Promised Land

W. T. Massey, war correspondent with the Desert Column in Egypt, wrote to The London Times under date of March 20, 1917:

THE Promised Land! After twelve months' incessant toil in the Sinai Desert, sometimes fighting hard, always digging, making military works, building railways, constructing pipe lines and roads, and forever marching over the heavy, inhospitable wastes, our troops have at last come into the Promised Land.

What a marvelous change of scene! They are in Palestine. Behind them is a hundred miles and more of monotonous sand. Before them, as far as the eye can reach, is unfolded a picture of transcending beauty. No wonder, when the troops come up to Rafa and look over the billowy downs, they break into rounds of cheers.

Before and around us everything is green and fresh. Big patches of barley, for which the plain south of Gaza is famous, shine like emeralds, and the im-

mense tracts of pasture are today as bright and beautiful as the rolling downs at home.

I have been out on a reconnoissance over ground evacuated by the Turks and toward positions which the enemy at present holds. The high minaret of Gaza showed itself to us from above the dark framework of trees inclosing the town. That mosque was formerly a Christian church built by the Knights Templars in the twelfth century, when the Crusaders fortified themselves within Gaza's walls, but Saladin drove them out.

After many centuries, (Napoleon's hold on Gaza was merely temporary,) British forces are within sight of the town. Away on our right over the abandoned Turkish stronghold of Wali Sheikh Narun is Beersheba, tucked in the plain beneath the southern end of the hills of Judea. These two of the most ancient cities of Palestine—it was in Gaza that Samson was betrayed by Delilah to the Philistines, and Abraham dug the "well of the oath" in Beersheba—have been seen by some of our troops, and the Desert Column is exceeding glad.

The Battle of Gaza

The fighting for Gaza developed into a pitched battle and then settled into trench warfare. Following is Mr. Massey's description of the battle of Gaza, written on April 21, 1917:

The biggest battle in all Palestine's long history is being fought at Gaza by bodies of troops on both sides immeasurably larger than any armies which have taken part in the countless campaigns of the Holy Land. Though we have only fought the first phase, it is clear that we are engaged upon the hardest struggle in this age-worn battle area. We have gained our first line, which we are consolidating, but apparently there is a period of trench warfare before us ere we reach the important system of trenches which has lately been cut to turn Gaza into a modern fortress of great strength. We paid a price for our gains, but we inflicted very heavy casualties on the Turks, whose counterattacks were repulsed with sanguinary losses. With the conditions pre-eminently favorable to the

defense, an early decision before Gaza must not be expected.

We had to dispose the British forces on a sixteen-mile front, practically the whole of which the Turks had intrenched deeply. The positions we had to attack on the Gaza front could not be stronger if the whole country had been built up for defense. There are sand dunes two miles deep between the sea and the town and an extraordinary variety of redoubts, trenches, and pits covering the western town, while Samson Ridge, 3,000 yards to the southwest, is strongly held to secure the enemy observation posts.

Southeast of Gaza there is a green plain a mile and a half wide and six miles deep inclosed on the sea side by sand dunes, on the north by the town, and the east by a range of hills running to Alimuntar, the spot where Samson displayed his prodigious strength. The plain is intersected by the Wadi Ghuzze, a ravine with precipitous sides, through which the Winter rains on the Judea hills pour in terrific torrent to the sea. It is now dry, but crossings have been made for guns, cavalry, infantry, and supply columns. The northernmost part of the plain is covered with trenches protecting the town, and for two miles to the southeast of Alimuntar the enemy on the irregular hills and deep woods, at one spot, prepared an intricate system connected up with trenches of great defensive power.

Mounted Troops Engaged

Three miles due south of Alimuntar is Mansura Ridge, facing another important series of defenses. About a mile further to the east is Sheikh Abbas Ridge, backed by ground torn and cracked as if by an earthquake, and looking over the country rolling to the Beersheba road. East by south are the tiny villages of Sihan, Atawinieh, Aseferieh, and Munkheileh, near which our cavalry fought strong actions against infantry counter-attacking from Hareira Sharia.

The whole country is extremely difficult for cavalry, as it constitutes a continuous bottle neck, full of deep ravines, but the part played by the mounted troops under these disadvantageous circumstances was superb. Soon after day-break on April 17 our movement began.

A war vessel assisted the shore batteries to cover a short advance of infantry to take up positions from which we might hope to secure our first objective at a subsequent date. The operations were brilliantly successful. We got to our mark on the sand dunes quickly, reached the positions in front in a few minutes, and took Sheikh Abbas Ridge by half-past 7, with remarkably small casualties. The cavalry were out on the right during this blazing hot morning, but it was impossible to hide them owing to every movement raising dense columns of dust. A wet night would have been of immense advantage, but throughout the operations rain was denied to us.

On April 18, while the country was obscured by dust clouds, we made ready for the next advance, sending much supplies forward. The whole terrain was covered with supply columns, and when the wind decreased an enormous pall of dust hung over the area. An occasional motor rushing across country raised a trail of dust like steam issuing from an express train. Bombardment of the outer trenches of Gaza began as the sun lifted over the black hills of Judea on the 19th.

Infantry and a "Tank"

Infantry attacks were launched at 8:30 o'clock. On the left they gained Samson Ridge and found the trenches full of Turkish dead. The enemy observation posts were seized. Toward Alimuntar and south of Gaza progress was more difficult and slower, but Scottish troops went forward with splendid steadiness under a desperately heavy machine-gun fire, and ultimately advanced 2,000 yards to Outpost Hill, south of Alimuntar, where they have consolidated their gains.

There was also considerable progress from Sheikh Abbas Ridge. Between 9 and 10 I saw a "tank" go into action against a green hill near a warren in front of the Alimuntar. She stood with her nose posted in the air across a trench, down which her crew poured rapid fire right and left. Then she crossed the trench and turned south. The Austrian gunners with the Turks

soon found the range, and turned an immense volume of fire on the tank, which seemed completely surrounded by bursting high-explosive shells. For several minutes I lost sight of her, but presently she emerged, pursuing the uneven tenor of her way toward our lines. Then a second succession of rapid artillery fire again enveloped the tank. When the fire ceased she had disappeared. I thought she had been smashed to pieces. But I learned she dropped back into the trench we had captured.

During the day, particularly in the afternoon, our mounted troops were heavily engaged. The Turks made five desperate counterattacks with infantry against the mounted troops and camel corps. Though inflicting considerable losses on us, they must have suffered very severe casualties.

Heroic Camel Corps

One heroic episode I did not see, but I repeat it from the evidence of competent witnesses. It was an effort by sixty men of the Camel Corps. The enemy had concentrated considerable forces at one spot to break through. A junior officer of the Camel Corps saw the preparation and took his men forward, with two machine guns, up a grassy slope, to prevent the advance, with absolutely no cover. His small party crept on stealthily, undeterred by a murderous machine-gun fire, in what was a forlorn hope. A tremendous shellfire fell about them, but the party, gradually becoming smaller through inevitable losses, pressed on until within 300 yards. The crest was lined with scores of machine guns and hundreds of riflemen. There they stopped, and kept the Turks from issuing to attack by sound and accurate bursts of fire every time the enemy showed themselves. For an hour and a half this gradually reduced band staved off attack until every one was hit. Most of them were killed, and the wounded fell into Turkish hands. It was too late in the day for the Turks to get through. My informant declared that every Camel Corps man in this section deserved the Victoria Cross, whether he be alive or dead.

The War's Effects on Turkish Railways

THE war has had some unforeseen effects on the economic life of Turkey.

To a certain extent that country has become the port of entry through which Central Europe seeks to escape the Entente blockade, and the Austro-German engineers are bending all their energies to draw from it every ounce of available resources. The men in control of the Ottoman Empire allow them to do this the more willingly because they regard the present epoch as essentially one of transition. They seem to be seeking especially to develop Asia Minor with the aid of German technicians, holding themselves ready, once the difficult task of economic rehabilitation is accomplished, to get rid of all foreign control and to adopt a frankly nationalist policy. Already, under German protection, they are breaking the contracts which bound them to other European powers.

Let us glance at what has taken place in the domain of transportation. As soon as the war had demonstrated the strategic and commercial importance of the railways, the Germans applied themselves, first, to utilizing the existing lines for intensive exploitation of resources; second, to finishing the construction of railways begun before the war, and, third, to establishing entirely new lines.

With the closing of the Dardanelles the traffic between Asia Minor and Turkey in Europe became extremely active, and the new state of things was immediately reflected in the movement of freight through Haidar Pasha, the gateway to the Bagdad Railway, lying just across the Bosphorus from Constantinople. The report of the Anatolian Railway, which handles the Bagdad Railway traffic at that point, showed for the year 1915 a total of 510,236 tons of merchandise transported through Haidar Pasha, as against 317,217 tons in 1914.

The increase was due especially to the provisioning of Constantinople and of the Turkish troops fighting at that time in the Peninsula of Gallipoli; in fact, out of a total of 510,236 tons, 419,920 tons were carried over the road in Asia

Minor toward Turkey in Europe, and only 90,316 tons in the opposite direction. The report for 1916 has not yet been issued at this writing, but it will show a much greater increase, as the construction of the Bagdad Railway has made extensive progress in the interval.

By virtue of the convention of March 5, 1903, the Bagdad Railway Company undertook to seek from the Ottoman Government a separate authorization for each section to be constructed. The Turkish authorities, usually very slow and negligent, in this case, under the stimulus of the war, granted the necessary authorizations with exceptional rapidity.

Konia, the southern terminus of the Anatolian Railway, is the western terminus of the Bagdad Railway proper. Between Konia and Bagdad there remain only two sections yet to be built; otherwise the whole enterprise is complete. The following table from the Paris Temps shows the progress of the work:

Sections.	Kilometers.	Opened.
Konia to Bulgurlu.....	200	Oct. 25, 1904
Bulgurlu to Ulukishla.....	38	July 1, 1911
Ulukishla to Bozanti.....	53	Dec. 21, 1912
Bozanti to Dorak.....	42	Not comp't'd
Dorak to Adana.....	15	Apr. 27, 1912
Adana to Osmanie and Namurie	100	Apr. 27, 1912
Osmanie to Alexandretta...	59	Nov. 1, 1913
Namurie to Islahie.....	54	Feb., 1916
Islahie to Radjun.....	47	Oct. 20, 1915
Radjun to Muslimie and Jerablus	203	Dec. 15, 1912
Muslimie to Aleppo.....	15	Dec. 15, 1912
Jerablus to Tel-el-Abiad....	101	July 11, 1914
Tel-el-Abiad to Tuem.....	62	June 1, 1915
Tuem to Raz-el-Ain.....	41	July 23, 1915
Raz-el-Ain to Samara.....	541	Not comp't'd
Samara to Istabulat.....	30	Oct. 7, 1914
Istabulat to Sumiken.....	38	Aug. 27, 1914
Sumiken to Bagdad.....	62	June 2, 1914

Of the whole 2,435 kilometers (1,510 miles) that separate Haidar Pasha from Bagdad there remain 583 kilometers (361 miles) still to construct; but the connection between the Bosphorus and the Euphrates is already made, and it should be noted that the greatest engineering difficulties of the whole en-

terprise have been surmounted since the beginning of the war. Two important gaps remained to be filled when the war broke out. One was the road across the Taurus Mountains, the other that across the Amanus Mountains. Now, the Namurie-Islahie section, opened in February, 1916, and built at an altitude of 874 meters, connects the plain of Adana with that of Mesopotamia. The great tunnel at Bagtche, pierced on June 16, 1915, is in this section. The crossing of the Taurus was effected at an altitude of 1,465 meters. In that section several tunnels, totaling eleven kilometers in length, were bored, including that at Bilemdik, opened in December, 1914. Only a few more tunnels remain to be finished in that part of the road in order to complete the Bozanti-Dorak section. Meanwhile their place is supplied by automobile roads, which also have been constructed during the war. On April 30, 1915, the Germans completed the great 810-meter bridge, weighing 3,400 tons, across the Euphrates.

The Turks also have carried through

other railway projects of some importance. They have finished the line from Haifa to Jerusalem and made considerable progress on that to Sinai, which branches off from the other at Afoule, and is soon to furnish connections with the Sinai Peninsula. The Young Turks expect the port of Haifa to supplant that of Beirut when the railway is completed.

The task of building the great Black Sea railway system—from Samsun to Sivas, from Angora to Erzerum, &c.—was handed over by Russia to France after M. Poincaré's journey to Petrograd; a Turkish law of June 25, 1915, however, transferred this work to the Ottoman Government. Meanwhile the presence of Russian troops in Armenia has prevented the Turks from doing anything on it. The Germans attach great importance to this project, which they regard as furnishing the missing link in their great waterway system to connect the North Sea with the Persian Gulf by way of the Rhine, Danube, Black Sea, and Tigris River.

Cruelties to Jews Deported From Jaffa

Djemal Pasha, Turkish Governor General in the Palestine region, signalized the approach of the British expeditionary force by driving all Jews from Jaffa, north of Gaza. The cruelties perpetrated in the execution of his order early in April, 1917, were reported to the United States Government by Consul Garrels at Alexandria. Ambassador Elkus advised the State Department on June 12 that no massacres had taken place, though the Jews had been compelled to leave Jaffa. Mr. Garrels's report follows:

THE orders of evacuation were aimed chiefly at the Jewish population. Even German, Austro-Hungarian, and Bulgarian Jews were ordered to leave the town. Mohammedans and Christians were allowed to remain provided they were holders of individual permits. The Jews who sought the permits were refused. On April 1 the Jews were ordered to leave the town within forty-eight hours. Those who rode from

Jaffa to Petach Tikvah had to pay from 100 to 200 francs instead of the normal fare of 15 to 25 francs. The Turkish drivers practically refused to receive anything but gold, the Turkish paper note being taken as the equivalent of 17.50 piastres for a note of 100 piastres.

Already about a week earlier 300 Jews had been deported in a most cruel manner from Jerusalem. Djemal Pasha openly declared that the joy of the Jews on the approach of the British forces would be short-lived, as he would make them share the fate of the Armenians. In Jaffa Djemal Pasha cynically assured the Jews that it was for their own good and interests that he drove them out. Those who had not succeeded in leaving on April 1 and following days were graciously accorded permission to remain at Jaffa over the Easter holidays until April 9. Thus 8,000 were evicted from their houses and not allowed to carry off

their belongings or provisions. Their houses were looted and pillaged even before the owners had left. A swarm of pillaging Bedouin women, Arabs with donkeys, camels, &c., came like birds of prey and proceeded to carry off valuables and furniture.

The Jewish suburbs have been totally sacked under the paternal eye of the authorities. By way of example two Jews from Yemen were hanged at the entrance of the Jewish suburb of Tel Avid in order clearly to indicate the fate in store for any Jews who might be so foolish as to oppose the looters. The roads to the Jewish colonies north of Jaffa are lined with thousands of starving Jewish refugees. The most appalling scenes of cruelty and robbery are reported by absolutely reliable eyewitnesses. Dozens of cases are reported of wealthy Jews who were found dead in the sandhills around Tel Avid. In order to drive off the bands of robbers preying on the refugees on the roads the young men of the Jewish villages organized a body of guards to watch in turn

the roads. These guards have been arrested and maltreated by the authorities.

The Mohammedan population have also left the town recently, but they are allowed to live in the orchards and country houses surrounding Jaffa and are permitted to enter the town daily to look after their property, but not a single Jew has been allowed to return to Jaffa.

The same fate awaits all Jews in Palestine. Djemal Pasha is too cunning to order cold-blooded massacres. His method is to drive the population to starvation and to death by thirst, epidemics, &c., which, according to himself, are merely calamities sent by God. Those who know his methods will not be surprised if after a short time severe punishment is dealt out to those who have looted and pillaged under his orders, or at least with his connivance. This would be in accordance with his settled policy of exciting one part of the population against the other, and exterminating all those who are not Turanians.

Djemal Pasha—A Turkish Ivanoff

[Cartoon from the American Jewish Chronicle]

Wartime Suffering in Turkey

A foreign official, whose duties took him to Constantinople in April, 1917, gave the following account of conditions in the Turkish capital:

THE reports which reach the outer world from time to time about conditions in Turkey invariably understate the facts. The vast mass of the Turkish population is now subsisting on the verge of starvation. The misery which prevails at Constantinople among the middle and working classes is heart-breaking; while conditions inland, owing to the epidemics which prevail, are even worse. There is no cholera at Constantinople, and the admirable sanitary measures imposed on the city by the Germans have succeeded in keeping typhus within close limits. The Germans tried to make the tramway company daily disinfect its vehicles, but, as usual, they acted in the matter without tact, and, the company refusing, no European now travels in the tramcars.

Pitiful incidents, indicating the misery of the people, can be witnessed daily at any street corner. The faces you see are haggard, pinched, and worn, the eyes haunted, the frames feeble. I do not know whether people die of starvation in Constantinople, but I have frequently seen old men and women collapse—I suppose from hunger—in the streets. Poor people will pay enormous sums for worm-eaten figs with which one would not attempt to poison a mad dog. In the old far-off days of peace the average humble-class Turk would make a piece of bread and cheese, some olives, and some Turkish delight form his principal meal. To-day such a meal would cost him about \$1.25.

Prices have risen steadily since the beginning of the war, and in American terms are something like the following: Butter, \$2.50 a pound; cheese, \$3.50 a pound; olives, 75 cents a pound; sugar, \$2.50 a pound; rice, \$1 a pound; Turkish delight, \$2 a pound. The veritable famine in sugar which now prevails in Constantinople is a great blow to the sweets-loving Turk. Lumps of sugar at 5 cents each are hawked about the streets. Aus-

tria recently promised to send Turkey 2,000 carloads of sugar at the rate of 200 cars a month, but owing to the great scarcity of rolling stock nobody takes the promise seriously. In spite of the hunger and abject misery everywhere prevailing, the Turk manifests no desire to revolt. Food riots are unknown at Constantinople, and the shops are never looted.

The shortage of bread is a great cause for complaint among the women. The Turkish Government, at the instigation of the Germans, early in the present year introduced a rationing system, but the wealthy Turks declined to submit to it, and the elaborate organization set up speedily collapsed. The apathy of the Turks angers the foreign observer. Only once have they been roused from their apathy, and that was when the thousands of wounded poured into Constantinople from the Dardanelles. The sight of their dying men-folk caused several hundred women to march to the War Office to call on the Government to give them back their husbands and sons.

In Turkey, as in other belligerent countries, the war has opened up new avenues of employment to women. The Greeks and Armenians formerly employed at the post and telephone offices have been dismissed and their places taken by Turkish women and girls. The war has hastened rather than checked the emancipation of Turkish women. All the young women wear veils of the flimsiest description, and in the tramcars they always draw them up from their faces. An incident which illustrates the strength of the "new woman" movement in Turkey occurred quite recently. The following notice was issued by the police department.

The adoption of new forms of apparel has become a public scandal in Constantinople. All Mohammedan women are given two days in which to lengthen their skirts, discard corsets, and substitute thick for flimsy veils.

Two days passed, and the following notice appeared:

We regret that through the interference of certain old women a subordinate of the Police Department has attempted to regulate

the costumes which Mohammedan women wear. The Police Department regrets this blunder and cancels the previous order.

The "police subordinate" who blundered was an invention of the department, anxious to find an excuse to capitulate to the storm which the original order provoked. The wives of Turkish aristocrats, Ministers, and high Government officials threatened to hold up the Red Crescent nursing work in Turkey, the telephone girls threatened to strike, the Post Office girls to leave the Post Office, unless the offending order was canceled; and before two days had passed Turkish women, determined to be Westernized, had won. The incident provoked an outburst of indignation on the part of the women against the German authorities in Turkey, who were accused, probably wrongly, with wanting to keep Turkish women in a backward condition.

It may be mentioned that some illusions are entertained outside Turkey regarding the powers possessed by the German authorities in Turkey. The Germans are certainly the masters of the Turks in the sense that they control the Turkish Government, but the influence of the German officials over the civilian population is very small. The German police in Constantinople are strictly forbidden to interfere with the population, and even in the army Turkish soldiers are not compelled to be subservient toward their German officers. Besides holding them responsible for the misery and misfortune which

have befallen their country, the Turks dislike the Germans personally. On the other hand, the German naval and military officers make no secret of their contempt for what they regard as the laziness and slackness of their Turkish charges. Admiral von Souchon, the German Admiral at Constantinople, is never tired of declaring to other Europeans at the Constantinople Club that the Turks as fighting men are hopelessly inefficient.

The principal preoccupation of the Turkish Parliament is the deplorable financial condition of the country. Gold, nickel, and copper have long since vanished from circulation, and the country is flooded with notes and stamps—the latter worth about 5 cents each—of all kinds. At the backs of the notes in one of these categories is a design of Kut, and an inscription, rather amusing in the light of recent events, to the effect that, thanks to the bravery of the Turkish troops and their German allies, the town will remain in Turkish hands until the end of time. Turkish finances are run on the simplest lines. Every time that the Turkish Government is hard up it asks Berlin for a "loan." The "loan" consists in permission by the German Government for the Turkish authorities to issue paper money for the amount required. The German Government has promised to redeem, out of the indemnities exacted from its enemies, all the paper money issued in Turkey during the war. The mark has dropped extremely low lately in value in Turkey.

THE EUROPEAN WAR AS SEEN BY CARTOONISTS

NOTE—Owing to the existing blockade CURRENT HISTORY MAGAZINE has been unable to obtain any German cartoons for this issue.

[Italian Cartoon]

Uncle Sam's First Projectile

"The United States has voted a loan of \$3,000,000,000 to the Entente."—Cable news.

—From *Il 420*, Florence.

AMERICA TO GERMANY: "First I'll hand you this one. Other presents will follow later."

[English Cartoon]

Receiving the Order of the Boot

—From The Sunday Pictorial, London.

THE KAISER (to the republics who have revolted against U-boat savagery):
"It's all very well to dissemble your love, but why did you kick me down stairs?"

[Dutch Cartoon]

Times Change

—From *De Nieuwe Amsterdammer*, Amsterdam.

THE GERMAN PEASANT: "I always used to think how that beast would like to eat me, but now I think how much I should like to eat it."

[Spanish Cartoon]

Compensation

—From *Espana, Madrid*.

FIRST DUTCH SEAMAN: "They have sunk seven of our ships, at one stroke, after promising not to touch them!"

SECOND SAILOR: "Yes, and they did not touch the Rochester and the Orleans after threatening to smash them! Probably that is because America is not a little country."

[English Cartoon]

The Hindenbeggar

—From *News of the World*, London.

WEARY WAR LORD (at the hot air pump): "Ach, Himmel! What'll happen when the beggar bursts!"

THE GERMAN CRISIS

Chancellor von Bethmann Hollweg Resigns and Is Succeeded by Dr. Michaelis and a New Ministry

GERMANY was the last of the beligerent powers to experience a political crisis due to popular dissatisfaction with the conduct of the war, but the end of the third year brought as complete a change as that suffered by any other warring Government except Russia. On July 14, 1917, after a fortnight of excitement and tension that stirred all other nations and convulsed Germany, Dr. Theobald von Bethmann Hollweg, the Imperial Chancellor since July 14, 1909, was forced to tender his resignation, and was succeeded by Dr. Georg Michaelis, Prussian Under Secretary of Finance and Food Controller. A complete reorganization of the Ministry ensued.

Owing to the rigid suppression of news regarding internal affairs in Germany, the world could obtain only meagre details of what was happening; such news as filtered beyond the border had suffered curtailment and revision at the hands of military censors, and much even of this information came second hand from Copenhagen, Stockholm, Amsterdam, and Berne, and was incomplete and contradictory. Enough, however, managed to elude the censors by word of mouth from trustworthy travelers and correspondents to disclose late in June that a political tumult was raging in Germany and that new political alignments were forming. The influence of the Russian revolution had been far more pervasive than the censored dispatches had indicated. A new situation, too, was acutely felt to be at hand when the German people realized that the United States intended to bring at once to the support of the Allies the full weight of its resources, wealth, and military power.

The discontent, which made itself manifest in half-suppressed newspaper comment and public expressions by men of prominence in civil and political life,

was lulled temporarily by the hope of a separate peace with Russia and by the popular belief that there was no possibility of Russia's again becoming a fighting factor for years. When the Russian offensive was resumed with brilliancy and with disastrous consequences to both Austria and Germany, and when the Russian armies gave proof that they possessed a greater power of offensive than at any time since the outbreak of the war, the crisis in Germany's political circles immediately became acute. It soon culminated in the collapse of the Bethmann Hollweg Government and the formation of an entirely new coalition, with all sorts of sensational possibilities in prospect as a consequence.

Revolt in the Saxon Diet

The first intimation of a serious state of affairs came in a dispatch which was permitted by the censors to pass late in June, relating that in "the Saxon Diet" the Prime Minister of Saxony declared "that the Government would fight any attempt to secure franchise reform in the individual States through the action of the Reichstag, whereupon the Socialist Vice President of the House declared that Saxon soldiers were not fighting because of loyalty to the King, but 'out of love of the Fatherland and 'monarchical principle.' If the Government of Saxony persisted in its reactionary attitude, he said that 'reform would come, if not from the Crown, then from the mob.' A Nationalist member of the Reichstag said 'that a vast majority of the Saxons were inspired by an utter lack of confidence in the Government.'"

The next important incident which was permitted to be made public occurred June 30, when it was announced that the movement to secure an equal electoral franchise in Prussia found cham-

pions in unexpected quarters. Leading Conservatives joined in a public declaration calling on the Government to take action for the prompt enactment of legislation in favor of election reform.

Demands for Franchise Reforms

Their call, which is an unequivocal endorsement of the agitation carried on by the Social Democrats for many years past, reads:

The mighty struggle in which the German people are now engaged is not yet ended. The undersigned until now have been largely of the opinion that the promise contained in the imperial Easter-tide message for the elimination of acrimonious internal struggles might be fulfilled in co-operation with the conservative forces of our public life. However, the opposition emanating from these sources is so powerful as to call forth doubts whether this Easter message, in its true spirit, can at all become a reality after the conclusion of peace.

Today such doubt is intolerable. To keep that faith with the German people to which it is entitled, it is needful to take this work in hand without further delay. We therefore do not hesitate to publicly emphasize the need of the hour which demands of the Government that it forthwith lay before the Diet a draft of an election reform which not only calls for a general, direct, secret ballot, but for an equal voting franchise for all; and, further, that the Government in addition give effective, visible expression of the confidence to which the German people are entitled.

The call was signed by Professor Hans Delbrück, historian of the University of Berlin; Alexander Dominicus, Chief Magistrate of Schoeneberg; Professor Emil Fischer, Dr. Adolf von Harnack, Dean of the German theologians; Professor Friedrich Meinecke, Count Monts, retired Ambassador; Professor Walter Ernst, Dr. Paul Rohrbach, Dr. Friedrich Thimme, and Professor Ernst Troeltsch. The signers, almost without exception, have been looked upon generally as stalwart conservatives.

This call was hailed with enthusiasm by the Berliner Tageblatt and other important papers, and the Socialist newspaper Vorwärts pronounced it "an historic document."

Agitation in the Reichstag

The Executive and Constitutional Committees of the Reichstag met July 4,

preliminary to the opening of the new session of that body. The Socialists demanded that immediate steps be taken to bring about electoral reform by having the Reichstag initiate the measures to bring about reforms in the individual States. The Government was reported as being willing to proceed at once with Reichstag election reform, involving subdivisions of the larger election districts and introduction of the proportionate ballot system which is quite well known in certain States of the American Union, but the Government did not think it advisable that the Reichstag should make ballot reform in the individual German States, especially Prussia, its own business.

The Socialists, however, wished to make it the business of the Reichstag, because the Prussian Diet was ultra-Conservative and would not favor reform; hence they announced a preference to have the settlement of Prussian ballot reform placed in the Reichstag's power; that body, according to the Socialists' idea, need only pass a law making the individual State electoral systems conform to that of the Reichstag. This, translated into American politics, would mean that Congress in Washington has the right to dictate to Ohio or Idaho what ballot system these States have to employ in their home elections.

These episodes were but the mutterings before the storm. It broke forth in its fury on July 6 at a joint session of the Main Committee and Constitutional Committee, held prior to the meeting of the Reichstag. Although the sessions of these committees were strictly executive, the comments in the newspapers next day indicated that very serious dissensions occurred.

Erzberger's Change of Front

It became known that Mathias Erzberger, a leader of the Clerical Centre, one of the most influential Catholics in Bavaria, which is one of the most powerful States in the German Confederation, created a profound sensation by deserting the Pan German and War Junker factions, and declaring for peace without annexations or indemnities. He severely criticised the Government's submarine policy

and the blundering diplomacy which had brought America into the conflict as Germany's enemy. This was a complete volte face, as Herr Erzberger had previously been regarded as a staunch Government supporter and his party as a main factor of the coalition. When it became known that the majority of his party, representing the influential Catholic faction of the Reichstag, was with him, it was clear that a crisis was impending, and that a majority in the Reichstag was probably against the Government.

Crown Council Summoned

Only fragmentary dispatches appeared for several days after this, and these were contradictory, but the world knew that the situation was serious. The Kaiser summoned a Plenary Crown Council. The Crown Prince was called to Berlin, as were Field Marshal von Hindenburg and Chief Quartermaster General Ludendorff. On July 8 the *Hamburger Fremdenblatt* said:

We are now living through the greatest crisis in our political life which has arisen since the outbreak of the war. This crisis centres around the fundamental questions of war and peace as well as the reorganization of our internal political system. It is in the nature of things that every such event crystallizes into a personal contest. Member of Parliament Erzberger's speech in the Reichstag General Committee was an attack on the Government, which means against the Secretary of the Navy as well as against the Chancellor. To avoid misunderstanding it should be said that the continuation of the submarine war does not come into the question, not even so far as Erzberger is concerned. The question is of the revising of the war aim formula somewhat on the lines demanded by our Social Democrats. Resolutions in the Reichstag will not accomplish this.

Since May there have been many changes. One thing, however, has not changed, and that is the complete lack of contact between Government and people. The reason for all these happenings? One has only to remember that the speech of a member of Parliament who chanced to be called Erzberger has sufficed to overthrow the entire structure of both our internal and external politics, nor was the Government able to stop it. That shows the bankruptcy of the system. The Kaiser is today in Berlin and conferring with Hindenburg, Ludendorff, and the Chancellor. Is it thinkable that at such a time

the party leaders should not be present and that what they have to say should not be also considered?

Harden's Magazine Suppressed

On July 11 *Die Zukunft*, Maximilian Harden's publication, was suppressed, and Herr Harden was drafted under the auxiliary civil service law to be employed as a military clerk. The following is an extract from the article which caused the suppression:

Herr von Bethmann is like neither Buddha nor a preacher in the mountains. He who hopes for his world to be saved by heavy guns, poisoned gas, mines, flame throwers, submarines, and air bombs must do without a reputation for sublime humanity. Every child understands that. Are impartial neutrals, then, to learn to dream with their eyes open that in the pure scales of the North Germans gentle humanity weighs heavier than rattling armor of power? Neutrals will never learn.

Are they (Germany's rulers) allowed by slandering an enemy who is not yet ready to conclude peace and by insisting all too loudly upon their deep belief in the nearness of peace, to nourish the mad but damaging belief that Germany is more weary than the league of her enemies? Must we not demand that our rulers shall learn and apply properly the principles of psychology and acoustics? Must we not demand that before they choose new weapons, and even before they resume the use of old weapons, they shall think out to the end every possible effect—not merely the effect which is desired by the commander in the field?

Harden reviewed once more the efforts to make capital out of the Russian revolution. He argued that it might have been possible for Germany to imitate the methods by which Frederick the Great ended the Seven Years' War after the death of Empress Elizabeth of Russia, but it would have been necessary to act promptly and make complete concessions, and the achievement would have required powerful statesmanship instead of "the Swiss pills" which merely reminded foreign countries of Herr Zimmermann's proposals to Mexico.

The first official utterance as the outcome of the crisis was the following manifesto, issued July 13, and addressed to the President of the State Ministry:

Upon the report of my State Ministry, made to me in obedience to my decree of April 7 of the current year, I herewith decide to order a supplement to the same,

that the draft of the bill dealing with the alteration of the electoral law for the House of Deputies, which is to be submitted to the Diet of the monarchy for decision, is to be drawn up on the basis of equal franchise. The bill is to be submitted in any case early enough that the next elections may take place according to the new franchise. I charge you to make all necessary arrangements for this purpose.

(Signed)

WILLIAM.

(Countersigned)

BETHMANN HOLLWEG.

The same day a statement was issued in explanation of the summoning of the Crown Prince. An official communication issued in Berlin had stated that Emperor William expressed the opinion that the political and constitutional reforms demanded by the Reichstag were such that they concerned not merely himself but his successor, inasmuch as they would be permanent. For this reason the Emperor summoned the Crown Prince to attend the Crown Councils at which final decisions regarding the extent to which the Crown and the Government would make concessions to the Reichstag were to be reached.

A Berlin correspondent, commenting on the Emperor's manifesto ordering electoral reform, said that the introduction of the phrase "equal suffrage" into the Emperor's manifesto restored a provision which, according to Berlin gossip, was contained in the original draft of the Easter manifesto and was eliminated at the last moment in consequence of a reactionary intrigue against the realization of the Emperor's wish for universal, equal, direct, and secret suffrage in Prussia. This is attributed to the reactionary Prussian Diet, which on an earlier occasion did not hesitate to disregard the sovereign's expressed wishes on franchise reform.

A correspondent at Berlin stated that the Emperor's manifesto forced the Prussian Ministry to discard its reform project, the draft of which had been largely worked out, and which, according to reports in Berlin political circles, although doing away with the three-class system, introduced the principle of plural voting as a concession to the Conservative and National Liberal Parties. A proviso was made that the attainment

of a certain age, marriage, or educational qualification entitled an elector to additional votes. The correspondent added:

The extent to which equal suffrage, if the Government is able to get its bill through the hostile Diet, will shake the domination of the Junker Prussian Government may be judged by the compilation of the probable strength of the parties in the Diet under this bill.

The Conservative leaders have figured, on the basis of their voting tables, that the strength of the two Conservative parties, now 262 out of a total membership of 443 in the lower house, would drop even under the most favorable conditions to 134, and might go to 100. The National Liberals, now with 73 members, would be represented in an equal suffrage House by 34 to 52, while the Socialists, with 10 members at the present time, would jump to at least 60, and might obtain as many as 125 seats. The Radicals would gain slightly and the Centre would show moderate shrinkage.

The Chancellor's Resignation

The story of the resignation of the Chancellor as related by The Associated Press correspondent is as follows:

The resignation of the Chancellor came in the end quite unexpectedly, for Dr. von Bethmann Hollweg, in the prolonged party discussions and heated debates of the Main Committee of the Reichstag, which have been proceeding all through the week, seemed to have triumphed over his opponents, who had been clamoring for his head, by making concessions which were tantamount to the formation of a kind of imperial Coalition Ministry.

At the same time, the Chancellor, by a declaration that Germany was fighting defensively for the freedom of her territorial possessions, evolved a formula that seemed satisfactory to both those who clamored for peace by agreement and those who demanded repudiation of the formula "no annexations and no indemnities."

In all this, Dr. von Bethmann Hollweg was strongly backed by the Emperor. The advent of the Crown Prince at the summons of his father to share the deliberations affecting the future of the dynasty seems to have changed entirely the situation with regard to the Imperial Chancellor. The Crown Prince at once took a leading part in the discussions with the party leaders, and his ancient

hostility toward Dr. von Bethmann Hollweg, coupled with his notorious dislike for political reform, undoubtedly precipitated the Chancellor's resignation.

Majority Peace Resolution

The Reichstag met July 11 and refused to vote the war credit, pending a solution of the political crisis. On July 13 the majority bloc of the Centre Radicals and Socialists, constituting a majority, decided to support the following peace resolutions:

As on Aug. 4, 1914, so on the threshold of the fourth year of the war the German people stand upon the assurance of the speech from the throne—"We are driven by no lust of conquest."

Germany took up arms in defense of its liberty and independence and for the integrity of its territories. The Reichstag labors for peace and a mutual understanding and lasting reconciliation among the nations. Forced acquisitions of territory and political, economic, and financial violations are incompatible with such a peace.

The Reichstag rejects all plans aiming at an economic blockade and the stirring up of enmity among the peoples after the war. The freedom of the seas must be assured. Only an economic peace can prepare the ground for the friendly association of the peoples.

The Reichstag will energetically promote the creation of international juridical organizations. So long, however, as the enemy Governments do not accept such a peace, so long as they threaten Germany and her allies with conquest and violation, the German people will stand together as one man, hold out unshaken, and fight until the rights of itself and its allies to life and development are secured. The German Nation united is unconquerable.

The Reichstag knows that in this announcement it is at one with the men who are defending the Fatherland. In their heroic struggles they are sure of the undying thanks of the whole people.

This resolution was adopted July 19 by a vote of 214 to 116, with 17 not voting.

Crown Prince's Influence

The *Tägliche Rundschau* of Berlin indicated that the Chancellor was forced out by the Crown Prince. It said in its issue of July 14:

It will be remembered that the Crown Prince's attitude toward the Chancellor and his policies is well known, and that,

apart from many other instances, at the time the Chancellor at the request of the Kaiser went to inform the Crown Prince at his headquarters of the coming Easter message, the Crown Prince had no scruples in expressing his vigorous opposition to the Chancellor's policies. To avoid further discussion the Chancellor withdrew, stating that he had fulfilled the Kaiser's mission, inasmuch as he had informed the Crown Prince of the coming action.

A Berlin correspondent added:

It is recalled here, also, how during the angry debate in the Reichstag on the Agadir affair in November, 1911, when Herr von Heydebrand, the so-called "uncrowned King of Prussia," attacked the Government's policy as being pro-English, the Crown Prince sat in the gallery shaking his head at Bethmann-Hollweg and openly applauding Heydebrand, even clapping his hands.

It was after this that the Crown Prince was banished by his angry father to Danzig, much to his disgust.

Also at the time of the Zabern incident the Crown Prince telegraphed to Captain Forstner, "Fester d'rauf!" ("Hit him again!") According to the view of many persons, the question whether the military or the civil power should dominate in Germany was settled at that time in favor of the former.

Judged by the comments of the German liberal press up to July 20, the political upheaval has strengthened the Extreme War Party and jeopardized the prospects of constitutional or Parliamentary reform.

The *Vossische Zeitung*, the *Tageblatt*, and *Vorwärts* on July 18 called attention to the fact that the appointment of Dr. Michaelis was made without previously sounding Parliament, and that the new Chancellor accepted the post without consultation with the party leaders or an attempt to learn whether his proposed policy was acceptable to the Reichstag. This they regarded as confirmatory evidence that the Reichstag's desire for formal acknowledgment of Parliamentary control of the old Government was ignored.

A correspondent at Amsterdam as late as July 18 asserted that Bethman Hollweg had fallen because he favored reform and a liberal peace policy. It was stated that he made two proposals, the first that in the direction of democratization a new body under the name of the

Reichsrat should be immediately constituted, which would be a sort of Committee of National Defense, and would for the time being act as a go-between twixt the Reichstag and the Emperor, thus instituting on a modified scale the principle of Parliamentary responsibility; the second that the Government should immediately make an authoritative declaration of "no annexations or indemnities." Both these proposals, it is asserted, had the backing of Bavaria and Austria, although Austria naturally had no open voice in the matter, which was purely a German internal affair.

Both proposals were violently opposed by the Crown Prince, von Hindenburg, and Ludendorff. It is declared that von Hindenburg came out openly for a "German peace."

Gain for Militarist Party

The official view at Washington was that the crisis had resulted in a com-

plete triumph for the Militarist Party, headed by the Crown Prince, and in a lessening of the prestige of the Emperor and the Moderates.

The letter of the Kaiser accepting the resignation of Dr. von Bethmann Hollweg was made public July 16, as follows:

I decide with a heavy heart by today's decree to grant your request to be relieved from your office. For eight years you have occupied the highest and most responsible offices in the imperial and State services with eminent loyalty, and have successfully placed your brilliant powers and personality at the services of the Kaiser and the empire and the King and the Fatherland.

In the most grievous times that have ever fallen to the lot of the German countries and peoples—times in which decisions of paramount importance for the existence and future of the Fatherland have had to be taken—you have stood by my side with counsel and aid. It is my heart's desire to express my most cordial thanks for your faithful service.

First Address of the New Chancellor

DR. MICHAELIS, the new Chancellor, made his initial address to the Reichstag July 19. He paid a warm tribute to his predecessor. In the course of his remarks he said:

Unless I had believed firmly in the justice of our cause I would not have accepted office. We must keep before our eyes daily the events of three years ago, which are fixed in history and which show we were forced into the war by Russia's secret mobilization, which was a great danger to Germany. To have participated in a conference while the mobilization proceeded would have been political suicide. [Exclamations of "quite right" from the Conservatives.]

The mobilization of the Russian Army compelled Germany to seize the sword. There was no choice left to us, and what is true of the war itself is true also of our weapons, particularly the submarine. We deny the accusation that the submarine warfare is contrary to international law and violates the rights of humanity.

England forced this weapon into our hands through an illegal blockade. England prevented neutral trade with Germany and proclaimed a war of starvation. Our faint hope that America, at the head of the neutrals, would check English

illegality was vain, and the final attempt we made by an honorably intended peace offer to avoid the last extremity failed.

Then Germany had to choose this last weapon as a countermeasure of self-defense. Now, also, she must carry it through for the purpose of shortening the war.

The submarine war is accomplishing all, and more than all, it is expected to. False reports which found their way into the press as a result of the secret session of the Reichstag evoked for a time a certain feeling of disappointment which ended at a particular time. They did the Fatherland no service.

I declare, in fact, that the submarine war accomplishes in the destruction of enemy tonnage what it should. It impairs England's economic life and the conduct of the war month to month in a growing degree, so that it will not be possible to oppose the necessity for peace much longer. We can look forward to the further labors of the brave U-boat men with complete confidence. * * *

Russian Offensive Unimportant

In the East, in consequence of the confusion in Russia, the attack of Russian millions did not materialize, and there is comparative calm. Only after false reports and incitement by Russia's allies

had stirred the Russian soldiers did the present offensive develop. Its goal was Lemberg and Drohobycz. General Brusiloff, with all his enormous sacrifices, has gained only a slight advantage. * * *

Greece was forced by violence to enter the war against us. Our common front with the brave Bulgarians stands firm.

Italy, even through the eleventh Isonzo battle against our war-tried Austro-Hungarian brothers, will not be able to attain the goal of its breach of faith—the possession of Trieste.

We look without serious concern upon the optimistic sentiment in the Entente countries caused by America's intervention. It is easy to reckon how much tonnage is necessary to transport an army from America to Europe, how much tonnage is required to feed such an army. France and England are scarcely able to feed and supply their own armies without influencing the economic situation still further. After our previous success we shall be able to master this situation also through our fleet, particularly the submarines. That is our firm conviction and assurance. We and our allies, therefore, can look forward to any further development of military events with calm security.

How Much Longer?

The burning question in our hearts, however, is how much longer the war is to last. With this I come to a matter which stands in the centre of all our interest and all our proceedings today. Germany did not desire the war in order to make violent conquests and, therefore, will not continue the war a day longer merely for the sake of such conquests, if it could obtain an honorable peace.

The Germans wish to conclude peace as combatants who have successfully accomplished their purpose and proved themselves invincible. A condition of peace was the inviolability of Germany's territory. No parley was possible with the enemy demanding the cession of German soil.

We must, by means of understanding and in a spirit of give and take, guarantee conditions of the existence of the German Empire upon the Continent and

overseas. Peace must offer the foundation of a lasting reconciliation of nations. It must, as expressed in your resolution, prevent nations from being plunged into further enmity through economic blockades and provide a safeguard that the league in the arms of our opponents does not develop into an economic offensive alliance against us.

These aims may be attained within the limits of your resolution, as I interpret it. We cannot again offer peace. We have loyally stretched out our hands once. We met no response, but with the entire nation and with Germany, the army and its leaders in accord with this declaration, the Government feels that if our enemies abandon their lust for conquest and their aims at subjugation and wish to enter into negotiations we shall listen honestly and readily to what they have to say to us. Until then we must hold out calmly and patiently.

Nation's Most Serious Crisis

The present time is, in regard to food conditions, the most severe we have experienced, and the month of July has been the worst. Drought has delayed the crops, and want exists in many cases, but I can declare with glad confidence that relief will shortly set in and the population can then be supplied more adequately.

On the occasion of his acceptance of the Chancellorship Dr. Michaelis sent a message to Count Czernin, the Austro-Hungarian Foreign Minister, saying that he considered it his chief and inviolable duty to preserve the previous inheritance of the closest and most loyal confederation. It was his firm conviction that Austria-Hungary and Germany would be victorious and that the war would secure for the heroic people a happy and bright future. Count Czernin, in reply, said he saw the best guarantee of a happy future in intimate and confident co-operation with the leaders of the German policy and firm insistence upon the well-tried alliance.

How the Hohenzollerns and Junkers Control

By Charles Downer Hazen

Professor of European History, Columbia University

THE German Empire is a confederation, founded in 1871—founded by the Princes, not by the people—and consists of twenty-five States and one imperial territory, Alsace-Lorraine. The King of Prussia is ipso facto German Emperor. The legislative power rests with two bodies—the Bundesrat, or Federal Council, and the Reichstag. The Emperor declares war with the consent of the Bundesrat, the assent of the Reichstag not being required. He is Commander in Chief of the Army and Navy, he has charge of foreign affairs, and makes treaties, subject to the limitation that certain kinds of treaties must be ratified by Parliament. He is assisted by a Chancellor, whom he appoints and whom he removes, and who is responsible to him, and to him alone. Under the Chancellor are various Secretaries of State, who simply administer departments, but who do not form a Cabinet, either in the English or French or American sense. They are responsible to the Chancellor.

The laws that govern the German Empire are made by two bodies—the Bundesrat and the Reichstag. The Bundesrat, of which we in America hear very little, is the most powerful body in the empire, far more powerful than the Reichstag, of which we hear a great deal. It possesses legislative, executive, and judicial functions, and is a kind of diplomatic assembly. It represents the States; that is, the rulers of the twenty-five States of which the empire consists. It is composed of delegates appointed by the rulers. Unlike the Senate of the United States, the States of Germany are not represented equally in the Bundesrat, but most unequally. There are sixty-one members. Of these Prussia has seventeen, and the three votes allotted to Alsace-Lorraine

since 1911 are "instructed" by the Emperor. Thus Prussia has twenty, Bavaria has six, Saxony and Württemberg four each, others three or two, and seventeen of the States have only one apiece. The members are really diplomats, representing the numerous monarchs of Germany.

Voting Under Orders

They do not vote individually, but each State delegation votes as a unit and as the ruler orders it to. Thus the votes that Prussia controls are cast always as a unit and as the King of Prussia directs. The Bundesrat is in reality an assembly of the sovereigns of Germany. It is responsible to nothing on earth, and its powers are very extensive. It is the most important element of the Legislature, as most legislation begins in it; its consent is necessary to all legislation, and every law passed by the Reichstag is, after that, submitted to it for ratification or rejection. It is therefore the chief source of legislation. The Princes of Germany have an absolute veto upon the only popular element in the Government, the Reichstag. Representing the Princes of Germany, the Bundesrat is a thoroughly monarchical institution, a bulwark of the monarchical spirit. The proceedings of this princely assembly are secret, which is one reason why we know and hear less about it than we do about the Reichstag.

Much less important than the Bundesrat is the Reichstag, the only popular element in the government of the empire. It consists of 397 members, elected for a term of five years by the voters, that is, by men 25 years of age or older. The powers of the Reichstag are vastly inferior to the powers of the House of Commons or the Chamber of Deputies or the House of Representatives. While it, in conjunction with the Bundesrat, votes

the appropriations, certain ones, notably those for the army, are voted for a period of years. Its consent is required for new taxes, whereas taxes previously levied continue to be collected without the consent of Parliament being again secured.

The Reichstag has no power to make or unmake Ministries; in other words, to control the executive, the Emperor. It may reject the measures demanded by the Government, it may vote what amounts to a lack of confidence in the Chancellor, but to the Chancellor it makes notoriously little difference. As long as he enjoys the confidence of the Emperor he continues on his way. Bismarck was fond of repeating from the tribune that he was not the servant of the Reichstag, but exclusively of the Crown. William II. dismissed in turn Bismarck, Caprivi, Hohenlohe, and Bülow. The imperial will determines the fate, dictates the rise and fall of the Chancellor.

Bethmann Hollweg has been the Emperor's man in body and soul. No val-
leity of independence has surged up in that submissive bosom. A bureaucrat of forty years' standing, advancing by regular gradations from the lowest rung of the administrative ladder to the highest, his view has remained the same, his gaze has been at every stage and is still riveted solely upon his superior, and his superior never has been nor is now the Reichstag. His source of inspiration is in the Schloss, not in the benches of the popularly elected Legislature. Bethmann Hollweg is sometimes frank, frank to the point of rudeness. "Gentlemen," he said at the beginning of his Chancellorship, "I do not serve Parliament," and was loudly applauded for his insolence by the members of the conservative parties of the Parliament, thus a victim of the proud man's contumely. And he ended this scornful speech with the statement that there was one rôle which he absolutely refused to play, that of the servant of the people's representatives. Bethmann Hollweg, who has curiously been considered a liberal by some ill-informed and putative American liberals, has the merit of great clarity in his consistent, undeviating hostility and con-

tempt for parliamentarism and for democracy. When reproached by the Socialists for not resigning after a vote of censure, as they do in France, he retorted that even children knew the difference between France and Germany.

"I know full well that there are those who are striving to establish similar institutions here," he said. "I shall oppose them with all my force."

Only the other day this "liberal" told the Right and the Left contemptuously that he was serving neither of them. He had a more august master. Not only does the Reichstag have no control over the Government, not only is it blocked and immensely outweighed by the Emperor, by the Bundesrat, and by the army, but it is itself, even within the sacred circle of its impotence, a very inaccurate representation of the people. The electoral districts as laid out in 1871 were equal, each representing approximately 100,000 inhabitants. But since that day there has been practically no change, although population has increased in some, decreased in others, so that there now exists a glaring inequality between the districts. There are some members of the Reichstag elected by a few thousand voters, others by the hundreds of thousands. The voter in some districts counts for only a thirtieth of the voter in certain other districts. The large districts are naturally progressive cities, the small ones the conservative country regions. A Berlin Deputy represents on the average 125,000 voters; a Deputy of East Prussia, home of the far-famed Junkers, an average of 24,000.

The Impotent Reichstag

But the fundamental evil is that the elections to the Reichstag result in the creation of an Assembly politically impotent, which does not control the executive and whose powers of legislation are subject to an absolute veto by the Bundesrat—that is, by the reigning Princes, big and little. German government is government by the Emperor and the dynasties, with the consent of the Reichstag, a consent which in practice can be forced, if not given voluntarily, for the

Bundesrat has the power of dissolving the Reichstag whenever it wishes to, a power always efficacious thus far. The German governing classes, the Princes, the bureaucracy, agree with Moltke, who said that the real ballot was the cartridge which the German soldier carried in his cartridge box, that the real representative of the nation was the army.

For all practical purposes the Reichstag is merely a debating club, and a debating club that has no power of seeing that its will is carried out. As late as January, 1914, Dr. Friedrich Naumann of "Middle Europe" fame described the humiliating position of the body of which he was a member in the following words:

"We on the Left are altogether in favor of the parliamentary régime, by which we mean that the Reichstag cannot forever remain in a position of subordination. Why does the Reichstag sit at all, why does it pass resolutions, if behind it is a wastepaper basket into which these resolutions are thrown? The problem is to change the impotence of the Reichstag into some sort of power." He added: "The man who compared this House to a hall of echoes was not far wrong. To those who are accustomed to do practical work in life it appears a mere waste of time to devote themselves to this difficult and monotonous mechanism. * * * When one asks the question, What part has the Reichstag in German history as a whole? it will be seen that the part is a very limited one."

"Many millions among us," said Dr. Frank in the Reichstag on Jan. 23, 1914, "feel it a burning shame that while Germans achieve great things in trade and industry, in politics they are deprived of rights."

In the determination of national policy the German Nation has, therefore, no way of enforcing its wishes through the only agency it possesses. In other words, the nation does not govern itself. The main-spring of power lies, not in the Reichstag, but in the Bundesrat, the organ of the Princes, every one of whom claims to rule by Divine right, not one of whom has his policy dictated to him by his people's representatives—and in the Kingdom of Prussia.

Absolutism in Prussia

The Kingdom of Prussia is larger than all the other German States combined, comprising two-thirds of the territory and about two-thirds of the population of Germany. The empire differs from other confederations in that the States composing it are of unequal voting power in both the Bundesrat and the Reichstag. It was Prussia that made the German Empire, and made it by blood and iron, and in the empire she has installed herself at every point of vantage and guards jealously not only the primacy but also the actual power.

Prussia has, since 1850, had a Constitution and a Parliament. What are they like? The Constitution was granted by the King, and nowhere does it recognize the sovereignty of the people. What the monarch has granted he can alter or withdraw. All the restriction the Constitution imposes upon the monarchical principal is that henceforth it shall be exercised and expressed in certain forms, with a certain procedure. Prussian statesmen and Prussian jurists maintain with practical unanimity that this does not mean any diminution of the power of the monarch, that the fact that he creates a Legislature does not for an instant mean that he devolves upon it a part of the sovereignty.

The Legislature of Prussia is the Landtag, which consists of two chambers, the House of Lords and the House of Representatives. The Legislature does not initiate much legislation. Most of the bills passed by it have been proposed by the Government; that is, by the King. The Legislature has practically no control over the administration; that is, over the powerful and permanent bureaucracy. It can in this sphere express opinions and practically nothing more. The Constitution does not determine the composition of the House of Lords, but leaves that to the King to determine by royal ordinance. As a matter of fact, this House is really overwhelmingly dominated by the land-owning nobility, the famous Junkers, men frequently more royalist than the King, conservative and militaristic to the marrow of their bones. The House is subject to the absolute

control of the monarch through his unrestricted power to create peers. It is really a sort of royal council, an extension or variation of the royal power. It is a body that in no sense represents the people of Prussia. It has a veto upon all legislation, and the King has an absolute veto also.

Yet there exists another House in this Legislature which enacts the laws that govern 40,000,000 Prussians—the so-called House of Representatives; and marvelous, indeed, is the construction and composition of that body. Every Prussian man who has attained his twenty-fifth year has the vote. Is Prussia, therefore, a democracy? Not exactly, for the exercise of this right is so arranged that the ballot of the poor man is practically annihilated. Universal suffrage has been rendered illusory. And this is the way it has been done: The voters are divided in each electoral district into three classes according to wealth. The amount of taxes paid by the district is divided into three equal parts. Those taxpayers who pay the first third are grouped into one class; those, more numerous, who pay the second third, into another class; those who pay the remainder, into still another class. The result is that a very few rich men are set apart by themselves, the less rich by themselves, and the poor by themselves. Each of these groups, voting separately, elects an equal number of delegates to a convention, which convention chooses the delegates of that constituency to the lower house of the Prussian Parliament.

No Chance for the Poor

Thus in every Electoral Convention two-thirds of the members belong to the wealthy or well-to-do class. There is no chance in such a system for the poor, for the masses. This system gives an enormous preponderance of political power to the rich. The first class consists of very few men, in some districts of only one; the second is sometimes twenty times as numerous, the third sometimes a hundred, or even a thousand times. Thus, though every man has the suffrage, the vote of a single rich man may have as great weight as

the votes of a thousand workingmen. Universal suffrage is manipulated in such a way as to defeat democracy decisively and to consolidate a privileged class in power in the only branch of the Government that has even the appearance of being of popular origin. Bismarck, no friend of liberalism, once characterized this electoral system as the worst ever created. Its shrieking injustice is shown by the fact that in 1900 the Social Democrats, who actually cast a majority of the votes, got only 7 seats out of nearly 400. It is one of the most undemocratic systems in existence.

The voters do not choose their representatives directly. The suffrage is indirect, and is, moreover, as we have seen, grossly unequal. As this system is in vogue for municipal elections as well as for State elections, it throws power, whether in the municipality or in the nation, into the hands of men of wealth.

In 1908 there were 293,000 voters in the first class, 1,065,240 in the second, 6,324,079 in the third. The first class represented 4 per cent., the second 14 per cent., the third 82 per cent. of the population. In Cologne the first class comprised 370 electors, the second 2,584, while the third had 22,324. The first class chose the same number of electors as the third. Thus, 370 rich men had the same voting capacity as 22,324 proletarians. In Saarbrücken, the Baron von Sturm formed the first class all by himself, and announced complacently that he did not suffer from his isolation. In one of the Berlin districts Herr Heffte, a manufacturer of sausages, formed the first class.

This system would seem to be monstrous enough by reason of the monstrous plutocratic cast. But this is not all. This reactionary edifice is appropriately crowned by another device, oral voting. Neither in the primary nor the secondary voting is a secret ballot used. Voting is viva voce. Thus every one exercises his right publicly in the presence of his superior or his patron or employer, or his equals or the official representative of the King. In such a country as Prussia, where the police are

notoriously ubiquitous, what a weapon for absolutism! The great landowners, the great manufacturers, the State, can easily bring all the pressure they desire to bear upon the voter, exercising his wretched rudiment of political power.

On Feb. 10, 1910, Herr von Bethmann Hollweg defended this system in the Landtag with great frankness: "We are opposed to secret voting because, instead of developing the sense of responsibility in the voter, it attenuates it, and, on the other hand, it favors the terrorism which Socialists exercise over the bourgeois voters."

As a matter of fact, a large number of voters prefer to forego their miserable privilege entirely and stay at home. In 1903, 23.6 per cent. only of them voted for the Prussian House of Representatives, while the same year 75 per cent. voted in the elections for the Reichstag, where the secret ballot is used. Of those who failed to vote, much the larger percentage is from the third class, whose members evidently feel the nullity of the privileges they enjoy in this "people's kingdom of the Hohenzollern," as the Kaiser alluringly describes it.

An additional evidence as to the perfection of the "people's kingdom" is this: With the exception of a thoroughly insignificant measure passed in June, 1906, there has been no change in the electoral districts since 1858. No account has been taken of the changes in the population, and there are the same or worse disparities than there are in the case of the Reichstag, as previously stated. It thus happens that 3,000,000 inhabitants of four large Prussian districts return nine representatives, while three other million, divided among forty smaller districts, return sixty-six. Here again the natural result of the change of the population owing to the economic evolution has inordinately increased the influence of the rural districts, prevalently Conservative.

In 1903 under this system 324,157 Conservative votes elected 143 representatives; but 314,149 Social Democratic votes did not secure the election of a single member.

Princes Have the Veto

Neither in the empire nor in Prussia nor any of the other States that compose the empire does the elected Chamber control the Government. In every case the Prince has the absolute veto. Where there are second Chambers, as in many of the States, they are not elected, but are nominated, and are a bulwark of a privileged class. And in Prussia even the so-called popular House is merely another name for a privileged class. Neither in the nation nor in the States are the Ministers controlled by the popular assemblies. They may vote a lack of confidence as often as they feel like it. The Ministers will go right on as long as the Emperor, King, Grand Duke, or Prince desires. You cannot amend the Constitution in any German State without the consent of the Prince. You cannot amend the Constitution of the empire without the consent of one man, William II. Reichstag committees may discuss and propose amendments to their hearts' content. After they have obtained the consent of the Reichstag a rocky road opens out broadly ahead of them. For they must have the approval of the Bundesrat, which is appointed by the reigning Princes of Germany and is obliged to vote as they direct. No amendment can pass the Bundesrat if 14 votes out of the 61 are cast against it. Of these 61, Prussia has 20. The Prussian votes are cast as the King of Prussia directs. If every individual in Germany except this one, and including the other Kings and Dukes, wanted a change in the Constitution, they couldn't get it if William II. said No! This is the people's kingdom with a vengeance!

The power of the Prussian Crown is virtually absolute—"absolutism under constitutional forms," said Rudolph Gneist, once considered in Germany a great authority on public law, before the modern school of publicists—Laband, George Meyer, Bornhak, Jellinek, Delbrück—became the teachers of Germany, and taught the most reactionary political philosophy that Europe has heard since the time of de Bonald and de Maistre. They have taught that the complete, uncontrolled power of the "Government"

(Regierung) is in the power of the Prince, that the granting of Constitutions did not mean the recognition of popular sovereignty in the slightest degree, that Legislatures are not representations of the people but are mere organs of the State, that Legislatures have no right to bring the State to a standstill, that is, have no right to refuse a budget until their wishes are respected; that, if they do, they are acting not in a constitutional but in a revolutionary sense; that if such a step is taken, then it is the right of the sovereign to recur to the principle that existed before the granting of the Constitution, absolute monarchy, and to do what he regards as wise.

German Legislatures are impotent and ineffective. The effective seat of political power in Germany is, as it has always been, in the monarchs. Germans may have the right to vote, but Napoleon I. and Napoleon III. showed men (and Bismarck among others) that that made no difference, if the vote led nowhere, if the body elected by the voters was carefully and completely nullified by other bodies over which the voters had no control whatever.

The Legislatures of Germany are really only royal councils, consultative assemblies. Bismarck's defiance of the Prussian Chamber and the voters who elected it, in the Conflict Period, from 1862 to 1866, has been decisive for the fate of popular government in Germany.

The All-Powerful King

Prince von Bülow, the ablest Chancellor of the empire since Bismarck, said in 1914: "Prussia attained her greatness as a country of soldiers and officials, and as such she was able to accomplish the work of German union; to this day she is still, in all essentials, a State of soldiers and officials." The governing classes are, in Prussia, which in turn governs Germany, the monarch, the aristocracy, and a bureaucracy of military and civil officials, responsible to the King alone. The determining factor in the State is the personality of the King.

Prussia has been the strongest obstacle the democratic movement of the nineteenth and twentieth centuries has encountered. Germany in 1914 was less

liberal than in 1848. The most serious blow that the principle of representative government received during that century was the one she received at the hands of Bismarck. We have expert testimony of the highest and most official sort that the effects of that blow are not outlived. Prince von Bülow, writing in 1914, said:

"Liberalism, in spite of its change of attitude in national questions, has to this day not recovered from the catastrophic defeat which Prince Bismarck inflicted nearly half a century ago on the party of progress which still clings to the ideals and principles of 1848."

Parliaments will not control in Germany, the civil power will not dominate the military, until the present régime, exalted and strengthened by the victories of 1864-70, is debased and disgraced by resounding and disastrous defeats. It is doubtful if there will be any change even then, for the German people are the most docile in Europe, with no taste for revolutions, with no revolutions to their credit, as have England, France, America, Russia, even China. Personal Government has brought the present calamity upon the world, and the possessors of that power will fight to retain it, and will, if necessary, treat the German people with the same ruthlessness as they have treated the other peoples of Europe. Moreover, the solidarity of governed and governors, in atrocious crimes, during the past three years gives little hope to liberals in other countries who desire liberalism in Germany.

Let us not be hoodwinked by Easter messages from William II., or by cloudy and ambiguous utterances of Bethmann Hollweg, as presaging forthcoming liberalization of Germany. Prussian Kings have shown that not only are treaties scraps of paper but that Constitutions are also scraps of paper when their provisions annoy the monarch. And Prussian monarchs have never been squeamish about perjury. The famous Easter "promises" of this year will not be a greater hindrance to imperial and royal volition than previous, celebrated promises to Belgium and to the United States have been.

RUSSIA'S NEW OUTLOOK

Achievements and Problems, Both Civil and Military, in the Fourth Month of the Revolution

THE situation in Russia improved, on the whole, during the fourth month after the abdication of Nicholas II. The marked feature of this advance was the way in which the civil power and the army reacted upon each other, each strengthening and steadying the other. The great offensive, which began on July 1—the anniversary of the battle of the Somme—and which, up to the middle of the month, had netted some 35,000 prisoners, was made possible by the strong hand of Alexander Kerensky at the War Ministry and the iron discipline which he promised to introduce, aided by the power of his fiery eloquence, which swept through Russia like a flame. And, once the offensive was started, the rapid succession of victories gained by the far-sighted military genius of General Brusiloff reacted in a very favorable sense upon the position of the Provisional Government, giving it new strength and prestige. Hindenburg checked the advance on July 17, but success had already consolidated the Russian Army and hardened and condensed the national spirit of the civil population behind the lines.

The instant success of Brusiloff's army, which duplicated the striking achievements of June, 1916, went far to show that the demoralization of the Russian Army had not gone to anything like the point suggested by pessimist cablegrams from Petrograd. It was evident that General Brusiloff to a large degree succeeded in shutting out from the army under his personal command—the Army of the Southwest, which was attacking—the wave of demoralization which turned the heads of the troops at Kronstadt and Schlüsselburg; succeeded also to a great extent in preventing the "fraternization" which is believed to have been a war ruse of the German Intelligence Department. Further, he kept his men vigilant and prepared along the fighting front; for

during the three months of inactivity and disorder following the revolution the combined Teuton armies did not gain a foot of ground anywhere along the long Russian line. This was no doubt due in part to a politic holding back inspired by the illusive hope of a separate peace; but at the same time it showed that the Russian lines all the way from the Baltic to the Danube were kept watertight during all the months of political turmoil. Finally, the supply of shells must have been steadily accumulating behind the lines, in spite of all obstructions in traffic arrangements.

Two difficult problems confront the Provisional Government, both due to groups calling themselves Socialists. There have been armed riots on the Nevsky Prospect. The most serious disturbances since the new Government was organized occurred in Petrograd on July 17. The radicals, by continued agitation and inflammatory appeals against the Provisional Government under the leadership of an extremist named Lenin, succeeded in precipitating disorders in the streets, and a number of disaffected soldiers and sailors co-operated with them. There was fighting between mobs and the troops of the Provisional Government, and fully 500 were killed and wounded during the two days. It was openly charged that documentary evidence was discovered which showed that Lenin and other radical leaders were in the pay of pro-Germans.

The avowed purpose of the anarchist demonstrations was to overturn the Provisional Government and seize the reins of power, immediately recalling the Russian Army from the fighting line.

The Government succeeded in restoring order on July 19, and received evidences of renewed support from all parts of the country. A special Congress of Delegates representing all the Councils

of Russia was summoned to meet July 28 to determine the future Governmental policy.

The second difficulty is also due to "Socialist" tendencies. It appears that two members of the Provisional Government, the Georgian Tsereteli and Terestchenko, Foreign Minister, whose name shows him to be of South Russian origin, were deputed to meet representatives of the so-called Ukrainian Party, which demands autonomy, if not independence, for a region partly in Southwestern Russia, partly in Galicia, called the Ukraine, or Borderland, (from the Russian "krai," a border.) It appears that these two Ministers committed the Provisional Government to certain extreme concessions, which practically suspend the authority of the Provisional Government in this loosely defined territory lying along and immediately behind the fighting line. The insistence that autonomy be granted at once caused the resignation July 15 of five members of the Cabinet, who were Constitutional Democrats.

The so-called "Ukraine" movement, which is very like the Sinn Fein movement in Ireland, had a certain development among emigrants to the United States, and there was good reason to believe that it had strong German support. Whether its recrudescence in Russia is directly due to this cause, or simply represents the efforts of Socialist extremists bent on carrying out a theory of decentralization at whatever cost to the State, it is evident that the Ukrainian movement will require very careful handling if it is not to become an open menace.

Finland presents a like problem. The

people of the Ukraine are of Slavonic blood, speaking a dialect so close to Russian as to be easily intelligible to all Russians. The Finns, on the contrary, are non-Aryan, remotely allied to the Magyars and the Turks, and also to a wide strip of peoples along Northern Russia and through the whole length of Siberia. On the ground of difference of race they now demand separate treatment, further alleging that the rights of the former Czar, as Grand Duke of Finland, did not pass automatically to the Provisional Government at the revolution, but reverted to the Finnish people.

There is reason to see the hand of Germany in the Finnish imbroglio also. While the bulk of the population is Finnish, the ruling class is Swedish, speaking the Swedish tongue, and, like Sweden itself, strongly sympathizes with Germany in the present war. It has been announced that some kind of a working compromise with the Finnish "nationalists" has been reached, in part through the efforts of the Georgian, Nicholas Tscheidze, conspicuous during the early days of the revolution as President of the Committee of Workmen's and Soldiers' Delegates, which made so many difficulties for the Provisional Government during its early existence, especially by demanding that all army orders must be submitted to this committee before coming into force. This danger was measurably removed by the strengthening of discipline in the army, by the formation of committees of the army itself and of its officers, but even more by the strong and successful offensive. C. J.

July 20, 1917.

Premier Lvoff on Russia's Situation

[Statement made July 7, 1917]

PRINCE LVOFF, Russian Premier and Minister of the Interior, made a public statement at Petrograd on July 7 for the information of America. He began by declaring his unshaken conviction that, despite grave difficulties to be faced, Russia was marching toward

reconstruction and stability, and that the war was developing toward victory. Prince Lvoff continued:

Regarding the war, say that the latest action of our army inspires in me full hope. I am convinced that the new advance, even if temporarily stayed, is not finished, but is a prelude to much

greater successes. The advance thoroughly confutes the pessimists who unanimately predicted that an offensive by our supposed disorganized troops was impossible. From actual intercourse with delegates from the army and with other observers on the spot, I know that the offensive spirit is spreading.

This is no gradual reconstruction of the army, but the first stage of a complete process of recreation, which is almost miraculous, proving, in my judgment, that the troops are infected with a genuine revolutionary and crusading spirit and the consciousness of a mission to save Russia and influence world events in the direction desired by all progressive men.

The good side is the army's supply of munitions and other necessities, in which we are markedly better off than last year; in fact, guaranteed for the immediate future. The bad side is the transport difficulties, which still are serious. These are an evil heritage from the old régime, and, naturally, it is impossible to restore order in three months crowded with revolutionary activities. Even with stable political conditions the creation of efficient transport is a problem of years. Our great hope of speedy improvement lies with the Stevens Railroad Commission, (the American Commission,) from which we expect much.

American Aid Welcome

With regard to American help generally, I lay down no specific program. It will be simplest to say that all conceivable American aid is wanted in every domain. But the key to the solution of all our military and economic difficulties is transport amelioration, in which it is impossible to do too much.

Send my hearty thanks for the American project, the dispatch of the Red Cross mission, as here we have serious defects and deficiencies. I follow the news on this subject from New York with intense interest, but, having myself ceased to direct Red Cross and sanitary affairs, I can only beg America as far as possible to meet the requests for material and personal help made by our official Red Cross, in the consciousness that the triumph of our common cause will be furthered thereby.

I hope also for further American financial support. I am unable to say what form this will take, presumably a loan, but on this subject our Finance Minister, M. Shingaroff, in his discussion with the financial members of the Root Commission, will no doubt produce a practical program which America can help realize. America should note that we ourselves are ready to bear the heaviest monetary sacrifices and have already passed more drastic measures respecting taxation on

property than any of the other belligerent powers and are ready to go much further.

Among our other economic problems the most vital is food. Here again the central question is transport, and if America helps in this we can do the rest ourselves, as the total stock of food is sufficient for both the army and the civilian population.

The Internal Situation

Prince Lvoff proceeded to discuss the internal situation, declaring that this has had a marked influence on Russia's ability to carry on the fight in the war with vigor. He said:

I am glad to see last week's marked signs of amelioration. Tell America that I have daily evidence of the rallying of all the rational elements of the nation round the Coalition Cabinet. The irrational elements, such as the anarchists and Bolsheviks, are in such a minority that there is no reason to fear their getting the upper hand. Not only the bourgeoisie, but an overwhelming majority of the workmen are against them. Their present excesses are merely a last desperate reaction against their consciousness of this.

On the whole, the nation is satisfied with the Provisional Government, because the Government, though hampered by grave military and diplomatic preoccupations, has already successfully carried through internal reforms which embody the traditional aspirations of Russia's progressives. Do you know that within a few weeks of the Czarists' downfall the Government realized a liberal fivefold program, giving complete liberty of person, speech, press, meeting, and religion, and going therein further than most progressive democracies in Europe or America?

Although these tremendous reforms were pushed through hastily in the absence of legislative machinery, not one of them has been subjected to serious criticisms even by the avowed anti-Government factions. Perhaps America knows of this, but does she know that we have also executed a comprehensive scheme of minor economic, financial, and social reforms, which has been unanimously approved?

I refer you, for instance, to the complete democratization of the country, local self-government in the towns throughout the country, with the universal and equal suffrage for both sexes regardless of qualifications, the special feature of which is the establishment of a smaller unit of local government, in which is abolished the inequality between peasants and the other classes, thus eradicating from the Russian law the ancient and degrading distinction of "the privileged

classes"; the reform of the military courts and of local courts of justice, with the admission of women to the magistracy and legal profession; educational reform, including a new university in the City of Perm; secondary school reconstruction, the reform of the backward parish elementary school, the democratic income property tax, with the proposal for the reform of succession taxation; the organization of peasant home work, which is an important factor in our village economy; the mobilization of the nation's technical knowledge for war purposes; many church reforms, among them the election of the highest prelates by popular vote, and the preparations for an ecumenical church council, aiming at the abolition of State despotism in church affairs.

Through these reforms Russia in 100 days has advanced 100 years.

America as Russia's Ideal

Prince Lvoff went on to declare that diplomatic relations with the Allies were much improved; that, despite three months of stagnation on the part of Russia's Army and the critical attitude of her democracy to the Allies, the program of mutual confidence was unshaken. "Equally satisfactory," said Prince Lvoff, "are our relations with America. Let me here express to America our hearty satisfaction at the visit of the Root Mission." In conclusion he discussed Russo-American and Russian world relations with fervor, declaring

that the greatest hope lay in Russia's new approximation to America. He added:

For decades of darkness and oppression America had been our ideal of freedom and intellectual and material development; rather, not our ideal, for we had considered it unattainable, but a remote fairy tale of happiness. Now we have in one jump reached America's condition of freedom. There remains the slower but not impossible task to overtake her in education, material progress, culture, and respect for order.

We are on the right track. The spirit of new Russia is closely akin to the immortal spirit of free America, and where the spirit is, work follows. That means Russia's salvation. But that is not all. I am convinced that our revolution is no mere domestic affair, but a stage in the new world movement toward liberty, equality, fraternity—perhaps the greatest stage in the world's history. Equally, I consider that the war, like, indeed, preceding wars, is a stage in world evolution. This war's mission is to spread throughout the world all that is vital and abiding in our revolution. That is why as a citizen of the world I desire victory.

I regard the growing friendship between Russia and America as a Providential instrument in this world process. Therefore I consider that all the help, sympathy, and encouragement we get from your people beyond the seas constitute not merely a local, temporary benefit, but a permanent contribution toward the regeneration of the world.

Russian Ambassador's Formal Address

BORIS BAKHMETEFF on July 5 formally presented his credentials to President Wilson as Russian Ambassador. The formal addresses were as follows:

Mr. President, I have the honor of presenting to you the letters by which the Provisional Government of Russia is accrediting me to the Government of the United States of America as its Ambassador Extraordinary and Plenipotentiary.

My Government has directed me to express to you its profound gratitude for the noble act of prompt recognition by your Government of the new order established in Russia and to convey to the Government and to the people of the United States the feelings of sincere sympathy and friendship.

At the present time the historical paths of the United States and Russia have been drawn close in the common struggle for

freedom and lasting peace of the world, and in this strife the new-born Russian democracy is being guided by the same unselfish aims, the same human and democratic principles, as this great Republic.

The success of our mutual task makes essential the firm establishing of the democratic régime in Russia, as well as the consolidation of Russia's fighting power. To that end are tending the efforts of the Provisional Government which is awaiting to find a source of new strength in the hearty spirit and brotherly support of the United States. For such attainments the Provisional Government is endeavoring to establish a full understanding and a close co-operation with the Government of this country, whose immense resources and unlimited energy can contribute most effectively to the achievement of our cause. To bring such co-operation into effect and to establish

means of common activity on the most practical lines and with no loss of time, the Provisional Government has considered it necessary to bestow on me exceptional powers to treat and decide, on behalf of my Government, all manifold questions in which such co-operation should have to reveal itself.

To secure unity of action the Provisional Government has concentrated under my supreme guidance the activities of various Russian institutions and representatives in this country, and has provided for amplified efficiency by sending a number of new competent delegates who have accompanied me on my mission.

Confident that the natural sympathy of the two nations will grow now into bonds of solid friendship, I look forward with the greatest hopes to the results of united efforts of the two great democracies, based on mutual understanding and common ends.

The President's Reply

Following is the reply of the President:

Mr. Ambassador, to the keen satisfaction which I derived from the fact that the Government of the United States was the first to welcome, by its official recognition, the new democracy of Russia to the family of free States is added the exceptional pleasure which I experience in now receiving from your hand the letters whereby the Provisional Government of Russia accredits you as its Ambassador Extraordinary and Plenipotentiary to the United States and in according to you

formal recognition as the first Ambassador of free Russia to this country.

For the people of Russia the people of the United States have ever entertained friendly feelings, which have now been greatly deepened by the knowledge that, actuated by the same lofty motives, the two Governments and peoples are co-operating to bring to a successful termination the conflict now raging for human liberty and a universal acknowledgment of those principles of right and justice which should direct all Governments. I feel convinced that when this happy day shall come no small share of the credit will be due to the devoted people of Russia, who, overcoming disloyalty from within and intrigue from without, remain steadfast to the cause.

The mission which it was my pleasure to send to Russia has already assured the Provisional Government that in this momentous struggle and in the problems that confront and will confront the free Government of Russia that Government may count on the steadfast friendship of the Government of the United States and its constant co-operation in all desired appropriate directions.

It only remains for me to give expression to my admiration of the way in which the Provisional Government of Russia are meeting all requirements, to my entire sympathy with them in their noble object to insure to the people of Russia the blessings of freedom and of equal rights and opportunity, and to my faith that through their efforts Russia will assume her rightful place among the great free nations of the world.

Indictment of Czar's Former Officials

LATE in June, 1917, the Provisional Government began to take severe measures against the highest officials of the old régime who are declared to be guilty of breaches of the laws of the empire.

An indictment was handed down against former Prime Minister Stürmer under a law which provides severe punishment for the arbitrary transgression by an official of the limits of his rightful power.

Former Secretary of the Empire, M. Kruizhanovsky, the strongest man in the Government under former Premier Stolypin, was indicted for issuing a decree in June, 1907, by which the election law was violated in defiance of the Constitution of 1906.

M. Chtyheglovitoff, former Minister of Justice, was indicted for unlawfully stopping the prosecution of former Governor Skallon of Warsaw, who was charged with having accepted a bribe of 100,000 rubles.

Former Governor Kourloff was charged with complicity in the murder of Colonel Karpoff, Chief of the Secret Police of Petrograd, who was assassinated in 1909 and whose death caused a great sensation.

General Rennenkampf, one of the army commanders in the early part of the war, and who was defeated by von Hindenburg in East Prussia, was indicted for alleged offenses, conviction of which means imprisonment.

Against M. Protopopoff, former Min-

ister of the Interior, was preferred a new charge—that of stealing from the telegraph archives the original dispatches between the late mystic monk Rasputin and Emperor Nicholas and Empress Alexandra. On conviction Protopopoff would be subject to a jail sentence.

Officials in Their Cells

A correspondent who visited the Fortress of Peter and Paul thus describes the prison cells of the former Ministers of the Czar:

In the bastion are more than eighty cells, some above and some below. I entered one of these cells. A room twenty-one feet long and about twelve feet broad, rather high, lit by one semicircular window almost at the ceiling. It is impossible to peep out of it, as the iron bed and the table are fixed to the wall. The window is stoutly barred with iron. The air in the cell is damp and stuffy.

The bed consists of wooden planks laid over the iron framework. It has a straw mattress and a single straw pillow. Above is a coarse cloth blanket. The table is painted dark gray. A water tap and basin are fixed to the wall and there are the necessary toilet utensils; nothing more.

The cells below are furnished similarly, but they are much damper and colder. In them one feels the nearness of the waters of the Neva, the splash of which on the stone walls is heard by the captives. Every quarter of an hour the boom of the big cathedral clock bell reverberates through the bastion.

The captives have exactly the same rations as the soldiers, mainly stew, black bread, and soup. They are allowed to purchase no dainties. The same conditions apply to all, to Stürmer and Protopopoff, to the former Minister of War, Sukhomlinov, and his wife, to Fräulein Virubova—companion of the former Czarina and close friend of Rasputin.

Sukhomlinov makes a painful impression on the observer. A thin old man with an unkempt gray beard and narrow little eyes. His troubled glance met ours as we peeped through the hole in the door.

The notorious "hangman" the gendarmeries officer, Sobestchanki, lay on his bed, enveloped in tobacco smoke through which faintly appeared his cruel features.

Stürmer, when I peeped in, was sitting, with bowed shoulders, on the end of his bed, his back to the door.

Fräulein Virubova sat on her bed, now and then crossing herself. Near her lay a crutch. Since her injury in a railroad smash on the Moscow-Windau-Ribinsk road two years ago she has had to get about with crutches.

Protopopoff, like a beast in its den, strode to and fro, to and fro, incessantly from corner to corner of his cell. He paid no attention to the sound of men moving in the corridor. He did not even glance at the hole in the door.

New Financial Measures

The Provisional Government issued a law June 29 increasing the existing progressive income tax to 30 per cent. on incomes over \$200,000. Another new law increases the war tax on increment of industrial profits to 60 per cent. A third law establishes a supplementary progressive income tax, rising on the largest incomes to more than 30 per cent., and making, together with the highest ordinary income tax, 60 per cent. of the income.

The new Russian loan received subscriptions amounting to \$1,500,000,000, bringing the total debt to \$20,500,000,000.

A dispatch dated July 12 from Petrograd stated that the deposed Emperor Nicholas had appealed to the Provisional Government to allow him and the members of his family to acquire stock in the "Loan of Freedom." He announced that the amount of their investment in the loan depended upon whether the Russian State intended to support his family. He added that of his own property he possessed now only 900,000 rubles, his wife 1,000,000 rubles, his heir, Alexis, 1,500,000; his daughter Olga 3,000,000, and his other daughters between 1,000,000 and 2,000,000 rubles. The nominal value of the ruble is 51.46 cents.

The Grimm Episode

The German conspiracy for a separate peace received a severe setback when the General Congress of Workmen's and Soldiers' Delegates of all Russia, by a vote of 640 to 121, approved the attitude of the Government in expelling from Russia Robert Grimm, a Swiss Socialist pacifist, who had received the following communication, when in Petrograd, from M. Hoffmann, member of the Swiss Federal Council:

Germany will not undertake an offensive so long as she considers it possible to arrive at an understanding with Russia. Numerous conversations with prominent politicians lead me to believe that Germany is seeking to conclude with Russia a mutually honorable peace, and a peace

which would result in the re-establishment of close economic and commercial relations with Russia; the financial support of Germany to Russia for her restoration; no intervention in the internal affairs of Russia; a friendly understanding with regard to Poland, Lithuania, and Courland; and the restoration to Russia of her occupied territories, in return for the districts of Austria invaded by Russia. I am convinced that if the allies of Russia desired it, Germany and her allies would be ready immediately to open peace negotiations.

On hearing of this document the Russian Government requested the Socialist Ministers MM. Tseretelli and Skobelev to demand an explanation from M. Grimm, who handed to these Ministers a document in which he sought to prove that he had had no communication, either direct or indirect, on the subject of peace negotiations, and that the telegram mentioned above was an endeavor on the part of Germany to profit by his stay in Russia to re-establish the bonds of international Socialists and a general peace in the interests of the German Government; and, furthermore, that when in Berne having his passport viséd, he avoided all political conversations and all contact with the German Majority Socialists; and that finally, in his capacity of a Socialist, he could not be the intermediary for imperialistic peace projects between Governments.

MM. Tseretelli and Skobelev found these explanations unsatisfactory, and the Provisional Government therefore requested M. Grimm to leave Russia, and he left. The episode caused the resignation of M. Hoffmann from the Swiss Council.

Regiment of Russian Women

One of the most picturesque episodes of the return of Russia into the war was the formation of a woman's regiment known as "The Command of Death," which was reviewed at Petrograd June 21 by Minister of War Kerensky.

The Associated Press correspondent who visited the barracks found posted at the gate a little blue-eyed sentry in a soldier's khaki blouse, short breeches, green forage cap, ordinary woman's black stockings, and neat shoes. The sentry was Marya Skrydloff, daughter of Admiral Skrydloff, former commander of

the Baltic Fleet and Minister of Marine. Inside there were four large dormitories, the beds without bedding and strewn with soldiers' heavy overcoats. In the courtyard 300 girls were at drill, mostly between 18 and 25 years old, of good physique, and many of them pretty. They wore their hair short or had their heads entirely shaved. They were drilling under the instruction of a male Sergeant of the Volynsky regiment, and marched to an exaggerated goosestep.

Commander Lieut. Butchkareff explained that most of the recruits were from the higher educational academies or secondary schools, with a few peasants, factory girls, and servants. Some married women were accepted, but none who had children. The girl commander said:

We apply the rigid system of discipline of the pre-revolutionary army, rejecting the new principle of soldier self-government. Having no time to inure the girls gradually to hardships, we impose a Spartan régime from the first. They sleep on boards without bedclothes, thus immediately eliminating the weak. The smallest breach of discipline is punished by expulsion in disgrace.

The ordinary soldier's food is furnished by the guards' equipage corps. We rise at 4 and drill daily from 7 to 11, and again from 1 to 6. The girls carry the cavalry carbine, which is five pounds lighter than the regular army rifle. On our first parade I requested any girl whose motives were frivolous to step out. Only one did so, but later many who were unable to stand the privations left us.

We are fully official, and are already entered on the list of regiments. Uniforms and supplies are received from the Ministry of War, to which we render account and present reports. Yesterday the commander of the Petrograd military district reviewed us, and expressed his satisfaction. I am convinced that we will excel the male fighters.

Asked as to the attitude of the male army, Commander Butchkareff said that only the Volynsky regiment, which led the Petrograd revolution, was really favorable. The regimental clerk is Mme. Barbara Rukovichikoff, editor of the weekly *Woman and Economy* and author of some admirable short stories.

Duma Refuses to Be Abolished

The Pan-Russian Congress of Soldiers' Deputies on June 23 passed a resolution to abolish the Duma, but this was ignored

by the Duma, which passed a resolution on June 29 as follows:

The Duma, having powerfully contributed to the abdication of Nicholas, and the formation of the provisional revolutionary government, which the entire country immediately recognized, thus showing its confidence in the Duma, and, having in this manner acted as a revolutionary institution independently of its position during the old régime, is of the opinion that it cannot cease to exist as an organ of national representation, and

will adhere to its patriotic duty of raising its voice, if necessary, to preserve the fatherland from the dangers which threaten it, and guide it in the right path.

Courts-martial have been abolished by the Provisional Government. It is provided, when offenders are caught in circumstances of particular gravity the case will be submitted under forms of urgent procedure to a permanent military court.

Root Commission in Russia

THE first formal address to the Russian Government in behalf of the American Mission was made by Elihu Root, the Chairman, at Petrograd, June 15, (printed in July CURRENT HISTORY MAGAZINE.) The mission immediately plunged into active work, the various members taking up separately the various features, and dividing their functions. On June 22 the entire body proceeded to Moscow, where, at the palace of the Governor General, they met representatives of the Zemstvo and Municipal Unions, the Zemstvo Industrial Committee, and the local Council of the Workmen's and Soldiers' Delegates.

Root's Address at Moscow

The meeting was in the nature of a test case to determine whether the commission was to have the real sympathy of the Socialist element in the country. It is said here that no foreigner ever before succeeded in enlisting the attention and interest of this association of committees representing the working masses of Moscow. But as Mr. Root began to speak, antagonism and indifference yielded to rapt attention, and he was warmly applauded at the conclusion. In the course of his address Mr. Root said:

We have seen nothing since we came to Russia that gives cause for criticism. We marvel at the self-control, the kindness of spirit, and the sound common sense that the Russians display. We feel that the work you are doing in the committees is on the right path toward an actual permanent democracy.

The Government of Germany, the German social system, even German socialism, are all militaristic in their essential nature. They shall not gain control of

free America, and if we can help you to prevent their gaining control of free Russia we shall be happy in feeling that we have assisted in the perpetuation of the ideals of our fathers who fought and sacrificed to make us free.

The representatives of the various groups replied, formally welcoming Mr. Root and the other members of the commission. At the second meeting, before the City Duma, Mr. Root said:

We have heard reports about dangers threatening your new liberty, but we hope you will find a way of expanding your experience in local self-government into power which will govern the whole nation. We have the marvelous spectacle of a people remaining peaceful and preserving the rights of others without the enforcement of law—a people waiting only for the establishment of a strong Government, which will lay down the proper basis for law and order. You have made sacrifices in the past; we know that you will still make sacrifices to preserve your freedom, won at such a high cost. Now comes the test. You must make sacrifices. You must struggle until your liberty is secure. We have faith that Russia will do this.

The Mayor in reply said: "Russia welcomes America's assistance in her present period of infirmity and economic exhaustion." He concluded with a eulogy of President Wilson, saying: "The aims of the war, the definition of the problems standing before humanity have been given by your great pacifist, President Wilson, who, in preserving the ideal of peace, has realized the vital importance of the struggle. His way of speaking appeals to us."

On motion of the Mayor the meeting unanimously decided to send a telegram to President Wilson, thanking him for sending the Root Commission to Russia. The experiences at Moscow gave much

encouragement to the mission, and Mr. Root announced that he felt that the situation was rapidly clearing.

Admiral Glennon's Service

An interesting episode occurred at Sebastopol when the American Admiral, James H. Glennon of the mission, succeeded in tranquilizing sailors of the Black Sea fleet who had mutinied and dismissed all their officers. He arrived soon after the sailors had sent away Admiral Koltchak. At the request of the sailors, Admiral Glennon addressed them, urging a continuance of the war without cessation.

He was heartily applauded. He also addressed a general meeting of representatives of all the councils of soldiers, sailors, and workmen of Sebastopol, where his advocacy of renewed energy in pushing the war was well received. After hearing the Admiral, the meeting voted, 60 to 3, to restore all the Black Sea fleet officers, with the exception of Admiral Koltchak and his staff, who were distrusted by the sailors. The meeting also voted to support the Provisional Government. Conditions with the fleet since then have been tranquil.

Work of Mr. Russell

Charles Edward Russell, Socialist and a member of the American Commission, outlined the aims of the United States and the reasons which brought the country into the war before a full Council of Workmen's and Soldiers' Delegates on June 25. Mr. Russell was warned in advance that he might expect an unfriendly demonstration on the part of the extremists among his auditors, but for the most part his hearers were sympathetic, and often interrupted him with applause.

The declaration of Mr. Russell that the United States was fighting only because the democracies of the world were in danger, and that after democracy was safe the people would turn to social reform, was cheered to the echo.

M. Tcheidze, President of the Council of Workmen's and Soldiers' Delegates, in replying to the speech of Mr. Russell, said the democracy of Russia was built upon the same foundation as that of the United States, and that Russia would carry on the war until mutual aims were

achieved. The American Mission announced on July 10 that its purpose had been accomplished in a month's visit. Chairman Root sent this statement:

The mission has accomplished what it came here to do, and we are greatly encouraged. We found no organic or incurable malady in the Russian democracy. Democracies are always in trouble, and we have seen days just as dark in the progress of our own.

We must remember that a people in whom all constructive effort has been suppressed for so long cannot immediately develop a genius for quick action. The first stage is necessarily one of debate. The solid, admirable traits in the Russian character will pull the nation through the present crisis. Natural love of law and order and capacity for local self-government have been demonstrated every day since the revolution. The country's most serious lack is money and adequate transportation. We shall do what we can to help Russia in both.

Stevens Railway Commission

John F. Stevens, as head of the American Railroad Commission in Russia, has officially reported recommending certain reforms and asking that Russia be given a credit of \$375,000,000 in this country for new locomotives, cars, and other equipment.

The construction of workshops at Vladivostok for the putting together of locomotives imported from the United States is deemed necessary by the commission. In all repair shops work must continue uninterruptedly twenty-four hours a day, thus enabling a reduction in the percentage of locomotives out of use. It also will be necessary to take rational measures for the acceleration and regulation of exchange of cars between the different roads and for the speeding up of the system of loading.

The creation of a special State Department, the chief of which will be an Inspector General responsible for seeing that the whole network of roads is supplied with all necessary material both for traffic and repairs, and also for the responsible distribution of such material between the different roads, is recommended by the commission. This official must have the right to demand the necessary material, and he himself must take measures to insure its delivery.

Russian Church Reforms

By Charles R. Crane

Member of United States Commission to Russia

[Cable to The Chicago Herald, June 27, 1917, from Petrograd]

IN the revolution that is taking place, the Russian Church is making more rapid progress toward adjusting itself to the new conditions than the State. It has practically been separated from the State and is now managing its own affairs. More changes were made in the Russian Church during the month of May than had been made in two centuries before.

The process has been one of democratization. Every priest has had to have his position confirmed by a vote from the people of his parish. Twelve Bishops have been dismissed, including the Bishop of Petrograd, and new Bishops have been installed only after election by congregations. The physical property of the churches has been transferred from the State and is to be administered by the congregations, the clergy and Bishops occupying themselves solely with theological affairs.

During the last weeks two very significant sobors, or assemblies of the Church, have been taking place at Moscow. One of them was that of Old Believers, who include some 15,000,000 people and who never were reconciled to the reforms of Nikon, representing the oldest and most uncompromising division of the Russian people. The other sobor was that of the Orthodox Church, the former State Church, and was the first one to meet in some 250 years.

They were the most representative gatherings it was possible to have in Russia, and the delegates came from every corner of the empire, two priests and two laymen being elected to represent every 100 churches, the whole body numbering 1,268 delegates. As the political organization is entirely shattered, the Church represents at present the only unifying fundamental idea.

The two most effective members of this

latter sobor were the former Archbishop of the United States, Platon, and Pastor Alexanderoff of a San Francisco church. In various questions that arise in the sobor the appeal was always made to these two authorities, as to the way these problems were solved in America, and their answer was usually enough to determine the action of the sobor.

John R. Mott, the leader in Young Men's Christian Association work, was invited to address the sobor, and every member was present. His speech was interpreted, sentence by sentence, by Father Alexanderoff, who was in entire sympathy with Mr. Mott and who himself was a member of Mr. Mott's organization in San Francisco. It was a moving address and was received with great emotion.

Mr. Mott divided his address into three parts. The first was expression of gratitude for the many acts of friendship Russia had shown for America in the course of the last hundred years, with special emphasis on its enormous sacrifices during the present war, which the American people now recognize, he said, as having been made quite as much for them as for Russia. He also expressed his gratitude for the contributions the Russian Church had made to a common Christianity.

The second part of his address was the expression of solicitude lest in the great upheaval now going on the Church might lose its central position and that, although, if carefully arranged, the process of democratization ought only to strengthen the Church, the members must be very careful to guard historical Christianity, the creed, mystical Christianity, and vital Christianity.

The third part of the address was a message of hope and reassurance, and went over in detail America's plans for

aid to Russia and the other Entente Allies in the war, closing with a stirring appeal to Russia to do its best on every front.

The reception of Mr. Mott's address was very sympathetic, and unanimous, and at its end the whole body rose, and for half an hour sang the most moving of their old church hymns. This was followed by fine responses from the Chairman of the meeting, Prince Lvoff, the head of the Synod; Prince Eugene Troubetzkoy, one of the first citizens of

Russia, and Bishop Andre, the greatest spiritual force in the Russian Church today.

Immediately after the meeting Prince Lvoff, who is charged with the chief responsibility for all these things, asked Mr. Mott to spend the afternoon with the leaders and go over in detail all the various reforms. He was also invited to engage in a meeting of the professors who were revising the courses of the theological academies and also to address the synod in formal session.

All Anti-Jewish Laws Repealed

THE Russian Provisional Government issued a decree repealing absolutely all laws restricting the civil, political, and religious rights of the Jews. The text of the decree, as published in The New York Jewish Chronicle, July 13, 1917, is as follows:

All existing legal restrictions upon the rights of Russian citizens, in connection with this or that faith, religious teaching or nationality, are revoked. In accordance with this:

1. Repealed are all laws existing for Russia as a whole, as well as those of separate localities, embodying limitations concerning:

1. Selection of place of residence and change of residence or movement.

2. Acquiring rights of ownership and other material rights in all kinds of movable and immovable property, and likewise in the possession of, the use and the managing of all property, or receiving such for security.

3. Engaging in all kinds of trades, commerce and industry, not excepting mining; also equal participation in the bidding for Government contracts, deliveries and in public auctions.

4. Participation in joint stock and other commercial or industrial companies and partnerships, and also employment in these companies and partnerships in all kinds of positions, either by elections or by hiring.

5. Employment of servants, salesmen, foremen, laborers, and trade apprentices.

6. Entering the Government service, civil as well as military, and the grade or condition of such service; participation in the elections for the institutions of local self-Government, and all kinds of public

institutions; serving in all kinds of positions of Government and public establishments, as well as the prosecution of the duties connected with such positions.

7. Admission to all kinds of institutions of learning, whether private, Government or public, and the pursuing of the courses of instructions of these institutions, and receiving scholarships. Also the pursuance of teaching and the other educational professions.

8. Performing the duties of guardians, trustees, or jurors.

9. The use of languages and dialects, other than Russian, in the proceedings of private societies, or in teaching in all kinds of private educational institutions, and in commercial bookkeeping.

Paragraphs II., III., IV., V., VI., VII., and VIII. proceed to enumerate and cite section by section, paragraph by paragraph, each and every law that was in existence coming within the broad terms of the repeal enumerated. The enormous number of the citations and the minuteness of their character testify in themselves to the thoroughness in which the Jewish restrictions were carefully searched out, so as to leave not the slightest question as to the exact laws which were abolished. They also serve to bear out quite convincingly the statement which Baron Gunzburg made, that prominent Jewish lawyers were called into consultation by the Ministry of Justice in the searching for these laws and the drafting of the repealing laws.

Early in July Jewish Chaplains were sent to the front.

First American Army in France

A Memorable Welcome

THE first contingents of the first United States Army to fight in Europe arrived at a port in France on June 26 and 27, 1917. The President's order had been issued on May 18 and the transports had departed from various Atlantic seaports in less than four weeks. Never before, it was stated, had a military expedition of such size been assembled, transported, and landed without mishap in so short a time. The only rival in magnitude was the movement of British troops to South Africa in the Boer war, and that was made without danger from submarines, mines, or other obstacles.

Although the first contingents reached their destination in safety, it was not without some thrilling moments during which disaster was an imminent possibility. Rear Admiral Albert Gleaves, who commanded the convoy squadron, reported to the Navy Department that German submarines twice attacked the transports, but were each time beaten off.

The first attack took place in the night of June 22, and was over before any one except the crews of the warships and the officers on the bridges of the transports were aware of the peril. The first sign of the presence of German submarines was a streak of shining foam noticed by a look-out man high above on one of the big ships. Almost at the moment that the alarm was given a gleaming line of bubbles, scarce twenty feet from the bow of one of the transports, announced the torpedo with its fatal burden of explosive. Then, in the words of an eyewitness:

Hell broke loose. Our (the big ship's) helm was jammed over. Firing every gun available, we swung in a wide circle out of line to the left. A smaller ship slipped into our place, and from what the lookout told me I think one of her shells must have landed almost right above the submarine. But they are almost impossible to hit when submerged, and the periscope is no target, anyway.

They fired three, if not four, torpedoes.

It was God's mercy that they all went astray among so many of our ships. One passed just astern. As you see, our helm jamming was absolutely Providential.

Naturally the old — acted quite differently from what the Boches expected; otherwise they might have got us. It was simply extraordinary. We drove right at them, (really, I suppose, the safest thing to do, as the bow gives the smallest mark to shoot at,) and it seems to have rattled Brother Boche considerably. After all, we draw enough water to smash a submarine at a level of the periscope awash, and no doubt he did not care to wait for us. Or perhaps a lucky shot disposed of him. We can't be certain either way. Anyhow, he disappeared, and we saw no more of him.

The whole business lasted only about a minute and a half. But, believe me, it added more than that to my life. While the thing was happening I had no time for anything but to attend to my job. Afterward I found myself sweating and my breast heaving as if I had run five miles. The other boys told me the same thing, but we got a compliment on the rapidity with which the guns were served, so I guess it didn't interfere any with our action.

The second attack occurred the next morning. No periscope was visible this time, but the unmistakable bubble line, clean across the bows, put the certainty of danger beyond question. The submarine was in front instead of in the deadliest position on the flank toward the rear. Like a striking rattlesnake, one of the American destroyers darted between a couple of the transports. As it flashed at nearly forty miles an hour across the spot where the submarine was supposed to be hidden the commander of the destroyer gave orders. A column of smoke and foam rose a hundred feet in the air, and in the waterspout that followed it the soldiers on the nearest transport, (she had swung in a headlong curve to the left,) distinguished clearly pieces of wood and steel and some dark blue fragments that a moment before had been living men. Any uncertainty was impossible. Transport after transport passed through floating oil, patched with wreck-

age. This submarine, at least, had timed its hour too well.

Soldiers Welcomed in France

The arrival in France of the first United States troops, which were under the command of Major General William L. Sibert, was the occasion of a magnificent welcome by the French people. The transports, whose arrival had not been previously announced, steamed into the harbor of the seaport [the name was suppressed by the censor] at an early hour on the morning of June 26. The news that the Americans were arriving spread with amazing rapidity, and by the time the troopships drew alongside the quays where the men were to debark thousands of persons were on hand to greet them. A wild welcome was shrieked by whistles of craft in the harbor, and cries of "Vive la France!" and "Vivent les Etats Unis!" seemed to come from every throat in the crowd, which was thickly dotted with the varicolored uniforms of French soldiers and sailors. Meanwhile the bands on the warships were playing "The Star-Spangled Banner" and the "Marseillaise" as the American colors were hoisted to their staffs. The town soon took on a holiday appearance, and, before the day was over, scores of American flags were flying along with the Tricolor of France over public buildings and private homes.

The American soldiers were spontaneously dubbed "Sammies" by the excited French crowds, to distinguish them from the British "Tommies."

Delegations of American Army officers from Paris and American naval men from elsewhere were present, with French military men of high rank, and a similar representation from the French Navy to receive the new fighting forces of the Allies, who were soon after transferred to a camp not far distant from the port where they arrived. General Sibert took up his quarters at the camp as commander of the first United States force sent abroad, under General Pershing as Commander in Chief.

The last units of the expedition, comprising vessels loaded with supplies and horses, reached port on July 2. Their coming, one week after the first troops

landed, was greeted almost as warmly as the arrival of the troops themselves, because it meant complete success of the undertaking.

Probably the happiest man in port was Rear Admiral Gleaves. From the bridge of his flagship he watched the successful conclusion of his plans and with characteristic modesty insisted upon bestowing the lion's share of credit for the crossing on the navigation officers of his command. All units of the contingent had to keep a daily rendezvous with accompanying warships. Thanks to his navigation officers and despite overcast skies which made astronomical observations impossible, each rendezvous, the Admiral said, had been minutely and accurately kept by each unit. This exactness on the part of the navigation officers was responsible in no small degree for the brilliant success of the entire undertaking.

Two Statements by Pershing

General Pershing, accompanied by General Pelletier, representing French General Headquarters, visited the camp on June 28, and after inspecting the troops made the following statement:

This is the happiest of the busy days which I have spent in France preparing for the arrival of the first contingent. Today I have seen our troops safe on French soil, landing from transports that were guarded in their passage overseas by the resourceful vigilance of our navy.

Now our task as soldiers lies before us. We hope, with the aid of the French leaders and experts who have placed all the results of their experience at our disposal, to make our force worthy in skill and in the determination to fight side by side in arms with the French Army.

On returning to his headquarters in Paris on June 30, General Pershing made a further statement:

The landing of the first American troops has been a complete success. In this remarkable transfer of a large force across the ocean (one of the largest operations we have ever undertaken) not a man or an animal was lost or injured, and there was not a single case of serious sickness—nothing but a few unimportant cases of mumps. The men landed in splendid morale, with keen, confident, and eager spirit.

The physical appearance of our men is truly inspiring. They are all fine, husky young fellows, with the glow of energy,

good health, and physical vigor which will make them a credit alongside any troops.

They are exceptionally well camped and cared for, with substantial wooden barracks, good beds, good food, and the best sanitary arrangements. They are located on high ground. For all of this we are deeply indebted to French co-operation with members of my staff.

How Order was Maintained

The question of maintaining order in the town where the camp was situated was settled by the French authorities transferring to the United States military police the necessary authority for maintaining discipline in the town, which now became overwhelmingly American in appearance and public life. In order to assist the Americans to keep order, however, the authorities issued new and stringent regulations forbidding the sale of spirituous liquors to any men in uniform, regulating the hours the men might be admitted to or served in cafés and restaurants, and specifying that disputes and disorders should be referred to and decided by the Americans.

The necessity of good behavior was set forth by General Pershing in the following general order:

For the first time in history an American Army finds itself in European territory. The good name of the United States of America and the maintenance of cordial relations require the perfect deportment of each member of this command.

It is of the gravest importance that the soldiers of the American Army shall at all times treat the French people, and especially the women, with the greatest courtesy and consideration. The valiant deeds of the French armies and the Allies, by which they together have successfully maintained the common cause for three years, and the sacrifices of the civil population of France in support of their armies, command our profound respect. This can best be expressed on the part of our forces by uniform courtesies to all the French people and by the faithful observance of their laws and customs.

The intense cultivation of the soil in France, under conditions caused by the war, makes it necessary that extreme care be taken to do no damage to private property. The entire French manhood capable of bearing arms is in the field fighting the enemy, and it should, therefore, be a point of honor to each member of the American Army to avoid doing the least damage to any property in France. Such conduct is much more reprehensible

here. Honor them as those of our own country.

Fourth of July in France

General Pétain, Commander in Chief of the French armies operating on the French front, on July 3 issued the following general order:

Tomorrow, the Independence Day celebration of the United States, the first American troops which have debarked in France will defile in Paris. Later they will join us on the front. Let us salute these new companions in arms who without thought of gain or of conquest, but with the simple desire of defending the cause of right and liberty, have come to take their places in the ranks beside us.

Others are preparing to follow them. They will soon be on our soil. The United States mean to put at our disposition, without reckoning, their soldiers, their factories, their vessels, and their entire country. They want to pay a hundred-fold the debt of gratitude which they owe to Lafayette and his companions.

From all the points of the front a single shout on this July 4 will be heard: "Honor to the great sister. Long live the United States!"

The Fourth of July was enthusiastically celebrated throughout France. In Paris the chief feature of interest was the presence of a battalion of United States troops which was about to leave for training behind the battle front. Everywhere the Stars and Stripes were flying from public buildings, hotels, and residences, and from automobiles, cabs, and carts; horses' bridles and the lapels of pedestrians carried them. The crowds began to gather early at vantage points. The Rue de Varenne was choked long before 8 o'clock in the morning, when the Republican Guard Band executed a field reveille under General Pershing's windows, and all routes toward the Invalides were thronged even before Pershing's men turned out.

In the chapel before the Tomb of Napoleon General Pershing received American flags and banners from the hands of President Poincaré. The enthusiasm of the vast crowd reached its highest pitch when General Pershing, escorted by President Poincaré, Marshal Joffre, and other high French dignitaries passed along reviewing the lines of the Americans drawn up in square formations. Cheering broke out anew when the Amer-

ican band struck up the "Marseillaise," and again when the French band played "The Star-Spangled Banner," and Pershing received the flags from the President. "Vivent les Américains! Vive Pershing! Vivent les Etats Unis!" shouted over and over by the crowd, greeted the American standard bearers.

Crowds in Tuileries Gardens

More people were massed in the Tuileries Gardens than on the Esplanade des Invalides. Few of them could get a glimpse of the parade, but all joined in a tremendous outburst of cheering when music from the Republican Guard Band announced the approach of the troops, and the cheering did not diminish in volume until the last man in the line had disappeared from view of the gardens down the Rue de Rivoli.

With this great demonstration the ceremonies of welcome came to an end and the serious business of warfare was taken in hand. On July 6 it was announced that the training bases for the American troops in France had been established and were ready for occupancy. They included aviation, artillery, infantry, and medical bases. The section of the battle front eventually to be occupied by the Americans was decided upon by the military authorities and approved by Major Gen. Pershing, who had thoroughly covered the ground. The location of this section was a military secret, and no actual time was fixed for American participation on the fighting front. The battalion of United States soldiers that took part in the Independence Day celebration in Paris immediately began

training at its permanent camp, over which General Sibert was placed in command.

Bastille Day Messages

Messages of mutual good-will were exchanged by President Wilson and President Poincaré on the French national holiday, July 14. President Wilson cabled:

On this anniversary of the birth of democracy in France, I offer on behalf of my countrymen, and on my own behalf, fraternal greeting as befits the strong ties that unite our peoples who today stand shoulder to shoulder in defense of liberty, in testimony of the steadfast purpose of our two countries to achieve victory for the sublime cause of the rights of the people against oppression.

The lesson of the Bastille is not lost to the world of free peoples. May the day be near when on the ruins of the dark stronghold of unbridled power and conscienceless autocracy a nobler structure, upbuilt like our great Republic on the eternal foundations of peace and right, shall arise to gladden an enfranchised world.

President Poincaré replied:

The French people who for three years have made so many heroic sacrifices in the defense of right and liberty shall receive in grateful emotion the brotherly message which you, Mr. President, were pleased to send me for them.

We shall be proud to carry on to victory, elbow to elbow with the great and generous American Nation, the war which was let loose on the world by the imperialism of our foes, in spite of the strenuous efforts which the French Republic always exerted to avert so awful a cataclysm. I, like you, have no doubt that the defeat of autocracy and German militarism will at last open a future of industrious peace and prosperity to liberate mankind.

Creating the New American Armies

THE month's progress in building up the new armies of the United States has been rather in the nature of laying solid foundations for the future than in actual results. Recruiting to bring the regular army up to its full strength of 293,000 continues slow, despite the special effort of the President to obtain 70,000 recruits in the period between June 23 and June 30, which he designated as Re-

cruiting Week. The call was for unmarried men between the ages of 18 and 40 years. At the end of the week over 50,000 men were still needed. On July 16 the deficiency had been reduced to just under 37,000 men. Three-fourths of the States had not yet filled their quotas.

Nevertheless, it has to be remembered that, when the United States entered the war, the strength of the regular army

was only 100,000, and in about three months this has been increased to nearly 250,000 by purely voluntary methods and in competition with the recruiters of the National Guard, the navy, and the marines. Thus, by the middle of July, 1917, nearly half a million men had volunteered for service in one or other of the different branches of the army and navy, while men had been obtained for various special units, and many candidates for officers' commissions were in training.

Mobilizing the National Guard

An important step to increase the strength of the army was the calling into Federal service of the National Guard regiments not already in service. This was done in three increments, one third being mobilized on July 15 and the other two thirds being warned to be ready on July 25 and Aug. 5. It was stated that after preliminary training the National Guard would soon be sent to France and that some regiments would leave the United States as early as November. At the date of mobilization the National Guard had reached a strength of about 300,000 men, and, as the war strength had been fixed at 400,000, recruiting continued. It was the intention of the War Department that if the full quota were not secured before the draft began, the vacancies in the National Guard, as in the regular army, would be filled by conscripted men. The only members of the National Guard who were not called up were officers holding general rank, as some of these appointments had been made on political grounds.

In addition to the sixteen cantonments which were begun for the new National Army, sixteen other camps were chosen for the training of the National Guard. The sites for practically all these camps were chosen in Southern States because, as Major Gen. Gorgas, Surgeon General of the Army, explained, the climate was milder in the Winter and rain less frequent. The accommodation was planned for about 35,000 men and 10,000 horses and mules in each camp.

Army Training Camps

The following are the locations of can-

tonments for the training of the nation's new armies:

NATIONAL ARMY

Inf'y Div.	No.	Department.	Location.
	1.....	Northeastern	Ayer, Mass.
	2.....	Eastern.....	Yapahank, Long Island
	3.....	do.....	Wrightstown, N. J.
	4.....	do.....	Annapolis Junction, Md.
	5.....	do.....	Petersburg, Va.
	6.....	Southeastern	Columbia, S. C.
	7.....	do.....	Atlanta, Ga.
	8.....	Central.....	Chillicothe, Ohio.
	9.....	do.....	Louisville, Ky.
	10.....	do.....	Battle Creek, Mich.
	11.....	do.....	Rockford, Ill.
	12.....	Southeastern	Little Rock, Ark.
	13.....	Central.....	Des Moines, Iowa.
	14.....	do.....	Fort Riley, Kan.
	15.....	Southern.....	Fort Sam Houston, Tex.
	16.....	Western.....	American Lake, Wash.

NATIONAL GUARD

Inf'y Div.	No.	Department.	Location.
	5.....	Southeastern	Greenville, S. C.
	6.....	do.....	Spartanburg, S. C.
	7.....	do.....	Augusta, Ga.
	8.....	do.....	Macon, Ga.
	9.....	do.....	Montgomery, Ala.
	10.....	do.....	Anniston, Ala.
	11.....	Southern.....	Fort Worth, Tex.
	12.....	do.....	Fort Sill, Okla.
	13.....	do.....	Deming, N. M.
	14.....	do.....	Waco, Tex.
	15.....	do.....	Houston, Tex.
	16.....	Southeastern	Charlotte, N. C.
	17.....	do.....	Hattiesburg, Miss.
	18.....	do.....	Alexandria, La.
	19.....	Western.....	Linda Vista, Cal.
	20.....	do.....	Palo Alto, Cal.

Navy Training Camps

Sites for naval training camps were selected as follows:

Philadelphia, for 5,000 men.
 Newport, R. I., for 6,000 men.
 Cape May, N. J., for 2,000 men.
 Charleston, S. C., for 5,000 men.
 Pensacola, Fla., for 1,000 additional men.
 Key West, Fla., for 500 men.
 Mare Island, Cal., for 5,000 men.
 Puget Sound, Wash., for 5,000 men.
 Hingham, Mass., for 500 men.
 New Orleans, La., for 500 men.
 San Diego, Cal., for 2,500 men.
 Great Lakes Training Station, Chicago, accommodations for 15,000 additional recruits.
 Port Royal, S. C., 5,000 men of the Marine Corps; also a Marine Corps Camp at Quantico, Va., for 8,000 men.
 Hampton Roads naval operating base, 10,000 men.
 Mississippi Exposition Grounds, Gulfport, Miss., 3,500 men.
 New York, a camp for 3,000 regulars adjoining the navy yard; Pelham, N. Y., 5,000 reserves.

A camp will also be located at Boston.

An indication of the merging of the National Guard with the other military forces of the United States was furnished by the War Department statement that regiments were henceforth to be num-

bered without reference to the fact that a particular regiment belonged to the Regular Army, National Guard, or National Army. The numbers of the National Army regiments begin where those of the National Guard regiments end, but locality is indicated in parentheses.

Rapid Training of Officers

The training of officers has been more rapidly conducted than that of the men, because without qualified leaders the new armies cannot be organized. The President has signed the commissions of several hundred new officers of the Army Reserve Corps, and, according to an announcement from General Pershing's

headquarters in Paris, these officers are to see service in France much earlier than was anticipated. In this way the demand for regular officers to train the men in France is being met. Every trainee in the Officers' Training Corps is assured of a commission if he can qualify. The officers' training camps are at Fort Myer, Virginia, (two camps,) Fort McPherson, Georgia, (two camps,) Fort Oglethorpe, Georgia, (two camps,) Fort Benjamin, Indiana, (three camps,) Fort Logan H. Roots, Arkansas, (two camps,) Leon Springs, Texas, (two camps,) Fort Riley, Kansas, (two camps,) and Presidio, San Francisco, (one camp.)

Selecting the Conscript Army

SETTING up exemption boards and arranging for the drawing of lots to decide who shall serve in the first conscript army have been the principal developments in the operation of the selective draft law during the month.

The total registration was 9,659,382, or 95.9 per cent. of the preliminary estimate. The apparent shortage, about 413,000, is considerably less than the number of men 21 to 30 years of age, inclusive, who are estimated by the War Department to have been in the various branches of the military and naval services of the United States on June 5, and for that reason exempt from the requirement of registration. This number is 600,000. On the face of these figures, therefore, it appears that the number of men between the ages of 21 and 31 in the United States is slightly in excess of the number estimated by the Census Bureau on May 12—10,079,000.

Of the 9,659,382 registrants reported, 7,347,794 are white; 953,899 are colored; 1,239,865 are unnaturalized foreigners from countries other than Germany; 111,823 are unnaturalized Germans, including "declarants"; that is, persons having declared their intention to become citizens but not having received their final naturalization papers; and 6,001 are Indians.

There is nothing in the returns to indi-

cate that there has been any general attempt at evasion of registration by any important element of the population.

The following table shows, by States, the total registration, the number of unnaturalized Germans, including those who have declared their intention to become citizens, and the percentage which the total represents of the census estimate:

	Total Registra- tion.	Per Esti- mate.	Unnat- uralized Ger- mans.
United States.....	9,659,382	95.9	111,823
Alabama	179,828	85.7	89
Arizona	36,932	106.4	193
Arkansas	147,522	94.2	98
California	297,532	82.2	3,948
Colorado	83,088	75.8	372
Connecticut	159,761	129.3	1,126
Delaware	21,864	108.8	92

The rules and regulations for the draft were issued to the local exemption boards by the War Department on June 21. Every board was required to make four copies of the registration list. One it kept for its own use, the second was posted in a conspicuous public place, the third was made available to the public press, and the fourth was sent to the Provost Marshal General at Washington.

Every board numbered the cards in its jurisdiction with red ink in a series running from 1 to the number representing the total number of cards in its jurisdic-

tion, and it was provided that these serial numbers, not the names, should be drawn. Alphabetical arrangement of the names was expressly prohibited. The numbers were to be drawn at Washington. If 15 and 167 were drawn, for example, the two men in each registration district against whose names these numbers were written would be thereby automatically drafted. Exemption could be claimed only afterward—through the local board.

President Wilson on July 2 promulgated the regulations governing exemption from military service. These regulations permitted the local and appeal exemption boards already appointed to organize at once and prepare for the concluding stages of raising the draft army. In an accompanying statement the President called upon the boards to do their work fearlessly and impartially and to remember that "our armies, at the front will be strengthened and sustained if they be composed of men free from any sense of injustice in their mode of selection." A statement issued by the War Department on July 13 set forth the number to be drafted from each State. The total for the first call was to be 687,000.

On July 20 all the numbered registration lists from the 4,550 districts had reached Washington, and the fateful drawing of numbers took place on that day. The story of the historic event will be told in the September issue of this magazine.

CURRENT HISTORY CHRONICLED

[PERIOD ENDED JULY 20, 1917]

THE CHANCELLORS OF THE GERMAN EMPIRE

COUNT BISMARCK was the first Chancellor of the German Empire, being appointed on Jan. 18, 1871, the day on which King William of Prussia was proclaimed Emperor of Germany, in the Mirror Room at Versailles. Bismarck was then raised to princely rank. He held office until March 20, 1890, less than two years after William II. became Emperor, on the death of his father, (June 15, 1888.) During his tenure of

office Prince Bismarck accomplished two things: the Triple Alliance or Dreibund, uniting Germany, Austria, and Italy, and later including Rumania and Bulgaria; and the formation of Germany's colonial empire, in 1885, in East and West Africa and New Guinea.

Bismarck was succeeded by Count Caprivi, who held office until Oct. 29, 1894. Caprivi was succeeded by Prince Hohenlohe, who gave place, on Oct. 17, 1900, to Count Bernhard von Bülow, then raised to princely rank. Prince von

Bülow was called upon to defend Kaiser Wilhelm's celebrated "mailed fist" speech on the departure of German troops to China, and, some years later, to extricate the Kaiser from the very difficult situation caused by an interview which he gave to *The Daily Telegraph*, (Oct. 28, 1908,) he carried the point that the Kaiser's pronouncements must first be approved by his responsible advisers. Prince von Bülow went out of office on July 14, 1909, being succeeded by Dr. von Bethmann Hollweg, who held office for exactly eight years.

Primarily, the Chancellor of the Empire is the head of the Bundesrat, the Federal Council, which represents, not the peoples of the various States which make up the empire, but the Kings, (of Prussia, Bavaria, Saxony, and Württemberg,) Grand Dukes, Dukes, and Princes who rule them. In the Bundesrat the Imperial Chancellor represents the King of Prussia, who has preponderant power in that body. The Chancellor is responsible solely to the Emperor. It has been pointed out that Dr. Georg Michaelis is the first man not of noble birth to be appointed Imperial Chancellor.

* * *

AUSTRIA, BAVARIA, AND CATHOLIC SOUTH GERMANY

THE recent vigorous protest of Matthias Erzberger, the Catholic member of the Reichstag from Bavaria, against the autocratic militarism and annexationist policy of Lutheran Prussia, apparently with the knowledge, and perhaps the active consent, of Emperor Charles of Austria, suggests that one of the results of the war may be a regrouping of the kingdoms and principalities within the frontiers of the Central Empires in a way resembling their position before 1860, when Bismarck began to execute his plan to break the Austrian supremacy in German affairs and to put Prussia in Austria's place as the dominant German State, a plan furthered by the aggressive wars of 1864, 1866, and 1870, and consummated when William I. was proclaimed German Emperor at Versailles in January, 1871.

In the German Empire the Lutherans number 40,000,000; the Catholics 24,000,-

000, or some 37 per cent. In Prussia about two-thirds are Lutherans; in Saxony the vast majority are Lutherans; in Württemberg about two-thirds are Lutherans; these three kingdoms would form the nucleus of a Lutheran group of States. In Bavaria, on the contrary, there are about 5,000,000 Catholics to 2,000,000 Lutherans, while within the Kingdom of Prussia Catholics are in a majority in Posen, Silesia, Westphalia, and the Rhine Provinces. Austria is almost completely Catholic, having 22,500,000 Roman Catholics and 3,500,000 Greek Catholics; the Lutherans do not number 600,000. In Hungary, Roman Catholics likewise predominate, numbering 11,000,000 in a population of 21,000,000, the minority being divided between Protestants, members of the Greek churches, (Catholic and Oriental,) and others.

This would give two groups of States, the Catholic, with a population of some 60,000,000; the Lutheran, with a population of some 45,000,000. The growth of the present German Empire has largely consisted in the extension of the power of Lutheran Prussia over the Roman Catholic States, like Silesia, the Rhine Provinces, and Bavaria; to these Austria, in which Prussian influence predominates, may be added.

* * *

THE RACE QUESTION IN AUSTRIA-HUNGARY

IN Austria (excluding Hungary) the division of races, calculated on the not wholly accurate basis of language, is approximately as follows: Germans, 10,000,000; Bohemian Czechs, Moravians, and Slovaks, (all speaking practically the same language,) 6,500,000; Poles, 5,000,000; Ruthenians in Galicia and Bukowina, 3,500,000; Slovenes, Serbs, and Croatsians, (all speaking what is practically Serbian,) 2,000,000; or, in all, 17,000,000 Slavs. There are also about 1,000,000 speaking Italian or Rumanian. Thus 18,000,000 non-Germans, nearly all of whom are Slavs, are dominated politically by 10,000,000 Germans.

In Hungary there are under 9,000,000 Hungarian Magyars; just over 2,000,000

Germans, 2,000,000 Slovaks, 2,600,000 Croato-Serbians, 400,000 Ruthenians, and something under 3,000,000 Rumanians. In Hungary the 9,000,000 Magyars and 2,000,000 Germans completely dominate the 5,000,000 Slavs and 3,000,000 Rumanians.

Taking the Dual Monarchy as a whole, we find that 12,000,000 Germans and 9,000,000 Magyars exercise political control over 22,000,000 Slavs and 4,000,000 Latins. That is, 21,000,000 dominating and 26,000,000 dominated.

An ideal reconstruction along the lines of race, (or, to speak more strictly, along the lines of language as calculated by the German-Magyar enumerators,) would divide the Dual Monarchy into four States, as follows: A German State, consisting of the northern part of what is now Austria and the western corner of Hungary, with 12,000,000 inhabitants; a north Slav State, (Czech-Bohemians, Moravians, Slovaks, Poles, Ruthenians,) with about 18,000,000 inhabitants; a Magyar State with about 9,000,000, and a south Slav State, predominantly Serbian, with about 5,000,000; but this last would be practically identical in blood and speech with Serbia and Montenegro, which, before the war, had a combined population of about 3,500,000; so that we have the basis of a Pan-Serbian State with about 8,500,000 inhabitants.

* * *

THE DRAFT IN 1863 AND 1917

THE extraordinary smoothness and freedom from disturbance which have marked each stage of the enrollment of our huge national army stand out in sharp contrast with the violent outbreaks which accompanied the operation of the Conscription act signed on March 3, 1863. That act declared that all able-bodied male citizens of the United States, and foreigners intending to become citizens, between the ages of 20 and 45 were liable for military service; a second section defined exemptions, while a third favored married men. On July 7 the actual work of the draft was begun in Rhode Island; on the following day it began in Massachusetts.

Saturday, July 11, was the date set for New York City. That day everything

went quietly, even gayly. But on Sunday, July 12, there were mutterings in the Ninth Congressional District, which was inhabited mainly by laborers, and which had a Democratic majority of over 3,000. These laborers, says Rhodes, when they faced the fact of three years' compulsory military service, "fell into despondency, while their wives and mothers abandoned themselves to excitement and rage." Prominent Democrats went about declaring the law was unconstitutional. A point of inflammation was the fact that a man might "buy himself loose" for \$300, favoring the rich at the expense of the poor.

On July 13, at the headquarters of the Ninth District, at the corner of Third Avenue and Forty-sixth Street, where the names were being drawn from a revolving wheel by a blindfolded man, pistols were fired, brickbats were hurled through the window, the crowd burst in, poured petroleum on the floor and set the building on fire. Workmen of the Second and Sixth Avenue street railroads noisily paraded the streets. The rioters were "almost all foreign born, with a large preponderance of Irish," who vented their wrath on the negroes, shooting and hanging them by the score and wrecking a Negro Orphan Asylum on Fifth Avenue between Forty-third and Forty-fourth Streets. The rioters seized arms from the arsenals; troops were called; "cannon and howitzers raked the streets."

The battle raged during four days, more than 1,000 persons being killed and wounded, while damage amounting to \$1,500,000 was done. In all, 10,000 infantry and three batteries of artillery assisted in quelling the riots. There was violence also in Pennsylvania and Wisconsin.

* * *

THE Secretary of War reported on June 22, 1917, that there were in the United States 1,239,179 persons born in foreign countries with which the United States was not at war, who had not declared their intention to become citizens, and 111,933 persons of birth in countries with which the United States was at war, who had not declared their intention to become citizens.

SUCCESS OF THE LIBERTY LOAN

THE official announcement of the Liberty Loan, the first United States war loan, was in substance as follows:

The total of the subscriptions was \$3,035,226,850, an oversubscription of \$1,035,226,850, over 50 per cent. More than 4,000,000 men and women subscribed. Of this number about 3,960,000 took the bonds in amounts ranging from \$50 to \$10,000; 21 subscriptions were \$5,000,000 and over, aggregating \$188,789,900. The subscriptions by Federal Reserve districts were as follows:

Boston	\$332,447,600
New York	1,186,788,400
Philadelphia	232,309,250
Cleveland	286,148,700
Richmond	109,737,100
Atlanta	57,878,550
Chicago	357,195,950
St. Louis	86,134,700
Minneapolis	70,255,500
Kansas City	91,758,850
Dallas	48,948,350
San Francisco	175,623,900

Allotments were made as follows: Subscriptions up to and including \$10,000, 100 per cent.; up to \$100,000, 60 per cent.; up to \$250,000, 45 per cent.; up to \$2,000,000, 30 per cent.; over \$2,000,000 and up to \$6,000,000, 25 per cent.; up to \$10,000,000, 21 per cent.; \$25,000,000, 22.22 per cent.; \$25,230,000, 20.17 per cent.

* * *

BRITISH CABINET CHANGES

IMPORTANT changes in the British Cabinet were announced July 17. Sir Edward Carson resigned as First Lord of the Admiralty and joined the War Cabinet without portfolio; he was succeeded by Sir Eric Campbell Geddes, former Director General of Munitions Supply. Winston Spencer Churchill succeeded Dr. Christopher Addison as Minister of Munitions, the latter to become Minister without portfolio in charge of reconstruction. Edwin Samuel Montagu became Secretary for India, vice Austen Chamberlain, who resigned on account of the Mesopotamia campaign disaster. Sir Edward Carson replaced Bonar Law as the fifth member of the War Cabinet, which consists of Premier Lloyd George, Labor Minister Henderson, Earl Curzon, Lord Milner, and Sir Edward Carson, the

three latter being Conservatives of the most extreme type.

* * *

BRITISH ROYAL HOUSE ABOLISHES ITS GERMAN TITLES

KING GEORGE of England has changed the name of his family and house from Saxe-Coburg and Gotha to the House of Windsor. He has also abolished the titles of the Princes of his family that bear German names and substituted British surnames, peerages being conferred as follows:

The Duke of Teck, a Marquis.
Prince Alexander of Teck, an Earl.
Prince Louis of Battenberg, a Marquis.
Prince Alexander of Battenberg, a Marquis.

Princess Victoria and Princess Marie Louise of Schleswig-Holstein shall be styled Helena Victoria and Marie Louise, respectively, and the Princesses of the royal family who bear the title of Duchess of Saxony have relinquished the title. Prince Leopold of Battenberg, whose elder brother, Prince Alexander, becomes a Marquis, will take the title of Lord Leopold of Mountbatten.

The action of the King reserves the title "Royal Highnesses" to the children and grandchildren of the sovereign, consequently the titles "Highness" and "Serene Highness" will disappear from English life, as well as the rank of Prince and Princess in the families upon which the King conferred peerages.

* * *

ENGLAND'S MUNITIONS OUTPUT

DR. ADDISON, British Minister of Munitions, declared in an address to the House of Commons, that in March, 1917, England's capacity for the production of high explosives was more than four times that of 1916 and 28 times as great as that of March, 1915. He said the country was now turning out twenty times as many machine guns as two years ago. In the matter of small arms and small ammunition the country was entirely independent of outside supplies. At Woolwich there were 73,571 workers, of whom 25,000 were women, as against 10,860 workers in August, 1914, of whom 125 were women.

In May twice as many airplanes were produced as in December last. They were

producing now 10,000,000 tons of steel per annum as against 7,000,000 tons per annum in pre-war days, and by the end of 1918 the figures would have risen to 12,000,000 tons.

He announced that a plant was now available for supplying the entire quantity needed of potash; they had also a plant to supply their needs entirely in scientific instruments, optical glass, machine tools, sulphuric acid, superphosphates, and tungsten, for all of which they had been dependent on outside sources. Fully 2,000 miles of railway track had been supplied to the several fronts, together with nearly 1,000 locomotives, apart from hundreds supplied by the Railway Executive Committee. India, Australia, and Canada had sent their contributions.

* * *

KNIGHTLY ORDERS FOR WOMEN

RECENT distinctions conferred upon women have suggested the question whether, in the past, the services and qualities of women have ever received recognition in the great knightly orders: The answer is distinctly in the affirmative. England, which has, in some ways, the most democratic government in the world, not only possesses the oldest existing knightly order, but is also the only country in existence where the ancient knightly custom of "dubbing" by the accolade, or laying on of the sword, is still preserved, as in the days when knighthood was in flower. The oldest knightly order is the Order of the Garter, which dates from about 1350; the "garter" is ascribed by tradition to Richard I., who sent it as a battle sign to the troops before Acre; to Edward III. at Crécy; to Joan, the "fair maid of Kent," Countess of Salisbury. Ladies were systematically admitted to the Order of the Garter in the fourteenth and fifteenth centuries, (at a time when prioresses and abbesses had the vote;) the Queen Consort, the wives and daughters of Knights of the Order, and other women of exalted position being members, and known as "Dames de la Fraternité de Saint George," patron saint of the Garter. Entries of the delivery of robes and garters to ladies are

found in the wardrobe accounts from 1376 to 1495, the first being to Isabel, Countess of Bedford, daughter of Edward III.; the last, Margaret and Elizabeth, daughters of Henry VII. Effigies of Margaret Byron and Alice Chaucer at Ewelme have garters on their left arms. The Order of the Thistle, established by James II. in 1687, under the patronage of St. Andrew, counts among its heads Queen Anne and Queen Victoria, who were also heads of the Order of the Garter, as were Queen Mary and Queen Elizabeth. This is the order recently conferred on Sir Douglas Haig. The Order of the Golden Fleece, established by Philip the Good in 1492, counts Queens among its members. The Order of St. Stephen of Hungary, founded by Maria Theresa in 1764, was presided over by her. The British Order of Merit was conferred on Florence Nightingale. Women as well as men are eligible to the Imperial Service Order. The Royal Order of Victoria and Albert and the Imperial Order of the Crown of India are conferred only on women. The decoration of the French Legion of Honor, founded by Napoleon on May 19, 1802, has been conferred on several distinguished women, including Rosa Bonheur and Mme. Curie, the discoverer of radium.

* * *

BRITISH AND GERMAN PRISONERS

THE British have captured 117,776 prisoners since the beginning of the war, not counting natives taken in the African campaigns, many of whom have been released, according to the statement of Major Gen. F. B. Maurice, Director of Military Operations at the War Office in London. The British have lost to the enemy 51,088 men as prisoners, including Indian and native troops

The British have captured 739 guns during the war and lost 113. Of the guns lost 37 were recaptured, and of the 96 remaining in enemy hands 84 were lost by the British on the west front early in the war. The British have not lost a single gun on the west front since April, 1915.

There are 58,138 German prisoners of

war interned in England, as against 42,-831 British prisoners of war or interned prisoners in Germany, according to a report made by the Postmaster General to the House of Commons on June 20. Each week the interned Germans receive an average of 9,260 parcels and money orders having a total value of \$12,000. The number of parcels received has decreased nearly one-half from last year. This was attributed by the Postmaster General to greater difficulty in obtaining materials to send from Germany.

* * *

GERMAN CASUALTY FIGURES

GERMAN casualties reported in German official lists during May, 1917, were as follows:

	May.	Total to date.
Killed and died of wounds..	19,006	998,439
Died of sickness.....	2,994	69,688
Prisoners	\$86	303,309
Missing	25,676	254,101
Severely wounded.....	14,348	571,386
Wounded	3,858	310,616
Slightly wounded.....	36,133	1,599,743
Wounded remaining with units.	8,655	249,478
Total	110,956	4,356,760

SMALL ARMIES IN DECISIVE BATTLES

THE attempt of a Chinese General to restore the fallen Manchu dynasty, which conquered China in 1644, having at his disposal only 7,000 troops with which he tried to change the destinies of 400,-000,000 population covering 4,000,000 square miles, recalls the fact that many of the world's decisive battles have been fought with bodies of troops which, in comparison with the numbers involved in the present war, seem absolutely insignificant. But it should be remembered that only the very recent development of railroads has made possible the moving and victualing of the huge modern armies.

On the morning of the battle of Lexington 130 answered Captain John Parker's rollcall, and not all of these took part in the fighting; at Concord, later in the same day, April 19, 1775, there were 450 minutemen; men, that is, who "answered at a minute's notice." The Americans under Lieut. Col. Smith

lost eighteen killed. At the battle of Long Island, Aug. 22, 1776, Lord Howe had 20,000 men, while Washington sent to General Putnam only 7,000 men, who, however, constituted more than one-third of his entire effective force. At the battle of Harlem Heights, Sept. 16, 1776, Lord Howe had 5,000 against Washington's 1,800 Americans, and the relative numbers were about the same at Bennington, Stony Point, and King's Mountain. At the battle of Princeton, Jan. 3, 1777, Lord Cornwallis had 6,000, while Washington had 3,600 men; yet this battle held Howe up for six months and laid the foundation of the French alliance. At Yorktown, Washington had 16,600 American and French troops, while Cornwallis had 5,316.

A recent historian asserts that there were not more than 5,000 knights in the feudal army of William the Conqueror, though older traditions placed the number at 60,000. John Fiske speaks of the forces in Cromwell's wars as "trivial," though Cromwell's victories had a world-wide significance.

* * *

THE lower house of Congress on July 14 passed without opposition a bill appropriating \$640,000,000 for the creation of a great air fleet. It is understood that the personnel authorized will approximate 100,000 men.

* * *

THE Austrian Parliament decided July 17 that Dr. Friedrich Adler, the assassin of Dr. Karl Stürgkh, Premier of Austria, should have been tried by a civil instead of a military court, consequently the death sentence imposed on him will not be carried out. His address at his trial is given elsewhere in this issue.

* * *

TUAN CHI-JUI was reappointed Premier and War Minister of China after the collapse of the effort to restore the monarchy, and Li Yuan-hung announced that he would retire from the Presidency in favor of the Vice President, Feng Kuo-chang. Tuan favored China's entrance into the war on the side of the Allies.

Military Events of the Month

Period From June 18 to July 18, 1917

By J. B. W. Gardiner

Formerly Lieutenant Eleventh U. S. Cavalry

THE past month has seen one of the most remarkable events of the entire war—the renewal of the Russian offensive begun last year. On July 1, the anniversary of the beginning of the battle of the Somme, the Russians began a determined movement along the northern course of the Zlota Lipa from Brzezany to Zloczow.

From such information as had reached us as to the condition of affairs in the new republic, the conclusion was almost unavoidable that there was no hope of Russia giving any assistance to the Allies during the current year. The spirit of the army, it appeared, had been destroyed through the period of fraternization with the enemy; their discipline was believed to have broken down entirely and their morale to be seriously impaired. The ammunition industry, besides, was partially paralyzed through strikes and impossible demands of the workmen, and the transport service, by which food and supplies were sent to the front, was completely disorganized. There was also an element in Petrograd, supported by German interests, that was outspoken against a renewal of the fighting and in favor either of a separate peace or an indefinite armistice. In the face of this condition, it did not seem possible that Russia could be counted upon as a factor in the fighting until next year.

But there was one man in Russia who saw the condition of affairs in its true perspective, who knew that the success of the revolution depended upon a continuation of hostilities until Germany was beaten, and whose enthusiasm and personal magnetism were so great as to nullify all opposing influences. This man was the new Secretary of War, Kerensky. The credit for the renewal of the fighting on the Russian front is his and his alone, and its successful prosecution a tribute to his personal inspiration.

When the Russian offensive of last year was finally halted, the battle line followed the eastern bank of the Zlota Lipa from its source near Zloczow as far as Brzezany. Here it made a curve around the latter point, crossing the river, and continued southward to the Dniester, which it crossed just west of Marympol. Passing west of Stanislaw, it continued south to the Carpathian Mountains, where it linked up to the Rumanian line along the border between Rumania and Transylvania.

First Russian Attack

The first task which the Russians had to accomplish, then, if they proposed to reach out for Lemberg from the east, was to clear the line of the Zlota Lipa throughout its length. This river flows through a deep cut with almost perpendicular sides, making it a particularly nasty line to force. All the advantage lies with the defense, and only great preponderance of artillery would give an attack a reasonable chance of success. It could, however, be flanked by a crossing to the north, where the river is narrow and presents a less difficult problem, and this the Russians tried to do through an attack between Brzezany and Zloczow.

The small village of Koniuchy was taken in this first effort, and about 10,000 prisoners fell into Russian hands. The ground gained, however, added little to their achievement. It was in every way immaterial. There was, however, a valuable significance in the character of the fighting. The Russians used artillery on a very large scale. Apparently they had a great supply of shell and were disposed to use it. There was also evidence that the army which made the attack, the army of Brusiloff, had not been seriously affected by the revolution. No army which was in an unor-

ganized condition a short time before could have been driven, thoroughly in hand at all times, as was the army which took this small village and so many Austrian prisoners. The fighting was of the heaviest kind and must have been accompanied by very heavy losses on the part of the Russians. That they

Blow South of the Dniester

Suddenly, without pausing in their attacks at Brzezany, the Russians opened up a terrific attack south of the Dniester, driving due west from the vicinity of Stanislaw toward Dolina and Stryj. It is somewhere in this vicinity that the Germans and the Austrians link up, and it

MAP SHOWING PROGRESS OF THE NEW RUSSIAN OFFENSIVE IN GALICIA

kept up the fighting is another indication of the morale which prevailed.

Not meeting with any great success at this point, the attack was switched further south, to Brzezany, where an effort was made to draw a noose around that important crossing, which, because of the high hills behind it, controls the country to the south and defends the railroad from Lemberg through Rohatyn. The Russian effort here was another failure.

was the Russian idea, undoubtedly, to separate the two forces by driving a wedge between them. This idea is sound. The history of the war on the eastern front will show conclusively that the Austrian is no match for the Russian. Wherever they have met on the field of battle the Austrian has invariably been beaten.

In the early days of the war it was the first invasion of Galicia which placed the Russian Army at the gates of Cracow

and threatened Silesia. Last year it was the great blow in Volhynia which nearly destroyed the Austrian Army. And now again Russia was attempting the same thing. How reasonable the argument is is shown by the results. The Austrian line cracked; the crack widened, and finally the line broke, permitting the Russians to pour through. We hear very often of a line being broken, but we seldom see it done. It is not sufficient merely to penetrate it. The gap through which the penetration is made must be very wide, so that sufficient troops can pass through to have some effect on the two wings thus separated. But the Austrian line was truly broken, and the Russian cavalry raced through, widening the gap as they passed.

The Lukwa River was reached and crossed almost without opposition. The Lomnica, the next stream met with, was the test. The east bank is low, the west bank very high and heavily wooded. If the Austrians could hold the Russians to the east bank of the stream they still had a chance to repair the damage. But the Russians were not to be halted here. The Cossack cavalry forced the river not more than fifteen miles south of the Dniester and drove at the town of Kalusz, the Austrians' former headquarters. They found it unoccupied and took possession.

Fall of Kalusz and Halicz

The Germans, however, had hurried reinforcements south to assist the beaten Austrians, and they came in contact with the advancing Russians first at this point. A heavy but local battle occurred, and the Russians, finding themselves temporarily outnumbered, withdrew. But reinforcements were arriving for both sides, and the real battle for the town was on. It changed hands several times, but finally fell securely to the Russians. Kalusz has an importance which in every way justified the effort to take it. West of the Lomnica River there is no barrier between it and the Stryj. The country is wide open, rolling, it is true, but without any definite natural barrier which would hinder the advance. If a stand is to be made anywhere east of the Stryj, the Lomnica is the line which would be selected. Kalusz is the most important

town along the river, and is, moreover, on the Lemberg-Stanislaw railroad. It was for these reasons that the Austrians selected it for their headquarters. With its fall went the line of the Lomnica, the Russians, as this article is written, being apparently firmly established on the west bank.

While this wedge was being pushed between the Austrian and the German armies the town of Halicz, on the Dniester, was stormed and taken. This place is important because it covers the first large bridge east of Chotin across the Dniester, and therefore may be said to guard Lemberg from an attack from the south. A covering force to guard the bridgehead was at once thrown across the Dniester, so that the Russians are now secure on the northern bank.

Effects of Russian Advance

The net results of the Russian advance up to the present time have been large. Nearly 50,000 prisoners have been taken—mostly Austrians—together with great quantities, not enumerated in dispatches, of guns and war material of all kinds. It is certain that the latter results have been considerable. The wedge which the Russians have pushed into the Teutonic lines is over twenty miles deep and at least half that width. The rate of advance was extremely rapid, the entire advance having been made in twelve days. There was not sufficient time to remove to safety the mass of materials normally held behind such a line. The fact that the taking of a number of guns of large calibre is sufficient indication of what must have happened to the Austrian reserve supply centres.

The Russian offensive is, however, infinitely more injurious to the Teutonic cause than the military damage so far inflicted. Ever since the beginning of the war Germany has played, as a most important card, the sympathy of a not inconsiderable number of Russians close to the Petrograd Court. ~~Stürmer was~~ most openly a German tool. The result was hardly what Germany had been led to expect; nevertheless, it was not for the moment without a decided element of advantage.

When the Russian revolution broke, the German military councils had before them

two alternatives. It was inevitable that such a tremendous civil upheaval should bring in its wake a military upheaval of equal intensity. Disorganization in the military would follow as a matter of course. Should the German Army take advantage of the military situation and attack with chances of a conclusive victory, or should Germany play the diplomatic game, trusting to her complete organization in Russia to produce either a separate peace or a perpetual armistice? Either way the chances of success were bright. While Germany was hesitating between the two, the British and the French on the western front became most active. A perfect hurricane of attacks followed, almost without cessation, demanding all Germany's reserve strength to fight back. The situation was desperate.

A Diplomatic Battle Lost

Confronted, then, with this resistless, unrelenting pressure on the western front, Germany decided to fight Russia with diplomacy rather than with force of arms. It was a gamble, but, as far as was apparent at the time, in no sense a desperate gamble. There was no indication that Russia could get her organization straightened out for some time to come. German Socialists were continually active and had formed an anti-war party in Russia which precluded the idea of any immediate military activity. To them Germany intrusted the task of neutralizing Russia. To have attacked Russia under such circumstances would have been to run the danger of solidifying, on the theory of the defense of the new freedom, all the discordant elements. And a new Russia in the field, with all elements of treachery removed—a Russia in control of the people rather than of a weak aristocracy—would possess an element of potential force that Germany could not face with equanimity.

There were, moreover, certain military factors to be considered. The first was the situation on the western front, a situation upon which hung the reputation of von Hindenburg. His celebrated line was under attack, and a weakening of any portion just at that time might cause a breach and send the German Army scurrying back to the frontier. There

was Italy, who had begun an offensive on a large scale on the Carso, the initial success of which promised badly for the Central Powers unless it could be checked. Austrian reinforcements had to be sent to Italy and to France. The available supply of human materials was small unless the needed men could be detached from the eastern theatre. Germany, therefore, abandoned the Russian front—particularly the northern portion—to the diplomats, and betook a not inconsiderable part of the army for service in the west and south.

But Russia has always been the great surprise of this war. At the end of 1915 he seemed completely out of it, as a result of her disastrous defeat along the Dunajec line, only to return to the fighting six months later more powerful than ever. And now Russia is again afield, possessing the power of at least a tremendous initial drive, whether or not it can be sustained for any considerable period. Germany played her cards and lost.

Delay Means German Defeat

The situation in which the Central Empires are placed is, therefore, that they must win the war in 1917, force the Allies to admit a draw during that year, or go down to inevitable defeat. In 1918 a new Russia will be in the field, a Russia of whose strength the present is but an indication. In that year the United States, fast mobilizing its resources for war purposes, will have material strength in Europe, and will be growing stronger as each day passes. It will not be a question, as was once contemplated, of America taking the place of Russia on the battlefield; America will be supplementing the resources of the new republic with her own.

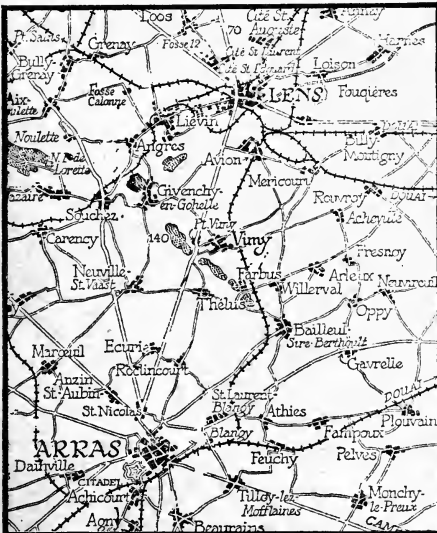

There remains, as far as is apparent, the submarine campaign, which has fallen far short of the requirements admitted by Germany as necessary last February. The effect of this will have to be greatly increased if it is to accomplish its purpose. And, if we admit as true the statements of the German Chancellor, it is Germany's only and last hope.

The British at Lens

The most important series of actions on the western front during the month

was that of the British along that dirty little stream which flows about Lens—the Souchez River. Ever since taking Vimy Ridge the British have been pecking at the Lens position. Their aim is to surround it from the south and so force its occupants out by the squeezing process. The steps taken this month were begun by the Canadians seizing the high ground west of the suburb of Coulotte. From here, with the trenches close together, they advanced step by step, occupied Coulotte, and established a line squarely across the Lens-Arras road, a scant mile from the village.

The same slow but unhalting process resulted somewhat later in the occupation of Avion, and Lens was placed in a deep

SCENE OF BRITISH ADVANCES NEAR LENS

pocket, the mouth of which was being constantly narrowed. There seems to be no reason to doubt that the British could take Lens whenever it is desired to do so; but the Germans have so conducted matters that it would be a very expensive operation. In order to give a clear field of fire to the artillery, the houses of the town have been practically leveled. The whole town was then turned into one gigantic nest of machine guns, the cellar of every house being a machine-gun emplacement.

The process now going on is slow, but

interesting. British raiding parties, made up almost entirely of Canadians, are entering the town with very small loss, and are destroying these positions one after the other by means of bombs. Sometimes a machine gun or two are taken, sometimes they are simply destroyed. But the raids are being carried on without cessation.

It is distinctly noticeable that several weeks have elapsed since the British have attempted any major attack. There is no way of gauging the situation as there was in the battle of the Somme. The operations of the year have consisted in a series of more or less detached attacks, each an independent battle. It is an entirely new development on this front, and has one distinguishing feature. Every attack has had for its object some one position of great local value—usually from the standpoint of observation. In almost every case, moreover, this object has been attained. What the next phase will bring forth it is impossible to forecast.

The Chemin des Dames

Except for one minor attack in the Champagne country east of Rheims, which produced only negative results, France has been on the defensive for the entire month. The Germans have attacked at a number of points between Soissons and Verdun, many of their attacks having reached the intensity and magnitude of a major effort. This is particularly true of the many attacks made along the Chemin des Dames. There is no line between Verdun and the North Sea that is more valuable than this Road of the Ladies. As long as it is in French hands it remains a constant threat against the German position at Laon, which is the very pillar of the whole line to the north.

This celebrated road runs along a tree-fringed ridge and brings under observation many miles of country northward. At the foot of the northern slopes runs the Ailette River, and from its valley rises the high ground on which Laon is situated. It is almost literally true that the German attacks against the French positions here have been unceasing. In-

deed, such has been their persistency that one is reminded of the attacks at Verdun. It might well be that what the Germans failed to do at Verdun—bleed the French to death—they are now trying to do on the Chemin des Dames. Whether this be the object or not, it is certainly true that the British are being left alone, and all strength concentrated against the French.

All the attacks, however, have been utterly fruitless. The French have broken them one after the other without having their lines even dented. Because of the great advantage of the French position the probabilities are that the German losses have far exceeded those of the French.

German Attack on the Yser

On the extreme left of the allied line, far to the north amid the sand dunes of Belgium, the Germans made the first offensive effort against the British that they have undertaken on their own initiative within a year. They had been whipped and spurred into many heavy and vicious counterattacks, but not for a long time had they undertaken an offensive effort voluntarily.

The northern extremity of the British line in Belgium is in a sense inclosed by a triangle formed by a bend in the Yser River. Going up the river from its mouth, we travel generally southward for a distance of about two miles, and then turn abruptly eastward. The British line, as it was established after the German attempt to drive to Calais, ran about 600 yards to the east of the southward stretch of the Yser, circled about the town of Nieuport, and, crossing the Yser Canal, continued south past Ypres to Armentières. It was against that stretch of line between the coast and the canal that the German attack fell.

Inasmuch as the establishment of the British lines in this sector was the result of a defensive engagement, it is a matter of surprise that a position on the far side of the river was selected. To make a stand before an aggressive enemy with a river only 600 yards in one's rear is a rather hazardous undertaking. A quick, hard blow which shatters the cross-

ings in rear while the infantry presses forward in front is apt to pin the defenders in between the advancing infantry and the river in such a way that escape becomes impossible. The only reason that suggests itself as to the retention by the British of such a dangerous position is that the possibilities of an offensive from this quarter was contemplated, and in view of this it was considered better to have the river behind rather than a barrier before them. In other words, it was a gamble as to who would start the first offensive. If Germany acted first, the British were in

SCENE OF BRITISH REVERSE ON THE YSER RIVER

serious trouble. If the British began operations they stood a good chance of improving their situation and eliminating the danger of having the river in their rear.

The ground over which the German attack was made is perfectly flat, except for the dunes, the intrenchments being built up of sandbags instead of being dug. Apparently there has been but little airplane activity on this front, so that when the Germans were ready for the attack they had the great advantage of superiority in the air, which means the advantage of observation.

Attack Was a Surprise

The attack came as a distinct surprise. Unnoticed by the British air scouts, the Germans effected a heavy concentration

of guns on this small front and suddenly opened a hurricane of artillery fire on the sandbag defenses. At the same time the bridges over the river as well as over the canal were bombarded and destroyed. Reinforcements were thus held back of the river where they could not reach the front British trenches. After a brief but intense artillery preparation the German infantry was sent forward and caught the British against the river with no line of retreat.

The battle was of very brief duration and was a decided success. The British force north of the canal—not more than a few battalions—was completely destroyed either through capture or casualties. The prisoners taken were about 1,200, with probably very small loss to the Germans. It was a brilliant movement, but one of minor importance. Its result on the general situation is that it improves the defensive strength of the German line in this section by forcing the British into a position where they have to fight their way across a river under fire should they ever intend to take the offensive against the Belgian coast. The Germans at no point were able to cross the river themselves, and having destroyed the bridges with their own artillery they will have considerable difficulty following the affair any further should they be so disposed.

Failure in Western Asia

Russia's very effective and truly re-

markable work on the European front has to some extent been offset by her complete failure in Western Asia, as evidenced by the Turkish reoccupation of the town of Khanikin. This small village has a peculiarly important strategic value in any campaign whose object is the occupation of the Mesopotamian plains. The mountains of Western Persia limit, as with a heavy wall, the eastern boundary of this plain. This wall is broken in but one place, and that by the excellent road from Kermanshah to Bagdad. This passage is covered by Khanikin. It was here that the Russian offensive broke down a year ago, and during the past months we have seen a similar retreat.

This means that contact with the British, upon which the success of the entire Asiatic campaign is based, has again been broken, leaving the British right flank completely in the air. On account of the excessive heat in this theatre, this matter is not as important or as serious as it would have been had the incident occurred earlier in the year. As a matter of fact, there has yet to be any activity in Mesopotamia during the Summer months, and this may explain the Russian action.

In all other theatres there has been marked quiet, as if all the powers were pausing for breath before undertaking new engagements.

Progress of the War

Recording Campaigns on All Fronts and Collateral Events
From June 19 Up to and Including July 18, 1917

UNITED STATES

A Russian Commission headed by Ambassador Boris A. Bakhmeteff and a Rumanian Commission headed by Dr. Basile Lucaciu conferred with American officials in Washington on the conduct of the war.

On June 19 Vice Admiral Sims was appointed to take general charge of the allied naval forces in Irish waters.

All contingents of the American expeditionary forces arrived safely in France and were sent to training camps. The transports were attacked twice by German

submarines, but the U-boats were driven off by American naval gunners, and at least one of them was sunk.

American airplane experts reached England to study modern aircraft designing and manufacturing.

On June 22 President Wilson signed an order authorizing the creation of an Exports Council, and on July 8 he issued a proclamation providing for Government control of exports.

An appeal to business men calling for fair war prices was issued by the President July 11.

SUBMARINE BLOCKADE

The American steamships Orleans, Kansan, Massapequa, and Grace, the schooner Mary W. Bowen, and the barkentine Hildegard were sunk by submarines.

According to British official statements, England's losses for the week ended June 16 included twenty-seven vessels of over 1,600 tons; for the week ended June 23, twenty-one vessels; for the week ended June 30, fifteen; for the week ended July 7, fourteen, and for the week ended July 14, fourteen. These included the Leyland liner Cestrian and the transport Armadale. A torpedo boat destroyer was sunk in the North Sea.

Announcement was made on June 23 that twelve Greek vessels, with tonnage of 31,542, had been sunk since April 1.

France reported two steamships of more than 1,600 tons lost in the week ended June 24 and four in the week ended July 1.

Germany ceded to Holland a number of German ships interned in the Dutch East Indies as payment for vessels destroyed by U-boats.

Argentina demanded an indemnity for the torpedoing of the vessels Oriana and Toro.

Spain barred submarines from her territorial waters.

Brazil revoked her decree of neutrality in the war between the Entente Allies and Germany, and her navy joined the United States fleet in patrolling the South Atlantic on watch for German sea raiders or submarines.

CAMPAIGN IN EASTERN EUROPE

June 26—Russians repulse strong attacks in Galicia in the direction of Zlochoff.

July 1-2—Russians, led by Kerensky in person, resume their drive toward Lemberg and advance on an eighteen-mile front; they raid Teuton positions in Volhynia, toward Kovel.

July 3—Austro-Germans are evacuating Brzezany; Russians take Presovce, Zborow, and Korshiduv, and drive the enemy across the Stripa River.

July 6—Teutons repulse Russian massed attacks between Zborow and Konluchy.

July 7—Fighting begins near Pinsk; city of Pinsk reported in flames; Russians occupy German trenches in the Zlochoff region and near Konluchy.

July 8-9—Russian offensive spreads north and south of Halicz; Russians cross the Bystritza River on both sides of the railroad line running west from Stanislaw to Kalusz and Dolina, and capture several villages and the town of Jezupol.

July 10—Russians take Halicz; Austro-German forces driven across the Lomnica and Luvka Rivers.

July 11—Russians advance on 100-mile front, pursuing the Teutons across the upper Lomnica River.

July 12—Russians capture Kalusz and push on toward Dolina.

July 13—Russians press on in Galicia on a front of nearly fifty miles from Halicz to the foot of the Carpathians, capturing several important heights north of the Dniester and driving the Teutons back to northeast of Ehilus and capturing Perchinsko, west of Kalusz.

July 14—Russians beat off two attacks on Kalusz and capture Novicka.

July 15—Russians repulse attacks in the Lodziany region and take many Austrian prisoners.

July 16—Russians take eastern end of Lodziany.

July 17—Russians driven out of Kalusz by German reinforcements and lose Novicka, but retake it.

July 18—Teutons open heavy fire along the front from south of Brzezany and in the region of Halicz.

CAMPAIGN IN WESTERN EUROPE

June 19—French repulse German attempts to regain positions in the Champagne district between Mont Carnillet and Mont Blond.

June 20—British retake lost positions east of Monchy-le-Preux; Canadians repulse attacks on new positions near Lens; Germans on the Aisne capture part of French first-line trench east of Vauxaillon.

June 21—French retake part of lost ground at Vauxaillon and push their lines ahead near Mont Carnillet on a 600-yard front.

June 22—Germans pierce French salient on a front of one and a quarter miles along the Chemin des Dames from west of La Royère Farm to the Epine de Chevreigny.

June 24—French recapture greater part of salient east of Vauxaillon.

June 25—British advance on a front of one and a half miles southwest of Lens.

June 26—Canadians capture La Coulotte and push beyond it toward Lens; French on the Aisne capture positions northwest of Hurtebise Farm.

June 27—French drive Germans from the Dragon's Cave near Hurtebise.

June 28—Canadians, in drive on Lens, push on half way through Avion.

June 29—British carry German line between Oppy and Gavrelle on a front of 2,000 yards; Germans at Verdun capture French positions on both sides of the Malancourt-Esnes road and storm Avocourt Wood.

June 30—British advance a mile toward Lens over a front of four miles; Germans make small gains at Dead Man Hill.

July 1—Heavy fighting around Avocourt Wood, Hill 304, and Dead Man Hill; British draw close to Lens.

July 2—French drive Germans out of positions west of Cerny village; British forced to retire west of Lens.

July 3—French repulse German attacks on

the Aisne on both sides of the Ailles-Paissy road; big artillery battle in the Ypres salient.

July 4—Germans launch powerful offensive north of the Aisne on a front of nearly eleven miles, from north of Joney to the Californie Plateau, but are repulsed with heavy losses; Germans attack French positions on the left bank of the Meuse with liquid fire, but are driven back.

July 5—British advance their line south of Ypres on a 600-yard front near Hollebeke.

July 7—British advance east of Wytshaete in Belgium.

July 8—German attack in four sectors on the Chemin des Dames repulsed; French seize three strongly organized salients on the west bank of the Meuse.

July 9—French drive Germans from positions on the Aisne front near Bovettes and Chevreigny Ridge.

July 11—Germans launch a strong attack against the British north of Nieuport and drive them back on the Yser River.

July 12—Germans storm British trenches near Monchy and take many prisoners.

July 15—Germans penetrate French salient west of Cerny, but lose part of ground seized; French in Champagne capture German trenches north of Mont Haut and northwest of Teton height.

July 17—French capture German first and second lines on a wide front northwest of Verdun.

ITALIAN CAMPAIGN

June 20—Italians resume the offensive in the Trentino and capture Austrian positions on Monte Ortigara.

June 21—Italians explode a mine in the Val Casteana-Ampezzo sector under the spur of the Lagazroi Piccolo and destroy the Austrian garrison.

June 26—Austrians suffer heavy losses in attempt to retake positions in the Ortigara sector.

July 11—Italians advance on the Carso and occupy Dalino.

July 12—Austrians driven back in counter-attack after reaching advanced Italian position on Col Bricon.

CAMPAIGN IN ASIA MINOR

June 29—Turks drive Russians across the River Abis Hirman on the Persian frontier.

July 6—Russians attack Turks in the region of Sakkiz.

July 9—Turks reoccupy Panjwin, Khanikin, and Kasr-i-Shirin on the Persian border.

July 12—Announcement made in British House of Commons of capture by the Arabs of Turkish posts between the Taffila-Main district and Akaba.

July 15—Russians drive back Turkish advance guards on the left bank of the River Arish-Darasi.

AERIAL RECORD

British aviators bombarded Ghisteltes, Nieu-

munster, Ostend, and other towns in Belgium and brought down seven German machines at Dunkirk. On July 6 eighty-four French machines raided Germany, dropping bombs on Treves, Coblenz, Essen, and other towns of military importance, and causing heavy damage at the Krupp Works. In the biggest air battle of the war, July 12, the British brought down fourteen German airplanes on the French front and drove sixteen out of control. Nine British machines were lost.

Two great raids were made on England.

On July 4 German airplanes dropped bombs on Harwich, killing eleven people and injuring thirty-six. Two German machines were lost. On July 11 London was raided and thirty-seven persons killed and 141 injured. Three of the twenty German machines that took part in the raid were brought down.

British naval aviators attacked the Turkish fleet off Constantinople and dropped bombs on the cruiser Sultan Selin, formerly the German cruiser Goeben. The War Office at Constantinople was also hit.

NAVAL RECORD

The American sailing ship Galena was sunk by a bomb off the French coast.

Great Britain, in a decree that became effective July 4, extended the danger zones in the North Sea northward and westward.

Ponta Delgada, in the Azores, was bombarded by a German submarine. An American transport joined in the firing at the U-boat.

The Peninsular and Oriental liner Mongolia was sunk by a mine off Bombay.

The French armored cruiser Kleber was sunk by a mine off Point St. Mathieu on June 27. Thirty-eight men were lost.

A British torpedo boat destroyer and a German torpedo boat were sunk by mines in the North Sea. British destroyers sank four German merchant ships, captured four, and routed others off the coast of Holland.

An armed American schooner returning to an Atlantic port reported that she had sunk an attacking U-boat.

A Russian torpedo boat was blown up by a mine in the Black Sea on June 30.

RUSSIA

The Pan-Russian Congress of Councils of Workmen's and Soldiers' Delegates adopted a minority resolution approving the creation of a Coalition Government, voted to dissolve the Duma and the Council of the Empire, and rejected the proposal for a separate peace with Germany.

Rear Admiral Glennon of the American diplomatic mission, by an address to the soldiers of the Black Sea fleet at Sebas-

topol, ended the mutiny there and secured the restoration of the officers.

Elihu Root and other members of the American Commission addressed the people of Petrograd and other large cities, pleading for the establishment of a secure Government and continued co-operation with the Allies.

The Social Democratic Congress of Finland adopted resolutions demanding the separation of Finland from Russia and the formation of an independent republic. The Finnish Diet passed the second reading of a bill establishing virtual independence, and refused to grant a full 350,000,000 mark loan to Russia.

Five Ministers resigned from the Cabinet because of their unwillingness to decree the autonomy of Ukraine in the absence of the Constituent Assembly.

Petrograd was placed under martial control on July 18, following outbreaks by the Maximalists.

GREECE

The Zaimis Cabinet resigned and a new Ministry was formed by Venizelos. On June 29 the Government severed diplomatic relations with the Teutonic Allies. Turkey announced that she would consider this act equivalent to a declaration of war and would deport the Greeks and confiscate their property. On July 16 the United States received official information that Greece considered herself a belligerent.

MISCELLANEOUS

German authorities seized twenty prominent Belgians and deported them to Germany in reprisal for what Germany alleged was inhuman treatment of German civilian prisoners taken by the Belgians at Tabora, in German East Africa.

The German Emperor divided Belgium into two districts and named one German administrator for the Flemish district and another for the Walloon section.

Germany imposed a fine of 250,000,000 francs on the occupied territory in Rumania.

An investigation into German plots for sinking Norwegian ships by concealing explosives in artificial lumps of coal in the coal bunkers resulted in the arrest of several Germans in Norway and a formal protest to the German Government.

A secret German wireless station was found on an island outside of Arendal.

The Austrian Ministry, headed by Count Clam-Martinic, resigned following the refusal of the Polish Party in Parliament to vote for the war budget. A temporary Ministry was formed by Dr. von Seydler.

The extent of Bohemian disaffection was revealed in a statement by F. von Georgi, retiring Minister of Defense, that three Czech regiments had deserted to the Rus-

sians and that Czech prisoners of war had volunteered for service against Austria.

Spain suspended constitutional guarantees on June 26. Catalonia and the Basque provinces demanded autonomy.

The young Manchu emperor, Hsuan Tung, was restored to the throne in China on July 1 by General Chang Hsun, who ordered President Li Yuan-hung to retire. He was forced to abdicate on July 7 when the Republican forces under Tuan Chi-jui routed the Monarchists near Lang Fang. The Republicans later captured Peking. President Li Yuan-hung decided not to resume office and Tuan Chi-jui assumed the Premiership and took over the war portfolio.

Germany was convulsed by a political crisis. Chancellor von Bethmann Hollweg, in a speech before the Reichstag on July 9, rejected the Socialist-Centrist program of peace without annexation and declared for continued fighting for conquest. The Emperor promised electoral reforms in Prussia. Dr. A. F. M. Zimmermann resigned as Secretary of Foreign Affairs and was succeeded by Count Brockdorff-Rantzau. Count von Roedern, the Finance Minister, replaced Dr. Karl Helfferich as Minister of the Interior. Bethmann Hollweg resigned on July 14 after a conference between the Kaiser and the Crown Prince and other military leaders. He was succeeded by Dr. Georg Michaelis.

Vice Admiral Delbono succeeded Vice Admiral Arturo as Italian Minister of Marine.

Albanian leaders asked the Italian Government to represent them and their interests at the coming allied conference in Paris, and to demand for them Epirus and parts of Serbia.

Anti-conscription agitation on the part of the French Canadians resulted in riots in Montreal and Quebec.

As a result of a report on the mismanagement of the British campaign in Mesopotamia, J. Austen Chamberlain resigned as Secretary of State for India. He was succeeded by Edwin Samuel Montagu. Lord Hardinge also presented his resignation as Under Secretary of State for Foreign Affairs, but it was not accepted. Bonar Law announced in Commons that a judicial inquiry would be made to place the blame for the fiasco. Several other changes were made in the British Ministry. Sir Edward Carson resigned as First Lord of the Admiralty and joined the War Cabinet without portfolio. He was succeeded by Sir Eric Campbell Geddes. Winston Churchill succeeded Dr. Christopher Addison as Minister of Munitions, Dr. Addison becoming Minister without portfolio in charge of reconstruction.

GENERAL JOFFRE BREAKING GROUND FOR THE LAFAYETTE MONUMENT AT BALTIMORE. BEHIND HIM IS M. VIVIANI, AND ON THE LEFT, WITH HAND EXTENDED, IS MAYOR JAMES H. PRESTON

Joffre's Tribute to Lafayette at Baltimore

By J. H. Barget

AFTER the lapse of 136 years the close ties of friendship uniting French and American hearts were renewed in a dramatic episode in which the recent French Mission took part at Baltimore, Md. It was one of those moments in which history repeats itself. On Nov. 5, 1781, when this nation was just emerging from its struggle for independence, the citizens of Baltimore addressed these words to the Marquis de Lafayette as he passed through that place on his way from the South: "Your good offices could not but increase a cordiality which must render our union with France a permanent one." The presence of our troops today on the battle front in France is a fulfillment of that pledge. General Lafayette said in reply:

"In the affections of the citizens of a

"free town I find a reward for the services of a whole life. The honor of being among America's first soldiers is for me a source of great happiness. The time when I had command of an army in Virginia, which you are pleased so politely to mention, has only shown that the courage and fortitude of American troops are superior to every kind of difficulty."

Like an echo from the tomb of that beloved Frenchman came the expressions of gratitude uttered by Marshal Joffre on May 14, 1917, when the hero of the Marne, with Vice Premier Viviani and other French dignitaries, stood upon the site in Mount Vernon Square, Baltimore, where a monument is shortly to rise in memory of Lafayette. And two months later, on July 14, Frenchmen at home celebrated their own national fête, recall

ing still more vividly the meaning of the great epoch of human liberty which, dawning in America in 1776, reached a new fullness in France in 1789, and is about to culminate in the destruction of the last Bastille of absolutism.

In Baltimore during the Revolution men and women provided General Lafayette's troops with flour and clothing on his march to the South; and today, through popular subscription, they are raising funds to erect a monument to the illustrious Frenchman. Nothing more was needed to stir the blood and sentiment of Americans than the presence of the Marquis de Chambrun, a member of the French War Commission. When he followed General Joffre in breaking the ground on which the monument to his great-grandfather will rise in Baltimore the cheering of the masses rose in volumes for the hero of their ancestors, and the echo passed the gigantic monument of his friend, General George Washington, whose shadow falls on the Lafayette site.

Many of those present at the dedication of the Lafayette site were ancestors of the association of youths known as the De Kalb Cadets, which took part in the great ovation given Lafayette when he visited Baltimore on Oct. 24, 1824, as the guest of the city, through a resolution passed by the City Council. General Lafayette arrived on the steamboat United States, which conveyed him from Frenchtown. After being shown about the city and entertained at the City Hall, General Lafayette was taken to an elevated pavilion at Baltimore and Light Streets. At this point the De Kalb Cadets passed in review and a scene took place which has been repeated in thousands of homes to show how the great soldier of freedom loved the people of Baltimore.

Each Marshal of the De Kalb Association carried a scroll in his hand bound with blue ribbon, upon which was inscribed the word "Gratitude." Each Marshal deposited the scroll at the feet of the General. He repeatedly opened and closed his arms as if in the act of pressing them to his heart; and, when the procession had passed, Lafayette suddenly turned away and burst into tears.

The breaking of the ground for the Lafayette Monument recalled this scene as the earth was turned over by the French Commission. The thousands of school children seemed thrilled and fairly throbbed the sentiments of the noble Lafayette. They each recalled the story of the banner of crimson silk with which Lafayette was saluted on his visit to the city in 1824—the banner whose memory lives in Longfellow's poem, "Hymn of the Moravian Nuns at the Consecration of Pulaski's Banner." The banner was presented to Count Pulaski by the nuns of Bethlehem. At the time he was raising a corps of cavalry in Baltimore, having been made a Brigadier in the Continental Army, and had called on Lafayette, who was wounded.

The visit to our shores of General Joffre, former Premier Viviani, and the French War Commission, coupled with the celebration in Paris this year, brings back vividly the days of the Revolution. It appears singular that after all these years we find ourselves in a rôle similar to that played by Lafayette and his fellow-countrymen in our hour of peril.

Thomas Hastings, who designed the Lafayette Monument in Paris, is now working on the plans for its completion. It is proposed to have the monument erected in Baltimore before the next national holiday of France, July 14, 1918.

War's Inferno on the Aisne Ridge

By Wythe Williams

(Cabled to *The New York Times*, July 12, 1917)

YESTERDAY at dawn I stood on the Chemin des Dames. For the first time in almost three years some one other than the struggling soldiery has been able to reach that bloody ridge. It is called the Road of the Ladies, because it was built by Louis XV. for his daughters. Although grim irony now, the name must remain famous forever as the scene of the mighty conflict still raging for its final possession.

Only a few yards from me was the spot where once stood the monument of Hurtebise, commemorating the battles of Napoleon. Nothing remains of it. It is just a spot pointed out by my officer in that waste of tortured earth. The whole road is the same. It is only a place no different from all that surrounds, and which my officer told me was the Chemin des Dames.

I crawled forward and down deep into the earth through a great granite cavern known as the Den of the Dragons. I passed out beyond the Chemin des Dames and crept slowly and cautiously into the first line of shellholes of the French Army—not trenches, but shellholes vaguely connected by gullies of mud and water. The first line of German shellholes was directly down the ridge beneath me.

The last of the stars were burning out and the light of a new day was just beginning to make things clear. There had been four alarms sounded on that particular section of the line in the twenty-four hours previous, and during the evening a strong but futile German attack. But now it was intensely quiet. Soldiers lay all about me—rifles and hand grenades always ready—but no sound broke the silence. The artillery was taking an early morning sleep, which fact alone was responsible for the permission granted to me to get so close to the very hand grapple of war.

What Our Troops Will See

Many miles behind lay an American army. With its early coffee it might dimly hear the artillery awake from slumber—the awakening wafted to it on the breezes of a July morning. I thought of the American Army as I sat in the mud beside a French *poilu* carefully sighting his rifle on a ridge of wet earth before us. I thought of the day, so soon to come, when that army must march forward to relieve some similar portion of this line that is hell's very own. I thought of the great armies now being organized back home—armies containing my friends and relatives, my own people—which must come soon to take their places in order that the world's civilization may be saved.

Last November I tried to describe the blasted slopes of Douaumont and the battle front of Verdun. That battlefield remains and always will remain the very last word in modern war. Nothing surpasses its appearance. Nothing can ever surpass it. But now the whole battle line is getting just like that. Some of it gradually, some quickly, like the Chemin des Dames, which is almost as awful a sight as Verdun after nearly a year of constant grueling artillery fire.

Along the Chemin des Dames I counted four charred and splintered stumps at great intervals. That was all that remained to mark a roadway, once macadamized and lined with great trees and hedge rows. In a day or even an hour they are likely to vanish, too, so that nothing will remain but a long expanse of tortured, shell-pocked, upturned, and battered earth. It is like a wild sea suddenly made to be still a moment, drawing under the caps of its waves thousands of pieces from the wreckage of sunken ships—the *débris* of battle and the remnants of men. No other comparison than a sea fits the battlefield,

both in its appearance and its desolation.

Importance of the Highroad

The Chemin des Dames runs for miles along the very top of the crest captured by the French at the time of the last great offensive. It is something probably the most coveted by the Germans on the whole battle line. Its possession gives the French all the observatories overlooking the valley of the Ailette. Its continued possession by the French makes the Germans tremble for their future. So the battle is always going on. Every day, almost every hour, at some point or other along the Chemin des Dames, the enemy strives desperately to regain some portion of the old line he held so long.

On this particular evening I was billeted at an Army Headquarters far in the rear, but was awakened by the sound of the guns. There was a continuous, unending roar that sounded plainly through the night. I feared that the trip would be called off, but on the stroke of 2 o'clock—the hour set for the start—an orderly came to my cot with a pot of hot coffee and told me an auto was waiting. Getting into my boots, I noticed the bombardment had died down, and went outside into a heavy drizzle which made me quite happy. Not that I particularly welcomed walking some hours in the rain and mud, but because the air was so heavy I felt positively there would be no German gas attack just while making the last stages of the journey. The thought of a gas attack at dawn on the unsheltered slopes of the Chemin-des Dames was anything but cheerful.

We went some miles in the car with lights bright, then at a certain point everything was made dark. We plowed away over tiny twisting new roads leading in the general direction of the front. We went very slowly. I could see through the dark long lines of troops plodding along the roadside going in the same direction. They were fresh troops, as we learned later, going to relieve the men in the front line who had borne the brunt of the attack that night.

At 4 o'clock—it was still dark on ac-

count of the heavy weather—we left the car in the rear at a post called the Moulin Rouge. I could faintly see a cluster of wooden shacks through the trees. I was met by a French Major. It was the gay welcome habitual to French officers, no matter what their business in hand. * * *

Sharpshooters at Work

We reached the listening post and slumped down into the mud. The soldier there was standing erect. We were all exactly the same color as the mud about, and the soldier told us it was quite safe to stand up and take a look over the barrier at the valley below. He explained casually, but in whispers, that the Germans were straight down the slope at our feet, so if they looked up to see what he was doing they would be sure to be killed by any one of scores of riflemen in similar positions to our own all along the line.

He was leaning over the parapet, aiming his rifle as he spoke. He was so unconcerned, so ordinary, so matter of fact, that I jumped back, startled and amazed, as the sound of the rifle fired suddenly broke the thread of conversation.

"Got an officer that time," he said, after a moment, and kept holding the same apparently casual but very careful aim over the edge.

I stepped forward and looked about. The entire valley of the Ailette stretched away to distant hills. On the left I could see moving Germans through a grove of trees through glasses. They seemed no further distant than across an ordinary street. The artillery was still sleeping, and they continued to move unchecked. Over the tiny stream I could see several white flags on what seemed to be bridges. The officer explained that they were fake Red Cross flags hung there by the Germans in a vain hope to avert fire.

I looked once more across the waste of mud. Only a few yards out lay a headless body. It was recognizable as a body then, but in a little while when the artillery duel would again be under way it would quickly be torn and retorn, buried and reburied under the storm until nothing remained.

As I stepped into the shelter a cannon roared. It was broad daylight on the Road of the Ladies.

Weary Troops From the Front

In a few minutes we began passing lines of poilus headed for the rear. We could not see clearly, but we understood they were troops just out of the front line. They paid no attention to us, and we noticed a sense of weariness in their walk as they plodded silently along.

We continued on our path beyond the village, where we met another party marching to the rear. At their heads was a small detachment of stretcher bearers. But the stretchers were rolled. There were no wounded. The sight of those rolled stretchers gave us a thrill as great as if that detachment had been a band playing martial music. The Germans had indeed failed if these Red Cross men were going back with their stretchers empty. Several of them smiled a greeting as we passed. But the men coming behind were like those we had seen among the stones of the village. They did not smile. Stumbling along in the dim light they looked as forlorn as scarecrows and just as bedraggled and unkempt. The glory of fighting and winning had all gone. They were just a gang of dog-tired men and they did not care a hang who we were or what. They did not even see us; they stared straight ahead with eyes so fixed, yet so lifeless, that it almost seemed as if they were blind.

They had come from that hell on the Chemin des Dames. They had been there for a prescribed number of days. They had not slept; they had only fought and fought and fought. Now they were going back for several days' rest, the same prescribed number. Then they would return to the Chemin des Dames or elsewhere, where they would go through the same performance over and over again, some of them. And they would do it willingly and bravely to the end. They were soldiers of France fighting for more than men ever fought for before.

We got our slow barrage as we came out from the trees into the open desolation that now exists everywhere in the immediate neighborhood of the line of fire. We hugged the lower stretches of the ridge which is the Chemin des Dames. The Germans were sending over shrapnel, but it fell into the valley at our left, and only occasionally were we forced to wait when black clouds of smoke hung in the sky directly before our path.

In the Dragons' Den

We gradually crept up the sides of the slope until about a third of the way from the top. We welcomed with a sigh of relief a yawning hole that is the entrance of the Dragons' Den. This vast winding cavern, one of scores along the Chemin des Dames front, is chiefly remarkable in that it extends clear across the ridge under the roadway and gives a view from the opposite side across the valley of the Ailette. It was held by the Germans long after the surrounding positions were captured, the French having only the end where we entered and a few yards of the tunnel. It is part quarry, part natural grotto, and big enough to conceal whole regiments. It resisted until a couple of weeks ago. When the French entered they merely had to count and bury the dead where they had fallen, and count the unresisting prisoners. We wandered through it lighted by candles. It still held a faint, sickly odor of gas. It is now used as a shelter for troops holding the front lines.

There are several holes where one can crawl directly to the summit of the ridge, others on the far side leading just above the present lines. It was by scrambling up through one of these holes on the Chemin des Dames and through a second one that we crawled to a listening post only fifteen yards from the Germans. The second exit was very difficult, and it made me wonder how it had been possible for all the German soldiers to pass through it whenever an alarm sounded calling them to their places in the shellholes.

A British Reverse on the Yser

By Philip Gibbs

[Cabled to The New York Times]

The Germans struck a heavy, unexpected blow on July 10, 1917, against the British lines north of Nieuport, on the Belgian Coast. After twenty-four hours of terrible artillery fire they broke through on a front of nearly a mile, driving the defenders back upon the Yser River (or Canal) and capturing a strip of sand dunes to a depth of 600 yards. The defenders, the King's Royal Rifles and Northampton's, were cut off from relief by the shell fire, which smashed all defenses and destroyed the bridges, so that only a few wounded men escaped by swimming. The Germans took 1,250 prisoners; the rest of the force died fighting.

[See Map on Page 232]

IT began early on the morning of July 10, when the enemy concentrated a great power of artillery on the British trenches and breastworks in the sands of the east side of the Yser Canal, north of Nieuport, with their left on the seashore. The enemy's position was in a network of trenches, tunnels, concrete emplacements, and breastworks of thick sandbag walls, built down from the coast to south of Lombaertzyde. Facing him were other trenches and breastworks which the British had recently taken over from the French. Behind them was the Yser Canal, with pontoon bridges crossing to Nieuport and Nieuport-les-Bains. Without these bridges there was no way back or around for the men holding the lines in the dunes.

The enemy began early in the morning by putting a barrage down on the British front-line system of defenses from a large number of batteries of heavy howitzers. His shells swept up and down the British front, smashing breastworks and emplacements and flinging up a storm of sand. After that hour the enemy altered his line of fire. There was five minutes pause, five minutes of breathing space for the men still left alive among the many dead, and then the wall of shells crossed the canal and stayed there for another hour, churning up the sand with a tornado of steel.

The guns then drifted to the front line again, and for another hour continued their work of destruction, pausing for one of those short silences which had given the men hope that the bombardment had ceased. It had not ceased. It traveled again to the support line and stayed, smashing there for sixty minutes, then across the canal. There was one interval

of a whole quarter of an hour, and officers had time to tell their men it must be a fight to the death, because the position must be held until death. At best when the shelling began it was thought by some of the officers it was retaliation for a raid on Lombaertzyde the night before, and would not be followed by an attack from the German marines, who were known to be holding the enemy's line.

But the commanding officer of the Sixtieth became convinced by 3 o'clock in the afternoon that all this destructive fire was preparatory to a big attack. He saw his bridges had gone behind him, so there was no way of escape, and he saw that the enemy was trying to cut off all means of relief and communication. He tried to get messages through, but without success.

Two shells came into his battalion headquarters, killing and wounding some of the officers and men crowded in the sandbag shelter and dugout in the dune. He took the survivors into a tunnel bored by miners along the seashore, and here for a time they were able to carry on. But it was almost impossible to get out to reconnoitre the situation or to give some word of comfort or courage to the men standing to arms among the wreckage. Flights of hostile airplanes were overhead, and they flew low and poured machine-gun fire at any living man who showed. Away behind they were searching for British batteries.

At 6:15 all the German batteries broke into a drum fire and poured shells all over the British position for three-quarters of an hour without pause. After all these previous barrages it reached greater heights of hellishness, destroying what

already had not been destroyed, sweeping all this wide tract of sand dunes right away from coast to south of Lombaertzyde with flame and smoke and steel and reaping another harvest of death.

There are many details of this action which may never be known. No man saw it from other ground, and those who were across that bank of the Yser could see very little beyond their own neighborhood of bursting shell. But a Sergeant of the Northamptons, who had an astounding escape, saw the first three waves of German marines advance with bombing parties. That was shortly after 7 o'clock in the evening. They were in heavy numbers against the few scattered groups of English soldiers still left alive after a day of agony and blood. They came forward bombing in a crescent formation, one horn of the crescent trying to work around behind the flank of rifles on the seashore as the other tried to outflank the Northamptons on the right.

A party of machine gunners crept along the edge of the sands, taking advantage of the low tide, and enfiladed the support line, now a mere mass of sand in which some wounded and unwounded men held out, and swept them with bullets. Another party of marines made straight for the tunnel, which now was the battalion headquarters of the Sixtieth, and poured liquid fire down it. Then they passed on, but, as if uncertain of having completed their work, came back after a time and bombed it. Even then there was at least one man not killed in that tunnel. He stayed there among the dead till night, then crept out and swam across the canal.

Two platoons of riflemen fought to the last man, refusing to surrender. One little group of five lay behind a band of sand and fired with rifles and bombs until they were destroyed. Meanwhile the Northamptons on the right were fighting desperately against the German marines, trying to get behind them on the right flank. Seeing that they had not the strength to resist this, they got a message through to some troops further down in front of Lombaertzyde to form a barrier, so that the enemy could not come through, and these fought their way grimly up, thrusting back the enemy's storm troops, and then made a defensive

block through which the marines could not force.

The German marines brought up a machine gun and fixed it behind the place where the Northampton officers had established their headquarters and fired upon it. The British machine guns were out of action, filled with sand or buried in the sand. One gunner managed to get his weapon into position, but it jammed at once, and with a curse on it he flung it into the waters of the Yser, and then jumped in and swam back. Another gunner lay by the side of his machine gun, hit twice by shells, so that he could not work it. One of his comrades wanted to drag him off to the canal bank, in the hope of swimming back with him. To linger there a minute meant certain death.

"Don't mind about me," said the machine gunner of the Northamptons. "Smash my gun and get back."

There was no time for both, so the gun was smashed and the wounded man stayed on the wrong side of the bank.

The fighting lasted an hour and a half after the beginning of the infantry attack. It was over at 8:30 P. M. A wounded Sergeant of the Northamptons who swam back saw the last of the struggle. He saw a little group of his own officers, not more than six of them, surrounded by marine bombers, fighting to the end with their revolvers. The picture of these six boys out there in the sand with their dead lying around them, refusing to yield and fighting on to certain death, is one of the memories of this war that should not be allowed to die.

Over the Yser Canal men were trying to swim, men dripping with blood and too weak to swim, and men who could not swim. Some gallant fellow on the Nieuport side swam across with a rope under a heavy fire, and fixed it so that the men could drag themselves across.

So a few survivors came over, and so we know, at least in its broad outline, how all this happened. It is a tragic tale, and there will be tears when it is read, but above the tragedy there is the splendor of these poor boys, young soldiers all, who fought with a courage as great as any in history.

Report on the British Disaster at Kut-el-Amara

THE report of the British commission which investigated the first Mesopotamia expedition was submitted to Parliament June 26, 1917, and created a profound sensation. The report finds that the expedition was a justifiable military enterprise, but was undertaken "with insufficient forces and inadequate preparation," and that its initial failure, with the loss of Kut, was due to lack of foresight, mistakes, and miscalculations. The report frankly declares that the shortcomings revealed reflect discredit upon the organizing aptitude of all concerned.

The report finds that the main responsibility for recommending an advance in 1915 with insufficient transport and equipment rests with General Sir John Eccles Nixon, the former commander of the British forces in Mesopotamia, while the others sharing responsibility are placed in the following sequence: In India, Baron Hardinge, the former Viceroy, and General Sir Beauchamp Duff, the former Commander in Chief of the British forces in India; and in England, Major Gen. Sir Edmund Barrow, the Military Secretary of the India Office; J. Austen Chamberlain, Secretary for India, and the War Committee of the Cabinet. The report shows the mistakes and miscalculations incident to the attempt to advance on Bagdad, which involved the surrender of more than a division of the finest fighting troops, while the casualties incurred in the ineffectual attempt to relieve Kut amounted to about 23,000 men.

The report says that the general armament and equipment were not up to the standard of modern European warfare and were quite insufficient for the purpose. Up to the end of 1915 the efforts made to rectify the deficiency in river transport were wholly inadequate. The report concludes:

Looking at the facts, the want of foresight and provision for the most fundamental needs of the expedition reflects discredit upon the organizing aptitude of all the authorities concerned. To Lord

Hardinge, as Viceroy, belongs the general responsibility attaching to his position as head of the Indian Government. More severe censure must be passed upon the Commander in Chief, for not only did he fail closely to superintend the adequacy of the medical provision, but he declined for a considerable time, until ultimately forced by the superior authority of the Viceroy, to give credence to rumors which proved to be true, and failed to take measures which subsequent experience shows would have saved the wounded from avoidable suffering.

The report largely attributes the shortcomings to the policy of indiscriminate retrenchment pursued for some years before the war by the India Government under instructions from the home Government. Transport and medical services are indicated as the weakest spots in the expedition, the lack of transport preventing reinforcements from reaching Kut in time. For "the lamentable breakdown" of the technical services the responsibility is attributed to Surgeon General H. G. Hathaway, who "showed singular unfitness for the high administrative office he held."

The signatories to the report are Lord George Hamilton, Earl Donoughmore, Lord Hugh Cecil, Sir Archibald Williamson, Admiral Sir Cyprian Bridge, General Sir Neville Lyttelton, and John Hodge, Minister of Labor.

In consequence of this report J. Austen Chamberlain resigned as Secretary for India. It is understood that judicial proceedings are contemplated against the responsible military officers.

Arthur Balfour, Secretary for Foreign Affairs, in the House of Commons July 18 supported Lord Hardinge, formerly Viceroy of India and now Under Secretary for Foreign Affairs. Mr. Balfour declared criticism of Baron Hardinge to be grossly unjust, and said that, while he held his present office, he would not permit such a gross act of injustice to any of his subordinates. The House of Commons then supported Mr. Balfour's refusal to accept Baron Hardinge's resignation as Under Secretary for Foreign Affairs by a vote of 176 to 81.

The Submarine Situation

By Thomas G. Frothingham

The material in this article was supplied to the writer by an American scientist, one of the leading practical experts on the submarine.

IT is evident that in times of war there are many things that cannot be discussed, but it is allowable to give a better idea of the situation, and especially to correct widely accepted errors concerning the U-boat, the most persistently misunderstood factor in the present war.

If one realizes that the proposition is being soberly considered, from a purely commercial point of view, of shortening the voyage from Northern Europe to the Pacific some 10,000 miles by sending goods in submarines under the arctic ice, it brings home the possibilities of what were considered a few years ago unreliable mechanical toys.

Even after the results accomplished by the U-boats in this war there is a general easy-going tendency in the public mind to regard the submarine as an outside factor that somehow or other will be done away with. This is all wrong, and it should be recognized that the U-boat is today the most active force in the war, the most dangerous weapon of the Teutonic allies. Submarines are steadily doing more damage than any other military arm of the enemy. To curb the U-boat is the greatest problem of the war. This does not mean that Americans should fall into pessimism and believe that the U-boats are now accomplishing military results that are decisive of the war. For this is not true. But Americans should not allow themselves to remain blind to the fact that our greatest danger is this American invention, and every resource of American ingenuity must be called upon to overcome it.

The truth should be baldly stated, that the submarine evil is at its worst. It would be a good thing for our people to understand this, for an intelligent public demand is an incentive to military activity. The lack of such a spur in Great Britain has been harmful. It is only

recently that the British public has begun to realize the submarine situation. At first there was no conception that the U-boats were a menace, then came overconfidence from a few successes against them in the early stages—and then the censored concealment of the damage they were doing.

Growth of the U-Boat Peril

The above is largely the reason for the unrestricted growth of the evil. After the first shock of the blow at British control of the seas, if the British Navy, stimulated by an aroused public, had devoted its best energies to devising means to suppress the U-boat there might have been a different story today. Instead of this the first lull in U-boat activity was regarded as a complete victory. There had been some successes, using nets, chasers, ramming, &c., and these means were assumed to be sufficient. It is known that many devices lay for months without being looked at. The "authorized" tales of Kipling, Noyes, &c., lulled the public into security, and the British Navy thought the problem was solved.

Then the U-boats outgrew the methods that had been relied upon. The engine noises that helped the chasers have been muffled. The nets are not effective in broad areas of ocean. The U-boat, which at first required three to five minutes to submerge, now rises, observes, and submerges in fifteen seconds. What chance is there of ramming one now, except by the most unheard-of luck?

The U-boats spread their activities over wide areas on the seas, and there were no new schemes of defense ready to cope with the new conditions. As the sinkings increased, the losses were concealed or minimized by the British censors, and the British public did not realize the extent of the damage until it was so self-evident that the censorship could not conceal it.

Full Truth Not Told

Even today there is no frankness in telling the story. The carefully pre-

pared weekly tables are most misleading. The five thousand and odd sailings and arrivals include all the local craft that make short trips in and out of British ports. Upon these numbers the small percentages are computed. The actual losses are a large percentage of the cargo-carrying tonnage, and far exceed any replacements that are in sight.

We must not allow ourselves to be misled, or to think that the submarine danger is abating. On the contrary, its

and at other times greater numbers in active service.

Of course it is now evident that the tales of great captures of U-boats, kept secret to impress the enemy with the horror of "disappearance," are wholly imaginary. Throughout all the warfare against the submarines the actual captures have been very few. There is good authority to say that the number of U-boats taken has not yet come anywhere near to two figures.

THE NEW TYPE OF GERMAN U-BOAT, WITH 3-INCH ARMORED CONNING TOWER
(© American Press Association)

perils are as great as ever, and sinkings can be prevented only by ceaseless vigilance and the use of every possible means of defense.

On the best authority it can be stated that the Teutonic allies have some 800 U-boats engaged in the present campaign. These may be roughly described as divided into three "watches," one-third coming from the base, one-third on active service, and one-third on its way back to the base. The average time of this turn of service, from the base and return, is about three weeks. It is known that there is a certain amount of supplying at sea, but it may be safely assumed that the great majority of the U-boats return to their bases to refit. As is natural in such an arrangement, there are at times lulls,

Some submarines have been destroyed, but it is believed that a larger proportion of the losses have been from accidents at sea, probably in most cases from the diving mechanism getting out of order and letting the submarine sink to a great depth. This is the main danger to the U-boats, and this will happen at times even in the most effectively operating types of submarines. We have been saved from frequent accidents of this nature in the United States Navy by trying out and developing our U-boats in shallow waters. We have great stretches of comparatively shallow water off our coast, and most of the operating of the submarines has been so safeguarded. The tragic accident at Honolulu in a great depth of water will be remembered as an example of this kind of accident.

Enemy Submarines Increasing

In the period of warfare against the U-boats the German losses of these craft from all causes are believed by the best experts to have averaged from three to five per month. It is known that the Germans are able to turn out U-boats rapidly, and that they have much more than replaced these losses. This is very far from the popular idea, but it is better to try to get at the truth.

One great mistake is to exaggerate the weaknesses of the submarine, yet this is the usual habit. It is an untrue picture to paint the U-boat as a fugitive cheerily chased by a swarm of mosquito boats, each armed with a feeble sting, and each certain that the submarine must soon rise to the surface to meet destruction from the one-pounder's shot in the periscope—to disappear in a spot of oil.

In the first place, the idea that the U-boat must come to the surface at frequent intervals, though still exploited, is no longer true. The present types of submarines can remain two days submerged with perfect comfort, and can easily travel 250 miles while thus submerged. The smitten periscope and the swirl of oil, announcing the doom of a U-boat, are also too frequently in print. All the submarines now carry two periscopes, some also have emergency periscopes, and most of them several spares. So evidently the wound in the periscope alone does not put out the submarine. It must also be remembered that the essential hull of the submarine is inside the oil tanks, and a liberal pouring of oil on the waters may only mean a punctured oil tank. The real hull must be injured to destroy the U-boat.

Gun Power of U-Boats

While the fleet of small patrol boats is of real use in scouting, and most valuable in developing and educating an intelligent personnel that will be a valuable auxiliary to the navy, it should be realized that these patrol boats alone cannot hope to engage submarines. If they are to attempt more than keeping a lookout, they must work in company with craft that are heavily enough armed to dominate the gunfire of the

U-boats. Otherwise, all a submarine would have to do, when attacked by these lightly gunned patrol boats, would be to thrust its protected superstructure above the surface and then destroy the patrols at its leisure by gunfire. The present submarines carry very able guns, 4-inch, 5-inch, and in some cases 6-inch. These are short-calibre guns, as they must be designed to be housed down into the hull, and consequently they are not equal to the naval guns of corresponding calibre, but they are very effective at the ranges of the U-boat's operations.

Although in the war game the life of the U-boat is given as one hit, it must be a real hit with a real gun. Besides this, any craft that is to engage a U-boat must have more than one gun, to be sure of destroying its enemy, as the U-boat has the advantage of offering a smaller target—and the U-boat itself has more than one gun.

The usual two naval guns in the bow and stern of the armed merchantman have not proved an insurance against the U-boat, as there already have been cases of ships so armed being worsted by the gunnery of the U-boats. It is now evident that arming merchantmen, while it is a help, is not a panacea against the submarine peril, as was hoped at first.

Value of Destroyers

It should be kept in mind that the destroyer is the lowest denominator in warships that can be considered strong enough really to dominate a U-boat with gunfire. That is, a flotilla of destroyers consists of units each one of which is able to destroy a U-boat in action.

The destroyer type, which was less esteemed before the present war, has won for itself recognition because its value has been proved in war conditions. At Jutland the destroyer showed its worth as an auxiliary of the battleship. In the warfare against the submarine the destroyer has proved the most effective warship.

The destroyers of the United States Navy which were sent abroad made an impression at once in Great Britain. Our destroyers are far superior to those of the British Navy. From our idea of a wider use of these craft as scouts we

have evolved a type that is a better sea boat, and consequently they can buck the weather and stay at sea much longer without being docked. There were not very many of our destroyers sent abroad, but their presence in British waters at once set a new standard, and this has been a great stimulus to the British Navy. Without undue self-praise we may believe that there is now much more alertness and vigilance in the operations against the U-boats.

Sending Admiral Sims, in command of our naval contingent, to co-operate with the British Navy meant even more than giving the assistance of one of our ablest officers. Admiral Sims had been for some months the President of the Naval War College, and he carried with him the results of the study of the submarine problem in the United States Navy.

Early in the game the United States Navy had recognized the submarine as the greatest danger on the sea, and much work has been done in seeking means to neutralize this menace. Admiral Sims and his officers have had all the benefit of this. There are many promising devices that may be worked out, but it is not wise to hope for sensational developments at once. It is more sensible to believe that evasion of the U-boats and protection of their intended victims will prove the present task of the united navies.

Undoubtedly an increasing amount of zealous skill is being devoted to the use of all means of defense available, and vigilance is taking the place of self-confidence. It is probable that the whole game is being plotted out as never before, and to this should be attributed any check on the sinkings, not to radical inventions.

The reports of sinkings have recently been more favorable, and this gives ground for hope that the more systematic use of every safeguard, and the new spirit in the campaign against the U-boats, may be already showing good results. In any case, there must be no delusions as to lessened danger from the U-boats, and no return of self-confidence, either in the navies or on the merchantmen.

Best Methods for Safety

As has been said, arming the merchantman has not insured safety against the U-boat. In many cases it has saved the ship—but it is to be feared that in others it has done harm in making the merchant Captains overconfident. From the first this quality has caused a great many sinkings. There have been too many Captains cocksure that, though the enemy craft might get other boats, they would never “get him”—and at all times too many ships have been coming and going in their same old lanes. The tragedy of the *Lusitania* was an instance of this.

Unexpected courses, the use of speed at the right time, concealment, and protection are all necessary means of evading the U-boats, and it is probable that the use of these precautions is now being imposed upon the merchant Captains.

Convoying has from the first been recognized as a great protection. But it is evident that the convoying destroyer or other armed ship, if simply moving along abreast of its charge, shares the same danger from waiting submarines. What is called “stationary convoying” is now considered much more effective. This implies large areas policed by patrols, into and through which the ship moves on her voyage. The increase in safety is obvious, and it is probable that this means of defense will be increasingly used. In these days of steam navigation a voyage can be plotted out with definite rendezvous at all stages, and it is possible to arrange a schedule so as to insure a comparatively protected voyage.

Use of Smoke Screens

The smoke screen, which was developed by the United States Navy, has probably been found the best protection for a ship in actual danger of attack by a U-boat. Concealment is given quickly and effectively. In most cases this screen is thrown out by convoying craft, but our navy has devised a practical and economical way of equipping merchantmen with this protection.

The United States Navy is known to have developed an improved high explosive bomb for use against the U-boat. In warfare against submarines the British

Navy had used bombs, especially when the presence of the U-boat was shown by the "Pram" nets, which were buoyed out on the surface of the water. But these bombs did no damage unless they were practically in contact with the U-boat. Cases are known of escapes when the bomb exploded within four feet of the craft attacked. In the improved American bombs the delayed explosion below the surface is so powerful that it will seriously injure the hull of a U-boat twenty-five or thirty feet away.

It is too generally believed that an airplane can detect a submerged U-boat. With the present tendency to overestimate the tactical value of aircraft, this is one of the functions glibly assigned to these machines. The truth is that the airplane can detect a submarine only in a perfect calm. Even the slightest ripple reduces greatly the depths at which it can be seen. In any sea at all the submerged U-boat cannot be detected by an airplane flying over it.

In May of this year there were two weeks of abnormally calm weather in the North Sea, and some U-boats were observed by airplanes, especially in shallow water, assisted by the shadow of the U-boat. Curiously enough, the submerged U-boats so seen are said to appear like whitish objects, no matter what color they are painted. This exceptional weather condition is so rare that it proves the rule cannot be counted upon—and there is not a great future for the airplane in detecting U-boats under the surface.

Hydroplanes Effective

A more practical utility for aircraft against submarines is to use hydroplanes to observe large areas of water, to watch out for U-boats rising to the surface, and to signal their presence to ships. With their wide range of vision hydroplanes can cover long distances on the

seas. Perhaps at present, with the difficulties of navigating planes at sea, dirigibles of a reliable type might do this work better, but probably these difficulties of navigating the hydroplanes will be overcome in the future.

Any system of safeguarding against the submarine must reckon on the possibility of attack without the U-boat showing a periscope at all. It is known that some of the submarines are equipped with apparatus that will locate the position of an enemy ship in an astonishingly accurate way. A ship 400 feet long at 8,000 feet range might become a target for a U-boat thus equipped, so that the U-boat, without observing through its periscope, would be able to discharge its torpedo at the target without a large angle of error. This last, however, increases the chances of a miss sufficiently to make the U-boat prefer the periscope, as the submarine's torpedoes are expensive and few in number; but such ability on the part of the U-boat must always be considered in the problem.

This is only one more reason to emphasize the need of some means of detecting the position of the U-boat when submerged. The importance of finding a practical detector will be self-evident to the reader. There are great hopes of such an invention in the near future—but of course there can be no discussion of this at present. Neither can there be any mention of other means that are being worked out; but the above is a fair statement of "the case so far."

To sum up the elements of defense, we should have:

Stationary convoying, with policed areas.

Destroyers to dominate the U-boats.

Smoke screens as the best concealment.

Aircraft to observe U-boats coming to the surface.

Some means of detecting submarines.

The utmost zeal and vigilance in the navies and on the merchantmen.

U-Boat Destruction of Shipping

Record From June 13 to July 15, 1917

THE destruction of merchant ships belonging to the Allies and neutrals has reached a stage where the outlook is regarded in some quarters as serious. A startling dispatch from a press correspondent in London on July 18 asserted that "the loss of ships by submarines totals 1,600,000 tons a month, or from two to three times the total of new construction." The available figures by no means support this estimate; they are, however, incomplete. The figures issued by the British Admiralty, while referring only to British ships, and concealing the tonnage totals, do not suggest that more than about 500,000 tons of British shipping are being destroyed monthly. The available figures of all other losses of Allies' and neutrals' ships by no means bridge the indicated difference.

The British merchant ships destroyed by submarines and mines since the last figures published in this magazine are, according to the Admiralty reports:

	Over 1,600 Tons.	Under 1,600 Fishing Tons. Vessels.
Week ended June 17....	27	5 0
Week ended June 24....	21	7 0
Week ended July 1....	15	5 11
Week ended July 8....	14	3 7
Week ended July 15....	14	4 8
Total for five weeks.	91	24 26

The totals for the last three months (thirteen weeks) are:

Over 1,600 tons.....	284
Under 1,600 tons.....	102
Fishing vessels.....	78

It is stated that the average tonnage of vessels of over 1,600 tons is 4,500. On that basis 1,278,000 tons of British shipping has been destroyed in three months, or an average of 426,000 tons per month. Add the ships under 1,600 tons and the fishing vessels, and it is certain the average tonnage lost is considerably under 500,000—probably about 470,000—tons a month.

French official figures show the following losses:

	Over 1,600 Tons.	Under 1,600 Fishing Tons. Vessels.
Week ended June 17....	0	5 0
Week ended June 24....	2	3 0
Total for two weeks..	2	8 0

Complete figures for June showed the loss of fourteen ships. Later dispatches from Paris report two steamers of the Messageries Maritimes sunk, the Himalaya, 5,620 tons, on July 1, and the Caedonien, 4,140 tons, on July 10.

Italian ships lost included two steamers and five sailing ships during the week ended June 17, one steamer, eight small sailing vessels, and four fishing barks during the week ended July 1, and one steamer and four small sailing vessels during the week ended July 15.

Norwegian ships reported lost included three steamers of 2,829 tons, 2,798 tons, and 1,458 tons, respectively. The Argentine steamer Toro, 1,141 tons, was torpedoed and sunk off Gibraltar.

Greek shipping has suffered heavily, according to a report received by the State Department at Washington and published on June 23. Twelve Greek ships, with a total tonnage of 31,542, valued at \$4,592,000, had been sunk by German and Austrian submarines since April 1.

To the foregoing should be added American losses. No complete official figures have yet been published, but news dispatches and reports received by marine insurance companies mention the sinking of eight vessels with a total tonnage of 38,345, between June 12 and July 16. The eight vessels were the Kansan, Haverford, Bay State, Moreni, Petrolite, Massapequa, Orleans, and Grace. Some smaller vessels were also destroyed during the period mentioned.

The conflict of opinion is evidenced by a statement on July 13 by Admiral La-

case, the French Minister of Marine. He said in part:

It is true we are suffering considerable losses, but every month increases our certainty of being able to repair them. Furthermore, we are in a position to stand these losses, as a large part in new construction will be taken by the United States. The shipbuilding already under way, the effect of which will naturally only be felt after a certain time, is great enough to replace the highest average of destruction the submarines are likely to reach.

Never in peace times have the entries into French ports been so numerous as now. The German authorities exaggerate the results of the submarine activity by from 30 to 50 per cent., while the French statistics are absolutely correct. The curve representing the tonnage sunk does not mount steadily, but rises and falls. We know, too, that the Germans find great difficulty in obtaining trained crews for submarines.

On the other hand, Senator Marconi, the inventor and a member of the Italian War Mission, stated in an interview while in New York City that the submarine situation was becoming increasingly serious. Speaking of the Mediter-

anean he described how the larger U-boats go through the Strait of Gibraltar and how the smaller ones are constructed in Germany and sent by rail to Pola, the Austrian naval base on the Adriatic, where they are put together and sent to sea. The Italian Navy had between 300 and 400 patrol boats on duty trying to cope with the submarine menace.

A German Admiralty statement published on June 30 asserted that the total tonnage available for Great Britain's supply of food, munitions, and materials, based upon two independent sets of figures, was 10,000,000, including new construction, confiscated German ships, and purchases from neutrals. More than 5,500,000 tons of this total had been destroyed up to June 1, leaving 4,500,000, or, at the utmost, 5,000,000 tons then available. With a further loss of 800,000 to 1,000,000 tons a month, the German Admiralty believed that it could be confidently expected that Great Britain would be brought to a point where she would be willing to make peace.

Great Britain's Royal Family Now the House of Windsor

KING GEORGE of Great Britain, at a meeting of the Privy Council held in St. James's Palace July 17, 1917, announced that the name of his royal house and family had been changed from Saxe-Coburg and Gotha to "the House of Windsor."

Those present on this historic occasion included Premier Lloyd George, Foreign Secretary Balfour, and other members of the Cabinet; the Archbishop of Canterbury, ex-Premier Asquith, and all members of the Colonial Government who were then in London. The Privy Council unanimously indorsed King George's announcement, and the proclamation putting it into effect was published that afternoon. It says:

We out of our royal will and authority

do hereby declare and announce that as from the date of our royal proclamation our house and family shall be styled and known as the House and Family of Windsor, and that all descendants in the male line of our grandmother, Queen Victoria, who are subjects of these realms, other than the female descendants who may marry or may have married, shall bear the said name of Windsor.

And we do hereby declare and announce that we for ourselves, and for and on behalf of our descendants and all other descendants of our grandmother, Queen Victoria, who are subjects of these realms, relinquish and enjoin the discontinuance of the use of degrees, styles, dignities, titles, and honors of the Dukes and Duchesses of Saxony and the Princes and Princesses of Saxe-Coburg and Gotha, and all other German degrees, styles, dignities, titles, and honors, and the appellation to us or to them heretofore belonging or appertaining.

What the American Navy Has Done

Summary by Secretary Daniels

Josephus Daniels, Secretary of the Navy, made the following statement to a representative of THE NEW YORK TIMES, summarizing the naval progress of the United States in war measures up to June 24, 1917:

THE policy of the United States Navy is simply to do at at any given moment the thing most effective to win the war for our allies and ourselves. As to the specific things we have done so far and are still doing in accordance with that policy, I can mention four. We have armed and manned with navy gun crews about 200 merchant ships, and are increasing the number daily. We have sent our destroyers to the other side to help the British fleet in the war on the submarines, and will send more. We are taking over the cruiser patrol of the Atlantic Coast on this side of the ocean from Brazil to Newfoundland. We have trained our naval gunners in the most difficult marksmanship in the world, until they have become as efficient in training a small gun on a distant, hardly visible, and constantly moving periscope as they are in shooting the big turret guns at a target as big as a battleship. And a big work for the navy that is in the future will be the convoying of our troops.

The arming of the merchantmen came before this country had entered the war, and was ordered by the President. This was a new problem for the navy, something which never had been contemplated before by the United States Government, and it was not the easiest thing in the world to find all the guns that were needed. Some of them we had to take from ships of the navy. Then the owners of the merchant vessels called upon us to furnish the gun crews. From the mere technical navy viewpoint that was not the thing to do. We needed the men on our naval vessels, but it proved to be the next thing that had to be done; so we manned every armed merchant ship with efficient gunners. I gave orders that none

but the best marksmen in the navy should be sent into this new service because of the extreme difficulties of the shooting they were to be called upon to do. So it meant a temporary drain on the battleship crews.

To some of the larger merchant vessels I sent as many as sixteen men each. But this has turned out to be one of the best things the navy has ever done because of the training it has afforded in the new kind of shooting that has become necessary in this war. Every battleship has become a school for marksmanship with a periscope as the target, and with remarkable results. Previously all the emphasis had been placed on the necessity of accuracy in working the big guns in the turrets, with the result that the American Navy had the best records of the world at big-gun practice. Needless to say, we are not neglecting that turret work or acquiring our skill in shooting submarines at the expense of our preparation for fighting bigger ships if the opportunity comes. Up to the present time the dreadnoughts have no work in this war except to wait in complete readiness for the big thing that they may be called upon to do. In that respect our fleet would be a fair match for the Germans, even assuming the apparently impossible situation in which we, alone, would be called upon to engage in a great sea fight off our own coast.

Another big educational work now in progress on the battleships is the training of the engine and fire room crews so that they will be ready for efficient service aboard the big merchant ships that will be used later on for the transportation of our troops. America, as a nation, has become so lacking in what you may call a seagoing personnel that we have to look to the navy as the source of supply in any big emergency.

The next service undertaken by the navy was the sending of our destroyers over to the other side for actual participation in the hostilities at sea. This was

done in spite of the theory that the place of the destroyers was with the battleship, that every dreadnought should have at least four destroyers to act as her eyes and scouts, and screen her with their smoke. But a great many former theories have had to be revised in this war; so we sent the type of craft that, under normal conditions, would have been the last to go, and our allies were greatly elated by our decision.

Both the English and French Commissions told us that the smaller vessels of our navy would be the most useful to them, and they expressed the hope that we might be able to send destroyers, although they did not expect it. But after consultation with Admiral Benson, Chief of Naval Operations, and later with Admiral Mayo, Commander in Chief of the Atlantic Fleet, I ordered the destroyers to go, even though it seemed a somewhat risky thing to do.

In addition to the destroyers, we have sent over enough fuel and supply ships to serve our own naval vessels without calling on the Allies, and we also have placed several of our small craft at the disposal of France. These latter ships are already there, and the number will be increased. We have two bases established on the French coast. Still more, we have sent over 100 navy aviators to France, and are now preparing to establish two hospital units in England and one in France.

Of course, I cannot say how many destroyers were sent, but there were enough to be effective, and more will go later. Sixty new destroyers for the American Navy are now under construction. The time allowed for their completion has been cut from the customary eighteen months to one year. We hope to have them on time within the shorter period.

But I can say of our ships now on the other side that they are all manned by picked officers and men. Nobody was allowed to go on this expedition who had not had experience on destroyers, which is in these days the hardest and most exacting service in the navy. But it develops a wonderful breed of men. They are young, alert, ambitious. The Captain of a destroyer is generally a Lieutenant Com-

mander, and it is a great thing for a youngster of that rank to be in command of his own ship. The best of them strive for it, and the other officers of the destroyer are of the same stamp, and the personnel of the crew is a good match for them. It was because of the quality of these officers and men and because of the splendid construction and equipment of the ships themselves that they were able to surprise the English with the statement that they were ready to go to work immediately upon their arrival on the other side. The spirit of the men in this part of the navy had been greatly improved by the organizing of the destroyers into a flotilla of their own, and they had had the great inspiration of serving under Admiral Sims when he was in command of that flotilla, and later under Admiral Gleeves.

It was Sims who declared at a dinner in London about fifteen years ago that blood was thicker than water and that if war ever came England could count upon America as an ally. Germany resented that officially through diplomatic channels, and Sims was reprimanded. Of course, he should have been reprimanded. I told him so myself not so very long ago, and then selected him to go to England and France before America entered the war. Even then I thought I could see the clouds and felt the need of getting in touch with the British and French Admiralties. Sims was the youngest Rear Admiral in the service. It was for that reason a violation of another tradition to select him, but he has been the right man in the right place, both from our point of view and that of our allies, which, after all, is the same point of view in everything we undertake.

As to the fourth thing I mentioned, the coast patrol, that is as thorough as we can make it and is under the command of one of our ablest officers, Captain Henry B. Wilson, who is soon to be made an Admiral. In addition to the big naval vessels assigned to this patrol, there are small craft on guard, which will be steadily increased in number. These, together with the Coast Guard and Lighthouse Services, the Navy Department has taken over for the purpose of more

efficient coast protection. There is not a harbor, not even a cove, between Brazil and Newfoundland that we do not know about. We have investigated many reports and rumors that the Germans had submarine bases on this coast, but none has been discovered.

To do all this work has put a tremendous pressure on the officers and men of the navy. We need more of both, in spite of the recent big increases. By graduating two classes at Annapolis far ahead of their time we have gained 380 new officers, and the enlisted strength of the navy has increased from 53,000 to 120,928 since the beginning of the year. By the end of the year we must have 150,000

men, the limit fixed by the law as it stands today. I have no doubt about getting these men, thanks to the new plan of dividing the country into fourteen naval districts and the perfecting of the recruiting organization in each of those districts. One big factor in our favor is the greatly improved chance which the enlisted man now has to become an officer. I am now authorized by law to appoint 100 enlisted men to Annapolis every year, so the chance of the man who enters the navy as a sailor to become an Admiral is now much more than a pleasant fiction. Last year an appointee from the ranks was the President of his class at the Academy.

Embargo on Exports of Food and Other Commodities

ACTING under the authority conferred on him by the Espionage act, President Wilson has adopted drastic and far-reaching war measures for the control of exports from the United States. By an executive order, dated June 22, 1917, he established an Exports Council "to formulate policies for the consideration and approval of the President, and make the recommendations necessary to carry out the purposes" of the Espionage act. The members appointed to form the Exports Council were:

Mr. Lansing, Secretary of State.
Mr. Redfield, Secretary of Commerce.
Mr. Houston, Secretary of Agriculture.
Mr. Hoover, Food Administrator.

The administrative end of the work was assigned to Secretary Redfield and the Commerce Department.

In a statement issued on June 25, President Wilson made it quite clear that the work of the Exports Council would be merely advisory, and that there would be no prohibition of exports. The statement continued:

The whole object will be to direct exports in such a way that they will go first and by preference where they are most needed and most immediately needed, and temporarily to withhold them, if necessary, where they can best be spared.

Our primary duty in the matter of

foodstuffs and like necessities is to see to it that the peoples associated with us in the war get as generous a proportion as possible of our surplus, but it will also be our wish and purpose to supply the neutral nations whose peoples depend upon us for such supplies as nearly in proportion to their need as the amount to be divided permits.

There will thus be little check put upon the volume of exports, and the prices obtained for them will not be affected by this regulation.

This policy will be carried out, not by prohibitive regulations, therefore, but by a system of licensing exports.

The Government is taking, or has taken, steps to ascertain, for example, just what the available present supply of wheat and corn is remaining from the crops of last year; to learn from each of the countries exporting these foodstuffs from the United States what their purchases in this country now are and where they are stored, and what their needs are, in order that we may adjust things, so far as possible, to our own needs and free stocks; and this information is in course of being rapidly supplied.

The step by which the President assumed absolute control of exports of essential wartime commodities was taken in a proclamation dated July 9 and brought into operation on July 15. It provided that none of the commodities named might be exported except under license. Fifty-six nations and their possessions, including allied, neutral, and

enemy countries, were specified as those to which the licensing system applied. The commodities named were coal, coke, fuel oils, kerosene, and gasoline, including bunkers, food grains, flour and meal, fodder and feeds, meats and fats, pig iron, steel billets, ship plates and structural shapes, scrap iron and scrap steel, ferro-manganese, fertilizers, arms, ammunition and explosives.

Immediately after issuing the proclamation the President made a statement in the course of which he said:

In controlling by license the export of certain indispensable commodities from the United States, the Government has first and chiefly in view the amelioration of the food conditions which have arisen or are likely to arise in our own country before new crops are harvested. Not only is the conservation of our prime food and fodder supplies a matter which vitally concerns our own people, but the retention of an adequate supply of raw materials is essential to our program of military and naval construction and the continuance of our necessary domestic activities. We shall therefore similarly safeguard all our fundamental supplies.

The statement added that the Government did not want to hamper neutral nations, but rather to co-operate with them so long as supplies from the United States would not become available, either directly or indirectly, to feed the enemy.

A Bureau of Export Licenses, as part of the Department of Commerce, was immediately created, and its organization completed by creating a division of war trade intelligence with Paul Fuller, Jr., of New York as its head. Mr. Fuller is widely known as an international lawyer, and has served as a special agent abroad for President Wilson. As a member of the Haitian Commission he helped reorganize Haiti's fiscal system. The Intelligence Division is charged with keeping the Government informed of the movement of American exports after they reach foreign shores.

The action of the United States Government was warmly approved by the Allies. Lord Rhondda, the British Food Controller, said that the President's action was typical of the way in which the United States had thrown itself into the war. Public opinion in England generally welcomed the embargo as a means

of tightening the blockade of Germany. The neutral nations of Europe, particularly Holland and the Scandinavian countries, however, viewed these measures with feelings of something more than misgiving, believing that the effect would be to reduce their necessary supplies of food and raw materials. Attempts were made to refute the accusation that the neutral countries were helping Germany with their own supplies and also importing commodities for re-export to Germany. The whole of this controversy, which has been in progress since the early months of the war, was revived in an acute form.

A request was made to the United States by the British Government on June 28, 1917, for the adoption of measures to prevent neutral countries contiguous to the Central Powers from importing anything beyond their needs, so that little or nothing could be sent into the enemy countries. Viscount Milner, member of the British War Cabinet, said in the House of Lords on July 4 that there was undoubtedly still a considerable amount of exporting from the neutral countries into Germany, but it was entirely the neutrals' own home products.

The news of the impending embargo on exports from the United States caused considerable alarm in Sweden. E. B. Trolle, former Foreign Minister and now President of the Swedish Government War Trade Commission, made a statement on July 6 in reply to the assertions that Sweden's imports were not intended solely for Swedish consumption. He said in part:

Official statistics of Sweden's importations for 1916, which are now nearly complete, demonstrate conclusively the absolute erroneousness of assertions that we have been bringing in American products for the purpose of passing them on to the Central Powers. In several instances our total importations from America show a decided decrease compared with 1913, the last normal year, and in many instances in which our imports from the United States have increased, this increase has fallen considerably short of making good the deficit caused by the decrease or total discontinuance of our pre-war importations from belligerent countries.

A Paris paper recently said that exports

to Scandinavia and Switzerland rose from \$40,000,000 in 1913 to \$183,000,000 in 1916. Leading American papers have published similar statistics and have maintained that the increase was largely due to the fact that Sweden had been re-exporting to Germany. This assertion will not stand the test of examination.

I may remind you that a considerable part of the merchandise mentioned in the American export statistics never reached us, having been detained by the British, and hence this cannot be considered.

Let us consider first the group showing the greatest increase. This embraces agricultural products, and, in particular, cereals. It is a fact that our importations of cereals from the United States in 1916 showed an increase of 72,846,000 crowns over 1913, but it must not be forgotten that in 1913 we imported 55,000,000 crowns' worth of cereals from Germany, whereas we did not bring in a crown's worth last year. Nor must it be forgotten that an increase in the value of products imported by no means indicates an increase in the quantity, in view of the tremendous rise in prices. As a matter of fact, our total imports of cereals in 1916 amounted to only 355,000 tons, against 515,000 in 1913.

I could continue similar citations, but these show the hollowness of assertions regarding our imports from the United States.

As against these explanations an official report made to the United States Government and published on July 8 showed the extent to which Sweden was furnishing supplies to Germany. Large quantities of materials used in the manufacture of war supplies figured prominently in the report. Iron ore shipments from Sweden to Germany have reached a total of 9,000,000 tons, all of the high grade required in the production of fine steel, and representing an amount equal to Sweden's entire pre-war export. In addition to this, the report stated that

Sweden had shipped to Germany 15,000 tons of ferro-silicon and ferro-manganese for hardening shells, together with large quantities of copper, zinc, manganese, sulphur, and other ores. Germany had also imported from Sweden in two years fully 200,000 tons of wood pulp for use as a basis for cellulose, used instead of cotton for the manufacture of high explosives, and large quantities of ball-bearings for use in the manufacture of war vehicles and submarines.

Another charge against Sweden made in the report was that she had discriminated against the Allies in the use of her railroads. Agricultural machinery destined for Russia had been held up for months, Sweden exacting from Russia extraordinary bargains before delivery was permitted.

A similar report was made in regard to large quantities of American cotton, said to have been passed on by neutrals to Germany for use in making high explosives. Neutrals are believed to have taken 90,000,000 pounds of cotton over and above their own requirements since the war began. The United States Government therefore is considering the laying of an export ban on that commodity.

On July 13 the State Department requested the neutrals contiguous to Germany to furnish this Government with complete information concerning their production and supplies of foodstuffs, the amount exported, to what countries exported, and their estimates as to their minimum import requirements. This information, supplemented by statistics already in the possession of the Exports Council, will determine the amount of exports to go from the United States to those countries.

Text of President Wilson's Appeal Against Profiteering

PRESIDENT WILSON has insisted from the beginning that the large business interests of the country should be content with normal profits, instead of excessive wartime profits, upon all supplies and materials entering

into the Government's prosecution of the war. The recommendation of the Federal Trade Commission (June 20) that the railroads, coal mines, and coke-producing companies be operated by the Government was one of the more radical

steps by which the authorities have sought to bring about a definite understanding on the whole range of wartime prices. On July 11, 1917, the President issued the following extraordinary appeal to the business interests of the country:

MY FELLOW-COUNTRYMEN:

The Government is about to attempt to determine the prices at which it will ask you henceforth to furnish various supplies which are necessary for the prosecution of the war and various materials which will be needed in the industries by which the war must be sustained. We shall, of course, try to determine them justly and to the best advantage of the nation as a whole, but justice is easier to speak of than to arrive at, and there are some considerations which I hope we shall keep steadily in mind while this particular problem of justice is being worked out. I, therefore, take the liberty of stating very candidly my own view of the situation and of the principles which should guide both the Government and the mine owners and manufacturers of the country in this difficult matter.

A just price must, of course, be paid for everything the Government buys. By a just price I mean a price which will sustain the industries concerned in a high state of efficiency, provide a living for those who conduct them, enable them to pay good wages, and make possible the expansions of their enterprises which will from time to time become necessary as the stupendous undertakings of this great war develop. We could not wisely or reasonably do less than pay such prices. They are necessary for the maintenance and development of industry, and the maintenance and development of industry are necessary for the great task we have in hand.

But I trust that we shall not surround the matter with a mist of sentiment. Facts are our masters now. We ought not to put the acceptance of such prices on the ground of patriotism. Patriotism has nothing to do with profits in a case like this. Patriotism and profits ought never in the present circumstances be mentioned together. It is perfectly proper to discuss profits as a matter of business, with a view to maintaining the integrity of capital and the efficiency of labor in these tragical months when the liberty of free men everywhere, and of industry itself trembles in the balance, but it would be absurd to discuss them as a motive for helping to serve and save our country.

Patriotism leaves profits out of the question. In these days of our supreme trial, when we are sending hundreds of thousands of our young men across the seas to serve a great cause, no true man who stays behind to work for them and sus-

tain them by his labor will ask himself what he is personally going to make out of that labor. No true patriot will permit himself to take toll of their heroism in money or seek to grow rich by the shedding of their blood. He will give as freely and with as unstinted self-sacrifice as they. When they are giving their lives will he not at least give his money?

I hear it insisted that more than a just price, more than a price that will sustain our industries, must be paid; that it is necessary to pay very liberal and unusual profits in order to "stimulate production"; that nothing but pecuniary rewards will do—rewards paid in money, not in the mere liberation of the world.

I take it for granted that those who argue thus do not stop to think what that means. Do they mean that you must be paid, must be bribed, to make your contribution, a contribution that costs you neither a drop of blood nor a tear, when the whole world is in travail and men everywhere depend upon and call to you to bring them out of bondage and make the world a fit place to live in again amidst peace and justice? Do they mean that you will exact a price, drive a bargain with the men who are enduring the agony of this war on the battlefield, in the trenches, amidst the lurking dangers of the sea, or with the bereaved women and pitiful children, before you will come forward to do your duty and give some part of your life, in easy peaceful fashion, for the things we are fighting for, the things we have pledged our fortunes, our lives, our sacred honor, to vindicate and defend—liberty and justice and fair dealing and the peace of nations?

Of course you will not. It is inconceivable. Your patriotism is of the same self-denying stuff as the patriotism of the men dead or maimed on the fields of France, or else it is no patriotism at all. Let us never speak, then, of profits and of patriotism in the same sentence, but face facts and meet them. Let us do sound business, but not in the midst of a mist. Many a grievous burden of taxation will be laid on this nation, in this generation and in the next, to pay for this war. Let us see to it that for every dollar that is taken from the people's pockets it shall be possible to obtain a dollar's worth of the sound stuffs they need.

Let me turn for a moment to the ship owners of the United States and the other ocean carriers whose example they have followed and ask them if they realize what obstacles, what almost insuperable obstacles, they have been putting in the way of the successful prosecution of this war by the ocean freight rates they have been exacting. They are doing everything that high freight charges can do to make the war a failure, to make it impossible. I do not say that they realize

this or intend it. The thing has happened naturally enough, because the commercial processes which we are content to see operate in ordinary times have, without sufficient thought, been continued into a period where they have no proper place. I am not questioning motives. I am merely stating a fact, and stating it in order that attention may be fixed upon it.

The fact is that those who have fixed war freight rates have taken the most effective means in their power to defeat the armies engaged against Germany. When they realize this, we may—I take it for granted—count upon them to reconsider the whole matter. It is high time. Their extra hazards are covered by war risk insurance.

I know, and you know, what response to this great challenge of duty and of opportunity the nation will expect of you; and I know what response you will make. Those who do not respond, who do not respond in the spirit of those who have gone to give their lives for us on bloody fields far away, may safely be left to be dealt with by opinion and the law—for the law must, of course, command these things. I am dealing with the matter thus publicly and frankly, not because I have any doubt or fear as to the result, but only in order that in all our thinking and in all our dealings with one another we may move in a perfectly clear air of mutual understanding.

And there is something more that we must add to our thinking. The public is now as much part of the Government as are the army and navy themselves; the

whole people in all their activities are now mobilized and in service for the accomplishment of the nation's task in this war; it is in such circumstances impossible justly to distinguish between industrial purchases made by the Government and industrial purchases made by the managers of individual industries; and it is just as much our duty to sustain the industries of the country, all the industries that contribute to its life, as to sustain our forces in the field and on the sea. We must make the prices to the public the same as the prices to the Government.

Prices mean the same thing everywhere now. They mean the efficiency or the inefficiency of the nation, whether it is the Government that pays them or not. They mean victory or defeat. They mean that America will win her place once for all among the foremost free nations of the world, or that she will sink to defeat and become a second-rate power alike in thought and in action. This is a day of her reckoning and every man amongst us must personally face that reckoning along with her.

The case needs no arguing. I assume that I am only expressing your own thoughts—what must be in the mind of every true man when he faces the tragedy and the solemn glory of the present war for the emancipation of mankind. I summon you to a great duty, a great privilege, a shining dignity and distinction. I shall expect every man who is not a slacker to be at my side throughout this great enterprise. In it no man can win honor who thinks of himself.

One Source of Germany's Poison Gases

A pamphlet on the field work conducted by and for the Smithsonian Institution states that while carrying on botanical explorations in Venezuela in the Fall of 1916 Dr. J. N. Rose, Associate Curator of Plants in the National Museum, secured some interesting specimens of *sabadilla*, a Venezuelan plant of the lily family, from the seeds of which are produced some of the asphyxiating and tear-producing gases used by the Germans in the present war.

The specimens were secured by Dr. Rose through the co-operation of Consul Homer Brett, La Guaira, Venezuela, who stated in a report of the Department of Commerce that this plant is known locally as *cevadilla*, a diminutive of the Spanish word *cebada*, meaning barley, and occurs in Venezuela and Mexico. Its highly poisonous seeds have long been used in medicine. The substances produced from *sabadilla* seed are *cavadine*, or crystallized *veratric*, an alkaloid; *veratric acid*, and *sabadalline*, a heart stimulant.

The dust from the seed in the field irritated the eyes, throat, and especially the nose, so much that the native laborers were obliged to wear masks. It has been reported that the Germans had bought all the available supply of these seeds before the declaration of war. Both the *sabadilla* seeds and all preparations compounded from them are now, however, declared contraband by England.

China Foils a Royalist Coup

Attempt to Restore the Manchu Emperor

THE first chapter of the rebellion in China closed on June 24, 1917, when a compromise was arranged between the rebels and the Constitutional leaders, which appeared to have bridged over the principal difficulties without recourse to bloodshed. President Li Yuan-hung's dissolution of Parliament on June 14, although against the counsel of Dr. George Morrison, his British constitutional adviser, and deeply resented throughout South China, was on that day accepted by the southern leaders on the understanding that a new election of both houses of Parliament would be held soon without military interference.

Li Ching-hsi, the President's original appointee to the Premiership in place of Tuan Chi-jui, was accepted by the rebels as Premier, and the beginnings toward a reorganized Cabinet were made with General Wang Shih-cheng, former Chief of Staff, as Minister of War, and Admiral Sah Chen-ping, China's well-known naval leader—who once served on a British battleship—as Minister of the Navy. Negotiations then opened for the rest of the Cabinet posts, and messages from the legations in Peking generally agreed that the civil war between the militarists and the southerners had for the time being been avoided by reassuring and patriotic concessions on both sides.

The world was suddenly amazed to hear on July 1, however, that Hsuan Tung, the little Manchu Emperor, had been put back on the Imperial Throne by the notorious Tartar General, Chang Hsun. On July 2, the young Emperor took possession of the palace occupied by President Li Yuan-hung, and Chang, as his protector, issued an edict explaining that Li Yuan-hung "bemoans his defects and asks us to punish him. We recognize his mistakes and also his merits," the edict continued; "we hereby appoint him Duke of the first class."

Chang Hsun accomplished his coup by concentrating strong divisions of troops

in Peking of what was practically his personal army, and he carried out the final arrangements, including the conveying of the little Emperor to the Forbidden City, at 3 o'clock on Sunday morning, July 1. Though the rest of the country, even the hitherto reactionary rebel Generals, began at once to stir to the defense of the republic, Chang Hsun continued to issue edicts from Peking, promising, among other things, an administration according to the constitutional laws promulgated by the Manchus, the forbidding

GENERAL CHANG HSUN
Chinese Dictator

of all blood Princes to interfere in politics, enforcement of all foreign treaties and contracts, abolition of distinction and permission of marriage between Manchus and Chinese, the pardoning of all political offenders, and the optional wearing of the queue. The expenses of the Imperial household were to remain the same as under the republic, (which has treated the Manchu family with the status of "visiting royalty.") Chang Hsun was appointed Viceroy of Chihli, the position held by Li Hung-chang un-

der the Dowager Empress when Chang Hsun was a Tartar General in her service. The nominee to the office of Foreign Affairs was Liang Tun-yen, Minister to America in 1911, a famous emissary on foreign diplomacy under the Manchus, and Yuan Shih-kai's late Minister of Communications.

So rapid was the concentration of the republican armies on Peking, however, that by July 5 this romantic Manchu restoration was already on the verge of collapse. No important leader in China came to Chang Hsun's relief; and no armies from either North or South China repaired to his imperial standard. His 30,000 troops were faced on the 5th of July by more than 50,000, with many thousands of others hurrying up from the south and west. By the 8th, exactly a week after his sensational re-entry into the public life of the world, the Manchu Emperor accepted Chang Hsun's resignation and abdicated from his throne. The armies continued to close in, however, and on July 9 Chang Hsun handed over the

administration of the City of Peking to General Wang Shih-cheng, the Minister of War, fighting having meanwhile taken place at the village of Lang Fang, south of the city.

The republican troops entered the city in force on the 11th, and hemmed in Chang Hsun and his fast dwindling troops in the imperial city. Large numbers of these were captured, and the final flight of Chang Hsun from the capital was reported on the 14th, at which time the city had again been taken over by the police gendarmerie, who had successfully prevented looting.

Meanwhile, Vice President Feng Kuo-chang had succeeded temporarily to the Presidency on July 7, and had administered the republican Government since that time from Nanking. The failure of Chang Hsun's imperial coup caused the situation to revert to the compromise of June 24, on the basis of which it is expected, now that republicanism is assured, the reorganization of the Government may continue in China.

"We Grazed the Very Edge of Cowardice"

Senator John Sharp Williams of Mississippi, retorting on July 14 to Senator Stone's assertion that "we are in the war unwisely," delivered a speech in the Senate in which he said:

The President and the Administration did do everything that human intellect could conceive for the purpose, if possible, of bringing an end to the war. We did everything we had a right to do. The President came to this Chamber and made that speech which was criticised, not only abroad but here in this Chamber, as being a "peace-at-any-price" speech—the celebrated speech in which he said we must have peace without victory.

The President traveled the whole gamut, up and down. He allowed this nation to suffer humiliation after humiliation, shame piled upon shame—grazed the very edge of cowardice because his heart beat in unison with the cause of a just and lasting peace.

Now we are in it, we have got to see it through—not only to a successful issue of this war, but, while we are about it, to a just and permanent treaty which shall as far as possible make war cease to be a game of national athletes.

We have got to see it through to a point where the world can hope that there will be peace for some generations—at any rate to a point where the civilized world shall say to any nation which goes to war without having previously submitted the cause in controversy, or proposed to submit it, to fair and impartial arbitration: "You are an outlaw nation. You are no longer within the pale of international law. You are everybody's enemy, and we shall treat you as such until you come back to your senses."

We do not propose in time of peace to prepare for war, always. We propose now in time of war to prepare for peace, and for a just and lasting peace, and we are going through with it with men and money and ships, on land and on sea, and in the air, and above the land and sea and under the sea, until we have seen it through not only to peace, but to a just and lasting peace, a righteous peace.

War Aims and Peace Terms Restated

Official Utterances of Premier Lloyd George, Baron Sonnino, and Other Ministers

David Lloyd George, British Prime Minister, made a noteworthy speech before the Burgesses in St. Andrew's Hall, Glasgow, on June 29, 1917. The most significant passages were aimed at the German Social Democratic peace program as stated at Stockholm, and were as follows:

NEVER have good men stood more in need of sympathy, support, and co-operation than the men who are guiding the fate of the nation in this hour in all lands. They were called to the helm in a raging tornado, the most destructive that ever swept over the world on land or sea. Great Britain so far has weathered the storm. She has successfully ridden the waves, but the hurricane is not yet over and it will need all the efforts, all the skill, all the patience and all the courage and endurance of all on board to steer the country through without foundering in the angry deep.

But with the co-operation of everybody we should get through once again. It is a satisfaction that Great Britain had no share in the responsibility for these grim events. Our part was as honorable and as chivalrous a part as was ever taken by any country in any war. The people must be sustained by the unswerving conviction that no part of the guilt for this terrible bloodshed rests on the conscience of their native land.

The story of the early days of the war is not that of the wolf and the lamb, for Germany, expecting to find a lamb, found a lion. * * *

In my judgment the war will come to an end when the allied armies have reached the aims which they set out to attain when they accepted the challenge thrown down by Germany. As soon as these objectives have been reached and guaranteed, this war will come to an end, but if the war comes to an end a

single minute before, it will be the greatest disaster that has ever befallen mankind.

No doubt we can have peace now at a price. Germany wants peace—even Prussia ardently desires it. They said give us some indemnity for the wrongs we have done, just a little territory here and a little there and just a few privileges in other directions, and we will clear out. We are told that if we are prepared to make peace now Germany will restore the independence of Belgium. But who has said so?

No German statesman has ever said he would restore the independence of Belgium. The German Chancellor came very near to it, but all the Junkers fell on him and he received a sound box on the ears from the mailed fist.

The only terms on which Germany has suggested restoring Belgium are not those of independence, but of vassalage. Then came the doctrine of the status quo and no annexation and no indemnities. No German statesman has accepted even that.

But what did indemnity mean? Indemnity is an essential part of the mechanism of civilization in every land and clime. Otherwise what guarantee have we against a repetition? Then it is said, "That is not what you are after. You are after our colonies, and probably Palestine and Mesopotamia." If we had entered into this war purely for the German colonies we would not have raised an army of 3,000,000 or 4,000,000. We could have got them without adding a single battalion to the army.

Our greatest army is in France. We are there to recover for the people who have been driven out of their patrimony the land which belonged to them.

As to Mesopotamia, it is not and never has been Turkish. You have only

to read the terrible reports to see what a wilderness the Turks have made of the Garden of Eden. What is to happen to Mesopotamia must be left to the peace conference, and there is one thing that will never happen to it. It will never be restored to the blasting tyranny of the Turks. The same observation applies to Armenia.

As to the German colonies, that again is a matter which must be settled by the great international peace conference. When we come to settle who must be the future trustees of those uncivilized lands we must take into account the sentiments of the peoples themselves and whether they are anxious to secure the return of their former masters or whether they would rather trust their destinies to other and juster and gentler hands. The wishes, desires, and interests of the peoples themselves of those countries must be the dominant factors in settling their future government.

Peace must be framed on so equitable a basis that the nations would not wish to disturb it. It must be guaranteed by destruction of Prussian military power, so that the confidence of the German people shall be put in the equity of their cause and not in the might of their armies. A better guarantee than either would be democratization of the German Government.

No one wishes to dictate to the German people the form of government under which they should choose to live. But it is right that we should say that we will enter into negotiations with a free Government of Germany with a different attitude of mind and a different temper and different spirit and with less suspicion and more confidence than we should with a Government whom we feel today to be dominated by the aggressive and arrogant spirit of Prussian militarism.

All the allied Governments will, in my judgment, be acting wisely if they draw that distinction in their general attitude toward the discussion of peace terms.

As to the military situation, there is no doubt that the startling developments in Russia have modified the military situation this year temporarily to our

disadvantage, but permanently for the better. What happened on the western front showed what could have been accomplished this year if all the allied forces had been ready to bring all-round pressure to bear.

In training, equipment, and experience our army is infinitely better than it ever has been. The finest collection of trench-pounding machines which any army has ever seen is now in the possession of the British forces.

The Russian revolution, beneficent as it undoubtedly is, great as will be its results both this year and even more hereafter, undoubtedly has had the effect of postponing complete victory. But Russia will regain her strength with a bound, and become mightier and more formidable than ever. * * *

The strength of Great Britain, once more flung into the breach, has once more saved Europe and human liberty. But now Russia is gaining strength every day. It has a capable Government. It never had a better one, and her power in the future will be inspired by freedom.

America, always the mainstay of freedom, is beginning to send her valiant sons to the battlefields of Europe to rally around the standard of liberty. That is why victory now is more assured and more complete than we could have hoped for.

Victory is assured under two conditions. The first is that the German submarine attacks must be defeated or kept within reasonable bounds.

The losses are heavy. They may, and probably will, drive us to further restrictions in some trades and perhaps to hardships. That all depends on the nation, for, after carefully reckoning the chances and the possibilities, the Government has come to the conclusion, based on best advice, that submarines can neither starve us at home nor drive our armies out of the field abroad. Our losses during May and June were heavy, but they were hundreds of thousands of tons beneath the Admiralty forecast.

We are beginning to get them. Arrangements also have been made for

frustrating them and for destroying them. I have no hesitation in saying that if we all do our part the German submarine will be almost as great a failure as the German Zeppelin.

If we do not waste we shall not starve. We have succeeded in increasing the food supply, and we are engaged in a great shipbuilding program for fighting and for carrying purposes. If every employer and every workman would pull together, between them they would pull us through. * * *

Sonnino On Italy's War Aims

Baron Sonnino, the Italian Minister of War, addressing the Chamber of Deputies at Rome on June 21, 1917, declared that Italy did not aspire to frontiers constituting a menace to any neighboring State, but was seeking a bulwark adequate to protect the independence of a pacific country. He said, in part:

The hour is solemn for our country. We cannot deny that. By the prolongation of the war general conditions have become worse day by day, and they have become even more disagreeable for the nations aspiring now, or who may be expected to aspire, to an equitable and durable peace. It must be equitable to prove durable—a peace which will mark an advance in the march of civilization. It is to obtain such a peace that we appeal to the entire nation without distinction of rank, sex or age, asking that each continue his efforts in the sacred name of all our brothers who have given their health or life for the common cause.

Every momentary weakness, every hesitation, might render useless the steps which have been taken up to the present amid so many arduous difficulties and innumerable sacrifices, and might even imperil the victorious outcome.

Italy counts today absolutely upon the devotion of her sons, upon their actions, their words, and their sublime spirit of self-abnegation.

Baron Sonnino pointed out that it was impossible for the country of Mazzini and Garibaldi to accept a peace which

Europe is again drenched with the blood of its bravest and its best, but do not forget the great succession of hallowed causes. They are the stations of the cross on the road to the emancipation of mankind. I again appeal to the people of this country and beyond that they should continue to fight for the great goal of international rights and international justice, so that never again shall brute force sit on the throne of justice nor barbaric strength wield the sceptre over liberty.

should leave a country under foreign oppression, which should exclude all reparation for all the iniquities and violent cruelties endured by Belgium, which, by implication, should tolerate the organized extermination of the Armenians by the Turks, and stand in the way of a unified and independent Poland. Baron Sonnino continued:

Would that ever be a peace such as has been proposed by President Wilson, which his memorable message guaranteed for the future and for which the United States has chivalrously drawn the sword? It would be an insult to suppose so. The objective for which all our politics are striving and by which all our warfare is being guided is peace, not conquests or imperialism—a desire to assure the country of the future of durable peace and free competition in the development of civilization and material resources. And for a durable peace it is necessary for Italy to have assurance of frontiers according to nationality, a condition which is indispensable to its effective independence.

Far from us is the thought not only of the oppression but also of the debasement of any race or State, far or near, big or little. We seek, on the contrary, to co-operate in the constitution of an equilibrium of power which is a condition and guarantee of reciprocal respect and mutual concessions—essential elements in the liberty and equality of the communal and social life of individuals as of peoples.

French Note to Russia Defining War Aims

Great Britain and France both replied on June 11, 1917, to the Russian proclamation of April 9, restating their war aims in the light of the Russian dictum concerning "no annexations and no in-

demnities." The British reply was printed in the preceding issue of this magazine. The text of the French note is as follows:

It is with entire satisfaction that the Gov-

ernment of the French Republic has taken cognizance of the proclamation of the Russian Provisional Government of April 9, (March 27, Old Style,) which the Russian Ambassador was instructed to communicate to it. The Government of the republic shares the full confidence which the Provisional Government entertains in the restoration of the political, economical, and military forces of the country.

It does not doubt that the measures announced for the improvement of the conditions in which the people mean to carry through to victory the war against an adversary who threatens their national patrimony more than ever, will permit them to drive him from their soil, definitely establish their reconquered liberty, and thus effectively take their part in the common struggle of the Allies. In this way the efforts, which our enemies do not cease to renew, to sow misunderstanding among the Allies, and to obtain credit for the most lying reports regarding their reciprocal decisions, will be rendered vain.

The Government of the French Republic, always confident in the sentiment of its old and faithful ally, is glad to feel itself in full community of ideas with the Russian Government and people regarding the principles by which its policy has not ceased to be inspired during the present conflict. France thinks of oppressing no people and no nationality, not even those of her enemies of today, but she intends that the oppression which has so long weighed upon the world shall be finally destroyed and that the authors of the crimes which will remain for our enemies the shame of this war shall be chastised.

Leaving to her enemies the spirit of conquest and greed by which they are inspired in peace as in war, France will never aspire to snatch any territory from its legitimate owners. Rebuffed in all the efforts which she made to maintain peace, forced to reply by arms to the most unjust of aggressions, she entered the war only to defend her liberty and her national patrimony, and to assure henceforward in the world a respect for the independence of peoples. Just as Russia

proclaimed the restoration of Poland to her former independence, so France hails with joy the effort which is being carried on in different parts of the world by peoples still tied by the bonds of a dependence which has been condemned by history.

ALSACE-LORRAINE

Be it to conquer or recover their national independence, to assert their rights to the respect of an ancient civilization, or to shake this Germanic tyranny ready to weigh so heavily on peoples less advanced on the path of progress, the only end of the war which France looks to is the triumph of right and justice. For herself she intends that her faithful and loyal provinces of Alsace and Lorraine which were snatched from her in the past by violence shall be liberated and shall return to her.

With her allies France will fight until victory in order that they may be assured the complete restoration of their territorial rights and their political and economic independence, as well as reparatory indemnities for the long toll of inhuman and unjustified acts of devastation and the indispensable guarantees against a recurrence of the evils caused by the incessant acts of provocation of our enemies.

The Government of the republic remains, like the Russian people, convinced that it is by drawing inspiration from these principles that the foreign policy of Russia will attain the aims of a people enamored of justice and liberty, and that after a victorious struggle the Allies will be able to create a solid and lasting peace founded on right. The Russian Government may be assured that the French Government is desirous of coming to an understanding with it not only regarding the means for continuing the struggle, but also regarding those for ending it, by examining and settling a common agreement as to the conditions in which they may hope to reach a final settlement in accordance with the ideas by which their conduct in this war is directed.

To this reply was attached the text of the Order of the Day voted on June 5 by the French Chamber of Deputies.

Alsace-Lorraine: The Declaration of Bordeaux

The Order of the Day adopted on June 5, 1917, by the French Chamber of Deputies, at the close of the debate on the Stockholm peace movement, contained this passage:

"Unanimously indorsing the protest made before the National Assembly in 1871 by the representatives of Alsace-Lorraine against the wresting of that territory from France, the Chamber declares that it awaits from the pres-

ent war, which has been imposed upon Europe by the aggression of imperialist Germany, along with the liberation of the invaded provinces, the return of Alsace-Lorraine to the mother country, and the just reparation of damages."

The Declaration of Bordeaux referred to in this Order of the Day was printed in full in the Bulletin des Armées a few days later, and is here translated for CURRENT HISTORY MAGAZINE:

DECLARATION OF BORDEAUX

National Assembly, Session of 1871. Annex to the Official Report of Feb. 16, 1871.

Proposition relative to the declaration of the Deputies of the Departments of the Upper Rhine, Lower Rhine, Moselle, Meurthe, and of the Vosges, in regard to Alsace and Lorraine.

Presented by Messrs Leon Gambetta, Grosjean, Humbert, Kuss, Saglio, H. Varroy, Titot, André, Kablé, Tachard, Rehms, Edouard, Teutsch, Dornès, Hartmann, Ostermann, La Flize, Deschamps, Billy, Bardon, Viox, Albrecht, Alfred Koechlin, Charles Boersch, Grandpierre, Chauffour, Rencker, Melsheim, Keller, Brice, Berlet, Schneegans, Ed. Bamberger, Noblott A. Boell, Scheurer-Kestner, Ancyon.

We, the undersigned, French citizens chosen and deputed by the Departments of the Lower Rhine, Upper Rhine, Moselle, Meurthe, and the Vosges, to bring to the National Assembly of France the expression of the unanimous will of the populations of Alsace and Lorraine, after having met and deliberated, have resolved to proclaim in a solemn declaration their sacred and unalterable rights, in order that the National Assembly, France, and Europe, having under their eyes the prayers and the resolutions of our constituents, can neither commit nor allow to be committed any act that shall attain the rights whose guardianship and defense have been intrusted to us by formal mandate.

DECLARATION

I.—Alsace and Lorraine do not wish to be alienated.

Associated for more than two centuries with France in both good and ill fortune, these two provinces, ceaselessly exposed to the blows of the enemy, have constantly sacrificed themselves for the national welfare; they have sealed with their blood the indissoluble pact that binds them to a united France. Made the subject of dispute today by the pretensions of a foreign aggressor, they affirm in the face of all obstacles and all dangers, under the very yoke of the invader, their unshakable fidelity.

In full unanimity the citizens who remained in their homes, like the soldiers who rallied to the flag, the former by voting, the latter by fighting, have made known to Germany and to the world the immovable will of Alsace and Lorraine to remain French territory.

II.—France can neither consent to nor sign the cession of Alsace and Lorraine.

She cannot, without imperiling her national existence, deal a mortal blow at her own unity by abandoning those who have acquired by two hundred years of patriotic

devotion the right to be defended by the whole country against the aggressions of victorious force.

An assembly, even though a product of universal suffrage, could not invoke its sovereignty to cover or ratify exactions destructive of the national integrity: it would be arrogating to itself a right which does not belong even to a people united in its legislative functions. Such an excess of power, whose effect would be to mutilate the mother community, would expose those guilty of it to the just denunciations of history. France can endure the blows of brute force; she cannot sanction its decrees.

III.—Europe can neither permit nor ratify the abandonment of Alsace and Lorraine.

Guardians of the rules of justice and international law, the civilized nations could not long remain insensible to the fate of their neighbor, under pain of being, in their turn, victims of the aggression which they had tolerated. Modern Europe cannot allow a people to be seized like a wretched herd; it cannot remain deaf to the repeated protests of the threatened communities; it owes it to its own safety to forbid such abuses of force. It knows, besides, that the unity of France is today, as in the past, a guaranty of the general order of the world, a barrier against the spirit of conquest and invasion. Peace made at the price of a cession of territory would only be a ruinous truce and not a definitive peace. It would be for all a cause of internal agitation, of legitimate and permanent provocation throughout the earth.

In brief, Alsace and Lorraine protest highly against all cession; France cannot consent to it, Europe cannot sanction it.

In support of this we call upon our fellow-citizens of France, and upon the Governments and nations of the whole world, to witness that in advance we hold null and void all acts and treaties, votes or plébiscites, which shall consent to abandoning to the stranger all or part of our provinces of Alsace and Lorraine.

We proclaim by these presents forever inviolable the right of citizens of Alsace and Lorraine to remain members of the French Nation, and we swear, both for ourselves and for those we represent, likewise for our children and their descendants, to claim it eternally by all ways and means and against all usurpers.

The undersigned members of the National Assembly place on file the following proposition with the Chamber of Deputies: "The National Assembly has taken under consideration the unanimous declaration of the Deputies of the Lower Rhine, Upper Rhine, Moselle, Meurthe, and Vosges." [Followed by the signatures.]

Russian Mission to United States

Ambassador Bakhmeteff, in a Series of Addresses,
Tells of Free Russia's Purposes

THE Russian Mission to the United States, which was appointed before the reconstruction of the Provisional Government, arrived at Seattle on June 13, 1917. The mission was headed by Special Ambassador Boris A. Bakhmeteff, and included about forty officials and experts, representing nearly every department of the Russian Government. The following constituted the special embassy, in order of their rank:

Ambassador Boris A. Bakhmeteff, (and wife.)

Lieut. Gen. Roop, representative of the Russian Army.

Professor Lomonosoff, member of the Council of Engineers and representative of the Ministry.

Professor Borodine, representative of the Ministry of Agriculture.

M. Novitzky, representative of the Ministry of Finance.

Attachés—M. Soukine, First Secretary of Legation, Ministry of Foreign Affairs; Captain Dubassoff of the Guard, aide de camp, (and wife,) and Captain Chutt.

Reaching Washington on June 19, the visitors were greeted by Secretary of State Lansing, and received an enthusiastic welcome as they passed through the streets from the station. Next day Ambassador Bakhmeteff was formally presented to President Wilson, while General Roop paid his respects to Secretary Baker.

Program of New Russia

Outlining the political and military program of "New Russia" to the newspaper correspondents at Washington, M. Bakhmeteff said:

In behalf of the Russian Provisional Government and in behalf of all the people of new Russia, I have been first of all sent here to express their gratitude to the Government of the United States for the prompt recognition of the new political order in Russia. This noble action of the world's greatest democracy has afforded us strong moral support and has created among our people a general feeling of profound appreciation. Close and active relationship between the two nations based upon complete and sincere understanding encountered in-

evitable obstacles during the old régime because of its very nature. The situation is now radically changed with free Russia starting a new era in her national life.

The Provisional Government is actively mobilizing all its resources and is making great efforts to organize the country and the army for the purpose of conducting the war. We hope to establish a very close and active co-operation with the United States, in order to secure the most successful and intensive accomplishment of all work necessary for our common end. For the purpose of discussing all matters relating to military affairs, munitions and supplies, railways and transportation, finance, and agriculture, our mission includes eminent and distinguished specialists.

On the other hand, I hope that the result of our stay and work in America will bring about a clear understanding on the part of your public of what has happened in Russia and also of the present situation and the end for which our people are most earnestly striving. The achievements of the revolution are to be formally set forth in fundamental laws enacted by a Constitutional Assembly, which is to be convoked as soon as possible. In the meanwhile the Provisional Government is confronted with the task of bringing into life the democratic principles which were promulgated during the revolution.

New Russia received from the old Government a burdensome heritage of economic and technical disorganization which affected all branches of the life of the State, a disorganization which weighs yet heavily on the whole country. The Provisional Government is doing everything in its power to relieve the difficult situation. It has adopted many measures for supplying plants with raw material and fuel, for regulating the transportation of the food supply for the army and for the country, and for relieving the financial difficulties.

The participation in the new Government by new members who are active and prominent leaders in the Council of Workmen's and Soldiers' Delegates has secured full support from the democratic masses. The esteem in which such leaders as M. Kerensky and M. Tseretelli and others are held among the working classes and soldiers is contributing to the strength and stability of the new Government. The Constitutional-Democratic Party, the Labor Party, the Socialist-Populists, and, excepting a small group of extremists, the Social Democrats—all these parties, embracing the vast majority of the peo-

ple, are represented by strong leaders in the new Government, thereby securing for it authority.

Plans of the Government

Firmly convinced that unity of power is essential, and casting aside class and special interests, all social and political elements have joined in the national program which the new Government proclaimed and which it is striving to fulfill. This program reads:

"The Provisional Government, rejecting, "in accord with the whole people of Russia, "all thought of separate peace, puts it "openly as its deliberate purpose the "promptest achievement of universal peace; "such peace to presume no dominion over "other nations, no seizure of their national "property nor any forced usurpation of foreign territory; peace with no annexations "or contributions, based upon the free determination by each nation of its destinies.

"Being fully convinced that the establishment of democratic principles in its internal and external policy has created a new factor in the striving of allied democracies "for durable peace and fraternity of all nations, the Provisional Government will take "preparatory steps for an agreement with "the Allies founded on its declaration of "March 27. The Provisional Government is "conscious that the defeat of Russia and her "allies would be the source of the greatest "misery, and would not only postpone but "even make impossible the establishment of "universal peace on a firm basis.

"The Provisional Government is convinced "that the revolutionary army of Russia will "not allow the German troops to destroy "our allies on the western front and then "fall upon us with the whole might of their "weapons. The chief aim of the Provisional "Government will be to fortify the democratic foundations of the army and organize and consolidate the army's fighting "power for its defensive as well as offensive "purpose."

The last decision of the Russian Council of Workmen's and Soldiers' Delegates, the decision of the All-Russian Peasant Congress, the decision of the Duma, the voice of the country as expressed from day to day by almost the entire Russian press, in resolutions adopted at different conferences and congresses—all these confirm their full support to this national program and leave not the slightest doubt that Russia is decided as to the necessity to fight the German autocracy until the conditions for a general and stable peace in Europe are established. Such decision is becoming more and more evident each day by practical work and results and shows itself in the pressing and rapid reorganization of the army which is now being fulfilled under the firm and efficient measures adopted by Minister Kerensky.

New Russia, in full accord with the motives which impelled the United States to enter

the war, is striving to destroy tyranny, to establish peace on a secure and permanent foundation and to make the world safe for democracy.

Address Before the House

Stirring scenes were witnessed when the House of Representatives gave a formal reception to the mission on June 23. Speaker Champ Clark caused the first outburst of enthusiasm when he reminded the House that Russia was the twenty-seventh republic and "that there was one other republic on earth (Switzerland) when our fathers proclaimed our independence in 1776." M. Bakhmeteff, speaking in excellent English and with much fervor, was frequently interrupted by bursts of applause. He said, in part:

Does not one feel occasionally that the very greatness and significance of events are not fully appreciated, due to the facility and spontaneity with which the change has been completed? Does one realize what it really means to humanity that a nation of 180,000,000, a country boundless in expanse, has been suddenly set free from the worst of oppressions, has been given the joy of a free, self-conscious existence?

Instead of the old forms there are now being firmly established and deeply imbedded in the minds of the nation principles that power is reposed and springs from and only from the people. To effectuate these principles and to enact appropriate fundamental laws is going to be the main function of the Constitutional Assembly which is to be convoked as promptly as possible.

Guided by democratic precepts, the Provisional Government is meanwhile reorganizing the country on the basis of freedom, equality, and self-government, rebuilding its economic and financial structure.

The people are realizing more and more that for the very sake of further freedom law must be maintained and manifestation of anarchy suppressed. In this respect local life has exemplified a wonderful exertion of spontaneous public spirit. On many occasions, following the removal of the old authorities, a new elected administration has naturally arisen, conscious of national interest and often developing in its spontaneity amazing examples of practical statesmanship.

The latest resolutions, framed by the Council of Workmen, the Congress of Peasants, and other democratic organizations, render the best proof of the general understanding of the necessity of creating strong power. The coalitionary character of the new Cabinet, which includes eminent Socialist leaders, and represents all the vital elements of the nation, therefore enjoying its full support, is most effectively securing the unity and power of the Central Government,

the lack of which was so keenly felt during the first two months after the revolution.

Realizing the grandeur and complexity of present events and conscious of the danger which is threatening the very achievement of the revolution, the Russian people are gathering around the new Government, united on a "national program." It is this program of "national salvation" which has united the middle classes, as well as the Populists, the labor elements, and Socialists. Deep political wisdom has been exhibited by subordinating class interests and differences to national welfare. In this way this Government is supported by an immense majority of the nation, and outside of reactionaries only is being opposed by comparatively small groups of Extremists and Internationalists.

As to foreign policy, Russia's national program has been clearly set forth in the statement of the Provisional Government of March 27, and more explicitly in the declaration of the new Government of May 18. With all emphasis may I state that Russia rejects any idea of separate peace. I am aware that rumors were circulated in this country that a separate peace seemed probable. I am happy to affirm that such rumors are wholly without foundation in fact.

Gentlemen of the House, I will close my address by saying—Russia will not fail to be a worthy partner in the "league of honor."

After this address members of the mission stood in a receiving line while members of the House passed by. Every one warmly congratulated Ambassador Bakhmeteff on his address.

At Washington's Tomb

The Russian Mission joined with the Belgian Mission on June 24 to pay homage at the tomb of George Washington at Mount Vernon. M. Bakhmeteff concluded his address with these words:

With a feeling of solemn veneration and overwhelming emotion I bestow on this immortal tomb this wreath as a tribute to the hero, to the knight of liberty and democracy, from the messengers of Russia's freedom.

Professor Lomonosoff, in a statement on June 25 regarding the condition of the Russian railroads, said that locomotives were the fundamental need of Russia today. "Quite frankly I can say to you, our American friends," he said, "give us locomotives, and we shall give you military success." Russia needs at once 1,000 ten-wheel American locomotives to put her idle cars in operation; another 1,000, with appropriate number of cars, to free the congested freight terminals, and another 850 annually to meet the discrepancy between Russia's

manufacture and her needs for renewal and new construction. "I must frankly tell you," Professor Lomonosoff added, "that the Russian railways are now in a most critical state. Heroism can do nothing when there is a lack of munitions and food." The Siberian railroad was in splendid condition for the immense task put upon it. Coal was available and adequate sidings had been completed.

Speech in the Senate

The Senate reception to M. Bakhmeteff and his colleagues on June 26 was in every way as enthusiastic as that given previously by the House. The Ambassador's address followed the same lines as that delivered before the House. In part he said:

Two considerations make me feel that Russia has passed the stage of the world when the future appeared vague and uncertain. In the first place is the firm conviction of the necessity of legality, which is widely developing and firmly establishing itself throughout the country. My latest advices give joyful confirmation of the establishment of a firm power, strong in its democratic precepts and activity, strong in the trust reposed in it by the people in its ability to enforce law and order.

In the second place, and no less important, is the growing conviction that the issues of the revolution and the future of Russia's freedom are closely connected with the fighting might of the country. It is such power, it is the force of arms, which alone can defend and make certain the achievements of the revolution against autocratic aggression. Like the nation, the army, an offspring of the people, had to be built on democratic lines. Such work takes time, and friction and partial disorganization must be overcome.

Conscious of the enormous task, the Provisional Government is taking measures to restore promptly throughout the country conditions of life so deeply disorganized by the inefficiency of the previous rulers and to provide for whatever is necessary for military success.

In this respect exceptional and grave conditions provide for exceptional means. In close touch with the Pan Peasant Congress, the Government has taken control of stores of food supplies and is providing for effective transportation and just distribution. Following examples of other countries at war, the Government has undertaken the regulation of the production of main products vital for the country and the army. The Government at the same time is making all endeavor to settle labor difficulties, taking measures for the welfare of workmen consistent with the

active production necessitated by national welfare.

Senators shook hands with all members of the commission, and later, by unanimous consent, adopted a resolution by Senator Gore of Oklahoma expressing "profound satisfaction over the assurances of the determination of the Russian people in their new-found liberty and republican institutions to defend and maintain them."

New York's reception to the Russian Mission on July 6 was a fitting expression of the enthusiasm which "the most democratic city in the world," as Ambassador Bakhmeteff described it, felt at the presence of the representatives of the new democracy. The procession through the streets was greeted by large and enthusiastic crowds; and everywhere the red flag of the revolution was in evidence. Replying to Mayor Mitchel's greetings, the Ambassador, speaking in English, said that the enthusiasm that had been manifested represented "the joy of America that a new democracy had been born. So momentous is the present hour," he continued, "that solemn gravity and earnest sincerity are in our greeting, and our two nations have extended to each other their brotherly hands. Liberty and democracy, such are the aims of the Russian revolution. Democracy and liberty, such are the aims which this great Republic is seeking to obtain for all nations. Is there not a deep historic meaning in the fact that while the first American troops stepped upon the soil of Europe as true champions of mankind, Russia, inspired by the vision of freedom and democracy, has thrust her warriors with unyielding impulse upon the yet unbroken ranks of the foe of liberty?"

On July 7 a crowd of 20,000 people gathered at a concert on the Mall of Central Park. In his speech Ambassador Bakhmeteff said:

I have come to this country in behalf of the new Russia, a Russia freed from the shackles of hundreds of years of oppression and hatreds. With a deadly blow has the Russian people shattered the chains of serfdom.

Russia is free! One hundred and eighty millions of men, women, and children now

have the blessings of self-government and self-rule. And with us others are free. The Pole is free. The Jew enjoys full equality. The Jew is a full fellow-citizen of free Russia.

This war in which we are comrades is not a common war between nations seeking personal ends. It is a war for a principle. On the issues of this war will depend the future of the world, whether the world will be "safe for democracy" or whether it will be fettered with autocracy.

Liberty and democracy! That was what the great hero Kerensky pleaded for when he led the soldier-citizen to fight. Let us be united. Let us all be one. Let us fight for liberty and democracy—that is the message to you, the oldest democracy of the New World, from the newest democracy of the Old World.

One episode marred the otherwise unbroken flow of harmony which characterized the visit of the mission to New York. At the great meeting in Madison Square Garden on the evening of July 7 a crowd of 12,000 persons was thrown into disorder by a hostile demonstration against a declaration that the Russians must fight until the Kaiser was removed from power. The speaker interrupted was a representative of Russian workers in the United States. The disturbance was stopped, and a little later Ambassador Bakhmeteff made an address. Without challenging the pacifist sentiment in the audience by making any direct reference to the determination on the part of the new Russia to continue the war until victory is secure, the Ambassador paid glowing compliments to the revolutionary army. He spoke in Russian, and was interrupted frequently by tumultuous cheers. He described the critical moments of the revolution, the economic, political, and social disorganization which necessarily followed the overturn of the old régime. For a time, he said, it seemed as though the revolution might prove a failure, that the obstacles were too great. "But the moment of salvation came," he added, "when Tseretelli, Skobelev, and Tchernoff united and formed the coalition which strengthened the Provisional Government and put the young nation on a firm and reliable foundation."

The mission on July 5 resolved itself into the permanent Russian Embassy in

the United States. Special Ambassador Boris A. Bakhmeteff presented to President Wilson his credentials as permanent Ambassador, but continued to exercise extraordinary powers of negotiation. The former Russian Embassy at Washington has been transformed into a network of offices. From there Ambassador Bakhmeteff now directs all the special, technical, and purchasing missions. The

other members of the special mission are working under his direction, some of them for the length of the war and others for at least four or five months.

The text of the new Ambassador's formal address to the President, delivered when he presented his credentials, will be found on a preceding page, in connection with articles on the Russian situation.

Tour of the Italian Mission

THE story of the arrival of the Italian Mission in the United States was given in the preceding issue of CURRENT HISTORY MAGAZINE, with the first public utterances of Prince Udine and his distinguished associates. To continue the narrative: In the course of a tour of the Middle West the commission visited Chicago on June 18, 1917. At a formal dinner in the evening the principal speaker was Guglielmo Marconi, who told of Italy's difficult position in the war, saying in part:

Among all the nations at war Italy is silently taking the greatest strain and the greatest privation. Only when the kind of war Italy is fighting becomes fully known will the world realize what sacrifices the army and the people of Italy have accomplished. For more than two years Italy has had an army of more than 3,000,000 men. It is now approaching 4,000,000. You must bear in mind that her population is a little over 37,000,000—about one-third that of the United States. If America were to make an equal sacrifice she would have to maintain under arms for more than two years about 12,000,000 men, and even then her effort would not be equal to ours, for the wealth of the United States is incomparably greater than that of Italy. To feel an equal strain America would have to fling at least \$30,000,000,000 into the furnace of war.

The Italian Mission arrived in New York on June 21, and received a hearty welcome. The crowds that gathered about the Battery, where Prince Udine and his colleagues came ashore from a ferryboat, the crowds in City Hall Park, in Washington Square, and along the rest of the way to Sixty-first Street were almost as large as those which had greeted the French Commission a few weeks previously. The city's Italian population

turned out in great numbers. An interesting episode was the stoppage of the procession at the Garibaldi Statue, on the pedestal of which Prince Udine, the head of the mission, laid a wreath of evergreens. Then he saluted, and stood a moment contemplating the figure of the man who had helped to create modern Italy.

At the luncheon given on June 22 by the Merchants' Association, Dr. Nicholas Murray Butler, President of Columbia University, reminded the audience that Italy had almost invented banking and that Genoa and Venice were the founders of the great overseas commerce of modern times. Charles Evans Hughes, Republican candidate for President in 1916, said that to state the indebtedness of America to Italy was to recite the history of navigation and discovery, of arts and letters, of commerce and invention—a long line of obligations, extending from Columbus to Marconi. "We also record the fact," Mr. Hughes added, "that Italian skill and industry are part of the very substance of American prosperity."

Marconi, in his speech, came down to the practical and critical question of Italy's shortage of coal, the importation of which had fallen to half the normal quantity. He proceeded:

We want coal, we must have coal, to keep our munition factories going, to run our railroads carrying ammunition to the front and food to all the scattered populations of the country, and to run our factories, the stoppage of which would mean the throwing of a million men out of work to starve and increase our difficulties. And if we do not get this coal, and get it quick, our ammunition factories will have to work half time or

stop, our trains will cease to run, diminishing the efficiency of the army, and even perhaps bringing about local famines. Above all, we must hasten the construction of ships, hundreds of ships, thousands of ships, ships of wood and ships of steel, so long as they will float and carry coal, iron, and wheat to Europe.

We expect the United States to put forth a great effort; given the spirit of organization and the industrial power of this great country, it should not be impossible to build one and a half million tons of shipping by the end of this year, and at least double that amount in 1918.

In addition to all these difficulties we must realize that the production of war material diminishes agricultural production, whereas the latter should be increased at all costs. Here again the United States can help us better than any one else if they will realize fully that the essential conditions of victory are an increase in agricultural production and the construction of many ships.

Enrico Arlotta, Minister of Transportation, pointed out the initial service to the Allies constituted by Italy's declaration of neutrality. He declared that, despite the increase of her budget from 2,500,000,000f. a year to eighteen billions, Italy had so well organized her finances that every new loan was met with new income adequate to cover the interest. He duplicated Marconi's plea for war materials and ships:

The commodities needed are wheat and other cereals, steel for the munitions, and, above all, coal; but these three things have now one name only, and this name is "ships, ships, and more ships." Italy used to take before the war about twenty millions of tons of goods, out of which one million was represented by coal imported from England and the United States. Now this figure is almost cut down to half, and this diminution represents the greatest sacrifice we could impose on our population.

Gentlemen, I said I would speak to you as a merchant done with a merchant. We have all signed a bill of exchange, and this bill of exchange is indorsed by England, by France, by Italy, by Russia, and so on. Now the United States has put its signature on this bill of exchange, and as nations live on credit, just as merchants do, when the bill of exchange is due we must pay it by winning the war. Otherwise we shall all be bankrupt.

Prince Udine on the afternoon of June 22 journeyed to Staten Island to pay a tribute to the memory of Garibaldi, who had lived for a while in a little frame house on the crest of a hill at Rosebank. It was estimated that at least 100,000

Italians took part in the demonstration, one of the most picturesque ever seen in New York. Members of Italian communities as far away as a hundred miles were represented in the crowd. The little house in which Garibaldi lived is now an Italian shrine, and is inclosed in another building, above it the words in gold, "The Garibaldi Memorial." In this old house Garibaldi supported himself by making candles, and in the rooms is still some of the humble furniture which the Italian patriot used. The Prince remained at the memorial about twenty minutes and the cheering never ceased for an instant while he was there. A committee representing the Order of the Sons of Italy greeted the Prince and handed him a check for \$10,000, to be applied to the relief of war sufferers in Italy. Prince Udine accepted the check, and expressed his deep gratitude for the gift. He said:

Before this memorial to Italy's great hero and in the country which Garibaldi loved so dearly, and at this historic moment when Italy is fighting for the principles which Garibaldi held most sacred, it is indeed a source of great gratification to me to greet so many Italian and so many American citizens at such a place as this.

The Prince referred to the present war as one for the complete realization of the dreams of Garibaldi, and he believed that the ideals of liberty and justice championed by the Italian patriot would triumph. He closed with a tribute to George Washington, whose ideals, he added, were the ideals of Garibaldi.

The official entertainment of the Italian Mission ended on June 23 with a celebration at the City College stadium. In the afternoon a visit was paid to Colonel Roosevelt at his Long Island home, and in the evening Prince Udine and his colleagues left for Boston.

Italy's Part in the Marne Victory

Senator Guglielmo Marconi of wireless fame, speaking as a member of the Italian Diplomatic Mission at the dinner given to the visitors by Mayor Mitchel of New York, June 22, 1917, revealed for the first time the circumstances in which

Italy announced to France her decision to remain neutral at the outset of the war, thereby releasing a million French soldiers on the Italian frontier and enabling France to win the battle of the Marne. This portion of Mr. Marconi's speech was as follows:

And now, gentlemen, I come to what is perhaps one of the least well-known matters in connection with this war, the absolutely decisive influence of Italy's conduct at the very outbreak of hostilities in 1914. Let me tell you a few facts concerning the inner political history of those fateful few days of July, 1914, when the fate of Europe was trembling in the balance.

Germany did not expect us to join her in her savage attack on the liberties of Europe; she did not even care much whether we eventually agreed to remain neutral. Her game was a much deeper and more treacherous one. She wanted us to leave France, our great Latin sister, in doubt as to our intentions.

On the morning of July 30, 1914, that is to say, one day before Germany declared war on Russia, and two days before she declared war on France, the Marquis de San Giuliano, who was then our Foreign Minister, unofficially informed the French Ambassador in Rome that Italy would never side with the Central Powers in a war of aggression. This information was immediately wired to Paris, but it was not sufficient to make France feel absolutely certain that Italy's attitude was favorable to her, because there was as yet no official declaration of neutrality on our part.

On the 2d of August, 1914, three days before England declared war against Ger-

many, at a Council of Ministers held in Rome, Italy decided formally to declare her neutrality. The news was immediately communicated to our Chargé d'Affaires in Paris, the Ambassador being absent. For some reason the telegram did not reach him until 1 o'clock in the morning. Without a moment's hesitation he went to see M. Viviani, the French Prime Minister, in the middle of the night.

When he was introduced into M. Viviani's presence the latter turned pale and drew back, for he was almost convinced that nothing but Italy's decision to join Germany would have brought the Italian Chargé d'Affaires there at that hour. The revulsion of feeling when M. Viviani read the telegram was such that he could not hide his emotion. Within half an hour orders had gone forth for the mobilization for service in the north of nearly 1,000,000 men which France would have had to keep on her southern and eastern frontier to guard against a possible attack from Italy.

That million men helped to stem the advancing tide of Germans, to win the battle of the Marne, and to save France from being crushed by the heel of German militarism. Had there been the slightest wavering, the smallest hesitation on the part of Italy, had any Italian politician been found to do one-tenth the part of what Bismarck did when he altered the wording of the famous Ems telegram, and thus brought about the Franco-Prussian war, France would not have dared to withdraw a single man from the Italian frontier, and the history of the world might have been written differently.

Gentlemen, is there any man who can think, in view of what I have just told you, that Italy's conduct was not a decisive factor in the war?

The Belgian Mission in America

A MOST sympathetic reception was accorded to the Belgian Commission, which arrived in the United States on June 16, 1917. Its personnel included:

Baron Ludovic Moncheur, Chief of the Political Bureau of the Belgian Foreign Office at Havre and former Belgian Minister to the United States, President of the commission.

General Leclercq, a cavalry commander.

Hector Carlier, member of a Belgian banking family, counselor of the commission.

Major Osterrieth, long attached to the Belgian Legation in Petrograd.

Count Louis d'Ursel, former Secretary of the Belgian Legation in Teheran, Persia.

The members of the mission were formally received on June 18 by President Wilson, to whom Baron Moncheur pre-

sented the following letter from the King of the Belgians:

HIS EXCELLENCY, WOODROW WILSON,
President of the United States of America.

Great and good friend: I commend to your Excellency's kindly reception the mission which bears this letter. This mission will express to the President the feelings of understanding and enthusiastic admiration with which my Government and people have received the decision reached by him in his wisdom. The mission will also tell you how greatly the important and glorious rôle enacted by the United States has confirmed the confidence which the Belgian Nation has always had in free America's spirit of justice.

The great American Nation was particularly moved by the unwarranted and violent attacks made upon Belgium. It

has sorrowed over the distress of my subjects subjected to the yoke of the enemy. It has succored them with incomparable generosity. I am happy to have an opportunity again to express to your Excellency the gratitude which my country owes you and the firm hope entertained by Belgium that on the day of reparation toward which America will contribute so bountifully, full and entire justice will be rendered to my country.

My Government has chosen to express its sentiments to your Excellency through two distinguished men whose services will command credence for what they have to say, Baron Moncheur, who for eight years was my representative at Washington, and Lieut. Gen. Leclercq, who has earned high appreciation during a long military career.

I venture to hope, Mr. President, that you will accord full faith and credence to everything that they say, especially when they assure you of the hopes I entertain for the happiness and prosperity of the United States of America and of my faithful and very sincere friendship.

ALBERT.

In the course of a statement to the newspaper correspondents at Washington on June 20 Baron Moncheur said:

Your entry into the war not only brings to us the satisfaction of finding in an old friend a new ally, but fires us with complete confidence in an early and victorious issue of the great struggle which has brought to my country so much of misery and suffering.

Our admiration for your decision in entering the war is all the greater because we know that you did so in full knowledge of all its horrors, and realized fully the sacrifices you will be called upon to make, the tears that will flow, the inevitable heartache and sorrow that will darken your homes.

In voicing my country's gratitude I am happy to be able to pay a tribute of admiration and affection to Mr. Hoover, under whose able and untiring direction the great work of feeding Belgium was carried on. We rejoice for you that a man so eminently fitted by ability and experience should be at your service in handling the great food problems that confront you.

From being one of the foremost industrial nations of the world, ranking fourth among exporting countries, Belgium for the time being has been ruthlessly wiped out. Her factories are closed. With cold calculation for the ruin of the country, the invader has even removed the machinery from our factories and shipped it to Germany as part of a far-sighted and cynical program of economic annihilation. And, worst of all, a part of Belgium's unoffending laboring class has been torn from their families and sent to toil in Germany under a system that would have offended the moral sense of the Middle Ages.

The Senate received the mission on June 22 with every mark of appreciation and sympathy. Baron Moncheur's address expressing Belgium's gratitude for America's aid was punctuated with frequent applause. "The sympathy of America," he declared, "gives us new courage."

Baron Moncheur's Eloquence

Baron Moncheur was one of the speakers at the impressive ceremony on June 24, when the Belgian and Russian Missions visited Washington's tomb at Mount Vernon. Speaking very earnestly and slowly, he said:

In this solemn hour when freedom is locked in a death struggle with the powers of darkness we come to pay homage to the great founder of American liberty. Although his body lies here, his work survives and his spirit still lives in the American people. I know of nothing which typifies that spirit better than the words of Washington when, in bequeathing his sword to his nephew, he added the injunction that it should never be drawn except in defense of liberty and justice, and that when once drawn it should never be sheathed before the complete victory of right over wrong.

It is that spirit which animates your nation in the present as in the past. You looked across the sea and saw liberty struggling in the grasp of autocracy, that hideous monster, the enemy of mankind. You came to her aid, and by throwing your mighty sword into the scales you have insured that right will prevail and that the world will be made safe for all honest nations—the small as well as the great.

You have done what Washington would have done. And, therefore, in paying homage to the father of your country I offer a tribute of devotion and gratitude to the whole American people.

Another notable address by Baron Moncheur was that delivered to the House of Representatives on June 27. He said, in part:

As in the Middle Ages the knights were accustomed to hold a vigil, watching their armor in the chapel, so you today are making the same holy and prayerful preparation for the battle to come. Everywhere you are carrying on work which day by day brings nearer the moment of supreme victory. While the flower of American youth is preparing itself in your splendid training camps, your shipyards, your factories, and munition plants resound with the hum of feverish work providing your soldiers with the implements of war.

American aviation, that marvelous product of the New World, is making ready to lend

its powerful aid, also, to support our armies. Is it not natural, indeed, that the American eagle from the skies should strike the death-blow to the enemy?

After your great stroke for liberty in 1776 you formed a society, which you called the Order of the Cincinnati, to indicate that when war was finished you knew how to beat your swords into plowshares; and now, when war has been forced upon you, you have given proof that you know equally well how to turn your plowshares into swords.

Some twenty years ago Prince Albert of Belgium, heir to a throne which seemed to be safely sheltered from the blast of war, came to America, where he studied with the deepest interest your marvelous country and the wonderful works of industry and commerce which you had developed in the

quietude of peace. And now, how can I express the sentiments which fill his heroic soul when, fighting at the head of his troops in the last trench on Belgian soil, he sees the sons of that same industrious America land upon the coast of Europe, brave champions of the most noble principles and ready to lay down their lives in defense of right and justice?

On a certain occasion a mighty sovereign declared, "The Pyrenees exist no more," and today we can say with even more truth, "There is no longer any ocean," for endless friendship, cemented by gratitude and joint effort and suffering in the cause of justice and liberty, will forever obliterate the barrier of the seas and unite the children of old Belgium to the sons of the young and powerful Republic of the New World.

Lord Northcliffe and Other Envoys

LORD NORTHCLIFFE, after his arrival in the United States as special representative of the British Government, delivered his first speech at a luncheon in New York City on June 28. He said, in part:

It is only by an absolute mobilization of man power and machine power that this war can be won. Industries that at this moment seem remote from mobilization for the war will sooner or later be called upon to do their part. In Europe, for example, one of the largest corset factories is now turning out very delicate pieces of machinery needed in the construction of airplanes. The war, which has proved the efficacy of motor transport to an almost incredible degree, will make a tremendous drain upon the automobile industry of your country. For one thing, the great bulk of automobile output will have to be concentrated on trucks. In the second place, the automobile factories will inevitably be commandeered for the manufacture of airplane parts and airplane construction generally.

In the airplane lies one great hope of allied victory. The war has taught that the airplane engine of Spring may be almost useless for actual fighting by the next Autumn, so rapid are the developments produced by the fierce competition of war.

When America has got her full stride in the war, as surely she will get it, it will be found that there will be a tremendous demand for chauffeurs. England today has nearly a hundred thousand motor trucks in France, and is constantly sending more. Every one of these trucks must be manned by a trained driver. If skilled chauffeurs can be sent to operate your trucks it will be possible to release an equal number of men for the fighting lines.

Lord Northcliffe prophesied a post-bellum federation of allied nations:

I have a strong conviction that with peace will come a close federation of the nations who are now fighting the great fight for freedom. You have only to look at the spectacle of what I might call the United Nations of Great Britain today to see the effect that the war has upon the co-ordination of peoples and nations of widely conflicting temperaments and national structures. You see democratic Australia, a near socialistic New Zealand, a vast country like India, with its feudal princes and other rulers, a free Canada, and what is nothing less than the Republic of South Africa, all pouring their blood and treasure out upon the battlefields of France, linked by a common feeling of empire and sustained by a common hope of liberation from the militarism that sought to dominate the world.

A close federation of the nations now fighting the good fight will be the only insurance against the autocracy that made this war possible and the horrors that the armies of the autocrat perpetrated on innocent non-combatants. The world must be made free for democracy.

Irish Nationalist Leaders

The Irish Nationalist Party in the House of Commons appointed T. P. O'Connor, M. P., and Richard Hazleton, M. P., and Secretary of the party, to visit the United States as its representatives. On their arrival in New York on June 24 Mr. O'Connor explained the purpose of his visit as follows:

I am here as the official representative, with my colleague, Mr. Hazleton, of the Irish Nationalist Parliamentary Party, to

lay before the men of my race and before the friends of Ireland of all races the realities and the issues, for the opinion of the Greater Ireland and of this democratic Republic beyond the seas remains the most potent factor in working out the liberation of Ireland and of all other nationalities in the world.

The situation in Ireland is still somewhat confused. A series of unfortunate mistakes and tragic events have produced resentment and thrown many of the younger men of the country off their balance for the moment. But this, in my opinion, represents a mood and not a settled preference for the hopeless program of armed insurrection over a constitutional movement.

As to the war, opinion in England grows more united and harder. I need say nothing more at the moment of America's welcome intervention except that Lincoln's speech at Gettysburg and President Wilson's address to Congress represent to me the clearest definitions of the issues and purposes for which all free men today are fighting.

The war has made a new world and has transformed the soul of Europe. No man's political, social, or mental standpoint has remained the same. The whole groundwork of society has adapted itself to a new state of things in which men fighting in the air and under the sea are recognized as prominent factors.

Men who have lost two or three sons in the war do not speak of their grief in going about their daily duties. It is only by the whitened hair and the drawn features that we can judge of what they are inwardly suffering.

The war and the demand for wheat, oats, and other grains have caused the British Government to till all available land, tending toward the solution in Ireland of the ranch problem. While the land under cultivation in England has increased 200,000 acres, in Ireland it has increased by 700,000 acres. Fully 10 per cent. of this Irish land, broken up for tillage, was drawn by the Government from grazing lands reserved for breeding sheep, horses, and cattle.

The series of conferences with prominent Irishmen, by which Mr. O'Connor and Mr. Hazleton hope to be able to carry back to the Irish convention the correct sentiment of America in regard to home rule, was started in New York City upon the arrival from Boston of T. B. Fitzgerald and Michael J. Jordan, respectively Treasurer and Secretary of the United Irish League of America. Mr. O'Connor divided the sentiment in Ireland into three classes: pro-Irish, pro-English, and the so-called pro-German, the last being, in his opinion, a sentiment formed not on love of Germany, but rather on an inveterate pacifism.

Andre Tardieu's Advice

André Tardieu, French High Commissioner to the United States, is laboring at Washington and elsewhere for the business efficiency of the Allies and the co-ordination of all their economic forces. He was the guest of honor in New York on July 11 at a luncheon of the Franco-American Society, which was attended

ANDRE TARDIEU
French High Commissioner

by many of the leading financiers of the United States and other notables and diplomats. After a brief beginning in English, M. Tardieu spoke in French, and the more important passages, duly translated, are these:

To set at nought the insolent hope of our enemies the United States must organize its own resources without ceasing to supply its allies. This problem is difficult, but it is not insoluble for a nation of decision and realization such as yours. That solution calls for the concentration of the whole of your financial, economic, and human resources in the hands of the Government.

The Congress has voted the conscription of men. It remains to organize the conscription of material means. To that end two conditions must be fulfilled—a thorough knowledge of those means and an equitable fixation of prices, insuring to the allied armies the same treatment in America as to the American Army itself, because we are now one common army fighting in a common cause.

The great duty of the United States at the present moment is to put on the same footing all those who are fighting for the same cause. Since you have been in this war you have been beset with isolated financial, industrial, and military requests by each of the powers of the Entente. You gave them a generous answer, but you are beginning to realize that if your assistance should be indefinitely solicited in the same manner your immense resources would not be sufficient to comply with requests when ill-regulated.

You are compelled to say yes to some, no to others. You must consider the order of urgency of the solicitations which reach you. We must put an end to confusion. We are entitled to ask you to discipline your means with a view to victory, but also, with a view to victory, you are entitled to ask us to discipline our needs.

For that purpose, there is clearly one method—that is to create in Europe as near the front as possible an inter-allied committee to centralize all the demands, study and control them, and to submit them to you on behalf of all the Allies, grouped according to their urgency in relation to military operations.

The one vital thing is to win the war. Discipline of the American resources upon the basis of the common interest, discipline of the European needs upon the basis of the same interest—such is the aim and such is the duty. The aim must be attained, the duty must be fulfilled.

Such is, freed from innumerable details, the task which I have undertaken—such is the task for which I shall need all your assistance.

Rumania's Patriotic Mission

The Rumanian Patriotic Mission arrived in America on June 22, 1917, and was received by the Secretary of State on July 2. The mission consists of the Rev. Basil Lucaciu, President of the Rumanian League, which was formed for the purpose of inducing Rumania to enter the war on the side of the Allies; Jean Mota, the Rumanian Speaker, and Lieutenant Vasili Stoica of the Rumanian Army. Father Lucaciu told the Secretary of State that the mission had come to the United States for the purpose of inducing Rumanians to enlist in the American Army and fight for the allied cause. The Secretary of State gave the visitors a cordial greeting and welcome, and said that the Government of the United States looked with sympathy upon the object of the mission. The members are now at work among their fellow-countrymen in the United States, urging them to enlist and fight for the Allies.

The Norwegian Government nominated a special commission of six members, with Dr. Fridtjof Nansen, formerly Norwegian Minister at London, as President, to visit the United States to organize and procure the importation of food supplies from that country.

Objects of the Japanese Mission

THE Department of State announced that the Japanese Government was sending a diplomatic mission to the United States, headed by Baron Kikujiro Ishii, to arrive in the latter part of July. Baron Ishii was formerly Minister for Foreign Affairs. He was an attaché of the legation in France in 1891 and went through the siege of Peking during the Boxer trouble. In addition to Viscount Ishii, who is made an Ambassador Extraordinary and Plenipotentiary, the mission includes:

Isamu Takeshita, Vice Admiral, Imperial Japanese Navy, formerly Naval Attaché in Washington.

Hisaichi Sugano, Major General, Imperial Japanese Army.

Matsuzo Nagai, Secretary of the Foreign Office, formerly a Secretary of the Japanese Legation at Washington.

Masataka Ando, Lieutenant Commander, Imperial Japanese Navy.

Seiji Tanikawa, Major, Imperial Japanese Army.

Tadanao Imai, Vice Consul.

Viscount Kikujiro Ishii, head of the Japanese Mission to the United States, made the following address at a farewell dinner given to the mission at Tokio, July 4, 1917, regarding the objects in view:

My mission, I consider, is a military one in one respect and one of peace in another—military as against the Central European system of militarism and domination, but one of peace to be consolidated and reaffirmed as between the Pacific powers—Japan and the United States.

He declared that the Japanese Nation unanimously and enthusiastically welcomed the decision to send a mission to America as wise, proper, and eminently useful. He was therefore proud that

part of his duty would be to convey to the 100,000,000 Americans the sympathy and good-will of the 70,000,000 Japanese. The intercourse between Japan and America had gradually come to assume a more popular character, which he considered a happy augury of the consolidation of a genuine friendship, since that friendship no longer hung perilously on the caprice of individual statesmen, but rested on the well-understood mutual interests and reciprocal respect of the two nations. Viscount Ishii concluded as follows:

It is gratifying to think of one great benefit with which the war has already endowed Japan and the United States. I mean the disappearance of Germany in this quarter of the world. Now that Germany, the universal disturber of the peace, has been completely and once for all driven out of her Asiatic bases, there remains no longer any one who will venture to cherish the design of estranging Japan from America. Consequently, the Pacific henceforth will have the noble destiny to join the two great nations and never to separate them.

Viscount Kentaro Kaneko, member of the House of Peers and a Privy Councillor, who presided at the dinner, emphasized the nobility and uprightness of the attitude of America, which, he said, was

fighting for the individual liberty, national freedom, peace, and civilization of mankind. The appearance of an American army at the front was certain to breathe new life into the gallantry and patriotism of the Allies. When Germany was crushed and the belligerents sat in a council of peace, he believed the voice of the United States would have great weight in determining the terms of peace, not for the belligerents only, but for the peace of the whole world.

"A clear and good understanding with the United States is most important for the present and the future," he added. "This may be the reason and aim of Viscount Ishii's mission."

Former Minister Hioki expressed the opinion that, in addition to the questions of the day, no question of any importance existing between the United States and Japan would escape either settlement or discussion while Viscount Ishii was in America. The mission was a difficult one because of the vastness of the field and the complexity of the problems to be handled, he said, but the two groups would not be throwing dust into each other's eyes. There would be plain dealing, just and fair, actuated by mutual respect and sympathy.

Viviani's Tribute to America

[Speech in the French Chamber, June 14, 1917.]

Three things united to make the session of the French Chamber of Deputies on June 14 a memorable occasion: General Pershing was present, Premier Ribot spoke on the reasons for dethroning King Constantine, and René Viviani, Keeper of the Seals, told the Chamber, in one of his most eloquent speeches, what he had seen and felt during his mission to the United States. The chief passages of M. Viviani's oration are here translated for CURRENT HISTORY MAGAZINE.

After an introductory tribute to American hospitality and to the qualities of President Wilson, M. Viviani continued:

SOLELY because I represented the French Nation, gentlemen, and in contravention of century-old rules, I was admitted to the unforgettable honor of addressing the United States Congress; and I desire that at this hour you should send across space to the great American Republic the fraternal salute of the French Republic. [All the Deputies arose, amid applause.]

Gentlemen, how does the American

soul group before its vision those vigorous principles and sentiments which have carried that country into the war? This is a complex and delicate question. Was it solely a matter of esteem for France, in remembrance of the glorious services of Lafayette and the French soldiers who took part in the winning of independence? No one here can realize the privileged place that France occupies in the vibrant heart of vast America. And the gratitude to Lafayette is infinite. * * *

[M. Viviani went on to say that this,

however, was not what had moved the American people; it was, rather, the silence, the dignity, the calm courage of France amid her present trials. He continued:]

To see a nation receiving fierce blows from an aggressor without crying out, and returning them without boasting; to see that nation united, the people of the factories and those of the trenches, the people of thought and the people of toil, to see these grouping themselves around their fighters; to see at the Marne the triumph of dash, at Verdun the triumph of patience; to see this palpitating capital, which German calumny had called the capital of pleasure and frivolity, so peaceful in tragic hours, so calm when glory later came to shine upon our banners, reserving its enthusiasm for the day when universal right, by force of our arms, shall be implanted throughout the whole world—that is the spectacle which, I assure you, stirred to its depths the American soul. * * *

It would have been easy for America, if she had desired to stand aloof, to think only of her individual grievances at the hands of imperial Germany. She might have said that she could not tolerate on her own soil the tortuous intrigues of a faithless Ambassador. She might have said that she would never subject the honor of the land of Washington to the arrogance of the Germanic boot; that she could not bear to hear the cries of those unfortunate victims who, in Summer evenings and Winter nights, were hurled without warning, by criminal hands, into the depths of the sea.

America did say these things, but she said more. Her merit, after stating her own grievances, the thing that will constitute her historic honor before the world, is that she heard the cry of all humanity, that she invoked human right, universal right!

Never have I felt that profound truth so deeply as in the great City of Chicago, the greatest German city after Berlin, where, pressed by 20,000 breasts, wearied by effort and emotion, I proclaimed in your name the whole truth about Alsace-Lorraine, repudiating the historic and juridical fraud that has proceeded out of

a lying plébiscite. And I still hear the storm of applause that followed, and the words of the Governor elected by several millions of men: "To the last cent, to the last man, to the last heart-beat!"

America has entered the war with the belief that there can be no peace without victory, unless we are to be recreant in our duty to the tomb and to the cradle, and, by the barbarous rhythm that returns every thirty years, are to allow our sons to go upon the battlefield and stand where their fathers have fallen. She has entered knowing what she has to do: not only to continue what she did while still chained to neutrality—render us financial and economic service—but to go to the end with her full might, giving to the Allies immediate aid of every kind until victory is won by constant co-operation.

Ah, well! It is universal justice that has thus been proclaimed by America as she takes her place by the side of France and the Allies to champion it. But what! Is France going to permit a portion of her heritage to be snatched from her? Human rights, universal justice, the independence of nations—whence have these sprung? It was by the spirit of our philosophers that the fire of independence was lighted in the world; it was by our men of action in the eighteenth and nineteenth centuries that the foundations of justice and liberty were laid. Ah, I know, I understand!

Yes, yes, three years of war, of economic and political difficulties, of griefs, of graves added to graves, of cradles over which mothers ask whether this is the punishment for life itself! All the sorrows, all the anguish, all the anxieties that tear our hearts; yes, all these—and after them?

[Here the whole Chamber, thrilled, rose as one man, carried away by the speaker's eloquence. M. Viviani spoke of the sacrifices that his people would still have to bear before victory could come, and concluded with this peroration:]

Such is the result that we must attain. For this, oh! life is hard, difficult, delicate! The mourning robes, the tears, the sufferings of the widows whom we meet at every step of the way, and who try to hide under their veils their saddening

grief, yet who demand expiation; all that we meet, all that we know, all that is written to us, all that we think, yes, all this creates around us an inextricable difficulty. But do not forget: you are not accountable to the France of today, you are accountable to the France of yesterday, you are accountable to the France of tomorrow.

To conquer and prevent the repetition of such crimes, after victory, when the American Army stands by our side; when immediate aid and constant co-operation are promised us, when we are certain not to be alone on the field of combat, when the same glory shall be harvested under different flags, when all the free peoples shall stand upon a land that trembles, while their own hearts tremble not; when before the world we shall have made an example of an autocracy which, if not beaten down, has received fearful blows and deserves to fall; when it is certain that there can be no more peace in the world for the sons of our sons so long as this bleeding autoc-

racy survives, I ask myself, truly, when duty is at once so tragic and so simple, how can it be difficult to follow whither it leads?

But you will follow it. At present your duty is simple: first to be men, to look our destiny in the face, whatever it be; to tell us that there is no historic fatality that cannot be redressed by courage and will; then to go on thus all the way to victory. After that, let others, more happy, who shall not have known our griefs, survive! But we shall have bequeathed to humanity the most magnificent heritage for which it has ever hoped.

[At the close the assembly leaped to its feet, acclaiming the orator, then turned its applause upon General Pershing, who, standing in the diplomatic tribune, was waving his military cap. The crowd in the galleries joined in the thrilling demonstration, and the public posting of the speech was ordered by a unanimous vote.]

Brazil's Revocation of Neutrality

THE friendly act of Brazil in revoking its earlier attitude of neutrality and definitely taking sides with the United States as against Germany was formally communicated to the Washington Government on June 4, 1917, by the Brazilian Ambassador, Dr. Domicio da Gama, in the following note:

Mr. Secretary of State: The President of the republic has just-instructed me to inform your Excellency's Government that he has approved the law which revokes Brazil's neutrality in the war between the United States of America and the German Empire. The republic thus recognized the fact that one of the belligerents is a constituent portion of the American Continent and that we are bound to that belligerent by traditional friendship and the same sentiment in the defense of the vital interests of America and the accepted principles of law.

Brazil ever was and is now free from warlike ambitions, and, while it always refrained from showing any partiality in the European conflict, it could no longer stand unconcerned when the struggle involved the United States, actuated by no interest whatever but solely for the sake of international judicial order,

and when Germany included us and the other neutral powers in the most violent acts of war.

While the comparative lack of reciprocity on the part of the American republics divested until now the Monroe Doctrine of its true character, by permitting of an interpretation based on the prerogatives of their sovereignty, the present events which brought Brazil even now to the side of the United States at a critical moment in the history of the world are still imparting to our foreign policy a practical shape of continental solidarity, a policy, however, that was also that of the former régime whenever any of the other sister friendly nations of the American Continent was concerned. The republic strictly observed our political and diplomatic traditions and remained true to the liberal principles in which the nation was nurtured.

Thus understanding our duty and Brazil taking the position to which its antecedents and the conscience of a free people pointed, whatever fate the morrow may have in store for us, we shall conserve the Constitution which governs us and which has not yet been surpassed in the guarantees due to the rights, lives, and property of foreigners.

In bringing the above-stated resolution to your Excellency's knowledge, I beg you to be pleased to convey to your Government the

sentiments of unalterable friendship of the Brazilian people and Government.

I avail myself of the opportunity to reiterate to your Excellency the assurances of my highest consideration.

DOMICIO DA GAMA.

The reply to Ambassador da Gama was sent by Frank L. Polk, Counselor of the State Department, as Acting Secretary of State. The text is as follows:

Excellency: I have the honor to acknowledge the receipt of your note of June 4 by which, in pursuance of instructions from the President of Brazil, you inform me of the enactment of a law revoking Brazil's declaration of neutrality in the war between the United States and Germany and request me to convey to this Government the sentiments of unalterable friendship of the Brazilian people and Government.

I have received with profound gratification this notification of the friendly co-operation of Brazil in the efforts of the United States to assist in the perpetuation of the principles of free government and the preservation of the agencies for the amelioration of the sufferings and losses of war so slowly and toilsomely built up during the emergencies of mankind from barbarism.

Your Government's invaluable contribution to the cause of American solidarity,

now rendered more important than ever as a protection to civilization and a means of enforcing the laws of humanity, is highly appreciated by the United States.

I shall be glad if you will be good enough to convey to the President, the Government, and the people of Brazil the thanks of this Government and people for their course, so consistent with the antecedents of your great and free nation and so important in its bearing on issues which are vital to the welfare of all the American republics.

Requesting that you will also assure your Government and people of most cordial reciprocation by the Government and people of the United States of their assurances of friendship, always so greatly valued, and now happily rendered still warmer and closer by the action of Brazil, I avail myself of the occasion to renew to your Excellency the assurances of my highest consideration.

FRANK L. POLK,
Acting Secretary of State.

Brazil's seizure of the war-bound German ships added to her merchant marine more than 150,000 tons. On June 30 it was announced that Brazil's navy had begun co-operating with the American fleet in South American waters in hunting for German sea raiders and submarines.

Ruy Barbosa's Stirring Call to Brazil

When Brazil broke off diplomatic relations with Germany on April 11, 1917, Senhor Ruy Barbosa, the most popular statesman in that country, delivered a memorable speech at a meeting of 50,000 persons in Rio Janeiro, praising the United States for going to war, and urging Brazil to do likewise. These were his closing words:

God did not kindle this conflagration to consume the human race, but to save it. From the great calamity will come a great renewal. On the curve of the blood-reddened horizon already glow the first dawns of a better world. Down will go the arbitrary Governments, and up will rise the Governments of law. Yesterday, Russia; tomorrow, Germany—and then others!

God grant that we, too, my fellow-citizens, may drink in this regenerating spirit, this spirit of genuine heroism, of human devotion, of liberal self-sacrifice, and that our nationality, our Constitution, our social life, revived in these fountains, may mitigate the present and insure us better days in the future, so that our moral stature may grow, so that we may be worthy of our place upon the earth. Then I shall be able to see in my declining years the realization of the patriotic dream of my youth; a Brazil in whose every act our hearts shall be able to discern, as in Milton's vision, "a noble and puissant nation rousing herself like a strong man after sleep and shaking her invincible locks!"

Greece Joins the Allies

How Constantine Departed

SINCE the abdication of King Constantine in favor of his second son, Alexander, who is now King of the Hellenes, a complete change has come over the attitude of the Greek Government, and the division of the nation into two factions has been brought to an end. Further light has been thrown on the course of events (see *CURRENT HISTORY MAGAZINE*, July, 1917, Pages 83-85) by documents which have now come to hand, as well as by later dispatches.

The full text of the ultimatum which High Commissioner Jonnart presented to Premier Zaimis in Athens on June 11 was made public by the Greek Legation at Washington. It read:

The protecting powers of Greece have decided to reconstitute the unity of the kingdom without impairing the monarchical constitutional institutions that they have guaranteed to Greece. His Majesty King Constantine, having manifestly on his own initiative violated the Constitution of which France, England, and Russia are the trustees, I have the honor to declare to your Excellency that his Majesty the King has lost the confidence of the protecting powers, and that the latter consider themselves free toward him from the obligations resulting from their right of protection.

I have in consequence the mission, with a view of re-establishing the real Constitution, to ask for the abdication of his Majesty King Constantine, who will himself designate, together with the protecting powers, a successor among his heirs. I am under the obligation to ask from you an answer within twenty-four hours.

Constantine, as already recorded, abdicated and left Athens for Switzerland, and with him were expelled several leading men among his supporters, including former Minister Gounaris, General Dousmanis, and Colonel Metaxas. The final scenes are described in dispatches from the Athens correspondent of *The London Times*.

On the morning of June 11, after Zaimis had seen Jonnart and learned that the Allies' decision that Constantine should abdicate was irrevocable, the Premier went straight back to the King's

palace and told him of his fate. The narrative then proceeds:

The King listened with great calm, and said to M. Zaimis: "I desire the Crown Council to be summoned." M. Zaimis, much distressed, left the room, and the King retired to his study, where some minutes after one of his Aides de Camp found him deep in a chair, his head bent on his hand, and "very pensive."

At 11:30 o'clock the Crown Council began, there being present, besides M. Zaimis, M. Skouloudis, M. Lambros, M. Dimitrakopoulos, M. Gounaris, M. Stratos, M. Kalogheropoulos, M. Rallis, and M. Dragoumis—all ex-Prime Ministers.

When they were seated, the King read to them the demands of the Allies. It is difficult to be quite sure of what happened, but it seems certain that when the King pronounced the fateful words demanding his abdication he turned toward them as for their opinion, and M. Gounaris (the arch pro-German politician) half rose and said: "Impossible! It is impossible that—" when the King stopped him, raised his hand, and said: "I have decided to accept."

The Council lasted till 2:30 o'clock, the Ministers insisting on seeing if a way of satisfying the Allies' demands could not be found without the abdication of the King, but it all ended in their recognizing the hopelessness of the situation, and the Council was dismissed by the King.

The demeanor of the Ministers as they came out showed the throng of waiting journalists that they had heard grave news, but they would not speak. M. Gounaris seemed incapable of speaking. M. Skouloudis, under whose Premiership Fort Rupel was handed over to the Bulgarians and the disasters of today largely prepared, was pale and shaking, and had to be assisted into his motor car. When he reached home he remained prostrate for a considerable time.

The deposed monarch's departure from the shores of Greece is described by the Athens correspondent of *The London Times*, under date of June 14:

The departure of ex-King Constantine, with Queen Sophie, the Crown Prince, the Princesses, and Prince Paul, which I witnessed this morning at Oropos, a small port in the Gulf of Euboea, took place very quietly.

Oropos is a tiny fishing village with a small jetty. All the night and all the morning motor cars had been bringing the King's luggage. A number of the King's personal friends came to see him off. The late King

George's yacht *Sphacteria* was refitted rapidly to receive the royal family, and lay off Oropos this morning escorted by two French destroyers whose Tricolors flapped broadly against the Euboean hills.

The ex-King and Queen and the Crown Prince arrived in motor cars shortly after 11 o'clock. The King wore a General's uniform and got slowly out of the car, which drew up close to the jetty, where two French officers stood rigidly. A small group of country people and schoolgirls mingled with M. Zaimis, the Prime Minister, courtiers, and official personages.

The King was pale, but erect and composed. He took a bouquet of flowers which a small child on the top of a wall thrust out to him. People gave subdued cheers, and peasants on the jetty knelt as the King and Queen passed them. The King made way for the Queen, bidding the people let them pass. The royal family then quickly entered a waiting motor launch and were borne to their vessel.

The King was dignified and bowed and saluted, but he scarcely uttered a word from the moment of his arrival till the launch cast off. Several of his friends were weeping. One man threw himself in the water in an endeavor, apparently, to follow the royal boat, but he was rescued.

The new King, Alexander, on ascending the throne, issued a proclamation in the following terms:

At the moment when my venerated father, making to the Fatherland the supreme sacrifice, intrusts me with the heavy duties of the Hellenic throne, I pray that God, granting his wishes, may protect Greece and permit us to see it once more united and strong.

In the grief of being separated in such painful circumstances from my well-beloved father I have the single consolation of obeying his sacred command. With all my energy I shall try to carry it out by following along the lines which so magnificently marked his reign, with the help of the people on whose love the Greek dynasty rests.

I have the conviction that, in obeying the will of my father, the people by their submission will contribute to our being able together to draw our well-beloved country out of the situation in which it now is.

The publication of this proclamation came as a shock to Great Britain, France, and Italy. The question was raised whether the Allies had not been hoodwinked and if another German diplomatic trick had not succeeded in the Balkans. Everywhere the demand was made that the Allies take direct control of Greece, establish Venizelos in power, and keep him there by force if necessary.

Jonnart indirectly but very effectively

replied to the young King's proclamation in the following manifesto addressed to the Greek people:

France, Great Britain, and Russia desire to see Greece independent, great, and prosperous, and they mean to defend the noble country, which they have liberated, against the united efforts of the Turks, Bulgarians, and Germans. They (the Entente Allies) are here to circumvent the manoeuvres of the kingdom's hereditary enemies; they want to end the repeated violations of the Constitution and of the treaties and the deplorable intrigues which have resulted in the massacre of soldiers of the united countries.

Berlin until now has commanded Athens and has been gradually bringing the people under the yoke of the Bulgarians and Germans. We have resolved to re-establish the constitutional rights and unity of Greece. The protecting powers have in consequence demanded the abdication of King Constantine. But they do not intend to touch the constitutional monarchy. They have no other ambitions than to assure the regular operation of the Constitution to which King George of glorious memory had always been scrupulously faithful and which King Constantine has ceased to respect.

Greeks! the hour of reconciliation has come. Your destinies are closely associated with those of the protecting powers. Your ideal is the same. Your hopes are the same. We appeal to your wisdom and patriotism. The blockade is now raised. Every reprisal against the Greeks, no matter by whom, will be pitilessly suppressed. No attempt against the public order will be tolerated. The property and liberty of all will be safeguarded. A new era of peace and work is opening before you.

Know that the protecting powers, respectful of the national sovereignty, have no intention of imposing upon the Greek people a general mobilization.

Long live Greece, united, great, and free!

On the invitation of M. Jonnart, Venizelos arrived at Piraeus on June 21. He received a great welcome from a crowd of several thousand persons and with Jonnart's approval entered into negotiations with Premier Zaimis for a fusion of the two parties. Meanwhile, King Alexander in a letter to Zaimis described himself as the faithful guardian of the Constitution, and thereby repaired the mistake he had made in his first proclamation. The new King made it clear that he was willing to comply with all the demands of the Entente Allies. But now it was Zaimis who refused to be their obedient servant. Jonnart demanded the convocation of the Parliament of

May 31, 1915, in which Venizelos had had a majority and which Constantine had dissolved. Zaimis, refusing to take responsibility for this step, resigned, and once more Venizelos returned to power. On June 27 the new Ministry, of which he became head, took the oath. Its personnel was as follows:

Premier and Minister of War—M. VENIZELOS.

Minister of the Interior—M. REPOULIES.

Minister of Justice—M. TSIRIMOKOS.

Minister of Foreign Affairs—M. POLITIS.

Minister of Marine—Admiral P. COUNDOURIOTIS.

Minister of Finance—M. MICHSAKOPOUDOS.

Minister of Agriculture—M. NEGROPONTES.

Minister of Communications—M. PAPANASTASION.

Minister of Education—M. DINGAS.

Minister of Food Supplies—M. EMBIRKOS.

Minister of Relief for Refugees—M. SIMOS.

Dispatches from Athens dated June 29 announced that the Greek Government had broken off diplomatic relations with Germany and her allies. The Greek Ministers at Berlin, Vienna, Sofia, and Constantinople were instructed to leave their posts and place their archives with the Netherlands Legations. This did not mean that Greece was going to war at once. Venizelos, when taking the oath of office, made the following statement:

We realize that unless we drive the Bulgarians from Eastern Macedonia that part of Greek territory will be always exposed to great danger. Before, however, thinking of mobilizing that part of Greece which has not shared in our movement, we must vitalize its military organization, which has fallen into such decay, and bring about a fusion of the two armies in brotherly co-operation. Therefore, we shall now call out the untrained classes of 1916 and 1917.

With the abdication of Constantine and with Venizelos once more guiding the destinies of Greece, administrative control of various Governmental services by the Entente Allies was gradually withdrawn, but it was decided that the telegraphs and the censorship should still be supervised by representatives of the Allies, in co-operation with the Greek Government. The raising of the blockade had already been announced on June 19.

An important result of the political change in Greece was seen in the report of General Sarraïl, whose French troops

were in occupation of Thessaly, that the movements of troops were being carried out without difficulty. All the communes in the region of Larissa and Volo spontaneously transferred their allegiance to the Venizelos Government and installed new civil authorities.

Constantine and his family arrived at Lugano, Switzerland, on June 20. Officers and delegates of the Swiss Government met him at the frontier and welcomed him in the name of Switzerland. A large number of German personages waited for the ex-King at the station, including Prince and Princess von Bülow and Dr. von Mühlberg, German Minister to the Vatican. The Greek Minister to Berne was also present. A number of German diplomats arrived at Lugano for the coming of the former King, who was delayed by the illness of his wife. A long telegram from the German Emperor was handed to Constantine as soon as he left the train. He was very coolly received by the crowds. After dinner he attended an open-air concert, where he was recognized and hissed by a group of strangers who were leaving. On entering the concert the former King was jostled, and he left later by a rear door to avoid the curious crowds.

Georgios Streit, former Adviser of the Greek Foreign Office, who is one of Constantine's entourage, announced on June 22 that in consequence of his wound the ex-King needed careful nursing and complete rest, and his physicians had advised him to proceed immediately to a sanatorium in the mountains, where he was to live merely for his health and family. The Queen, too, was not in good health after troubles and tribulations of the last year. According to other reports he and the ex-Queen were greatly shocked at their reception in Switzerland.

The Greek War Record

The leading episodes in King Constantine's policy from the time the question of Greek intervention in the war was first raised by the proposal that Greek troops should be sent to Gallipoli are set out in the following chronological table by The London Times:

March, 1915.—King Constantine refuses M. Venizelos's proposal for intervention in Gal-

lipoli; M. Venizelos resigns the Premiership.

May, 1915.—M. Gounaris, (Pro-German,) Prime Minister.

June, 1915.—General election in Greece results in a Venizelist majority.

August, 1915.—M. Venizelos again becomes Prime Minister.

Sept. 18, 1915.—King Constantine and M. Venizelos "in complete agreement" about Balkan policy.

Sept. 21, 1915.—M. Venizelos invites France and Great Britain to send troops to Saloniki to aid Serbia.

Sept. 23, 1915.—King Constantine signs decree mobilizing Greek Army; to support, as is supposed, Serbia against Central Powers and Bulgaria.

Oct. 3, 1915.—First Anglo-French troops reach Saloniki.

Oct. 4, 1915.—M. Venizelos announces that the Greek Government "will not oppose the Anglo-French armies hastening to the aid of the Serbians, the allies of Greece."

Oct. 5, 1915.—King Constantine dismisses M. Venizelos from office. Serbia's appeal to Greece to fulfill her treaty obligations and come to her aid when attacked refused. King Constantine alleges that the treaty refers only to an attack on Serbia by a Balkan foe, not to a war against Germany and Austria. "If Greece intervenes she will share the fate of Belgium."

November, 1915.—Protest by Allies against interference by Greece with the movement of Franco-British troops; partial blockade of Greece.

March, 1916.—Greek officers in Macedonia instructed not to oppose the Bulgarian advance into Greece.

May, 1916.—Greek Government refuses facilities for Serbian Army to cross Greece by rail.

May 26, 1916.—On orders approved by King Constantine, Greek commander surrenders Fort Rupel to Bulgarians; Entente Powers thereupon blockade Greek ports.

August, 1916.—Greek division in Eastern Macedonia "surrenders" to Bulgarians and is conveyed to Germany.

Aug. 27, 1916.—M. Venizelos appeals to King Constantine to "put himself at the head of the nation and defend Greece's honor and territory." King Constantine declines.

Sept. 25, 1916.—M. Venizelos breaks with King Constantine and proclaims a Provisional Government. Most of the islands and part of mainland of Greece adhere to M. Venizelos.

Nov. 24, 1916.—In consequence of anti-ally acts of King Constantine's Government, Entente Powers present ultimatum to Greece; Greece refuses to surrender certain guns.

Dec. 1, 1916.—Allied troops landed at Athens fired on by King Constantine's troops; several killed. Reign of terror at Athens. Venizelists tortured.

Dec. 14, 1916.—Another ultimatum to Greece. M. Venizelos charged with treason by King Constantine.

Jan. 8, 1917.—New note to Greece; evasive reply.

February-May, 1917.—Continuance of King Constantine's intrigues with Germany; peril to the rear of the allied army in Macedonia. Blockade of Greece continues.

June 7, 1917.—M. Jonnart arrives in Greece as High Commissioner of the Protecting Powers.

June 12, 1917.—King Constantine abdicates, and is succeeded by his son Alexander.

Re-establishing Albania

Rival Plans of Autonomy, and How They Conflict with Albania's Desire for Independence

This article, written by a native Albanian now in the United States, summarizes the latest attempts to solve the knotty problem of what shall be done with Albania. It supplements the brief sketches of "Albanian Autonomy" and "The New Republic of Koritza" which appeared in the July issue of *CURRENT HISTORY MAGAZINE*.

WHILE the diplomatic pourparlers for the abdication of King Constantine and for the clearing up of the situation in Greece were going on, the Allies were taking the necessary steps toward the settlement of another important and vexatious question concerning the Balkans. On June 3, 1917, the Italian Government proclaimed the independence of Albania, in apparent accord with England and

France, and placed the new State under Italian protection, marking a new turning point in the Balkan situation.

Albania had proclaimed her independence early in 1912, and the London conference of the same year recognized and guaranteed her autonomy by placing the new principality under the collective protection of the six great European powers who undertook to organize it. They placed on the throne of Albania Prince

MAP SHOWING ALBANIA'S POSITION IN RELATION TO THE POWERS SEEKING TO CONTROL ITS DESTINY. AUSTRIA-HUNGARY HOLDS THE NORTHERN PORTION

William of Wied, a German Prince. With the outbreak of the European war, the Prince was forced to abandon his realm, after a troubled reign of about seven months, and Albania fell a prey of her neighbors, Serbians, Montenegrins, and Greeks. After several changes of occupants, her territory came into the possession of Austria and Italy, the former holding Northern and Central Albania, about two-thirds of the whole territory, and the latter the rest of it.

The Italian action in proclaiming the independence of Albania took place as a result of two tentative steps made separately by France and Austria.

In October, 1916, an Anglo-French detachment took possession of the City of Koritza and of the adjoining territory in Eastern Albania, by expelling therefrom the Greek royalist troops. On Dec. 10 the French commander, Colonel Descoins, proclaimed the autonomy of the region of Koritza, a district of about 100,000 inhabitants, under French protection. The French commander was forced by the Albanian militia of that region to issue a formal proclamation, and according to a duly signed protocol the tiny State was made a provisional republic.

Following the action of France, which had deeply impressed the Albanians living under Austrian occupation, the commander of the Austro-Hungarian troops

in Albania issued on March 9, 1917, a ringing proclamation to the Albanians by which he guaranteed, in the name of his Government, the independence of the *whole* of Albania, under Austrian protection, and invited the Albanians to join the Austrian troops in the war against the allied forces in the Balkans.

Next it was Italy's turn. She had declared, on entering the war against the Central Powers, that one of her chief war aims was the re-establishment of the independence of Albania and the elimination of Austrian influence in that part of the Balkans. She had irritated Greece by wresting Southern Albania from her, and had crossed even the frontiers decided upon in the London Conference, by occupying a large part of what is called Albania Irredenta. On June 3 General Ferrero, commander of the Italian troops in Southern Albania, read a formal proclamation at Argyrocastro, before a crowded assembly of Albanian notables. The text is as follows:

To the whole people of Albania:

Today, June 3, 1917, the memorable anniversary of the establishment of Italian constitutional liberties, I, General Giacinto Ferrero, commander of the Italian expeditionary forces in Albania, do solemnly proclaim, in accordance with the orders of his Majesty, King Victor Emmanuel, *the unity and independence of the whole of Albania*, under the shield and protection of the Italian Kingdom.

By this proclamation you, Albanians, have a free Government, an army, tribunals, schools, all made up of Albanians, and are free to use as you wish your property and the fruits of your labor, for your own benefit and for the enrichment of your country.

Albanians!

Wherever you are, whether free in the land of your birth, an old and honorable race, or in exile in other countries and under foreign domination, we are bringing you back to the civilization of the Romans and of the Venetians.

You know the bonds that unite the Italian and Albanian interests. The sea divides them, and at the same time the sea binds them together. Let all good citizens, then, stand unitedly, having faith in the future of your beloved nation. Come, all of you, under the flags of Albania and Italy, and pledge yourselves to Albania, which is today proclaimed independent, in the name of the Italian Government and under its friendly protection.

This proclamation of the Italian Government was the subject of copious comments throughout the allied countries. For many days the Italian newspapers devoted columns and pages to the great importance of the proclamation, emphasizing the paramount necessity of such a measure to bar Austria from the Adriatic Sea. *La Tribuna* of Rome on June 5 stated that many misgivings in regard to the aims of Italy have been in the air, but that the proclamation of the independence of Albania was proof that Italy was acting in accordance with the principle of nationalities. *Il Giornale d'Italia*, the organ of Baron Sonnino, saluted the independence of Albania in these words:

"Italy, well aware that there is no sacrifice too great for the inestimable boon of liberty, salutes with joy and with confidence in the triumph of justice the ancient people of Albania."

The impression made in Petrograd, however, by the proclamation of the Italian protectorate on Albania was the reverse of what it was expected to be, and M. Terestchenko, the Russian Minister of Foreign Affairs, asked for more ample explanations as to the meaning of the "protectorate." On the other hand, when questions were raised in the House of Commons and the French Chamber of Deputies on the same subject, Lord Cecil replied, on June 13, that the Italian pro-

tectorate over Albania did not convey any material privileges to Italy, and Jules Cambon declared that the Italian protection must be considered in the light of the exclusion of Austrian influence only.

The attitude of the Albanian press was anything but complaisant. Commenting editorially on the Italian action, the newspaper *Dielli*, (the Sun,) organ of the nationalist Albanians in America, wrote on June 8:

"The proclamations by Austria and Italy, which came one after the other, are neither welcome nor well sounding. These powers are disputing between them the right of protection over Albania. The way in which each desires to reorganize and dominate Albania cannot meet our approval. We acknowledge with boundless pleasure any friendly protection, but we cannot even for a moment agree that Albania be reduced to the state of a vassal country. The Albanians are fighting for the real independence of Albania, and for this we can rely on the assistance of her friends only. The Albanians desire that Albania should be for the Albanians. They do not wish her to be the tool of either Austria or Italy. Such a servile Albania would be the worst element in the Balkans, a fire-maker in the already troublesome peninsula. * * *

Acrimonious criticisms in the press and in diplomatic circles of the allied powers, as to the Italian protection, led Baron Sonnino, the Italian Minister of Foreign Affairs, to make further official declarations. On June 22 he stated that the independence of Albania was a thing to be desired, being in accordance with the principles expounded by President Wilson and espoused by the Allies.

The situation in Albania is likely to be further complicated by the advent of M. Venizelos as Premier of Greece. The Greek statesman is understood to make the participation of Greece in the war by the side of the Allies conditional upon the elimination of Italy's ambitions in Albania.

Canada's Three Years of War

By Frank Yeigh

WHEN Father Time ticks off the 4th of August, 1917, Canada will have ended three years of experience as a war country. Looking back on this stirring period and on her record as a participating ally, the Dominion can at least have the satisfaction of knowing that her response to the call of the motherland and civilization was as prompt as it was definite. The story of the enlistment of the first troops, their initial training in a hastily improvised camp, and their passage overseas, guarded by a part of the British fleet, will long be a creditable chapter in the history of Canada. The first Canadian contingent, comprising nearly 33,000 men, 7,500 horses, and 70 pieces of artillery, was the largest military force that up to that time had ever crossed any ocean to go to any war.

When war was declared, and Canada without delay promised England her aid, the plan of voluntary enlistment was adopted as the one best suited to a country so democratic and in which strong emphasis is placed on individual liberty. The cry of the recruiter was at once heard throughout the land; appeals were made from platform and press, organizations of all kinds became recruiting agencies, and the Church added its voice in solicitation. This method resulted in the raising of the first 400,000, but it now seems unable to go further. The chief criticism of the plan is that it is unfair and unequal in its operation. This is illustrated by the fact that only one man out of fifty joined the forces from Quebec, as against one out of sixteen in Ontario and one out of twelve in the Canadian West. It also left many a slacker untouched, while married men with home ties and responsibilities, or valuable toilers, felt the call and enlisted.

Total Enlistment Figures

Canada's total enlisted force, up to June 15, 1917, was 421,767. According to a recent statement made in the House

of Commons by the Minister of Militia, there were, of the above total, in May last 136,400 troops of all ranks in France, with 747 in the Near East and 120 at St. Lucia. There were at the same time 180,326 in England, not counting those in hospitals and convalescent homes. On June 1, 1917, there were 17,353 troops of the Canadian expeditionary forces of all ranks in Canada, gathered in a series of military training camps.

Of the men sent overseas 14,100 were French Canadians. The number of native-born Canadians speaking the English language who have gone overseas is given as 125,245, and the number of British subjects born outside of Canada who have gone overseas, 155,095. The British-born members of the Canadian Army outnumbered the Canadian-born by about 15,000.

It is estimated that Canada has 1,583,549 men of military age, (based on the census of 1911,) of whom 760,453 are single and therefore the first subject to any conscription call, and 680,307 married, between the ages of 20 and 45, or nearly a half-and-half proportion.

A system of national service registration was next adopted. This was obligatory on men beyond the military age, and called upon them to describe their present occupations and responsibilities and to place themselves at the disposal of the Government for whatever service it might determine. A million and a quarter responded, but it is asserted that few practical results have ensued, and that as a source of military strength it has proved ineffectual. The same might be said of the putting into force of a long-standing Militia act, under which men of military age are liable to be called out for home defense. Enlistments were asked under this act, but with few results. Volunteers said in effect that they were willing to be stay-at-home

fighters, but drew the line at overseas service.

The increasingly imperative need for further reinforcements, not only to bring up the Canadian Army to the standard of half a million promised early in the war by the Premier, but to replace the wastage in the ranks, led the Government in June, 1917, to bring in the Military Service bill, which is, in essence, like that of the United States, a selective conscription plan. At the present writing this bill is under discussion in Parliament and throughout the country.

More Than 100,000 Casualties

The casualties in the Canadian ranks have passed the 100,000 mark. On June 22, 1917, there were nearly 30,000 hospital cases; of this number 22,067 were in the United Kingdom and 7,271 in Canada. There were 2,295 Canadian prisoners of war in Germany. Canadians had won, up to the first of January, 1917, 2,715 decorations, including six Victoria Crosses, 329 Military Crosses, and 1,138 military medals.

It is estimated that the war thus far has cost Canada \$600,000,000, and that it is now costing over a million a day. The estimate for the year 1917 alone is \$433,274,000. To meet this expenditure and establish a line of credit with Great Britain, three Government bond issues have been floated, totaling \$350,000,000. Each was largely and quickly oversubscribed, and a fourth is foreshadowed for the Fall. They bear 5 per cent. interest.

As financial aid to England the Dominion Government has contributed \$200,000,000 as a loan to the Imperial Treasury, in connection with the financing of munition orders; it also has arranged with the Canadian banks for advances aggregating another \$100,000,000. England, on the other hand, advanced to Canada, up to March 30, 1917, \$692,000,000. The imperial and international financing is one of the most remarkable features of the war.

The war expenditure is responsible for a steady increase in the public debt of the Dominion. Whereas the debt stood at \$327,000,000 before the war, it had risen to \$722,111,000 by Dec. 31, 1916,

and it is estimated that it will reach a total of \$1,200,000,000 by the end of 1918 if the struggle continues until then.

Canada's special war taxes are yielding approximately \$65,000,000 a year, made up, for the last fiscal year, as follows: Excess profits tax, \$15,600,000; war tariff, \$37,000,000; bank tax, \$1,000,000; loan companies, \$400,000; spirits and tobacco, \$7,000,000; extra postage, \$6,000,000. The excess profits tax, which raised \$12,500,000 the first year, is expected to produce \$20,000,000 during the current year under an increased schedule. An income tax is also foreshadowed.

Millions for Relief Work

Canada's war gifts, Governmental and private, have been on a most generous scale. Private benefactions, through such agencies as the Red Cross, the Patriotic Fund and other relief funds, total \$60,000,000, and the ratio of giving is continually rising. Every province gave, during the first year of the war, large stores of flour, grain, and other food products, coal and horses. These included a million bags of flour from the Dominion, 250,000 bags from Ontario, and 50,000 from Manitoba; 4,000,000 pounds of cheese from Quebec; 500,000 tons of coal from Nova Scotia; oats, cheese, and hay from Prince Edward Island; 100,000 bushels of potatoes from New Brunswick; 1,200,000 cans of salmon from British Columbia, and 1,500 horses from Saskatchewan. The Patriotic Acre in Saskatchewan has produced tangible results. The school children, too, have raised large sums in the aggregate, through food production and otherwise, and have presented some ambulances to the Red Cross. In a word, every section of the Dominion and almost every class of the population have contributed and are still doing so on a substantial scale.

Some of the most generous gifts of men and means have been made in connection with the hospital service at home and overseas. Several of the larger Canadian universities have equipped war hospitals and manned them with doctors and nurses, and supplies therefor are provided as a gift from those at home. The universities have sent thousands of under-

graduates to the front, so that their halls are practically empty and educational work is almost at a standstill. Officers' training corps of students have been popular from the outset, and these are also being maintained as a source for supplying officers.

Provincial Governments are aiding in providing practical work for the returned soldiers. Ontario has made a start in this direction by training a number of men on the Monteith Government Farm in Northern Ontario. Following the training the men will be given homesteads free of cost, after proving their fitness for the work. They receive soldiers' pay while in training. Alberta also is active in the care and re-employment of those who need help of this kind. A Soldiers' Aid Committee is operating in 500 different places, seeking not only to act as the friend of the soldier in a variety of ways, but to assist some in settling on Government lands. No less than 3,693 returned soldiers have been given positions in the Government service, and vocational training is being conducted in a number of centres. The great war veterans' association, with a membership of over 10,000, is also looking after the interests of the homecoming men.

Caring for the Wounded

The care of the returned soldier who is invalided is under a Military Hospitals Commission appointed by the Government. On the arrival of the men at a Canadian port, such as Halifax, St. John, or Quebec, distribution is made according to their condition and ultimate destination. At Quebec the commodious immigration buildings of the Government are being utilized for this work. For transportation of the more serious cases, sleeping cars, specially fitted up as hospital cars, are used. A large number of military hospitals have been provided in different sections of the country, many Government institutions being used to house hundreds of men.

The Canadian Patriotic Fund, a remarkable voluntary achievement, has raised over \$30,000,000. A million a month is being paid out through this channel as an auxiliary help to the soldier and his dependents, in addition to

the Government pay of \$1.10 a day to the private and a separation allowance for his family. This fund has done much to stimulate recruiting by assuring the soldier of a degree of support for those dependent upon him. The Red Cross has been no less generously supported; in fact, almost every city exceeds the sum asked from it.

In addition to the Government pay and the patriotic funds, several municipalities, like Toronto, have insured their enlisted men, mostly for \$1,000 each. Many corporations and large employers of labor are performing a similar service for their employees.

W. J. Hanna, a Cabinet member, was appointed National Food Controller in June, 1917, and is working in harmony with Mr. Hoover, who occupies a similar position for the United States. The Canadian Food Controller, like the American, has been given wide powers and has already issued a manifesto to the people urging maximum production, prevention of waste, and the largest possible consumption of perishable foodstuffs in order to liberate the storable foods for transportation. A National Fuel Controller has also been appointed, to whom has been given wide powers, especially in reference to the coal situation both for manufacturing and domestic use.

Munitions and Aviation

Canada has become an important munition supplying country, operating under the Imperial Munitions Board. The board had placed, up to April last, \$850,000,000 worth of orders in the Dominion, employing over 250,000 persons in 630 factories.

Britain is now spending \$80,000,000 in aviation training in Canada. Formerly these aviation camps were left partly to private enterprise, but the Government has now installed large ones in several of the provinces. Several aero squadrons are in process of enlistment, and large numbers of machines are to be made in Canada.

The effects of the war on Canada, commercially and industrially, have been most marked. The circulation of extra millions of dollars is felt in a new buoyancy of trade, though the trade channels

are necessarily changed from their pre-war directions. The 22,000 industrial plants of the Dominion are working for the most part to their capacity, often on day and night shifts. The flour and saw mills tell the same story, while the 500 branch United States industries established in Canada find themselves fully occupied.

Exceptionally high wages prevail, though the cost of living shows a steady increase that offsets the wage scale and creates an alarming condition for those on small fixed salaries. Some of the railways are suffering from a lack of adequate rolling stock to meet the exceptional demands. Gauged by the bank figures, both as to deposited savings and loans made, the country is enjoying a degree of economic prosperity that is enabling it to handle the war cost. The Dominion, for example, had a surplus of \$60,000,000 during its last fiscal year as between the current revenue and expenditure.

The Governments, both Federal and Provincial, have appointed commissions to deal with resources and to conduct thrift and food production campaigns. A scientific research council is at work. The Governments are using their legislative powers to the utmost, especially in the Federal realm, through the appointment of food, fuel, and other controllers. The mobilization of the resources of the country, both in men and resources, is being carried on to an ever-increasing extent. Along with the movement for conscription of men there is a strong demand for the conscription of wealth and of profits to an extent not yet reached.

Such, in brief, is the three-year story of Canada at war. The period presents an interesting study of development under absolutely new conditions. Errors naturally crept in at first, but the machinery of war is working more smoothly now, and the national will is becoming more and more fixed on seeing the struggle through to a satisfactory end.

Canadian Indians at the Front

By Verne De Witt Rowell

In striking contrast to the bitter racial discussions provoked in Canada by the charges of the Toronto journalistic school that French Canada has not done her duty in the matter of recruiting men for overseas service is the fervent patriotism of the old-time Indian allies of the French and English in America. In all, approximately 5,000 Canadian Indians have been trained in Indian companies of overseas units and been sent to France to fight for the allied cause. The only tribe that has not sent its full quota of recruits to the firing line in Europe is that of the Eskimo Indians; and while they might prove excellent warriors during the Winter months, they obviously would not survive a Summer campaign.

The once ferocious and formidable Blackfeet Indians, who lived on buffalo meat and were the terror of explorers and outlying settlements, have sent sev-

eral companies. The Crees of the Slave Lake and Hudson Bay regions have sent their representatives in khaki, and the Indians of Eastern Canada have in many instances sent practically the full number of eligible males in their tribes.

In the early days of American colonization, when the French and English contended in warfare, each was aided by an Indian nation, the French by the Algonquin federation, and the English by the Iroquois, or Six Nation Indians. The Algonquins, largely domesticated, tilled the soil and lived in more or less permanent settlements in the territory now forming the Provinces of Ontario and Quebec. Time and again did the French establish colonies along the St. Lawrence and the northern shores of the Great Lakes to engage in the fur trade with their Algonquin friends, but nearly always did these colonies disappear before the fierce raids of the Iroquois warriors,

who made their home in Western New York, and, as the unflinching allies of the New England British colonists, swooped over the Niagara and St. Lawrence frontiers, burning and ravaging the French settlements and scalping all the French palefaces they could lay their hands on. Today, under the Canadian flag, Iroquois and Algonquins are fighting side by side in the same Indian companies for the new, united cause of the French, the English, and the great nation that has sprung from the little New England and Pennsylvania settlements of those early days.

Since New Year's, 1917, companies of American Indians have been holding front-line trenches on the western front, and they would have been there nearly three years ago had not an order of the Canadian Militia Department, for some reason never quite explained, forbidden recruiting among the Indians when the war first commenced. But no sooner had the war clouds broken in Europe, in August, 1914, than the Indian tribes one and all met in their tribal councils, pledged firm allegiance, and offered their service to the British Crown, subscribed from their tribal funds money to the Red Cross and to buy machine guns, and petitioned to be allowed to go overseas as fighting men.

The Canadian Indian, not being a citizen, knows no politics as yet. He knows nothing of nationalism, neither that of the French-Canadian variety, which has something of a racial basis, nor the now unheard-of nationalism of the English-speaking Canadian, which was just budding before the war, and which, as one of its manifestations, opposed strenuously any contribution by Canada to an imperial navy. The Indian is loyal to the Crown; he is a monarchist. Whether his views will change when he becomes a citizen, as it is expected he will as a reward for his services in the war, remains to be seen. The agitation for citizenship is now led by the better educated of the old chiefs of the tribes, too old to go on the war trail themselves, but who have given their sons freely, and when these young warriors return, their education broadened by contact with the death grapple between European civilization and bar-

barism, it goes without saying that they, too, will expect some voice in the direction of their country's affairs.

Chief Scobie Logan of the "Munseys of the Thames," one of the smallest but most progressive and highly educated Indian tribes in America, is an ardent advocate of his people in their claim to citizenship. His only son was the first Indian killed in the war, having enlisted in a Western Ontario unit and gone overseas before any Indian companies were authorized. In several other instances recruiting officers winked at the regulations and enlisted individual Indians in white units. Tales of wonderful Indian snipers who were a law unto themselves and amply earned their exemption from disciplinary rule prescribed for their pale-skin comrades by bringing scores of Germans to the earth found their way into print early in the war. But at the most there were only two or three full-blooded Indians in the first contingent.

The first Indian company to arrive in France was the 135th Middlesex, which crossed the English Channel in December, 1916, after training several months in England. Other Indian units from Western Ontario which soon followed the Middlesex Indians to the trenches were the 149th Lambton Battalion Indians, Chippewas of Walpole Island and Sarnia Reserve; the 160th Bruce Battalion, Saugeen Indians from the remote Georgian Bay district, near the former scene of a bloody massacre of early Christianized Hurons by the Iroquois; the 114th Haldimand County Battalion Indians, and the Mohawks of the Brant County battalions.

The Mohawks have the distinction of giving to Canada one of her finest woman writers, E. Pauline Johnson, or "Tekahionwake," who died several years ago at Vancouver. United Empire Loyalists, the Mohawks came to Canada after the American Revolution and settled near where the City of Brantford is, known widely as the "Telephone City," where Alexander Graham Bell first perfected his epoch-making invention.

The Middlesex County Indians included representatives of three tribes, the Algonquin Chippewas, the Iroquois Oneidas,

and the Munseys, who a century ago came from the Susquehanna River district in the southland, and, welcomed in their homeless wanderings by the Chippewa chief, were allotted one square mile of territory on the Chippewa Reserve, near the picturesque little paleface village of Middlemiss, Ont. Throwing his blanket on the ground and drawing with chalk a map of his territory, the Chippewa chief marked off the little corner which henceforth should be the home of the Munseys. Before the war many of the Oneidas clung to their pagan faith, and in so doing were the last of their race to resist Christianity. Letters from the trenches, however, tell of many of them accepting the Christian faith at Gospel meetings held in Y. M. C. A. huts on the firing line.

Still one of the most interesting religious temples in North America is the "Long House," near Southwold, Ont., a short distance from the Michigan Central Railway connecting Buffalo and Detroit, where annually the sacrifice and feast of the "White Dog," a ceremony of purification for the sins of the year past, is held by the Oneida pagans. The plain-looking wooden building is also the Mecca and temple of the pagan Oneidas of Western New York State, but the only other remnant of the Oneida race, found at Green Bay, Wis., does not count among its members any braves who still adhere to the faith of their fathers. After all, this pagan faith is largely colored by Christian influ-

ences very similar to the Judaism of the Old Testament, and, incorporating the story of the Christ among its legends, might be aptly styled an American Islam.

Among the Chippewas of the Middlesex Indian unit are Moraviantown Indians, whose reserve on the River Thames near Chatham is believed to contain the burial place of Tecumseh, whose name is a romantic and bright one in Canadian history, on account of his brilliant assistance given to the Canadians in repelling the American invasion of 1812.

The loyalty of the Indian race in Canada may be illustrated by reference to an Indian mother now living in London, Ont. She has four sons in the war, and her baby son of 14 years also attempted to enlist. His brother, one year older, was held in England on account of his age, when it was discovered, and is now an instructor at Witley Camp. This Indian mother, whose husband is a descendant of Moses Schuyler, who led the Oneidas from New York to Ontario and founded the settlement on the Thames nearly a century ago, said recently: "Yes, I have given four of my boys, and I am sorry that my other children died when they were babies, for I would gladly have given them, too, to fight for England."

In every way the Canadian Indians have proved themselves the equals of their white comrades on the battle line.

Canada to Have Conscription

A BILL for compulsory military service by Canadians between the ages of 20 and 45 years was presented in the House of Commons on June 11, 1917, by Sir Robert Borden. The measure at once precipitated a bitter controversy. Emboldened by the apparent inactivity of the authorities against the campaign of sedition which was fostered throughout the Province of Quebec, and in which the clergy took an unostentatious but influential part in the country districts, *La Croix*, a Roman Catholic Church organ published in Mon-

treau, on June 10 frankly and pointedly advocated a policy of "down with conscription."

This was followed up immediately by an editorial in *L'Idéal Catholique*, generally considered to be the semi-official organ of the Roman Catholic Church in Montreal, in which the writer, Joseph Bégin, also an assistant editor of *La Croix*, urged Quebec to secede from the Confederation, form a French republic on the banks of the St. Lawrence, and impose taxes on all exports from Ontario passing down the St. Lawrence.

As both these organs are considered to be semi-official organs of the Archdiocese of Montreal, and as Archbishop Bruchesi did not remonstrate with their editors, Catholics and Protestants at Montreal assert that the Archbishop, if he had not approved of the sentiments expressed, would assuredly have taken some action. The Government took no public action.

In Parliament on July 6 the controversy eventuated in a victory for the Government, when Premier Borden's bill passed the House on second reading by a majority of sixty-three. Twenty-six Liberals voted with the Government and against their leader, Sir Wilfrid Laurier, and only twelve English-speaking Liberals voted against the idea of conscription of the manhood of Canada. West of Montreal there were only four Liberals who voted against the bill. At 3:30 A. M. a fresh amendment was sprung upon the House regarding better treatment for wives and children of soldiers, which was also voted down.

One of the immediate results of the split in the Liberal Party over the conscription bill, which is likely to have very far-reaching effects on the political fut-

ure of Canada, is the formation of a new Liberal Party, composed of the Liberals of Manitoba, Saskatchewan, Alberta and British Columbia. The party as at present led by Sir Wilfrid Laurier, it is said, is to disappear and the new party will elect its own leader.

The parliamentary contingent of western Liberals held a meeting and decided to call a convention of the Liberals of Western Canada, to be held in Winnipeg on Aug. 7 and 8. The object of the convention will be to consider the whole political situation, particularly as it affects Western Canada. The membership will include all Dominion members and Senators, Dominion Liberal candidates, and all Liberal candidates in the last provincial elections in the western provinces.

There will be a number of women, it is expected, among the delegates, each constituency in the western provinces being empowered to send four representatives.

Up to July 1 the aggregate of volunteer enlistments in Canada was 423,858. In the last two weeks of June the total enrolled was 2,358, as against 3,392 in the preceding fortnight.

The Mothers

Maurice Maeterlinck's Beautiful Tribute to Women
Who Mourn Soldier Sons

IT is they who bear the main burden of suffering in this war. In our streets and open spaces and all along the roads, in our churches, in our towns and villages, in every house we come into contact with mothers who have lost their sons or are living in an anguish more cruel than the certainty of death.

Let us try to understand their loss. They know what it means, but they do not tell the men.

Their sons are taken from them at the fairest moment of life, when their own is in its decline. When a child dies in infancy it is as though his soul had hardly gone, as though it were lingering near the mother who brought it into the world

awaiting the time when it may return in a new form. The death which visits the cradle is not the same as that which now spreads terror over the earth, but a son who dies at the age of 20 does not come back again and leaves not a gleam of hope behind him.

He carries away with him all the future that his mother had remaining to her, all that she gave to him and all his promise; the pangs, anguish, and smiles of birth and childhood, the joys of youth, the reward and the harvest of maturity, the comfort and the peace of her old age. He carries away with him something much more than himself; it is not his life only that comes to an end; it is numberless days that finish suddenly,

a whole generation that becomes extinct, a long series of faces, of little fondling hands, of play and laughter, all of which fall at one blow on the battlefield, bidding farewell to the sunshine and re-entering the earth which they have never known.

All this the eyes of our mothers perceive without understanding; and this is why, at times, the weight and sadness of their glance are more than any of us can bear.

And yet they do not weep as mothers wept in former wars. All their sons disappear one by one, and we do not hear them complain or moan as in days gone by, when great sufferings, great massacres, and great catastrophes were enwrapped by the clamors and lamentations of the mothers. They do not assemble in the public places, they do not utter recriminations, they rail at no one, they do not rebel. They swallow their sobs and stifle their tears as though obeying a command which they have passed from one to the other, unknown to the men.

We do not know what it is that sustains them and gives them the strength to bear the remnant of their lives. Some of them have other children, and we can understand that they transfer to them the love and the future which death has shattered.

Many of them have never lost or are striving to recover their faith in the eternal promises; and here, again, we can understand that they do not despair, for the mothers of the martyrs did not despair either. But thousands of others, whose home is forever deserted and whose sky is peopled by none but pale phantoms, retain the same hope as those who keep on hoping.

What gives them this courage which astonishes our eyes? When the best, the most compassionate, the wisest among us meet one of these mothers who has just stealthily wiped her eyes, so that the sight of her unhappiness may not offend

others who are happier, when they seek for words which, uttered amid the glaring directness of the most awful sorrow that can strike a human heart, shall not sound like odious or ridiculous lies, they can find hardly anything to say to her.

They speak to her of the justice and beauty of the cause for which her hero fell, of the immense and necessary sacrifice, of the remembrance and gratitude of mankind, of the irreality of life, which is measured not by the length of days but by the lofty height of duty and glory. They add that the dead do not die, that there are no dead, that those who are no more live nearer to our souls than when they were in the flesh, and that all that we loved in them lingers on in our hearts so long as it is visited by our memory and revived by our love.

But even while they speak they feel the emptiness of their speech. They are conscious that all this is true only for those whom death has not hurled into the abyss where words are nothing more than childish babble; that the most ardent memory cannot take the place of a dear reality which we touch with our hands or lips; and that the most exalted thought is as nothing compared with the daily going out and coming in, the familiar presence at meals, the morning and evening kiss, the fond embrace at the departure, and the intoxicating delight at the return.

The mothers know and feel this better than we do; and that is why they do not answer our attempts at consolation and why they listen to them in silence, finding within themselves other reasons for living and hoping than those which we, vainly searching the whole horizon of human certainty and thought, try to bring them from the outside. They resume the burden of their days without telling us whence they derive their strength or teaching us the secret of their self-sacrifice, their resignation, and their heroism.

Military Operations of the War

By Major Edwin W. Dayton

Inspector General, National Guard, State of New York; Secretary, New York Army and Navy Club

Major Dayton has long had the official recognition of the United States War Department as an authority on strategy and tactics. The article here presented is the sixth in a series which he is writing for CURRENT HISTORY MAGAZINE, covering in a rapid and authoritative narrative all the military events of importance since the beginning of the great conflict.

VI.—Italy in the War

IN the Spring of 1915 public opinion in Italy finally swept aside the influence of a large conservative element in high places, and on May 19 the Chamber by a vote of 407 to 74 put the full responsibility of the decision for or against war into the hands of the Salandra Cabinet. This action was equivalent to a decision for war, because no Cabinet could have continued to hold office after denying the popular clamor. Italy declared war against Austria on May 23, 1915, and General Cadorna, Chief of the Italian General Staff, took command of the Italian armies. On Aug. 21, 1915, Italy also declared war on Turkey.

No other country entered the conflict with so much popular enthusiasm as did Italy, which had been until recently an active ally of Germany and Austria. Much that modern Italy had gained was due to Germany, for that northern master had compelled Austria to make large concessions to Italy following the crushing defeat suffered by the Italian armies at Custoza in 1866. Austria won that war with Italy on the field, but lost it at the council table, when Prussia compelled the victor to hand over the frontier provinces to the defeated.

Italy, receiving these territories as a gift, had for two generations longed to extend the conquest on the north through the Trentino to Trent and on the east side of the Adriatic to Trieste. In both regions many Italians unquestionably live on the Austrian side of the frontier, but, while it is a fact that, so far as the coast regions are concerned, Italian influence has long been felt close to the shores, a journey of a very few miles

inland would carry the traveler into Slav neighborhoods, where the Italian was heartily hated. As in the case of most politically arranged frontiers, national ambitions and complications surged back and forth in the Alps and along the Isonzo in a way that frequently fanned historic rivalries close to the flaming point. In 1881, at a critical time, Italy joined Germany and Austria in forming the Triple Alliance, but Austrian aggressions in the Balkans were viewed by Italy with strong disapproval. In 1896 Italian ambition to expand suffered a severe check in the disaster at Adowa, but in 1911 the successful war with Turkey won Tripoli and reawakened the national aptitude for real politik.

The year 1915 seemed to Italy the proper juncture to gratify the nation's aspirations. In last efforts to keep Italy from bringing war on her western frontier, Austria offered a number of concessions—territorial, commercial, and political. Italy, however, believed that, when the map of Europe should be remade after the war, the great spoils would go only to those who had fought, and so the die was cast for war.

Cadorna's Plan of Campaign

In the Winter of 1914-15 Italy had been busily preparing for war, so that Cadorna was ready to strike promptly. Two aggressive campaigns were immediately developed. One, aimed straight to the north, toward the City of Trent, sought to gain control of the many mountain passes, while the real attacks followed the line of natural approach along Lake Garda, whose northern end lay across the frontier. The most direct mili-

tary road toward Trent lies through the Valle Lagarina, which is drained by the Adige. Having passed the frontier town of Borghetto, the City of Rovereto becomes the main strategic objective, guarding, as it does, the wider valley between the mountain fastnesses to Trent, which lies only fifteen miles north of Rovereto. There is another approach to Trent from the east by way of the Val Sugana, but the approaches to that valley were

ter of fact, the Italian commander wisely concentrated his strength on his north-eastern front after making secure the approaches toward the plains of Lombardy from the north. For the sake of brevity and clearness I shall here discuss the Trentino operations before passing to the much more important campaigns on the Isonzo.

Operations in the Trentino

Italy remembered the ugly lesson at Custoza in the old war of 1866 and determined to block Austria's road into Italy past the southern end of Lake Garda by immediately shifting operations beyond the northern end of that long, narrow lake. Early in June Italian detachments had won their way well into the crests of the Dolomites, the mountain group northeast of Trent, and similar successes were readily won among the Carnic Alps, still further to the east, where it appeared as though Cadorna's men might succeed in reaching the Pusterthal railway between Lienz and Innichen.

While these thrusts were prospering to the east of Trent, several small, aggressive columns appeared among the mountains to the west, between Lake Garda and the Swiss frontier. The Val Camonica was the highway for these forces, one of which struck east through the Tonale Pass, while at least three other columns took the same general direction via passes further south. A strong force marched east through the Val de Ledro and menaced Riva, the important Austrian town at the north end of Lake Garda.

Austria remained strictly on the defensive, and for the first few weeks at least seems to have had only Landwehr and Landsturm troops with which to check the invasion. The veteran regular troops were kept in Galicia until the defeat of Ivanoff's armies was certain and Russia's attack upon the Carpathians definitely turned back. The Allies were greatly disappointed when it was seen that Italy's entrance into the war had no effect in relieving the pressure upon the Russians, for it had been confidently expected that the fresh enemy in the

GENERAL LUIGI CADORNA

guarded by the almost impregnable fortified passes of the higher mountain region.

In the first months of the war the news dispatches from Italy were so deceptive that unprofessional readers all over the world were led to believe that the conquest of the Trentino was to be an operation of a few triumphant weeks only. Two years and more have passed, and the Austrians are still secure in Trent. Unless Italy had been strong enough to engage in two great offensives and Austria too much occupied elsewhere to threaten any counterattack, it is evident that General Cadorna would never have seriously contemplated a great invasion of the Trentino while Austria continued to hold the dangerous fortified base at Gorizia on the Isonzo. As a mat-

rear would compel Austria to shift large armies to the new theatre of conflict. When Ivanoff had been defeated and driven back, some of the first-line troops were transferred to the Italian front, but Cadorna's time to have taken Trent was in the early Summer, when the Austrian Generals had little but second and third line troops with which to oppose Italy's best.

About midsummer in 1915 strong efforts were made to capture Rovereto, but without success, although the fall of the mountain town was frequently announced. In the Autumn strong columns began to make some progress north of the frontier on the west side of Lake Garda, while another force took Brentonico on the opposite side of the lake. In the Carnic Alps the Austrians repulsed frequent attacks upon their fortified lines on the Col di Lana, but could not prevent the gradual development of an Italian offensive along the upper Cordevole. With the coming of snow among the high mountains both sides began to provide white coats for the soldiers, whose ordinary uniforms would have stood out in bold relief against snowy backgrounds. In November an Italian column fought hard in an effort to advance toward Rovereto through the Adige Valley.

In December bayonet attacks, following heavy bombardments, won a number of fortified positions in the Giudicaria Valley west of Lake Garda, and in the early weeks of 1916 the Italian campaign in this region continued to make better progress. In February and March there were a series of minor battles in the direction of the Val Sugana, with the Italians almost invariably making the attacks. At the end of March the Austrians made several unsuccessful efforts to drive back from their advanced positions the columns converging toward Rovereto, and by the middle of April there were battles in the Ledro Valley only three miles west of Riva, and further to the east Italian batteries of the heaviest calibres were hurling shells toward Innchen and the Pusterthal railway.

Italy had been a year at war, and it seemed as though at last her soldiers

might be about ready to debouch from the mountain passes and begin a real invasion of the Trentino. In April, however, it began to be rumored that large Austrian reinforcements had been assembled about Trent, and on May 15 the Austrians, for the first time, assumed the offensive. With the aid of an overwhelming artillery fire they launched powerful and successful attacks on a wide front. On Armentara Ridge in the southern Sugana Valley and on Folgaria Plateau south of Rovereto 3,000 Italian prisoners were taken with a number of cannon. On the following day the attack progressed especially in the sector east of Rovereto, where the Austrian infantry stormed Zugna Gorta, and at various points over 6,000 more prisoners were taken. In counterattacks several hundred Austrians were captured in Val Sugana, but by May 24 the Italians had been driven back across the frontier with a loss of over 27,000 prisoners, 300 cannon, and many machine guns.

By the end of May the Austrian invasion of Northern Italy had established an attack which threatened the Italian fortified line of interior defense based on Arsiero and Asiago. They were ten to eleven miles into the mountains on the Italian side of the frontier and approaching the easier slopes toward the Venetian plains. Similar progress for another fortnight would have seriously threatened the communications of the main Italian armies engaged on the Isonzo.

As May ended, the Austrians were winning battles close to Arsiero and were vigorously attacking Italian fortifications on the Asiago Plateau. Early in June, after long and bitter fighting, the Italians were compelled to yield some ground on the plateau di Sette Comuni, and within less than four miles of Asiago some thousands of Italian prisoners were taken. The result of the failure to stop the Austrian invasion at the frontier threatened serious political results in emotional Italy. The Cabinet fell, several Generals were recalled, and the prestige of even General Cadorna was threatened.

Just then Russia did for Italy what

Italy had failed to do for Russia in the previous year. In April General Ivanoff had been replaced in command of the Southern Russian Armies by General A. A. Brusiloff, the brilliant cavalry leader. The new commander hurled an attack upon the Austrian lines in Volhynia and Galicia which compelled the immediate transfer of every available soldier and gun from the west to the east. That ended the Austrian threat against the Province of Venice, but the Austrians nevertheless have continued to hold approximately the same positions up to the present time, (July, 1917,) although they have been driven back somewhat from Arsiero and Asiago and have lost some ground in the Val Sugana.

Campaign on the Isonzo

While Italian popular ambition longed for the Trentino, General Cadorna, the trained soldier, knew that the necessity for the real attack lay further to the east. While very considerable forces were detached to fight the campaigns described above, the bulk of Italy's military strength was concentrated in the attack upon Gorizia and the Carso. The actual frontier was not defended by the Austrians, so that the Italians advanced practically unopposed until they approached the line of the Isonzo River and the heights covering the approaches along the western side of the stream. While the higher mountain ridges lie on the east, there are numerous rugged hills on the near (west) side admirably adapted to defense. The communications between Gorizia and Trieste were covered by the extraordinarily difficult region called the Carso Plateau, where a seamed and broken plain is thickly strewn with huge masses of limestone boulders.

By the early part of June, 1915, General Cadorna's men were deployed on a front of about fifty miles from Caporetto to the sea. Monfalcone, just east of the river mouth, was easily taken, (June 9,) and Gradisca, too, was won, but the next three principal objectives were hard to get. At the north a large force, principally of Alpine troops, attacked Tolmino and Monte Nero. Their mission was to cut the railway between Gorizia

and Villach. The centre had the hardest task and attacked Gorizia with its fortified bridgehead west of the Isonzo and the strong covering positions on Podgora Heights. The right attacked Monfalcone, Gradisca, and the Carso.

The Italians found the Austrian defenses far stronger than had been be-

GENERAL VON HOETZENDORF

lieved, although the forces employed to hold them were quite inadequate and might have been overwhelmed by a quick, hard attack in the first days of the campaign. The Austrian artillery positions had been well chosen, the intrenched positions were skillfully constructed and the approaches heavily wired. The Italians, by means of pontoons, crossed the swift running river at dawn on June 17, and in a brilliant bayonet attack carried Plava, where the defending artillery included 12-inch guns. On June 28 General Cadorna's men won another bridgehead at Castelnuovo on the east side of the Isonzo, and a footing was gained on the edge of the Carso Plateau between Monfalcone and Sagrado.

First Battle of Gorizia

In the first week of July the first battle of Gorizia opened, and this costly effort on the part of the Italians to storm

the Austrian stronghold persisted through the next six weeks. Some ground was gained on the Carso—including Sei Busi, San Martino, and San Michele—and on Podgora, while under the eye of King Victor Emmanuel several divisions had finally won a very costly victory at Plava.

The Austrian second line proved even stronger than the first, and no great progress had been made in the direction of Trieste as the result of six weeks of terrific fighting.

The fall of Warsaw had by now enabled the Austrians to bring over to this front reinforcements, which included some of their best units. The difficult terrain was thoroughly understood by the Austrian first-line troops, whose manoeuvres had been held there. The Austrian commander, Field Marshal Baron von Hoetzendorf, had made a special study of the region and wrote a book on its military features. He knew the Isonzo almost as von Hindenburg knew the Masurian Lakes.

After the first great attack on Gorizia ended in the middle of August there was a period of some weeks when the exhausted and much-depleted units were rested and replenished. By early October the Italians were renewing the attacks against the bridgehead at Tolmino and on the Carso. While these efforts made little progress, the Italians seemed always able to repulse such counterattacks as were attempted by the enemy. On Oct. 21 the Italians attacked along the whole Isonzo front and made substantial gains below the summit of Mrzli, a peak dominating Tolmino from the northwest. Other gains were won on the slopes of Monte Sabotino near Gorizia and toward San Martino on the Carso. More than 5,000 Austrian prisoners were taken, and General Cadorna at this time estimated that the Austrians had not less than 800,000 men defending the Isonzo front. The actual figures were probably less than this estimate, but there is reason to believe that General Cadorna had close to a million fighting men trying to break through the almost impregnable Austrian positions, which were unquestionably de-

fended at this time by very large numbers of excellent troops.

In November the Italians made new progress at Oslavia on the west face of the Gorizia position, and in spite of terrific losses wave after wave of fresh infantry continued for weeks the successive assaults upon the fortifications on Podgora and Oslavia covering Gorizia. As the year closed the assaults once more subsided into the normal daily artillery bombardments, but it was evident that the Italians were firmly committed to the task of taking Gorizia and continuing the attacks toward Trieste across the Carso.

Fighting on the Carso

On this plateau the fighting somewhat resembled that in France about the famous Labyrinth, for the intricate and difficult terrain had made it possible for the Austrians to create on the surface a system of defenses almost as intricate as those which the German engineers burrowed under the soil of Artois. Progress was won only by desperate hand-to-hand battles, in which comparatively small detachments fought to the death for every foot of vantage. Occasionally the Austrians launched powerful counterattacks, and in the middle of January, 1916, they took nearly two thousand prisoners at Oslavia in trenches which they stormed but had to yield again a few days later. About this time heavy Italian batteries resumed the long-distance shelling of Malborghetto, on the road toward Garves, but these activities were part of the effort to cripple Austrian lines of communication rather than the prelude to any northern extension of the actual attacks.

Late in 1915 Italy began to move large forces across the Adriatic into Albania, and by February, 1916, an announcement from Rome credited General Giovanni Ameglio with a command numbering 170,000 troops. General Ameglio was the conqueror of Libya and had with him in Albania a division of 22,000 veterans from North Africa. This powerful army eventually checked the southern march of the Austrians and Bulgarians, who threatened to overrun all of Albania after

their successes in the north against the Montenegrins, Serbs, and Albanians at Mount Lovcen, Alessio, San Giovanni di Medua, and Elbassan.

In the early Spring of 1916 there was much hard fighting in front of Gorizia, which subsided during the great Austrian invasion from the Trentino. After Brusiloff's splendid victories in the east had put a stop to that Austrian campaign, the Italians resumed their assaults along the Isonzo.

The Capture of Gorizia

Early in August, after a series of terrific battles, General Cadorna scored the first great Italian victory of the war. Tunnels had been driven close up to the Austrian fortifications, which enabled several columns of infantry to rush positions that had resisted all other assaults for a year. On Aug. 9, after storming the bridgehead, the Italian troops entered the City of Gorizia on the east side of the Isonzo. Between 15,000 and 20,000 Austrian prisoners were taken in the final fighting at Gorizia. The Italian casualties must have been very heavy, but no statement indicating the extent of the losses was issued.

In the year that has elapsed since Gorizia was taken General Cadorna has made only a little progress among the high and difficult mountain positions still stubbornly defended by the Austrians east and southeast of the city. Further south on the Carso the Italians have gradually won more ground, and their lines are now nearly midway of that most forbidding plateau. The road to Trieste is still blocked by a competent and stubborn foe, who knows how to take every advantage of a region singularly adapted to a defensive campaign. Had the Russians been able to maintain a serious campaign on the other side of Austria in the Spring of 1917 it is possible that General Cadorna might have been enabled to push his striking force further toward Trieste, while his detaining forces could be trusted to prevent any resumption of the previous year's Austrian attack aimed at the Venetian plains and the rear of the armies on the Isonzo.

In the Balkans General Ameglio's

army has firmly established Italian control of Southern Albania, with a naval and military base at Avlona. This force links up with General Sarraill's international group of armies near Monastir, and the Italians have undoubtedly made great improvements in the old roadway across Albania from Avlona via Elbassan, which is Ameglio's line of communications.

The British in Mesopotamia

It will be recalled that in the latter part of 1914 a British expedition from India landed at the north end of the Persian Gulf and occupied Basra, the important city close to the junction of the Euphrates and the Tigris. Perhaps the purpose of this force was to block any possible effort which the Germans might have launched via the Tigris Valley against India. Possibly it was a campaign of conquest designed to wrest from German influence the partly completed railway route to Bagdad. If it were only a defensive measure, as it was announced to be in India, every purpose would have been served by maintaining a strong force at Basra, backed up by British naval power.

A fortnight after the fall of Basra the British took Kurna, where an entrenched position was established astride the Tigris. In April the Turks made several abortive efforts against British outposts, and gradually the British forces became involved in operations which extended considerably to the north. Following a routed force of Turks, Esra's tomb was passed, and on June 3, 1915, the British captured Amara, seventy-five miles above Kurna. What was left of the Turkish force under Nur-ed-Din Pasha retreated 150 miles up the Tigris to Kut-el-Amara.

From Kut-el-Amara a river channel cuts away to the south and joins the Euphrates at Nasiriyeh, and as river routes are the only ones practicable for troops in this sunbaked region, the British determined to gain control of this waterway, which links the two great rivers in the interior. Major Gen. G. F. Goringe led the expedition from Kurna against Nasiriyeh, which, with the help

of a flotilla of gunboats, was captured after a stiff fight on July 25; 2,500 Turks were killed and 700 captured, while the British loss was only 600.

Following this success on the Euphrates, Sir John Nixon dispatched General Townshend's division up the Tigris, and this column found 10,000 Turkish regulars intrenched a few miles below Kut-el-Amara, where, on Sept. 28, in a brilliantly planned action a large part of the Turkish position was captured. By the next day the Turks were in full retreat toward Bagdad, and the British were in Kut-el-Amara. General Townshend embarked a brigade of infantry on river steamers and pushed on up toward Bagdad.

Townshend's Bagdad Expedition

Every mile of this progress toward the north lengthened the line of communications with Basra, but the British Staff doubtless had excellent confidential advices as to the attitude of the Arabs who were passed en route. When the Caliph proclaimed from Constantinople the holy war against the Allies he called upon no other community so solidly Mohammedan as the Arabian Peninsula, yet the event proved that the Arabs of those far regions felt little or no political obligation to the ruler on the Golden Horn.

Below Basra, on the west side of the Persian Gulf, were three vilayets which had either resisted Turkish control or, as in the case of Oman, had always remained independent. West of Basra lies the extensive interior Arab Kingdom of Nejd, which, like far-off Oman, had never been conquered. Between Nejd and the Red Sea lies Hejaz, with both Mecca and Medina within its borders, and consequently the very centre of ultra Mohammedan influence. While in the event of a great disaster to the British expedition most of these tribesmen might be counted upon to attack and plunder broken and retreating columns, it was evident that no strong bonds of sympathy for the far-off Turk moved them to take any very active part in harassing the British advance.

Bagdad, the great city of the Tigris,

was the ancient metropolis of the Eastern world, and still harbored a certain provincial independence of thought, which treasured the history of a past, when the fair city of the Tigris was easily the peer of that later capital which settled on the distant edge of Europe, whence little new glory had come to Islam. Whatever difficulties developed further up the country the British control of the bases at Kurna, Basra, and Nasiriyeh proved amply sufficient to prevent the development of any very serious attacks on the flanks.

From Kut-el-Amara General Townshend pushed on up the Tigris to attack Bagdad, 573 miles from the waters of the Persian Gulf. The British force numbered 15,000, of whom about one-third were white soldiers and the other two-thirds Indian troops. The army was accompanied by a large flotilla of river boats of various types, and the advancing troops went forward both by road and by river.

This campaign beyond Kut-el-Amara was a colossal blunder, and it is idle now to speculate on the reasons for the undertaking. To General Townshend's professional credit it is related that he protested against so large an undertaking with so small a force. The British Indian military administration overruled him, and apparently held the Turkish soldier far too lightly. British political and diplomatic interests in the Autumn of 1915 were certainly in a bad way in Gallipoli, in France, in the Balkans, and in Russia. Undoubtedly there was a disposition to take a gambler's chance and hope by capturing Bagdad to offset the imminent failure at Constantinople.

Reverse at Ctesiphon

There was only light skirmishing most of the way, as the troops, heartened by the change from the murderous heat of the Summer campaign to the clear days and cool nights of October, pushed bravely on up the river. In the last week of October a flank attack dislodged the Turkish rear guard from a prepared position at Azizie, and by Nov. 12 General Townshend's force camped at Lajj, seven miles below Ctesiphon, and on the evening of the 21st he marched three columns

out to attack the elaborately prepared Turkish positions below and above the ruins of Ctesiphon.

The plan was practically a duplicate of that which had succeeded so brilliantly at Kut-el-Amara. While one column made a direct frontal attack, another was to strike the Turkish left flank and hold it fully occupied; meanwhile, the third column, by a wide turning movement, was to gain the rear of the Turkish position and join in rolling the whole Turk force up against the river. After a seven-mile march by bright moonlight, the British arrived opposite the Turkish positions before dawn and began the grand attack before 9 o'clock. By the early afternoon the British had the first-line position won and the Turks fell back to their second and much stronger prepared position. In the afternoon a fresh division joined Nur-ed-Din's forces, and the fortunes of the fight strongly favored the Turks. On the 23d there was an exchange of shellfire until the middle of the afternoon, when the Turks made a number of counterattacks upon the well-intrenched British lines.

By the 24th the British casualties amounted to 4,500, with especially severe losses among the officers. The Turks were receiving further reinforcements, and at midnight on the 25th General Townshend retreated to Lajj, and on Dec. 30 was back in Kut-el-Amara, after a heartbreaking retreat in which rear-guard actions were frequent, and the wearied troops sometimes marched as much as twenty-seven miles in a day. The beaten army barely managed to stagger into Kut, and the Turks instantly closed the approaches and settled down to a long siege.

The Russians in Persia

In November and December, 1915, a Russian force pushed down from the Caucasus and defeated several forces of Persian rebels fighting on behalf of German influence. Teheran was occupied by the Russians and most of the Persian forces were driven back on Kermanshah. This prompt action on the part of Russia defeated an elaborate German plan to commit Persia to the Teuton cause.

In the following year military operations in Persia assumed for a time a really threatening appearance, and a somewhat important campaign was required to drive well-organized forces from several of the larger mountain towns in Western Persia. Wide interest

GENERAL TOWNSHEND

was at one time aroused by an announcement that a small force of Russian cavalry had unexpectedly joined the British on the Tigris, and there was a possibility that this might have been the independent cavalry of an army advancing from Persia to join the British campaign for the relief of Kut-el-Amara. In the end no such army appeared, and the real story of that strange adventure of the Russian horsemen has never yet been told.

Townshend's Force Besieged

The remnant of General Townshend's army just managed by almost superhuman efforts to struggle through the last terrible days of the retreat into Kut. That they were able still to preserve a morale that enabled them to hold that place against a victorious enemy greatly

superior in numbers reflected the greatest glory on the British service. The failure of the campaign had resulted in a damaging blow to British prestige, but the heroic qualities of the troops engaged proved that there was nothing the matter with the courage of the British soldier. Muddled plans might waste British blood and treasure on the Tigris as well as on the Dardanelles, but nothing could break down the indomitable fighting quality of the army. Thoroughly censored press dispatches covered up for many weeks the extent of the disaster at Ctesiphon by assertions that after a great victory General Townshend's force had been compelled temporarily to fall back for lack of water. It was December before England realized that there was a besieged remnant of a heroic army at Kut-el-Amara which would need prompt succor.

On Christmas Day, 1915, after a heavy bombardment for many hours, the Turks fought their way into one of the forts on the right flank. They were expelled, but returned and again occupied the position, from which they were finally driven back to their own trenches after a severe battle.

By the middle of January, 1916, a strong relief force was advancing well up the Tigris under the command of General Aylmer, but this expedition found a detached Turkish army on its front blocking the road toward Kut. From Sheik Saad onward General Aylmer's army was engaged in a number of severe actions, and these prevented the prompt relief which it was expected to afford to the besieged force up the river. The British lost heavily in battles at Sheik Saad and at Essin, and were compelled to intrench at a point twenty-three miles below Kut against a foe too strong to be brushed aside or pierced. At Men-larie the Turks had the advantage in another hot fight, and at Felahie a British reconnoitring party were all killed; 150 miles down stream, at Kurna, irregular Turkish forces defeated

a British transport column, and in February there was another severe defeat near Batilia, with many casualties and the loss of a great number of transport animals.

At this time Turkish airmen were frequently bombing the British batteries at Kut. Large reinforcements of British and Indian regiments began to reach General Aylmer's army in February and March, and along the Euphrates the British were strong enough to take the offensive against the Turks above Nasiriyeh. In a fight on the upper Tigris, near Felahie, General Aylmer's men entered the Turkish trenches, but were driven out in a counterattack with a loss of 2,000 dead. The British retreated, and in a rear guard action at Zenzir Heights had 5 officers and 175 men captured.

In April General Lake scored the first British victory in a long time by winning a battle at Umm-el-Henna, about twenty miles below Kut. At Bestissa and Felahie the Turks defeated desperate British efforts to cut a way through with the bayonet, and news from General Townshend's besieged force in Kut told of a serious shortage of food.

On April 29, 1916, General Townshend's troops could hold out no longer, and, although the army advancing to their relief was less than twenty-five miles away, it was apparent that the Turks would be able to delay any further advance for a long time. The entire force surrendered unconditionally after a brave defense of 143 days. The Turks claimed to have captured 13,000 men, while the British figures named 2,970 British and 6,000 Indian troops. General Townshend surrendered to Halil Pasha and the loot was said to include £1,000,000 in cash.

The planning of the successful Turkish campaign in Mesopotamia was credited to the great German Field Marshal von der Goltz, who died April 19, 1916, at Turkish Headquarters. Rumor at the time said he was assassinated by a Turkish Anatolian officer.

How the War Came to America

Official Survey of the Causes That Led the United States to Enter the Great Conflict

The Committee on Public Information, composed of the Secretaries of State, War, and Navy, with George Creel as civilian Chairman, issued on June 24, 1917, a pamphlet entitled "How the War Came to America," setting forth at length the events that had forced the United States to enter the war in defense of the Monroe Doctrine, freedom of the seas, and arbitration. Following is the full text of that important and interesting document:

IN the years when this Republic was still struggling for existence, in the face of threatened encroachments by hostile monarchies over the sea, in order to make the New World safe for democracy our forefathers established here the policy that soon came to be known as the Monroe Doctrine. Warning the Old World not to interfere in the political life of the New, our Government pledged itself in return to abstain from interference in the political conflicts of Europe; and history has vindicated the wisdom of this course. We were then too weak to influence the destinies of Europe, and it was vital to mankind that this first great experiment in government of and by the people should not be disturbed by foreign attack.

Reinforced by the experience of our expanding national life, this doctrine has been ever since the dominating element in the growth of our foreign policy. Whether or not we could have maintained it in case of concerted attack from abroad, it has seemed of such importance to us that we were at all times ready to go to war in its defense. And though since it was first enunciated our strength has grown by leaps and bounds, although in that time the vast increase in our foreign trade and of travel abroad, modern transport, modern mails, the cables, and the wireless have brought us close to Eu-

rope and have made our isolation more and more imaginary, there has been until the outbreak of the present conflict small desire on our part to abrogate, or even amend, the old familiar tradition which has for so long given us peace.

Policy at The Hague

In both conferences at The Hague, in 1899 and 1907, we reaffirmed this policy. As our delegates signed the First Convention in regard to arbitration, they read into the minutes this statement:

Nothing contained in this convention shall be so construed as to require the United States of America to depart from its traditional policy of not intruding upon, interfering with, or entangling itself in the political questions or policy or internal administration of any foreign State; nor shall anything contained in the said convention be construed to imply a relinquishment by the United States of America of its traditional attitude toward purely American questions.

At The Hague we pledged ourselves, in case we ever went to war, to observe certain broad general rules of decency and fair fighting. But at the same time we cleared ourselves from any responsibility for forcing other nations to observe similar pledges. And in 1906, when our delegates took part in the Algeiras Conference, which was to regulate the affairs of the distracted Kingdom of Morocco, they followed the same formula there. While acquiescing in the new régime which guaranteed the independence and integrity of Morocco, we explicitly announced that we assumed no police responsibility for the enforcement of the treaty. And if any honest doubt was left as to our attitude in regard to the enforcement of Old World agreements, it was dispelled five years later, when our Government refused to protest against the overthrow of the Acte d'Algeiras.

We declined to be drawn into quarrels abroad which might endanger in any way our traditional policy.

For Freedom of the Seas

Our second great tradition in international relations has been our persistent effort to secure a stable and equitable agreement of the nations upon such a maritime code as would assure to all the world a just freedom of the seas.

This effort was born of our vital need. For although it was possible for the Republic to keep aloof from the nineteenth century disputes that rent the Continent of Europe, we could not be indifferent to the way in which war was conducted at sea. In those early years of our national life, when we were still but a few communities ranged along the Atlantic coast, we were a seafaring people. At a time when our frontiersmen had not yet reached the Mississippi, the fame of our daring clipper ships had spread to all the Seven Seas. So while we could watch the triumphant march and the tragic counter-march of Napoleon's grand army with detached indifference, his Continental blockade and the British Orders in Council at once affected the lives of our citizens intimately and disastrously.

So it was in the case of the Barbary pirates. We had no interest in the land quarrels and civil wars of the Barbary States, but we fought them for obstructing the freedom of the seas.

And in the decades ever since, although the imagination of our people has been engrossed in the immense labor of winning the West, our Department of State has never lost sight of the compelling interest that we have upon the seas, and has constantly striven to gain the assent of all nations to a maritime code which should be framed and enforced by a joint responsibility. Various watchwords have arisen in this long controversy. We have urged the inviolability of private property at sea, we have asked for a liberal free list and a narrow definition of contraband; but our main insistence has not been on any such details. One salient idea has guided our diplomacy. The law of the sea must be founded not on might, but on right and a common accord—upon a code binding all alike, which cannot be changed

or set aside by the will of any one nation. Our ideal has been not a weakening but a strengthening of legal restraint by the free will and agreement of all. We have asked nothing for ourselves that we do not ask for the whole world. The seas will never be free, in our American meaning, until all who sail thereon have had a voice in framing sea laws. The just governance of the seas must rest on the consent of the governed.

The Declaration of London

No other question of international polity has found the great powers more divided. But in our insistence on this fundamental principle, we have been strengthened by the support of many other countries. At times we have had the support of Great Britain. No one of our Secretaries of State has more clearly defined our ideal than has Viscount Grey, recently British Secretary of State for Foreign Affairs. None of our statesmen has ever gone so far as he in advocating limitation of the rights of belligerents on the sea. It was on his initiative that the international naval conference was summoned to London in 1909, and it was under his guidance that the eminent international lawyers and diplomats and Admirals who gathered there drew up the Declaration of London.

While there were in that declaration sections that did not quite meet our approval and that we should have liked to amend, the document was from our point of view a tremendous step in advance. For although, like any effort to concisely formulate the broad principles of equity, it did not wholly succeed in its purpose, it was at least an honest attempt to arrive at an agreement on a complete international code of sea law, based upon mutual consent and not to be altered by any belligerent in the heat of the conflict.

But the Declaration of London was not ratified by the British Parliament, for the point of view prevailing then in England was that a power dependent almost wholly upon its navy for protection could not safely accept further limitations upon action at sea unless there were compensating limitations on land powers. And this latter concession Ger-

many consistently refused to make. This conference therefore came to nought; and, the London Declaration having been rejected by the strongest maritime power, its indorsement was postponed by all the other countries involved. Our motives, however, remained unchanged, and our Government persisted in its purpose to secure a general ratification either of this Declaration or of some similar maritime code.

Principle of Arbitration

There has been in our diplomacy one more outstanding aspiration. We have constantly sought to substitute judicial for military settlement of disputes between nations.

The genesis of this idea dates from the discussions over the Federal organizations of our thirteen original States, which were almost as jealous of their sovereignties as are the nations of Europe today. The first great step toward the League of Honor, which we hope will at last bring peace to the world, was taken when our thirteen States agreed to disarm and submit all their disputes to the high tribunal of the new federation.

And this idea of an interstate court, which except at the time of our civil war has given this nation internal peace, has profoundly influenced our foreign policy. Of our efforts to bring others to our way of thinking, a historical résumé was presented by our delegates at the First Hague Conference. A project was submitted there for the formation of a world court. And a few years later Mr. Root, our Secretary of State, in instructing our delegates to the Second Conference at The Hague, laid especial emphasis on this same international ideal.

We have taken a particular pride in being in the vanguard of this movement for the peaceable settlement by process of law of all disputes between nations. And these efforts have not been without success. For, although the last few decades have seen this principle time and again put under a terrific strain, no nation has dared to go to war against the award of a court of arbitration. The stupendous possibilities that lie in ar-

bitration for solving international problems, promoting liberal principles, and safeguarding human life had been amply demonstrated before the present war began.

But in the discussions at The Hague, largely through the resistance of the German Empire and its satellites, the efforts of our delegates and those of other Governments to bring about a general treaty of compulsory arbitration had failed; and therefore this nation, having been thwarted in its attempts to secure a general agreement, began negotiations with all those nations which, like our own, preferred the methods of law and peace, with the purpose of effecting dual arbitration treaties. And before the end of 1914 we had signed far-reaching treaties with thirty nations, twenty of which had been duly ratified and proclaimed. But in this work, too, we were made to feel the same opposition as at The Hague; for, while Great Britain, France, Russia, and Italy cordially welcomed our overtures, the German and Austro-Hungarian Empires were noticeably absent from the list of those nations who desired, by specific agreements in advance, to minimize the danger of war.

Three Cardinal Doctrines

On the eve of the present conflict our position toward other nations might have been summarized under three heads:

I. The Monroe Doctrine.—We had pledged ourselves to defend the New World from European aggression, and we had by word and deed made it clear that we would not intervene in any European dispute.

II. The Freedom of the Seas.—In every naval conference our influence had been given in support of the principle that sea law to be just and worthy of general respect must be based on the consent of the governed.

III. Arbitration.—As we had secured peace at home by referring interstate disputes to a Federal tribunal, we urged a similar settlement of international controversies. Our ideal was a permanent world court. We had already signed ar-

bitration treaties not only with great powers which might conceivably attack us, but even more freely with weaker neighbors in order to show our good faith in recognizing the equality of all nations both great and small. We had made plain to the nations our purpose to forestall by every means in our power the recurrence of wars in the world.

The outbreak of war in 1914 caught this nation by surprise. The peoples of Europe had had at least some warnings of the coming storm, but to us such a blind, savage onslaught on the ideals of civilization had appeared impossible.

The war was incomprehensible. Either side was championed here by millions living among us who were of European birth. Their contradictory accusations threw our thought into disarray, and in the first chaotic days we could see no clear issue that affected our national policy. There was no direct assault on our rights. It seemed at first to most of us a purely European dispute, and our minds were not prepared to take sides in such a conflict. The President's proclamation of neutrality was received by us as natural and inevitable. It was quickly followed by his appeal to "the citizens of the Republic."

"Every man who really loves America will act and speak in the true spirit of neutrality," he said, "which is the spirit of impartiality and fairness and friendliness to all concerned. * * * It will be easy to excite passion and difficult to allay it." He expressed the fear that our nation might become divided in camps of hostile opinion. "Such divisions among us * * * might seriously stand in the way of the proper performance of our duty as the one great nation at peace, the one people holding itself ready to play a part of impartial mediation and speak counsels of peace and accommodation, not as a partisan, but as a friend."

This purpose—the preservation of a strict neutrality in order that later we might be of use in the great task of mediation—dominated all the President's early speeches.

"We are the mediating nation of the

world," he declared in an address on April 20, 1915. "We are compounded of the nations of the world; we mediate their blood, we mediate their traditions, we mediate their sentiments, their tastes, their passions; we are ourselves compounded of those things. We are, therefore, able to understand them in the compound, not separately as partisans, but unitedly as knowing and comprehending and embodying them all. It is in that sense that I mean that America is a mediating nation."

American neutrality, in those first months of the great war, was beyond any question real.

Stirred by Events in Belgium

But the spirit of neutrality was not easy to maintain. Public opinion was deeply stirred by the German invasion of Belgium and by reports of atrocities there. The Royal Belgian Commission, which came in September, 1914, to lay their country's cause for complaint before our National Government, was received with sympathy and respect. The President in his reply reserved our decision in the affair. It was the only course he could take without an abrupt departure from our most treasured traditions of non-interference in Old World disputes. But the sympathy of America went out to the Belgians in the heroic tragedy, and from every section of our land money contributions and supplies of food and clothing poured over to the Commission for Relief in Belgium, which was under the able management of our fellow-countrymen abroad.

Still, the thought of taking an active part in this European war was very far from most of our minds. The nation shared with the President the belief that by maintaining a strict neutrality we could best serve Europe at the end as impartial mediators.

But in the very first days of the war our Government foresaw that complications on the seas might put us in grave risk of being drawn into the conflict. No neutral nation could foretell what violations of its vital interests at sea might be attempted by the belligerents. And so, on Aug. 6, 1914, our Secretary of State dispatched an iden-

tical note to all the powers then at war, calling attention to the risk of serious trouble arising out of this uncertainty of neutrals as to their maritime rights, and proposing that the Declaration of London be accepted by all nations for the duration of the war.

Controversies With Great Britain

But the British Government's response, while expressing sympathy with the purpose of our suggestion and declaring their "keen desire to consult so far as possible the interests of neutral countries," announced their decision "to adopt generally the rules of the Declaration in question, subject to certain modifications and additions which they judge indispensable to the efficient conduct of their naval operations." The Declaration had not been indorsed by any power in time of peace, and there was no legal obligation on Great Britain to accept it. Her reply, however, was disappointing, for it did nothing to clarify the situation. Great Britain recognized as binding certain long-accepted principles of international law and sought now to apply them to the peculiar and unforeseen conditions of this war. But these principles were often vague and therefore full of dangerous possibilities of friction.

Controversies soon arose between Great Britain and this nation. In practice their ruling sometimes seemed to our Government inconsistent with the spirit of international law, and especially with the established precedents which they invoked. But, painful as this divergence of opinion sometimes was, it did not seriously threaten our position of neutrality, for the issues that arose involved only rights of property and were amply covered by the arbitration treaty signed only a short time before by Great Britain and the United States.

And this controversy led to a clearer understanding on our part of the British attitude toward our ideal of the freedom of the seas. They were not willing to accept our classification of the seas as being distinct from the Old World. We had confined our interest to matters affecting rights at sea and had kept carefully aloof from issues affecting the

interests of European nations on land. The British were interested in both. They explained that they had participated in the London naval conference in the hope that it would lead to a sound and liberal entente in the interest of the rights of all nations on the sea and on the land as well, and that they had refused to ratify the London Declaration because no compensating accord on the Continent had resulted. They could not afford to decrease the striking power of their navy unless their powerful neighbors on land agreed to decrease their armies.

America's Changed Attitude

That this attitude of England deeply impressed our Government is shown by the increasing attention given by the United States to the search for ways and means of insuring at the end of the war a lasting peace for all the world. The address of our President, on May 27, 1916, before the League to Enforce Peace was a milestone in our history.

He outlined the main principles on which a stable peace must rest, principles plainly indicating that this nation would have to give up its position of isolation and assume the responsibilities of a world power. The President said:

So sincerely do we believe these things that I am sure that I speak the mind and wish of the people of America when I say that the United States is willing to become a partner in any feasible association of nations formed in order to realize these objects and make them secure against violation.

It was a new and significant note in our foreign policy. But the mind of America had learned much in the long, bitter months of war. Future historians will make charts of this remarkable evolution in our public opinion: the gradual abandonment of the illusion of isolation; the slow growth of a realization that we could not win freedom on sea—for us a vital interest—unless we consented to do our share in maintaining freedom on land as well, and that we could not have peace in the world—the peace we loved and needed for the perfection of our democracy—unless we were willing and prepared to help to restrain any nation that willfully endangered the peace of the whole world family.

Had this address of the President come before the war there would have arisen a storm of protest from all sections of the land. But in May, 1916, the nation's response was emphatic approval.

No Treaty with Germany

In the meantime, although our neutral rights were not brought into question by Germany as early as by England, the German controversy was infinitely more serious.

For any dissension that might arise no arbitration treaty existed between the United States and the German Government. This was from no fault of ours. We had tried to establish with Germany the same treaty relations we had with Great Britain and nineteen other nations. But these overtures had been rejected. And this action on the part of the Imperial German Government was only one example of its whole system of diplomacy. In both conferences at The Hague it had been the German delegates who were the most active in blocking all projects for the pacific settlement of disputes between nations.

They had preferred to limit international relations to the old modes of diplomacy and war. It was therefore obvious from the first that any controversy with the German Government would be exceedingly serious; for if it could not be solved by direct diplomatic conversations, there was no recourse except to war.

From such conversations there is small hope of satisfactory results unless the good faith of both sides is profound. If either side lacks good faith, or reveals in all its actions an insidious hostility, diplomacy is of no avail. And so it has proved in the present case.

In the first year of the war the Government of Germany stirred up among its people a feeling of resentment against the United States on account of our insistence upon our right as a neutral nation to trade in munitions with the belligerent powers. Our legal right in the matter was not seriously questioned by Germany. She could not have done so consistently, for as recently as the Balkan wars of 1912 and 1913 both Germany and

Austria sold munitions to the belligerents. Their appeals to us in the present war were not to observe international law, but to revise it in their interest. And these appeals they tried to make on moral and humanitarian grounds. But upon "the moral issue" involved, the stand taken by the United States was consistent with its traditional policy and with obvious common sense.

Our Defense at Stake

For, if, with all other neutrals, we refused to sell munitions to belligerents, we could never in time of a war of our own obtain munitions from neutrals, and the nation which had accumulated the largest reserves of war supplies in time of peace would be assured of victory.

The militarist State that invested its money in arsenals would be at a fatal advantage over the free people who invested their wealth in schools. To write into international law that neutrals should not trade in munitions would be to hand over the world to the rule of the nation with the largest armament factories. Such a policy the United States of America could not accept.

But our principal controversy with the German Government, and the one which rendered the situation at once acute, rose out of their announcement of a sea zone where their submarines would operate in violation of all accepted principles of international law. Our indignation at such a threat was soon rendered passionate by the sinking of the *Lusitania*. This attack upon our rights was not only grossly illegal; it defied the fundamental concepts of humanity.

Aggravating restraints on our trade were grievances which could be settled by litigation after the war, but the wanton murder of peaceable men and of innocent women and children, citizens of a nation with which Germany was at peace, was a crime against the civilized world which could never be settled in any court.

Our Government, however, inspired still by a desire to preserve peace if possible, used every resource of diplomacy to force the German Government to abandon such attacks. This diplo-

matic correspondence, which has already been published, proves beyond doubt that our Government sought by every honorable means to preserve faith in that mutual sincerity between nations which is the only basis of sound diplomatic interchange.

But evidence of the bad faith of the Imperial German Government soon piled up on every hand. Honest efforts on our part to establish a firm basis of good neighborliness with the German people were met by their Government with quibbles, misrepresentations, and counteraccusations against their enemies abroad.

Work of Hostile Spies

And meanwhile in this country official agents of the Central Powers—protected from criminal prosecution by diplomatic immunity—conspired against our internal peace and placed spies and agents provocateurs throughout the length and breadth of our land, and even in high positions of trust in departments of our Government.

While expressing a cordial friendship for the people of the United States, the Government of Germany had its agents at work both in Latin America and Japan. They bought or subsidized papers and supported speakers there to rouse feelings of bitterness and distrust against us in those friendly nations, in order to embroil us in war. They were inciting to insurrection in Cuba, in Haiti, and in Santo Domingo; their hostile hand was stretched out to take the Danish Islands; and everywhere in South America they were abroad sowing the seeds of dissension, trying to stir up one nation against another and all against the United States.

In their sum these various operations amounted to direct assault upon the Monroe Doctrine. And even if we had given up our right to travel on the sea, even if we had surrendered to German threats and abandoned our legitimate trade in munitions, the German offensive in the New World, in our own land and among our neighbors, was becoming too serious to be ignored.

So long as it was possible, the Government of the United States tried to be-

lieve that such activities, the evidence of which was already in a large measure at hand, were the work of irresponsible and misguided individuals. It was only reluctantly, in the face of overwhelming proof, that the recall of the Austro-Hungarian Ambassador and of the German Military and Naval Attachés was demanded.

Proof of their criminal violations of our hospitality was presented to their Governments. But these Governments in reply offered no apologies nor did they issue reprimands. It became clear that such intrigue was their settled policy.

In the meantime the attacks of the German submarines upon the lives and property of American citizens had gone on; the protests of our Government were now sharp and ominous, and this nation was rapidly being drawn into a state of war.

Warnings Given by President

As the President said in Topeka, on Feb. 2, 1916:

We are not going to invade any nation's right. But suppose, my fellow-countrymen, some nation should invade our rights. What then? * * * I have come here to tell you that the difficulties of our foreign policy * * * daily increase in number and intricacy and in danger; and I would be derelict to my duty to you if I did not deal with you in these matters with the utmost candor, and tell you what it may be necessary to use the force of the United States to do.

The next day, at St. Louis, he repeated his warning:

The danger is not from within, gentlemen, it is from without; and I am bound to tell you that that danger is constant and immediate—not because anything new has happened, not because there has been any change in our international relationships within recent weeks or months, but because the danger comes with every turn of events.

The break would have come sooner if our Government had not been restrained by the hope that saner counsels might still prevail in Germany. For it was well known to us that the German people had to a very large extent been kept in ignorance of many of the secret crimes of their Government against us.

And the presence of a faction of German public opinion less hostile to this

country was shown when their Government acquiesced to some degree in our demands at the time of the Sussex outrage, and for nearly a year maintained at least a pretense of observing the pledge they had made to us. The tension was abated.

While the war spirit was growing in some sections of our nation, there was still no widespread desire to take part in the conflict abroad; for the tradition of non-interference in Europe's political affairs was too deeply rooted in our national life to be easily overthrown.

Moreover, two other considerations strengthened our Government in its efforts to remain neutral in this war. The first was our traditional sense of responsibility toward all the republics of the New World. Throughout the crisis our Government was in constant communication with the countries of Central and South America.

They, too, preferred the ways of peace. And there was a very obvious obligation upon us to safeguard their interests with our own.

The second consideration, which had been so often developed in the President's speeches, was the hope that by keeping aloof from the bitter passions abroad, by preserving untroubled here the holy ideals of civilized intercourse between nations, we might be free at the end of this war to bind up the wounds of the conflict, to be the restorers and rebuilders of the wrecked structure of the world.

Neutrality Becomes Unsafe

All these motives held us back, but it was not long until we were beset by further complications. We soon had reason to believe that the recent compliance of the German Government had not been made to us in good faith, and was only temporary, and by the end of 1916 it was plain that our neutral status had again been made unsafe through the ever-increasing aggressiveness of the German autocracy. There was a general agreement here with the statement of our President on Oct. 26, 1916, that this conflict was the last great war involving the world in which we would remain neutral.

It was in this frame of mind, fearing we might be drawn into the war if it did

not soon come to an end, that the President began the preparation of his note, asking the belligerent powers to define their war aims. But before he had completed it the world was surprised by the peace move of the German Government—an identical note on behalf of the German Empire, Austria-Hungary, Bulgaria, and Turkey, sent through neutral powers on Dec. 12, 1916, to the Governments of the Allies, proposing negotiations for peace.

While expressing the wish to end this war—"a catastrophe which thousands of years of common civilization was unable to prevent and which injures the most precious achievements of humanity"—the greater portion of the note was couched in terms that gave small hope of a lasting peace.

Boasting of German conquests, "the glorious deeds of our armies," the note implanted in neutral minds the belief that it was the purpose of the Imperial German Government to insist upon such conditions as would leave all Central Europe under German dominance and so build up an empire which would menace the whole liberal world.

Moreover, the German proposal was accompanied by a thinly veiled threat to all neutral nations; and from a thousand sources, official and unofficial, the word came to Washington that unless the neutrals used their influence to bring the war to an end on terms dictated from Berlin, Germany and her allies would consider themselves henceforth free from any obligations to respect the rights of neutrals.

The Kaiser ordered the neutrals to exert pressure on the Entente to bring the war to an abrupt end, or to beware of the consequences. Clear warnings were brought to our Government that if the German peace move should not be successful, the submarines would be unleashed for a more intense and ruthless war upon all commerce.

On the 18th of December the President dispatched his note to all the belligerent powers, asking them to define their war aims. There was still hope in our minds that the mutual suspicions between the warring powers might be decreased, and

the menace of future German aggression and dominance be removed, by finding a guaranty of good faith in a league of nations.

There was a chance that by the creation of such a league as part of the peace negotiations the war could now be brought to an end before our nation was involved. Two statements issued to the press by our Secretary of State, upon the day the note was dispatched, threw a clear light on the seriousness with which our Government viewed the crisis.

German Reply Evasive

From this point, events moved rapidly. The powers of the Entente replied to the German peace note. Neutral nations took action on the note of the President, and from both belligerents replies to this note were soon in our hands.

The German reply was evasive—in accord with their traditional preference for diplomacy behind closed doors. Refusing to state to the world their terms, Germany and her allies merely proposed a conference. They adjourned all discussion of any plan for a league of peace until after hostilities should end.

The response of the Entente Powers was frank and in harmony with our principal purpose. Many questions raised in the statement of their aims were so purely European in character as to have small interest for us; but our great concern in Europe was the lasting restoration of peace, and it was clear that this was also the chief interest of the Entente nations.

As to the wisdom of some of the measures they proposed toward this end, we might differ in opinion, but the trend of their proposals was the establishment of just frontiers based on the rights of all nations, the small as well as the great, to decide their own destinies.

The aims of the belligerents were now becoming clear. From the outbreak of hostilities the German Government had claimed that it was fighting a war of defense. But the tone of its recent proposals had been that of a conqueror. It sought a peace based on victory.

The Central Empires aspired to extend their domination over other races. They were willing to make liberal terms to any one of their enemies, in a separate

peace which would free their hands to crush other opponents. But they were not willing to accept any peace which did not, all fronts considered, leave them victors and the dominating imperial power of Europe.

The war aims of the Entente showed a determination to thwart this ambition of the Imperial German Government. Against the German peace to further German growth and aggression the Entente Powers offered a plan for a European peace that should make the whole Continent secure.

Blow at German Domination

At this juncture the President read his address to the Senate, on Jan. 22, 1917, in which he outlined the kind of peace the United States of America could join in guaranteeing. His words were addressed not only to the Senate and this nation, but to people of all countries:

May I not add that I hope and believe that I am in effect speaking for liberals and friends of humanity in every nation and of every program of liberty? I would fain believe that I am speaking for the silent mass of mankind everywhere who have as yet had no place or opportunity to speak their real hearts out concerning the death and ruin they see to have come already upon the persons and the homes they hold most dear.

The address was a rebuke to those who still cherished dreams of a world dominated by one nation. For the peace he outlined was not that of a victorious Emperor, it was not the peace of Caesar. It was in behalf of all the world, and it was a peace of the people:

No peace can last, or ought to last, which does not recognize and accept the principle that Governments derive all their just powers from the consent of the governed, and that no right anywhere exists to hand people about from sovereignty to sovereignty as if they were property.

I am proposing, as it were, that the nations should with one accord adopt the doctrine of President Monroe as the doctrine of the world; that no nation should seek to extend its policy over any other nation or people, but that every people should be left free to determine its own polity, its own way of development, unhindered, unthreatened, unafraid, the little along with the great and powerful.

I am proposing that all nations henceforth avoid entangling alliances which would draw them into competitions of power, catch them

in a net of intrigue and selfish rivalry and disturb their own affairs with influences intruded from without. There is no entangling alliance in a concert of power. When all unite to act in the same sense and with the same purpose, all act in the common interest and are free to live their own lives under a common protection.

I am proposing government by the consent of the governed; that freedom of the seas which in international conference after conference representatives of the United States have urged with the eloquence of those who are convinced disciples of liberty, and that moderation of armaments which makes of armies and navies a power for order merely, not an instrument of aggression or of selfish violence.

And the paths of the sea must, alike in law and in fact, be free. The freedom of the seas is the *sine qua non* of peace, equality, and co-operation.

It is a problem closely connected with the limitation of naval armament and the co-operation of the navies of the world in keeping the seas at once free and safe. And the question of limiting naval armaments opens the wider and perhaps more difficult question of the limitation of armies and of all programs of military preparation. * * * There can be no sense of safety and equality among the nations if great preponderating armaments are henceforth to continue here and there to be built up and maintained.

Mere agreements may not make peace secure. It will be absolutely necessary that a force be created as a guarantor of the permanency of the settlement so much greater than the force of any nation now engaged or any alliance hitherto formed or projected that no nation, no probable combination of nations, could face or withstand it. If the peace presently to be made is to endure, it must be a peace made secure by the organized major force of mankind.

The Issue Becomes Clearer

If there were any doubt in our minds as to which of the great alliances was the more in sympathy with these ideals, it was removed by the popular response abroad to this address of the President. For, while exception was taken to some parts of it in Britain and France, it was plain that so far as the peoples of the Entente were concerned the President had been amply justified in stating that he spoke for all forward-looking, liberal-minded men and women. It was not so in Germany. The people there who could be reached, and whose hearts were stirred by this enunciation of the principles of a people's peace, were too few or too oppressed to make their voices heard in the councils of their nation. Already, on Jan.

16, 1917, unknown to the people of Germany, Herr Zimmermann, their Secretary of Foreign Affairs, had secretly dispatched a note to their Minister in Mexico, informing him of the German intention to repudiate the Sussex pledge and instructing him to offer to the Mexican Government New Mexico and Arizona if Mexico would join with Japan in attacking the United States.

In the new year of 1917, as through our acceptance of world responsibilities so plainly indicated in the President's utterances in regard to a league of nations we felt ourselves now drawing nearer to a full accord with the Powers of the Entente; and, as on the other hand, we found ourselves more and more outraged at the German Government's methods of conducting warfare and their brutal treatment of people in their conquered lands; as we more and more uncovered their hostile intrigues against the peace of the New World; and, above all, as the sinister and anti-democratic ideals of their ruling class became manifest in their manoeuvres for a peace of conquest—the Imperial German Government abruptly threw aside the mask.

Unlimited Submarine Warfare

On the last day of January, 1917, Count Bernstorff handed to Mr. Lansing a note, in which his Government announced its purpose to intensify and render more ruthless the operations of their submarines at sea, in a manner against which our Government had protested from the beginning. The German Chancellor also stated before the Imperial Diet that the reason this ruthless policy had not been earlier employed was simply because the Imperial Government had not then been ready to act. In brief, under the guise of friendship and the cloak of false promises, it had been preparing this attack.

This was the direct challenge. There was no possible answer except to hand their Ambassador his passports and so have done with a diplomatic correspondence which had been vitiated from the start by the often proved bad faith of the Imperial Government.

On the same day, Feb. 3, 1917, the

President addressed both houses of our Congress and announced the complete severance of our relations with Germany. The reluctance with which he took this step was evident in every word. But diplomacy had failed, and it would have been the hollowest pretense to maintain relations. At the same time, however, he made it plain that he did not regard this act as tantamount to a declaration of war. Here for the first time the President made his sharp distinction between government and people in undemocratic lands:

"We are the sincere friends of the German people," he said, "and earnestly desire to remain at peace with the Government which speaks for them. * * * God grant we may not be challenged by acts of willful injustice on the part of the Government of Germany."

In this address of the President, and in its indorsement by the Senate, there was a solemn warning; for we still had hope that the German Government might hesitate to drive us to war. But it was soon evident that our warning had fallen on deaf ears. The tortuous ways and means of German official diplomacy were clearly shown in the negotiations opened by them through the Swiss Legation on the 10th of February. In no word of their proposals did the German Government meet the real issue between us. And our State Department replied that no minor negotiations could be entertained until the main issue had been met by the withdrawal of the submarine order.

The Armed Neutrality Phase

By the 1st of March it had become plain that the Imperial Government, unrestrained by the warning in the President's address to Congress on Feb. 3, was determined to make good its threat. The President then again appeared before Congress to report the development of the crisis and to ask the approval of the representatives of the nation for the course of armed neutrality upon which, under his constitutional authority, he had now determined. More than 500 of the 531 members of the two houses of Congress showed themselves ready and anx-

ious to act; and the armed neutrality declaration would have been accepted if it had not been for the legal death of the Sixty-fourth Congress on March 4.

No "overt" act, however, was ordered by our Government until Count Bernstorff had reached Berlin and Mr. Gerard was in Washington. For the German Ambassador on his departure had begged that no irrevocable decision should be taken until he had had the chance to make one final plea for peace to his sovereign. We do not know the nature of his report to the Kaiser; we know only that, even if he kept his pledge and urged an eleventh-hour revocation of the submarine order, he was unable to sway the policy of the Imperial Government.

And so, having exhausted every resource of patience, our Government on the 12th of March finally issued orders to place armed guards on our merchant ships.

American Aloofness Ended

With the definite break in diplomatic relations there vanished the last vestige of cordiality toward the Government of Germany. Our attitude was now to change. So long as we had maintained a strict neutrality in the war, for the reason that circumstances might arise in which Europe would have need of an impartial mediator, for us to have given official heed to the accusations of either party would have been to prejudge the case before all the evidence was in.

But now at last, with the breaking of friendly relations with the German Government, we were relieved of the oppressive duty of endeavoring to maintain a judicial detachment from the rights and wrongs involved in the war. We were no longer the outside observers striving to hold an even balance of judgment between disputants. One party by direct attack upon our rights and liberties was forcing us into the conflict. And, much as we had hoped to keep out of the fray, it was no little relief to be free at last from that reserve which is expected of a judge.

Much evidence had been presented to us of things so abhorrent to our ideas of

humanity that they had seemed incredible, things we had been loath to believe, and with heavy hearts we had sought to reserve our judgment. But with the breaking of relations with the Government of Germany that duty at last was ended. The perfidy of that Government in its dealings with this nation relieved us of the necessity of striving to give them the benefit of the doubt in regard to their crimes abroad. The Government which under cover of profuse professions of friendship had tried to embroil us in war with Mexico and Japan could not expect us to believe in its good faith in other matters. The men whose paid agents dynamited our factories here were capable of the infamies reported against them over the sea. Their Government's protestations, that their purpose was self-defense and the freeing of small nations, fell like a house of cards before the revelation of their "peace terms."

And judging the German Government now in the light of our own experience through the long and patient years of our honest attempt to keep the peace, we could see the great autocracy and read her record through the war. And we found that record damnable. Beginning long before the war in Prussian opposition to every effort that was made by other nations and our own to do away with warfare, the story of the autocracy has been one of vast preparations for war combined with an attitude of arrogant intolerance toward all other points of view, all other systems of governments, all other hopes and dreams of men.

Germany's Criminal Record

With a fanatical faith in the destiny of German Kultur as the system that must rule the world, the Imperial Government's actions have through years of boasting, double dealing, and deceit tended toward aggression upon the rights of others. And, if there still be any doubt as to which nation began this war, there can be no uncertainty as to which one was most prepared, most exultant at the chance, and ready instantly to march upon other nations—even those who had given no offense.

The wholesale depredations and hideous

atrocities in Belgium and in Serbia were doubtless part and parcel with the Imperial Government's purpose to terrorize small nations into abject submission for generations to come. But in this the autocracy has been blind. For its record in those countries, and in Poland and in Northern France, has given not only to the Allies but to liberal peoples throughout the world the conviction that this menace to human liberties everywhere must be utterly shorn of its power for harm.

For the evil it has effected has ranged far out of Europe—out upon the open seas, where its submarines in defiance of law and the concepts of humanity have blown up neutral vessels and covered the waves with the dead and the dying, men and women and children alike. Its agents have conspired against the peace of neutral nations everywhere, sowing the seeds of dissension, ceaselessly endeavoring by tortuous methods of deceit, of bribery, false promises, and intimidation to stir up brother nations one against the other, in order that the liberal world might not be able to unite, in order that the autocracy might emerge triumphant from the war.

All this we know from our own experience with the Imperial Government. As they have dealt with Europe, so they have dealt with us and with all mankind. And so out of these years the conviction has grown that until the German Nation is divested of such rulers democracy cannot be safe.

Russia Removes the Last Doubt

There remained but one element to confuse the issue. One other great autocracy, the Government of the Russian Czar, had long been hostile to free institutions; it had been a stronghold of tyrannies reaching far back into the past, and its presence among the Allies had seemed to be in discord with the great liberal principles they were upholding in this war. Russia had been a source of doubt. Repeatedly during the conflict liberal Europe had been startled by the news of secret accord between the Kaiser and the Czar.

But now at this crucial time for our

nation, on the eve of our entrance into the war, the free men of all the world were thrilled and heartened by the news that the people of Russia had risen to throw off their Government and found a new democracy; and the torch of freedom in Russia lit up the last dark phases of the situation abroad. Here, indeed, was a fit partner for the League of Honor. The conviction was finally crystallized in American minds and hearts that this war across the sea was no mere conflict between dynasties, but a stupendous civil war of all the world; a new campaign in the age-old war, the prize of which is liberty. Here, at last, was a struggle in which all who love freedom have a stake. Further neutrality on our part would have been a crime against our ancestors, who had given their lives that we might be free.

"The world must be made safe for democracy."

State of War Declared

On the 2d of April, 1917, the President read to the new Congress his message, in which he asked the Representatives of the nation to declare the existence of a state of war, and in the early hours of

the 6th of April the House by an overwhelming vote accepted the joint resolution which had already passed the Senate:

Whereas, The Imperial German Government has committed repeated acts of war against the Government and the people of the United States of America; Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the state of war between the United States and the Imperial German Government which has thus been thrust upon the United States is hereby formally declared; and that the President be, and he is hereby, authorized and directed to employ the entire naval and military forces of the United States and the resources of the Government to carry on the war against the Imperial German Government, and to bring the conflict to a successful termination all the resources of the country are hereby pledged by the Congress of the United States.

Neutrality was a thing of the past. The time had come when the President's proud prophecy was fulfilled:

There will come that day when the world will say, "This America that we thought was full of a multitude of contrary counsels now speaks with the great volume of the heart's accord, and that great heart of America has behind it the supreme moral force of righteousness and hope and the liberty of mankind."

To the United States of America

By ROBERT BRIDGES

British Poet Laureate

Brothers in blood! They who this wrong began
To wreck our commonwealth, will rue the day
When first they challenged freemen to the fray,
And with the Briton dared the American.
Now are we pledged to win the Rights of man;
Labor and Justice now shall have their way,
And in a League of Peace—God grant we may—
Transform the earth, not patch up the old plan.

Sure is our hope since he who led your nation
Spoke for mankind, and ye arose in awe
Of that high call to work the world's salvation;
Clearing your minds of all estranging blindness
In the vision of Beauty and the Spirit's law,
Freedom and Honor and sweet Loving kindness.

April 30, 1917.

Why We Entered the Great War

Address by William Howard Taft

Former President of the United States

[Delivered at the 121st Commencement Exercises of Union College, Schenectady, N. Y., June 13, 1917]

Mr. Taft first summarized the attacks on our shipping and the plots that led up to our entry into the war, and then continued:

NOW, was there any other alternative for us than to declare war? I would like to begin with the fundamentals. That depends upon what in fact and in law the act of Germany was. What was the law? It is what is called international law; that is, a rule of conduct adopted by the acquiescence of all nations, of one nation toward another, both in peace and in war. The branch of international law in which we are concerned here is perhaps the most definitely fixed of any branch of that jurisprudence, which in some respects is indefinite. It is the branch that governs the capture of commercial vessels at sea. For a hundred years there has been very little doubt about the rules that control that field of jurisprudence. During the Napoleonic wars a great many commercial vessels were captured and in the procedure instituted they had to be brought into the domestic courts of prize where these rules were laid down. At the same time on our own side of the ocean our Supreme Court settled many of the cases. In our civil war, in the war between France and Germany, similar conditions were made. So that when we speak of that law we are speaking of a law that has some similitude to our domestic law.

In the first place, a belligerent—one of those engaged in war upon the high seas—may seize a commercial vessel of its enemy, may confiscate the vessel and its cargo, and, if necessity requires, may sink or burn it. The second is that a neutral vessel may be seized by a belligerent vessel upon the high seas and examined to see whether that neutral vessel is carrying contraband to the

enemy of the captor, and if so, the contraband may be confiscated. Third, a belligerent vessel may blockade a port of its enemy. It must blockade it with visible vessels and a knowledge to the world that a blockade exists. Even if a neutral vessel enter this blockade it may be seized by the belligerent and the cargo confiscated.

These are the three rules that cover the whole field of capture of commercial vessels. But accompanying these rules is the limitation that in taking a commercial vessel which makes no response when hailed, which does not attempt to escape under the circumstances I have described, it is the bounden duty of the captor to see to it that the officers, the crew, and the passengers, all of the ship's company, shall be put in a safe place. The captor may, as I say, sink or burn the vessel at the time or it may take it into port and have it adjudged a prize, but in either case the captor is bound to secure the lives of those who are upon that commercial vessel.

Deliberate Violations

Germany has violated that rule. It has deliberately caused the death of men, women and children on the high seas, under the American flag, and where they had a right to be. Killing against the law with deliberation is murder, and Germany has been guilty of murder of 200 of our fellow-citizens, innocent of any offense, national or international.

Now, what is our duty under these circumstances? The Constitution of the United States is interpreted by the Supreme Court to say the duty of the citizens of the United States is to render allegiance, to do service, to pay taxes, and support the Government, and the corresponding duty of the United States

as a Government is to protect the rights of citizens of the United States at home and abroad. Because one citizen of the United States puts himself under the lawful jurisdiction of another country, the absolute right of protection is qualified by his voluntary submission to another jurisdiction. The necessity for protection is not entirely taken away, but it is qualified. When a man is on an American deck and under the American flag, a citizen of the United States, he is as much entitled to protection from the unlawful invasion of a foreign power as if he stood on the soil of the United States.

In view, therefore, of the murder of these 200 citizens and of the announcement of a policy to continue these murders, what alternative was there left open other than a declaration of war to the United States? Suppose this had been Guatemala which had sunk one of our vessels and had sent ten of our sailors to the bottom? How many hours do you think it would be before the President and the Secretary of the Navy would send a battleship down to Guatemala and be thundering at the ports of that republic and demanding restitution, demanding a promise of conduct hereafter, demanding damages for what had been done, and on failure to answer promptly, to begin a bombardment? Even pacifists would have justified that.

Difficult Situations

Now, what is the difference between that situation and this? None? Yes. A very great difference. The nation that has done this is the greatest military nation in the world. It is a nation with which, if we engage, we are likely to lose, it may be, a million men, and all that to resent the sacrifice of only 200 souls. That, it is said, is a trivial discrepancy. Is it? It is if you look at it from a grossly material and mathematical standpoint, but it is not if you understand what it means to consent to the murder of 200 of our citizens because there is a powerful nation you have to meet and overcome in order to vindicate the rights of our citizens. It means submission to the domination of another

power; it means giving up the independence for which we fought in 1776 and which we made sacrifices to maintain in 1861.

There was great criticism of the Administration because we did not immediately act as we now have acted. I am not going into the pros and cons of that discussion. It suffices to say that the self-restraint, the deliberation, the tolerance, if you choose, which characterized that policy, has had this great and good effect. It has shown to the world, and it has shown to our people that in entering this war we have done it with the utmost reluctance, and in entering the war we are entirely void of offense. It has shown that we have been forced in and that the situation has been such that no self-respecting nation, no nation which appreciates what a government is formed for, could avoid doing what we are doing when the rights of our citizens, the preservation of which is the chief object of government, have been defiantly violated by a power that rests for its right upon might.

Why We Are in War

That is why we are in. There are many of us who think, "for my country, right or wrong; may she always be right, but always for my country." I do not care to discuss that philosophy, but I do think it important we should realize and take it home to our souls we do not need that kind of philosophy in fighting out the fight we are to fight now. In 1776 we were fighting for our own independence and the development of our future. In 1861 we tried to eliminate that living lie in the Declaration of Independence, which declared that "all men are born free and equal." It took us four years of a terrible struggle to demonstrate to the world what had been doubted. We demonstrated to the world that we could make sacrifices of lives and treasure for the maintenance of a moral principle and the integrity of the nation. We showed in the words of Lincoln, that "the rule of the people should not perish from the earth."

And then we went on, and increased from 30,000,000 to 100,000,000 people, and we created a material expansion

which has given us greater wealth than any other country. We have had comfort and luxury. Now the question was when this issue came on whether in that change from 30,000,000 to 100,000,000, from comparative wealth to great wealth, we had lost the moral spirit we had before shown, we had become so enervated by our success that we felt it was not wise to risk the lives of those dear to us, to risk the destruction that war must bring in order to assert our rights. Now we have stepped to the forefront of nations, and they look to us.

Before we came into this fight Russia had become a democracy, and we find ourselves fighting shoulder to shoulder with the democracies of the world. We find arrayed against us the military dynasties of the world, Germany, Austria, and Turkey. Of course, people say England has a King; so has Italy and other countries that are fighting on our side. A democracy is a country ruled by the people. The King of England and the King of Italy haven't any more influence over the policies of their country than an ex-President.

Form Not Our Business

The issue at present is drawn between the democracies of the world and the military dynasties, and people like to characterize that as the issue. It is and it isn't. What I mean by that is: The United States is not a knight-errant country going about to independent people and saying, "We do not like your form of government, we have tried our own popular government and we think it is better for you to take it, and you have got to take it." That is a very unreasonable position, in so far as that form of government deals with only their domestic pursuits and their domestic happiness. If they like to have a Czar, if they prefer it, why, it isn't for us to take away their freedom of will. Otherwise we shall go back to the logic of the Inquisition, when they burned people in this world so that they might not burn in the next.

But when their form of government involves a policy which does not confine its opinions to the people who make the government or support it, but becomes a

visible policy against the welfare and happiness of the rest of the world family, we have a right and a duty, standing with other nations as we do, to see to it that such a foreign policy is stopped and stamped out forever.

I will not minimize or confuse. Germany is not exhausted. That machine which it has been creating for fifty years is a wonderful machine. * * * It did not interfere with Austria until Austria showed some signs of coming into a conference, and then it said to Austria, "This is the time to strike." It had been creating this force for fifty years, and now seemed the time to make it most effective. * * *

This militarism is a cancer which must be cut out by a surgical operation. It shows its malignant character in the utter disregard of the rules of war. It shows itself in the violation of Belgium, in the policy of frightfulness in order to subjugate Belgium; in the violation of The Hague treaties, which forbid the dropping of explosives out of aerial craft, the planting of mines, the use of asphyxiating gases and flames, all spread out in The Hague treaties, and all violated promptly by this German military machine.

It is therefore a cancer which would absorb the wholesome life of the world unless it is cut out, and necessitates suffering and pain in ridding the world of it. There are other evidences of divine plan. Think of the battle of the Marne, where this matchless machine began to find France and England unprepared, and they turned at the Marne when the German hosts with their guns were heard in Paris, and by mere moral force they turned these German legions back. Think of the blindness of this absorption of gross materialism as brought into the intellect of the Germans.

Don't Understand Others

They cannot understand other people. They cannot recognize a moral force that binds people together in a cause. They said England will not stand by Belgium; it has trouble with Ireland; they said France is torn with Socialism and it is a decadent nation. In both cases they made

blunders. They said as regards Canada, Australia, New Zealand, and South Africa, England has no control over them by force; they are far removed from it and will follow the path of materialism and gain; they will follow where profit determines; they will not be held. And yet, nothing has been grander than this light bond which unites England with these independent dependencies, and they have rallied to the support of the mother country, responded out of gratitude for the liberty that it had conferred upon them, and they have made sacrifices which call for our profound admiration. Think of it. Canada has furnished upward of 400,000 men. Nearly every home in English Canada is mourning—their best and most beloved. If we furnish as many men as they have for this war our armies will reach 6,500,000 men.

If our contributions to the Red Cross, Y. M. C. A., and other voluntary individual contributions, in addition to taxes, reach the figures which they have in Canada, we shall contribute \$14 to \$15 per capita.

My friends, those are the mistakes or blunders that Germany has made, self-imposed or imposed by a definite rule that when you subject yourself to grossly material considerations you lose the higher mental and spiritual forces which enable you to conquer in the end.

Now, the last blunder of all. In its determination to depend upon the devilish

ingenuity of science in the development of war, the Germans said: "We can starve England out with this submarine." When it saw us it said, "There is a tango-loving nation, too fat to fight, too lazy to go into the trenches," and they have deliberately forced us into the ranks of their enemies. Think of it. They have been fighting for nearly three years. The exhaustion that has come to them has had no comparison in history. The war must be determined by the weight of wealth and resources and the courageous men which can be gathered together to fight it out and be sure of a victorious battle in the end. And yet, in the face of that fact, we should impress on them that they deliberately forced into the ranks of their enemies the nation which can furnish more wealth, more resources, more equipment, and more men than any other nation in the world.

My friends, we are going to make these sacrifices. We do not know what they are yet, and we shall not know until we see the bulletins. The English people watched the bulletins for May and saw a loss of 114,000 in the British Army; 26,000 privates killed and 16,000 officers killed in action; 76,000 privates wounded, and 3,600 officers wounded and 7,000 missing. When we watch a report like this, then it will come home to us in our souls and we shall understand the sacrifice we have to make.

Wartime Life in European Capitals

Vienna—June, 1917

By a Viennese Sojourner at Berne

VIENNA hears little of the actual fighting. The city is full of people who seem bent on enjoyment, the cafés—where conversation about the war is taboo—are full of people from morning till night, the restaurants, where everything except bread and potatoes can be obtained, if one's purse is long enough, are crowded; the opera and the theatres have nearly every seat booked in advance and the cinemas are filled at every performance. In the fashionable streets of the city one cannot help remarking the extraordinary number of officers of all ranks and of both services, who appear to have no other duties than to make themselves agreeable to ladies. Both morning and afternoon the pavements are so crowded that progress is a matter of the utmost difficulty. On all sides are fine shops full of the latest fashions which find purchasers even at the prevailing exorbitant prices. Everything is up to date and of the best, but only within the reach of the rich.

If one makes inquiries below the surface, however, one finds that housekeeping, even on the most modest scale, is almost an impossibility, owing to the difficulty of obtaining supplies. The rich solve this difficulty by giving up all idea of catering for themselves and going to a good restaurant for most of their meals, but to those of moderate or small income the food problem is an ever-increasing anxiety. The question is no longer "What shall I buy?" but "What can I buy?" for it is impossible to procure many articles which were formerly regarded as necessities.

No longer can a customer, unless he can afford to pay a fancy price, choose a piece of meat; he must be thankful for anything he can get. Bread is not to be bought except with a bread card at a particular shop in the district in which the purchaser dwells, and very often he cannot get bread at all. The supply of potatoes is limited to one pound per person

weekly, but for some weeks recently there were none on the market. Milk is so scarce that no person can have more than about one-fifth of a pint daily. Such things as coffee, butter, fat, macaroni, rice, petroleum, soap, and leather are not to be bought. Cards are the order of the day—bread cards, fat cards, sugar cards, coffee cards—indeed, meat is about the only article of food for which a card is not necessary. This is because it was found that the demand for meat was not increasing, presumably on account of its prohibitive price. But as one Viennese plaintively remarked to my informant: "What earthly use are the cards to me if I cannot procure the articles to which they are supposed to entitle me?"

The shops are full of substitutes and prices have gone up enormously—in many cases as much as 300 or 400 per cent. A pair of men's boots of medium quality costs 85 kroner, (at pre-war rates, \$17.50), a lounge suit 300 kroner (\$62.50) and more; a small box of sardines 4.50 kroner, (90 cents.) Meat ranges from 6 kroner (\$1.25) to 14 kroner (\$2.75) per kilogram, (2.2 lbs.) Danish butter is 14 kroner per kilogram, and one candle (candle size) costs 70 or 80 hellers, (16 cents.) Cheese costs 5 kroner (\$1.04) to 7 kroner (\$1.37) per kilogram, and everything else is in proportion.

The poor people are not noticeable in the streets. They are only heard of by chance, as it were, and their distress and privations during the last Winter, owing to the scarcity of coal and coke and the price of food, were the cause of numerous deaths from "hunger-typhus." Attempts are now being made to relieve their wants and cheap meat is being supplied to the really needy; but however cheap this meat may be, it is not of much use if the money is not forthcoming to pay for it.

In the country life is strenuous. The villages and small towns are peopled by

old men, women, and children, for every man and youth capable of holding a weapon has been drafted into the army. Day in and day out, from early dawn till late in the evening, the entire population of a village may be seen working on the land trying to raise a crop sufficient for their needs during the coming year, after a very large portion of the harvest has been commandeered by the Government to feed the army—and Vienna. Even in peace time the peasant lives frugally, but now he has to be content with his piece of black bread, which he soaks in his substitute for coffee, and his knödel, (a kind of dumpling,) and he may consider himself very fortunate if he can add eggs from his own fowls and potatoes from his own patch of ground. Meat he very seldom tastes, as he cannot afford to buy it, and he has also to do without many articles, as they are unobtainable in the shops.

Hopes for Peace

The attitude of the people toward the war may be described as one of total indifference—except in regard to its duration. The only desire of the people is for peace, “no matter who wins.” For some

little time there have been persistent rumors that Austria was about to make a separate peace. Indeed, the Burgomaster of Vienna has spoken very openly and freely about the desirability of peace. Letters received from Vienna have spoken of peace almost as a *fait accompli*. If Austria could shake off German influence and get good terms she would make peace tomorrow, but as she knows that she would be obliged to give up so much of her territory she is obliged to continue the fight, in the hope that something may turn up. As an Austrian soldier friend of my informant expressed it: “We are beginning to realize that all along we have been the tool of Germany, and whether we win or lose we shall have to pay, and pay dearly.”

From the press it is most difficult to gather anything about the real state of affairs except as regards parliamentary reform, which is being kept in the foreground and dangled before the eyes of the people to prevent them from dwelling upon more important matters. Every paper is carefully censored and papers frequently appear with a column or more blank; it is not an unknown thing for a number not to appear at all.

Paris—July, 1917

[BY A CORRESPONDENT OF THE NEW YORK WORLD.]

The complete list of things regulated in Paris is as follows:

Bread—May be sold not less than twelve hours after it leaves the baker's oven; must be of uniform “standard loaf” shape, all kinds of rolls being forbidden; must contain not more than 85 per cent. of wheat flour.

Meat—May not be sold or consumed in restaurants on Mondays and Tuesdays, with the exception of horse, donkey, or mule meat, which, however, may be bought only in butcher shops and not in restaurants.

Sugar—May be sold only upon presentation of a card issued by the municipal authority, which permits the purchase of not more than 750 grams per person per month.

Pastry—May be made only of rice flour and may not be sold on Tuesdays and

Wednesdays, on which days all pastry shops, tearooms, candy stores, &c., must be closed.

Coal, Gas, Transportation

Coal—Stocks in excess of one ton must be declared by all householders to the municipal authority; persons whose homes are not supplied with gas for heating and cooking are granted priority in the purchase of coal, to an extent, however, not exceeding eighty pounds per month. (Coal cards are soon to be introduced.)

Spirits—Alcohol, turpentine, gasoline, &c., may be purchased only by municipal card, to the extent of not more than two liters per month per household.

Gas and Electricity—Consumption in any household reduced by Government decree to about two-thirds of the amount consumed by the same household in November of 1913 or November of 1915.

Railroad Transportation—Trains greatly reduced in number, safe conducts for railroad travel issued only for journeys made necessary by business, health, or family reasons; each passenger limited to sixty pounds of personal baggage, except commercial travelers, who may carry up to 400 pounds by special license.

Paris Subway—Closed between 10 P. M. and 5:15 A. M., except on Thursdays, Saturdays, and Sundays, when trains run till 11:15 P. M.

Automobile Taxicabs—Reduced in number to a maximum of 5,974, of which, however, not more than 2,500 are in operation at any given hour. (There were 8,000 constantly in operation before the war.)

Automobiles in General—Are limited to a maximum consumption of forty liters of gasoline per vehicle per week.

Street Car and Bus Lines—Are in operation daily only from 6 A. M. to 10 P. M. (Only two bus lines are operating on the pre-war scale.)

Must Keep to Earth

Aviation and Ballooning—Are strictly forbidden to private individuals.

Telegrams and Cables—Are accepted for transmission only after the sender has verified his identity by passports, &c.; must not be in code; must be in French except as regards messages abroad, which may be couched in French, Italian, or English, and are subject to censorship.

Letters—Are subject to censorship, and may be received at the general delivery without verification of the recipient's identity by passports, &c. Price of postage in France has been increased to 3 cents.

Telephone Communication—Is restricted to local and a few suburban exchanges. Long-distance calls are prohibited throughout France.

Wireless Telegraphy—May be used only by the Government.

Stores—Must be closed at 7 P. M. daily, except grocery and provision establishments.

Importation and Exportation of Merchandise—Regulated by a series of restrictions decreed by the Government. In principle all imports are forbidden, but

there are numerous exceptions to this law.

Firearms—May not be sold, and gunsmiths must keep a register to show to the police at monthly intervals.

Two Non-Bathing Days

Bathing Establishments—Are closed Mondays and Tuesdays.

Museums—Are closed with the exception of a few rooms in the Louvre and Luxembourg.

Theatrical, Musical, and Motion Picture Performances—Are subject to censorship by the Prefect of Police.

Advertising Matter—Must be submitted to the same authority.

Newspapers—Are subject to the military censorship; may not publish more than one edition daily or be cried by newsdealers; are restricted in size according to the form in which they appear. (Great newspapers like *Le Matin* and *Le Temps* print only one sheet four days a week.)

Photography—Is forbidden in the zone of the armies, and subject to local restrictions elsewhere.

Theatres and Concert Halls—Are permitted to give only seven evening and two matinée performances, or vice versa, and must close at 11 P. M.

No Evening Clothes

Evening Clothes and Decolleté Frocks—May not be worn at theatres or restaurants or in other public places.

Cafés and Restaurants—Must be closed at 9:30 P. M.; may not sell spirituous liquors to soldiers at any time, and to civilians before 11 A. M.; may not have orchestras.

Dancing—Is forbidden both in public places and in the home.

Games of Chance—Are not tolerated even in the fashionable clubs.

Hunting—Is forbidden except in regions where, on the responsibility of the local Government authority, a general authorization to destroy overabundant game during a specified period is issued.

Horse Racing—Is prohibited, with the exception of a few rarely authorized semi-public "trials" of thoroughbreds at which betting is not permitted.

Fairs—Save certain semi-public bazaars held for the benefit of war charities, are forbidden.

Stock Exchange Transactions in Futures—Are prohibited, except for the liquidation of contracts entered upon before the war.

Gold—May not be dealt in commercially and may not be taken out of France.

Personal liberty is restricted by numerous regulations. France is divided into three zones—of the army, of the interior, and of the frontiers. For all of them passports and municipal identification papers (*permis de séjour*) are required; for the zone of the armies one must also have a special safe conduct issued by the Great General Staff, and for the frontier

zone a safe conduct issued by the Ministry of War. Motoring from one community to another is forbidden except in cases considered exceptional by the Government. To enter or leave France foreigners are obliged to carry passports countersigned by a French Consulate in the country from which they have come or by a Consulate in France of the country to which they are going, and in addition to all the papers mentioned above they are now required to obtain a special identity card, application for which must be made immediately.

Less than half these restrictive measures were put into effect at the time of mobilization, and all those controlling food consumption are less than six months old.

Berlin—June, 1917

[By F. Sefton Delmer, an Australian, English Lecturer at Berlin University from 1901 to 1914; interned at Ruhleben from November, 1914, to March, 1915; resident at Berlin until May, 1917.—In *The London Times*.]

The Germans were enthusiastic for the war only so long as they were convinced that it was going to pay a tangible, material dividend. As long as it promised to be a big scoop of other nations' wealth they were for it, heart and soul, peer and peasant, Socialist and Junker. Let this never be forgotten. Their enthusiasm waned as soon as success began to look doubtful. Their doubts will turn into execration from the moment they recognize that defeat is inevitable. The last of these three stages has not yet been reached, but they are well on in the second.

It was in the days immediately following Rumania's entrance into the war that their confidence reached its lowest ebb. It was about this time that the criticism of the Emperor and his family and his policy became positively bitter—so bitter as to alarm his Majesty not a little. The Rumanian débâcle saved the situation, and the offer of peace clinched it.

When the limelight-loving Kaiser stepped forward as the protagonist of peace it was a clever move with a double object. It aimed at throwing dust in the eyes of pacifists abroad in order to pro-

mote dissension in the ranks of the Allies, and at the same time it was meant to convince the malcontents at home that they were the victims not of the German Emperor's own criminal policy, but of "that wicked England and its accomplices."

Jeers at the Kaiser

When I remarked to the intelligent old Portierfrau of a house in the aristocratic Tiergarten quarter that I had seen the Kaiser a few days before and that he was looking very well, "Ach, der!" (Oh, he!) said the old lady. "I daresay he does, but he wouldn't look so well by a long chalk if he only knew what folk around here are thinking and saying about him. And he thought he was going to beat the English! He, indeed!"

Any one who knows German will no longer recognize the Germany in which the contemptuous demonstrative pronoun "der" can be used of his Imperial Majesty. That in itself is almost a revolution. No; the common people and, what is more, the common soldiers have not the faintest trace left of enthusiasm for the war. "Ach, Gott, wenn man nur das Ende absehen könnte," (If one only knew when and how it's all going to end,) they sigh. You hear the same song wherever you go: at the Boerse, in the banks, in the shops, and in the queues.

At the police station, where I had to report myself daily, I often exchanged a few words with the man whose duty it was to stamp my paper. He used to ask me about once a fortnight when I thought the war was coming to an end, and to give an oracular answer each time rather taxed my supply of commonplaces. With some people who asked this question I usually fell back on the reply of the Scotsman to his German prisoner: "I canna say positevely; but I think the fur-st three year-rs'll see the wur-rst of it." On another occasion, when I modestly disclaimed all powers of second sight, the man, a furniture dealer, would not take "I haven't the faintest idea" for an answer. "Oh, you must know, all right," he said, "for you're an Englishman."

Just before I came away, however, the *Möwe* films were shown, and they were, from many points of view, well worth seeing. From a German standpoint they are undoubtedly a gross mistake, for, in their grim realism, they bring home to the beholder the wholesale and wanton destruction of peaceful merchantmen and lead the imagination to conceive the unspeakable horrors of the U-boat war, horrors which the Germans, as a whole, have not yet grasped. One sees on these films, which take exactly one hour to show, steamers and sailing ships brought up, one sees the torpedo strike the ship, and the noble vessel, as in agony, struggle, writhe, fill, and sink.

The effect on the spectators was the very reverse of what the military authorities wished to produce. Far from being exhilarated, the public seemed depressed by the sight of what they felt to be cold-blooded murder of unarmed ships. "Schrecklich! Schrecklich!" (Frightful!) they whisper, as if it is just beginning to dawn on them why that other more terrible and cowardly form of hostilities, the U-boat war, has made the German name so detested throughout the civilized world.

On one of the pictures one sees the Captain of the Brecknockshire after his ship has sunk, standing on the bridge of the *Möwe* beside Graf Dohna, the German commander. The latter had made

some joke at which the British Captain, as was intended, had felt constrained to laugh, although he had just seen his ship sunk, but his heart was breaking. The chivalrous German newspapers sneer at his heartlessness. "This is an English dschentleman," they say, "laughing as he watches his ship go down!"

Hidden Casualties

In spite of all the Germans' twisting of facts, and all their skill in making the worse appear the better reason, they really do not believe they are winning. None of them has, it is true, any idea of their actual losses in the field. Vague estimates are current. I take the one that is going the rounds as being most symptomatic. Among the officials at the Deutsche Bank a report was recently in circulation estimating Germany's losses alone at 1,800,000 men killed up to the end of March, 1917. A civilian in a high official position, who was present at the discussion, contradicted this, saying that he believed this estimate to be too low by at least half a million.

But no official totals are published. The long sheets of casualties are still pasted up on the polished granite of the Kriegsakademie (Staff College) in Berlin, but one no longer sees the groups of weeping women and eager searchers that were constantly standing there in the early stages of the war. The authorities now have more expeditious private ways of informing the relatives.

In spite of their doubts about victory, and of their distrust of and resentment at the methods their own Government has adopted toward them, there is no sign that the Germans will yield till they are at their last gasp. I have, however, myself heard certain members of the Roman Catholic Centre Party in the Reichstag say that they did not see how either Germany or its enemies could possibly hold out till Christmas. Any such discouraging statements when made by less privileged individuals than members of Parliament are liable to be regarded as treasonable, and a reward of £150 is promised to any one who can bring any propagator of such rumors to book. Police proclamations to this effect adorn the advertisement pillars in the streets.

This public incitement to private denunciation has produced a reign of terror. "Nobody is safe in even the most confidential conversation," I heard a university student say. This new regulation has certainly had the effect of muzzling conversation between all but the closest of friends.

Even their idol Hindenburg now comes in for criticism. He has the reputation of being a man who boasts of never having read any books except those written on military subjects, nor have I ever seen or heard of a single statement of his that betrayed anything more than a mediocre mind. Nevertheless, among the Reventlow party Hindenburg is still a fetiche.

Hindenburg or no Hindenburg, both soldiers and officers are heartily sick of the war in general and the western front in particular, from which officers are known regularly to head their letters home with the words, "Noch am Leben," (Still alive.)

And that, I think, expresses the state of Germany regarded as a whole. "In spite of everything, we're still alive!"

The well-paid munition workers excite the envy of the rest of the working classes. "These munition workers, who are getting handsome pay and all sorts of extra food, even sausage and fat, are the last who have reason to strike," says the ordinary workman.

The munition workers' strike in Berlin in the middle of April was brought about by the proclamation of a smaller bread ticket. The strike had practically no political inspiration, and was soon nipped in the bud. The authorities, fearing a new outbreak on May 1, liberally sprinkled policemen about on the bridges and at other strategic points of the town, much to their discomfort on that bleak east-wind day.

These strikes, as well as the riots at Magdeburg and Leipsic in March, seem to have been rather absurdly exaggerated in some English newspapers. As far as Berlin goes, not even a revolver shot was fired. All the talk about machine guns having been turned on the crowd is sheer moonshine.

The German Government put the people on bread rations at an early stage in the war. One after another, almost all

other foodstuffs had to be brought under the card system. Only at a comparatively late date, however, was the intimate connection between the supply of food for human being and the supply of fodder for stock recognized. The tardy recognition of the economic connection between food and fodder very nearly led to disaster. The Reichsfuttermittelstelle (Imperial Fodder Commission) is now of almost greater importance than the Reichsgetreidestelle, (Imperial Breadstuffs Commission.)

These two organizations are at present working out a great scheme for the formation of a monopoly of the fodder and breadstuffs produced in the whole of Germany. Up to the middle of May Bavaria was still half unwilling to throw in its lot with Northern Germany by joining in the proposed monopoly, but was showing signs of yielding to Prussia's cajolery.

Great battles were taking place behind the scenes when I left, as I know from private sources, as to whether the new organization of the breadstuff and fodder supplies of the whole German Empire was to be run on the lines of a great private monopoly or on State socialistic lines. Some big financiers were anxious for the former, while their opponents, following Adam Smith, (Yes! Adam Smith was quoted in the commission,) maintained that such a plan would spell depredation and hasten revolution. As far as I could understand, Dr. Michaelis was likely to decide in favor of the State socialistic form.

Wood for Food

In Germany there is at present in use a method secretly but every extensively practiced of obtaining a kind of flour from wood. This "flour" goes by the name of Holzmehl. It is a modification of the discovery of a Swedish savant, whose name I have forgotten. I saw a German translation of his book on the subject in the hands of the Director of the Fodder Commission.

This new wood-fodder is a sort of forlorn hope which the landowners have eagerly clutched at. The Russian forests in the occupied districts, I have heard, are being ruthlessly cut down and turned

into wood-meal. This wood-meal is intended primarily to serve as a cattle food. Of its nutritive properties I know nothing. They are said to be low. Bread is also made from it, and I have been told that it is given to the soldiers. I am more inclined to think that it is reserved as a delicacy for the prisoners' camps.

It will probably be an improvement on the war bread served out to us at Ruhleben in the Winter of 1914-15, which was made of all sorts of inferior ingredients and included flour made from straw. I remember yet the rasped, scratched feeling it produced in one's throat and digestive canal.

Constantinople—June, 1917

[By a correspondent who obtained this expression of views from an official who investigated conditions in Turkey.]

It is almost impossible to give a complete picture of present-day conditions in the Ottoman Empire, because even the most inquiring foreign resident in Turkey finds his efforts to obtain accurate information persistently balked. No diplomatist is allowed to leave Constantinople, except, of course, to return home; and communication between Ambassadors and Ministers there, and Consuls and Vice Consuls at Smyrna, Beirut, Damascus, and Jerusalem, are limited and extremely irregular. Only one non-Turk has succeeded in getting through from Smyrna to Constantinople for nearly a year. He turned up toward the end of last month, and told us that, thanks to the good feeling of the Turkish Governor there, Europeans and Americans have a very comfortable time. The British colony numbers about forty, and its members are technically supposed to be "interned." As a matter of fact, however, they are allowed complete liberty during the daytime, the only restriction being that they must be indoors before 10 o'clock each evening. The Englishmen there are nearly all representatives of large Lancashire and Yorkshire textile firms. They are greatly respected by the Turks, and bear up very bravely.

British Prisoners

British officers and men whom I have met in Turkey generally told me that they were well treated; and my own experience is similar, so far as the civilians are concerned. The internment of civilians, I admit, is frequently attended by serious hardships, but these arise from the general conditions existing in Turkey, and are not to be ascribed to cruel-

ty on the part of the Turks. I have known cases of poor Europeans who have had to walk with their jailers hundreds of miles across barren country to inland internment camps.

The peace sentiment is daily growing stronger throughout all classes, but it is folly to imagine that Turkey will ever take the initiative toward making a separate peace. I think, on the other hand, that sympathetic handling on the part of the allied powers might "detach" Turkey from her Teutonic masters.

Popular discontent in Constantinople is provoked by the food scarcity, and not by the loss of close on 500,000 square miles of Turkish territory and 5,000,000 Turkish subjects in Asia. I don't think the average poor Turk has any spirit left to grieve greatly over empire losses, but the authorities, who probably know their people better than I do, take no risks; and an organized attempt to conceal, or at least minimize, British success in Mesopotamia and Egypt is in operation. The fall of Bagdad has not yet been officially announced in Turkey, nor has any Turkish newspaper ever contained any reference to it.

The German Grip

The Germans are more unpopular than ever; but, curiously enough, their grip on the country is tighter than ever. The only tactful thing the Germans do is to conceal the outward manifestation of their authority. The story which constantly crops up about a German garrison of 60,000 men in Constantinople is false. At the most there are not 6,000; and these are kept discreetly concealed in a building outside the city. The crews of the Goeben and Breslau never come to Constantinople, and there are no German policemen in the city. Enver Pasha still

continues to be the dominant figure in Turkey.

This man is an enigma. He rules with a hand of iron; and those of his opponents who have escaped the summary process of hanging are so terrified and obsequious that the great man rules unperturbed. The misery and suffering of the masses of the people in Constantinople and the other large cities are very great; but I doubt whether, making allowance for the size of their respective populations, there is as much abject poverty as in London or New York. It must be admitted, however, that people do actually die of starvation in Constantinople. In spite of all German efforts to impose a "system" of food distribution upon Turkey, bread is the only article of food in which a partial Government monopoly has been established. Every Turk, rich or poor, is entitled to half a pound of bread daily for one penny. If his needs extend beyond this amount, he must buy "Trangola" bread, (a kind of luxury bread,) at 1s. 8d. per pound. The Europeans find the cost of living terribly high. Early this month, as I personally ascertained, tea cost £2, coffee 14s., and sugar 8s. per pound. The middle and upper classes, in spite of, or because of, the war, live a gay, feverish kind of life. The cafés, theatres, and cinema houses are crowded daily. Special cinema performances are given for the women.

New and Old Turkey

The Young Turk Government, it must be confessed, is doing its utmost to encourage the Turks to prepare themselves for the after-the-war economic struggle.

Elementary school teachers are excused military service, and new schools are springing up like mushrooms throughout the empire. The "right-for-women" movement is making astonishing progress. Let me quote the following instance, (one among many:) A great charity concert took place early last month in Constantinople, and a group of aristocratic "new" women determined to exercise their rights. They went together to the concert hall, only to find their entrance to it barred by two policemen. "There are men in there; you cannot enter," said the head policeman, in horrified tones. "We are going to enter. We've bought our tickets," said the spokeswoman of the group. "Impossible," said the policeman. "Telephone the Ministry of the Interior and see what the Minister says," cried the women. The policeman rang up the Ministry and received the laconic reply: "Let the ladies in." The "new" woman in Turkey had won another victory.

Side by side with the new movement are the old ways. I went recently to call upon the Grand Vizier and his wife. The latter ordered coffee, but in spite of repeated protests to the servants it was not until one hour and a half later that the coffee arrived. The Grand Vizier's wife is not "modern." She claps her hands to summon the servants, and does not touch an electric bell. The long delay before the coffee was served did not displease her. "You see," she explained, "that we Turks are not really suited to the rapid, go-ahead methods of the West."

New Order of Knighthood for Women in Great Britain

IN recognition of services that have been rendered both by British subjects and their allies in connection with the war the King has instituted two orders.

The first is an Order of Knighthood, to be styled "The Order of the British

Empire," and to be conferred for services rendered to the empire, whether at home or abroad. This order will follow, in most respects, the precedents of other orders of knighthood, but it will consist of five classes, and will be given to women as well as men. The first two

classes will, in the case of men, carry the honor of knighthood, and in the case of women the privilege of prefixing the title "Dame" to their names.

STAR WORN BY MEMBERS OF FIRST TWO CLASSES, ORDER OF THE BRITISH EMPIRE

The second order will be entitled the "Order of the Companions of Honour," and will consist of one class only, to which women will be eligible equally with men. The order will carry with it no title or precedence, and will be conferred upon a limited number of persons, for whom this distinction seems to be the most appropriate form of recognition, constituting, as it will, an honor dissociated either from the acceptance of title or the classification of merit.

Both orders, though created in connection with the war, will doubtless survive it.

The King appointed the Prince of Wales to be Grand Master of the order.

The five classes of the order are as follows:

Men.—1. Knights Grand Cross, (G. B. E.) 2. Knights Commanders, (K. B. E.) 3. Commanders, (C. B. E.) 4. Officers, (O. B. E.) 5. Members, (M. B. E.)

Women.—1. Dames Grand Cross, (G. B. E.) 2. Dames Commanders, (D. B. E.) 3. Commanders, (C. B. E.) 4. Officers, (O. B. E.) 5. Members, (M. B. E.)

The badge of the order, worn by the members of the first, second, and third classes, is a silver gilt cross, enameled pearl gray, in the centre of which, in a

BADGE, ORDER OF THE BRITISH EMPIRE

circle enameled crimson, is a representation of Britannia seated. The circle contains the motto of the order, "For God and the Empire."

The star, worn by members of the first two classes, is an eight-pointed silver star, the centre of which bears the same device as the badge.

The treatment of the badge for the fourth class is similar to that for the first, second, and third classes, except that it is smaller and is not enameled. In the case of the fifth class the badge is of silver instead of silver gilt.

As in the case of other orders, the members will have the privilege of placing the initials (above indicated) after their names.

Assassination of Austrian Premier

The Apologia of Dr. Adler an Important Utterance

DR. FRIEDRICH ADLER, who assassinated the Austrian Premier, Count Stürgkh, in October, 1916, was condemned to death for his act, but the Socialists of neutral countries and the radicals in Germany and Russia have petitioned that his life be spared. After the sentence was pronounced the condemned man turned to the spectators and shouted, "Long live international, revolutionary Social Democracy!" a cry that was loudly echoed from the crowded court and galleries, while women waved their handkerchiefs and the whole assembly, even including some individuals in the well of the court, enthusiastically applauded the prisoner. The President thereupon ordered the court to be cleared, and four people were arrested in the process, while other arrests were afterward made in the street.

Dr. Adler delivered an address after his trial which produced a profound impression. He protested emphatically against the attempt to represent him as not responsible for his actions. He had known beforehand, he said, that the "Government Socialists" of Austria and Germany would try to place that construction on his deed, and his counsel was naturally anxious to do the same, but the change that came over Austrian political life within only a few days of the assassination of Count Stürgkh was striking enough to compel some slight recognition even then that the deed was not that of a mere irresponsible.

He asserted that all constitutional rights had been suspended in Austria by the failure of the Premier to assemble the Reichsrat. He declared that the keynote to the situation in Austria and the explanation of his deed were that there was no authority left in Austria that could be considered constitutionally competent, and that Count Stürgkh had persistently suppressed the one institution which could have held him and his Cabi-

net to account, namely, the Reichsrat. What other way remained open then, he asked, of calling Ministers to account than the way they had themselves chosen, that of force? Years before, in November, 1898, Herr Hochenburger himself, (Count Stürgkh's Minister of Justice,) who was not in office then, declared in the Reichsrat on the subject of legislation by royal decree that any treading underfoot of justice in Austria would not go unpunished. "Herr Minister-President," he said at that time, "take care that you do not bring things to such a pass that you are made to learn that an aggravated people can create justice for itself, and that today still there is an emergency code of peoples." Yet it was this same Hochenburger, who, in conjunction with Count Stürgkh, promulgated on July 25, 1914, such a series of arbitrary decrees as proved that everything had been prepared long before the outbreak of war.

"Hochenburger and Stürgkh," said Dr. Adler, "deliberately planned this coup d'état, and for that reason the moral justification of my deed is complete for me as a citizen. The question at issue is not whether force is justifiable, but what is my individual position. In my opinion, every citizen is justified, if the law is trodden underfoot, in securing justice for himself. When a Government has placed itself outside the legal domain, every citizen is justified in holding it to account outside that domain also. Indeed, every citizen is not only justified in so doing, but is under an obligation so to do."

He objected to being classed as either a patriot or an anti-patriot. He had always held, he said, that the cause of socialism was a much greater thing than any temporary State organism, and that Socialists should not identify themselves too intimately with any one State, as certain of his former friends had now unfortunately done. Indeed, he declared,

it is only since the '70s that the ideal of the national State has taken root among even the bourgeoisie, which at the same time began to regard it, not as the nation, but as an economic unit. Everywhere before that date the intellectual bourgeoisie was not patriotic, but national, and the attitude of the German Austrians was then what that of the Czechs is today. Now, however, the bourgeoisie is interested in the maintenance as an economic unit not only of Austria, but of the whole Central European bloc—with the King of Prussia at its head, of course, and Austria subordinate to him. Its ideal, in fact, is no longer national independence, but national predominance and the foundation of an empire from Berlin to Bagdad. Many Social Democrats, Dr. Adler complained, had themselves been carried away by this development, but while, he observed, it was true in his own case that Austria played a part in his motives, it was not on account of her existence as a State, but as a moral unit. It was the Austrian character for which he was concerned.

"Already at school," he said, "it was clear to me that the greatest sin, the one which cannot be forgiven, is the sin against character; the sin that is customary in Austria. And if you wish to understand my deed and all that led to it, there must run like a red thread through all your considerations the recognition that it was a revolt, a protest against this sin against character which prevents any manly action in Austria. We are in a State which was once made (Roman) Catholic again by fire and sword at the time of the counter-reformation. We are in a State in which the convictions of men are despised, in which it is never recognized that the individual must act according to his convictions. It is the State of the Metternich doctrine which weighed down Austria before 1848, the State which has fettered free speech in order to create a slavish public opinion. * * * I have shown what Hohenburger said in 1898 and how he afterward acted as Minister. It is this abandonment of any loyalty to convictions, this complete lack of stability,

which has always filled me with the deepest hatred of Austria, not as a political unit, but as a moral one; of the Austrian character for untrustworthiness."

These traits, Dr. Adler continued, were to be found among all the nationalities of the monarchy, and they had penetrated his own party, a penetration against which his deed was a protest. He was not a fanatical purist, he declared, but he did hold that a man should be clear with himself as to the ground on which he stood, and he despised a party that allowed Austrian Germans to masquerade as Socialists. He denied, however, that he was isolated from the majority of his party except as concerned his final act, and maintained, indeed, that in the seven months that had since elapsed the world had in many respects come around to his standpoint and that much that was characterized as absurd then was now considered quite natural.

Internationalism, for instance, had become the very hope of the Austrian Government, and none were today more sought after by Count Czernin than the "revolutionists," to whom the Public Prosecutor had referred as being the speaker's associates, and who, as having a certain amount of influence in Russia, were to travel to Stockholm with the Government Socialists of Germany as "the commercial travelers of the Foreign Office." Austria's real greeting to the Stockholm conference, however, Dr. Adler observed, would be the sentence passed upon himself.

Proceeding to trace in detail the developments which led him to regard his party as having altogether forsaken the Socialist ideal and his attempts to persuade it of its mistake, Dr. Adler stated that he finally came to the conclusion that only by acting in opposition to the party leaders would it be possible to effect a real revolution in Austria, and that he must do what he could to pave the way for that revolution. That, he said, did not mean that he became an anarchist, or that he imagined he alone could set afoot a revolution. On the contrary, he had always held that the battle must be fought, not by individuals, but by the masses, and he had never believed that

the people would rise in his support. All he wanted to do was to prove to the people and the Government alike that revolutionary action in Austria was not a matter of impossibility, and thus to set the ball a-rolling. It was not his intention to introduce a new Socialist method of warfare, and in general he would deprecate such isolated deeds; but his own was an exceptional one, provoked by exceptional circumstances.

Dr. Adler proceeded to recount the special considerations that had weighed with him, and dealt in detail with the abuse of the censorship, the scandal of the political trials held during the war, and Count Stürgkh's determined attempt to establish permanently an absolutist régime, which eventually became so apparent as to be beyond all doubt, and finally determined the speaker to take forcible action. And at this point the latter was careful to point out that it was not against Count Stürgkh himself but against his system that the deed was directed. He had, he said, a certain respect for the former Premier, who contrasted favorably in his manly straightforwardness with many of his associates. Having consciously taken his stand on force, he had to be removed by force, but

the speaker reserved his contempt for those Austrians "who tolerated Stürgkh without attempting to defend themselves, and who by their behavior furnished the proof that every land has the Stürgkh it deserves."

Above all, Dr. Adler concluded, he was moved to his final act by the political situation at the moment. The fact that there seemed not the slightest prospect of peace affected him profoundly, and he thought hopelessly of what would happen at the Austrian Labor Congress that was to meet on Nov. 5, and of how he would again bring forward his motion for peace without annexations, and of how he would perhaps be able to count an increase of two or three in his following. In that way, he felt, he would never reach the masses; hence his choice of another weapon, which had proved effective in this, as in other respects. The resolution that was adopted on Nov. 5, said the speaker, was almost identical with my own, with the one that had always been rejected previously. My deed, therefore, had the result I anticipated. I have never regretted it since, and am convinced that it was profitable—that I did what had to be done to rescue the situation from the stagnation into which it had fallen.

The Armenian Tragedy

By Edmund Candler

[WRITTEN AT BAGDAD IN APRIL, 1917]

ONE of the best things that are being done in Bagdad is the salvage of Armenian women and children who have survived the massacres and who are now living in Mussulman families. These are being gathered into homes financed by the British Government, and their own community is looking after them.

I visited one of these institutions yesterday. The inmates were all young, many of marriageable age, and there were a great number of children under 6 who have already forgotten their language and their faith.

The bald statement of what they have

suffered and seen is a damning and unanswerable arraignment against the Turkish Government. The first girl I saw was a child of 10 from a village near Erzerum. She and her family had started on donkeys with a few of their belongings, but in three days the Kurds had left them nothing, and they had to walk. The Turks had issued a proclamation in all the villages that the Armenians were to be sent away to a colony that was being prepared for them, and that their property was to be kept under the care of the Government during the war and then restored. This was

(Copyright The New York Times Mid-Week Pictorial)

more than a year ago. The gendarmes were very pleasant to them in their homes, and told them that they were to be given new land to cultivate, and that their journey would not be long. The first assurance, as they guessed, was visionary. In the second the gendarmes did not lie.

For many of them it was all over on the third day. Two or three hundred of the men were separated from the women and killed at a distance, shot or cut down with the sword. After that the same thing happened nearly every day. The guards were very haphazard; there was no system. Some of the women were pushed into the river, others thrust over precipices. Twelve hundred left the two villages near Erzerum; 400 only reached Ras-el-Ain. The survivors were all women and children; there was not a man among them, or a child over the age of 9.

I met a refugee from the Kara-Hissar district who, with six companions, had been saved by some Armenian women he found established in a Bedouin camp. Eight hundred families in all had left Kara-Hissar. Half of these were capsize and drowned on Arab boats on the Euphrates. The survivors, when they reached Deir-ez-Zor, were placed in an internment camp. While here they approached the Mutesarraf, hoping to purchase their release. They offered him 3,000 liras. It was not enough. They made a second collection; every piastre they could raise was thrown into the pool. This time the sum was nearly 5,000 liras, and the Mutesarraf accepted the bribe on condition that they should sign a paper, "We, the Armenians of —, give this sum willingly to the Turkish Army." But it did not save them. The hated gendarmes accompanied them on the march, and nine miles from the city the massacre began. Sticks and stones and knives and daggers were employed, and a few merciful bullets. But, as always happens, the assassins tired of their work; even the physical part of it was exhausting, and the last act was postponed from day to day. In the end a tired gendarme gave them the hint to go. The night was dark, and the guard more

careless than usual, and the last remnants of the party, fifty-five in all, made their escape.

Another man I heard of was the sole survivor of a group of refugees who disappeared between Ras-el-Ain and Nisibin. They were taken into the desert and formed in line, as in a Chinese execution, to be dispatched with the sword. There was no shortage of ammunition, I was told, but the sword was employed for reasons of economy. While waiting for his turn, it occurred to the Armenian that a bullet would be an easier death. So he broke from the line. In the confusion the gendarmes missed him. It was almost dusk; he hid in the brushwood; by a miracle he escaped, and found his way to Bagdad.

The main features of the massacres are much the same. The emigrants, if they are not killed on the road, are taken to some depot, where they are kept a few days. Here they find a large camp of two or three thousand or more. Soon notice comes from Constantinople that the refugees of a certain district have been allotted land for cultivation, and they are told they must start on their journey again. This, they know, is probably the death sentence, but they nourish a thin hope. For the first half day they are generally safe, as murder on a large scale is deprecated near a town. Nobody, for instance, saw any one killed in Trebizond; but a few days after the Armenians had left the city their bodies came floating down the river. The desert is a non-conductor. What is done there leaves only vague rumor.

The refugees, though unarmed, sometimes turn on their guard. More than once the assassins have paid dearly. There is a woman in Bagdad who was one of a band of 200 or 300 Armenian women from the hills who held a pass near Urfa. Their men had been treacherously killed off earlier, and they knew that obedience to the proclamation of exile was as fatal as resistance. They held the pass with their rifles nearly a week, and the Turks had to bring up artillery. Some fifty of them escaped. The woman who is now in Bagdad was rescued

by a Turk of the better school, who respected her honor and on the journey treated her as his own daughter, though he failed to convert her to Islam.

Few Armenian women were so fortunate. Many were killed with as little scruple as the men. Plainness or good looks were fatal in different ways. The old and ugly died by violence or were starved; the young were taken into the families of the Turks. A traveler now

in Bagdad was given a letter by an official at Ras-el-Ain to deliver to the gendarme in charge on the road. "Choose a pretty one for me," he wrote, "and leave her in the village outside the town."

At Aleppo and Ras-el-Ain German officers stalked side by side with these spectres of famine and murder and death, and not a finger was raised or a word said.

Enormous Weight of Metal Hurlled by Artillery

THE weight of projectiles fired from the German 77-millimeter guns in the battle of the Somme in July, 1916, was more than 121,000 tons, or about equal to the combined weight of four superdreadnought battleships of the Pennsylvania type, the largest vessel of that class now in commission in the United States Navy. In an article dealing with the expenditure of ammunition in the Somme battles The Field Artillery Journal, published by the officers of the United States Army, says that in July there is reason to believe that the 77-millimeter guns in the German Army fired projectiles the total weight of which was 121,140.25 tons, or 242,280,500 pounds.

"That the expenditure of field artillery ammunition in the present war has been enormous and beyond any conception based upon previous experience is well known, but, like many other matters of importance," The Field Artillery Journal says, "exact data have not generally been available.

"The following data, taken from General Sixt von Arnim's report concerning the battle of the Somme, July, 1916, are extremely interesting in that they give the maximum expended in any one day of twenty-four hours and the average daily expenditure during the month of July, 1916.

"First—Maximum artillery ammunition expended in any one day of twenty-four hours:

	Rounds Per Gun.
77-mm. field gun.....	322
105-mm. field howitzer.....	479
150-mm. howitzer	233

Rounds Per Gun.

105-mm. gun	321
210-mm. mortar	116

"Second—Daily average during July, 1916:

Rounds Per Gun.

77-mm. field gun.....	145
105-mm. field howitzer.....	170
150-mm. howitzer	119
105-mm. gun	118
210-mm. mortar	51

"One field battery (howitzers) expended in one day 3,500 gas shells.

"The actual number of guns in action is not known. The best information gives a probable number of one field gun, exclusive of heavy types, for every twenty yards of front. The approximate frontage of the Somme battle was forty miles, so that the number of field guns engaged numbered in the vicinity of 3,500. Each gun fired 145 projectiles per day, or a total of 4,495 for the month, and the total fired becomes 15,732,500.

"The German 77-millimeter projectile weighs 7 kilograms, or 15.4 pounds, so that the total weight fired was 242,280,500 pounds, or 121,140.25 tons. The computed weight of the heavy artillery ammunition would probably more than double this amount."

It was announced by the British Ministry of Munitions that the British expenditure of shells of the calibre of six inches and upward during the first week of the offensive that opened near Arras on April 9, 1917, was nearly twice that of the first week of the Somme offensive, while the expenditure of such shells during the second week was six and one-half times that of the second week on the Somme.

General Haig's Official Report

Battles on the Ancre From Nov. 18, 1916, to
March 13, 1917

[Field Marshal Sir Douglas Haig, Commander in Chief of the British armies in France, on May 31 submitted his official report to the Secretary of State for War of the operations of the armies under his command during the period following Nov. 18, 1916, which is the end of the preceding report covering the period from May 19, 1916, to Nov. 15, 1916, as printed in CURRENT HISTORY MAGAZINE March, 1917, Pages 1114-1132.]

I.

General Headquarters,
British Armies in France,
May 31, 1917.

My Lord:

I have the honor to submit the following report on the operations of the British armies in France from the 18th of November, 1916, to the commencement of our present offensive.

Nature of Operations

(1) My plans for the Winter, already decided on at the opening of the period under review, were based on several considerations:

The enemy's strength had been considerably reduced by the severe and protracted struggle on the Somme battlefields, and so far as circumstances and the weather would permit it was most desirable to allow him no respite during the Winter.

With this object, although possibilities were limited by the state of the ground under Winter conditions, I considered it feasible to turn to good account the very favorable situation then existing in the region of the River Ancre as a result of the Somme battle.

Our operations prior to the 18th of November, 1916, had forced the enemy into a very pronounced salient in the area between the Ancre and the Scarpe Valleys, and had obtained for us greatly improved opportunities for observation over this salient. A comparatively short further advance would give us complete possession of the few points south of the Ancre to which the enemy still clung, and would enable us to gain entire command of the spur above Beaumont Hamel. Thereafter the configuration of the ground in the neighborhood of the Ancre Valley was such that every fresh advance would enfilade the enemy's positions and automatically open up to the observation of our troops some new part of his defense. Arrangements could, therefore, be made for sys-

tematic and deliberate attacks to be delivered on selected positions, to gain further observation for ourselves and deprive the enemy of that advantage. By these means the enemy's defenses would be continually outflanked, and we should be enabled to direct our massed artillery fire with such accuracy against his trenches and communications as to make his positions in the Ancre Valley exceedingly costly to maintain.

With the same object in view a number of minor enterprises and raids were planned to be carried out along the whole front of the British armies.

In addition to the operations outlined above, preparations for the resumption of a general offensive in the Spring had to be proceeded with in due course. In this connection, steps had to be taken to overcome the difficulties which a temporary lack of railway facilities would place in the way of completing our task within the allotted time. Provision had also to be made to cope with the effect of Winter conditions upon work and roads, a factor to which the prolonged frost at the commencement of the present year subsequently gave special prominence.

Another very important consideration was the training of the forces under my command. It was highly desirable that during the Winter the troops engaged in the recent prolonged fighting should be given an adequate period out of the line for training, rest, and refitting.

Certain modifications of my program in this respect eventually became necessary. To meet the wishes of our allies in connection with the plan of operations for the Spring of 1917, a gradual extension of the British front southward as far as a point opposite the town of Roye was decided on in January, and was completed without incident of importance by Feb. 26, 1917. This alteration entailed the maintenance by the British forces of an exceptionally active front of 110 miles, including the whole of the Somme battle front, and, combined with the continued activity maintained throughout the Winter, interfered to no small extent with my arrangements for reliefs. The training of the troops had, consequently, to be restricted to such limited opportunities as circumstances from time to time permitted.

The operations on the Ancre, however, as well as the minor enterprises and raids to which reference has been made, were carried out as intended. Besides gaining valuable position and observation by local attacks in the neighborhood of Bouchavesnes, Sailly-Saillisel, and Grandcourt, these raids and

minor enterprises were the means of inflicting heavy casualties on the enemy, and contributed very appreciably to the total of 5,284 prisoners taken from him in the period under review.

The Enemy's Position

(2) At the conclusion of the operations of the 13th of November and following days the enemy still held the whole of the Ancre Valley from Le Transloy to Grandcourt, and his first line of defense lay along the lower northern slopes of the Thiepval Ridge.

North of the Ancre he still held the greater part of the spur above Beaumont Hamel. Beyond that point the original German front line, in which the enemy had established himself two years previously, ran past Serre, Gommecourt, and Monchy-au-Bois to the northern slopes of the main watershed, and then northeast down to the valley of the River Scarpe east of Arras.

Besides the positions held by him on our immediate front, and in addition to the fortified villages of the Ancre Valley with their connecting trenches, the enemy had prepared along the forward crest of the ridge north of the Ancre Valley a strong second system of defense. This consisted of a double line of trenches, heavily wired, and ran northwest from Sailles past Le Transloy to the Albert-Bapaume road, where it turned west past Gréville and Loupart Wood and then northwest again past Achiet-le-Petit to Bucquoy. This system, which was known as the Le Transloy-Loupart line, both by reason of its situation and as a result of the skill and industry expended in its preparation, constituted an exceedingly strong natural defensive position, second only to that from which the enemy had recently been driven on the Morval-Thiepval Ridge. Parallel to this line, but on the far side of the crest, he had constructed toward the close of the past year a third defensive system on the line Rocquigny, Bapaume, Ablainzeville.

Operations Commenced

(3.) The first object of our operations in the Ancre Valley was to advance our trenches to within assaulting distance of the Le Transloy-Loupart line.

Accordingly, on Nov. 18, 1916, before the rapidly deteriorating condition of the ground had yet made an undertaking on so considerable a scale impossible, an attack was delivered against the next German line of defense, overlooking the villages of Pys and Grandcourt. Valuable positions were gained on a front of about 5,000 yards, while a simultaneous attack north of the Ancre considerably improved the situation of our troops in the Beaucourt Valley.

By this time Winter conditions had set in, and along a great part of our new front movement across the open had become practically impossible. During the remainder of the month, therefore, and throughout December, our energies were principally directed to

the improvement of our own trenches and of roads and communications behind them. At the same time the necessary rearrangement of our artillery was completed, so as to take full advantage of the opportunities afforded by our new positions for concentration of fire.

The Beaumont Hamel Spur

(4.) As soon as active operations again became possible, proceedings were commenced to drive the enemy from the remainder of the

BRITISH ADVANCE DURING THE ANCRE OFFENSIVE

Beaumont Hamel Spur. In January a number of small operations were carried out with this object, resulting in a progressive improvement of our position. Before the end of the month the whole of the high ground north and east of Beaumont Hamel was in our possession, we had pushed across the Beaucourt Valley 1,000 yards north of Beaucourt Village, and had gained a footing on the southern slopes of the spur to the east.

The most important of these attacks was undertaken at dawn on the morning of the 11th of January against a system of hostile trenches extending for some 1,500 yards along the crest of the spur east and north-east of Beaumont Hamel. By 8:30 A. M. all our objectives had been captured, together with over 200 prisoners. That afternoon an enemy counterattack was broken up by our artillery.

Throughout the whole of the month's fighting in this area, in which over 500 German prisoners were taken by us, our casualties were exceedingly light. This satisfactory circumstance can be attributed mainly to the close and skillful co-operation between our infantry and artillery, and to the excellence of our artillery preparation and barrages. These in turn were made possible by the opportunities for accurate observation afforded by the high ground north of Thiepval and by the fine work done by our aircraft.

Grandcourt

(5) Possession of the Beaumont Hamel Spur opened up a new and extensive field of action for our artillery. The whole of the Beaucourt Valley and the western slopes of the spur beyond from opposite Grandcourt to Serre now lay exposed to our fire. Operations were, therefore, at once commenced under the cover of our guns to clear the remainder of the valley south of the Serre Hill, and to push our line forward to the crest of the spur.

On the night of the 3d-4th of February an important German line of defense on the southern slopes of this spur, forming part of the enemy's original second-line system north of the Ancre, was captured by our troops on a front of about three-quarters of a mile. The enemy's resistance was stubborn and hard fighting took place, which lasted throughout the whole of the following day and night. During this period a number of determined counterattacks were beaten off by our infantry or dispersed by our artillery, and by the 5th of February we had gained the whole of our objectives. In this operation, in which the excellence of our artillery co-operation was very marked, we took 176 prisoners and four machine guns.

This success brought our front forward north of the Ancre to a point level with the centre of Grandcourt, and made the enemy's hold on his position in that village and in his more western defenses south of the river very precarious. It was not unexpected, therefore, when on the morning of the 6th of February our patrols reported that the last remaining portion of the old German second-line system south of the river, lying between Grandcourt and Stuff Redoubt, had been evacuated. The abandoned trenches were occupied by our troops the same morning.

Constant reconnoissances were sent out by us to keep touch with the enemy and to ascertain his movements and intentions. Grandcourt itself was next found to be clear of the enemy, and by 10 o'clock on the morning of the 7th of February was also in our possession. That night we carried Baillescourt Farm, about half way between Beaumont and Miraumont, capturing eighty-seven prisoners.

(6) The task of driving the enemy from his position in the Beaucourt Valley was re-

sumed on the night of Feb. 10-11. Our principal attack was directed against some 1,500 yards of a strong line of trenches, the western end of which was already in our possession, lying at the southern foot of the Serre Hill. Our infantry were formed up after dark, and at 8:30 P. M. advanced under our covering artillery barrage. After considerable fighting in the centre and toward the left of our attack, the whole of the trench line which formed our objective was gained, with the exception of two strong points which held out for a few days longer. At 5 A. M. a determined counterattack from the direction of Puisieux-au-Mont was beaten off by our artillery and machine-gun fire. Two other counterattacks on Feb. 11 and a third on Feb. 12 were equally unsuccessful.

The Advance Toward Miraumont

(7) The village of Serre now formed the point of a very pronounced salient, which our further progress along the Ancre Valley would render increasingly difficult, if not impossible, for the enemy to hold. Accordingly, an operation on a somewhat larger scale than anything hitherto attempted since the new year was now undertaken. Its object was to carry our line forward along the spur which runs northward from the main Morval-Thiepval Ridge about Courcellette, and so gain possession of the high ground at its northern extremity. The possession of this high ground, besides commanding the approaches to Pys and Miraumont from the south, would give observation over the upper valley of the Ancre, in which many hostile batteries were situated in positions enabling their fire to be directed for the defense of the Serre sector. At the same time arrangements were made for a smaller attack on the opposite bank of the river, designed to seize a portion of the Sunken Road lying along the eastern crest of the second spur north of the Ancre and so obtain control of the approaches to Miraumont from the west.

Our assault was delivered simultaneously on both banks of the Ancre at 5:45 A. M. on the 17th of February. The night was particularly dark, and thick mist and heavy conditions of the ground produced by the thaw that had just set in added to the difficulties with which our troops had to contend. The enemy was, moreover, on the alert, and commenced a heavy barrage some time before the hour of our assault, while our attacking battalions were still forming up. None the less, our troops advanced to the assault with great gallantry. On the left of our attack our artillery preparation had been assisted by observation from the positions already won on the right back of the Ancre. In consequence, our infantry were able to make a very considerable advance, and established themselves within a few hundred yards of Petit Miraumont. The right of our attack encountered more serious resistance, but here also valuable progress was made.

North of the Ancre our troops met with complete success. The whole of the position attacked, on a front of about half a mile, was secured without great difficulty, and an enemy counterattack during the morning was easily driven off.

Next day, at 11:30 A. M., the enemy delivered a second counterattack from the north with considerable forces, estimated at two battalions, upon our new positions north of the river. His advancing waves came under the concentrated fire of our artillery and machine guns while still some distance in front of our lines, and were driven back in disorder with exceedingly heavy losses.

Eleven officers and 588 other ranks were taken prisoners by us in these operations.

Miraumont and Serre Evacuated

(8) The ground gained by these two attacks and by minor operations carried out during the succeeding days gave us the observation we desired, as well as complete command over the German artillery positions in the upper Ancre Valley and over his defenses in and around Pys and Miraumont. The constant bombardment by our artillery, combined with the threat of an attack in which his troops would have been at great disadvantage, accordingly decided the enemy to abandon both villages. Our possession of Miraumont, however, gravely endangered the enemy's positions at Serre by opening up for us possibilities of a further advance northward, while the loss of Serre would speedily render Puisieux-au-Mont and Gommecourt equally difficult of defense. There was, therefore, good ground to expect that the evacuation of Pys and Miraumont would shortly be followed by a withdrawal on a more considerable scale. This, in fact, occurred.

On the 24th of February the enemy's positions before Pys, Miraumont, and Serre were found by our patrols to have been evacuated, and were occupied by our troops. Our patrols were then at once pushed forward, supported by strong infantry detachments, and by the evening of the 25th of February the enemy's first system of defense from north of Gueudecourt to west of Serre, and including Luisenhof Farm, Warlencourt-Eaucourt, Pys, Miraumont, Beaugard Dovecot, and Serre, had fallen into our hands. The enemy offered some opposition with machine guns at selected strong points in his line, and his artillery actively shelled the areas from which he had withdrawn; but the measures taken to deal with such tactics proved adequate, and the casualties inflicted on our troops were light.

The enemy's retirement at this juncture was greatly favored by the weather. The prolonged period of exceptional frost, following a wet Autumn, had frozen the ground to a great depth. When the thaw commenced in the third week of February the roads disintegrated by the frost broke up, the sides of trenches fell in, and the area across which

our troops had fought their way forward returned to a condition of slough and quagmire even worse than that of the previous Autumn. On the other hand, the condition of the roads and the surface of the ground behind the enemy steadily improved the further he withdrew from the scene of the fighting. He was also materially assisted by a succession of misty days, which greatly interfered with the work of our airplanes. Over such ground and in such conditions rapid pursuit was impossible. It is greatly to the credit of all ranks concerned that, in spite of all difficulties, constant touch was maintained with the enemy and that timely information was obtained of his movements.

Le Barque and Gommecourt

(9) Resistance of a more serious character was encountered in a strong secondary line of defense which, from a point in the Le Transloy-Loupard line due west of the village of Beaulencourt, crossed in front of Ligny-Thilloy and Le Barque to the southern defenses of Loupart Wood. Between Feb. 25 and March 2 a series of attacks were carried out against this line, and the enemy was gradually driven out of his positions. By the evening of the latter day the whole line of trenches and the villages of Le Barque, Ligny-Thilloy and Thilloy had in turn been captured. One hundred and twenty-eight prisoners and a number of trench mortars and machine guns were taken in this fighting, in the course of which the enemy made several vigorous but unsuccessful counterattacks.

Meanwhile, rapid progress had been made on the remainder of the front of our advance. On Feb. 27 the enemy's rear-guards in Puisieux-au-Mont were driven to their last positions of defense in the neighborhood of the church, and to the northwest of the village our front was extended to within a few hundred yards of Gommecourt. That evening our patrols entered Gommecourt Village and Park, following closely upon the retreating enemy, and by 10 P. M. Gommecourt and its defenses had been occupied. Next morning the capture of Puisieux-au-Mont was completed.

Irlès

(10) The enemy had, therefore, been driven back to the Le Transloy-Loupard line, except that he still held the village of Irlès, which formed a salient to his position and was linked up to it at Loupart Wood and Achiet-le-Petit by well constructed and well-wired trenches.

Accordingly, our next step was to take Irlès, as a preliminary to a larger undertaking against the Le Transloy-Loupard line itself; but before either operation could be attempted exceedingly heavy work had to be done in the improvement of roads and communications, and in bringing forward guns and ammunition. The following week was devoted to these very necessary tasks.

Meanwhile, operations were limited to small enterprises designed to keep in touch with the enemy and to establish forward posts which might assist in the forthcoming attack.

The assault on Irles and its defenses was delivered at 5:25 on the morning of March 10, and was completely successful. The whole of our objectives were captured, and in the village and the surrounding works 289 prisoners were taken, together with sixteen machine guns and four trench mortars. Our casualties were very light, being considerably less than the number of our prisoners.

The Loupart Line

(11) The way was now open for the main operation against the centre of the Le Trans-

loy-Loupart line, which throughout March 11 was heavily shelled by all kinds of our artillery. So effective was this bombardment that during the night of March 12-13 the enemy once more abandoned his positions, and fell back on the parallel system of defenses already referred to on the reverse side of the ridge. Gréville and Loupart Wood were thereupon occupied by our troops, and methodical preparations were at once begun for an attack on the enemy's next line of defense.

[THE SECOND SECTION OF THE REPORT COVERING THE GENERAL WITHDRAWAL OF THE GERMANS TO THE BEGINNING OF THE BRITISH OFFENSIVE APRIL 9, 1917, WILL APPEAR IN THE SEPTEMBER ISSUE OF CURRENT HISTORY MAGAZINE.]

Burial of German Prisoners

THE Swiss Minister in London, M. Carlin, transmitted to the Foreign Office under date of May 22 the following copy of a Note Verbale of the German Foreign Office, dated May 9:

The Daily Mirror, in their issue of Jan. 8 last, published under the heading "Hun Skeleton for Anatomy Class" a picture showing blind English soldiers receiving instructions in skeleton anatomy.

Beneath the picture was written, "Twelve months ago the skeleton was a living German."

The Foreign Office would be glad if the Swiss Legation would protest strongly to the British Government, pointing out at the same time that in Germany only the skeletons of convicts are made use of for such purposes. The German Government have a right to expect that German prisoners in England should be buried in a manner in accordance with the conceptions of civilized peoples regarding the respect due to the dead. This is still more so in the case of soldiers who, after bravely defending the land of their birth, have died in a foreign country; for the earthly remains of such men even their opponents ought to entertain feelings of sympathy and respect.

The reply of the Foreign Minister, dated June 6, is as follows:

The Secretary of State for Foreign Affairs presents his compliments to the Swiss Minister, and with reference to Monsieur Carlin's note No. 486 S.G. of May 22, transmitting a Note Verbale from the German Government relative to a photograph published with the description "Hun Skeleton for Anatomy Class," in The Daily Mirror of Jan. 8, 1917, together with the statement "Twelve months ago the skeleton was a living German," has the honor to request that the German Government may be informed as follows:

The German Government's protest is based on an inaccurate statement, as the photograph in question did not, as stated by The Daily Mirror, represent the skeleton of a German soldier, and a contradiction of the statement was published in the edition of the newspaper in question of Jan. 10, 1917, under the heading "Training Blind Soldiers."

The skeleton depicted in the photograph was purchased by the National Institute for the Blind before August, 1914.

The bodies of German prisoners who die when in British hands are invariably buried in a manner which is in full accord with the conceptions of civilized peoples regarding the respect due to the dead.

German Barbarities in France

Official Report of Illegal Treatment Inflicted Upon Inhabitants in Occupied Territory

The appended report, handed to Premier Ribot by a commission appointed to investigate acts of the enemy in violation of the law of nations, was published by the French Government in the *Journal Officiel* on June 1, 1917. The commission consisted of Georges Payelle, First President of the Court of Accounts; Armand Mollard, Minister Plenipotentiary; Georges Maringer, Counselor of State, and Edmond Paillot, Judge in the Court of Cassation. The complete text of the report has been translated for *CURRENT HISTORY MAGAZINE*.

SINCE April 12, [1917,] the date of our previous report, we have pursued our investigations in the portions of France recently freed from enemy occupation, and this further inquiry has only confirmed our conviction that all the violations of international law of which the Germans were guilty at the time of their departure were committed under general orders issued by the Supreme Command. In all the towns the same measures of unjust severity and cruelty toward individuals, the same methods of devastation and brigandage were employed simultaneously and in identical conditions. Everywhere the people were exploited and deported, the factories destroyed, houses demolished or burned, furniture stolen or smashed, trees cut down, wells contaminated, farm implements broken or carried away.

There is not a single locality where inhabitants of both sexes, from sixteen to sixty years of age, were not torn from their homes and sent into Germany or Northern France; sent with no more regard for the grief of their families than for the morality of the young girls thus subjected to the most disquieting dangers. The scenes caused by these deportations were so heartrending that the Germans themselves at times were moved by them. Thus at Nesle, whence 180 women or girls and 164 men were taken away on Feb. 17, 1917, an officer said that he "could not bear to watch their departure, because it was too sad a sight." It is true that all were not so sensitive, as the two following episodes prove:

At Douilly a young woman, who had given birth to a dead infant two days before, was forced to rise from her bed

and depart. As she passed, weeping, before the door of Mme. Wager, the latter, seeing that she was scarcely clothed, threw a shawl over her shoulders to protect her from the cold, and watched her depart with the certainty that the poor unfortunate would never come back.

One day in November, 1915, after the evacuation of a part of the population, a distracted woman came to the Town Hall of Chaunÿ; she was uttering cries of despair and tearing her hair, demanding the return of her daughter, a child of 15 years, who had been sent away she knew not where. The Mayor took her to Reserve Officer Bergschmidt, a Berlin lawyer, the local representative of the Kommandantur; but he drove her away, saying that she annoyed him and was disturbing everybody. Then, turning to the Municipal Magistrate, who was trying to move him, he cried: "Mr. Mayor, you know very well, as I have told you repeatedly, that the words 'pity' and 'humanity' are erased from the dictionary. I want it to be understood that you are not to annoy me further in these matters. That is clear, is it not?"

Slavery of Deported Victims

It would be impossible to overemphasize the profoundly outrageous character of these abominable practices, which are nothing else than the re-establishment, for Germany's profit, of the hardest and most revolting form of slavery. The "Notice Concerning the Columns of Civilian Workers," which was prepared by Column Commander Kugemann, (Form. 5 v. 28. 4. 16. ZAK,) and of which we possess a copy, surpasses anything imaginable in this regard. It contains long instructions, the principal ones being these:

General Considerations

The persons belonging to the column of civilian workers are employed in the construction of roads, in farm labor, and in tasks of other kinds. It is forbidden to make them work in the zone of operations, properly so called.

All workers of said column wear on the part of the left arm (sic) a red armlet firmly sewed on; the armlet contains on the outside a black A, which should be easily visible. Workers whose conduct is bad, or who have been punished for attempts to escape, wear the badge on both arms.

Duties of the Workers

The workers live together in places under guard. In exceptional cases permission to live outside the camp may be granted to aged workers whose conduct is particularly good, or who have voluntarily sought admission into the column of workers.

During their labors, and on the way to and from work, the men are guarded by soldiers. At the command of "Achtung!" ("Attention") given by the soldier in charge, the working gangs must, in passing before the officers, as a mark of respect take off their caps. The work that is ordered must be done with speed and good-will.

In case of insubordination or attempt to escape, the soldiers will, if occasion requires, use their weapons unsparingly.

Payment, Food, and Housing

Every workman receives a daily wage of 2.25 francs, (45 cents,) from which are deducted 1.50 francs for board and 25 centimes for clothes, or a total of 1.75 francs, (35 cents.) Of the remaining 50 centimes, 25 are paid on account, 25 go into the reserve fund. Every ten days each serious workman receives 2.50 francs, (50 cents.)

Those who are placed under arrest receive only bread and water; however, in case of moderate offenses, the complete rations are given every second day, and every third day in case of serious offenses. Workmen must furnish their own clothes, linen, and shoes. The administration undertakes only the mending and renewal of footwear and clothing worn out by work.

Punishments

The civilian workers are warned that in case of infraction of any nature whatever, and particularly when it is a matter of attempted escape, of disobedience, of insubordination, of theft, or deception, they can be punished by the ordinary police—if the German law does not provide heavier penalties—with imprisonment not exceeding three months, or with a fine not exceeding 1,000 marks, (\$250.) In case of an offense against a member of the German Army the delinquent will be tried before the War Council and may be sentenced to death.

Jail sentences, punishments for minor offenses, for serious offenses, prison to the extent of three months, and fines to a maximum amount of 1,000 marks may be inflicted by the local commandant of the place where the workers are housed. The imprisonment must be imposed in such manner that the man shall not be absent from his work, but shall be confined during other than his working hours. Besides, he shall not receive his pay for that period.

Workers whose attitude gives rise to continual complaints may be thrown into a separate section for discipline.

System of Draconian Laws

Thus all these free men, women, and girls, accustomed to family life, whom the Germans have carried away in crowds from the invaded regions in defiance of the most formal rules of international law, are compelled, under a system of pitiless servitude, to perform the hardest kinds of work for the enemy. At the mere will of a commandant the slightest infractions of the Draconian rules are punished with imprisonment that may run to three months, during which the victims, forced to work hard from morning to night, receive, two days out of every three, only a little bread and water as their sole nourishment.

If this is the treatment of the deported, that imposed upon the inhabitants who are not evacuated is scarcely more tolerable. A notable illustration of the fact is found in the following proclamation, which was posted up at Holnon (Aisne) on July 20, 1915:

All workmen and women and children of 15 years are required to labor in the fields every day, including Sunday, from 4 o'clock in the morning until 8 in the evening, (French time.) Recreation, half an hour in the morning, an hour at noon, and half an hour in the afternoon. Disobedience will be punished in the following manner:

1. Lazy workmen will be brought together during the harvest, along with the workmen in barracks, under the inspection of German Corporals. After the harvest the idlers will be imprisoned six months; on every third day the rations shall be only bread and water.

2. Lazy women will be exiled to Holnon to work. After the harvest the women will be imprisoned six months.

3. Idle children will be punished with blows of a stick.

Furthermore, the commandant reserves the right to punish lazy workmen with twenty blows of a stick every day.

The workmen of Vandelles Commune are punished severely.

[Signed] GLOSS,
Colonel and Commandant.

Other Tyrannous Edicts

Innumerable notices posted up by the enemy upon the walls of the invaded communities bear irrefutable witness to the harshness of the yoke that weighed upon our unfortunate fellow-countrymen and to the rigor and continuity of the requisitions levied upon them. In these posters will be found, formulated in the most imperative terms and with threats of punishment, the obligation to salute officers, to go without lights, and to keep all doors open during the night; also edicts forbidding the people to leave their homes at certain hours and orders compelling them to place everything, even to their garden products, at the disposal of the military authorities. One ordinance from General Commandant in Chief von Below, dated Oct. 1, 1915, appears to have been promulgated solely to give a semblance of legality to the most arbitrary executions. It will suffice here to reproduce the measure with which it ends:

In every commune a certain number of notables, whose names will be published, will answer *with their lives* for the safety of the railways in the territory tributary to the commune. Besides, every community in the territory belonging to a railway line that has been damaged or destroyed shall pay a contribution or suffer other punishment. In certain circumstances the whole town can be evacuated, the men taken to the prison camp and the rest of the population scattered to other localities.

These were not vain threats. On the remnant of a placard, the upper part of which has not been found—the whole was posted up at Amigny-Rouy (Aisne)—appears this notice:

5. Leon Oudard, farmer and Mayor of Floignes, because he did not immediately notify the nearest German authorities of the known presence of enemy soldiers.

In accordance with the sentence, the condemned were shot on the 3d of August, [or April,] 1916, at 5:45 o'clock in the morning.

[Here follows the mention of seven persons condemned to terms of imprisonment or reclusion.]

Because in the communes of La Vallée and Floignes a large proportion of the inhabitants doubtless had knowledge of the criminal conduct of the persons above named, one-

half of all the men of the communes of La Vallée and of Floignes are, besides, incorporated for the duration of the war in a section of workers.

[Signed] V. BOCKELBERG.

Wringing Money From Cities

Officer Bergschmidt told the Mayor of Chauny that the words pity and humanity were to be expunged from the dictionary. These, alas! are not the only expressions that have been eliminated from the German vocabulary. It is the same with all those which represent any idea of generosity or simple honesty, and the mind would refuse to admit, if not compelled by the evidence, that the army of a civilized nation could be guilty of such a frenzy of theft and fury of destruction. In all the invaded regions and during the whole period of occupation the municipalities have been scandalously exploited and the goods of private individuals continually pillaged.

In the beginning Nesle was struck with a forced contribution of 13,000 francs, and in the interval, before the sum could be produced, M. Obry, the assistant who was fulfilling the functions of Mayor, with two members of the Council and an owner of property, were imprisoned in a cellar for six hours. Later the city had to pay 3,000 francs because a few old suits of armor were found in an abandoned house, and 30,000 as the penalty for the discovery of three shotguns—for game—in the home of one of the residents.

In March, 1915, the authorities seized a great quantity of wheat at Nesle, which had been stored up in reserve for the needs of the population, and then compelled the Mayor to buy flour from them for cash. In the same year, after having exacted the expenditure of 6,896 francs for tilling and seeding, they seized the whole crop, and it was necessary to buy back a part of it to feed the horses. The municipality was compelled, besides, to enter into a consortium for the issuance of regional bonds. This measure was quite general, as we indicated in our previous report, and at Réthovillers, where it was not put into effect rapidly enough to suit the German authorities, an officer announced that if within an

hour the City Council did not meet and submit to the bond issue, the Mayor, the notables of the town, and their families would be arrested immediately and deported to Germany.

Looting and Destroying

At the end of their stay in Nesle the Germans, who had already indulged in many acts of pillage, finished the dismantling of the houses and carried on particularly fruitful operations in those occupied by the superior and general officers. In the church they carried away the pipes of the great organs, and after having broken the bells by throwing them out of the belfry they carried away the pieces. Dr. Braillon, 60 years old, who for four months had spent himself in caring for the enemy wounded, was arrested and transferred to Germany under a gross pretext. His wife had to give lodgings to the General Staff and the secretaries of the central telephone service. Before their departure her guests sacked the house, breaking the marbles and furniture, the windows and mirrors, ripping up the upholstered seats with a knife, cutting down ninety pear trees and as many feet of vines in the garden, and contaminating the well with manure. This task was attended to by the cook, the chauffeur, and the orderlies of the officers, with the aid of the secretaries. When Mme. Braillon protested against the destruction of the roofs of small buildings belonging to her home, a Lieutenant contented himself with replying: "It is the order!"

Everywhere, as we have many times repeated, incessant depredations were committed cynically. The number of broken safes that we have seen in the course of our investigations is unprecedented, and we have also found proof that the enemy had no scruples against theft, even from individuals. Many persons, in fact, were robbed of objects of value and of securities and cash which they carried on their persons. At Vraignes, notably, the Germans on the eve of departure searched many inhabitants of the neighboring villages after they had been herded into farmhouses and stables. They did the same at Tincourt,

where Mme. Vancopenolle, after having been ordered to undress, saw them carry away a rente bond representing 1,500 francs.

A Characteristic Theft

An old man at Roisel, M. Villain, was ruined by an important theft committed in characteristic circumstances. On March 4, at the time of the final evacuation of the inhabitants, he had been compelled to remain with the baker who furnished bread for the soldiers. At that time he owned 150,000 francs [\$30,000] in securities, and the enemy authorities knew it. On March 15 M. Villain was informed that he was wanted at the kommandantur. He went there and had to wait a long time; finally he was told that the chief could not receive him. When he got back to the bakery he found that the valise which contained his fortune, and which he had hidden under the covers of his bed, had disappeared.

He had noticed for several days that the Germans, as he said, had been hovering around his securities. Several times the secretaries of the kommandantur had come under thin pretexts to his quarters, and on the evening before the theft, after the departure of one who had stopped a considerable time near the door of the house, it was seen that the key of that door had been carried away. As early as the end of February an officer of the pioneers, calling at M. Villain's house, had laid hands upon the linen, the plate, and various other objects, and had sent them all, carefully wrapped, to the railway station. The owner was well aware that the most timid protest would have been not only useless but dangerous. A workman in Roisel, who had broken one of his own chairs in order not to see it carried away, had been imprisoned, and Mme. Boinet, for having expressed herself in a rather lively manner at the moment when they were taking away her piano, had been condemned to prison and to pay a fine of 200 marks.

In many places the commandants used still more summary methods to mulct the inhabitants and those driven from their homes. They simply ordered them to come and deposit their valuables. They

used this method notably at Mesnil-Saint-Nicaise and at Voyennes, where there were many victims; at Rouy-le-Petit, where the enemy gathered in 330,000 francs in securities; at Offoy, where the people had the prudence not to deliver any but insignificant papers, and at Nesle, where the Mayor flatly refused to transmit the order.

It is not without interest to add that at Vraignes and Nesle the Germans appropriated a part of the provisions furnished by the Spanish-American Food Commission.

Vast Destruction of Houses

In our report of April 12 we mentioned the total destruction of cities and villages by means of fire and explosives. We have found an appalling number of further cases of this sort. The method was applied in a systematic and general manner, and scarcely any place was spared except certain towns to which the enemy sent the populations from other localities; even there, sometimes, the Germans, on retiring, took pleasure in cannonading the unfortunates whom they had themselves assigned to those places. We have already told of the bombardment of Brouage, a suburb of Chauny; Rouy-le-Petit, where people from Douchy, Omissy, Matigny, Morcourt, Sancourt, and Viller-Saint-Christophe were herded together, suffered the same fate. On March 18, when the last unit had departed, the German artillery fired on the village before any allied soldier could reach there. Three persons were wounded; a little girl, a woman, and a man were killed.

Out of thirty-seven towns and villages in the Canton of Roye only three remain—Roye, Erchue, and Moyencourt; all the others were burned. In the Canton of Nesle sixteen communes were burned; Nesle, Languuevoisin, Rouy-le-Grand, Rouy-le-Petit, and Mesnil-Saint-Nicaise alone escaped the devastation. Finally, in the Canton of Ham, out of twenty-one towns there remain only Ham, Estouilly, Saint-Sulpice, and Eppeville. As we indicated above, the localities spared were places of asylum for the last inhabitants of the villages condemned to the flames.

As for the remnants of the population

in the Arrondissement of Péronne, the Germans gathered a part of them at Tincourt, at Vraignes, and at Bouvincourt, in a pitiable state of misery. Of the other inhabitants not a trace remains, but it seems already to be certain, from investigations which we are making, that as long ago as 1914 these people were the victims of frightful atrocities. At Vraignes two sections were burned, despite the presence of a great number of persons evacuated from the surrounding region. Many of these unfortunates, while houses were blazing around them, saw the illumination made by the flames of their own villages in the distance. The Germans had said, on the eve of their departure, to residents of Monchy-Lagache: "Look in the direction of Monchy tomorrow!" And the next day, indeed, Monchy was in flames.

Trying to Ruin the Region

Even in the places where the residences were not all annihilated, the enemy tried, with all the means in his power, to ruin the country; and everywhere he ravaged the factories. At Bernes and Hervilly, adjoining towns, there were two important sugar factories, one belonging to M. Busignies, the other to M. Carpeza. The soldiers blew up the buildings of both, having first pillaged them. All the destruction of property, moreover, was executed with implacable minuteness. In order to demolish houses the Germans first made excavations or cut long, narrow channels into the walls, intended to promote the crumbling of the building when the mine exploded. They did this at Roisel and Péronne.

This latter city was left in a lamentable condition. After the furniture had been carried away or broken, a great number of houses were blown up. Among the ruins we found slashed mattresses, bolsters that had been slit from end to end, baby carriages and sewing machines that had been deliberately smashed, cupboards that had been broken in, and safes, notably those of the Bank of France, which were shattered and empty. On one of the walls of the City Hall, which is almost entirely destroyed, was displayed a large wooden panel on which

was painted in large letters the inscription, "Nicht ärgern, nur wundern!" (Don't be annoyed, only astonished!) and we have seen and photographed an unexploded bomb fixed to a beam in the fallen roof of the monument; to the bomb were still attached the strings intended to set it off.

At Nesle, after compelling the residents of the suburbs to go into the middle of the town, the troops demolished the empty houses with axes. They also destroyed the gas factory, the Lesaffre distillery, the Evence Coppé factory for chemical products, and the Tabary malt-house.

At Offoy, two days before the retreat, they consigned all that remained of the population to one part of the village, with orders not to stir outside until after forty-eight hours. Then they blew up and set fire to the vacated quarter.

Belated Explosions

Bapaume has been completely devastated, and on March 25, at 11:30 in the evening, an explosion, certainly produced by a bomb with retarded action, blew the City Hall to pieces and caused the death of two members of Parliament, Messrs. Briquet and Tailliandier, Deputies from the Pas-de-Calais, who had installed themselves in that edifice for the night. This catastrophe at Bapaume is not the only one that has taken place since the departure of the enemy, for the latter, before turning back, sowed in the country which he was compelled to surrender a number of deadly snares set as well for the civilian population as for the allied soldiers. It was thus that the churches in Sapignies and Béthancourt were blown up, the first on the 18th, the second on the 22d of April, that is to say, more than a month after the German retreat.

The measures intended to destroy the fruit trees and render useless the wells have been generalized in all the regions we have visited. At Rouy-le-Petit the Germans, after trying to make the inhabitants themselves contaminate their wells with manure, compelled the children to do it. At Berne some time in February two soldiers, accompanied by

a petty officer, who called himself an architect, came to Mrs. Payen and asked whether she had provided herself with water, warning her that they were going to stop up the cistern with manure. One of the men added: "It is unfortunate to be obliged to do this." At Mesnil-Saint-Nicaise a German said to Mme. Wager, pointing to the well on the farm where she was interned after leaving Douilly: "Nicht drink! Colics!"

Text of Official Orders

The General Staff of the British Fifth Army has come into possession of an order given by the German commandant of outposts on March 14, 1917, in which this sentence occurs: "The detachment of the Sixth Cuirassiers will see to it that manure in sufficient quantities is placed in the wells." Another document entitled "Order Relating to Destruction," and bearing at the top the words "Streng geheim" (strictly secret) has also been communicated to us. We quote from Chapter III.:

The commandant of outposts will direct the destruction of the various localities. The final and complete destruction of Gréville, Biefvillers, Aubin, and Avesnes will begin at the hour of X+2. To provide the detachments for setting fire to houses each commandant in the sector will furnish two sub-officers and twenty men from the B battalions, and two stretcher bearers with litters. The destruction of Favreuil, Beugnatre, and Frémicourt will begin on the second day of the retirement at the hour of X+3. The destruction of Morchies will be executed in the morning of the third day of the retirement, at about 5 o'clock. * * * The destruction of Louverval, Boursies, Demicourt will begin on the third day of the retirement. For these operations the commandant of pioneers will arrange with the commandant of outposts of Division S, Sector III, Major von Uechtritz, at Doignies, in such manner that all the details of destruction not carried out under orders of the commandant of outposts shall be executed later by Division S.

The lighting of the incendiary fires shall be executed under command of the officers by the different detachments. The destruction of all wells is important.

THEDE (F. d. R.)

BAESSLER, Oberleutnant.

Through a dispatch emanating from the German Legation at Berne, Germany attempted, in view of the indignation aroused throughout the world by these latest crimes of her armies, to promul-

gate the idea that "the measures regretfully adopted by the commanders were limited to strict military necessities and had no other object than the defense and safety of their troops." In support of this statement Germany cited an Order of the Day, said to have been issued in the following terms on March 11, 1917, by a division General "operating in the region of Bapaume," and bearing no other signature than the initials V. O.:

The acts of destruction now in progress in the abandoned territory are intended to wipe out all war materials that would be useful to the enemy, the trees, and all structures in so far as they might serve the enemy artillery for a covering. Everything over and above this military aim should be avoided. I request all persons intrusted with this work to keep close watch and see that nothing is destroyed except what enters into this program, and to spare particularly the trees and plants around cemeteries and in gardens of little elevation, also all crosses.

If this Order of the Day is not apocryphal, it simply proves that among the enemy Generals there was one less brutal and inhuman than the others. In any case, it must be admitted that his orders were very poorly carried out.

At the Bar of Nations

The German Government appears to regard military interest as an excuse for everything; but is it not precisely to prevent those abuses for which this interest would be the pretext that there exists a public international law, and that conventions, which Germany herself has formally indorsed, have been enacted by the civilized nations? Was it, furthermore, in behalf of military interest that the enemy burned villages situated far from the highways, where their destruction could not retard the march of a pursuing force; that citizens and their wives and children were reduced to servitude; that their goods were stolen, their furniture destroyed, their wells poisoned, their farming implements broken, and fruit trees cut down or girdled by thousands so as to kill them slowly where they stand?

The truth is that the German High Command intended, in a mood of anger and hatred, to terrorize a defenseless population. Such was the mentality of

the chief officers from the beginning, and such it has remained. The deposition made before us by M. Fabre, President of the Chamber in the Paris Court of Appeals, gave us a striking proof of this. That Magistrate found himself with his family at Lassigny, county seat of the canton which he represents in the General Council of the Oise, when the first troops of General von Kluck arrived there. From Aug. 31, 1914, his property was occupied by officers of the General Staff. A superior officer, who spoke French well, at that time summoned him, as well as Mme. Fabre and the rest of the household, and said:

"You do not know the news, but I am going to tell it to you. You are beaten everywhere—in Alsace, in the east, in the north, at St. Quentin; your friends the Russians are annihilated; the British fleet no longer exists, the English troops are scattered. We are the masters. We mean to wipe France off the map. It must disappear. In three days we shall be at Paris; we shall take it; we shall carry away all its wealth, artistic and commercial; we shall pillage and devastate it; nothing but ashes and ruins will remain. Paris must no longer exist."

This harangue, which was to be repeated a few hours later, certainly reflected the thought of the great chief. When General von Kluck arrived, a little later, he was furious at finding the town almost deserted. In the presence of M. and Mme. Fabre he uttered terrible imprecations. "Curses upon the inhabitants who have left their homes!" he cried. "This village shall be punished; everything shall be pillaged, destroyed; nothing shall remain. We will it. Woe, woe to this wretched population!"

The Looting of Lassigny

These threats were soon to be put into effect. The next day, Sept. 1, 144 motor trucks arrived; the men in them scattered themselves through the town and gave it over to pillage; they carried off everything of any value, packed and crated the objects, placed them in the trucks, and ranged the vehicles in a row after having tilted them. All afternoon

there was an orgy of confusion; the horde killed the animals in the farmyards, shook the fruits from the trees, and carried into the public square great heaps of provisions. To cook their food and entertain themselves with bonfires they burned all the furniture that they disdained to carry away. Soldiers dressed out in old French uniforms or women's clothes paraded the streets, shouting, under the complacent eyes of officers.

After such scenes, how can one believe in the so-called humanitarian intentions of the enemy command, or in the scruples trumped up by the news dispatch from the Berne Legation? According to the text already cited, this Order of the Day pretended especially to direct the sparing of trees and plants around cemeteries; but it failed to order the soldiers to respect the graves themselves, for the sacred dwelling places of the dead have been many times violated. To the horrors of this nature related in our previous report, unhappily, many others must be added. The cemetery at Péronne was shamefully ravaged, and many tombs were profaned. At Hervilly five vaults were ransacked, and the altar in the funereal monument of the Paux family was broken. At Cartigny the Germans opened five vaults, each with a chapel above it, by tearing apart the stones. They did the same thing at Ronsoy, at Becquincourt, at Dompierre, at Bouvincourt, and at Herbécourt. At Nurly, Roisel, Bernes, they even broke

into coffins. In the inclosed ground serving as a private cemetery for the Rohan family at Manancourt they buried a great number of their soldiers, and, an inconceivable thing, established a kitchen in the interior of the Rohan mausoleum and latrines among their family tombs. In the crypt, where indescribable disorder reigns, almost all the compartments are empty. A child's coffin, taken from one of them, was stripped of its lead. A heavy leaden casket, half drawn from another compartment, bears on its lid marks of a chisel. A block of marble, in which is seen a small excavation, has been thrown among the débris; it bears the inscription: "Here rests the heart of Mme. Amélie de Musnier de Folleville, Countess of Boissy, who died at Paris, July 16, 1830, at the age of 32 years and 10 months."

To what motive should these monstrous profanations be attributed? Did the enemy hope to find valuables or gold placed by the families under the protection of the dead, or jewels in the coffins? It is noteworthy that the sepulchres of the rich suffered especially. Whatever the reason, the repetition of the same acts in so many cemeteries gives ground for affirming that the German chiefs at least tolerated these crimes, if they did not order them.

ARMAND MOLLARD.

G. MARINGER.

PAILLOT, Secretary.

The Resurrection of Devastated France

Fruit Trees Saved by Surgery

THREE months after the French armies had taken back from the Germans 1,000 square kilometers of French soil, blasted and devastated, they had worked such marvels in restoring the fields and orchards that press correspondents devoted enthusiastic articles to the transformation. One of these, an American, looking on the brighter side of the picture, wrote in the last week of May, 1917:

"To a person who passed through this district the day after the German hordes had departed, and who passes there today, the change almost exceeds human belief. It presents a miracle that only the genius of the French race and its painstaking industry could have performed. Nothing has been done to restore the ruined towns, villages, and farmhouses, but these now stand in the midst of fields of waving grain and blossoming

orchards. * * * One has the startling impression that those thousands of hewn-down trees have all grown up again. A close examination, however, shows what has really happened. The French soldiers, working under direction of the French Generals, who know other things than mere military operations, have found the means of saving a large proportion of the trees."

This miracle was worked especially upon those trees which the Germans had intended to destroy by cutting off a circle of bark around the trunk. With a few days' exposure to the sun, that treatment was sufficient to kill thousands of peach, plum, apple, apricot, and cherry trees that had been half a century attaining their full productiveness. These were saved by prompt "first aid." The wounds were merely bound up like the wounds of a soldier. The American correspondent already quoted has described the process:

"Thousands of army Surgeons and Red Cross ambulance drivers and stretcher carriers assisted in this work, so like, in many respects, their own. The circle where the bark had been cut away was first covered with a special grafting cement, and the entire wound then carefully bandaged up—often with the same bandages that had been prepared for human limbs.

"So great was the number of trees that had to be dressed in this way that the entire available supply of grafting preparation was quickly exhausted. Tar was then used as a substitute, and, finally, loamy clay. Substitutes for surgical bandages also had to be found, and in the end it was discovered that moss, twisted and tied about the dressed wound, was as effective as anything else.

"A much more serious problem, of course, presented itself where the trees had been entirely cut or sawed down. But here French genius also solved the problem. The stumps, protruding usually two or three feet from the ground, were first trimmed off in a scientific manner, so as to conserve the sap and prevent the death of the roots. This stump was then treated with grafting paste, and carefully bandaged, till the cut-down tree, lying

at the side, budded from the sap and life that remained in it. Branches that showed great numbers of buds and other signs of exceptional vitality were then cut off and finally grafted into the carefully prepared stump. Today these grafts are in full leaf and blossom; the roots appear to have been entirely saved by this process. Years have been saved in restoring the cut-down orchards of France."

A more conservative view is presented by an English correspondent, who estimates that in the territory recovered by a single French army the Germans had felled over 32,000 fruit trees. After stating that some of these have been saved by the methods indicated, he adds: "Unhappily, in the immense majority of cases, German malice has proved effective." The actual extent of the tree-rescue work lies somewhere between these two views.

Of the lands devastated by the Germans between Noyon and the Somme the zone covered by the French Army alone contained 243 evacuated villages and hamlets, not counting the communes recovered in the Soissons district or those in the British zone. The pursuing French Army found here a wretched population of 35,000 old men and women, mothers of large families, and children under 15. Twelve thousand, for whom it was impossible to find food or shelter, were removed to the interior of France, while the remainder stayed in their ruined villages and are endeavoring to restore life and prosperity to what had been one of the richest agricultural districts of France. Aided by the French Army and by American, French, and British civilians, they achieved wonders in the few weeks that still remained for planting and sowing.

The situation was that 250,000 acres of agricultural land which had once kept the whole region in prosperity had been neither plowed nor sown. There was one small exception. About 1 per cent. of the land had been sown with rye in September and October, before the enemy had fully made up his mind to retire. The work began at the end of March, and in less than two months over 6,000

acres had been plowed and over 3,500 acres sown. No draught animals of any kind had been left behind by the enemy, and almost all the agricultural implements had either been carried off or destroyed. The army, however, could supply horses, and miracles of ingenuity were displayed by the French officers in repairing and improvising the indispensable machines.

The French military authorities organized the whole project with wisdom and efficiency. First they concentrated their energies upon the vegetable gardens, and these were soon flourishing throughout the district, later giving large yields of potatoes, strawberries, and vegetables—enough to carry the local population until Winter. The army based its system on that adopted in the reconquered territory of Alsace. The recovered zone was divided into seven sectors, each under the command of a Lieutenant Colonel or Major. Each officer had under his orders a permanent staff, which included an agricultural expert, an architect, and about forty military engineers. This military organization is still working hand in hand with the civil organization, headed in each town by the Mayor, or, if he has been carried off by the Germans, then by a municipal councillor, who acts as intermediary between the army and the people. The results achieved have been surprising.

The first step was to supply food for the people, and this was done through the army commissariat. Horses for plowing were lent by the army, broken plows and harrows were repaired by motor mechanics of the army, seeds of all kinds were procured, and thirty American tractors found lying idle in a depot were put to work. Soldiers joined the meagre peasant contingent of laborers and toiled early and late to sow, cultivate, and gather the crops, counting all as part of their service for beloved France.

In the meantime houses are being repaired where possible, and temporary buildings erected where no habitation exists. Schools have been opened, military doctors attend the sick, a postal service has begun, and so far as possible life is being made endurable for the

thousands who suffered so much during the German occupation and virtually lost everything they possessed when the invaders departed.

The State, in providing the peasants with their immediate necessities as concerns seeds, animals, implements, and the like, has adopted the following system: One-fifth of the cost price is to be paid down by the beneficiary, while the remainder is to be set against the indemnity that he is to receive from the State as compensation for the damage that he has suffered through the war. On this principle army horses still capable of work in the fields, though past war work, are being sold in the district. Brood mares also are being sent there on certain conditions. In addition to State aid, the inhabitants are being helped by French, English, and American subscriptions. Baron Henri de Rothschild has centralized a part of the work and founded a store that has rendered invaluable services by supplying gratuitously all necessities.

Midsummer of 1917 finds at least a beginning made in the vast task of rebuilding the ruined towns, partly with American aid. Noyon has been "adopted" by the City of Washington and is being rebuilt by contributions from the people of that city. The American Fund for French Wounded has taken full charge of the hamlet of Behericourt, and the Comtesse de Chabrannes has undertaken to rebuild the hamlet of Maucourt, which the enemy reduced to a desolate heap of bricks and stones. The vastness of the task that remains, however, is indicated by the fact that fully a hundred towns and villages were as thoroughly destroyed as Maucourt.

In the picturesque mountain region of the Vosges is the village of Vitrimont, an earlier victim of German destructiveness, which Mrs. Crocker of California has chosen for a similar work of resurrection. Being too infirm to go abroad herself, she sent Miss Daisy Polk with an ample fund to rebuild a ruined town in the region designated. Miss Polk chose Vitrimont, a village in Lorraine that had been reduced to a mass of blackened stones during the fighting around Nancy.

The place was a desert when she began, but soon she found herself at the head of a small army of eager villagers, mostly old men and young women, who undertook the heaviest tasks of house building under her leadership. The Préfet of the department came and solemnly laid the first stone of the new village. Already a church and rows of attractive two-story houses have risen under the American magic. In an illustrated article on the subject in *Les Annales* an enthusiastic French writer says:

"The construction of Vitrimont constitutes an experience which deserves to found a school. The architect of the de-

partment, who is directing the work, intends to make of Vitrimont a model village. Houses, farms, public buildings, are being erected according to a plan which gives them a logical grouping.

"Mme. Crocker has devoted a first appropriation of \$20,000 to the resurrection of Vitrimont. Her ingenious charity seeks to avoid the form of alms and to render a real service. Half of her gift will remain the property of the commune, the other half is to be returned to her in annuities from the war indemnity which Vitrimont will receive when the imitators of the Huns will be compelled to pay for breakage."

Two Years Under the Germans

A Villager's Diary

SAVY is a little village three miles southwest of St. Quentin. A resident of Savy kept a diary throughout the years of German occupation, a simple document, such as any villager might write, but presenting a unique and truthful picture of what the people suffered under the heel of the invader. A correspondent of *The London Times*, writing from France, has summarized its contents in an interesting article.

The diary begins with occasional entries recording the outbreak of the war, the passing of English soldiers, and then, on Aug. 28, 1914, the news comes that the Germans are at St. Quentin. "At Savy nobody would believe it. However, it was only too true." The next day the first Germans appeared in Savy itself. They celebrated the day by looting a baker's shop and taking possession of the local tavern and drinking all the liquor.

Then began the real occupation, with continual and increasing requisitions, plunderings, limitations of the liberty of the residents, and punishments for minor offenses. People were fined or imprisoned for going out of the village into the wood without permission, for hiding oats or food in their houses or gardens, for not saluting German officers or not saluting properly, for giving oats to a

horse to eat, for plowing a field without permission, for resisting German soldiers who came to loot furniture without authority, for giving coffee to a French prisoner of war, and (the Mayor himself being the culprit in this case) for selling potatoes contrary to orders. When a man was imprisoned he got off his sentence after a few days by paying money.

Meanwhile, constant thieving went on by German soldiers, especially from out-houses, barns, &c., which the villagers, being obliged to be indoors after dusk, were powerless to prevent. Houses were looted and barns stripped of planks and whatever odds and ends seemed worth taking.

Then notice was formally posted giving the German soldiers the right to go into any garden and take vegetables as they pleased.

Besides money tribute, requisitions were made for innumerable articles, such as oats, corn, clover, eggs, potatoes, beans, straw, blankets, boards, tools, and especially wine, which was hunted for in every cellar and hiding place and drunk. Besides firearms, bicycles and blankets had to be given up. Individual houses were plundered of chairs, beds, stoves, bottles, casks, and so forth. Censuses were made at one time and another of

agricultural implements, fruit trees, fowls, wheelbarrows, all bronze articles, and sheep, besides horses, asses, and mules, of which the three last were all first vaccinated and then commandeered by installments. So with cows. By November, 1916, only three cows were left in Savy to give milk to the children and invalids, and on Feb. 9, 1917, even these last three were taken.

A census was taken of all walnut trees, then all were cut down and the wood carted away. The Germans sheared all the sheep and similarly sent away the wool. Russian prisoners were set to break up the stones of the local mill to prevent illicit grinding. People were forbidden to go into the wood to gather fuel, or glean in the harvest fields, or to set traps for game. Notices ordered all the people to be ready to work in the fields from 4 in the morning to 8 in the evening. Children were made to weed the crops. As the corn and oats were reaped the Germans took charge of it all. The people were ordered to pick all the fruit and turn it over to the authorities. Finally, all copper articles, including the bells of the church and the school, were taken off to Germany.

We hear of the brutal abusing of old men of 80 by German soldiers and of men being beaten with sticks for trivial offenses. Thus:

At the general census of horses at Holnon, the owners had to stand for six hours at their horses' heads. Henri Catry happened to be standing two yards away from his horse. A gendarme demanded "Is that your horse?" Henri replied, "Yes," and was beaten with a stick. When he protested, "Don't hit so hard," he was beaten even more severely. There was one, an old man, who was lying down in front of his horse. He was severely beaten by a gendarme. M. Datchy of Holnon saw an old man who had hardly strength to walk. Two Germans hit him continually with their sticks. The other communes were treated in the same brutal manner.

These random quotations, says the cor-

respondent, can give little of the impression created by reading the whole document, but they suffice to show the régime under which the people lived, a régime which grew steadily more severe. Then came the beginning of the end.

On June 29, 1916, we read: "Commencement of the German offensive, according to some; of the English offensive, according to others. For the last ten days at least there has been uninterrupted bombardment." For some days the bombardment continued, then on July 3 it ceased: "All is quite quiet." Though the people in Savy knew nothing of it, the British had made their great attack and were slowly at work breaking the German power on the slopes of the ridge toward Contalmaison and Mametz.

In November the Germans began to fill in the wells under the pretense that they were no longer wholesome, to destroy empty houses, and to carry all sorts of goods away. Just before Christmas the destruction of the fruit trees commenced and went on through the January frosts, when the Germans also pulled down the temporary huts which they had built for camp purposes. On Feb. 10 the Curé, doubtless with a hint of what was coming, turned over the sacred objects and vessels from the church to the Germans for safe keeping.

And then comes the last entry in the diary: "There is a rumor current that soon we are all going to be evacuated from our homes." They were evacuated to certain villages where the residents of the country round were concentrated before the Germans began in earnest their work of devastation, and by the middle of March the great retreat was in full swing. When the British reached the site of Savy in the early days of April the village was no more than a litter of dust and broken bricks. The torch and high explosives had done their work well before the Germans left the town.

Von Bissing's Plan to Annex Belgium

Pan-German Program Revealed

THE late Governor General of Belgium, Baron von Bissing, left at his death an extraordinary "political testament," which has finally reached the outside world through the columns of the *Hamburger Nachrichten* and the *Deutsche Tageszeitung*. As a frank and insistent statement of the Junker demand for the annexation of Belgium it must rank among the historic documents bearing upon the war aims of the Central Powers.

It begins with a long argument about the dire necessity and sacred duty of Germany to annex Belgium, insisting especially upon the military requirements of "the next war" and the value of the Belgian coal mines. Baron von Bissing protests against any thought of Germany's accepting "the Meuse line" and the fortresses of Liège and Namur, because the German frontier "must reach the sea." Coming to details, he reveals in the following passage the real intent underlying the talk about "the liberation of the Flemings":

We have among the Flemings many open, and very many still undeclared, friends, who are ready to join the great circle of German world interests. That will also be very important for the future policy of Holland. But, as soon as we remove our protecting hand, the Flemish movement will be branded by the Walloons and the Frenchlings (*Französlinge*) as pro-German, and will be completely suppressed. We must do everything without delay to repress boundless hopes on the part of the Flemings. Some of them dream of an independent State of Flanders, with a King to govern it, and of complete separation. It is true that we must protect the Flemish movement, but never must we lend a hand to make the Flemings completely independent. The Flemings, with their antagonistic attitude to the Walloons, will, as a Germanic tribe, constitute a strengthening of Germanism. But if we abandon part of Belgium, or if we make a part of it, such as the territory of Flanders, into an independent Flemish State, we are not only creating for ourselves considerable difficulties, but we are depriving ourselves of the considerable advantages and aids which can be afforded us only by Belgium as a whole and under German administration. If only on account of the necessary bases for our fleet, and in order not to cut off Ant-

werp from the Belgian trade area, it is necessary to have the adjacent hinterland.

Thus at the conclusion of peace we shall find opportunity after a century to make good the mistakes of the Vienna Congress. In 1871, by the annexation of Alsace-Lorraine, which Prussia even at the time of the Vienna Congress wanted to claim for herself, repaired the first of these mistakes. It is our business now to put aside reluctance and ideas of reconciliation, and not to fall into new mistakes.

Baron von Bissing goes on to argue that the annexation of Belgium is the only means of obtaining "the necessary respect" from England, and of saving the Germans from being regarded all over the world as weaklings. He says that it is also the only means of repairing the prestige of German diplomacy. He then deals with alleged German anxieties as to the danger of incorporating non-German territory, and proceeds to the following conclusions:

There is no prospect that we shall ever be able to conclude with the King of the Belgians and his Government a peace by which Belgium will remain in the German sphere of power, and it is impossible that the Quadruple Entente, over the heads of its allies, shall ever accept our peace demands with regard to Belgium. It only remains for us, therefore, to avoid during the peace negotiations all discussion about the form of the annexation and to apply nothing but the right of conquest.

It is true that dynastic considerations have an importance which is not to be underestimated. For, in view of our just and ruthless procedure, the King of the Belgians will be deposed, and will remain abroad as an aggrieved enemy. We must put up with that, and it is to be regarded almost as a happy circumstance that necessity compels us to leave dynastic considerations entirely out of account. A King will never voluntarily hand over his country to the conqueror, and Belgium's King can never consent to abandon his sovereignty or to allow it to be restricted. If he did so his prestige would be so undermined that he would have to be regarded not as a support, but as an obstacle, to German interests. On the most various occasions the English have described the right of conquest as the healthiest and simplest kind of right, and we can read in Machiavelli that he who desires to take possession of a country will be compelled to remove the King or Regent, even by killing him.

These are grave decisions, but they must be taken, for we are concerned with the welfare and the future of Germany, and concerned also with reparation for the war of destruction that has been directed against us.

Finally, Baron von Bissing demands that Belgium shall be kept under the present dictatorship after the peace, and discusses the comparative values of Belgium and the Belgian Congo. He says:

For years to come we must maintain the existing state of dictatorship. It is the only form of administration, based as it is upon military resources, which can be chosen, in order to gain time for the gradual and methodical building up of the most appropriate possible administration. The completion of the annexation will be regarded by many Flemings and by a great part of the Walloons as a release from uncertainty and from vain hopes. Both races will return to the life that will be rendered possible by renewed opportunities for trade and pleasure. The Walloons can, and must, decide, during this period of transition, whether they will adapt themselves to the definitely altered state of affairs, or whether they prefer to leave Belgium. He who remains in the country must declare his allegiance to Germany, and, after a fixed time, must declare his adoption of Germanism. * * *

Half measures and a middle course must be condemned most of all. Lack of determination in the decisive days of German fate will be a grave wrong to the blood that has been shed. Among such half measures I include the intention of treating Belgium merely as a pawn which might be used to recover or extend our colonial possessions. As regards the extension of our colonial possessions, the Belgian Congo comes especially into question. The possession of the Belgian Congo is certainly to be aimed at, and I desire to insist that a German colonial empire, whatever its shape, is indispensable for Germany's world policy and expansion of power. But, on the other hand, I am of the opinion that only such frontiers as will contribute to the acquisition of greater freedom on the sea are calculated to make colonial

possessions valuable. Consequently the supporters of the colonial movement must also demand the Belgian coast, together with the Belgian hinterland. If we give up the Belgian coast our fleet will lack important bases for its share in the protection of our colonial empire.

Vorwärts, the Berlin Socialist organ, published in May, 1917, an interchange of letters between Baron Gebsattel, a Pan-Germanist leader, and Chancellor von Bethmann Hollweg. On May 5 the Baron wrote to the Chancellor on behalf of the Executive Committee of the Pan-Germanist League protesting against the Government's too narrow view of the way in which the results of certain victory should be utilized. The Baron said that the soldiers might even overturn the monarchy itself if they returned from the war and found that all possible gains from their sacrifices had not been secured by the Government.

The Chancellor replied on May 13 with a letter in which he said:

Only after the complete defeat of all the enemies of Germany will the time be ripe for considering the Pan-Germanist war aims. For the moment, the interests of the country forbid a closer examination of these aims. The league has rendered great service to Germany by developing national sentiment and combating the idealism of those who dreamed of a fraternity of nations, but it is grotesquely lacking in political judgment.

The Chancellor added that the Baron's allusion to a possible revolution, if it had any foundation, was a condemnation of those who were stirring up a dangerous spirit among the people, and, if it had no foundation, then it was a threat betraying the desires of those who were using it to subjugate to their own will the responsible counselors chosen by the Kaiser.

Battle's Grim Realities at Ginchy

An Irish Officer's Realistic Account of One Day's Awful Experiences

Second Lieutenant Arthur C. Young of the Seventh Battalion, Royal Irish Fusiliers, a volunteer from Kobe, Japan, took part in the storming of Ginchy on the Somme front, Sept. 9, 1916, and wrote the subjoined letter to a relative in London shortly afterward. This remarkable narrative is here presented in its entirety, with the exception of a few personal references.

THE storming of Ginchy took place on Saturday last, Sept. 9. It had been taken once or twice before, I believe, (some say four times,) but even out here it is so difficult to get authentic news about things which are happening quite close to us that you will have to make allowances for my possible inaccuracies. Each time, however, it was recaptured by the Germans, for to them it was a most important stronghold, particularly from their artillery's point of view. A gunner officer told me why this was. You must remember that artillery fire is not very effective unless there is good observation, for atmospheric conditions affect shooting considerably. Now, the best sort of observation is that obtained from high ground in a forward position—it is better even than airplane or balloon observation, so I am told. Well, Ginchy was the last bit of high ground which the Germans held, and now that they have lost it, they are dependent on their less certain aerial observation, or, failing that, they must shoot by the map, which is no better than guesswork. Hence the vital importance to the Germans of Ginchy.

Try and picture in your mind's eye a fairly broad valley running more or less north and south. You must imagine that the Germans are somewhere over the further, or southern, crest. You are looking across the valley from the ruins of Guillemont. About half-right the further crest rises to a height crowned by a mass of wreckage and tangled trees. Well, that is Ginchy. The valley narrows somewhat and bends round this way to the right of Ginchy. Then it bends back again to its original line of direction,

and goes on, goodness knows where. At that point another valley branches off at right angles to the left, or southward, and leads up to Combles, which the French are investing.

At the point of the peninsula between this valley and that other one is Falfemont Farm, which is now in our possession, for we have driven the Germans well back along the flat top of the peninsula to some place beyond Leuze Wood, which is on the right of Ginchy as we face it from Guillemont. You can see the trees sticking up on the skyline. Now, if you look the other way, half-left, you will see the ruins of Delville Wood, which seems to start almost at the bottom of the broad valley and to go over the top of the slope beyond. Well, we hold that place too. In fact, we hold all the ground which you can see in front of you, except Ginchy, and that is what the Irish division is now going to storm at the point of the bayonet, if you have the patience to follow me.

I have conjured up some kind of scene in your mind—a framework, anyway. Now, to complete it, you must imagine that every square yard of ground, in front, behind, wherever you look, is churned up as if by some monster plow until barely one blade of green is left. Think what Hampstead Heath would look like if it were dug up in all directions into pits about ten feet deep and fifteen feet across—and you will have framed an image (I'm afraid a faint one only) of the awful scene of desolation which your eyes have to dwell upon for days at a time on the battlefield of the Somme.

Seeking a Habitable Trench

On the night previous to the taking of Ginchy my battalion had to take up a

position on the further slope of the valley. We were some distance in rear at the time, where the shells did not fall so plentifully. We had had nearly a week of it already, and a more horrible five days I have never passed in my life. We had been over the top from Falfemont Farm on the Tuesday, and had been thanked for our services in a special divisional order, but the price we had to pay for that feat of arms was a big one, as the casualty list printed by this time only too well shows.

I was sent out to find a habitable trench for my company. I found one near the spot indicated on the map. We moved in there at dusk. There is no proceeding to your sector through a long communication trench at the Somme. You just go over the top, skirting shell holes all the way. Nor is there any "taking over" in the sense in which that term is used in the more civilized regions further north, where the officer of the relieving company finds out the exact delimitations of his frontage, and takes an inventory of all stock in the way of ammunition, bombs, stores, &c. You don't do things on those lines here. The relieving company comes up at an unexpected hour, the commander reports himself to you, and asks you all sorts of questions which you answer to the best of your ability, and then you get your men together and make off, hell for leather. And the trenches are nothing like the elaborate affairs you meet with in the more settled parts of the line. They are just ditches and nothing else. There are no dugouts or shelters or fire bays or anything of that sort. Then, again, you don't always relieve another regiment in the same trench. You may prefer to go on a little bit in search of a more suitable one.

Driven Out by the Dead

Well, as I have just said, we moved into our trench north of Guillemont at dusk. We faced half-right, as it were, looking up the slope toward Ginchy. It was like being near the foot of Parliament Hill, with the village on top. Our right flank was down near the bottom of the valley; our left extended up to

the higher ground toward the ruins of Waterlot Farm. The trench was very shallow in places, where it had been knocked in by shellfire. I had chosen it as the only one suitable in the neighborhood, but it was a horrible place.

SCENE OF THE FIGHT FOR GINCHY

British dead were lying about everywhere. Our men had to give up digging in some places, because they came down to bodies which were buried there when the parapet blew in. The smell turned us sick. At last in desperation I went out to look for another trench, for I felt sure the Germans must have the range of the trench we were in, and that they would give us hell when dawn broke. To my joy I found that a very deep trench some distance back had just been vacated by another regiment, so we went in there.

The night was bitterly cold. I have felt hunger and thirst and fatigue out here to a degree I have never experienced them before, but those torments I can endure far better than I thought I could. But the cold—my word! It is dreadful. I suppose life in the Far East does not harden one's constitution against that torture. Many a night have I slept out in the open, in narrow, wet trenches, with the rain pouring down, and almost groaned with the agony of cold. If two can huddle together, you can get some

warmth, but the trenches are frequently too narrow for that. I think I feel the cold more than any one.

However, dawn broke at last. It was very misty. All night we had been trying to get into touch with the unit on our left, but without success. So the Captain sent me out with an orderly to see whether I could manage it. We two stumbled along, but the mist was so dense we could see nothing. We came to one trench after another, but not a living thing could we see—nothing but dead, British and German, some of them mangled beyond recognition. Bombs and rifles and equipment were lying all over the place, with here and there a great-coat, khaki or gray according to the nationality of their one-time owners, but of living beings we could see no sign whatsoever. There was a horrible stench in places which nearly turned our stomachs.

A Dangerous Reconnaissance

To make matters more wretched, we could not make sure of our direction, and were afraid of running into a German patrol, or even into a German trench, for such accidents are by no means uncommon in this region. However, we managed to find our way back and report that up to such and such a point on the map (approximately) there was no one on our left. The Captain was not content with this, so I went out again, this time with another officer. Having a compass on this second occasion, I felt far more self-confidence, and to our mutual satisfaction we discovered that the unit on our left was the right flank of an English division. Captain ——— was very bucked when we brought back this information. As the mist continued for some time afterward, we were able to light fires and make breakfast.

Now, I have forgotten to tell you that we were in reserve. The front line was some five or six hundred yards higher up the slope nearer Ginchy. We knew that a big attack was coming off that day, but did not think we should be called upon to take part. Accordingly, we settled down for the day, and most of the men slept. I felt quite at home, as I sat in the bottom of the deep trench, reading the papers I

had received the previous day from England. I went through *The Times* and was much interested in its Japan Supplement, for the memories it brought back of many happy days in Dai Nippon were vivid ones. I also read *The Nation* from cover to cover. At Falfemont Farm I had picked up a good copy of Burns's "Poems" in the Everyman Series, so I read "The Cottar's Saturday Night" and some other pieces. Mentally, in fact, I was living in quite another world, and it was only the occasional "cr-r-r-rump" of a Boche shell which brought me back to my senses and to the hideous reality of things.

"Over the Top"

It was about 4 o'clock in the afternoon when we first learned that we should have to take part in the attack on Ginchy. Now, you probably expect me to say at this point in my narrative that my heart leaped with joy at the news and that the men gave three rousing cheers, for that's the sort of thing you read in the papers. Well, I had been over the top once already that week, and knew what it was to see men dropping dead all around me, to see men blown to bits, to see men writhing in pain, to see men running round and round, gibbering, raving mad. Can you wonder, therefore, that I felt a sort of sickening dread of the horrors which I knew we should all have to go through? How the others felt I don't exactly know, but I don't think I am far wrong when I say that their emotions were not far different from mine. You read no end of twaddle in the papers at home about the spirit in which men go into action. You might almost think they reveled in the horror and the agony of it all. I saw one account of the battle of Ginchy in which the correspondent spoke of the men of a certain regiment in reserve as "almost crying with rage" because they couldn't take part in the show. All I can say is that I should like to see such superhuman beings. It is rubbish like this which makes thousands of people in England think that war is great sport. As a famous Yankee General said, "War is hell," and you have only got to be in the Somme one single day to know it. The man who says he

loves being in a charge is a liar, and an adjective liar at that.

But to get on with the story. We were ordered to move up into the front line to reinforce the Royal Irish Rifles. None of us knew for a certainty whether we were going over the top or not, but everything seemed to point that way. Guides were sent down by the Rifles to lead us up. We wended our way up slowly, keeping as much as possible to the trenches, which were so shallow that the deepest part of them did not conceal more than our waists, but they were something to duck into if we heard a shell coming. The bombardment was now intense. Our shells bursting in the village of Ginchy made it belch forth smoke like a volcano. The German shells were bursting on the slope in front of us. The noise was deafening. I turned to my servant O'Brein, who has always been a cheery, optimistic soul, and said, "Well, O'Brien, how do you think we'll fare?" and his answer was for once not encouraging. "We'll never come out alive, Sir!" was his reply. Happily, we both came out alive, but I never thought we should at the time.

Real Picture of a Charge

It was at this moment, just as we were debouching on to the scragged front line of trench, that we beheld a scene which stirred and thrilled us to the bottommost depths of our souls. The great charge of the Irish division had begun, and we had come up in the nick of time. Mere words must fail to convey anything like a true picture of the scene, but it is burned into the memory of all those who were there and saw it. Let me employ once more the simile of Parliament Hill. You are more than half way up it now. The flat top, where the village lies a heap of ruins, surrounded by a fence of shattered trees, is about 400 yards away. Between the outer fringe of Ginchy and the front line of our own trenches is No Man's Land—a wilderness of pits, so close together that you could ride astraddle the partitions between any two of them. As you look half-right, obliquely along No Man's Land, you behold a great host of yellow-coated men rise out of the earth and surge forward and upward in a tor-

rent—not in extended order, as you might expect, but in one mass—I almost said a compact mass. The only way I can describe the scene is to ask you to picture five or six columns of men marching up hill in fours, with about a hundred yards between each column. Now, conceive those columns being gradually disorganized, some men going off to the right and others to the left to avoid shell holes. There seems to be no end to them. Just when you think the flood is subsiding, another wave comes surging up the beach toward Ginchy.

We joined in on the left. There was no time for us any more than the others to get into extended order. We formed another stream converging on the others at the summit. By this time we were all wildly excited. Our shouts and yells alone must have struck terror into the Germans, who were firing their machine guns down the slope. But there was no wavering in the Irish host. We couldn't run. We advanced at a steady walking pace, stumbling here and there, but going ever onward and upward. That numbing dread had now left me completely. Like the others, I was intoxicated with the glory of it all. I can remember shouting and bawling to the men of my platoon, who were only too eager to go on. The German barrage had now been opened in earnest, and shells were falling here, there, and everywhere in No Man's Land. They were mostly dropping on our right, but they were coming nearer and nearer, as if a screen were being drawn across our front. I knew that it was a case of "now or never" and stumbled on feverishly. We managed to get through the barrage in the nick of time, for it closed behind us, and after that we had no shells to fear in front of us.

A Psychological Note

I mention, merely as an interesting fact in psychology, how in a crisis of this sort one's mental faculties are sharpened. Instinct told us when the shells were coming gradually closer to crouch down in the holes until they had passed. Acquired knowledge on the other hand—the knowledge instilled into one by lectures and books, (of which I have only read one, namely, Haking's "Company Training,")

—told us that it was safer in the long run to push ahead before the enemy got the range, and it was acquired knowledge that won. And here's another observation I should like to make by the way: I remember reading somewhere, I think it was in a book by Winston Churchill, that of the battle of Omdurman the writer could recollect nothing in the way of noise; he had an acute visual recollection of all that went on about him, but his aural recollection was nil; he could only recall the scene as if it were a cinematograph picture. Curiously, this was my own experience at Ginchy. The din must have been deafening, (I learned afterward that it could be heard miles away,) yet I have only a confused remembrance of it. Shells, which at any other time would have scared me out of my wits, I never so much as heard—not even when they were bursting quite close to me. One landed in the midst of a bunch of men about seventy yards away on my right; I have a most vivid recollection of seeing a tremendous burst of clay and earth go shooting up into the air—yes, and even parts of human bodies—and that when the smoke cleared away there was nothing left. I shall never forget that horrifying spectacle as long as I live, but I shall remember it as a sight only, for I can associate no sound with it.

Capture of the Trenches

How long we were in crossing No Man's Land I don't know. It could not have been more than five minutes, yet it seemed much longer. We were now well up to the Boche. We had to clamber over all manner of obstacles—fallen trees, beams, great mounds of brick and rubble—in fact, over the ruins of Ginchy. It seems like a nightmare to me now. I remember seeing comrades falling round me. My sense of hearing returned, for I became conscious of a new sound, namely, the pop, pop, pop of machine guns and the continuous crackling of rifle fire. I remember men lying in shell holes holding out their arms and beseeching water. I remember men crawling about and coughing up blood, as they searched round for some place in which they could shelter until help could reach them. By this time all units were mixed up. But they

were all Irishmen. They were cheering and cheering and cheering like mad. It was hell let loose. There was a machine gun playing on us near by, and we all made for it.

At this moment we caught our first sight of the Germans. They were in a trench of sorts, which ran in and out among the ruins. Some of them had their hands up. Others were kneeling and holding their arms out to us. Still others were running up and down the trench distractedly as if they didn't know which way to go, but as we got close they went down on their knees, too. To the everlasting good name of the Irish soldiery, not one of these Germans, some of whom had been engaged in slaughtering our men up to the very last moment, was killed. I did not see a single instance of a prisoner being shot or bayoneted. When you remember that our men were now worked up to a frenzy of excitement, this crowning act of mercy to their foes is surely to their eternal credit. They could feel pity even in their rage.

Only Two Officers Left

By this time we had penetrated the German front line, and were on the flat ground where the village once stood, surrounded by a wood of fairly high trees. There was no holding the men back. They rushed through Ginchy, driving the Germans before them. The German dead were lying everywhere, some of them having been frightfully mangled by our shellfire. As I was clambering out of the front trench, I felt a sudden stab in my right thigh. I thought I had got a "blighty," [a wound serious enough to send him back to Britain,] but found it was only a graze from a bullet, and so went on.

I managed to find my men without difficulty. They had rushed through the ruins of the village and were almost a hundred yards beyond the wood, where the ground dips down slightly into a shallow valley and mounts up gradually to a ridge about half a mile away. We were facing south here, having Delville Wood away to our left and Leuze Wood on our right. — and I were the only two officers left in the company, so it was up to us to take charge. There

were not more than half a dozen officers in this part of the line, and so we had a great deal of work to do. We could see the Germans hopping over the distant ridge like rabbits, and we had some difficulty in preventing our men from chasing them, for we had orders not to go too far.

We got them—Irish Fusiliers, Inniskillings, and Dublins—to dig in by linking up the shell craters, and though the men were tired, (some wanted to smoke and others to make tea,) they worked with a will, and before long we had got a pretty decent trench outlined.

Scenes Among Prisoners

While we were at work a number of Germans who had stopped behind, and were hiding in shell holes, commenced a bombing attack on our right. But they did not keep it up long, for they hoisted a white flag, (a handkerchief tied to a rifle,) as a sign of surrender. I should think we must have made about twenty prisoners. They were very frightened. Some of them bunked into a sunken road or cutting which ran straight out from the wood in a southerly direction, and huddled together, with hands upraised. They began to empty their pockets and hand out souvenirs—watches, compasses, cigars, penknives—to their captors, and even wanted to shake hands with us! There was no other officer about at the moment, so I had to find an escort to take the prisoners down. Among the prisoners was a tall, distinguished-looking man, and I asked him in my broken German whether he was an officer. "Ja! mein Herr!" was the answer I got. "Sprechen sie English?" "Ja!" "Good," I said, thankful that I didn't have to rack my brains for any more German words; "please tell your men that no harm will come to them if they follow you quietly." He turned round and addressed his men, who seemed to be very grateful that we were not going to kill them! I must say the officer behaved with real soldierly dignity, and, not to be outdone in politeness, I treated him with the same respect that he showed me. I gave him an escort for himself and told off three or four men for the remainder. I could not but rather admire his bearing, for he

did not show anything like the terror that his men did.

I heard afterward that when Captain —'s company rushed a trench more to our right, round the corner of the wood, a German officer surrendered in great style. He stood to attention, gave a clinking salute, and said in perfect English, "Sir, myself, this other officer, and ten men are your prisoners." Captain — said, "Right you are, old chap!" and they shook hands, the prisoners being led away immediately. So you see there are certain amenities which are observed even on the bloodiest of battlefields. I believe our prisoners were all Bavarians, who are better mannered from all accounts than the Prussians. They could thank their stars they had Irish chivalry to deal with.

There were a great many German dead and wounded in the sunken road. One of them was an officer. He was lying at the entrance to a dugout. He was waving his arms about. I went over and spoke to him. He could talk a little English. All he could say was, "Comrade, I die, I die." I asked him where he was hit and he said in the stomach. It was impossible to move him, for our stretcher bearers had not yet come up, so I got my servant to look for an overcoat to throw over him, as he was suffering terribly from the cold. Whether or not he survived the night I do not know.

After the Battle

Our line was now extended across the sunken road and beyond the corner of the wood to our right. Darkness was coming on. Airplanes were hovering overhead, and shortly afterward our shells began to form a barrage in front. The Germans had evidently rallied, for we could see a long line of them coming up on our right, evidently from the direction of Leuze Wood. Our machine guns opened fire. The counterattack was hung up, but the Germans must have dug themselves in for the night, for in the morning they gave us a good deal of trouble.

I could go on in this strain for a long time, but will cut the rest of the story short, for you must be weary of it. As briefly as possible, then, after the coun-

terattack had subsided, I was ordered to take my men and join up with the rest of the battalion on our right. There we spent the night in a trench. We must have been facing south. It was a miserable night we passed, for we were all very cold and thirsty. We had to keep digging. When morning broke it was very misty. We expected to be relieved at 2 in the morning, but the relief did not come till noon. Never shall I forget those hours of suspense. We were all hungry. The only food we could get was German black bread, which we picked up all over the place; also German tinned sausages and bully-beef. We had to lift up some of the dead to get at these things. Some of them had water bottles full of cold coffee, which we drank.

We all craved a smoke. Fortunately, the German haversacks were pretty well stocked with cigarettes and cigars. I got a handful of cigars off a dead German, and smoked them all morning. Also a tin of cigarettes. His chocolates also came in handy. Poor devil, he must have been a cheery soul when living, for he had a photograph of himself in his pocket, in a group with his wife and two children, and the picture made him look a jolly old sport. And here he was dead, with both legs missing! The trench (between ours and the wood) was stacked with dead. It was full of *débris*—bombs, shovels, and what not—and torn books, magazines, and newspapers. I came across a copy of Schiller's "*Wallenstein*."

Treatment of Wounded Germans

Hearing moans as I went along the trench, I looked into a shelter or hole dug in the side and found a young German. He could not move, as his legs were broken. He begged me to get him some water, so I hunted round and found a flask of cold coffee, which I held to his lips. He kept saying "*Danke, Kamerad, danke, danke*." However much you may hate the Germans when you are fighting them, you can only feel pity for them when you see them lying helpless and wounded on the ground. I saw this man afterward on his way to the dressing station. About ten yards further on was another German, minus a leg. He, too,

craved water, but I could get him none, though I looked everywhere. Our men were very good to the German wounded. An Irishman's heart melts very soon. In fact, kindness and compassion for the wounded, our own and the enemy's, is about the only decent thing I have seen in war. It is not at all uncommon to see a British and German soldier side by side in the same shell hole nursing each other as best they can and placidly smoking cigarettes. A poor wounded German who hobbled into our trench in the morning, his face badly mutilated by a bullet—he whimpered and moaned as piteously as a child—was bound up by one of our officers, who took off his coat and set to work in earnest. Another German, whose legs were hit, was carried in by our men and put into a shell hole for safety, where he lay awaiting the stretcher bearers when we left. It is with a sense of pride that I can write this of our soldiers.

There was a counterattack on our left in the morning, and for a few minutes the machine guns were very active, but the Germans were beaten off. At last we were relieved, and made our way back, behind Guillemont, to be taken out of the line. We spent one night in a camp and next day came on here. I am writing this in a picturesque French village. You can see green fields and trees and stacks of corn and cattle when you look through the window. Here, at all events, "*grim-visaged war* hath smoothed his wrinkled front." I am not alone in hoping that we shall not have to go back to that hellish place.

Well, now, that's the story of the great Irish charge at *Ginchy*, so far as I can tell it. I suppose by this time the great event has been forgotten by the English public. But it will never be forgotten by those who took part in it, for it is an event we shall remember with pride to the end of our days.

Need I tell you how proud we officers and men are of the Royal Irish Fusiliers who played as big a part as any in the storming of that stronghold, and who went into action shouting their old battle cry of "*Faugh-a-Ballagh*!"—"Clear the way!"

THE CALL TO ARMS

President's Proclamation of Conscription Law Creating the National Army of the United States

Whereas, Congress has enacted and the President has on the 18th day of May, one thousand nine hundred and seventeen, approved a law, which contains the following provisions:

SECTION 5.—That all male persons between the ages of 21 and 30, both inclusive, shall be subject to registration in accordance with regulations to be prescribed by the President: And upon proclamation by the President or other public notice given by him or by his direction stating the time and place of such registration it shall be the duty of all persons of the designated ages, except officers and enlisted men of the regular army, the navy, and the National Guard and Naval Militia while in the service of the United States, to present themselves for and submit to registration under the provisions of this act: And every such person shall be deemed to have notice of the requirements of this act upon the publication of said proclamation or other notice as aforesaid, given by the President or by his direction: And any person who shall willfully fail or refuse to present himself for registration or to submit thereto as herein provided shall be guilty of a misdemeanor and shall, upon conviction in the District Court of the United States having jurisdiction thereof, be punished by imprisonment for not more than one year, and shall thereupon be duly registered; provided that in the call of the docket precedence shall be given, in courts trying the same, to the trial of criminal proceedings under this act; provided, further, that persons shall be subject to registration as herein provided

who shall have attained their twenty-first birthday and who shall not have attained their thirty-first birthday on or before the day set for the registration; and all persons so registered shall be and remain subject to draft into the forces hereby authorized unless excepted or excused therefrom as in this act provided; provided, further, that in the case of temporary absence from actual place of legal residence of any person liable to registration as provided herein, such registration may be made by mail under regulations to be prescribed by the President.

SECTION 6.—That the President is hereby authorized to utilize the service of any or all departments and any or all officers or agents of the United States and of the several States, Territories, and the District of Columbia and subdivisions thereof in the execution of this act, and all officers and agents of the United States and of the several States, Territories, and subdivisions thereof, and of the District of Columbia; and all persons designated or appointed under regulations prescribed by the President, whether such appointments are made by the President himself or by the Governor or other officer of any State or Territory to perform any duty in the execution of this act, are hereby required to perform such duty as the President shall order or direct, and all such officers and agents and persons so designated or appointed shall hereby have full authority for all acts done by them in the execution of this act by the direction of the President. Correspondence in the execution of this act may be carried in penalty envelopes, bearing the frank of the War Department. Any person charged, as herein provided, with the duty of carrying into effect any of the provisions of this act or the regulations made or directions given thereunder who shall fail or

neglect to perform such duty, and any person charged with such duty or having and exercising any authority under said act, regulations, or directions, who shall knowingly make or be a party to the making of any false or incorrect registration, physical examination, exemption, enlistment, enrollment, or muster, and any person who shall make or be a party to the making of any false statement or certificate as to the fitness or liability of himself or any other person for service under the provisions of this act, or regulations made by the President thereunder, or otherwise evades or aids another to evade the requirements of this act or of said regulations, or who, in any manner, shall fail or neglect fully to perform any duty required of him in the execution of this act, shall, if not subject to military law, be guilty of a misdemeanor, and upon conviction in the District Court of the United States having jurisdiction thereof be punished by imprisonment for not more than one year, or, if subject to military law, shall be tried by court-martial and suffer such punishment as a court-martial may direct.

Now, Therefore, I, Woodrow Wilson, President of the United States, do call upon the Governor of each of the several States and Territories, the Board of Commissioners of the District of Columbia, and all officers and agents of the several States and Territories, of the District of Columbia, and of the counties and municipalities therein, to perform certain duties in the execution of the foregoing law, which duties will be communicated to them directly in regulations of even date herewith.

And I do further proclaim and give notice to all persons subject to registration in the several States and in the District of Columbia, in accordance with the above law,

that the time and place of such registration shall be between 7 A. M. and 7 P. M. on the fifth day of June, 1917, at the registration place in the precinct wherein they have their permanent homes. Those who shall have attained their twenty-first birthday and who shall not have attained their thirty-first birthday on or before the day here named are required to register, excepting only officers and enlisted men of the regular army, the navy, the Marine Corps, and the National Guard and Navy Militia, while in the service of the United States, and officers in the Officers' Reserve Corps and enlisted men in the Enlisted Reserve Corps while in active service. In the Territories of Alaska, Hawaii, and Porto Rico a day for registration will be named in a later proclamation.

And I do charge those who through sickness shall be unable to present themselves for registration that they apply on or before the day of registration to the County Clerk of the county where they may be for instructions as to how they may be registered by agent. Those who expect to be absent on the day named from the counties in which they have their permanent homes may register by mail, but their mailed registration cards must reach the places in which they have their per-

manent homes by the day named herein. They should apply as soon as practicable to the County Clerk of the county wherein they may be for instructions as to how they may accomplish their registration by mail. In case such persons as, through sickness or absence, may be unable to present themselves personally for registration shall be sojourning in cities of over 30,000 population, they shall apply to the City Clerk of the city wherein they may be sojourning rather than to the Clerk of the county. The Clerks of counties and of cities of over 30,000 population in which numerous applications from the sick and from nonresidents are expected are authorized to establish such agencies and to employ and deputize such clerical force as may be necessary to accommodate these applications.

The power against which we are arrayed has sought to impose its will upon the world by force. To this end it has increased armament until it has changed the face of war. In the sense in which we have been wont to think of armies, there are no armies in this struggle, there are entire nations armed. Thus, the men who remain to till the soil and man the factories are no less a part of the army that is France than the men beneath the battle

flags. It must be so with us. It is not an army that we must shape and train for war; it is a nation.

To this end our people must draw close in one compact front against a common foe. But this cannot be if each man pursues a private purpose. All must pursue one purpose. The nation needs all men; but it needs each man not in the field that will most please him, but in the endeavor that will best serve the common good. Thus, though a sharpshooter pleases to operate a trip-hammer for the forging of great guns and an expert machinist desires to march with the flag, the nation is being served only when the sharpshooter marches and the machinist remains at his levers.

The whole nation must be a team, in which each man shall play the part for which he is best fitted. To this end, Congress has provided that the nation shall be organized for war by selection; that each man shall be classified for service in the place to which it shall best serve the general good to call him.

The significance of this cannot be overstated. It is a new thing in our history and a landmark in our progress. It is a new manner of accepting and vitalizing our duty to give ourselves with thoughtful de-

votion to the common purpose of us all. It is in no sense a conscription of the unwilling; it is, rather, selection from a nation which has volunteered in mass. It is no more a choosing of those who shall march with the colors than it is a selection of those who shall serve an equally necessary and devoted purpose in the industries that lie behind the battle line.

The day here named is the time upon which all shall present themselves for assignment to their tasks. It is for that reason destined to be remembered as one of the most conspicuous moments in our history. It is nothing less than the day upon which the manhood of the country shall step forward in one solid rank in defense of the ideals to which this nation is consecrated. It is important to those ideals no less than to the pride of this generation in manifesting its devotion to them, that there be no gaps in the ranks.

It is essential that the day be approached in thoughtful apprehension of its significance, and that we accord to it the honor and the meaning that it deserves. Our industrial need prescribes that it be not made a technical holiday, but the stern sacrifice that is before us urges that it be carried in all our hearts as a great day of patriotic devotion and obligation, when the duty shall lie upon every man, whether he is himself to be registered or not, to see to it that the name of every male person of the designated ages is written on these lists of honor.

In Witness Whereof, I have hereunto set my hand and caused the seal of the United States to be affixed. Done at the City of Washington this 18th day of May in the year of our Lord one thousand nine hundred and seventeen, and of the independence of the United States of America the one hundred and forty-first.

By the President:

ROBERT LANSING,
Secretary of State.

The New American Army

Operation of the Selective Draft Law and Formation of the Nation's Military Forces

CONGRESS passed the bill May 18 authorizing the formation of the new army by conscription—after a month's earnest debate. The measure provides for increasing the regular army to 287,000 men and the National Guard to 625,000. It further adopts for the United States the theory and system of compulsory service—which constitutes a revolutionary change—and provides a system of selective drafts between the ages of 21 and 30 years where-by men may be taken by the Government.

The President is authorized to take 500,000 at once and 500,000 later, in addition to the regular army and National Guard increases. In all, this legislation provides an army of approximately 2,000,000 to be raised in the first year following the passage of the law. The vote in the Senate was 81 to 8 and in the House 397 to 24.

President Wilson signed the measure the day it passed, and at once issued the proclamation printed in the preceding pages, calling the nation to arms. In this proclamation he defined the workings of the law, and fixed June 5 as the day for registration. This day is to be made the occasion of great patriotic demonstrations throughout the country.

About 10,000,000 men between 21 and 30, inclusive, are expected to be registered. After the registration and exemptions have been completed, those declared to be eligible for drafting will have their names placed in jury wheels and 500,000 will be drafted for Federal service in the formation of the new national army. It is expected that the second call for 500,000 men will follow within a few weeks. The new army will be completed as follows:

The regular army will be recruited to the maximum war strength of 287,000 men by voluntary enlistment or, as a last resort, by selective enrollment.

The National Guard will be recruited to the

maximum war strength of 625,000 men by voluntary enlistment or, as a last resort, by selective enrollment.

The first additional force of 500,000 men will be raised by selective enrollment.

The new army will be mobilized in 16 divisions of 28,000 men each, distributed among the States as follows:

First—Massachusetts, Maine, Connecticut, Rhode Island, Vermont, and New Hampshire.

Second—Lower New York State and Long Island.

Third—Upper New York State and Northern Pennsylvania.

Fourth—Southern Pennsylvania.

Fifth—Virginia, Maryland, Delaware, New Jersey, and District of Columbia.

Sixth—Tennessee, North Carolina, and South Carolina.

Seventh—Alabama, Georgia, and Florida.

Eighth—Ohio and West Virginia.

Ninth—Indiana and Kentucky.

Tenth—Wisconsin and Michigan.

Eleventh—Illinois.

Twelfth—Arkansas, Mississippi, and Louisiana.

Thirteenth—North Dakota, South Dakota, Nebraska, Minnesota, and Iowa.

Fourteenth—Colorado, Kansas, and Missouri.

Fifteenth—Arizona, New Mexico, Texas, and Oklahoma.

Sixteenth—Washington, Oregon, Idaho, Montana, California, Nevada, and Utah.

National Guard Called Out

Coincident with the proclamation, President Wilson issued orders for the mobilization of the entire National Guard, which will immediately be drafted into the Federal service; 60,000 of this force out of a total of 160,000 were drafted into the Federal service prior to May 15. New National Guard units will be expanded to a total of 400,000, to be known as the National Guard Army, consisting of sixteen divisions.

All men taken into the army will serve for the period of the war.

Although local units will be kept intact, so far as possible, the regular army, National Guard, and enrolled men will be welded into a homogeneous army, with

officers appointed and assigned by the President.

Enlisted men will receive pay of \$30 a month, an increase of \$15, and the pay of the other grades is increased.

Recruits of the regular army will go into training at once. The National Guard units will be in training, it is expected, by July 1, and the 500,000 enrolled men by Sept. 1.

There was a prolonged conflict over a provision authorizing the formation of four divisions of volunteers at the pleasure of the President, which was intended to authorize former President Roosevelt to head this volunteer army; it was finally incorporated into the bill. Announcement was made on May 19, however, that the President had decided not to avail himself of the authority to organize volunteer divisions. He announced at the same time that a division of the United States regulars would be sent to France at the earliest date practicable, to be commanded by Major Gen. John J. Pershing, who had been in command of the expedition to Mexico. The Secretary of the Navy announced May 19 that 2,600 marines would accompany the Pershing expedition.

Training Camps Established

Officers' training camps were opened on May 15 as follows:

First—Troops from all New England States, Plattsburg Barracks, N. Y.

Second—New York Congressional Districts 1 to 26, (including Long Island, New York City, and a strip north of the city,) Plattsburg Barracks, N. Y.

Third—Remainder of New York State and Pennsylvania Congressional Districts 10, 11, 14, 15, 16, 21, 25, and 28, Madison Barracks, N. Y.

Fourth—Remainder of Pennsylvania State, including Philadelphia and Pittsburgh, Fort Niagara, N. Y.

Fifth—New Jersey, Delaware, Maryland, Virginia, and District of Columbia, Fort Myer, Va.

Sixth—North and South Carolina and Tennessee, Fort Oglethorpe, Ga., near Chattanooga, Tenn.

Seventh—Georgia, Alabama, and Florida, Fort McPherson, Ga., near Atlanta.

Eighth—Ohio and West Virginia, Fort Benjamin Harrison, near Indianapolis.

Ninth—Indiana and Kentucky, Fort Benjamin Harrison.

Tenth—Illinois, Fort Sheridan, near Chicago.

Eleventh—Michigan and Wisconsin, Fort Sheridan.

Twelfth—Arkansas, Mississippi, and Louisiana, Fort Logan H. Root, Ark., near Little Rock.

Thirteenth—Minnesota, Iowa, North and South Dakota, and Nebraska, Fort Snelling, Minn., near St. Paul.

Fourteenth—Missouri, Kansas, and Colorado, Fort Riley, Kan.

Fifteenth—Oklahoma and Texas, Leon Springs, Texas, near San Antonio.

Sixteenth—Montana, Idaho, Oregon, California, Nevada, Utah, Wyoming, Arizona, and New Mexico, Presidio, San Francisco.

In addition there will be two separate cavalry divisions which probably will be situated in the Southwest, near the Mexican border. Officers for the cavalry divisions will be trained at all of the sixteen officers' training camps, which will open with 40,000 prospective officers under training.

Each infantry division consists of nine full regiments of infantry, three regiments of field artillery, one regiment of cavalry, one regiment of engineers, one division hospital, and four camp infirmaries. The total strength of the sixteen is 15,022 officers and 439,792 men.

The two cavalry divisions combined will have 1,214 officers and 32,062 fighting men, including mounted engineers and horse artillery units, and each will have also its divisional hospital and camp infirmaries.

The proportion of coast artillery troops to be provided out of the first 500,000 will be 666 officers and 20,000 men, with requisite medical troops.

Supplementing these tactical units will be: Sixteen regiments of heavy field artillery, strength, 768 officers and 21,104 men; eight aero squadrons, or one new squadron to each two new infantry divisions; eight balloon companies, ten field hospitals, ten ambulance companies, twenty-two field bakeries, six telephone battalions, sixteen pack companies, six ammunition trains, and six supply trains.

Provisions of Conscription Bill

Under the provisions of the conscription measure men without dependent wives or children are required to serve unless exempted on some other ground. Unmarried men with dependents, on the other hand, are not required to serve. Unmarried men belonging to exempted

classes under regulations to be prescribed by the President also may be exempted, even if they have no dependents.

The President himself is the final authority on all questions of exemption or discharge. The law authorizes him to appoint a local board for each county or similar subdivision and a local board for each 30,000 population in cities of 30,000 or more. These local boards will consist of three or more persons, none of them to be connected with the military establishment. The members of these boards will be chosen from local authorities or other citizens of the subdivision in which the board has jurisdiction.

Local boards have power to hear and determine, subject to review by district boards to be appointed for each Federal judicial district, all questions of exemption and all questions of including individuals or classes in the selective draft or of discharging them from it.

In densely populated judicial districts, as in New York City, more than one board will be appointed to revise the findings of local boards in each district when appeals are taken.

The entire scheme is to localize the exemption boards and boards of review as much as possible, officials feeling that in this way, and by keeping military men off the boards, the minimum of friction will result.

The district boards, also appointed

solely by the President, have authority to review on appeal, affirm, modify, or reverse the decision of local boards, as to any individual or any class of individuals. Those not satisfied with the decision of the Board of Review may appeal directly to the President. In appointing all boards, the President has absolute control at all times of the exemption machinery. The exemption work is a purely civil procedure. The army has no part in the matter until after all questions of exemption or discharge of individuals or classes have been finally disposed of and the new draft army is called to the colors.

The specific exemptions fixed by the bill include State and Federal officials of the legislative, executive, and judicial branches, persons in the naval or military service, members of religious sects with conscientious scruples against war. The President is authorized to exclude from the draft or to draft for "partial military service only," county and municipal officers, Custom House clerks, persons employed by the United States in the transportation of the mails and certain other designated classes, together with "persons engaged in industries, including agriculture, found to be necessary to the maintenance of the military establishment or the effective operation of the military forces or the maintenance of the national interest during the emergency."

Mobilizing America's Resources

THE mobilizing of America's resources and the organizing of its man power for the war proceeded in earnest in May. In every direction new forms of co-operation in industry were established with the help of leading business men, technical experts, and men whose organizing abilities had been previously employed in private enterprise.

Committees to serve under Bernard M. Baruch, Chairman of the Committee on Raw Materials of the Advisory Commission, and Julius Rosenwald, Chairman of the Committee of Supplies, were appointed by the Council of National De-

fense. These committees assisted in the co-ordination of industries. Judge Elbert H. Gary was appointed Chairman of the Committee on Steel, and among the members of the committee was Charles M. Schwab of the Bethlehem Steel Company. A. C. Bedford, President of the Standard Oil Company, was appointed Chairman of the Committee on Oil. Other committees to handle alcohol, aluminium, asbestos, magnesia, and roofing; brass, coal tar by-products, lumber, lead; mica, nickel, rubber, sulphur, wool, and zinc, were selected from the chief leaders in those lines.

The Commercial Economy Board of the Advisory Commission to promote efficiency, eliminate waste, and especially to assist commercial houses in releasing employes for Government service without dislocating business, proceeded with its work. A committee was appointed to increase output of coal and by co-operation with the Committees on Raw Materials and Transportation to accelerate the movement of coal to points where the need is greatest.

Medical men organized a board to work with the Council of National Defense.

The Women's Committee, presided over by Dr. Anna H. Shaw, endeavored to prevent overlapping by the numerous women's organizations, and to organize their work in an efficient manner.

Measures were undertaken to recruit for farm work boys between the age of 16 and the age of enlistment, of whom there are 5,000,000, with 2,000,000 estimated as idle. This was directed by the Department of Agriculture through the United States Boys' Working Reserve.

The leaders of capital and labor on May 15 met at Washington, and, putting aside all differences, agreed to co-operate. Samuel Gompers, President of the American Federation of Labor and Chairman of the Labor Committee of the Advisory Commission, invited a group of America's greatest industrial magnates to discuss methods of co-operation between employers and workers. Those who accepted included John D. Rockefeller, Jr., Emerson McMillan of New York, Daniel Guggenheim, Theodore Marburg of Baltimore, and Colgate Hoyt of New York. The meeting in the Labor Federation building at Washington was unprecedented. Mr. Rockefeller promised that he would do all he could to co-operate with labor. Similar pledges were received from other men representing great industrial interests, who were not present at the meeting. At its conclusion the

spokesmen of capital and labor went in a body to the White House, and were received by the President, who said that this was a most welcome visit, because it meant a most welcome thing—co-operation of the whole nation. The labor union leaders of America have also conferred with the British labor representatives who have been visiting Washington and learning how in England employers and workers have co-operated for the prosecution of the war.

The Government received invaluable assistance from the iron and steel producers, who formed a central organization and took charge of all orders for war munitions. All steel mills were classified according to tonnage, so as to make a proper distribution of the financial burden. The copper producers made an agreement with the Metals Committee of the National Defense Council to supply copper at the average market price for the last ten years, instead of the current market prices. Secretary of the Navy Daniels stated that his department is thereby saving \$850,000 in the cost of cartridge cases under contracts just awarded. The agreement was brought about by Bernard M. Baruch. Satisfactory arrangements were also made by the Navy Department with the petroleum interests to supply the navy's needs at reasonable cost. Judge Gary, Chairman of the United States Steel Corporation, announced that the Government was to obtain the steel it required at lower prices. Other branches of trade and industry also acted on the principle that patriotism demands the subordination of profit-seeking to war needs.

The State Governments began to organize so as to help the National Government, New York in particular being well advanced with its scheme of defense work. Early in May a conference of Governors and State delegates was held at Washington and received explanations regarding the various projects of committees of the National Defense Council.

VISIT OF NOTED DIPLOMATS

Marshal Joffre and Ministers Balfour and Viviani
Welcomed by the United States

Text of Their Most Eloquent Speeches

THE entrance of the United States into the great conflict was immediately followed by a decision on the part of the British and French Governments each to send on one of its warships a high commission to convey the greetings and sense of appreciation of those Governments to this country, and also to discuss ways and means for securing the most effective co-operation of the United States.

The British Commission was headed by Arthur J. Balfour, Foreign Minister and former Premier; his personal staff included the Hon. Sir Eric Drummond, K. C. M. G., G. C. B.; Ian Malcolm, M. P.; C. F. Dormer, and G. Butler. Sir Eric Drummond is a half-brother and heir presumptive of the Earl of Perth. Mr. Malcolm at different times was an attaché of the British Embassies in Berlin, Paris, and Petrograd, and during the war has been the British Red Cross officer in France, Switzerland, and Russia.

Other members of the party were Rear Admiral Dudley R. S. de Chair, K. C. B., M. V. O.; Fleet Paymaster Vincent Lawford, D. S. O., Admiralty; Major General George T. H. Bridges, C. M. G., D. S. O.; Captain M. H. Spender-Clay, M. P.; Lord Cunliffe, Governor of the Bank of England. Admiral de Chair is one of the naval advisers of the British Foreign Office. General Bridges was the head of the military mission with the Belgian field army and served in both the Boer war and the present conflict. Captain Spender-Clay married the daughter of William Waldorf Astor. The commission also included the following:

War Office.—Colonel Goodwin, Colonel Langhorne, Major L. W. B. Rees, V. C., M. C., Royal Flying Corps, and Major C. E. Dansey.

Blockade Department Experts.—Lord Eustace Percy of the Foreign Office, A. A. Paton of the Foreign Office, F. P. Robinson of the

Board of Trade, S. McKenna of the War Trade Intelligence Department, and M. D. Peterson of the Foreign Trade Department, Foreign Office.

Wheat Commission.—A. A. Anderson, Chairman, and Mr. Vigor.

Munitions.—W. T. Layton, Director of Requirements and Statistics Branch, Secretariat of the Ministry of Munitions; C. T. Phillips, American and Transport Department, Ministry of Munitions; Captain Leeming, Mr. Amos.

Ordnance and Lines of Communication.—Captain Heron.

Supplies and Transports.—Major Puckle.

The French Commission was headed by former Premier Viviani, Minister of Justice; General Joffre, Marshal of France; Vice Admiral Chocheprat, Senior Vice Admiral of the French Navy, and Marquis de Chambrun, a member of the Chamber of Deputies, a lineal descendant of Marquis de Lafayette. The party also included M. Simon, Inspector of Finance; M. Hovelacque, Inspector General of Public Instruction, and the personal staff of Marshal Joffre, comprising Lieut. Col. Fabry, Chief of Staff; Lieut. Col. Remond, (artillery,) General Headquarters; Major Rerquim, Ministry of War; Lieutenant de Tossan, Tenth Army, and Surgeon Major Dreyfus of the Medical Corps. The other members of the party are Lieutenant A. J. A. K. Lindeboom of the Ministry of Marine, a specialist in sea transport, and Captain George E. Simon, Aid de Camp of Admiral Chocheprat.

Arrival of British Mission

The visit of these eminent men was meant to fulfill two separate functions, the one to express to the people of America the gratification of the allied Governments over our action, and the other to discuss practical ways and means with our Government to secure its most effective co-operation with the Allies.

The British Commissioners stole secretly away from England April 11 on a

fast ship, protected in every possible way from German spies, who might have sent out word to lurking submarines. The voyage was entirely uneventful, however, and the party arrived at Halifax April 20. Crossing to St. John, a special train took them to the little Canadian town of McAdam, just across the International Bridge, which Werner Horn, a former German officer, had attempted to blow up.

Meanwhile the American Reception Committee, headed by Breckinridge Long, Third Assistant Secretary of State; Rear Admiral Fletcher, and Major Gen. Wood, slipped out of Washington April 15 under the impression that the British party had started two days earlier than it did. With a five-car special train standing with steam up, the committee waited anxiously from Monday until Friday afternoon, when the word came from Halifax which sent them on a night ride to the border. At 9 A. M. of the 21st they arrived at the little frontier town of Vanceboro, Me. The American officials, with the army and navy representatives in uniform, descended to a dingy and deserted station platform in a thick, cold mist. News of the distinguished guests' arrival soon brought a small gathering of railroad workers, farmers, and French Canadians, reinforced by a squad of youngsters who came marching up with three worn American flags.

To these modest surroundings the special train, which had gone on to McAdam, returned two hours later bearing Mr. Balfour and his party. As it drew across the bridge, Secretary Long and his party mounted the rear of the observation car and disappeared inside to welcome the commission formally to American soil.

Mr. Balfour's Statement

The party reached Washington on Sunday, April 22. While en route Mr. Balfour issued the following statement:

I have not come here to make speeches or indulge in interviews, but to do what I can to make co-operation easy and effective between those who are striving with all their power to bring about a lasting peace by the only means that can secure it, namely, a successful war.

On my own behalf let me express the deep gratification I feel at being connected in any capacity whatever with events which associate our countries in a common effort for a great ideal.

On behalf of my countrymen, let me express our gratitude for all that the citizens of the United States of America have done to mitigate the lot of those who, in the allied countries, have suffered from the cruelties of the most deliberately cruel of all wars. To name no others, the efforts of Mr. Gerard to alleviate the condition of British and other prisoners of war in Germany and the administrative genius which Mr. Hoover has ungrudgingly devoted to the relief of the unhappy Belgians and French in the territories still in enemy occupation, will never be forgotten, while an inexhaustible stream of charitable effort has supplied medical and nursing skill to the service of the wounded and the sick.

These are the memorable doing of a beneficent neutrality. But the days of neutrality are, I rejoice to think, at an end, and the first page is being turned in a new chapter in the history of mankind.

Your President, in a most apt and vivid phrase, has proclaimed that the world must be made safe for democracy. Democracies, wherever they are to be found, and not least the democracies of the British Empire, will hail the pronouncement as a happy augury.

That self-governing communities are not to be treated as negligible simply because they are small, that the ruthless domination of one unscrupulous power imperils the future of civilization and the liberties of mankind, are truths of political ethics which the bitter experiences of war are burning into the souls of all freedom-loving peoples. That this great people should have thrown themselves wholeheartedly into this mighty struggle, prepared for all the efforts and sacrifices that may be required to win success for this most righteous cause, is an event at once so happy and so momentous that only the historian of the future will be able, as I believe, to measure its true proportions.

At Washington the party was met in the station by Secretary of State Lansing and Colonel W. W. Harts, the President's Aid; Frank L. Polk, Counselor of the State Department and Assistant Secretary of State; Sir Cecil Spring-Rice, the British Ambassador, and others. Escorted by two troops of cavalry, the visitors were taken to the private residence of Franklin MacVeagh, former Secretary of the Treasury, which had been placed at their disposal. The streets through which they passed were filled with welcoming crowds, and as they passed they were everywhere greeted with cheers and waving flags, the Stars

and Stripes and the union jack being freely intermingled.

Mr. Balfour first conferred with President Wilson on the morning of the 23d, and that night the President and Mrs. Wilson gave a dinner at the White House in honor of the party.

Seeking No Formal Alliance

On April 25 Mr. Balfour made his first important official declaration, in which he stated that the Entente Powers did not seek a formal alliance with the United States. Speaking to a group of newspaper correspondents, he said:

I do not suppose that it is possible for you—I am sure it would not be possible for me were I in your place—to realize in concrete detail all that the war means to those who have been engaged in it for now two years and a half. That is a feeling which comes, and can only come, by actual experience. We on the other side of the Atlantic have been living in an atmosphere of war since August, 1914, and you cannot move about the streets, you cannot go about your daily business, even if your affairs be disassociated with the war itself, without having evidences of the war brought to your notice every moment.

I arrived here on Sunday afternoon and went out in the evening after dark, and I was struck by a somewhat unusual feeling which at the first moment I did not analyze; and suddenly it came upon me that this was the first time for two years and a half or more when I had seen a properly lighted street. There is not a street in London, there is not a street in any city in the United Kingdom in which after dark the whole community is not wrapped in a gloom exceeding that which must have existed before the invention of gas or electric lighting. But that is a small matter, and I only mention it because it happened to strike me as one of my earliest experiences in this city.

Of course, the more tragic side of war is never, and cannot ever be, absent from our minds. I saw with great regret this morning in the newspapers that the son of Bonar Law, our Chancellor of the Exchequer, was wounded and missing in some of the operations now going on in Palestine, and I instinctively cast my mind back to the losses of this war in all circles, but as an illustration it seems to me impressive. I went over the melancholy list, and, if my memory serves me right, out of the small number of Cabinet Ministers, men of Cabinet rank who were serving the State when the war broke out in August, 1914, one has been killed in action, four at least have lost sons. That is the sort of things that have happened in quite a small and narrowly restricted class of men, but it is characteristic of what is happening throughout the whole country.

The condition of France in that respect is evidently even more full of sorrow and tragedy than our own, because we had not a great army, we had but a small army when war broke out, whereas the French Army was of the great Continental type, was on a war footing, and was, from the very inception of military operations, engaged in sanguinary conflict with the common enemy.

Tribute to General Joffre

We have today among us a mission from France. I doubt not—indeed, I am fully convinced—that they will receive a welcome not less warm, not less heartfelt, than that which you have so generously and encouragingly extended to us. That was and certainly will be increased by the reflection that one member of the mission is Marshal Joffre, who will go down through all time as the General in command of the allied forces at one of the most critical moments in the world's history.

I remember when I was here before there was a book which was given out in the schools called "The Fifteen Decisive Battles of the World." I do not know whether they all quite deserve that title, but there can be no doubt or question whatever that, among the decisive battles of the world, the Battle of the Marne was the most decisive. It was a turning point in the history of mankind, and I rejoice that the hero of that event is today coming among us and will join us, the British Nation in laying before the people of the United States our gratitude for the sympathy which they have shown and are showing, and our warm confidence in the value of the assistance which they are affording the allied cause.

Gentlemen, I do not believe that the magnitude of that assistance can by any possibility be exaggerated. I am told that there are some doubting critics who seem to think that the object of the mission of France and Great Britain to this country is to inveigle the United States out of its traditional policy and to entangle it in formal alliances, secret or public, with European powers. I cannot imagine any rumor with less foundation, nor can I imagine a policy so utterly unnecessary.

Our confidence in the assistance which we are going to get from this community is not based upon such shallow considerations as those which arise out of formal treaties. No treaty could increase the undoubted confidence with which we look to the United States, who, having come into the war, are going to see the war through. * * * I feel perfectly certain that you will throw into it all your unequalled resources, all your powers of invention, of production, all your man power, all the resources of that country which has greater resources than any other country in the world, and, already having come to the decision, nothing will turn you from it but success crowning our joint efforts.

The vessel bearing the French High Commission was convoyed across the

Atlantic by French warships, and was met about a hundred miles at sea by American naval officers aboard a flotilla of our destroyers. The meeting was at night, and not a light was shown by either party; the vessels knew of each other's presence only by the phosphorescence kicked up by the propellers. At dawn the flotilla and its guests fell in by rendezvous with an American cruiser, which led the way to Hampton Roads, arriving there on April 24. Here the visitors were tendered the use of President Wilson's yacht, the *Mayflower*, which they at once boarded.

French Mission Welcomed

Meanwhile, every American ship in the harbor hoisted the French tricolor to the masthead, and the band of a warship played "The Star-Spangled Banner." Marshal Joffre and the military and naval members stood at salute until the last note had floated across the water, while the civilian members stood with bared heads. Immediately after came the French national anthem, which was saluted in a similar manner.

The ship bearing the mission dropped anchor off Fort Monroe, while the convoy steamed several miles further on. High army and navy officers greeted the visitors and accompanied them to Washington, where the *Mayflower* arrived soon after noon on April 25.

On the broad landing stage were assembled a company of marines and two troops of the Second Cavalry, with the Marine Band at hand to play appropriate music, all these military contingents in blue dress uniforms, with service facings. The members of the French Embassy Staff were there also.

As the yacht docked, Secretary Lansing, accompanied by Frank L. Polk, the Counselor of the State Department; William Phillips, the Assistant Secretary of State, and Colonel W. W. Harts, U. S. A., the President's aid, walked up the gangplank to extend a welcome to the French Commissioners in the nation's name. As Mr. Lansing reached the deck of the ship trumpeters gave him four flourishes, and the *Mayflower's* band played a few bars of a ceremonial

march. The greeting of the Secretary of State was first extended to M. Viviani, and then to Marshal Joffre, and was of an extremely cordial character. Only a few minutes were spent in exchanging felicitations, however, and then the whole party, French and American, came ashore, while the Marine Band played "The Marseillaise," the marines and troopers saluted, and the spectators applauded.

The trip through Washington to the residence of Henry White, former Ambassador to France, which was placed at their disposal, was one continuous ovation. The streets were lined with people, all of whom were carrying the French tricolor and the Stars and Stripes, and as the visitors passed they were greeted with enthusiastic cheers of welcome. Secretary Lansing issued this statement:

It is very gratifying to this Government and to the people that we should have as our guests such distinguished representatives of the French Republic as arrived this noon. In sending men who so fully represent the French Government and people we have the very best evidence of the spirit and feeling of France toward the United States. We can assure the French people that we reciprocate this spirit which induced them to send these Commissioners, and rejoice that the two great nations are battling side by side for the liberty of mankind.

Statement by M. Viviani.

M. Viviani's first official statement was issued on the 26th, after he had paid his formal visit to President Wilson. It was addressed to the representatives of the press, as follows:

I am indeed happy to have been chosen to present the greetings of the French Republic to the illustrious man whose name is in every French mouth today, whose incomparable message is at this very hour being read and commented upon in all our schools as the most perfect charter of human rights and which so fully expresses the virtues of your race—long suffering patience before appealing to force; and force to avenge that long suffering patience when there can be no other means.

Since you are here to listen to me I ask you to repeat a thousandfold the expression of our deep gratitude for the enthusiastic reception the American people has granted us in Washington. It is not to us, but to our beloved and heroic France that reception was accorded. We were proud to be her children

in those unforgettable moments when we read in the radiance of the faces we saw the noble sincerity of your hearts. And I desire to thank also the press of the United States represented by you. I fully realize the ardent and disinterested help you have given by your tireless propaganda in the cause of right.

We have come to this land to salute the American people and its Government, to call to fresh vigor our lifelong friendship, sweet and cordial in the ordinary course of our lives, and which these tragic hours have raised to all the ardor of brotherly love—a brotherly love which in these last years of suffering has multiplied its most touching expressions. You have given help, not only in treasure, but also in every act of kindness and good-will. For us your children have shed their blood, and the names of your sacred dead are inscribed forever in our hearts. And it was with a full knowledge of the meaning of what you did that you acted. Your inexhaustible generosity was not the charity of the fortunate to the distressed—it was an affirmation of your conscience, a reasoned approval of your judgment.

Your fellow-countrymen knew that under the savage assault of a nation of prey which has made of war, to quote a famous saying, "its national industry," we were upholding with our incomparable allies, faithful and valiant to the death, with all those who are fighting shoulder to shoulder with us on the firing line, the sons of indomitable England, a struggle for the violated rights of man, for that democratic spirit which the forces of autocracy were attempting to crush throughout the world. We are ready to carry that struggle on to the end.

And now, as President Wilson has said, the Republic of the United States rises in its strength as a champion of right and rallies to the side of France and her allies. Only our descendants, when time has removed them sufficiently far from present events, will be able to measure the full significance, the grandeur of a historic act which has sent a thrill through the whole world. From today on all the forces of freedom are let loose, and not only victory, of which we were already assured, is certain; the true meaning of victory is made manifest. It cannot be merely a fortunate military conclusion to this struggle—it will be the victory of morality and right, and will forever secure the existence of a world in which all our children shall draw free breath in full peace and undisturbed pursuit of their labors.

"France Day" in New York

April 26 was officially designated as France Day by Governor Whitman of New York in commemoration of the historic friendship between the United States and the French Republic, with particular significance as the accepted

anniversary of Lafayette's departure from France in 1777 to fight by the side of Washington.

From one end of New York City to the other the tricolor flew with the American flag to proclaim the union of the two republics in the war. Groups of children in their schoolrooms and of their elders in meeting halls sang the "Marseillaise" and applauded tributes in poetry and prose to Lafayette and France. Wreaths of flowers were piled high about the statue of Lafayette in Union Square, and Frenchmen were the guests of honor at luncheons and dinners. By order of Dr. Finley, State Commissioner of Education, President Wilson's war address to Congress was read in all the schools.

At Washington's Tomb

One of the most imposing and significant episodes during the sojourn of the distinguished guests was a visit by both commissions to the tomb of Washington at Mount Vernon on April 29. The two former Premiers of France and Great Britain, standing before the tomb of the first President, with the flags of the three great democracies floating together above it, spoke with deep emotion of the common fight for freedom in which all three were together engaged, while Joseph Jacques Césaire Joffre, Marshal of France, laid on the marble sarcophagus with his own hands a bronze palm wound with the French tricolor. A card attached to a huge wreath of lilies placed beside the French palm bore the following words in Mr. Balfour's handwriting:

"Dedicated by the British Mission to the immortal memory of George Washington, soldier, statesman, patriot, who would have rejoiced to see the country of which he was by birth a citizen and the country his genius called into existence fighting side by side to save mankind from a military despotism."

An Eloquent Tribute

Mr. Viviani's speech on that occasion was a notable tribute in the following eloquent terms:

In this spot lies all that is mortal of a great hero. Close by this spot is the modest abode where Washington rested after the tre-

mendous labor of achieving for a nation its emancipation. In this spot meet the admiration of the whole world and the veneration of the American people. In this spot rise before us the glorious memories left by the soldiers of France led by Rochambeau and Lafayette. A descendant of the latter, my friend, M. de Chambrun, accompanies us. And I esteem it a supreme honor as well as a satisfaction for my conscience to be entitled to render this homage to our ancestors in the presence of my colleague and friend, Mr. Balfour, who so nobly represents his great nation. By thus coming to lay here the respectful tribute of every English mind, he shows, in this historic moment of communion which France has willed, what nations that live for liberty can do.

When we contemplate in the distant past the luminous presence of Washington; in nearer times the majestic figure of Abraham Lincoln; when we respectfully salute President Wilson, the worthy heir of these great memories, we at one glance measure the vast career of the American people. It is because the American people proclaimed and won for the nation the right to govern itself, it is because it proclaimed and won the equality of all men, that the free American public, at the hour marked by fate, has been enabled with commanding force to carry its action beyond the seas. It is because it was resolved to extend its action still further that Congress was enabled to obtain within the space of a few days the vote of conscription and to proclaim the necessity for a national army in the full splendor of civil peace.

In the name of France I salute the young army which will share in our common glory.

While paying this supreme tribute to the memory of Washington I do not diminish the effect of my words when I turn my thoughts to the memory of so many unnamed heroes. I ask you before this tomb to bow in earnest meditation and all the fervor of piety before all the soldiers of the allied nations who for nearly three years have been fighting under different flags for the same ideal. I beg you to address the homage of your hearts and souls to all the heroes, born to live in happiness, in the tranquil pursuit of their labors, in the enjoyment of all human affections, who went into battle with virile cheerfulness and gave themselves up, not to death alone, but to the eternal silence that closes over those whose sacrifice remains unnamed, in the full knowledge that save for those who loved them their names would disappear with their bodies. Their monument is in our hearts. Not the living alone greet us here; the ranks of the dead themselves rise to surround the soldiers of liberty.

At this solemn hour in the history of the world, while saluting from this sacred mound the final victory of justice, I send to the Republic of the United States the greetings of the French Republic.

Mr. Balfour, who followed M. Viviani, said:

My friend and colleague, M. Viviani, in phrases burning with emotion, and in eloquent language, not only has paid tribute to the hero who is buried here, but has brought our thoughts down to the present crisis, the greatest in the world's history. He has told us of the people of France, England, Belgium, Russia, Italy, and Serbia who have sacrificed their lives for what they believe to be the cause of liberty. No spot on the face of the earth, where a speech in behalf of liberty might be made, could be more appropriate than the tomb of Washington.

Mr. Balfour concluded by reading the inscription on the card attached to the British wreath, which he himself had written.

Mr. Balfour was followed by Governor Stuart of Virginia, who spoke of the pride of his State in claiming Washington as its son, and expressed the appreciation of America at the honor that had been paid to her hero.

Marshal Joffre, as France's greatest soldier, added a tribute to the greatest soldier of the United States.

"In the French Army," he said, "all venerate the name and memory of Washington. I respectfully salute here the great soldier and lay upon his tomb the palm we offer our soldiers who have died for their country."

The bronze palm which is the symbol with which France honors her military heroes was laid on the sarcophagus by Marshal Joffre, assisted by Lieutenant de Tossan, his aid.

Mr. Balfour and General Bridges, Great Britain's chief army representative in the mission, placed the British wreath. The three flags of Great Britain, France and the United States rested on it. The French palm had on it only a wide band in the French national colors.

The earnestness and feeling with which the allied representatives spoke carried with it a full conviction of the reality of the symbolism which they sought to convey.

Visit to Senate Chamber

In the United States Senate Chamber May 1 Vice Premier Viviani, Marshal Joffre, and Ambassador Jusserand were granted the courtesies of the floor. A demonstration followed such as had not been witnessed in that Chamber since

France

Lafayette was the guest of the United States in 1822.

The visit was made by invitation. The French Mission reached Vice President Marshall's room shortly before 12:30 o'clock. The Vice President was notified, and he named Mr. Hitchcock of Nebraska, who has been the active leader of the Committee on Foreign Relations, and Mr. Lodge of Massachusetts, the ranking Republican of the committee, to usher the guests into the chamber.

The two Senators crossed the lobby to the Vice President's room and returned at once. M. Viviani entered with Mr. Hitchcock, Marshal Joffre with Mr. Lodge, and the French Ambassador with Admiral Chocheprat. The committee's return was not expected so soon, but grave salutes to Marshal Joffre by two bright-eyed little pages at the door, which the Marshal as gravely returned, gave the signal. The Senators clapped hands deafeningly and rose, the galleries shouted more deafeningly still and rose, leaning forward and waving, while members of the House standing at the back of the chamber surged forward.

The visitors shook hands with the Vice President and stood beside him, looking with evident pleasure at the wild scene before them. When the applause had lasted for several minutes Mr. Marshall tapped for order.

"The Senate of the United States," he said, "has had the pleasure and honor many times of receiving distinguished visitors to the Republic. It had the honor of receiving General Lafayette, and now, nearly a century later, it has the honor of welcoming the Vice Premier of the French Government and the Marshal of France."

"Mr. President," said Senator Martin of Virginia, the majority leader, "I move that the Senate now recess so that Senators may have the pleasure of greeting personally our distinguished guests."

The motion was carried by acclamation, and an informal reception began.

Viviani Addresses Senate

M. Viviani, during the reception, in which Representatives as well as Senators participated, was prevailed upon to make an address and spoke as follows:

Since I have been granted the supreme honor of speaking before the representatives of the American people, may I ask them first to allow me to thank this magnificent capital for the welcome it has accorded us? Accustomed as we are in our own free land to popular manifestations, and though we had been warned by your fellow-countrymen who live in Paris of the enthusiastic burning in your hearts, we are still full of the emotion raised by the sights that awaited us. I shall never cease to see the proud and stalwart men who saluted our passage; your women, whose grace adds fresh beauty to your city, their arms outstretched full of flowers, and your children hurrying to meet us at the call of their schoolmasters, as if our coming were looked upon as a lesson for them, all with one accord acclaiming, in our perishable persons, immortal France. And yet I predict there will be a yet grander manifestation the day when your illustrious President, relieved from the burden of power, will come among us bearing the salute of the Republic of the United States to a free Europe, whose foundations from end to end shall be based on right. It is with unspeakable emotion that we cross the threshold of this legislative palace where prudence and boldness meet, and that I, for the first time in the annals of America, though a foreigner, speak in this hall, which only a few days since resounded with the words of virile force.

You have set all the democracies of the world the most magnificent example. So soon as the common peril was made manifest to you, with simplicity and within a few short days you voted a formidable credit and proclaimed that a formidable army was to be raised. The commentary on his acts which President Wilson gave before acting, and which you made yours, remains in the history of free peoples the weightiest of lessons.

Doubtless you were resolved to avenge the insult offered your flag, which the whole world respected; doubtless through the thickness of these massive walls the mournful cry of all the victims which criminal hands hurled into the depths of the sea, has reached and stirred your souls; but it will be your honor in history that you also heard the cry of humanity, and invoked against autocracy the rights of democracies. And I can only wonder as I speak what, if they still have any power to think, are the thoughts of the autocrats who three years ago against us, three months ago against you, unchained this conflict.

Ah! doubtless they said among themselves that a democracy is an ideal Government, that it showers reforms on mankind, that it can in the domain of labor quicken all economic activities. And yet now we see the French Republic fighting in defense of its territory and the liberty of nations and opposing to the avalanche let loose by Prussian militarism the union of all its children who are still capable of striking many a weighty blow. And now we see England, far removed

like you from conscription, who has also, by virtue of a discipline all accept, raised from her soil millions of fighting men. And we see other nations accomplishing the same act; and that liberty not only inflames all hearts but co-ordinates and brings into being all needed efforts. And now we see all America rise and sharpen her weapons in the midst of peace for the common struggle.

Together we will carry on that struggle; and when by force we have at last imposed military victory, our labors will not be concluded. Our task will be—I quote the noble words of President Wilson—to organize the society of nations. I well know that our enemies, who have never seen before them anything but horizons of carnage, will never cease to jeer at so noble a dream. Such has always been the fate of ideas at their birth; and if thinkers and men of action had allowed themselves to be discouraged by skeptics mankind would still be in its infancy and we should still be slaves. After material victory we will win this moral victory. We will shatter the ponderous sword of militarism; we will establish guarantees for peace; and then we can disappear from the world's stage, since we shall leave at the cost of our common immolation the noblest heritage future generations can possess.

When he concluded, shouts of "Joffre!" "Joffre!" filled the Chamber, and the Marshal turned and said with a smile: "I do not speak English." Then raising his right hand, he called out, "Vivent les Etats-Unis!" With a military salute, he was gone.

Reception in the House

M. Viviani and Marshal Joffre visited the House of Representatives by invitation on May 3. Practically the entire membership of the House and the crowded galleries rose and applauded as the visitors were announced. Several children of members received kisses from the Marshal of France and the Vice Premier. When Miss Jeannette Rankin, woman member of the House, approached, M. Viviani and Admiral Chocheprat kissed her hand.

M. Viviani mounted the Speaker's rostrum and said:

Gentlemen: Once more my fellow-countrymen and I are admitted to the honor of being present at a sitting in a legislative chamber. May I be permitted to express our emotion at this solemn derogation against rules more than a century old, and, so far as I am concerned, may I say that as a Member of Parliament accustomed for twenty years to the passions and storms which sweep through political assemblies I appre-

ciate more than any one at this moment the supreme joy of being near this chair, which is in such a commanding position that, however feeble may be the voice that speaks thence, it is heard over the whole world?

Gentlemen, I will not thank you, not because our gratitude fails, but because words to express it fail. We feel that your sympathy and enthusiasm come not only from your hearts but from the jealousy which you have for your own honor. We have all felt that you were not merely fulfilling the obligation of international courtesy. Suddenly, in all its charming intimacy, the complexity of the American soul has been revealed to us. When one meets an American one is supposed to meet a practical man, merely a practical man, caring only for business, only interested in business. But when at certain hours in private life one studies the American soul one discovers at the same time how fresh and delicate it is; and when at certain moments of public life one considers the soul of the nation, then one sees all the force of the ideals that rise from it is so that this American people, in its perfect balance, is at once practical and sentimental, a realizer and a dreamer, and is always ready to place its practical qualities at the disposal of its puissant thoughts.

Intrusted with a mandate from a free people, we come among freemen to compare our ideas, exchange our views, to measure the whole extent of the problems raised by this war, and all the allied nations, simply because they repose on democratic institutions, through their Governments, meet in the same lofty region on equal terms, in full liberty.

I well know that at this very hour in the Central Empires there is an absolute monarchy which binds other peoples to its will by vassal links of steel. It has been said that this was a sign of strength; it is only an appearance of strength. In truth, only a few weeks ago, on the eve of the day when outraged America was about to rise in its force, on the morrow of the day when the Russian revolution, faithful to its alliance, called at once its soldiers to arms and its people to independence, this absolute monarchy was seen to totter on the steps of his throne as he felt the first breath of the tempest pass over his crown. He bent toward his people in humiliation, and, in order to win their sympathy, borrowed from free peoples their highest institutions and promised his subjects universal suffrage.

The day before yesterday, in a public meeting at which I was present, I heard one of your greatest orators say with deep emotion: "It has been sworn on the tomb of Washington." And then I understood the full import of those words. If Washington could rise from his tomb, if from his sacred mound he could view the world as it now is—shrunk to smaller proportions by the lessening of material and moral distances and the mingling of every kind of communication be-

tween men—he would feel his labors were not yet concluded; and that, just as a man of superior and powerful mind owes a debt to all other men, so a superior and powerful nation owes a debt to other nations, and after establishing its own independence must aid others to maintain their independence or to conquer it. It is the mysterious logic of history which President Wilson so marvelously understood, thanks to a mind as vigorous as it is subtle, as capable of analysis as it is of synthesis, of minute observation followed by swift action.

It has been sworn on the tomb of Washington. It has been sworn on the tomb of our allied soldiers, fallen in a sacred cause. It has been sworn by the bedside of our wounded men. It has been sworn on the heads of our orphan children. It has been sworn on cradles and on tombs. It has been sworn!

Marshal Joffre in Chicago

The French Mission left Washington by special train on the 3d for a tour of the Middle Western States, and reached Chicago on the 4th. At a public reception Marshal Joffre delivered his first address, as follows:

My friends, I am proud to have in my hand the American flag, which is to the American people what the French flag is to the people of France, a symbol of liberty. I hold in my other hand the flag of France, who has given of her best, her stanchest, and her bravest, and which also stands for liberty. I had the honor to carry the French flag on the field of battle, and I am glad to join the flag of many battles to the flag that has never known defeat. With this flag I bring to you the salute of the French Army to the American people, our stanch ally in the common cause.

As he joined the two flags of red, white, and blue with the closing words, the whole assembly mounted the seats and cheered.

The mission was enthusiastically welcomed and hospitably entertained at Chicago, and thence proceeded to St. Louis. On May 6 at St. Louis 20,000 persons crowded into the Coliseum to welcome the visitors, and as many more stood outside, unable to obtain admission. From there they proceeded to Kansas City, where they were received with tumultuous enthusiasm. They returned to the East via Springfield, Ill., where they visited the tomb of Lincoln; a wreath was placed upon the sarcophagus by Marshal Joffre; here the Legislature was also addressed. At all towns through which they passed

large crowds assembled and greeted the visitors with shouts of welcome.

At Philadelphia they were elaborately entertained. Independence Hall was visited. General Joffre, receiving a Marshal's baton made from a piece of one of the Independence Hall rafters, said he held "a piece of real liberty, and wished to convey to the American people the greetings of the French Army and an expression of happiness in having the co-operation of Americans."

At Independence Hall M. Viviani said: "We do not feel in America as if we were far from home. The ideals and aims of America and of France are the same. It was in this holy place that freedom was first breathed from the mouths of men for the inspiration of every nation."

French Envoys in New York

The visitors reached New York City on the afternoon of May 9. The reception tendered them on their arrival was the most enthusiastic ever granted any man or group of men in the city's history. For two days and nights enormous crowds filled Fifth Avenue and Broadway and overflowed far back into adjoining streets. Flags, bunting, and illuminations appeared from one end of the city to the other, and the visitors passed for miles along Fifth Avenue amid a wonderful vista of the French tricolor, the British union jack and the American Stars and Stripes.

The New York Public Library and the Court of Honor in front of it were remarkable for the beauty of the decorations. The columns of plaster, surmounted by the American eagle standing on globes with wings outstretched, supported streamers of the dark blue of France and poles from which hung the flags of the three allies. In front of the library many pine trees gave a touch of color to the great marble building. Along the terrace and on either side of the entrance way were five great poles supporting streaming banners alternately displaying the rooster of France, the lion of Britain, and the American eagle. At night the scene was far more beautiful, with the great lines of the library out-

lined with indirect lighting and each column of the court standing clear in a blaze of golden illumination.

Address at City Hall

At the City Hall, where the formal reception was held on the evening of the mission's arrival, M. Viviani, in response to an address by Mayor Mitchel, replied as follows:

You were right when you dwelt on the wonderful spectacle which France has given to the world for three years. You were right when you said that the blood of France is flowing like water. From the open wounds of our soldiers has flowed the pure red blood of France. It has flooded our plains in the very spots where formerly our farmers and our workmen were living at peace.

And why does the invader pollute our soil? We are a pacific nation, as pacific as yourselves, but you have seen for yourselves how easy it was to remain faithful to dreams of universal peace. You cherished such dreams. You were a great people, with only one thought—humanity and justice. We were a free democracy and we had only one thought—universal right and humanity. But German aggression was thrust upon us. We were compelled to rise in arms, and now we fight—we fight for our territory, for our wealth, for our historical traditions—in order that the invader may not take another step on our sacred soil. France fights for the world—for justice, for humanity—and it is because she fights for that that at last the American people have risen to give France and her allies their moral and material aid.

Slavery Worse Than War

I fully understand how you faltered in the face of the awful duty that confronted you. For war has its dangers and its horrors, its moaning widows, its premature deaths, and casts a blight on the mothers of infants who are our hope and joy and who know only woe and calamity.

War is a horrible thing, but could there be anything more terrible for people than to live without honor or independence? Just as you were unwilling to allow your national honor to be humiliated under the insolent threats and mandates of Germany, we were unwilling to submit to break our oaths. When we look back into the events of the last three years, you have seen small peoples oppressed and great nations like Russia, England, France, and Italy rush to the defense of the rights of mankind in order to save from the wreck some portion of their national honor. You have felt the revolt of your consciences from the first hour when German aggression struck at your brothers, and it was then an easy matter for those who had witnessed the evolution of American feeling to foresee what would happen and what has actually happened since.

All America has risen in arms. We have just visited the Middle West. We have just seen what enthusiasm has arisen among the men, the women, and the children of these regions.

We have found everywhere, even in those very places where we had been told we would not find it, the virile resolution of a whole people acclaiming our message, and we find it here again in these streets of New York, this great city where millions of men surge like waves of the sea.

Democracy in Arms

I cannot do better in order to symbolize this union of the French and American people than to appear before you side by side with Marshal Joffre. It is indeed pleasing to me in this by no means foreign land, in this friendly land, bound by so many ties to France, to thank the French Army for the heroic manner it has fought, for the great deeds it has done. That army at the outset of the war had to give way materially before the most formidable onslaught that the history of man has ever recorded, but came back and hurled itself upon the invader. Yes, they threw themselves into the fray, those youths in their teens, their eyes aflame and their hearts, going into battle, going to death, but going for the country, for civilization, for mankind.

Our army is our nation in arms. It is democracy in arms for its honor and independence. You will say—you also—that you have seen that wonderful sight of democracy which has known how to organize its forces, how to marshal its strength. A democracy which has not awaited the hour of danger, which, like our own, had its army, its leaders, its chiefs, and which, thanks to what it had done, was able to hold its own.

As I was on my way here I heard the crowd acclaiming those who accompanied me, and who wear the uniform like Marshal Joffre, as the saviors of the world. Yes; the soldiers of the Marne are the saviors of the world. But if we had not had conscription, if there had not been the men to answer the call of mobilization, what would have befallen our country despite its courage, its enthusiasm, its valor? There, citizens, you have the great and grave legend taught by the war.

So long as there is in the world a war-like Germany, so long as there is a nation of prey, a country bent on oppression, on treachery and violence, so long will democracies be imperiled. If they would save the treasures of civilization and the heritage of mankind which are theirs they must meet the danger, they must be ready, they must arm themselves, but with the purpose never to place the sword at the service of aught but the right.

The home of Henry C. Frick on Fifth Avenue was placed at the service of the guests. On May 10 the whole city united

in demonstrations. The commission went in the morning to attend the unveiling of a statue of Lafayette in Prospect Park, Brooklyn, and later were entertained at luncheon by the Merchants' Association of New York. In the afternoon Columbia University conferred the honorary degree of Doctor of Laws upon Marshal Joffre and Vice Premier Viviani, after which they visited Grant's Tomb. In the evening a reception was given in the Public Library by the French patriotic societies, and a great gala concert followed in the Metropolitan Opera House, where the audience contributed \$85,000 for Marshal Joffre's use in relief work. The Marshal's arrival in the Opera House at 11 o'clock at night, when the audience interrupted Paderewski's playing of a masterpiece to rise and cheer the victor of the Marne, marked the climax of a memorable and strenuous day for the visitors.

Balfour Visits Congress

Meanwhile at Washington the British Commissioners remained in daily conference with Cabinet officials. On May 5 Mr. Balfour, head of the commission, was invited to attend Congress. In the scene that followed two precedents of a century and a half were broken. It was the first time in American history that a British official had been invited to address the House of Representatives, and it was the first time that a President of the United States had sat in the gallery. The welcome to Mr. Balfour and his associates equaled, if it did not surpass, the demonstration which had greeted M. Viviani and Marshal Joffre earlier in the week.

The demonstration given to the President rivaled that which Mr. Balfour received. Unannounced, he slipped into the Executive Gallery. For several minutes no one on the floor saw Mr. Wilson, although he was sitting in the front row. Then suddenly a member on the floor discovered him, and a group rose, applauding. The whole House followed, and for several minutes the floor and galleries joined in hearty applause.

As the applause died down, Speaker Clark appointed a committee to escort the British Mission into the Chamber. At a few minutes after 12:30 o'clock

they appeared and the whole House rose to greet them while hearty applause swept the floor and the galleries. The ovation lasted several minutes, subsiding only to start with a new outburst of cheers and hand-clapping when the Speaker introduced Mr. Balfour. The British Minister was visibly affected by the warmth of his reception.

Through it all the President joined vigorously in the applause. When the speaker had finished and stood below the rostrum with General Bridges, Admiral de Chair, and the British Ambassador, shaking hands with the members as they filed past, Mr. Wilson again surprised those present by slipping downstairs quietly and passing down the line with the Congressmen.

Balfour's Address to the House

In his address before the House of Representatives Mr. Balfour said:

Will you permit me, on behalf of my friends and myself, to offer you my deepest and sincerest thanks for the rare and valued honor which you have done us by receiving us here today? We all feel the greatness of this honor, but I think to none of us can it come home so closely as to one who, like myself, has been for forty-three years in the service of a free assembly like your own.

I rejoice to think that a member, a very old member I am sorry to say, of the British House of Commons has been received here today by this great sister assembly with such kindness as you have shown to me and to my friends.

Ladies and gentlemen, these two assemblies are the greatest and the oldest of the free assemblies now governing great nations in the world. The history, indeed, of the two is very different. The beginnings of the British House of Commons go back to a dim historic past, and its full rights and status have only been conquered and permanently secured after centuries of political struggle.

Your fate has been a happier one. You were called into existence at a much later stage of social development. You came into being complete and perfected and all your powers determined and your place in the constitution secured beyond chance of revolution, but though the history of these two great assemblies is different, each of them represents the great democratic principle to which we look forward as the security for the future peace of the world. All of the free assemblies now to be found governing the great nations of the earth have been modeled either upon your practice or upon ours, or upon both combined.

Mr. Speaker, the compliment paid to the mission from Great Britain by such an as-

sembly and upon such an occasion is one not one of us is ever likely to forget; but there is something, after all, even deeper and more significant in the circumstances under which I now have the honor to address you than any which arise out of the interchange of courtesies, however sincere, between two great and friendly nations.

We all, I think, feel instinctively that this is one of the great moments in the history of the world, and that what is now happening on both sides of the Atlantic represents the drawing together of great and free peoples for mutual protection against the aggression of military despotism.

I am not one of those, none of you are among those, who are such bad democrats as to say that democracies make no mistakes. All free assemblies have made blunders, sometimes they have committed crimes. Why is it then that we look forward to the spirit of free institutions, and especially among our present enemies, as one of the greatest guarantees of the future peace of the world? I will say to you, gentlemen, how it seems to me.

It is quite true that the people and the representatives of the people may be betrayed by some momentary gust of passion into a policy which they ultimately deplore, but it is only a military despotism of the German type that can through generations, if need be, pursue steadily, remorselessly, unscrupulously, and appallingly the object of dominating the civilization of mankind. And, mark you, this evil, this menace, under which we are now suffering, is not one which diminishes with the growth of knowledge and progress of material civilization, but, on the contrary, it increases with them.

When I was young we used to flatter ourselves that progress inevitably meant peace, and that growth of knowledge was always accompanied as its natural fruit by the growth of good-will among the nations of the earth. Unhappily, we know better now, and we know there is such a thing in the world as a power which can with unvarying persistency focus all the resources of knowledge and of civilization into the one great task of making itself the moral and material master of the world. It is against that danger that we, the free peoples of Western civilization, have banded ourselves together.

British in New York

Mr. Balfour and the other members of the British Commission reached New York by special train Friday afternoon, May 11, and every step of their way from the Battery to the home of Mr. and Mrs. Vincent Astor, which had been placed at their service, lay through cheering crowds. The party was formally received at the City Hall by Mayor Mitchel and a delegation of distinguished

citizens. An enormous crowd was in attendance. The lawn at the entrance was filled with 2,000 schoolgirls, all clad in white middy blouses and dark blue skirts with red hair ribbons, and each with a flag. Behind this group was a column of Boy Scouts in mass and pyramid formations, all clad in khaki. Every available foot of space in the park and surrounding streets was filled with cheering people, among whom the flags of the United States, France, and Great Britain were freely intermingled.

Mr. Balfour was formally greeted by the Mayor, who was followed by Joseph H. Choate, former Ambassador to Great Britain. [Mr. Choate died suddenly three days later in his New York home.] In the course of his speech Mr. Choate said:

We hesitated, we doubted, we hung back, not from any lack of sympathy, not from any lack of enthusiasm, not because we did not know what was the right path; but how to take it and when to take it was always the question. I feared at one time that we might enter into it for some selfish purpose, for the punishment of aggressions against our individual, national, personal rights, for the destruction of American ships or of a few American lives, ample ground for war; but we waited, and it turns out now that we waited wisely, because we were able at last to enter into this great contest of the whole world for a noble and lofty purpose, such as never attracted nations before. We are entering into it under your lead, Sir, for the purpose of the vindication of human rights, for the vindication of free government throughout the world, for the establishment—by and by; soon, we hope; late, it may be—of a peace which shall endure and not a peace that shall be no peace at all.

Fortunately, we have now no room for choice. Under the guidance of the President, we stand pledged now before all the world to all the allies whom we have joined to carry into this contest all that we have, all that we hope for, and all that we ever aspire unto. We shall be in time to take part in that peace which shall forever stand and prevent any more such national outrages as commenced this war on the side of Germany. We have been only thirty days in the war, and already it has had a marvelous effect upon our own people. Before that there was apathy, there was indifference, there was indulgence in personal pursuits, in personal prosperity; but today every young man in America, and every old man, too, is asking: "What can I do best to serve my country?"

Mr. Balfour, in the course of his reply, said:

Those who had the good fortune to drive

through the streets of the city up to this hall, I am sure must have been astounded at the whole-hearted exhibition of enthusiasm which, from every street, from every window, from every house, made itself visible and audible to the spectators. Seldom have I seen a sight—and my experience, alas, is an old one—seldom, or never, have I seen a sight so deeply moving; never have I seen a sight which went more to the heart. If, on the other side of the Atlantic, where the stress and strain of battle seem sometimes hard to sustain, they could have one glimpse of the sympathies shown them in this vast and noble community, it would give them, if there be faint hearts—I have not heard of them on the other side—if faint hearts there be, they indeed would regain new strength, new courage, new enthusiasm, new resolution, and they would feel again, if they ever ceased to feel it, that firm determination to carry through at all sacrifices this great struggle to its appointed end, which, after all, is the very strength and nerve of the allied forces.

Dinner of Mayor's Committee

The climax of all these proceedings was the joint reception in New York on May 12 to both the French and English Commissions. It took the form of a dinner at the Waldorf tendered by the Mayor's Reception Committee, which was attended by 1,000 of New York City's leading men; in addition there were present the only two living ex-Presidents, Taft and Roosevelt, the Governor of New York, and other men distinguished in official and civic life.

Here again Mr. Choate delivered the principal address on the part of the city, following Mayor Mitchel. In the course of his speech Mr. Choate said:

America, from the Atlantic to the Pacific, from the Lakes to the Gulf, America has learned what this war is about, what it is for—that it is for the establishment of freedom against slavery, for the vindication of free government against tyranny, and oppression and autocracy and all the other horrible names that you can apply to misgovernment. When it came to that there was but one question for America, and our President at Washington has solved it for us. Nobody can tell how far he saw ahead any more than we at this moment can tell how far we can see ahead.

Balfour on the War's Meaning

In his address Mr. Balfour said:

I have not come here authorized by my Government to set myself up or to set my friends up as instructors of the great Amer-

ican people. They know and you know how to manage your affairs, and do not require us to teach you. It may be, it probably is, the fact, that a study of the history of this war will show those who run and desire to read that there are certain mistakes which a great democracy, imperfectly prepared for war, may easily make. We shall be happy to describe these mistakes to you, if happily it will be your desire to learn the lesson from them. But I do not propose either now or at any other occasion to set myself up as an adviser or monitor on these great themes. It is enough that I proclaim my unalterable conviction that we have reached a moment in the world's history on which the future, not of this country, but of every country, not of its interests, but of every interest of civilization is trembling in the balance. At that critical moment it is my bounden duty to raise my voice and to appeal to all who will listen to me today in the great task which we have been bearing for two and a half years, and which you have cheerfully and generously determined to take the weight of upon your own shoulders. * * *

Why is it that the people of this great city have come forth instinctively—I was going to say by thousands; I feel inclined to say by millions—to show their enthusiasm for the cause you have taken up? It is because they instinctively feel what is the vital issue at stake, because they instinctively feel that it is neither desirable nor, were it desirable, possible for this great Republic to hold itself aloof from a world in suffering and not do its part to redeem mankind.

Surely it is a significant fact that here we are, the representatives of three great democracies, in the very heart of New York, to plead a common cause. What has brought us all together? What is the meaning of this unique gathering? What is the meaning of the multitude crowding your streets today and yesterday? It is a shallow view to suppose that each of these great nations has had a separate and different cause of controversy with the enemy—that Russia was dragged in because of Serbia, that France was dragged in because of Russia, that Great Britain was dragged in because of the violation of Belgian territory, and that the United States has been dragged in because of the piratical warfare of the German submarines.

All those causes are, each of them, and separately, no doubt a sufficient reason, but for a moment to consider this war carried on by the Allies as that of separate interests, separate causes of controversy, is an utterly inadequate and false view of the situation. These are but symptoms of the absolute necessity in which a civilized world finds itself, to deal with an imminent and overwhelming peril. What is that peril? What is it we feel that we have got to stop? I will tell you my view of it. It is the calculated and remorseless use of every civilized weapon to carry out the ends of pure barbarism. To us of English speech it seems

impossible, incredible, that a nation should clearly set itself to work and co-ordinate every means of science, every means that knowledge, that industry can provide, not for the bettering of its own people, but for the demolition of other peoples.

The history of the world is too full of the adventures of unscrupulous ambition. We know all through history of men who have endeavored, at the cost of others, to expand their own State. Within the last century, or a little more, we have seen men of genius trying to coerce the world. But this is not a case of a new Napoleon arising to carry out a new adventure. This is not a case of adventure, of a genius seeking to satisfy his ambition within the limits of his own country.

It is something far different and far more dangerous for mankind. It is the settled determination to use every means to put the whole world at her feet. We all know it is a commonplace that science has enormously expanded the means by which men can kill each other. Modern destruction is carried out as much in the laboratory of your universities as it is on the field of battle, but we have always believed, we have always hoped, that this increased power of destruction would be limited and controlled by the growing forces of humanity and civilization. We have been taught, not by Germany, but by those who rule Germany, by the military caste which controls Germany—we have been taught a different lesson, and we now know not merely that every scientific weapon will be put in force to make war more horrible than it was in barbarous times, but that even the rights of civilization, of trade, of commerce, even the intercommunication between different peoples, will be used for the same sinister object.

Ladies and gentlemen, that is the danger we have to meet, and if at this moment the world is bathed in blood and tears from the highlands of distant Armenia down to the very fields of France, almost within sight of the Strait of Dover—if we have seen a reckless destruction of life, not merely of soldiers but of civilians; if we have seen peaceful communities dragged through the mire, ruined, outraged; if horror has been heaped upon horror, until really we almost get callous in reading our newspapers in the morning—if all these things are true, shall we not rise up and resist them?

Shall we who know what freedom is become the humble and obsequious servants of those who only know what power is? That will never be tolerated. The free nations of the earth are not thus to be crushed out of existence, and if any proof is required that that consummation is impossible, it is a gathering like this where the three great democracies of the West are joined together under circumstances unique in the whole history of the world.

And that fact should also give strength

and consolation to those who, feeling the magnitude of the issue at stake, are inclined to doubt how the contest will end. But we will fail unless all here who love liberty, and who are prepared to labor together, to fight together, to make our sacrifices in common—unless that happens we may be destroyed piecemeal and the civilization of the world may receive a wound from which it will not easily recover.

Viviani's Dinner Speech

M. Viviani's speech was one of impassioned and vivid eloquence. In part he said:

The Kultur of Germany is all very well so long as its interests are not crossed, but when they are it is like a wild beast. Germany did not know the spirit of England, of France, or of Russia. They said that England would not fight, that Englishmen would remain at home while the Continent of Europe was overrun, but they did not know the history of that country.

You in America cannot realize, cannot imagine the suffering and horror of what war has meant to France and her people. But you will arouse yourselves to the battle for liberty, justice, democracy, and humanity.

When the war is over and peace reigns in the world—and Germany is vanquished—history will say that the free peoples of the earth joined their powers and resources to make the world safe for justice, for good faith between nation and nation, and for humanity.

In the name of France and my companions I thank you all and the entire population of New York for the great ovation and welcome you have extended us. The soul of America is so great and noble that it is fitting that America should arise to fight for the cause of freedom and justice. It is the greatest honor of my life to have been here and see and realize the spirit of this sister republic. You may depend upon Joffre and myself to do all we can to aid you and inform you in all the details of the great task ahead of you. I see before me now the might and strength of Germany and realize that it must—that it will—be overthrown.

Following the dinner at the Waldorf Mr. Balfour was driven to the home of Mr. and Mrs. Cornelius Vanderbilt. There he was presented with the diploma of Doctor of Laws conferred upon him on Thursday by Columbia University. The presentation was made by Dr. Nicholas Murray Butler, President of the university, who explained how the degree had been conferred.

In accepting, Mr. Balfour was deeply touched. He said afterward that he had

been thrilled as never before in his life by the reception in New York.

Address to Lawyers' Club

Earlier in the day M. Viviani was the guest of the lawyers of New York. On this occasion he delivered another of his important utterances, of which the following are among the significant passages:

It is not an abstract salute which the French Mission has brought to America. No, we are not here merely to exchange expressions of international friendship; we have not come merely for the purpose of shaking hands with you; we have not come here to salute you nor to become intoxicated by the clamorous acclamations which greet us in your streets. We have come here to penetrate your souls, to penetrate your hearts. Yes, this I say, we have come, however unworthy we may be of our mission, to show you the great soul of wounded France, of suffering France, of eternal France.

All the orators who have preceded me upon this platform have accorded me too much praise to permit me, with modesty, to surpass the height of their eulogy. You have shown the French, isolated at the beginning of the war, sleeping in muddy and bloody trenches, fighting night and day, constantly, not only for themselves, but for humanity. You have considered the French Army as the vanguard of all the armies of free men. Yes, indeed, that is true. For the last three years we have been fighting for liberty; we are flinging to the breeze under the fire of cannon the banner of universal democracy. May free men now rise and come to our side! For the honor of humanity let us not be alone in this fight!

Come to us, American brothers, whose hearts have been attached to ours since Lafayette, with his French soldiers, landed upon your soil and loaned the aid of his arms to American independence. It is not for France; it is not for you; it is not for England; it is not for Russia. No; it is not for the nations; it is for the whole world; it is for all humanity.

On May 11 Marshal Joffre visited West Point, reviewed the Cadet Corps, and was entertained by the staff. Previously the same day he visited Washington's Headquarters at Newburg, N. Y., where he was received by Governor Whitman. Here the Eagle of the Society of the Cincinnati was conferred on him. He had been elected an honorary member of this society. The only other foreigners who had thus been honored were Rochambeau and Lafayette.

From New York the French Mission

visited Boston, where they were enthusiastically received. M. Viviani proceeded to Ottawa.

Chamber of Commerce Speech

The New York Chamber of Commerce luncheon to Mr. Balfour and the English party was attended by more than 1,000 members and guests. In his address, after thanking the President, E. H. Outerbidge, for his kindly references to the bond between the United States and England, Mr. Balfour said the hope of his life had been that before he died "the union between the English-speaking, freedom-loving branches of the human race should be drawn far closer than in the past, and that all temporary causes of difference which may ever have separated the two great peoples would be seen in their true and just proportion, and that we should all realize, on whatever side of the Atlantic fortune had placed us, that the things wherein we have differed in the past sink into absolute insignificance when compared with those vital agreements which at all times, but never more than at such a time as the present, unite us in one great spiritual whole."

In alluding to the bonds between the English-speaking races, he said:

You have absorbed in your midst many admirable citizens drawn from all parts of Europe, whom American institutions and American ways of thought have molded and are molding into one great people. I rejoice to think it should be so. A similar process on a smaller scale is going on in the self-governing dominions of the British Empire. It is a good process, it is a noble process. Let us never forget that wherever be the place in which that great and beneficent process is going on, whether it be in Canada, whether it be in Australia, or whether on the largest scale of all it be in the United States of America, the spirit which the immigrant absorbs is the spirit in all these places largely due to a historic past in which your forefathers and my forefathers, gentlemen, all had their share.

In speaking of the Chairman's reference to the splendid work of the British fleet, Mr. Balfour said:

Does anybody think that if the sea power were transferred from British to German hands the historian of the future could say the same of the German fleet? By their fruits we know them. Deliberately brought into ex-

istence in the hope that it would break down that naval power which the German autocracy—not the German people, but the German autocracy—recognizes as one of the greatest bulwarks of freedom, and one of the most powerful defenses against world domination, knowing that instinctively they have been feverishly building for eighteen or twenty years in order that, if it might be so, they could destroy the country with which they had no quarrel, and no cause of quarrel, but which they regarded with an instinctive and unalterable jealousy. They have been disappointed. Their fleet remains safely in the harbor.

What puts out to sea is not the battleship or the battle cruiser; there is no successor of the great fleets of ancient times; but the submarine which, in their hands, finds its natural prey in the destruction of defenseless merchantmen and the butchery of defenseless women and children. I will do the German fleet the justice to say that I do not believe that this was its ideal when this war started, or when its ships were under construction. What I do say is that the use which the German governing classes are now making of this new weapon, while it will never decide the issue of this war, nevertheless indicates a menace to the future commerce of the world which must be absolutely stopped for the future. Under the old maritime laws, which the United States and Great Britain in particular have always recognized, fleets undoubtedly did interfere with the commerce of any enemy belligerents, and it is very difficult to see how that could or ought to be avoided until that happy time comes when war is neither on land nor sea permitted to interfere with private rights, or indeed permitted to go on at all.

Germans Made War Inhuman.

But, gentlemen, maritime warfare as it has been carried on by civilized nations in the past has been a human affair, carried out under recognized laws, under which as little injury was done to the neutral trader as was possible under the circumstances, compared to the abominations which are now insisted upon by the German staff. Huge tracts of ocean are marked out at the arbitrary will of one belligerent, and within these vast areas neutrals, peaceable traders, do not merely have their ships taken in, adjudged in the prize court, dealt with, and non-belligerent life carefully regarded, but they are sunk at sea, no examination, no knowledge of what is in the ship, no knowledge of the character of the crew, no knowledge of whether there are or are not passengers aboard, no knowledge of the goods which are being transported, of the place from which they came or the destination designed. That, gentlemen, is carrying out the methods of barbarism, and in a manner which would have been regarded as incredible even in Germany two years ago. It has been carried out by a Government which, when it thought

worth while for diplomatic reasons, was never wearied of talking of the freedom of the seas.

But it is a method of conducting warfare which in its indirect consequences, as well as its direct consequences, is of such a character that the civilized world must, when this war is over, take effectual precautions against its repetition. For, if not, it seems to me that, whenever two countries go to war, and whenever it suits the least scrupulous of the belligerents, not merely will a great wrong have been inflicted upon its opponent, but the commerce of the whole civilized world will be disorganized and destroyed. That is impossible to tolerate. And this Chamber has under its guardianship the interests of trade and commerce, and it is of all bodies the one most interested in seeing that, so long as wars are still permitted—and I hope that will not be long—maritime warfare shall be conducted under methods consistent with public law, consistent with ordinary humanity, consistent with those fundamental principles of morality which underlie—or ought to underlie—all law.

Problems After the War

When this tremendous conflict has drawn to its appointed close, and when, as I believe, victory shall have crowned our joint efforts, there will arise not merely between nations but within nations a series of problems which will tax all our statesmanship to deal with. I look forward to that time, not, indeed, wholly without anxiety, but in the main with hope and with confidence; and one of the reasons for that hope and one of the foundations of that confidence is to be found in the fact that your nation and my nation will have so much to do with the settlement of the questions.

I do not think anybody will accuse me of being insensible to the genius and to the accomplishments of other nations. I am one of those who believe that only in the multitude of different forms of culture can the completed movement of progress have all the variety in unity of which it is capable; and, while I admire other cultures, and while I recognize how absolutely all important they are to the future of mankind, I do think that among the English-speaking peoples is especially and peculiarly to be found a certain political moderation in all classes which gives one the surest hope of dealing in a reasonable, progressive spirit with social and political difficulties. And without that reasonable moderation interchanges are violent, and as they are violent reactions are violent also, and the smooth advance of humanity is seriously interfered with.

I believe that on this side of the Atlantic, and I hope on the other side of the Atlantic, if and when these great problems have actively to be dealt with, it will not be beyond the reach of your statesmanship, or of our own, to deal with them in such a manner that

we cannot merely look back upon this great war as the beginning of a time of improved international relations, of settled peace, of deliberate refusal to pour out oceans of blood to satisfy some notion of domination; but that in addition to those blessings the war, and what happens after the war, may prove to be the beginning of a revived civilization, which will be felt in all departments of human activity, which will not merely touch the material but also the spiritual side of mankind, and which will make the second decade of the twentieth century memorable in the history of mankind.

The Italian War Commission reached New York on May 10, headed by Enrico Arlotta, Minister of Maritime and Railway Transportation, with the following associates: General Gugliemotti, representing the Italian Army; Commander Vannutelli, representing the navy; Alvise Bragadini of the Transportation Department, G. Pardo of the Department of Industry and Commerce, and Gaetano Pietra of the Agricultural Department.

The Battle of Arras Day by Day

By Philip Gibbs

[Published by arrangement with The London Chronicle]

The progress of the great struggle in the region of Arras is here graphically described as seen from day to day by one of the most brilliant correspondents with the British armies in France. The battle of Arras began on April 9, 1917, and the story is here taken up where it broke off in the May issue of CURRENT HISTORY MAGAZINE.

[See Map on Page 422]

APRIL 23, 1917.—The battle of Arras has entered into its second phase; that is to say, into a struggle harder than the first day of the battle on April 9, when by a surprise, following great preparations, we gained great successes all along the line.

This morning shortly before 5 o'clock English, Welsh, and Scottish troops made new and strong assaults east of Arras upon the German line between Gavrelle, Guémappe, and Fontaine les Croisilles, which is the last switch line on this part of the front between the British and the main Hindenburg line. It has been hard fighting everywhere, for the enemy was no longer uncertain of the place where the British should attack him. As soon as the battle of Arras started it was clear to him that they should deliver their next blow when they had moved forward their guns upon this "Oppy line," as the British call it, which protects the Hindenburg position north and south of Vitry-en-Artois. His troops were told to expect the British attack at any moment and hold on at all costs of life.

To meet the British strength the enemy had brought up many new batteries, which were placed in front of the

Hindenburg line and close behind the Oppy line, and massed large numbers of machine guns in the villages, trenches, and emplacements, from which they could sweep the line of advance by direct and enfilade fire. These machine guns were thick in the ruins of Roeux, just north of the River Scarpe, in Pelves, just south of it, in two small woods called Bois du Sart and Bois de Vert, immediately facing Monchy, on the slope of the hill, and in and about the village of Guémappe, which we had assaulted and entered twice before.

Many German snipers, men of good marksmanship and tried courage, had been placed all about in shell holes with orders to pick off the British officers and men, and the enemy's gunners had registered all British positions so that they were ready to drop down a heavy barrage directly the British made a sign of attacking.

A Battle to the Death

It was only to be expected that this second phase of the battle of Arras should be extremely hard. For the British it is a battle to the death. Fighting is in progress at all points attained by the troops, and there is the ebb and flow of men—beaten back for a while

by the intensity of fire, but attacking again and getting forward.

At the outset of the attack, according to accounts given me by men who went over with the first waves, the enemy showed himself ready to meet it with fierce resistance. Last night was terribly cold, and the British troops lying out in shell holes or in shallow trenches dug a day or two ago suffered from this exposure. Some of the Scottish troops had fought in the first day's battles of Arras, and, with English troops, had gone forward to Monchy and into the storm centre of German fire. Some of the men I met today had been buried by German crumps and had been dug out again, and as they lay waiting for the hour of attack shells fell about them and the sky was aflame with the flashes of British bombs. The men craved for something hot to drink. But they nibbled dry biscuits and waited for the dawn, and hoped they would not be too numb when the light came to get up and walk.

The light came very pale over the earth, and with it the signal to attack. The bombardment had been steady all through the night and then broke into a hurricane of fire. As soon as the men left the trenches the gunners laid down a barrage in front of them and made a moving wall of shells ahead of them—a frightful thing to follow, but the safest if the men did not go too quickly or failed to distinguish between the line of German shells and the British. It is not easy to distinguish, for the men had hardly risen from the shell holes and ditches before the enemy's barrage started and all the ground about them was vomiting up fountains of mud and shell splinters. At the same time there came above all the noise of shellfire a furnace blast of machine guns. The machine gunners in Roeux and Pelves, in the two small woods in front of Monchy, and in the ground about Guémappe were slashing all the slopes and roads below Monchy on the hill. "It was the most awful machine-gun fire I have heard," said a young Scot this morning as he came back with a bullet in the hip.

Desperate Fighting at Monchy

April 24.—Fighting, harder and more stubborn on both sides, more desperate in resistance on the enemy's part than anything since the battles of the Somme, has been in progress east of Arras since the hour of attack yesterday morning. For the German Army they have been two days of dreadful sacrifice, for the British days of grim struggle, with many attacks and counterattacks which in the end have won and held important ground.

The village of Monchy dominates the present scene of battle, and is the key position above the Cambrai road, for which the enemy is fighting with full strength. His gunners made it one of their fixed targets yesterday and today and flung enormous high explosive shells at it, so that it is no longer the white village I saw last week, but a heap of broken walls and skeleton barns. Opposite lie the two woods of Bois Vert and the Bois du Sart on the slope of the opposite ridge, and it is from these woods that the enemy has come in his counterattacks. At 10 o'clock yesterday morning strong bodies of Rhinelanders left the cover of Bois Vert and, in spite of heavy losses from British machine-gun fire and field batteries, succeeded in driving back part of the British foremost line. Four thousand Germans of a fresh division gathered in the Bois du Sart for a further attempt to break the line, but they were seen by flying officers, and the British batteries filled the wood with gas shells so that great slaughter was done there. This body of men was literally shelled to death, and it was a human hell in that wood under the blue sky.

Like the Somme Battle

April 25.—The battle which is still in progress east of Arras is developing rather like the early days of the Somme battles, when the British fought stubbornly to gain or regain a few hundred yards of trenches in which the enemy resisted under cover of great-gun fire and to which he sent up strong bodies of supporting troops to drive the British out by counterattacks. The attack made by the Scottish troops yesterday afternoon and English troops at 3:30 this morning re-

established the line on this side of the two woods called Bois Vert and Bois du Sart, and on the further side of Guémappe. Parties of British troops who had been cut off, and were believed to be in the hands of the enemy, were recovered yesterday, having held out in the most gallant way in isolated positions. The British barrage preceding an infantry attack actually swept over them, and they gave themselves up for lost, but escaped from the British shells and German shells which burst all around them and seemed in competition for their lives.

A similar case happened with a party of Worcester men, recovered last night. They were cut off in a small copse, and lay quiet there for several days, surrounded by the enemy. They had rations with them, and lived on them until they were gone. They were then starving and suffering great agony for lack of water, but still would not surrender, and last night they were rewarded for their endurance by seeing the enemy retire before the advancing waves of English troops, the enemy suffering big losses, but replacing them each time by fresh battalions.

It is impossible to estimate the German losses during the last three days, but successive counterattacks were smashed by shell fire, machine-gun fire, and rifle fire, so that the ground was heaped with their dead. There have been no fewer than eight counterattacks already upon the village of Gavrelle, and not one of them reached the British front line, but they have been broken and dispersed. In the first counterattack upon the British line opposite Monchy between 2,000 and 3,000 Germans left Bois Vert, but after many hundreds had fallen they retired to reorganize. The second attack was in greater numbers and rolled back the British line for a time, but has now been forced to retire to its old position in the woods, which the British kept continually under an intense fire, so that the slaughter there must be great. The guns never cease their laboring night and day, shelling the enemy's infantry positions, batteries, lines of communication, railheads, and crossroads, so that no

troops may move except under the menace of death or mutilation.

Fierce Aerial Combats

April 26.—East of Arras, after three days of battle, the British hold good lines, with almost all the high and commanding positions south of Scarpe, and the enemy so far has made no further effort to recapture ground by sending out masses of men behind heavy curtain fire. He has paid a heavy price already in these endeavors, and is reorganizing and replacing his shattered divisions and carrying back his wounded to join that vast army of cripples, blind men, and nerve-broken men who in Germany are hideously eloquent of the truth and reveal the mockery of official history.

In the daily official reports a brief picture has been given of the battle which has raged in the skies while the earthmen have been struggling below. Truly during these last few days the air service has fought wonderfully. There have been hours when I have overheard the continual tattoo of the Lewis guns, and when the great sweep of the sky has been tracked out with white shrapnel clouds, following the British flying squadrons, engaged hotly with hostile machines.

British Daring in Raids

The British airmen go daily far back across the German lines, taking thousands of photos, engaging enemy squadrons so that they are held back from the line of battle, and dropping tons of explosives upon ammunition dumps, railheads, and transport. The boys (for they are absurdly young in average age) take all these deadly risks and do all this work of terror with the same spirit as did the young gentlemen of England who rode out with Sir John Chandos and Sir Walter Manny to seek combat with the French knights many hundred years ago along roads where the modern British men at arms go marching today. During this recent fighting one of them challenged a German albatross, who accepted fight, and for an hour they did every trick known to flying—stalling, banking, sideslipping, and looping—in order to get in the first shot. It was the German who tired first, though he

showed himself master of his machine. There are boys in the British air service who have killed six or seven Germans in single combat and a few who have accounted for many more and go off again for mornings, hunting men as if on a good adventure. Yet they know the risks and the fortune of war. They cannot have all the luck all the time. When their turn comes it is quick to the end, or if hit and left alive they do amazing things up there in the high skies to save the final crash.

During this battle of Arras the British airmen have made thousands of flights over the German lines, have engaged in hundreds of combats with hostile squadrons, and at the cost of their own lives in many cases have saved the British infantry great losses by keeping down the fire of the German batteries, destroying their kite balloons, signaling preparations for the German counterattacks, photographing the enemy's trenches and positions, and blinding his own power of observation to some extent, at least, by chasing his airplanes away from the lines on a day when the British infantry is not hard pressed. It is good to pay this tribute to the flying men, whose exploits are not much recorded, though they are always overheard and though the droning song of their engines is always the accompaniment of battle down below.

Capture of Arleux

April 29.—Yesterday the attack northward was delivered against the Oppy switch line, which the British broke by the capture of Arleux en Gohelle, which has fallen to the Canadians, and by successful assaults upon Oppy Village, from which the British troops afterward fell back for a few hundred yards owing to the intense enemy fire making a target of the village. English divisions have also swept across the northern and western slopes of Greenland Hill, which I already described as the dominating position above Roeux, and hold the ground in spite of the most resolute counterattacks and heavy shelling. Roeux itself has been entered by the British, and

their line now runs through the station there.

Further north the Canadians fought hard in Arleux Wood, and English troops, who had advanced up to Oppy, came against strong forces of the enemy, who came up from Neuvireuil and had to swing back a little upon a defensive line. South of the River Scarpe there was shellfire heavier than the British had yet encountered since the full height of the Somme battle, as heavy perhaps as that on July 1 at Gommecourt. The enemy has not only brought up new divisions, massing great reserves, but has dragged up many new batteries of heavy guns which are now firing ceaselessly day and night at long range.

At Lagnicourt I saw the corpses of the Germans who tried to capture the Australians' guns, and I was told that the first estimate of 1,500 men caught on their own wire by the British artillery and rifle fire was much below the number afterward reckoned. This German army is paying a fearful price for Hindenburg's strategic plans, but the men are fighting now as fiercely as ever they fought in this war, and this battle, now raging under a blue sky, is a most bloody episode of history.

Terrible Word Picture

April 30.—There has been but little time lately to describe the scenes of war or chronicle the small human episodes of this great battle between Lens and St. Quentin, with its storm centre at Arras, where men are fighting in mass, killing in mass, and dying sometimes in mass, as when German counterattacks were broken and destroyed at Gavrelle, Monchy, Guémappe, and Lagnicourt. The scene of battle changed during the last few days, because Spring has come at last and warm sunshine. It has made a tremendous difference to the look of things and sense of things.

More frightful now even than in the worst days of Winter is the way up to the front. In all that great stretch of desolation the British left behind the shell craters which were full of water, red water and green water, are now dried up and are hard, deep pits, scooped

out of the powdered earth from which all vitality is gone so that Spring brings no life to it. I thought, perhaps, that some of these shell-slashed woods would put out new shoots when Spring came, and I watched them curiously for any sign of rebirth. But there is no sign and their poor mutilated limbs, their broken and tattered trunks, stand naked and stark under the blue sky. Everything is dead, with a white, ghastly look in the brilliant sunshine except where here and there in a litter of timber and brickwork which marks the site of a French village a little bush is in bud or flowers blossom in a scrap heap which once was a garden.

All this is the background of the present battle, and through this vast stretch of barren country British battalions move slowly forward to take part in the battle when their turn comes, resting a night or two among the ruins where other men who work always behind the lines road-mending, wiring, on the supply column, at ammunition dumps, in casualty clearing stations, and railheads make their billets on the lee side of the broken walls or in holes dug deep by the enemy and reported safe for use. Dead horses lie on the roadsides or in great shell craters. I passed a row of these poor beasts as though all had fallen down and died together in a last comradeship. Dead Germans or bits of dead Germans lie in old trenches, and a few days ago I watched the bombardment of Lens close to the bones of a little Frenchman who had worn the red trousers of the old army when he fought down the slopes of Notre Dame de Lorette to the outskirts of Souchez. He seemed like a man of ancient history, and that red scrap of clothing belonged to an epoch long gone.

May Day in the Trenches

May 1.—May Day has been quiet along the British front so far as infantry activity was concerned, although noisy enough with gunfire. It was a day of perfect weather, rich in sunshine under a cloudless sky, through which the British air squadrons went away this morning flying low, so that they were fine to see, with glistening wings and wires. Today as well as yesterday the enemy's chief

targets were Arleux, captured by the Canadians, and Guémappe, which fell to the Scottish troops, both of which places he tried to take back by repeated and violent counterattacks. He is still in a trench on the east side of Guémappe running down to a bit of ruin called Cavalry Farm, where there has been close fighting for several days since the great battle of April 23, when Guémappe was taken by the Scots.

Two hundred prisoners were taken in that first forward sweep, when the kilted men advanced in long lines and went through and beyond the village of Guémappe with loud shouts and cheers. For nearly three hours the Scots were held up by the fire of German machine guns and artillery, and suffered many casualties, but they fought on, each little group of men acting with separate initiative, and it is to their great honor as soldiers that they destroyed every machine-gun post in front of them. They were checked again by machine-gun fire from many different directions and from the ruin called Cavalry immediately ahead of them. This was afterward cleared and many Germans lie dead there. Then between 11 and 12 in the morning the enemy developed his first counterattack. He massed great numbers of men in the valley below Guémappe, flung a great storm of shell on to the village and then sent forward his troops to work around it. It was then that these Scottish troops showed their fierce and stubborn fighting spirit. They tore rents in the lines of advancing Bavarians with Lewis guns and rifle and grenade fire, and the enemy's losses were so great that the supporting troops passed over lines of dead comrades.

Canadians Take Fresnoy

May 3.—Another day of close, fierce, difficult fighting is in progress, having begun early this morning in the darkness and going on down the long front in hot sunshine and dust and the smoke of innumerable shells. At many points the British troops succeeded splendidly, in spite of great resistance from fresh German regiments and intense artillery fire. The most important gains of the day were in the direction of the village of

Chérisy, where ground has been won by the English battalions, and in Bullecourt, where street fighting is in progress. This thrust at the enemy by Fontaine lez Croiselles, where he is still holding out in a narrow-pointed salient, which should be an utterly unendurable way to Chérisy, was taken rapidly without any serious check, although there was savage machine-gun fire. At Fontaine lez Croiselles the British troops found it very difficult to get forward, owing to the strength of the German defenses south of the wood and the barrage of heavy shellfire.

North of the river Scarpe there was great fighting around Roeux, Gavrelle, and Oppy. When the British advanced they were met by masses of Germans, and once more the line of battle had an ebb and flow and both sides passed over the dead and wounded in assault and retirement. Four times the old windmill beyond the village changed hands. Men were fighting here as if these bits of brick and wall were worth a King's ransom or a world's empire, and in a way they were worth it, for the windmill at Gavrelle is one point which will decide a battle or a series of battles upon which the fate of two empires is at stake.

In Oppy, above the cathedral, the Germans had been very businesslike. They knew this attack was coming. It was clear that it must come to them, and at night they worked hard to protect themselves. They made machine-gun emplacements not only in pits and trenches, but in branches of many trees, and wired themselves in with many twisted strands. A second Guards reserve, newly brought up, held the village and wood and a white château, with its empty windows and broken roofs, and kept below ground when the British gunfire stormed about them. So when the British attacked in that pale darkness of the night they found themselves at once in a hail of machine-gun bullets and later under shellfire which made fury about them. They penetrated into Oppy Wood, but, owing to the massed German troops, who counterattacked fiercely, they did not go far into the wood or lose themselves in a sure deathtrap. They were withdrawn to the

outskirts of Oppy, so that the British guns could get at the enemy and drive him below ground again.

To the northward the British stormed and won long trenches running up from Oppy to Arleux, and, most necessary for their further progress, linking up with the Canadians, who made a great and successful attack upon the village of Fresnoy, just south of Acheville. This was a very gallant feat, in the face of many difficulties of ground and savage fire. They completely surrounded the village and caught the garrison in a trap from which they had no escape. The prisoners escaped the British shellfire, but were nearly done to death by their own guns. I saw this incident this morning. They had been put in an inclosure next to the Canadian field dressing station, flying the Red Cross flag, when suddenly the German guns began shelling the area with 5.9s. They burst again and again during a half hour with tremendous crashes and smoke clouds.

Deadly Windmill Fight

May 4.—I told yesterday of the windmill at Gavrelle and said it changed hands four times. That figure has now doubled since yesterday morning. Eight times the Germans recaptured it and eight times lost it again. While the British hold it and look above its chaos of timbers and bricks and sandbags and rusty wire to those stretches of shelled earth where many hundred forms lie, other field-gray men are approaching from Fresnes Woods, shoulder to shoulder, until the British guns tear holes in their ranks and they crumble away under the machine-gun bullets. So it is at Oppy and Roeux, in this battleground north of the Scarpe. Picked troops have been chosen to hold the villages, and, although so far they have held them by counterattacks in great strength against the British advanced posts, they suffered losses which one cannot reckon but I know to be most bloody under the British bombardments.

In this fighting just north of Oppy the British took many prisoners yesterday.

I saw the prisoners made around the chemical works, whose bricks are pock-

marked by the incessant patter of bullets from machine guns. There were a great many Poles among them, speaking a queer patois, and these men, though they fought according to order, loathe war and want to finish with it. They are tall, lean, swarthy fellows, unlike the blonde, square-shouldered Prussians brought down with them from Roeux. The Prussian machine gunners stood in a separate group and were a sturdy-looking crowd, not very dirty, in spite of their fighting, and looking well fed. Other prisoners, twenty of them, came in like earthmen or men buried and dug up again, which was their actual fate, although they did the digging with their own hands. Their dugouts blown in by the British shellfire and all the stairways and openings closed, they found themselves entombed. Horrible enough as it happens to the British, buried in shell craters or trenches with friends above to rescue them quickly if they have that luck, but most horrible for those men, cut off from the world in the battle which swept over them. For two days they used their spades, digging furiously till they were drenched with sweat and weak and parched with thirst. At last they broke up to daylight and surrendered to British soldiers, who were surprised to see them rise out of their tombs.

Some of the British wounded lying out on these battlefields must have been picked up by the Germans as the fighting swayed to and fro, but here and there a man lay where he fell and was recovered again by his comrades in a new advance just as parties of unwounded men held out or hid until the British line reached them again. One man had been lying out since April 23. He was brought in yesterday. He was an officer who had been hit in the stomach by a piece of shell and lay in a crater for five days, unconscious for a time and suffering in his conscious hours the agony of thirst, which is the greatest torture of all.

End of Fourth Week

May 7.—The battle of Arras has now lasted for a month, with successive shocks of attack and counterattack, and

for both sides the struggle has been a fiery ordeal, in which a great sum of human life has been burned and blasted. On the great day of April 9 the British losses were very light, as losses must be counted nowadays, and in comparison with the great gains. The enemy losses on that day were huge in prisoners, in killed and wounded, in guns, and in all material of war. Since then, after hours and even days of panic lest the British tide of men should break all barriers and overwhelm his Hindenburg line, the enemy has been able to rally, to rush up great reserves, and to replace his captured and battered guns by many new batteries. That has saved the Hindenburg line for a time at least, but has not reduced his daily toil of life and limb, for he has only been able to defend himself by counterattacking, and, although that is the best means of defense, according to the German textbooks, it has proved to be frightful in cost for the German soldiers. They succeeded in flinging back the British here and there by sheer weight of numbers when, after hard days' fighting, they lie exhausted in their advanced positions, but every time they have been swept by machine-gun fire and shrapnel, so that they have fallen in great numbers. To pretend that the British escaped scot free would be a silly lie. The casualty lists tell how many the British have lost.

In the battle of Arras there was individual courage, incredible almost in human nature, but what to me is more amazing is the general stolidity of all of them—this common valor of shop boys and cooks and farmers' lads and factory hands. To say they are always without fear would be ridiculous. They are often very much afraid, as all men must be when high explosives come out of the blue skies with frightful noises for abominable slaughter, but these lads are by some magic, which is in experience, steeled against ordinary apprehensiveness and against imaginative terror. A few days ago near Oppy I passed a group who had just been knocked out by a shell. It was a sight to turn one sick and cold, but a company

of boys came along on the way to the front line, where other shells were falling, and they paid very little heed to this group of men.

Night Scenes at Lens

May 8.—Last night, and after daylight this morning the enemy's gunfire was very heavy southward from the neighborhood of Loos and Lens, and he launched a violent counterattack against the British line north of Fresnoy, captured a few days ago by the Canadians. Further south still, at Bullecourt, the Scots are fighting at close quarters, mainly with bombs, routing the enemy down trenches and out of the village, regained for a while in the backward and forward drives of this fierce struggle westward of Queant, where the Hindenburg line is most closely menaced. Elsewhere in the northern lines it was a night of small raids on both sides, and along all the front a night of great artillery. I watched this battle of guns from the old trenches looking across to Lens and giving a wide sweep of the battle front from the field of Loos to the ground below the sloping shoulder of Vimy Ridge.

This ground was the storm centre of the world's war last night just after dark, and before the coming of the moon lights rose from the German lines. The old devil was lighting his tapers round the witches' caldrons of fire. These rockets rose high, flung up like jugglers' balls, then falling slowly and going out. Some of them burned for a minute or more and the woods and trenches beneath them were illuminated with sharp white lights. One remained hanging high over Lens for more than five minutes like a great star. All through the night the battle of the guns went on and the sky was filled with the rush of the shells and the moon veiled his face from this horror which made hell on earth. But in a little wood a nightingale sang all through the night.

Germans Recapture Fresnoy

May 9.—The night bombardment I described yesterday was the preliminary of a strong morning attack against the

British position in and around Fresnoy. Upon this village and the neighboring ground the enemy concentrated everything he has in artillery which can be directed on this sector of the front, and, in addition to the ordinary high explosives and shrapnel, he flung a storm of gas shells wherever he thought the British had battery positions. Fresnoy itself had been a difficult place to hold since the Canadians took it so gallantly on May 3. Having Acheville to the north of it and Oppy to the south, it jutted like a square-walled bastion with exposed sides, along which at the time of capture the Canadians had to form defensive flanks. The enemy had marked it down for attack, and for several days made strong counterthrusts on each side of it in order to prevent British troops getting forward to straighten out the line. English troops had to bear the brunt of the German concentrated fury. The German Army Corps Staff evidently decided to attack with the greatest strength possible on a narrow front, which was already held by their best troops. For a time that village is lost, but one day sooner or later the British will take it back. These men do not reckon cost, even though it is their own life that pays.

Australians at Bullecourt

May 13.—While the British were fighting north and south of the Scarpe an attack was made yesterday morning by the English and Scots at Bullecourt, supported by the Australians on their flank. The English and Scottish troops advanced from the south and west and drove forward through the village, establishing themselves first on the road which runs through the centre of the ruins and then going forward again to a line at the extreme north of the village, from which they have pushed out posts. The place is a rabbit warren of tunnels, in which there may still be Germans holding out, cut off from all chance of escape. When the British got through, the enemy seemed to run up these tunnels, hoping to get away to Riencourt, but by this time the Australians had just come up and captured a crowd of them numbering two officers and over 180

men, bayonetting a number who refused to surrender and fought like tigers.

The history of this fighting at Bullecourt is, however, inseparably bound up with the Australian troops who broke through the Hindenburg line to the right of this village and held on to their positions with amazing and splendid courage, although they were utterly exposed on their left and subjected to at least a dozen counterattacks in considerable force, preceded and followed by severe shelling.

All Australian officers pay high and touching tribute to the work of their stretcher bearers, who were superb in courage and self-sacrifice. I have seen the ground they had to cross and I know the evil and peril of it, but they went forward with the infantry and day after day crossed this country in the open with their heavy burdens, never stopping to glance at the bursting shells on either side of them, regardless of their own lives so that they could save their comrades. Unfortunately, the enemy did not respect ambulances, although they could clearly see the sign of the Red Cross, but sniped them continually with shells and shrapnel bullets, as well as stretcher parties which had more faith in German chivalry and for that reason walked deliberately in the open, so that they could not be mistaken. The percentage of mortality among these men is rather higher than that of the infantry themselves.

Heroic Incidents at Roeux

May 15.—The account I have already given of the way in which Roeux was taken a few nights ago left out some episodes which should be told and remembered, for the winning of this place was the result of many weeks' most fierce and tragic fighting.

After dusk some British lost their way from the cemetery and wandered off the track into the ruined streets of Roeux. There were some Irishmen among them, bold and reckless fellows who are very quick to do the right things in a tight corner when, as they say, they are on their own. They searched some dugouts and hauled out, by good luck, a group of staff officers belonging to the 362d Regiment and a doctor.

The doctor found his position rather obscure. He remained in his dugout for some time, attending British wounded brought down to him, and, according to these men, labeled them for Berlin. It was quite a time before he realized that his patients were not German prisoners, but that he was a British prisoner.

May 16.—The enemy is still making violent efforts to gain back Roeux and the part which he recently lost of Bullecourt, two places where for four weeks men fought on both sides in a daily struggle so deadly that the ground thereabout is heaped with bodies.

Yesterday, as I wrote, all Roeux was in British hands—the chemical works beyond the station, where many prisoners were taken; the château, with its great dugouts and machine-gun emplacements; the cemetery from which a great tunnel runs westward to Mount Pleasant Wood, and the village of Roeux itself. The British established machine-gun posts in the edge of the old German emplacements, dug defensive trenches, and cleaned out the dugouts in which dead Germans lay. There can hardly have been a patch of ground between the shell craters and the rubbish heap of the houses and barns on which there was not a German corpse. Among them lay men of the British Army. Some day, when the nightmare of this war has passed and the enemy has gone back to his own place, some of the men now fighting will come to Roeux as to a sepulchre where the dust of heroes lies; for all this place is a graveyard, although no dead lie quiet there yet. Living men are fighting there again amid all that mortality. Today's fighting here began this story of blood all over again; it piled new dead on the old dead; it refilled the cup of agony which has overflowed around these heaps of brickwork and tattered timbers.

While the artillery protects the enemy's present line he is digging hard behind in order to safeguard any further retreat that may be forced upon him. Now that the old Hindenburg line is breached both at Bullecourt and Wan-

court up north he is trying to strengthen his new line of defense running down through Montigny, Drocourt, and Queant. To fall back on that would mean the abandonment of Lens and of the Oppy-Mericourt line and the ground about Fontaine lez Croiselles, and Chérisy, which is gravely menaced. His industry

on this back line is helped by forced labor and there is evidence that he is employing British prisoners of war under British shellfire on this work.

May 17.—The British troops today completed the capture of the village of Bullecourt, for which they have been fighting since May 3.

French Offensive On the Aisne

From April 16 to May 17, 1917

[See Map on Page 422]

A NEW battle of the Aisne has been in progress since April 16, when General Nivelle, the French Commander in Chief, launched a great offensive on a front of twenty-five miles between Soissons and Rheims. This was on the line to which the Germans fell back after the battle of the Marne and from which the Allies had been unable to drive them.

In expectation of a strong offensive in this region, the enemy had massed large numbers of men and many guns, the intense bombardment of the previous ten days having given them ample warning that the French were preparing an attack. The Germans fought with great desperation along the whole front, realizing that a successful French advance would isolate the important city of Laon, upon which the Hindenburg line depends, but, according to General Nivelle's report at the end of the first day's fighting, "everywhere the valor of our troops overcame the energetic defense of our adversary."

The German first-line positions along the entire front were captured, and at some places the second line also. Over 10,000 prisoners were taken, as well as a large quantity of war material. On the two succeeding days the offensive was continued with unabated vigor. By the end of the third day the total number of prisoners taken was 17,000, with 75 guns. In many places the Germans were forced to fall back in disorder. The French gained several important positions, including the villages of Chavonne,

Chivy, Ostel, and Braye-en-Laonnois. Further to the west, where the old German line stood on the south bank of the Aisne, the French delivered another attack, no less successful. The important town of Vailly was captured in its entirety, while a powerfully organized bridgehead between Vailly and Condé-sur-Aisne also fell into the hands of the attackers. At the same time the French struck a strong blow against the western leg of the German salient, which has its apex at Fort Condé on the Aisne, capturing the village of Nanteuil-le-Fosse. East of Craonne, in the forest of La Ville-au-Bois, the French surrounded a body of 1,300 Germans, who threw down their arms. Further to the east, where the French in their first onslaught captured the German second-line positions, the Germans delivered a counterattack, employing two divisions, or about 40,000 men. The attackers met a hail of artillery and machine-gun fire, and suffered heavy losses. At no point were they able to reach the French lines. Twenty-four guns and three large cannon with their shell dépôts were captured by the French in this region during the day's fighting, the guns being immediately turned against the enemy.

South of St. Quentin the Germans made two strong counterattacks. The first one failed completely, the second had only momentary success, as a French attack immediately afterward retook all positions, capturing or killing all the enemy who had penetrated the line.

To stem the French advance, Hinden-

burg threw twelve new German divisions, approximately 240,000 men, into the lines on the night of April 18, but next day the French pushed further ahead. The most desperate attempt made by the Germans on April 19 was between Juvincourt and Berry-au-Bac, the weakest point on the line. Here 30,000 of the best German troops were hurled forward in a furious counterattack, but were beaten off with heavy losses. The most important French gains were made at two widely separated points—at the angle of the new front east of Soissons and north of Vailly, where a sharp salient was developed, and just northwest of Auberive, in the Champagne, where the town of Moronvillers was threatened with capture.

Following up these successes in squeezing out the German salient, which had its point at Fort Condé, on the Oise, the French continued to press back the enemy in this sector on April 20 toward the Chemin des Dames, the road running along the crest of the heights north of the river. General Nivelle's troops occupied the village of Sancy, between Aizy and Nanteuil. They also made appreciable progress east of Laffaux. Immediately in front of the French in this sector is the fort of Malmaison, standing on a range of high hills and protecting the high road from Soissons to Laon. West of Craonne the Germans launched a heavy attack in the region of Ailles and Hurtebise Farm, employing large forces of troops. They met a withering fire from the French artillery and machine guns and fell back in disorder. In Champagne the French also made progress, capturing several important points of support in Moronvillers Wood. Here, also, the Germans attempted strong counterattacks, but without result.

On April 22 and 23 the Germans concentrated their energies to capture Mont Haut, the dominating position in Western Champagne, but without result. Meanwhile the French gained more ground at the western end of the Soissons-Rheims front. South of St. Quentin the artillery duel which had been in progress several days continued with vigor. April 25 was notable for strong

German attacks on the French positions at Hurtebise Farm, north of the Chemin des Dames, but the advantage remained with the French, who on April 27 gained further ground.

There was now some diminution of the intensity of the fighting. The French were in possession of the chief heights of Moronvillers. On April 30 they began another offensive on the left of the previous advance in Western Champagne. The fighting was particularly severe on the north slopes of Mont Haut, to the northeast of which the French pushed a salient reaching the approaches to the Nauroy - Moronvillers road. Artillery fighting of considerable violence continued along the Chemin des Dames, north of the Aisne, and in the region northwest of Rheims. By May 1 the French had taken well over 21,000 prisoners since the opening of the drive on April 16.

Scenes of Awful Combat

"One of the most awful parts of the battle line in France," wrote G. H. Perris, The London Daily Chronicle correspondent with the French Army, on May 14, "is the Chemin des Dames and the neighboring points of the Aisne heights, where mutual bombardments never cease and infantry fighting goes on continuously. Before a resistance of unprecedented obstinacy the French have slowly made good and slightly extended their hold upon the ridge, and every day makes its commanding views more useful to them. I suppose that in the whole extent of the war there could hardly be found a natural stronghold put to better defensive use than this has been. From the outset the German armies have been richly provided with machine guns. They are now employed upon a larger scale than ever, and in this rugged ground, with its ravines, cliffs, woods, and stone villages, they are peculiarly formidable. The chalk slopes are honeycombed with caverns and grottoes, natural and artificial, which the German engineers had furnished, enlarged and connected by tunnels. Here they awaited the end of the bombardment in comparative immunity, while the French had to approach from a valley 300 feet below by trenches that were nearly everywhere overlooked.

"It is true that when the barbed wire was completely broken and the chasseurs, zouaves, Moroccans, and other troops of assault were able to dash over No Man's Land, the caves proved to be traps and yielded up several thousands of prisoners. On the crest the Germans had pierced a number of tunnels through the chalk from the front to the back slopes of the hills. Sometimes, as above Chivy, they let the wave of the assault pass and then fired upon the French from behind. Sometimes there were bloody combats in the entries of these warrens and the tenants were shot down as they came out. There was at the head of the Chivy ravine a wide hole in the earth down which the Moroccans threw some grenades and then passed on. It turned out to be the entrance to a great tunnel which led by no fewer than 112 steps to another entrance on the back of the hillside. Apparently against the eventuality of assault the tunnel had been mined with five large charges. The grenades filled the place with smoke and threw the occupants into panic. Fearing that they would be blown up with their own explosives, they bolted upstairs to the back door, but by that time the Moroccans had discovered the second entry, and here they collected 200 frightened Boches as they emerged.

"Generally the German resistance was brave and determined. In one day near Cerny counterattacks were launched only to break like spume upon the extemporized French positions. They became daily stronger, but still thousands of graycoats were sent to the assault. In their attempts to recover the Cerny sugar factory (a heap of ruins, of course) they started from some specially wide communication trenches up which columns of grenadiers came four abreast. As soon as four were shot down another line stepped forward. Thousands and thousands of bombs were thrown, but the French mitrailleuses could not be passed."

The Capture of Craonne

The village of Craonne, several fortified points north and east of the village, and the German first-line positions on a front of two and a half miles northwest

of Rheims were captured by the French on May 4. Craonne, about nine miles southeast of Laon, stands upon an isolated height at the eastern end of the Chemin des Dames. It not only protects the entire plateau north of the Aisne, but defends also the lowlands between this height and Neufchatel. The Germans had been intrenched in this position since the first battle of the Aisne, and many French attacks had broken against the cliffs on which the village stands. Its capture by the French gave them an open road up the valley of the Miette, where more than two weeks previously they captured the enemy's second line south of Juvincourt. An advance up this corridor would outflank the entire German position depending on Laon as a centre. Such an advance would have been a hazardous operation so long as the Germans clung to Craonne. The corridor is protected on the east by the heights of Brimont.

Another brilliant victory was gained by the French on May 5 on the front north of the Aisne River at both ends of the Chemin des Dames. Over 4,300 prisoners were taken. On both sides of the Soissons-Laon road the French carried a salient in the Hindenburg line over a front of nearly four miles, extending from the Moisy farm (southeast of Vauxaillon) to a point north of Sancy, including the Laffaux Mill, which stands on a height at the intersection of the Soissons-Laon road with that running north to La Fère. The French line north of Nanteuil la Fosse and Sancy was pushed forward to the immediate vicinity of the Soissons road.

At the eastern end of the Chemin des Dames the French not only repulsed all German counterattacks, but cleared the entire plateau from east of the Cerny en Laonnois to a point east of Craonne, and pushed forward to the hills which dominate the valley of the Ailette River, south of Ailles, and the Vanderc Forest. The Germans counterattacked more violently than at any time since the offensive began, throwing fresh troops into the battle at threatened points in fierce efforts to regain their lost positions. The fighting was especially prolonged and

violent around Craonne, where the French took prisoners from two fresh German divisions and maintained all their gains. The obstacles confronting the French armies were in many cases natural, and, it would seem, insurmountable, and the French accomplished magnificent exploits in scaling them in the face of the enemy, who had accumulated divisions and batteries.

Fighting Near Rheims

There was no diminution in the heavy German onslaughts in the neighborhood of Rheims, where the German positions between Beine and Sapiigneul form a pronounced salient, which includes Fort Brimont and Forts Witry, Berru, and Nogent. After three days' more fighting the French gained further successes, capturing first-line trenches over a front of three-quarters of a mile northeast of Chevreux, near Craonne, and also a minor position northwest of Rheims.

In a determined effort to secure the initiative, the Germans on May 16 delivered a powerful attack on a front of two and a half miles northeast of Soissons, attempting to break through the French lines north and northwest of Laffaux

Mill, where the French seriously threatened the whole German position as far north as La Fère. So huge were the masses of troops thrown by the Germans against the French lines that at several points the French were driven back by sheer force of numbers, but counterattacks immediately organized enabled them to regain the lost ground.

On May 17 the German counterattacks still continued with extraordinary insistence, especially on the Chemin des Dames. A correspondent on that day summed up the situation in these words: "To the north of Laffaux village and the neighboring crossroads in particular the battle has gone on practically without intermission for a month. This district of sharp hills, wooded ravines, and limestone caverns is the corner at which the Siegfried line turns eastward. The French advance was desperately opposed from the first, and it has been possible to extend it only slightly, but the chief end has been very fully attained. The tide of the German assault swells up, splashes over a piece of trench here or there, is broken, and in its ebb leaves terrible human wreckage to mark one more failure."

The Famous Fight for Vimy Ridge

The story of the remarkable capture of Vimy Ridge by the Canadians, one of the outstanding episodes of the British offensive in France in April, 1917, is officially related as follows by the Canadian War Records Office:

A GAIN the Canadians have "acquired merit." In the capture of Vimy Ridge on April 9, as in the lesser action of Courcellette in September of last year, they have shown the same high qualities in victorious advance as they displayed in early days in desperate resistance on many stricken fields. At half-past 5 on Easter Monday morning the great attack was launched with terrible fire from our massed artillery and from many field guns in hidden advanced positions. Our "heavies" bom-

barded the enemy positions on and beyond the ridge, and trenches, dugouts, emplacements, and roads, which for long had been kept in a continual state of disrepair by our fire, were now smashed to uselessness. An intense barrage of shrapnel from our field guns, strengthened by the indirect fire of hundreds of machine guns, was laid along the front.

At the same moment the Canadian troops advanced in line, in three waves of attack. Flurries of snow drifted over the battlefield as the Canadians left their jumping-off trenches behind the rolling barrage. The light was sufficient for manoeuvring purposes and yet obscure enough to obstruct the range of vision and lessen the accuracy of fire of the German riflemen and machine-gunners.

The troops on the extreme left made a start under conditions as favorable as those in the centre and right, but they were soon confronted by a strong and constantly strengthening opposition. The advance of these troops was soon checked between its first and second lines of objectives by heavy fighting, which was more formidable against the centre of the line than against the flanks.

A dip in the ground caused a change of direction, which swung these troops off their central objectives. They reached their goals on the flanks, only to find themselves subjected to heavy, close-range fire of machine guns and rifles. To be enfiladed from the centre and the north was bad enough, but to add to the situation, caves, or a tunnel, in the hostile line over which we had already advanced now disgorged Germans, who promptly reoccupied their old front and opened fire on our rear. The enemy at these points fought with unusual vigor and resolution.

These troops on the extreme left fought all day against the Huns, and by 10 o'clock at night succeeded in disposing of the enemy in their rear and capturing the major portion of the enemy trenches in their centre. "The Pimple," in the north, still remained to the enemy, but by then snow was falling heavily and it was wisely decided to consolidate the hard-won gains and prepare for a counterattack rather than to undertake a further assault that night. "The Pimple" would keep for the morrow.

In the meantime the other troops fought forward to one line after another without serious check, but with many brisk encounters and not without casualties. Most of these were the result of shrapnel fire, only a small percentage were fatal, and the majority of the wounds were of a minor character.

On the German second line the troops drew breath and consolidated their gains. Our barrage was laid before them steady as a wall. Fresh troops came up and deployed into position. They waited for the barrage to lift at the ordained minute and lead them on. The enemy's artillery fire—their counterbarrage and

bombardment of our gun positions—was not strong as strength in such things is considered today. Prisoners were already hurrying to our rear in hundreds, pathetically and often ludicrously grateful to the fortunes of war that had saved them alive for capture. They surrendered promptly and willingly.

The barrage lifted, and the two divisions on the right followed it forward to the German third line. Here again they paused for a time, then advanced again, behind the ever-ready and unslackening barrage, for a distance of about 1,200 yards. This advance included the capture of several villages, Hill 140, a number of fortified woods, and several trenches and belts of wire. And still the enemy surrendered by hundreds and scuttled rearward to safety. Their resistance grew feeble, their hands more eager to relinquish their weapons and ascend high above their heads, at each stage of our advance.

At 10 o'clock snow fell heavily from black clouds sweeping low across the ridge. Half an hour later the snow ceased, the clouds thinned, and the sun shone fitfully over the shattered and clamorous battlefield. Word was received at the advanced headquarters that the British division on our immediate right was enjoying a degree of success in its operations equal to the Canadian success.

Events continued to develop with rapidity and precision. By 1 o'clock every point in the enemy's third line of our objectives had been reached and secured. By this time the troops on the right had consolidated their gains and advanced strong patrols. From their new positions they commanded a wide view of enemy territory to the eastward. They reported a massing of Germans on a road in the new field of vision, and our heavy guns immediately dealt with the matter. By noon one of the battalions of a division had received and dealt drastically with three counterattacks. Its front remained unshaken. Shortly after this the Canadian Corps was able to state that the prisoners already to hand numbered three battalion commanders, 15 other officers, and more than 2,000 noncommissioned

officers and men—with plenty more in sight—making for our “cages” as fast as their legs could carry them.

The final stage of the attack of the troops on the right was now made. They passed through the wide belts of enemy wire which fringed the plateau by way of wide gaps torn by our heavy artillery at fixed intervals. So they issued on the eastern slopes of Vimy Ridge—the first allied troops to look down upon the level plain of Douai since the German occupation in 1914. They saw the villages of Farbus, Vimy, and Petit Vimy at their feet, and beyond these the hamlets of Willerval, Bailleul, Oppy, and Mericourt.

They pressed on to Farbus Wood and Goulot Wood, and possessed themselves of several hostile batteries and much ammunition.

By an early hour of the afternoon all our objectives, save those of the left of the attack, were in our possession, and the task of consolidating and strengthening our gains was well in hand. Throughout the day the most courageous and devoted co-operation was rendered to the Canadian Corps by a brigade and a squadron of the Royal Flying Corps.

The night saw all of Vimy Ridge, with the exception of a few trenches on Hill 145, secure in Canadian hands.

Last Inhabitants Driven From Rheims

The City of Rheims was evacuated by its civil population on Easter Sunday, when the last 17,000 inhabitants, who had withstood the German bombardment for two and one-half years, withdrew. Henry Wood describes this episode as follows:

BEFORE the German declaration of war Rheims was a prosperous city, with 117,000 inhabitants, and though about 100,000 of the population left by degrees, the remainder refused to go. They organized an underground cellar life, with schools and municipal, social, and business activities.

The enemy apparently chose Holy Week for the final destruction of the city. On Palm Sunday nearly 1,000 shells were thrown into the city, and the local authorities immediately suggested the final evacuation of the city, but the faithful 17,000 said, “Oh! but we have seen much worse than this in 1914.” On Holy Monday another thousand shells came. The faithful 17,000 began to look a little dubious, but cheered each other up heroically. But on Tuesday another thousand shells deluged the city, and the local authorities had some bills printed begging the people to flee; but the bombardment was so terrific that it was im-

possible to post the bills. On Wednesday there came still another thousand shells. The two newspapers of Rheims, which had never missed a single issue even under the severest bombardment, invited their readers at last to abandon their homes as they were abandoning their newspapers. Thursday saw another thousand shells hurled into Rheims and the authorities prepared more posters, this time ordering the population to flee immediately. The bombardment again prevented the posting of the bills and the 17,000 still refused to flee.

On Good Friday not only was the number of shells increased, but their size as well, and on Saturday were added shells filled with asphyxiating gas. It was then, and then only, the faithful 17,000 admitted their defeat.

They still hung out till Easter morning, however, and then, getting together their few possessions, and under a new deluge of shells, they went out, and Rheims remained a city without life and without breath.

The damage done to the remains of Rheims Cathedral during the bombardments of April and May was so serious that architects apprehend the complete collapse of the building.

Military Review of the Month

Period from April 18 to May 18, 1917

By J. B. W. Gardiner

Formerly Lieutenant Eleventh U. S. Cavalry

THE object of these reviews is twofold—to give a résumé of recent fighting in the various theatres of military operations and to outline the general situation as it exists at the moment of writing. The second of these I will take up first, as it will bring into clearer view the objects on either side of the fighting, and to what extent those objects are being attained.

Germany has two chances of winning the war. The first is the submarine campaign. If this campaign is successful to the point that oversea communication between the New World and the Old is completely broken up German victory is almost certain to ensue. The second is a separate peace with Russia. This will not necessarily make Germany the winner, but it will greatly enhance Germany's chances and make victory a possibility. As to the first, it is practically impossible. The second is not impossible, but improbable. At the same time a situation exists in Russia which is not without an omen of ill for the Allies.

Ominous Conditions in Russia

The situation is one of chaos. Instead of liberty and an active struggle to defeat the most persistent foe to republican ideas, there is almost unbridled license and a complete breaking down of discipline in the military force. As one of the Russian leaders stated it, the people have had a sip from the cup of liberty, and it has intoxicated them. The ablest Generals, the greatest statesmen, have all left their posts, either through removal or resignation. Nicholas, Brusiloff, Ruský have gone, and there is no one apparently able to take their places. Discipline in the army has disappeared, the control of the officers over the men has gone with it, and no important order can be given unless ap-

proved by the soldiers themselves. The Russians and the Germans are fraternizing openly in No Man's Land, and there seems no means of breaking up this ruinous communication. The situation could not, in a military way, be very much worse.

It is not that Russia will make a separate peace. The probabilities are that she will not. While this still keeps Germany away from the Russian granaries, it nevertheless, in so far as military operations are concerned, gives Germany the same advantages that such a peace would bring. That is, it eliminates Russia from the war, at least for the current year, and thereby permits the Central Powers to concentrate in other quarters a large part of the forces which have been held on the eastern front by Russia's swift, hard offensive strokes. This is an element that has an important bearing on the fighting in France.

General Hindenburg's Plan

Let us turn back a little to the beginning of the great German retreat and outline the reasons given by Germany, or fairly implied as reasons therefor. The first was undoubtedly to gain time—to delay the attack of the Allies, which they felt sure would be launched. The almost inconceivable devastation left in their wake is sufficient proof of this. The second was to give their submarines an opportunity to destroy sufficient tonnage to give them the advantage in the land fighting. Finally, having accumulated during the Winter a certain reserve of new material through new levies, returns from the hospitals, and men released from manufacturing duties through the enslavement of the Belgians, their aim was to begin an offensive in a new field through open warfare, using this reserve for the purpose.

What this new reserve amounted to in

numbers we do not know. The normal yearly increment is approximately 500,000; it does not seem reasonable that the number from other sources could be greater. This would give the total reserve figure at about 1,000,000. It is apparent, however, from the statement as to the German plan—which statement comes from Berlin—that Germany planned to take the initiative which the Allies had held since the ending of the battle of Verdun. If she did not, indeed, there was but little sense in collecting this reserve which was formed largely by mortgaging the future. It was a stake with which to gamble, and therefore must have been intended to be used in an effort to accomplish some result through offensive operations initiated by Germany.

Plans That Have Failed

To what extent, then, do the operations of the last month indicate success in conformity with the German plan? The first part—to gain time—has proved a failure. They did not gain time because the British and French, knowing of the coming retirement, (I myself was advised of it from an authoritative source the first week in February,) had, before it began, prepared to strike elsewhere than on the Somme. The British preparation for the attack on Vimy Ridge was made in February, the French preparation for the attacks on Craonne and in Champagne somewhat later.

The second part of the plan, while in one sense partially successful, since many hundreds of thousands of tons of shipping have been sunk, has in reality been a ruinous failure, since it has thrown the resources of America into the balance against Germany. Nor has it even approached cutting England off from the New World. Indeed, Canada is sending troopships across weekly, and there is no record of any one of them ever having been sunk.

As for the third, its defeat has been most complete. Germany has been utterly unable to take the initiative or to use for this purpose the million men she had gathered at serious cost to her later operations. On the contrary, she has had to use this reserve to resist the ter-

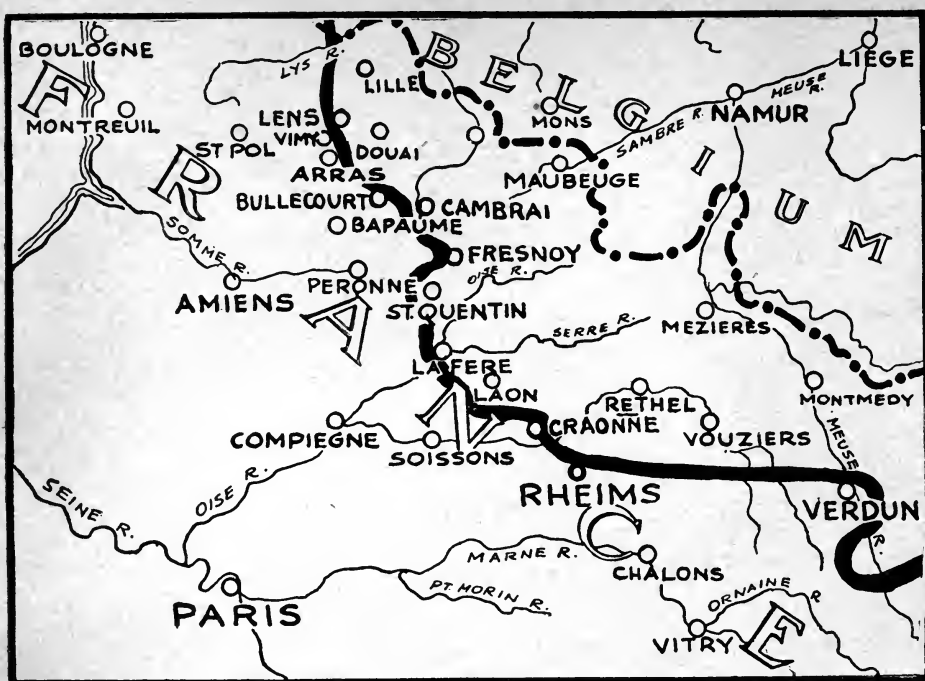

rific and unrelenting pressure which the British and French have applied to the two most vital sections of the German front. And even this does not seem to have been sufficient. Aside from throwing this reserve into action long before it was expected, she has had to call on the Russian front for additional men, and is using many divisions of them now. The Russian situation permits this to be done without present danger. It is another case of mortgaging the future because of the exigencies of the present. When Russia is ready to strike again the result will show how serious the damage is. We see, therefore, that in every particular the German plans have met with defeat.

Less Hopeful Elements

To this extent the situation is entirely favorable to the Allies. But it is a negative advantage. In reality the situation is not as hopeful as might appear from what has already been said. There is reason for a somewhat dubious feeling about any great success this year. The whole thing hinges on Russia, and we know what the Russian situation is. The only way a group of nations holding the advantage of interior lines can be beaten is by striking simultaneously at many points on the inclosing circle. And this cannot happen. Russia, we have seen, cannot attack. Any Italian attack will be met by Austrian reserves, drawn with impunity from the Russian front. Rumania is dependent upon Russian assistance and Russian supplies, and may consequently be classed with Russia as incapable of offensive action. The army in Saloniki, although spasmodically active, is really performing no other function than that of a holding force, neutralizing the army of Bulgaria. Only on the western front can effective fighting be done, and the forces on this front must bear the brunt of the entire German Army. This, then, is the situation with which the British and French are confronted, and which must be borne in mind in following the western fighting.

French Fighting on the Aisne

As for the actual fighting, it has been more severe than during any correspond-

BRITISH AND FRENCH BATTLE FRONTS NEAR ARRAS AND ON THE AISNE

ing period of the war. The first attack to be noted—it began as last month's review was going to press—was the French attack west of Rheims and in Champagne. The attack west of Rheims was against the southern pivot of the so-called "Hindenburg Line"—against the Laon position. It was leveled principally against the heights of the Aisne, where the allied attacks which followed the battle of the Marne broke down. From the Aisne, passing north toward Craonne, there is an abrupt limestone plateau, rising in a very difficult, heavily wooded country and terminating sharply at Craonne itself.

The first French rush, which was preceded by the usual terrific bombardment, carried Nivelle's men well up to this plateau and accounted for a great many guns and thousands of prisoners, many of the latter being caught in the limestone caves—some natural, some created by the Germans—with which the plateau is honeycombed. Following up this success, the French struck again and again until the plateau was taken and Craonne occupied. French lines were established

about three-quarters of a mile from the Ailette River, which they now parallel from Courtecon to Chevreux. The floor of this valley is now under complete domination by the French guns, which occupy the ridge that parallels the valley throughout.

Here the French have had to stop. The Germans have thrown into the fighting over 100,000 new troops in their efforts to hold back the French thrust, and have made the most furious counterattacks, particularly against the Craonne position. But the French have maintained their new positions entirely. Indeed, it was the terrain which has held the French back, more than the reserve material which the Germans have thrown into the battle. The truth of the matter is that both sides hold positions which are exceedingly strong defensively. Each holds a ridge paralleling the river—one on one side, one on the other. There is no object in the French pushing down to the river unless they can cross it and seize the heights on the other side. This promises to be a most difficult operation, and one accompanied by heavy losses;

and there is no indication that any such attempt is being considered. Indeed, it would seem that the French have reached the limit of possibilities here, and that this section of the line will wait for an attack to be made from the east, where the terrain is much more simple and less favorable for defense.

Between Rheims and Berry-au-Bac the country is open, gently rolling, without positions of any particular dominating value. The attack here almost entirely cleared the Aisne Canal north of Soivre and forced the Germans back to within a mile of the Suippes River. Here, too, the advance has halted and the French have had to withstand the heaviest of countermovements. In the Champagne country east of Rheims, to which the French attack extended, there was also a decided gain in the early days of the fighting, but the advance stopped at the heights of Moronvillers. Against this section, too, the Germans have countered heavily, but everywhere the French lines have held. Division after division of the German reserves has been used up in these three sections of the line and withdrawn to recuperate and re-form.

On the British Front

All the British fighting of the month has been over the narrow front from Fresnoy to Queant. The ground gained has been unimportant, but the apparent plan of the British is important. It must be realized, first, that the western fighting still has with it the idea of attrition—of wearing the Germans down. This has

never been lost sight of by the allied General Staff since trench warfare developed. And it is toward this end that the fight in the west is directed. The idea of the British, then, seems to be to provoke the Germans to counter-attack rather than to gain ground themselves.

The percentage of men lost in such attacks is always greater than in the original attack. There are several reasons for this, chief of which is that counter-attacks, whether made to stop an advance or to recover lost ground, promise success only when made before the hostile infantry can consolidate the ground gained and settle down into new positions. The artillery, therefore, cannot be used to the same extent either to prepare for or to protect the infantry as it moves forward. The losses involved in such fighting are always excessive. Such attacks are justified only when important positions are at stake. Here is apparently the key to the fighting at Roeux, at Oppy, and at Bullecourt.

There are indications of activity both on the Saloniki and the Italian fronts, but such attacks as have been delivered are only in the preparatory stage. The Saloniki fighting has been confined to the Vardar Valley, on both sides of which the French and British have made slight advances. On the Italian front, about midway between Tolmino and Gorizia, a new crossing of the Isonzo has been forced and several heights on the eastern bank have been seized. In general, however, the engagement has been without definite result.

German Version of the Month's Fighting

April 18 to May 17, 1917

GERMAN accounts of the fighting on the western front during the month have maintained that the British and French attacks have been failures attended by appalling losses. "After a week of incomparably wrathful onslaught," wrote the correspondent of the Berlin Lokal-Anzeiger on April 22, "the German front still stands unshaken, al-

though covered with bruises and pools of blood on the Aisne and in Champagne, a guarantee that, since the enemy did not succeed in the first two days of this gigantic battle, when their valor and vigor were fresh, in breaking the German lines, they will never succeed hereafter."

The German War Office report of April 23, the day on which the British

launched their second great assault since April 9, said that on the battlefield of Arras the new offensive had broken down without success under very heavy enemy losses, and the report of April 25, referring to the same day's fighting, added that the number of British dead and wounded lying in front of the German lines, according to aviators and men in the trenches, was unusually high. Only on the Cambrai-Arras road did the British gain ground.

The Berlin Lokal-Anzeiger correspondent described this offensive as the most gigantic infantry effort ever made by the British. "British humanity in khaki," he wrote, "flooded the whole country in front of the German trenches at Loos and Arras. Between Hulluch and Lens they formed a living battering ram and thus succeeded in taking about a kilometer of the German first trench. But a German counterattack, following immediately, not only ejected them from the trench, but left every British soldier on the battlefield. The troops welcomed an infantry attack as relief from the rain of iron that the British artillery is pouring on them incessantly. The German soldiers who had for days been exposed to the hell of gunfire never lost their nerve one moment when the human sea of khaki threatened to swamp them. On the Aisne and in Champagne, too, a sanguinary struggle around the hills continues as bitterly as in the last eight days. Evidently the French have received fresh munitions and replaced their tired divisions by new formations."

British Failure Announced

The third attempt of the British to break through the German lines on the battlefield of Arras was, according to the Berlin official statement of April 28, another complete failure, involving heavy losses, and followed by a German counterattack ending in "a heavy defeat" for the British. The War Office report of the following day contained this account of the battle:

"A very heavy drum fire, which was begun before daybreak over the whole front from Lens as far as Queant, was the prelude to a battle by which the

British for the third time hoped to pierce the German lines near Arras. By midday the great battle was decided by a heavy defeat of the British. At dawn, on a front of about thirty kilometers, (eighteen miles,) British storming columns followed curtains of steel, dust, gas, and smoke, which had been advanced by degrees. The weight of the enemy thrust north of the Scarpe was directed against our positions from Achéville as far as Roeux, where the battle raged with extraordinary violence. The British forced their way into Arleux-en-Gohelle and Oppy and near Gavrelle and Roeux, occupied by us as advanced positions. They were met by a counterattack by our infantry. In a severe hand-to-hand struggle the enemy was defeated. At some points he was driven beyond our former lines, the whole of which, with the exception of Arleux-en-Gohelle, is again in our hands. South of the Scarpe, in the lowlands, a desperate battle also raged. In their wrecked positions our brave troops withstood the British charges, repeated several times. Here also the British attacks failed. On the wings of the battlefield enemy attacking waves broke down under destructive fire. The British losses were extraordinarily heavy. April 28 was a new day of honor. Our infantry, powerfully led and excellently supported by its sister and auxiliary arm, showed itself fully equal to its tasks."

Claim Heavy French Losses

The French preparations for a new attack at the end of April are described in the following dispatch, dated May 1, from the Berlin Mittagszeitung correspondent at the German headquarters:

"The great battle enters upon the fourth week and looks very much as though a new change of parts is about to take place. On April 9 the English began a great onslaught, on April 16 the French fell in line, while on April 23 the English carried out a second assault, which they followed with a third on the 28th. Now it is evidently the French turn again. The country around Artois is still vibrating with the fierce battle of the last eight days, and the artillery continues its chaotic noise, especially around

Oppy, which yesterday withstood the British onslaught four different times.

"On the Aisne and in Champagne the guns are roaring worse than ever today. As early as Saturday night one noticed at Berry-au-Bac, where I was at the time, the thunder of artillery and the flash and bang of exploding shells increasing in rapidity. Toward Sunday morning, of course, everything was prepared for a new onslaught. The French, however, did not think their artillery preparation sufficient, and continued the bombardment with all the more ferocity, since the German guns gave them tit for tat. Toward Monday morning the French developed a regular drumfire, which was mainly directed against the left wing of the Aisne front around Vauxaillon and against the line of Bray-Craonne-Brimont.

"Observation and the testimony of prisoners tell an awful story of the overwhelming losses on the French side. Large detachments ceased to exist in the original form. The battlefields which the Germans have to cross in their counterattacks are full of the terrors of slaughter. There are countless bodies along the whole front which in view of the French inconsiderateness for the life of their own men are not to be wondered at. The Germans, too, mourn many dead heroes, but it is quite natural that the French, who have been trying the front now for three weeks, should have suffered many more losses. The Germans know that, and they know that, thanks to the splendid efficiency of their artillery and the untiring efforts of their flying squadrons, they shall have the upper hand to the end."

Gigantic British Effort

Meanwhile the British were once more on the offensive, and again, according to German accounts, with no real success. "At this last hour," wrote the Berlin Lokal-Anzeiger correspondent on May 4, "the last waves of the hostile flood against the German walls east of Arras are receding. Another gigantic effort has spent itself without the desired effect of breaking through the German lines in even one single spot." He continued:

"Led by countless tanks, the British infantry rushed on as often as five times in some places. About noon on May 3 the most powerful of all the English onslaughts that brought them nearly one kilometer deep into the German lines near the village of Fresnoy broke down completely. At Oppy, where the field was literally covered with English bodies, they received a staggering blow and retired. In the valley of the Scarpe toward Roeux and in the direction of Pelves their onslaughts met a like fate in the fire of German sharpshooters and machine guns.

"Large, dense masses of troops operating against the German south flank succeeded in the first heat of the assault in piercing the line to Chérisy, which, however, was recovered by a counterattack. Having completely failed here, the British sought to gain a foothold at the village of Bullecourt, four kilometers east of Queant. Again they were defeated, but managed to occupy a short stretch of trenches, where they are now completely shut off from their connections. At 4:30 o'clock this morning (May 4) the British sent dense masses against Bullecourt. As far as we know by this time this attack was also successfully repulsed. All the enemy got for the thousands of dead and wounded sacrificed in this fourth battle is mostly a pile of walls and burned woodwork, where once stood a village of 200 inhabitants, and that after a bombardment that hardly ever had its equal, and after seventeen divisions spent their breath against narrow stretches of the German position.

"While this furor of attack on the Arras front seems subsiding, the valleys of the Aisne and Champagne are again shrouded in steam, dust, smoke, and the noise of battle. Since early dawn the French have been trying to rush the German position between the Aisne and Brimont. The night before their projectiles were raining on the Vauxaillon-Laffaux-Braye-Craonne line. Guns of all calibres seem to have joined in the hellish concert, and for a change the Germans now and then were treated to gas shells. Now the battle of human masses is again raging in those valleys. There is no doubting what it will be."

Fall of Craonne Not Announced

The German reports made no reference to the capture of Craonne. On the other hand, the War Office report of May 8 announced the recapture of Fresnoy. On May 11 it was stated that the mutual activity of the artilleries had increased to great violence on the whole Arras battle front and that local advances by the British at Fresnoy and Roeux and between Monchy and Chérisy remained unsuccessful. On May 13 it was admitted that the British had succeeded in forcing their way through the German lines at Roeux. One report read:

"The great attacks of the English have broken down. After very strong artillery preparation, which extended throughout the whole battlefield of Arras, from Lens to Queant, the English in the early morning attacked the lines between Gavrelle and the Scarpe, astride the Arras-Cambrai Road, and near Bullecourt. At Roeux they were successful in forcing an entry, but at all other points they were repulsed by our fire and hand-to-hand fighting, and sustained the heaviest losses. In the evening several fresh attacks were made on both sides of Monchy. These likewise broke down with sanguinary losses. The advantages which the English succeeded in obtaining at Bullecourt were again wrested from them by powerful counterthrusts of a Guard battalion."

The capture of La Neuville, on the Aisne front, was announced by the War Office on May 16. A later report said that rain and mist had rendered the fighting activity on the western front slight. On May 17 the German official statement admitted the loss of ground at Roeux, but announced the capture of 2,300 English prisoners and 2,700 Frenchmen since May 1. The British capture of Bullecourt was conceded.

Kaiser to the Crown Prince

Earlier in the struggle—on April 22—the German Kaiser sent the following telegram to the Crown Prince:

"The troops of all the German tribes under your command, with steel-hard determination and strongly led, have brought to failure the great French attempt to break through on the Aisne and in Champagne. Also there the infantry again had to bear the brunt, and, thanks to the indefatigable assistance of the artillery and other arms, has accomplished great things in death-defying perseverance and irresistible attack. Convey my thanks and those of the Fatherland to the leaders and men. The battle on the Aisne and in Champagne is not yet over, but all who fight and bleed there shall know that the whole of Germany will remember their deeds, and is at one with them to carry through the fight for existence to a victorious end. God grant it."

Germany's Peace Discussion

Chancellor's Address of May 15, 1917

THE German Chancellor at a meeting of the Reichstag on May 15 delivered an address which had been anxiously awaited in the hope that it would be a definite proffer of peace; but it proved to be a disappointment in that regard. Chancellor von Bethmann Hollweg was preceded by Dr. Roesicke, Conservative and President of the German Farmers' Union, who said:

"While our brave troops maintain with streams of blood our territorial

gains, the Social Democratic Party urges the Imperial Chancellor to conclude a peace without any indemnity and without any annexation. The Imperial Government has met the Social Democratic demands to such an extraordinary extent that this party enjoys preferential treatment beyond that accorded to other parties, and the imperial word, 'I know no parties,' is rendered valueless.

"In a statement recently published in the Norddeutsche Allgemeine Zeitung we see a far-reaching similarity with the

GENERAL HENRI P. PETAIN

Newly Appointed Commander in Chief of All French Armies
Operating on the Western Front

After the Passing of the German Army of Occupation

(Photo from Pictorial Press)

declaration of various party committees concerning our relations with Russia. The Austro-Hungarian Government has allowed to be issued through the press declarations which are not far removed from the views of the Social Democratic Party's resolution. Telegrams were exchanged between the Imperial Chancellor and Count Czernin [Austro-Hungarian Foreign Minister] emphasizing the mutual agreement between the two countries. It can therefore be assumed that the Imperial Government met also in this case the Social Democratic wishes."

Herr Roesicke proceeded to denounce the Socialist aims as sinister and anti-national and as tending to a prolongation of the war, since, he said, the Entente based their hopes on German disunion.

"President Wilson," Herr Roesicke continued, "wants no peace with the Hohenzollerns, but the monarchy is too deeply rooted in German hearts for the malignity of the Entente or of President Wilson to be capable of destroying it."

He said the Germans acknowledged that Russia was keeping faith with her allies, while from Germany disloyalty to the Hohenzollerns was expected. Proceeding to denounce the Socialist aims and expressing doubt as to the Government's "will to victory," Herr Roesicke continued:

"The desire for renunciation of annexation and indemnity gives our enemies a charter to prolong the war without risking anything. A rejection of the renunciation proposals by the Reichstag will be a manifestation of our strength and of our will to secure an enduring peace which will safeguard Germany's future. The nation demands a clear reply."

Calls Annexationists Robbers

Philip Scheidemann, in introducing the Social Democratic interpellation, said:

"The party's decision does not demand immediate peace, but action by the Socialists of all countries. My Breslau utterance was to the effect that the Chancellor had stated he had nothing to do with the memorial which had incited

our enemies to agree with Herr Roesicke, that we must emerge from all obscurity, and that the Chancellor must say what he wanted.

"We adhere to the same point of view as contained in the demand of Aug. 4—the territorial integrity of Germany and her economic independence and development; but today we still refuse to oppress foreign peoples. On both sides the nations are being put off with the promise of an imminent final decision. It is our task to expose this playing with the life of peoples, and we cry to all Governments, 'It is enough!'

"We are convinced that the Central Powers will stand fast in repelling intentions of annihilation, but also that the wishes of the French, English, and German annexationists shall not be realized. Thus think the Socialists, and millions are with us.

"The supporters of conquest shout for increase of power, increase of territory, money, and raw material. That can only be wanted by a nationally organized gang of robbers. [This statement provoked a storm of indignation on the Right.] The drawing of the Kaiser into this agitation has as a result that abroad the Kaiser is made responsible for Pan-German madness and the outbreak of war, and that he is continually being insulted.

"Peace by agreement would be good fortune for Europe. Ninety-nine per cent. of all the peoples look with hope and longing to Stockholm. If France and Great Britain renounce annexation and Germany insists thereon, we shall have a revolution in the country."

There were prolonged shouts of indignation at this and cries of "Shame! Stand down!" The President called Herr Scheidemann to order, but Scheidemann continued:

"It has not gone so far as that yet; the enemy does not renounce annexation. A peace just to all parties should be concluded. I am firmly convinced that no peace can be concluded without an alteration of frontiers, and that must be arranged by mutual understanding. I am bitterly opposed to the slaughter of an-

other million men simply because certain Germans desire peace that would follow conquests. Long live peace! Long live Europe!"

Bethman Hollweg's Speech

The Chancellor replied to these attacks in the following terms:

"These interpellations demand from me a definite statement on the question of our war aims. To make such a statement at the present moment would not serve the country's interests. I must therefore decline to make it.

"Since the Winter of 1914-15 I have been pressed now from one side, now from the other, publicly to state our war aims, if possible with details. Every day they were demanded from me. To force me to speak an attempt was made to construe my silence regarding the program of the war aims of individual parties as agreement. Against that I must resolutely protest. On giving liberty for free discussion of war aims I had it expressly declared that the Government could not and would not participate in the conflict of views. I also protested against any positive conclusions whatever regarding the Government's attitude being drawn from the Government's silence.

"I now repeat this protest in the most conclusive form. What I was ever able to say about our war aims I say here in the Reichstag publicly. They were general principles—they could not be more—but they were clear enough to exclude identification such as was attempted with other programs. These fundamental lines have been adhered to up to today. They found further solemn expression in the peace offer made conjointly with our allies on Dec. 12, 1916.

"The supposition which has recently arisen that some differences of opinion existed on the peace question between us and our allies belongs to the realm of fable. I expressly affirm this now with certainty. I am at the same time also expressing the conviction that the leading statesmen of the powers which are our allies are with us.

"I thoroughly and fully understand the passionate interest of the people in

the war aims and peace conditions. I understand the call for clearness which today is addressed to me from the Right and the Left. But in the discussion of our war aims the only guiding line for me is the early and satisfactory conclusion of the war. Beyond that I cannot do or say anything.

Scornful Reference to Socialists

"If the general situation forces me to reserve, as is the case now, I shall keep this reserve, and no pressure either from Herr Scheidemann or Herr Roesicke will force me from my path. I shall not allow myself to be led astray by utterances with which Scheidemann, at a time when drumfire sounds on the Aisne and at Arras, believed he could spread among the people the possibility of a revolution. The German people will be with me in condemning such utterances, and also Roesicke's attempt to represent me as being under the influence of the Social Democrats.

"I am reproached for being in the hands of one party, but I am not in the hands of any party, either the Right or the Left. I am glad I can state that definitely. If I am in the hands of any one, I am in the hands of my people, whom alone I have to serve, and all of whose sons, fighting for the existence of the nation, are firmly ranged around the Kaiser, whom they trust and who trusts them. The Kaiser's word of August lives unaltered. Roesicke, who sets himself forward as a particular protector of this word, has received in the Kaiser's Easter message the assurance of the unaltered existence of the Kaiser's word.

"I trust that the reserve which I must exercise—it would be unscrupulous on my part did I not exercise it—will find support from the majority of the Reichstag, and also among the people. For a month past unparalleled battles have been waging on the west front. The entire people, with all its thoughts and sorrows and feelings, is with its sons up there, who with unexampled tenacity and defiance of death resist the daily renewed attacks of the English and French.

"Even today I see no readiness for peace on the part of England or France,

nothing of the abandonment of their excessive aims of conquest and economic destruction. Where, then, were the Governments who last Winter openly stood up before the world in order to terminate this insane slaughter of peoples? Were they in London or in Paris? The most recent utterances which I have heard from London declare that the war aims which were announced two years ago remain unaltered.

"Even Herr Scheidemann will not believe that I could meet this declaration with a *beau geste*. Does any one believe, in view of the state of mind of our western enemies, that they could be induced to conclude peace by a program of renunciation?

"It comes to this. Shall I immediately give our western enemies an assurance which will enable them to prolong the war indefinitely without danger of losses to themselves? Shall I tell these enemies: 'Come what may, we shall under all circumstances be people who renounce; we shall not touch a hair of your head. But you want our lives—you can, without any risks, continue to try your luck?'

"Shall I nail down the German Empire in all directions by a one-sided formula which only comprises one part of the total peace conditions and which renounces successes won by the blood of our sons and brothers and leaves all other matters in suspense?

"No, I will not pursue such a policy. That would be the basest ingratitude toward the heroic deeds of our people at the front and at home. It would permanently press down our people, to the smallest worker, in their entire conditions of life. It would be equivalent to surrendering the future of the Fatherland.

"Or ought I, conversely, to set forth a program of conquest. I decline to do that. [Cries from the Right: "We are not demanding that."] If it has not been demanded, then we are of one opinion. I also decline to set forth a program of conquest. We did not go forth to war, and we stand in battle now against almost the whole world, not in order to make conquests, but ex-

clusively to secure our existence and to establish firmly the future of the nation. A program of conquest helps as little as a program of reconciliation to win victory and the war.

"On the contrary, I should thereby merely play the game of hostile rulers and make it easier for them further to delude their war-weary peoples into prolonging the war immeasurably. That, too, would be base ingratitude toward our warriors near Arras and the Aisne.

"As regards our eastern neighbor, Russia, I have already recently spoken. It appears as if new Russia had declined for herself these violent plans of conquest. Whether Russia will or can act in the same sense on her allies I am unable to estimate. Doubtless England, with the assistance of her allies, is employing all her efforts to keep Russia harnessed to England's war chariot and to traverse Russian wishes for the speedy restoration of the world's peace.

Proffer of Peace to Russia

"If, however, Russia wants to prevent further bloodshed and renounces all violent plans of conquest for herself, if she wishes to restore durable relations of peaceful life side by side with us, then surely it is a matter of course that we, as we share this wish, will not disturb the permanent relationship in the future and will not render its development impossible by demands which, indeed, do not accord with the freedom of nations and would deposit in the Russian Nation the germ of enmity. [Thunderous applause.]

"I doubt not that an agreement aiming exclusively at a mutual understanding could be attained which excludes every thought of oppression and which would leave behind no sting and no discord.

"Our military position has never been so good since the beginning of the war. The enemy in the west, despite his terrible losses, cannot break through. Our U-boats are operating with increasing success. I won't use any fine words about them—the deeds of our U-boat men speak for themselves. I think even the neutrals will recognize that.

"So far as compatible with our duty toward our own people, who come first, we take into account the interests of the neutral States. The concessions which we have made to them are not empty promises. That is the case in regard to our frontier neighbors. Holland and Scandinavia, as well as those States which, on account of their geographical position, are especially greatly exposed to enemy pressure. I am thinking in this connection especially of Spain, which, loyal to her noble traditions, is endeavoring under great difficulties to preserve her independent policy of neutrality. We thankfully recognize this attitude and have only one wish—that the Spanish people reap the reward of their strong, independent policy by further developing their power.

"Thus, time is on our side. With full confidence we can trust that we are approaching a satisfactory end. Then the time will come when we can negotiate with our enemies about our war aims, regarding which I am in full harmony with the supreme army command. Then we will attain a peace which will bring us liberty to rebuild what the war has destroyed in the unhampered development of our strength, so that from all the blood and all the sacrifices an empire, a people will rise again strong, independent, and unthreatened by its enemies, a bulwark of peace and labor."

A motion to end the debate was lost, after which the middle-of-the-road parties, made up of the Centrists, National Liberals, Progressive People's Party and German fraction presented a joint declaration approving the Chancellor's attitude.

Dr. Peter Spahn, leader of the Catholic Centre Party, spoke in behalf of the groups just mentioned, approving the Chancellor's attitude and declaring his resolute opposition to all enemy interference with Germany's domestic affairs. "If the enemy," he said, "is combating Prussian militarism and the Hohenzollerns in the illustrious person of the Emperor, it will only result in bringing his Majesty closer to the hearts of the German people."

A Republic Suggested

Georg Ledebour, an Independent Socialist, created a distinct stir by an allusion to a republic in his address following the Chancellor. He said:

"The Chancellor doubtless desires annexations both in the east and west. With the exception of extravagant visionaries, nobody believes that Germany can win a war of subjugation. The Russian Socialists have made an offer which opens up the possibility of peace. This is what the Chancellor forgets. It is true that a separate peace with Russia cannot be achieved, but the Russian Government can convert the Entente, and in this direction we ought to assist it.

"Herr Scheidemann must take up the cudgels against the Government if he does not want strong words, which do not shrink even from the announcement of a revolution, to be followed by deeds. We are convinced that events must happen in Germany as they have happened in Russia. That is what those in power are working for. We must soon introduce a republic in Germany, and we shall propose that the Constitution Committee take preparatory steps in that direction."

Progress of the War

Recording Campaigns on All Fronts and Collateral Events
From April 19 Up to and Including May 18, 1917

UNITED STATES

A British Commission headed by Lord Balfour and a French Commission headed by René Viviani conferred with American officials in Washington on the conduct of the war.

Heavy loans, authorized by the Bond bill, were made to the Allies.

Military censorship was established over cables, telegraph lines, and telephone lines.

On May 16 announcement was made that a squadron of American torpedo boats, under the command of Rear Admiral Sims, had safely crossed the Atlantic and was aiding the British fleet in patrolling the seas.

The first hospital unit authorized by the United States Government arrived in England May 18.

The Army Conscription bill was passed by Congress and signed by President Wilson May 18. The President issued a proclamation fixing June 5 as the day for the registration of men between the ages of 21 and 30. Announcement was made that an expeditionary force of regular troops under Major Gen. Pershing would be sent to France at the earliest possible moment.

SUBMARINE BLOCKADE

Dr. Karl Helfferich informed the Reichstag that more than 1,600,000 tons of shipping had been sunk by the Germans in February and March.

The British official announcement for the week ended April 29 showed that thirty-eight merchant ships of over 1,600 tons each had been sunk. The report for the week ended May 9 showed sixty-two vessels lost, but of smaller tonnage than in the three weeks preceding. In the week ended May 16 twenty-six vessels, eighteen of over 1,600 tons, were lost. Seventy-five Norwegian ships were sunk during April and more than 100 sailors lost their lives. Captain Persius estimated that the total tonnage of merchant craft destroyed by the Germans from the beginning of the war up to April 1 was 6,641,000.

The Belgian relief ship *Kongsli* was sunk, either by a mine or a torpedo.

Two British hospital ships, the *Donegal* and the *Lanfranc*, were sunk without warning and seventy-five men were killed, including some wounded German prisoners. Other British losses included the troopship *Ballarat*, the freighter *Harpagus*, and the transport *Cameronia*, on which 140 lives were lost. Ninety lives were lost

when the African steamer *Abosso* was torpedoed on April 24.

The list of American ships sunk included the schooners *Woodward* *Abraham* and *Percy Birdsall*, the oil tanker *Vacuum*, on which seventeen lives were lost; the unarmed steamer *Hilonian*, on which four persons were lost, and the *Rockingham*, with two persons killed. Germany disclaimed the sinking of the American tank steamer *Heraldton*.

The Dutch fishing fleet was forced to suspend operations because of the constant torpedoing of vessels and because of Germany's failure to provide coal as she promised. Germany, in reprisal, announced that the Relief Commission would not be allowed to import fish for the population of Belgium and Northern France.

Argentina sent an ultimatum to Germany demanding satisfaction for the sinking of the sailing ship *Monte Protegido*. Germany apologized and offered an indemnity.

Guatemala severed diplomatic relations with Germany.

The President of Haiti sent a message to Congress demanding a declaration of war against Germany. The Congress, acting in accordance with the report of a special commission, decided against war, but a strong protest was sent to Germany against the drowning of five Haitian citizens on the French steamship *Montreal*, with the announcement that diplomatic relations would be severed unless reparation was made.

Turkey severed diplomatic relations with the United States.

The Chinese House of Representatives refused to pass a resolution declaring war on Germany.

Liberia severed diplomatic relations with Germany.

CAMPAIGN IN EASTERN EUROPE

April 28—Increased activity of Russian guns near Lutsik and the Zlota Lipa, Marayuvka, and Putna Rivers.

May 5—Russian fire increases from Kovel to Stanislaw.

May 6—German offensive beaten back near Zolotschevsk.

May 18—Russians beat back German attacks in the region of Shelvov.

CAMPAIGN IN WESTERN EUROPE

April 19—French occupy Aizy, Jouy, Lafaux, and Fort de Condé, in the Vailly

- district, take several heights east of Moronvillers, and carry trench lines near Auberive.
- April 20—French occupy Sancy and drive Germans to heights dominated by Malmaison Fort; Germans announce abandonment of the bank of the River Aisne, between Condé and Soupir.
- April 21—French push forward toward ridge topped by the Chemin des Dames and make progress south of Juvincourt; British capture Gonnelleu, drawing their lines closer around Havrincourt Wood.
- April 22—British close in on Havrincourt Wood and take part of Trescault; Germans repulsed by French in attack on Mont Haut.
- April 23—French repulse German attacks in Belgium.
- April 24—British advance east of Monchy and between Monchy and the Sensée River; French improve their positions south of St. Quentin.
- April 25—British advance south of the Scarpe and extend their lines from Trescault to Bilhemion, south of the Bapaume-Cambrai Road.
- April 26—French beat off German counterattacks near the Chemin des Dames.
- April 28—British begin new attack north of the Scarpe, capture German positions on a two-mile front north and south of Arleux, push forward northeast of Gravelle, and gain ground north of Monchy.
- April 29—British capture German trenches south of Oppy on a front of half a mile.
- April 30—French make new attack in Champagne and capture trenches on both sides of Mont Carnillet.
- May 2—French in Champagne push forward south of Beire.
- May 3—British penetrate the Hindenburg line west of Queant, take Fresnoy, and part of Bullecourt.
- May 4—French capture Craonne and German first line trenches on a front of two and a half miles northwest of Rheims.
- May 5—French carry a salient in the Hindenburg line on both sides of the Soissons-Laon Road, on a front of nearly four miles, clear Craonne Plateau from east of Cerny-en-Laonnais to a point east of Craonne, and push forward to the hills dominating the valley of the Ailette River.
- May 6—French clear all but a small section of the Chemin des Dames; British repulse strong German counterattacks on their new positions near Bullecourt.
- May 8—Germans retake Fresnoy.
- May 9—British regain part of the ground lost at Fresnoy and repel attacks near Gavrelle; French capture first line of German trenches northeast of Chevreux and repulse attacks on the plateau of Chemin des Dames.
- May 11—Allies repulse German attacks against Lens and in the Cerny section.
- May 12—British troops enter Bullecourt and capture fortified works at Roeux and Cavalry Farm; French in Verdun region penetrate German line north of Bezonaux.
- May 13—British advance their outposts north of Bullecourt and take part of Roeux Village.
- May 14—British capture the whole of Roeux and advance toward Oppy.
- May 15—Germans launch four massed attacks on new British positions in Bullecourt and penetrate first French line southwest of Filaine.
- May 16—British forced back temporarily at Roeux, but retake all positions; Germans strike hard northeast of Soissons, but are driven back by French counterattacks.
- May 17—British complete the capture of Bullecourt; French win ground east of Craonne and repulse attacks in Laffaux district; many villages near St. Quentin afire.
- May 18—Germans repulsed by French with grenades near Craonne; French penetrate German lines in Lorraine near Petoncourt.

BALKAN CAMPAIGN

- April 20—French recapture trenches lost April 18 near Trsvena Stena.
- April 22—Fighting renewed in the bend of the Cerna River and near Lake Doiran.
- April 23—Russians drive Teutons from advanced posts in Rumania and re-establish first lines.
- April 26—British take Bulgar trenches west of Lake Doiran on a 1,000-meter front.
- May 5—French and Venizelist troops in Macedonia occupy enemy positions in the region of Jumnica.
- May 9—Russian troops on the Rumanian front northwest of Senne break through Teuton positions and advance upon Jenawer.
- May 10—British take two miles of Bulgar trenches.
- May 12—Germans and Bulgarians gain a foothold on Srka di Legen, west of the Vardar heights; Venizelos troops carry an enemy work near Lymnitsa.
- May 16—British troops in Macedonia capture Kjuipri, on the Struma front, and advance trenches on a wide front southwest of Ernekeoi.

ITALIAN CAMPAIGN

- May 13—Italians begin terrific bombardment to destroy Austrian defenses on the Carso front.
- May 15—Italians take the offensive on the Isonzo front and make progress in the Plava area, on the slopes of Monte Cucco, and on the hills east of Gorizia and Vertobizza.
- May 16—Italians force a passage of the Isonzo River, capturing Bombrez, Zagora, and Zagonilla.
- May 17—Italians cross the Isonzo River and take Mount Kuk; right wing takes Duino, on the way to Trieste.

May 18—British War Office announces that British heavy artillery batteries are co-operating with the Italians against the Austrians on the Julian front.

ASIA MINOR

April 20—British force a passage of the Shatt-el-Adhem and rout Turkish forces covering the Istabulat station.

April 23—Turks evacuate Istabulat.

April 24—British occupy Samara station.

April 30—Turks intrench fifteen miles north of Samara.

May 2—Russians evacuate Mush.

May 12—Russians force their way across the Diala River at two points northwest of Bagdad.

AERIAL RECORD

The Germans reported that 362 French and British airplanes were brought down in April, but admitted the loss of only seventy-four of their own. In three days, April 23 to April 25, the Allies reported fifty-five German machines brought down and thirty-nine of their own lost. From May 1 to May 7 seventy-six German airplanes were brought down, according to a French report. A compilation from official sources showed 717 machines lost in April—369 German, 201 French and Belgian, and 147 British. The Germans bombarded Dunkirk, Nancy, and Belfort. In response for the bombardment of Châlons and Epernay by the Germans, French aviators bombarded Treves, on the Saare River.

The British steamer Gena was torpedoed and sunk by a German seaplane off the coast of Suffolk. German airplanes dropped bombs northeast of London on May 7, killing one person and injuring two. The Zeppelin L-22 was brought down in the North Sea by a British naval battleplane. British aviators aided the attacking British monitors in a raid off Zeebrugge and photographed the entire Belgian coast, mapping the German defenses.

NAVAL RECORD

A Russian destroyer sank ten schooners in the Black Sea.

The Germans made several raids off the coast of England. On April 21 two German destroyers were sunk near Dover. Berlin reported a British outpost vessel destroyed and a scouting ship torpedoed. On April 27 German destroyers bombarded Ramsgate, but were driven off by land batteries after an attack in which a man and a woman were killed. British light cruisers and destroyers chased eleven German destroyers between the English and the Dutch coasts. One German torpedo boat was damaged.

German warships bombarded Calais, killing and wounding civilians. A French destroyer was sunk in a raid on Dunkirk.

A British torpedo-boat destroyer hit a mine on May 4. One officer and sixty-one men

were lost. A British mine sweeper was torpedoed and sunk May 5, with the loss of two officers and twenty men.

British warships, aided by an air fleet, bombarded Zeebrugge on May 12, destroying two submarine sheds and killing sixty-three persons.

The armed American steamer Mongolia fired on a German submarine in British waters on April 19 and damaged it.

American warships began operations in the North Sea, and Japanese warships arrived at Marseilles to combat submarines off the coast of France.

Fourteen British mine sweepers were sunk, the British light cruiser Dartmouth was torpedoed, and an Italian destroyer was sunk in a raid by Austrian light cruisers in the Adriatic Sea.

RUSSIA

On May 5 the Council of Workmen's and Soldiers' Delegates adopted a vote of confidence in the Provisional Government by a small majority. There followed, however, a period of bitter conflict between the council and the Government. Generals Korniloff, Brusiloff, and Gurko resigned from the army, but the last two withdrew their resignations after partial harmony was restored. General Guchkoff resigned as Minister of War. He was succeeded by A. F. Kerensky. Paul N. Milukoff resigned as Minister of Foreign Affairs and was succeeded by Terechenko. On May 16 the Government, the Executive Committee of the Duma, and the Council of Workmen's and Soldiers' Delegates agreed on a basic program, including continuance of the war. A Coalition Cabinet, containing five representatives of the Socialist groups, was formed, with Prince Lvoff retained as Premier.

MISCELLANEOUS

Labor troubles and riots occurred in several cities in Germany because of food scarcity. The Constitution Committee of the Reichstag adopted several proposals to restrict the authority of the Emperor. Chancellor von Bethmann Hollweg in a speech to the Reichstag on May 15 announced Germany's willingness to make easy peace terms with Russia, but made no offer to the other Entente Allies.

A new Cabinet was formed in Greece by Alexander Zaimis.

General Pétain was appointed Commander in Chief of the French armies operating on the French front.

A new Cabinet was formed in Spain, with Marquis Manuel Garcia Prieto as Premier. Announcement was made that strict neutrality would be maintained.

Brazil issued a proclamation of neutrality in respect to the war between the United States and Germany. Dr. Lauro Muller resigned as Minister of Foreign Affairs. Nilo Pecanha was appointed to succeed him.

CURRENT HISTORY CHRONICLED

[PERIOD ENDED MAY 20, 1917]

CONDUCT OF ENEMY ALIENS

THE conduct of the millions of Germans in the United States after the declaration of a state of war with their Fatherland, which was regarded with apprehension by many, proved a gratifying relief during the first six weeks after the war resolution was adopted. All Government officials were highly pleased over the success of the policy toward aliens which the President advocated in his war message to Congress, in which he declared that the generous spirit with which America entered the war, and the absence of vindictiveness on the part of the American people, could best be displayed by their kindly attitude toward Germans living in this country. According to a statement issued by the Department of Justice, it had been found necessary to arrest only 125 alien enemies under the President's proclamation. Attorney General Gregory said on May 7:

The foreign-born citizens of America as a class deserve the highest commendation and praise for the manner in which they have conducted themselves since the declaration of war against Germany. As regards law and order, they have in almost all instances stood with the Government, and have vindicated the President's oft-repeated assertion that he had no misgivings as to how foreign-born Americans would measure up to their responsibilities and duties in the event of a national crisis.

The number of arrests which the Government has been forced to make has been gratifyingly small. Agents of the Department of Justice have arrested only 125 alien enemies under the President's proclamation. About one-half of these are being held because it was decided that they would be dangerous to the Government if permitted to remain at large. The remainder of the alien enemies arrested since the declaration of war were taken into custody on charges of espionage or attempts to foment disloyalty or disorders.

* * *

LATIN AMERICA AND THE WAR

CUBA is the first nation of Latin America to enter the war as the ally of the United States and the En-

tente Powers. Other Latin-American countries, taken alphabetically, stand as follows: Argentina—which has between two and three million citizens of Italian origin and a quarter million French, while the British and German colonies are about equal, some 70,000 each—is still formally neutral, having presented an ultimatum to Germany and received an apology. The next submarine outrage may lead to severed relations or war. In Buenos Aires, the capital, there have been enthusiastic war parades, numbering 100,000 men. Bolivia was the first South American country to indorse the protest of the United States; the army is "German trained, but French equipped and strongly pro-ally." Bolivia, which has no merchant marine, protested on principle.

Brazil, where a strong German element is balanced by a much larger but less closely organized Italian colony, has severed relations with Germany, but is not yet at war, although the new Foreign Minister, Senhor Milo Pecanha, who succeeded Lauro Muller, is strongly pro-ally and is said to be pledged to go to war. In Rio de Janeiro the German Club and the Grande Hotel Schmidt have been burned to ashes, German newspapers have stopped publication, and German flags have been hauled down. In Chile, it is stated, 70 per cent. of the population is strongly pro-ally; it is reported that the Chilean Minister to Germany has demanded his passports.

Guatemala has broken with Germany and has offered the use of her ports and railroads to the United States for war purposes. A German wireless plant has been dismantled. Dr. Lehmann, German Minister to Guatemala, was one of the leading figures in the futile plot to stir up revolutions in Central America to embarrass the United States. Nicaragua and Salvador have offered their harbors to the United States, while Panama has declared war, and, like Cuba, is now the ally of the United States and the En-

tente. Mexico's final decision is still uncertain.

* * *

LORD CECIL AND GERMAN COLONIES

LORD ROBERT CECIL, speaking as Acting Foreign Secretary, in the absence of Arthur James Balfour, concerning the application of the non-annexation theory to Germany's former colonies in Africa, said that, while it was true that England had not taken these colonies in order to rescue the natives from German rule, but as a part of the war operations, nevertheless England, having rescued them, could hardly contemplate handing them over again to the tender mercies of their German tyrants. He then read an account of the shocking treatment suffered by the natives in both German East Africa and German West Africa, and said that if the Entente Powers won any measure of success in the war he would regard with horror the idea of returning natives who had been set free from a Government of that kind.

Corroboration of all that Lord Robert Cecil said comes from several independent sources—from the officers of the French armies which co-operated with the English in the capture of the Cameroon region; from the Belgian expeditionary force now operating in German East Africa in the direction of the Great Lakes, and from the Portuguese contingent, which has entered the same region from the south.

All evidence indicates that Germany has tried to rule her African colonies by the means which she applied in Belgium, in Poland, and in occupied France—enslavement, terrorism, and brutality. To pass over the habitual abuse of women of the native African races, who were treated as chattel slaves, there have been well-substantiated reports, published in detail in *l'Illustration*, of the wholesale murder and mutilation of natives suspected of being favorable to France and England—or, rather, to the French and English armies that were approaching to liberate them—as well as the customary terrorism to compel natives to fight in Germany's African armies; for Ger-

many, from the outset, employed negro troops to fight against the French and English.

* * *

BRITAIN'S VAST WAR EXPENSES

GREAT Britain's war budget for the fiscal year, as introduced May 2 by Andrew Bonar Law, Chancellor of the Exchequer, carried estimates of \$11,451,905,000 for expenditures. Mr. Law laid emphasis on the statement that Great Britain was paying a greater share of her war expenses from her income than were the other belligerents, the amount paid out of the revenue being 26 per cent. of the whole war expenditure. He said the total of Treasury bills outstanding was about two billion dollars—in exact figures, £463,000,000. He estimated the daily expenses of the war to Great Britain at \$31,175,000. The excess profits tax was raised from 60 to 80 per cent. Discussing the expenditures of the last year, Mr. Bonar Law said they had been £372,000,000 higher than the estimate. The increase was largely due to expenditures on munitions and advances to the Allies and dominions. The estimate for the Allies and dominions had been exceeded by £100,000,000.

* * *

FIRST AMERICAN GUN FIRED

CAPTAIN RICE of the American steamship *Mongolia*, which arrived at Liverpool April 25, reported that the first gun of the war fired from an American ship was fired from the *Mongolia* April 19 at the periscope of a German submarine. He believed that the shell went true to the mark and sank the hostile craft. The periscope was sighted dead ahead on the last afternoon of the voyage. The Captain gave the order for full speed ahead with the intention of ramming the submarine. The periscope disappeared, and a few minutes later reappeared on the ship's broadside. The gunners fired at 1,000 yards. The submarine immediately disappeared and oil was seen on the water when it submerged. It was later reported that the periscope had been smashed and the commander killed, but the submarine was not sunk.

PORTUGUESE SOLDIERS IN FRANCE

A LARGE detachment of soldiers from Portugal are serving with the Entente Allies in France. These troops were landed at Brest early in March, 1917, and went at once to the front. They consist of infantry, cavalry, and artillery, and occupy an independent sector under the command of General Tamagnani. Portugal also has an army in East Africa which, in co-operation with the English and Belgian forces, has practically occupied all the German territory there. Conquest was not the purpose of the Portuguese Government; traditional friendship with England and the natural sympathy of a Latin country with Italy and France led her to antagonize the Teutons. The Portuguese Minister of Foreign Affairs, Señor Soares, recently issued a statement which leaves the impression that Portugal would not have declared war, on its part, but would have maintained the attitude it took in the seizure of German ships in its harbors, if Germany had not chosen to force belligerency upon it. Fifty thousand Portuguese troops were reported in France in May.

SOCIALIST PARTIES IN THE DUMA

WITH the Socialists participating more fully in the provisional Russian Government, it is important to distinguish between the different Socialist parties. Kerensky has been incorrectly described as the Socialist leader, whereas he is only the leader of one of the three distinct parties into which the Russian working class movement is divided. His party is the Group of Toil, which in the strictest sense is not a Socialist party, but a political organization of the mujiks, or peasants, whose traditions are those of the old Russian communism, and who, at the election for the first Duma, were greatly attracted by the semi-communist program of the Group of Toil. At that election the Group of Toil succeeded in returning 104 Deputies to the Duma, but its representation was subsequently cut down by the Czar's Government, and it was able to elect only ten Deputies to the Fourth

Duma. Kerensky was their leader, and his important position is due to the fact that the radical peasant movement is much greater than its Parliamentary representation indicates. In the reconstructed Cabinet the Group of Toil, or Social Populists, as they are also called, have three Ministers, including Kerensky. The second Socialist party is the Social Revolutionary Party, which has been more anarchistic in its aims and methods, and most closely connected with the terrorists and nihilists. The third party, the Social Democratic Labor Party, is the most representative of the industrial working class population and the counterpart of the real Socialist movement in other countries, for it is based upon the Marxian Socialist philosophy. All three Russian Socialist parties, however, have been recognized by the international congresses; and, though there are wide differences between the Social Democrats and the Group of Toil, and many minor differences within each party, they are united in their opposition to the property-owning and commercial classes.

THE PERSONAL WEALTH OF NICHOLAS ROMANOFF

HIGHLY picturesque and irreconcilably divergent accounts of the wealth of the former Emperor of Russia have been going the rounds of the press since the Russian revolution on the Ides of March. They should all be regarded with skepticism, for the reason that the vast Crown demesne of Russia has always been regarded as the personal property of the Emperors; it has never been included in the general fiscal statistics of Russia, and no items concerning it have ever appeared in the Russian budget. It has been managed by a separate minister, under the immediate supervision of the ruler, and has been treated as a family estate.

Here are a few facts, which seem to be quite authentic: The Crown demesne of the Romanoffs includes over a million square miles—that is, over 640,000,000 acres—of rich arable land, pasture, and forest, besides many mines of gold, platinum, copper, iron, and so forth. The area of

the Russian Crown demesne, thus stated by the Statesman's Year Book, is, therefore, larger than the combined areas of Great Britain, France, Germany, Spain, Portugal, Italy, and Austria; larger than the area of the United States east of the Mississippi. The Encyclopaedia Britannica makes itself responsible for the following details: In European Russia, the Crown demesne contains 400,000,000 acres, or 35 per cent. of the cultivated land, while 446,000,000 acres, or 38 per cent. is owned by peasants, the remainder being held by landowners and towns. In Poland, the Crown demesne includes 1,800,000 acres, much of it made up of confiscated estates.

These enormous Crown holdings become more intelligible, if we remember that the old Russia was, in fact, a patriarchal family, of which the Emperor was the patriarchal head, the source of all power and of all emoluments. The Crown lands paid for the maintenance of the numberless palaces, in Petrograd, Moscow, Tsarskoe-Selo, Gatchina, and elsewhere; for the expenses of the Emperor and his Court; for the numerous imperial family, of sixty or seventy members; and, further, large lots of land were given, in lieu of pensions, as a reward for services to the State. Between 1871 and 1881, 1,300,000 acres were thus distributed. * * *

* * *

ONE THOUSAND DAYS OF WAR

APRIL 30, 1917, was the thousandth day of the European war. Two days later Herr Joseph Freidrich Naumann, a former Conservative member of the German Reichstag, was reported in an Amsterdam dispatch to have made in a lecture the following statement:

"Until now the war has caused us a loss of 1,300,000 dead. This, together with the decrease in birth, gives a reduction of 3,800,000. The surplus of females has increased from 800,000 to far, as never since the Thirty Years' War, more than 2,000,000. The nation has bled

It is stated that this estimate did not include the losses in the offensive begun April 1, 1917, which, it is estimated, will exceed in April alone 200,000. If such is the case the total number of Germans

killed in the 1,000 days of war will not fall far short of 1,500,000, or 1,500 a day, about one in every minute of the twenty-four hours of each day in the thousand.

* * *

THE United States Shipping Board on May 13 awarded to the Los Angeles Shipbuilding and Dry Dock Company a contract to build eight steel ships of 8,000 tons each, to cost \$10,771,200. It is the first of momentous steps to rush ahead operations in all yards on a full-time basis. Other contracts already drafted and ready to be signed are to be awarded within a short time. The Shipping Board intends to build fully 1,000 such ships in the quickest time possible. For this purpose a fund of \$750,000,000 was provided by Congress.

* * *

TURKEY BREAKS RELATIONS

THE Turkish Government on April 20 officially informed the American Embassy that diplomatic relations with the United States had been broken off. Abram I. Elkus, the American Ambassador, was ill with typhus fever at the time, and was compelled to remain at Constantinople for some weeks afterward; his staff remained with him. Armenian interests in Turkey were confided to the Swedish Minister. The American State Department on April 23 gave passports to Abdul Hak Hussein Bey, First Secretary and Chargé d'Affaires of the Embassy, and other members of the staff. The Turkish Ambassador, A. Rustem Bey, was recalled by the Government early in the war on account of injudicious criticisms of the President. Robert College and the Bible House and its branches were closed, and Americans left the Turkish capital. On April 27 the Swedish Minister cabled that the American colleges at Constantinople would be permitted to continue their activities.

* * *

FRANCE'S NEW CHIEF COMMANDER

GENERAL PETAIN was appointed on May 15 Commander in Chief of the French armies operating on the French front. General Nivelle was placed in command of a group of armies. General Foch, who played an important rôle

in the battles of the Marne and the Yser, succeeds General Pétain as Chief of Staff of the Ministry of War.

The transfers were approved on the recommendation of the Ministry of War. General Nivelle some time ago succeeded General Joffre in chief command along the western front. Recently a new military office was created, that of Chief of the General Staff, to which General Pétain was assigned, with authority to act as the principal adviser to the Minister of War upon all military movements. This made General Pétain the chief consultative authority at the Ministry of War in formulating movements, but without actual command of troops in the field, for which his experience appeared to qualify him.

General Pétain, in a statement on the day of his appointment, urged America to send as many men as possible as soon as they can be transported to France, to be put into immediate training under French commanders, but to maintain their autonomy as American units.

* * *

STRIKES IN GERMANY

DURING the last days of April and early in May a serious strike situation arose in Germany, but the news censorship was so strict that only meagre reports could be obtained, and the facts were not fully authenticated. On April 23 it was stated that the military authorities had taken control of the German weapon and munition factory at Berlin, and the workmen were ordered to return to work immediately; otherwise they would be mobilized as soldiers and compelled to work at soldiers' wages. This ended that strike.

Strikes were reported all over the empire, and included the great Krupp works and other great industrial plants. Field Marshal Hindenburg sent a message to General Groener, head of the munitions department, urging the striking workmen to resume their labors, in order that the military forces of the empire, especially on the western front, should not be seriously hampered. He said he recognized that the population had been hit hard by the reduction of the bread ration, but that undoubtedly the increase in meat

and the regular delivery of potatoes would compensate therefor. He added: "Every strike, however small, may be the means of an unjustifiable weakening of our defensive forces and is an inexcusable crime against the fighting forces, especially the men in the trenches, who bleed in consequence."

In reply to this the German Labor Federation issued an address stating that the fairer distribution of food would allay the discontent, but added

The chief causes for the prevailing spirit of unrest are the inadequacy of the food policy and a desire to obtain measures for providing for the complete requisition and just distribution of all available foodstuffs. Workers are aware, and the fact is undeniable, that large quantities of foodstuffs are still obtainable outside the rationing system, but at prices prohibitive to the workers. These foodstuffs are consumed mainly by people who are not compelled to place their full working capacities and service at the defense of the country. The desire to bring about a more equal distribution of foodstuffs has been the fundamental cause of these strikes.

The situation at one time grew menacing, according to all reports, but the firmness of the Government and the assurance of better food supplies finally quieted the workers, and the trouble subsided.

* * *

DEMOCRACY OR ANARCHY IN RUSSIA

WHILE Russia appears to have passed, for the moment, some of her more acute troubles, there is evidence that, for a long time to come, critical problems lie ahead of her. The recent establishment, for a few hours, of "an independent, autonomous republic" by the garrison of the military post at Schluesselburg may be merely laughable, the revolt of the Buriats was more serious, because the Buriats are only one among scores of smaller and alien nationalities over which swept the vast, perpetually expanding Russian Empire, until it covered a fifth of the land surface of the world.

In European Russia there are many of these smaller nations, of whom the Poles, the Finns, the Lithuanians are the most conspicuous; in the Caucasus, a dozen more, like the Armenians and Georgians and Circassians; in Turkestan,

many more; in Siberia, perhaps a score, each with its national life and tongue. Among these the Buriats are one of the most civilized; they are Mongolians, of the race that gave mediaeval history some of its greatest conquerors, men like Genghis and Kublai Khan, like Bati and Tamerlane, like Baber and Akbar the Magnificent, a family that made far wider conquests than the Caesars, famous also for high literary gifts and, in an epoch of bigotry, for deep religious toleration.

The Buriats are spread out on both sides of Lake Baikal, the great obstacle in the way of the trans-Siberian railroad. They have their comparatively high civilization, their books in Mongolian, largely translated from the Northern Buddhist scriptures of Tibet, their chief Lama, with papal headquarters at Goose Lake. They are rich, possessing large herds of excellent horses and cattle, they are able to dress themselves in silks during the Summer, and in rich furs in Winter. They, like nearly all Mongolian peoples, have an innate gift for agriculture, giving more attention to intensive fertilization than do the Russian Siberians themselves, and being large purchasers of the newest American agricultural machinery. Here, it would seem, is a real national unit, as definite as Serbia. They ask, now, for national autonomy; many other Siberian tribes may follow their example.

* * *

AMERICAN DESTROYERS AT WORK IN EUROPEAN WATERS

THE first contribution of American military power to the Entente Alliance against German aggression consisted of a flotilla of American torpedo-boat destroyers. The vessels reached England May 4, but no announcement was made of the fact until May 16. The squadron was placed under command of Rear Admiral Sims. Immediately on their arrival the American vessels began operations in the submarine zone. The British Admiralty announced that these swift fighting ships were rendering services of the greatest value to the allied cause. Vice Admiral Sir David Beatty, commander of the British Grand Fleet,

sent the following message to Admiral Henry T. Mayo, commander of the United States Atlantic Fleet:

The Grand Fleet rejoices that the Atlantic Fleet will now share in preserving the liberties of the world and in maintaining the chivalry of the sea.

Admiral Mayo replied:

The United States Atlantic Fleet appreciates the message from the British fleet and welcomes opportunities for work with the British fleet for the freedom of the seas.

The fact is noted by commentators that the submarine toll, which reached high-water mark in the last week in April, showed a reduction after the American vessels reached the scene of operations.

* * *

BRITISH NAVY'S GENERAL STAFF

A GENERAL STAFF for the British Navy was announced May 15. It is headed by Admiral Sir John R. Jellicoe, the First Sea Lord, who will have the title of Chief of the Naval Staff. Vice Admiral Sir Henry Oliver, Chief of the Admiralty War Staff, is an additional member of the Board of the Admiralty, with the title of Deputy Chief of the Naval Staff. Rear Admiral Alexander L. Duff also became an additional member of the Board of the Admiralty, with the title of Assistant Chief of the Naval Staff. Rear Admiral Halsey, formerly Fourth Sea Lord, became Third Sea Lord, in succession to Vice Admiral Frederick C. Tudor, who was appointed Commander in Chief of the China station. Rear Admiral Tothill succeeded Rear Admiral Halsey as Fourth Sea Lord.

* * *

FIRST AMERICAN RED CROSS UNIT

THE first of six fully organized and equipped hospital units which the American Red Cross is sending to France arrived in England on May 17. The unit comprised about 300 persons, including twenty army medical officers, sixty nurses, and more than 200 other attachés. It is Base Hospital 4 of Cleveland, Ohio, commanded by Major Harry L. Gilchrist, Medical Corps, U. S. A., and is under the direction of Dr. George W. Crile.

This unit will be the first officially

sanctioned by the United States Government to carry the American flag to the battlefields of France since the United States entered the war. After a brief stay in England the unit will be sent to the Continent, where it will take charge of a base hospital behind the British front. The hospital will have accommodations for 500 patients and be fully equipped by the British Hospital Service.

* * *

AMERICAN ENGINEERS IN FRANCE

ANNOUNCEMENT was made May 7 by the War Department that orders had been given for the forming of nine regiments of army engineers, which were to be sent to France as quickly as possible for railroad work along the lines of military communications. There will be more than 1,000 men in each regiment, or nearly 10,000 in the expedition. Two regular army engineer officers—a Colonel and a Lieutenant Colonel—will be assigned to each regiment. The other officers will be chosen from the Engineer Officers' Reserve Corps, the mem-

bers of which have been commissioned, or who will be chosen in the near future.

* * *

DURING the first three weeks of May the United States Government loaned the Entente Allies \$670,000,000, divided as follows: Great Britain, \$325,000,000; France, \$100,000,000; Italy, \$100,000,000; Russia, \$100,000,000; Belgium, \$45,000,000. Loans will be made in regular installments to the Allies, and it is estimated that the aggregate will reach \$1,000,000,000 by June 15, 1917.

* * *

THE United States Government invited public subscriptions May 15 to \$2,000,000,000 of the \$5,000,000,000 loan authorized by Congress; interest, 3½ per cent., maturity thirty years, redeemable in fifteen years at the option of the Government. Denominations of bearer bonds are \$50, \$100, \$500, \$1,000; registered bonds \$100, \$500, \$1,000, \$5,000, \$10,000, \$50,000, \$100,000. The bonds have privilege of conversion to any bonds of higher interest if issued; they are exempt from all taxes except inheritance.

The Month's Submarine Depredations

From April 15 to May 13, 1917

THE destruction of merchant ships by German submarines in the last month has shown a serious increase, followed by a decrease, according to the figures published by the British Admiralty. The last weekly report in the May issue of this magazine was for the seven days ended April 15. Since then the losses of British merchant ships have been these:

	Over 1,600 Tons.	Under 1,600 Tons.	Fishing Ves- sels.
Week ended April 22.....	40	15	9
Week ended April 29.....	38	13	8
Week ended May 6.....	24	22	16
Week ended May 13.....	18	5	3
Total for four weeks..	120	55	36

According to a British naval expert, the corrected figures for the nine preceding weeks, including all British merchant

ships sunk by mine or submarine, are as follows:

	1,600 Tons Gross or Over.	Under 1,600 Tons Gross.	Un- success- fully At- tacked.	Fishing Vessels Sunk.
Feb. 24.....	16	6	16	5
March 4....	15	8	15	2
March 11... 12		4	12	3
March 18... 18		8	20	21
March 25... 20		7	12	18
April 1..... 17		14	20	3
April 8..... 17		2	13	7
April 15.... 17		9	12	11

As the British Admiralty does not give the aggregate tonnage of ships sunk, only approximate estimates can be formed. But if we can accept German official statements, the destruction of shipping since the new campaign began amounts to millions of tons. Dr. Karl Helfferich, Imperial Secretary of the Interior, speaking before the Reichstag Main Committee on April 28, said that the results of

the first two months (February and March) of the unrestricted submarine campaign was 1,600,000 tons sunk, one million tons being British. In the Reichstag on May 8, Dr. Pfleger, naval reporter of the Budget Committee, stated that when the complete figures for April were available they would show that the German submarines had destroyed at least 1,100,000 tons of shipping. Vice Admiral von Capelle, Minister of the Navy, who spoke after Dr. Pfleger, said that the results greatly exceeded the expectations of the German Admiralty, for during the three months of February, March, and April 2,800,000 tons had been sunk, the number of ships being 1,325. Details are lacking to show how Admiral von Capelle's figures for the number of ships are arrived at, since the British Admiralty reports only 275 British ships of over 1,600 tons and 130 of under 1,600 tons, a total of 405, sunk during the period between Feb. 1 and April 29, exclusive of fishing vessels and other minor craft.

A French official statement shows that the number of French merchantmen sunk during February, March, and April was 17. Norway lost 64 ships of unspecified tonnage during March and 75 during April, a total of 139. There are, of course, the losses of other Allies and neutrals to be taken into account, but some experts decline to accept the German figures.

Nevertheless, authoritative statements in the allied countries make it clear that the havoc wrought by the submarines is extremely serious. Lord Devonport, the British food controller, speaking in the House of Lords on April 25, said that British shipping was being depleted every day in large volume, and that it was at the moment "a wasting security." Herbert L. Samuel, a former Cabinet Minister, speaking in London on April 27, said that figures he had seen on the sinking of vessels showed that the situation was worse than official reports indicated. Admiral Lord Beresford, speaking in London on May 1, complained of the incompleteness of the official returns, and said that the losses were appalling. He was inclined, he added, to

risk the penalties of the Defense of the Realm act and tell the people the truth.

American official utterances have been equally alarming. Franklin K. Lane, Secretary of the Interior, addressing a joint meeting of the Council of National Defense and Governors of States in Washington on May 2, made the startling statement that in the previous week German submarines had destroyed 400,000 tons of shipping. Secretary of State Lansing, without being so specific, was no less emphatic in declaring that the seriousness of the submarine situation could not be exaggerated. Reports to the State Department gave a total of eighty vessels lost in one week, figures much higher than any contained in recent British announcements.

J. Bernard Walker, editor of *The Scientific American*, speaking at the annual meeting of the National Security League in New York on May 2, said that it was more than likely that Germany had on the ways and nearing completion not fewer than 500 submarines of the U-53 type and within six months should have about 700 submarines afloat, and in twelve months 1,200. Evidence at hand, he added, indicated that German shipyards had room to keep work on 530 submarines constantly under way.

According to an interview with a member of the crew of the German submarine U-58, printed in the *Amsterdam Telegraaf* on May 15, the Germans have about 325 submarines in operation and about 80 to 100 have been lost through British nets alone. When at sea the submarines assemble at a given point every morning and receive wireless instructions, presumably from Heligoland. There are about thirty-nine U-boats of the newest type, each carrying a crew of 56 men, and this fleet is supplemented by a secondary squadron marked with a C. The first-class boats have a speed calculated as sufficient to overtake any cargo boat. Two-thirds of their crews are experienced and one-third novices. The boats carry a fortnight's stores and have a maximum period of submergence of from eight to ten hours. Each is equipped with two periscopes and sometimes descends to from 30 to 50 meters.

The two most important American vessels lost have been the oil tanker Vacuum and the steamer Rockingham. The Vacuum was sunk on April 28 off the north coast of Ireland. Seventeen of the crew, including American naval gunners, died from exposure in the boats in which they left the sinking steamer. The loss of the Rockingham was reported on May 2. The vessel, valued at \$1,300,000 and carrying cargo worth nearly \$2,000,000, was sunk just before reaching Liverpool from the United States. Two members of the crew were killed. The others on board, including an officer and gunners of the United States Navy, were saved.

Estimates of Captain Persius

Captain L. Persius, a German naval critic, writing in the Berliner Tageblatt in the last week of April, estimated the total tonnage of merchant craft destroyed by the German Navy from the beginning of the war up to April 1 at 6,641,000. Of this total, he said, 6,000,000 tons were enemy shipping, and 4,998,500 tons are said to have been sunk before the opening of unrestricted submarine warfare on Feb. 1 this year. The total of 1,642,500 tons destroyed in February and March are itemized by Captain Persius as follows:

FEBRUARY

	Tons.
368 ships, including	
292 enemy vessels	644,000
76 neutral vessels	137,500

MARCH

435 ships, aggregating	861,000
Total	1,642,500

Warships and auxiliary cruisers such as the Emden, Karlsruhe, and Möwe have accounted, according to Captain Persius, for between 400,000 and 500,000 tons of enemy and neutral shipping; but he explains that these figures are put completely into the shade even by individual achievements of certain submarine commanders. Three of these are credited with having accounted for more than 100 ships each, aggregating between 250,000 and 300,000 tons.

As evidence of how U-boat activities have developed during the war, Captain Persius gives the following figures of tonnage sunk by submarines:

	1915	Tons.
January		14,000
February		27,000
March		83,000
April		33,000
	1916	
January-February		238,000
March-April		432,000
May-June		219,000
July-August		273,779
September		254,600
October		393,500

	1917	
January		439,500

Commenting on these figures, Captain Persius said:

"Unless countermeasures can be found, the shipping losses of our enemies will swell to still greater proportions. It remains to be seen what will be the consequences. So much, however, is already tolerably certain today—the naval supremacy of Great Britain will emerge from this war at least shattered."

The Sinking of Hospital Ships

THE British Admiralty issued a statement on April 23 announcing the sinking of the two hospital steamships Donegal and Lanfranc without warning by submarines; nineteen British and fifteen wounded German officers were drowned. In their statement the British authorities denied the German charge that hospital ships were employed to transport troops and military supplies.

The statement asserts that Germany was notified that under the rules of international law she had the right to visit and search any such suspicious craft, which she refused to do. Germany was notified that, if her course was persisted in, reprisals would follow, yet the British hospital ship Asturias was torpedoed without warning on the night of March 20. The ship was steaming with all

navigation lights burning and the proper Red Cross signs brilliantly illuminated. The cumulative evidence that she had been torpedoed and not mined was only accepted after it had been confirmed beyond all doubt and after exhaustive investigation. The loss of life on this occasion included a nursing sister and a stewardess. The German official wireless message of the 26th finally established the guilt of the German Government, who, having boasted of the deed, published on the 29th a further message, which said: "It would, moreover, be remarkable that the English in the case of the *Asturias* should have abstained from their customary procedure of using hospital ships for the transport of troops and munitions."

On the night of March 30-31 the hospital ship *Gloucester Castle* met with a similar fate. On this occasion the Berlin official wireless message again published a notification that she was torpedoed by a U-boat, thus removing any possible doubt in the matter. The British Government thereupon authorized prompt measures of reprisal, and on April 14 a large squadron of British and French airplanes bombarded the German town of Freiburg with satisfactory results.

In spite of the warnings conveyed to Germany that her barbarous attacks on hospital ships would result in such action on the part of Great Britain, the German Government published through a wireless message of April 16 an abusive protest which "categorically contested any justification" for this reprisal.

The markings agreed upon at The Hague Convention, which had hitherto guaranteed the immunity of hospital ships from attack, rendered them no longer inviolable. The custom of showing all navigating lights and illuminating the distinctive markings at night only afforded a better target for German submarines. It was therefore decided that sick and wounded, together with medical personnel and supplies, must in future be transported for their own safety in ships carrying no distinctive markings, and proceeding without lights in the same manner as ordinary mercantile traffic.

Notice was accordingly given to the German Government that the British Government had withdrawn certain vessels from the list of hospital ships published in accordance with international law.

During the recent fighting on the western front a large number of wounded German prisoners have fallen into British hands. These have had to be transported to England for treatment by the same means as the British wounded, and practically all ships transporting wounded are bound to carry a proportion of German wounded. These naturally share with British wounded equal risks from the attacks of German submarines.

Although Germany did not frame any formal allegation of the misuse of hospital ships against the Allies until the commencement of 1917, the British hospital ship *Asturias* was fired at and missed by a German submarine on Feb. 1, 1915, in broad daylight while flying the Red Cross flag. In the light of recent events it seems reasonable to suppose that the hospital ships *Braemar Castle* and *Britannic* were also torpedoed in November, 1916, although the evidence at the time was not considered conclusive.

After the case of the *Gloucester Castle* the British authorities made no further announcement that German prisoners would be conveyed on hospital ships, but the German Government followed their hint by removing a number of imprisoned French and British officers to camps at unfortified cities, which action was announced to be in reprisal for the course of the Allies in bombarding such cities and conveying German prisoners on hospital ships. [See also article on "German Reprisals," Page 547.]

The British Government let it be known that, on account of the danger in transporting the wounded, they would be kept at hospitals in France. In consequence several thousand new medical men were ordered to the French front, and preparations were made to send an increased number of hospital units from the United States. It was stated that the first American hospital unit after the war declaration sailed from New York May 12, headed by Dr. Creel of Cleveland, Ohio.

Home Rule for Ireland

Events Attending the British Government's New Proposal of an Irish Council

THE question of the government of Ireland became a prominent issue in America after the entrance of this country into the war. Irish societies in all parts of the country passed resolutions demanding home rule; a majority of the House of Representatives signed a cablegram to the British authorities joining in the appeal. In England the demand grew more insistent for some definite proposal of a settlement of the question, and the issue became more acute through the election to Parliament of Joseph McGuinness, Sinn Feiner, from the Cork district, who was chosen over a Nationalist while serving a three-year sentence in Lewes Prison for connection with the Dublin rebellion.

A Sinn Fein convention was held at the Mansion House, Dublin, under the Chairmanship of Count Plunkett. There was a large attendance of Catholic priests, and the lay delegates represented a considerable number of public boards as well as local political organizations.

At the instance of the Chairman, votes of honor were passed in memory of the men who "sacrificed their lives for Ireland's liberty and to those at present in prison and in exile for Ireland's cause." These resolutions having been passed, there was a loud call of three cheers for the Irish Republic, which met with a ready response.

Count Plunkett said he wished to refer to the men who had been sentenced to long terms of imprisonment for the cause of Ireland. "I will not," he said—and there was wild enthusiasm—"insult the courage of these men by pleading for their release. We ask no favor of the enemy, but I must refer to a dishonor put upon these men by the enemy. These men, among the noblest who have ever fought for Ireland, are not only wearing the prison garb, but are treated as criminals, and in your name I demand that they be treated as prisoners of war." A wave of cheering swept through the hall

when Count Plunkett announced that any offer England had to make short of complete liberty would be treated with contempt by a free-souled nation. He asked his audience to stand up and affirm their adhesion to the following declaration:

1. That we proclaim Ireland to be a separate nation.
2. That we assert Ireland's right to freedom from all foreign control, denying the authority of any foreign Parliament to make laws for Ireland.
3. That we affirm the right of the Irish people to declare their will as law and enforce their decisions in their own land without let or hindrance from any other country.
4. That maintaining the status of Ireland as a distinct nation, we demand representation at the coming Peace Conference.
5. That it is the duty of nations taking part in the Peace Conference to guarantee the liberty of the nations calling for their intervention, releasing the small nations from the control of the greater powers.
6. That our claim for complete independence is founded on human right and the law of nations. We declare Ireland has never yielded to and has ever fought against foreign rule, and we hereby bind ourselves to use every means in our power to obtain complete liberty for our country.

A petition to the Government for absolute home rule was signed by three Irish Protestant Bishops.

Americans on Irish Issue

Expressions were obtained from a number of eminent Americans on the subject for publication in England. Former President Roosevelt wrote as follows:

I most earnestly hope that full home rule will be given to Ireland; home rule relatively to the empire, such as Texas or Maine or Oregon now enjoys relatively to the national Government at Washington. Of course, Ireland should remain part of the empire. I have no more sympathy with the irreconcilable extremists on one side of the question than on the other.

Similar views were expressed by Charles W. Eliot, President Emeritus of Harvard University, and Judge Alton B. Parker, former Democratic nominee for President. Cardinal Gibbons expressed himself in part as follows:

Supposing that each county were given its

choice as to whether it would come under the Home Rule Parliament in Dublin or not, the counties which voted themselves out would be in a fearfully anomalous position. They would not belong to England. They would not belong to Ireland. They would not be large enough to set up a Home Rule Parliament of their own. If they did they could only construct an artificial State, and such an artificial State cannot endure. * * *

I should like, if possible, to impress upon Irishmen in Ulster the lesson of our own civil war here in America. The minority felt that they were going to be forced, that the institution of domestic slavery, upon which they contended that their prosperity depended, was going to be destroyed by a triumphant majority, and that their rights and liberties would be taken away from them at the bidding of the Northern States. For this reason they set up a confederacy apart from the Union. Leaving apart the whole question of the long and bitter war which ensued, the commerce of the South was ruined simply because they had erected an artificial barrier between themselves and the North which lasted long after the war had ended, and which ruined every great Southern commercial centre. If the South had won its independence it would today be a ruined country. Only because in the end it was not able to leave the Union has it revived commercially, now that it is looked upon as an integral part of the country. * * *

The American civil war ought to teach all men a great lesson. Separate nationalities must be recognized, but no nation can be permanently divided. Since I have been asked, then, the only way I see out of the difficulty is the way of guarantees—a Home Rule Parliament in Dublin, and Ulstermen receiving whatever guarantees seems necessary to them for their protection. * * *

American Advice Resented

Frederic Harrison, the noted British historian and publicist, resented the advice of Americans in these words, in a public communication:

Our American friends, in our almost desperate crisis at home, repeat the unreal, untrue, and malicious taunts of our enemies within and without the United Kingdom when they tell us to give the Irish "nation" autonomy. Where is the Irish nation? Our very dilemma is that there are three sections of Irishmen, each repudiating, contradicting, and, if we let them, eager to fight each other.

"The Home Rule act!" cries one group, though they and all men of sense know that the act of 1914 is impracticable as it stands, and must in any case be revised under the urgent stress of war.

"No Dublin Parliament for us!" cries Ulster—Ulster, far the richest, most civilized, most vigorous element in Ireland, the only element which joins us in the war and is not openly malevolent.

And now a third factor breaks in with the cry: "Away with Redmond and his lot, traitors all! The independent republic! Down with British uniforms, officials, and laws!"

Our difficulty is, and has been for generations, to know which of these three groups we ought to regard as the strongest and most permanent. Which of them is the Irish nation? All three furiously claim to be the real Irish nation. * * *

Ireland has already 103 representatives in the House of Commons—vastly in excess of its due proportion. At Westminster the Nationalist members occupy as much time as all the rest. They complain of, obstruct, and vilify our Government in our sore need. Yet they still cry out for more parliamentary representation, and they use the excessive representation they have got in such treasonable ways as in any other country but ours would have them sent outside or to jail. These are the men whom our American mentors tell us we must "placate." They seem to think that if we only started the act of 1914 all would be smooth in Ireland; that 250,000 Irishmen would enlist the next day. It is far more likely that if we started the act and withdrew the strong hand Ireland in three months would be in a state of chaos, the three groups at open war. And as soon as the Sinn Féin recruits got arms in their hands they would turn them against us and proclaim the republic, as they did a year ago.

How can responsible statesmen abroad repeat that most false of all the Potsdam lies—that Ireland has been treated as Poland was by Russia or as the Czechs are by Austria—Austria, that will not open its Parliament at all, which has hanged 2,000 Bohemian patriots, to say nothing of the hecatombs of Serbians, Bosnians, and Rumanians?

Why, for two generations Britain has sacrificed her men and her own interests to do justice to Irish demands. Her purse, her policy, her Parliament, her Government have all been strained to meet Irish claims, to restore Irish welfare. Ireland has never been so wealthy, so prosperous, so hopeful as she is today.

When the war came Ireland was treated as being outside of it, as if it were a spoiled and unmanageable son who must not be crossed. It was allowed to rest and grow rich in sullen scorn of all that Britons and true Irishmen were bearing in the war—this to the eternal shame of the Irish name, which Britons and which history will never forget or excuse; to the eternal shame also of those besotted politicians who treated Ireland as a timid fool might treat a dangerous lunatic whom he was afraid to touch and hoped to coax.

The Government's Proposal

Premier Lloyd George on May 16 presented the Government's proposals regarding a settlement of the Irish question in the form of a letter to John

Redmond, leader of the Irish Nationalist Party. Following are the proposals of the Premier:

Firstly, the immediate application of the Home Rule act to Ireland, but excluding therefrom the six counties in the north and east of Ulster, such exclusions to be subject to reconsideration by Parliament at the end of five years, unless it is previously terminated by the action of the Council of Ireland, to be set up as hereinafter described.

Secondly, with a view to securing the largest possible measure of common action for the whole of Ireland, the bill would provide for a Council of Ireland, to be composed of two delegations consisting, on the one hand, of all members returning to Westminster from the excluded area, and, on the other, of a delegation equal in numbers from the Irish Parliament, this council to be summoned on the initiative of any six members. It would be empowered by a majority of the votes of each of the delegations to pass private bill legislation affecting both the included and excluded areas; to recommend to the Crown the extension to the included area, by an Order in Council, of any act of the Irish Parliament; to agree to the inclusion under the Home Rule act of the whole of Ireland, subject to the assent of a majority of the voters in the excluded areas, the powers to be vested in the Crown in that case to extend the act to all of Ireland by an Order in Council; to make recommendations on its own initiative upon the Irish question, including the amendment of the Home Rule act as finally passed. The President of this Council of Ireland would be elected by agreement between the delegations, or, in default of agreement, would be nominated by the Crown.

Thirdly, the letter says that the financial proposals of the Home Rule bill are unsatisfactory and should be reconsidered. Important objects, such as the development of Irish industries, improvement in town housing, and the furtherance of education, with increased pay for teachers, owing to the war conditions, it declares, cannot be dealt with under the bill without undue burden on the Irish taxpayers. It continues:

Fourthly, the Government would recommend that after the second reading of the bill embodying the above proposals, together with the Home Rule act, it should forthwith be considered by a conference to be constituted on the lines of the Speaker's Conference on Electoral Reform, though not consisting exclusively of members of Parliament, and meeting under the Chairmanship of some one commanding the same general confidence in

his impartiality and judgment as Mr. Speaker himself.

The Government feel that a proposal which provides for immediate home rule for the greater part of Ireland, while excluding that part of Ireland which objects to coming under the Home Rule act for a definite period, when Parliament will consider the matter afresh; which recognizes the profound sentiment existing in Ireland for the unity of the country by creating a common council to consider Irish affairs as a whole, and which, finally, sets up a representative conference to attempt to adjust the most difficult questions involved is as far as they can possibly go toward effecting a legislative settlement in the crisis of a great war. They are prepared to introduce a bill on these lines.

An Alternative Plan

In his letter the Premier writes that if the preceding proposition proves unacceptable there remains an alternative plan, which, though it has been sometimes seriously discussed, has never been authoritatively proposed—that of assembling a convention of Irishmen of all parties for the purpose of producing a scheme of Irish self-government.

"As you will remember," he continues, "the Constitution of the Union of South Africa was framed, despite most formidable difficulties and obstacles, by a convention representative of all the interests and parties in the country, and the Government believes that a similar expedient might in the last resort be found effectual in Ireland. Would it be too much to hope that Irishmen of all creeds and parties might meet together in convention for the purpose of drafting a Constitution for their country which would secure a just balance of all the opposing interests and finally compose the unhappy discords which have so long distracted Ireland and impeded its harmonious development? The Government are ready, in default of the adoption of the present proposals for home rule, to take the necessary steps for assembling such a convention."

It was announced by Mr. Redmond on May 17 that the Irish Nationalists rejected the first proposal of the Premier, but accepted the alternative proposition for the immediate calling of a convention to decide on a Government for Ireland.

The Background of Home Rule

THE situation that evoked the agitation for home rule was created by the Act of Union, signed by King George III. on Aug. 1, 1800, and which came into force on Jan. 1, 1801, the first day of the nineteenth century. Ireland had had a Parliament since the thirteenth century, but it was the Parliament of the Anglo-Norman colony about Dublin. Twice, the powers of this Irish Parliament had been limited:

In 1494, by Poynings's law, (so-called from Sir Edward Poynings, then Lord Lieutenant of Ireland, who secured its passage,) which enacted that "All acts intended to be passed by the Irish Parliament must first be submitted to the King of England and his Privy Council"; and in 1720, when an English act affirmed the right of the English Parliament to pass laws for Ireland, and deprived the Irish House of Lords of the right to hear appeals.

These limitations were removed in 1782, and from this time until the Act of Union the Irish Parliament had its period of largest activity. This Irish Parliament, often called, from its most distinguished member, "Grattan's Parliament," consisted of a House of Lords and a House of Commons of 300 members, all of whom were Protestants. The laws barring Roman Catholics from Parliament, and from many civil and military activities, dated from the time of the Reformation, from the reigns of Henry VIII., Edward VI., and Queen Elizabeth. They were not directed against Irishmen, but against all Roman Catholics in Great Britain and Ireland; and, in fact, through acts passed by the exclusively Protestant Irish Parliament, Roman Catholics had larger rights in Ireland than in England, including the franchise. The resolution enlarging these rights declared that "as men and Irishmen, as Christians and Protestants, we rejoice in the relaxation of the penal laws against our Roman Catholic fellow-subjects."

Pitt, then Prime Minister of England, decided that a legislative union between England and Ireland was expedient, as

an earlier Act of Union had united the Parliaments of England and Scotland in 1707. It was necessary to pass this Act of Union through the Irish Parliament. This was done by means of rewards in cash and preferment, new peers being created to secure a majority in the Irish House of Lords. These were ordinary political expedients of the period; Guizot, by similar methods, governed France from 1840 to 1848.

Ireland Under the Union

In the combined Parliament at Westminster, which met on Jan. 22, 1801, Ireland was represented by 100 members, later increased to 103; 4 Bishops and 28 peers, elected from the body of the Irish peerage, represented Ireland in the House of Lords. No Roman Catholic could at that time sit in Parliament.

This system left at least two-thirds of Ireland unrepresented. A movement for "Catholic emancipation" was begun in Ireland, under the leadership of Daniel O'Connell, in 1823; this movement attained complete success in 1829, when a law was carried through Parliament by Sir Robert Peel and signed by George IV., which extended political equality to all Roman Catholics within the British Isles.

In 1785 the population of Ireland was about 2,850,000; by 1845, it had risen to about 8,300,000, this rapidly increasing population pressing dangerously upon the means of subsistence. Ireland relied too largely on the potato, and widespread potato disease caused a series of famines, culminating in 1847, still remembered in Ireland as "the black forty seven." England made extensive efforts to stem the famine, using the same means which have often been employed in India. In March, 1847, 734,000 persons were employed on relief works; later 3,000,000 cooked rations were distributed daily. But large numbers nevertheless died of starvation; much larger numbers emigrated, chiefly to the United States.

Ireland was originally divided into tribal areas, the land being held by mem-

bers of the tribes in communal tenure. But the chieftains gradually made themselves feudal owners, turning the tribesmen into tenants. Under the Stuart Kings numbers of these Irish chieftains were dispossessed; their lands, which were really tribal lands, passed, by purchase from the King, into the hands of English landlords. Further, large areas, chiefly in Ulster, were colonized by English and Scottish tenants, Protestants or Presbyterians; this applied especially to the lands of the O'Donnells and O'Neills, the Earldoms of Tyrconnell and Tyrone.

The tenure under which the Irish tenants held their land was, over large areas, a bad one; their leases ran for one year only. If they made improvements, draining, clearing, or building, these belonged, at the end of the year, to the landlord, who had the power to raise the rent to cover the enhanced value of the land, and generally used it. This system put a premium on improvidence and discouraged all improvements. Largely because of this, Irish tenants generally limited their farming to a single crop—potatoes—and, when this crop failed through disease, they were reduced to starvation.

Therefore "land agitation" in Ireland had two purposes: First, to improve the land tenure and the status of the tenant; second, to undo, as far as possible, the land confiscations of the Stuarts, and to restore the land to Irish owners. This double objective constituted the "land question" in Ireland.

Beginning of Land Purchase

One result of the three years' famine, which stopped the payment of all land rents over large areas, was to ruin many landlords, and so to curtail the resources of others that they were unable to improve their lands. English statesmen devised a plan which they hoped would introduce capital. This plan was embodied in the Encumbered Estates act of 1849, two years after the famine, providing for the establishment of a court to examine the affairs of heavily indebted Irish landlords. The courts were empowered to order the sale of such estates

to the value of £20,000,000, (\$100,000,000.) The estates thus sold were bought up by Irishmen who had made money in trade, who considered their new land merely as an investment, and tried to get the largest possible profit from it. The tenants were thus worse off than before. The new owners immediately increased all rents, sometimes two and three fold.

This led to the formation of the Tenants' League in the following year, 1850. It drew up a very moderate program, which included the following demands:

1. A fair valuation of the rent.
2. Security from eviction while rents were paid.
3. The right of a tenant to sell his interest in the land, representing the improvements he had made, to the incoming tenant.
4. A settlement of arrears of rent.

But this movement had little practical result. The first real relief was gained as a by-product of the Disestablishment of the Anglican Church in Ireland in 1869. It had until then been the State Church, supported by tithes paid by all Ireland, Protestant and Roman Catholic alike. This palpable injustice Gladstone determined to remove. All tithes were remitted, and a sustentation fund was established to provide the income previously drawn from tithes.

Even more important was the disposal of extensive Church lands. The tenants of these were allowed to become owners of them, by making a series of payments extending over a number of years, on the installment plan. More than six thousand tenants were thus able to buy their farms, and it is noteworthy that failures to pay the installments were practically nonexistent.

This principle of land purchase was destined to have a large and highly beneficent development in the following years.

Parnell and the Land League

The example of tenants thus becoming owners of their holdings, which were scattered throughout Ireland, was a strong stimulus to their neighbors to work for a like happy consummation. This widespread desire made possible the

foundation of the Land League, by Michael Davitt, in 1879. But it owed its success to the organizing genius of Charles Stewart Parnell. Its aims, practically the same as those of the earlier Tenants' League, were embodied in three catchwords: Fair Rent, Fixed Hold, Free Sale, which came to be known as "the three F's."

A fair rent was to be fixed by an impartial court; the tenant was to have security of tenure so long as he paid this rent; he was to have the right to sell to the incoming tenant his interest in the land, represented by the improvements he had made.

Parnell was a well-to-do landlord of English descent, a Protestant; the woes of the tenants therefore formed no part of his own experience. His object was not so much to relieve the tenants as to weaken the power of England and to work for complete independence. Speaking at Cincinnati on Feb. 23, 1880, he declared that the first thing necessary was to undermine England's power in Ireland by destroying the Irish landlords. Ireland might then work for independence. "And let us not forget that that is the ultimate goal at which all we Irishmen aim. None of us, whether we be in America or in Ireland, or wherever we may be, will be satisfied until we have destroyed the last link which keeps Ireland bound to England."

In this way the purely economic land question was bound up with political aims. And, for Parnell, the land question was merely the lever for his political purpose, which was to make Ireland a separate nation.

Daniel O'Connell had developed a new political instrument, which came to be called "constitutional agitation." He held mass meetings, and in this way brought pressure to bear on the Government, but carefully avoided the slightest infraction of law. He was arrested in October, 1843, and imprisoned, but three months later he was released by a decision of the House of Lords, which declared that his sentence was illegal; that he had broken no law.

Parnell heartily despised the moderate methods of O'Connell. He did not at-

tempt an armed rising, like that of 1798, not from any moral objection to rebellion, but for a purely practical reason: he said that Ireland, having no regular army, would be reduced to guerrilla warfare; but guerrilla warfare was impossible in Ireland, because Ireland has a wide central plain, with mountains along the rims, whereas guerrilla warfare requires a back country of hills. He was firmly convinced that an armed movement in Ireland was an impossibility for this reason.

Creation of the Boycott

With these views, he developed a practical method for the Land League, in which legal and illegal means were combined as expediency dictated. One of the most famous means, not strictly illegal, was the creation of the "boycott." In an attack on a Protestant landlord, a Captain Boycott, which Parnell made at Ennis on Sept. 18, 1880, Parnell urged the people of the neighborhood to punish him "by isolating him from his kind as if he were a leper of old." The boycott created by that phrase instantly became a powerful instrument, which was mercilessly used, both against landlords and against tenants who rented farms from which their former occupants had been evicted for non-payment of rent. By this means, and by agrarian outrages, which generally took the form of maiming cattle, the Land League established a reign of terror. In 1881, there were 4,439 agrarian outrages; in the first half of 1882, there were 2,597. On Jan. 28, 1882, Gladstone told the House of Commons that "with fatal and painful precision the steps of crime dogged the steps of the Land League." In the previous October, Gladstone had imprisoned Parnell and his chief lieutenants in Kilmainham Jail, at Dublin.

Gladstone tried to meet the Land League agitation in two ways—first, by removing real grievances; second, by endeavoring to stop outrages through the operation of a Coercion act, which gave him extraordinary authority to deal with agrarian crimes, such as cattle maiming.

His first object he sought to achieve by passing the Land act of 1881, which gave the Irish tenants "the three F's"—

a fair rent, settled by an impartial court; a fixed hold of the land, so long as this legal rent was paid; free sale, or the right, on leaving a farm, to receive from the incoming tenant the cash value of all improvements made, such as clearings, draining, and buildings.

Parnell opposed this law, refused to vote for it, walking out of the House of Commons with thirty-five of his followers, and did all in his power to keep the tenants from taking advantage of its remedies. But they ignored his advice, flocked to the land courts, and had their rents very generally lowered and fixed by law.

By May, 1882, Gladstone had tired of the task of meeting outrage by coercion. On May 2, 1882, he entered into an agreement with Parnell, then in Kilmainham Jail; this was called the Kilmainham treaty, and marks an important stage in Gladstone's conversion to home rule. As an immediate result of this agreement, agrarian outrages almost ceased; in the second six months of 1882 they were only 836, as against 2,597 in the first six months of that year, thus practically establishing the fact that they had been organized by the Land League, which was able to easily to stop them.

But another event occurred in Ireland, four days after the Kilmainham treaty, which for the time made home rule an impossibility. This was the assassination of Lord Frederick Cavendish, whom Gladstone had sent to Ireland as the agent of his policy of conciliation, and of Thomas Burke, in Phoenix Park, near Dublin, on May 6, 1882. This murder so profoundly shocked England that to bring forward a home rule measure at that time was out of the question. It was postponed for four years.

Advocates of "Physical Force"

O'Connell believed in using means that were completely legal. Parnell used means both legal and illegal, but thought any armed effort to destroy English power in Ireland impracticable, because of the geographical character of the country.

But there have always been, in Ireland, men who have not agreed with either O'Connell or Parnell; who have

advocated illegal means, and have believed in the possibility of armed rebellion. These advocates of "physical force" have generally chosen a time when England was at war with one or another Continental power, and have tried not only to organize armed force in Ireland, but also to bring into Ireland the armies of England's Continental enemies.

Early instances are: The bringing of Spanish ships and soldiers to Ireland by James Fitzgerald in 1579, when Queen Elizabeth was at war with Philip II. of Spain; the landing at Kinsale of 4,000 Spaniards, as allies of the O'Neills and O'Donnells, in 1600; the sending of a French contingent by Louis XIV. to Ireland in 1689; a further force of 3,000 Frenchmen being sent in 1691; the landing of General Humbert with 1,000 Frenchmen at Killala, during the Irish rebellion of 1798.

These attempts at armed rebellion were prepared by secret societies, of which there has been a long series in Ireland, such as the "Whiteboys" of 1762, so called because they wore white shirts over their coats like the French Camisards; the "Right Boys" twenty-five years later; the "United Irishmen" who brought about the rebellion of 1798; the "Young Ireland" movement of 1848; the "Fenian" movement, from 1863 to 1868; the Sinn Feiners of 1916. They all had the same purpose, the establishment of a separate Irish nation, by open rebellion, leading to terrorism; they have all openly and frankly expressed their contempt for the advocates of "constitutional agitation," like Daniel O'Connell, or his successors, the Constitutional followers of John Redmond—the Irish Parliamentary Nationalists.

One of the gravest difficulties which beset the solution of the Irish problem is the existence of these two rival schools—the Constitutionalists, and the advocates of "physical force," for the reason that the physical force men, open enemies of the Constitutionalists, will flatly refuse to recognize any settlement made with the Constitutionalists, or will use any concessions made to the Constitutionalists simply as a stepping stone to their own

ulterior ends: complete separation and the establishment of "the Irish Republic." In this sense, a settlement of the Irish question made with the Constitutionalists is no settlement, unless the physical force party can in some way be compelled to respect it.

Gladstone's First Bill

Gladstone's impulse toward home rule was cut short by one expression of the "physical force" movement: the Phoenix Park murders. In October he suppressed the Land League, whose place was taken by the National League, which is still in existence. In the Summer of 1885, Lord Salisbury and the Conservatives came into power, and introduced a second and much larger measure of land purchase, devoting \$25,000,000 to the work of turning Irish tenants into peasant proprietors. The general election of 1885 gave the following result: Liberals, 331; Conservatives, 249; Irish Nationalists, 86. If the Conservatives joined forces with the Nationalists, they would have 335 against Gladstone's 331. In these circumstances, Gladstone determined to form a working alliance with Parnell, and frame a Home Rule bill.

Gladstone's first "Government of Ireland bill" was launched in April, 1886. It proposed to form an Irish Parliament of two houses; the upper house was to consist of 28 Peers and 75 members elected for ten years; the lower house of 204 members, about double the existing number of Irish Members of Parliament. Irish Members of Parliament were to be excluded from the British Parliament at Westminster. On June 7, 1886, 93 Liberal Unionists joined with the Conservatives in voting against this bill, which was defeated in the House of Commons by 30 votes.

More Land Purchase

Gladstone had previously made a further effort to settle the land question by introducing a bill which further extended the operation of land purchase—the purchase of their farms by tenants, who repaid the Government by installments.

Lord Salisbury and the Conservatives returned to power in August, 1886; Lord

Salisbury's nephew, Mr. Arthur James Balfour, was appointed Chief Secretary for Ireland. He suppressed the National League; and, by his steady administration of the Crimes act, gradually quieted Ireland. In 1891 he carried through Parliament a further Land Purchase act, which applied \$150,000,000 to the work of turning tenants into owners. These successive Land Purchase acts, culminating in Wyndham's (Conservative) Land Purchase act of 1903, have gone far to solve the Irish land question; once more it may be put on record that failures to pay the installments are practically unknown. The result of these measures throughout Ireland has been admirable.

Gladstone's Second Bill

Gladstone returned to power in August, 1892. In February, 1893, he introduced a second Home Rule bill, which proposed that eighty Irish members should be retained in the Imperial Parliament at Westminster, though they were not to vote on measures expressly confined to Great Britain. Two main objections were made to this second home rule measure. The first, by the Conservatives, was that it not only gave Ireland the right to govern herself, but also the right to govern England and Scotland. The second, by the Irish Nationalists, that the financial provisions of the bill were such as "to keep Ireland in bondage." This meant, in practice, that Ireland might not build a separate tariff wall.

On Sept. 1, the bill passed the House of Commons by a majority of 34; but it was thrown out by the House of Lords by a vote of 419 to 41. A few months later Gladstone resigned, his place being taken by Lord Rosebery, who was succeeded by Lord Salisbury in June, 1895. Ten years of Conservative Government followed, which were marked by the establishment of County Councils—small local Parliaments for each of the thirty-two counties of Ireland—in 1898, and by Wyndham's Land Purchase act, already mentioned, in 1903.

Asquith's Home Rule Act

The Liberals returned to power in 1905, Mr. Asquith becoming Prime Minister in 1908. He secured his parliamentary posi-

tion by making a working agreement with the Labor and Nationalist members. The Nationalists were to support his plan to disestablish the Anglican Church in Wales as Gladstone had disestablished it in Ireland in 1869, while he was to bring in a Home Rule bill. To insure its passage, it was necessary to destroy the practical veto power of the House of Lords. Asquith did this by means of the Parliament act of 1911, under which bills (other than money bills or a bill extending the maximum duration of Parliament) if passed by the House of Commons in three successive sessions, whether of the same Parliament or not, and rejected each time (or not passed) by the House of Lords, may become law without their concurrence on the royal assent being signified, provided that two years have elapsed between the second reading in the first session of the House of Commons and the third reading in the third session.

The passage of this act cleared the way for the new Home Rule bill which was introduced in 1912.

Proposed Dublin Parliament

Gladstone's first Home Rule bill proposed to exclude the Irish members from Westminster. His second Home Rule bill proposed to retain 80 Irish members at Westminster, besides establishing a separate Irish Parliament at Dublin. Asquith made a compromise between these two plans, and proposed to retain only 42 Irish members at Westminster, the ground for their retention being that many Irish questions were reserved to be dealt with by the Imperial Parliament. These 42 Irish members at Westminster were to represent Belfast (4), Dublin (3), Cork (1), counties in Ulster (11), in Leinster (8), Munster (9), and Connaught (6).

The Dublin Parliament was to consist of two houses—a Senate of 40 members and a House of Commons of 164 members, who were to represent the following constituencies: Boroughs, Belfast (14), Dublin (11), Cork (4), Londonderry (2), Limerick (2), Waterford (1), and Dublin University (2); counties in Ulster (43), in Leinster (30), in Munster (30), and in Connaught (25).

Senators were to be drawn from the four provinces in the following numbers: Ulster (14), Leinster (11), Munster (9), and Connaught (6).

Under this third Home Rule bill, England would be able to exercise control over Ireland in three ways: First, through the Executive, the Lord Lieutenant being appointed by the Crown, which means in practice the Prime Minister of England, and in his turn selecting the members of the Dublin Cabinet, who must, however, either be members of the Dublin Parliament, or become members; secondly, through financial arrangements, chief of which is the provision that all Irish taxes are to be paid into the Exchequer of the United Kingdom, which shall pay to the Irish Exchequer a sum of \$2,500,000 yearly, to diminish to \$1,000,000 yearly, as an imperial contribution to Irish finances; and a sum equal to the proceeds of Irish taxes laid by the Dublin Parliament. Thirdly, through the reservation of a number of departments or subjects for decision by the Imperial Parliament. For example, the Dublin Parliament is expressly forbidden to transfer to the Roman Catholic Church the Protestant Cathedrals, which were Catholic until the Reformation, such as the cathedral at Armagh, Christchurch Cathedral, (founded by the Danes,) and St. Patrick's Cathedral, (founded by the Anglo-Normans,) in Dublin.

The arrangement proposed by Asquith's Home Rule bill is, therefore, comparable, not so much to the form of government of the Dominion of Canada or the Commonwealth of Australia, as to that which exists, let us say, in New York State, which sends 43 members to Congress, (as compared with the 42 Irish members to be sent to Westminster,) with a Legislature at Albany consisting of a Senate of 51 members (compared with the 40 members of the Dublin Senate) and a lower house of 150 members, (compared with the 164 members of the lower house in the Dublin Parliament.) The restrictions as to taxation and reserved federal authority are comparable to those reserved to the Imperial Parliament at Westminster.

There are three sharply contrasted

parties in Ireland: (1) the Ulster Unionists; (2) the Constitutionalist Nationalists; (3) the successors and heirs of the "physical force" movements. Inevitably Asquith's plans for the government of Ireland make a different impression on each of these three parties.

To begin with, this third Home Rule bill is only moderately satisfactory to the Irish Constitutional Nationalists led by John Redmond, a former lieutenant of Parnell, who would like much larger powers.

It is denounced as wholly inadequate by the extremists, who do not try to conceal the fact that what they want is not this moderate home rule scheme, but complete independence, a separate Irish Republic. This view is strongly represented among Irish-Americans, who have, within the last few weeks, given very clear expression to their views.

The Unionists of Ulster, of whom Sir Edward Carson is the leader, strongly desire to remain in their present relation to the Imperial Parliament and as strongly object to being governed by a Dublin Parliament.

The objections of Protestant and industrial Ulster (including six out of the nine counties of Ulster) to the home rule plan may be summed up as follows:

First, they say openly that this supposed settlement will be no settlement, but will simply be used by the extremists as a basis of further operations against England, in furtherance of their avowed plan to form a completely independent Irish Republic—a plan openly announced even by Parnell when he was leader of the parliamentary party. The people of Ulster say that they will be sacrificed, not to a genuinely loyal plan of Irish Nationalism, but to this strategic outpost of armed rebellion. They say that Irish agitators have always had "two voices," one for England and another, more genuine, for extremists. This is their political objection.

Second, they object to the probable influence of the Vatican in Irish affairs. They have always held this objection; it

has been greatly strengthened by the pro-German, anti-French action and attitude of the Vatican in the world war. They assert that, lured by the bribe of "temporal power," which would mean the disruption of free Italy, the Vatican has secretly used its influence through the hierarchy and the religious orders in favor of Germany, for example, in Roman Catholic Canada, which has contributed only a corporal's guard to the allied armies, French Canada being notably priest-ridden. This illustrates the kind of political intrigue which Ulster Protestants have always apprehended.

Third, they object to the progressive Northeast being taxed to supply the deficiencies of the backward South and West. Belfast has a population of 386,947, (as against 304,802 for Dublin,) with large industries; her shipyards employed, even before the war, 22,000 men, with a weekly payroll of \$175,194; the same district produces four-fifths of the world's linen. The people of Ulster say that the South and West desire to include Ulster in the home rule plan, in order to be able to tax Ulster.

Fourth, they object on principle. Home rule is based on the principle of "government by consent of the governed." Ulster claims for herself the application of the same principle. Ulster has always been loyal to the Union, loyal to all imperial aims. She has resented, and prepared to resist, one thing only: the attempt to give her over into the hands of a hostile majority, who wish to coerce her. Ulster earnestly protests against all plans to force her out of the Union, which expresses her ideals of government and political justice. As an example of the separate treatment which she claims for herself, she cites such a precedent as that of West Virginia, which, refusing to leave the Union in 1861, separated from Virginia, and, in 1862, was made a separate State loyal to the Union, and has since greatly prospered under this arrangement.

These are, in part, the grounds of the claim that Ulster should be excluded from the operation of the Home Rule act.

The Entente's Greetings to America

Memorable Utterances of European Leaders on Entry of United States Into the War

THE entry of the United States into the war was formally celebrated in England on April 20. For the first time in history a flag other than the union jack was hoisted at the top of Victoria Tower at Westminster, where during the entire day the Stars and Stripes fluttered fraternally with the English flag above the Houses of Parliament. A solemn and stately service took place at St. Paul's Cathedral, attended by the King and Queen, and the most notable representatives of the British realm. Bishop Brent, an American Bishop, delivered the sermon, and the Archbishop of Canterbury pronounced the benediction. In his sermon Bishop Brent said:

This, I venture to say, is not merely the beginning of a new era but of a new epoch. At this moment a great nation, well skilled in self-sacrifice, is standing by with deep sympathy and bidding godspeed to another great nation that is making its act of self-dedication to God. * * * This act of America has enabled her to find her soul. America, which stands for democracy, the cause of the plain people, must fight, must champion this cause at all costs.

Hall Caine's Winged Words

Hall Caine, the British novelist, wrote as follows regarding the celebration:

American Day in London was a great and memorable event. It was another sentinel on the hilltop of time, another beacon fire in the history of humanity. The two nations of Great Britain and America can never be divided again. There has been a national marriage between them, which only one judge can dissolve, and the name of that judge is Death. * * *

Two lessons, at least, must be learned from the service of Friday in St. Paul's Cathedral. The first is that the accepted idea of the American Nation as one that weighs and measures all conduct by material values in dollars and cents must henceforth be banished forever. Thrice already in its short history has it put that hoary old slander to shame, and now once again has it given the lie to it. The history of nations has perhaps no parallel to the high humanity, the splendid self-sacrifice, the complete disinterested-

ness that brought America into this war, with nothing to gain and everything to lose. It has broken forever with the triple monarchies of murder. To live at peace with crime was to be the accomplice of the criminal. Therefore, in the name of justice, of mercy, of religion, of human dignity, of all that makes man's life worth living and distinguishes it from the life of the brute, America, for all she is or ever can be, has drawn the sword and thrown away the scabbard. God helping her, she could do no other.

The second of the lessons we have to learn from the services of Friday is that, having made war in defense of the right, America will make peace the moment the wrong has been righted. No national bargains will weigh with her, no questions of territory, no problems of the balance of power, no calculations of profit and loss, no ancient treaties, no material covenants, no pledges that are the legacy of past European conflicts. Has justice been done? Is the safety of civilization assured? Has reparation been made, as far as reparation is possible, for the outrages that have disgraced the name of man, and for the sufferings that have knocked at the door of every heart in Christendom? These will be her only questions. Let us take heart and hope from them. They bring peace nearer.

It was not for nothing that the flags of Great Britain and America hung side by side under the chancel arch on Friday morning. At one moment the sun shot through the windows of the dome and lit them up with heavenly radiance. Was it only the exaltation of the moment that made us think invisible powers were giving us a sign that in the union of the nations which those emblems stood for lay the surest hope of the day when men will beat their swords into plowshares and know war no more? The United States of Great Britain and America! God grant the union celebrated in our old sanctuary may never be dissolved until that great day has dawned.

Jubilation in London

One of the unique events of the day was a luncheon for American wounded men who, after attending the services at St. Paul's, were guests of one of the American women's organizations. There were present seventy privates and thirty officers, all Americans, who were convalescent patients of hospitals near Lon-

don. They were accompanied by thirty nurses connected with the British and Canadian forces, all of whom were Americans. Ambassador Page presided. The roll of the men and women present showed that nearly forty States were represented, including every section of the Union.

Celebrations were held in many of the large cities of Great Britain in honor of America, and the Stars and Stripes were generously displayed from public and private buildings. At Manchester a special service was held at the Cathedral at noon. The Lord Mayor, who attended in state, was accompanied by members of the Council.

April 30 was "America Day" in Liverpool. A special town meeting of citizens was held at noon to celebrate the entrance of the United States into the war. It was preceded by a service of thanksgiving at St. Nicholas Church, attended by the Lord Mayor, city officials, the United States Consul, Consular representatives of all the allied powers, and leading citizens. The sermon was preached by the Bishop of Liverpool.

Celebration in France

Paris celebrated "United States Day" on April 20 with exercises in the great hall of the Sorbonne, and on April 21 with a reception to Ambassador Sharp, a procession to Lafayette's statue, and exercises in the City Hall. The Stars and Stripes were unfurled from the Eiffel Tower, the City Hall, and other municipal buildings.

The celebration on the 20th was organized by the French Maritime League and was an imposing testimonial in honor of the United States. On the platform were Admiral Lacaze, Minister of Marine; Alexandre Millerand, President of the league; Mr. Sharp, American Ambassador; J. de Mello Machado, Brazilian Senator; M. Nail, Under Secretary of the French Merchant Marine; Ernest Lavisse, M. Lacour-Gayet, Jean Richepin, Admiral Fournier, and others. Raymond Poincaré, President of France, who presided over the ceremonies, was greeted on his entrance with the "Marseillaise" and the American national hymn. M. Millerand made an address saluting the

co-operation of the American fleet. He said in part:

Washington, Lincoln, Wilson—these are immortal types of the Presidency of a democracy—men who, conscious of their responsibilities, assume the duty of guiding the people at whose head they have the honor to be placed, thus realizing the indispensable harmony in human affairs between the principle of authority and the principle of liberty. Yes, history will assign to Mr. Wilson a place among the great statesmen of all time, for he has been able, in a memorable document, to make clear the ideal reasons why honor condemned neutrality and commanded war in order to assure to humanity the definitive blessing of peace. Near him appear the shadows of the victims whose sacrifice, by arousing the indignation of the civilized world, has rendered inevitable the explosion which we are today witnessing.

A unique feature of the ceremonies was furnished by Jean Richepin, member of the French Academy. Surrounded by armed sailors, the American and French flags were presented, and, in a voice vibrant with emotion, the poet recited "Le Baiser des Drapeaux," ("The Kiss of the Flags,") which he had composed for the occasion. While the audience was applauding the last stanzas the color bearers dipped the starry banner and the tricolor in a movement that stirred deep enthusiasm.

Mr. Sharp, the American Ambassador, presented the formal salute of the great Republic to France and her allies, adding:

As a man who feels himself to be American to the very roots of his being, who is filled with pride by the magnificent traditions of his country, and who has so often heard the heart of America beating, I know, with a certainty born of profound conviction, that in this great conflict France has been the lodestone that has drawn to itself the complete devotion and unqualified admiration of the American people.

Admiral Lacaze paid a stirring tribute to the sailors of the allied nations, especially to those obscure heroes, the sailors of the merchant fleet, who, exposed daily to the perils of German piracy, bring to their arduous task the highest courage and patriotic devotion.

Previous London Celebration

The first celebration of this kind occurred in London April 12; it was at a luncheon given by the American Club, at which important speeches were made

by Ambassador Walter H. Page and Premier Lloyd George. The keynote of the Ambassador's speech was in these words:

These are great days for the Republic. We have set out to help in an enterprise of saving the earth as a place worth living in. The clear, solemn call of the President and the voice of Congress, which is the voice of the people, are to us the high call of duty.

We come in answer only to the high call of duty, and not for any material reward, not for territory, not for indemnity or conquest, not for anything save the high duty to succor democracy when it is desperately as-

sailed. We come only for the ideal, that is, the republic.

Why else have we drawn into this grim Old World bloody struggle against our traditions and wishes? Why except that our standard of honor and our judgment of safety are the same as yours? Some of our differences are historical and fundamental, but most of them are superficial or manufactured by agitation. None of them need or can separate us in the further development of our national freedom.

The Premier's speech was at considerable length. The full text is given below under a separate subhead.

Lloyd George on America's Entrance Into the War

[The British Premier's Address at the American Club in London, April 12, 1917]

I AM in the happy position of being, I think, the first British Minister of the Crown who, speaking on behalf of the people of this country, can salute the American Nation as comrades in arms. I am glad; I am proud. I am glad not merely because of the stupendous resources which this great nation will bring to the succor of the alliance, but I rejoice as a democrat that the advent of the United States into this war gives the final stamp and seal to the character of the conflict as a struggle against military autocracy throughout the world.

That was the note that ran through the great deliverance of President Wilson. It was echoed, Sir, in your resounding words today. The United States of America have the noble tradition, never broken, of having never engaged in war except for liberty. And this is the greatest struggle for liberty that they have ever embarked upon. I am not at all surprised, when one recalls the wars of the past, that America took its time to make up its mind about the character of this struggle. In Europe most of the great wars of the past were waged for dynastic aggrandizement and conquest. No wonder when this great war started that there were some elements of suspicion still lurking in the minds of the

people of the United States of America. There were those who thought perhaps that Kings were at their old tricks—and although they saw the gallant Republic of France fighting, they some of them perhaps regarded it as the poor victim of a conspiracy of monarchical swashbucklers. The fact that the United States of America has made up its mind finally makes it abundantly clear to the world that this is no struggle of that character, but a great fight for human liberty.

The Prussian Menace

They naturally did not know at first what we had endured in Europe for years from this military caste in Prussia. It never has reached the United States of America. Prussia was not a democracy. The Kaiser promises that it will be a democracy after the war. I think he is right. But Prussia not merely was not a democracy. Prussia was not a State; Prussia was an army. It had great industries that had been highly developed; a great educational system; it had its universities, it had developed its science.

All these were subordinate to the one great predominant purpose, the purpose of all—a conquering army which was to intimidate the world. The army was the

spear-point of Prussia; the rest was merely the haft. That was what we had to deal with in these old countries. It got on the nerves of Europe. They knew what it all meant. It was an army that in recent times had waged three wars, all of conquest, and the unceasing tramp of its legions through the streets of Prussia, on the parade grounds of Prussia, had got into the Prussian head. The Kaiser, when he witnessed on a grand scale his reviews, got drunk with the sound of it. He delivered the law to the world as if Potsdam was another Sinai, and he was uttering the law from the thunder clouds.

But make no mistake. Europe was uneasy. Europe was half intimidated. Europe was anxious. Europe was apprehensive. We knew the whole time what it meant. What we did not know was the moment it would come.

This is the menace, this is the apprehension from which Europe has suffered for over fifty years. It paralyzed the beneficent activity of all States, which ought to be devoted to concentrating on the well-being of their peoples. They had to think about this menace, which was there constantly as a cloud ready to burst over the land. No one can tell except Frenchmen what they endured from this tyranny, patiently, gallantly, with dignity, till the hour of deliverance came. The best energies of domestic science had been devoted to defending itself against the impending blow. France was like a nation which put up its right arm to ward off a blow, and could not give the whole of her strength to the great things which she was capable of. That great, bold, imaginative, fertile mind, which would otherwise have been clearing new paths for progress, was paralyzed.

That is the state of things we had to encounter. The most characteristic of Prussian institutions is the Hindenburg line. What is the Hindenburg line? The Hindenburg line is a line drawn in the territories of other people, with a warning that the inhabitants of those territories shall not cross it at the peril of their lives. That line has been drawn in Europe for fifty years.

You recollect what happened some years ago in France, when the French Foreign Minister was practically driven out of office by Prussian interference. Why? What had he done? He had done nothing which a Minister of an independent State had not the most absolute right to do. He had crossed the imaginary line drawn in French territory by Prussian despotism, and he had to leave. Europe, after enduring this for generations, made up its mind at last that the Hindenburg line must be drawn along the legitimate frontiers of Germany herself. There could be no other attitude than that for the emancipation of Europe and the world.

Hindenburg Line at Sea

It was hard at first for the people of America quite to appreciate that Germany had not interfered to the same extent with their freedom, if at all. But at last they endured the same experience as Europe had been subjected to. Americans were told that they were not to be allowed to cross and recross the Atlantic except at their peril. American ships were sunk without warning. American citizens were drowned, hardly with an apology—in fact, as a matter of German right. At first America could hardly believe it. They could not think it possible that any sane people should behave in that manner. And they tolerated it once, and they tolerated it twice, until it became clear that the Germans really meant it. Then America acted, and acted promptly.

The Hindenburg line was drawn along the shores of America, and the Americans were told they must not cross it. America said, "What is this?" Germany said, "This is our line, beyond which you must not go," and America said, "The place for that line is not the Atlantic, but on the Rhine—and we mean to help you to roll it up."

There are two great facts which clinch the argument that this is a great struggle for freedom. The first is the fact that America has come in. She would not have come in otherwise. The second is the Russian revolution. When France in the eighteenth century sent her soldiers

to America to fight for the freedom and independence of that land, France also was an autocracy in those days. But Frenchmen in America, once they were there—their aim was freedom, their atmosphere was freedom, their inspiration was freedom. They acquired a taste for freedom, and they took it home, and France became free. That is the story of Russia. Russia engaged in this great war for the freedom of Serbia, of Montenegro, of Bulgaria, and has fought for the freedom of Europe. They wanted to make their own country free, and they have done it. The Russian revolution is not merely the outcome of the struggle for freedom. It is a proof of the character of the struggle for liberty, and if the Russian people realize, as there is every evidence they are doing, that national discipline is not incompatible with national freedom—nay, that national discipline is essential to the security of national freedom—they will, indeed, become a free people.

I have been asking myself the question, Why did Germany, deliberately, in the third year of the war, provoke America to this declaration and to this action—deliberately, resolutely? It has been suggested that the reason was that there were certain elements in American life, and they were under the impression that they would make it impossible for the United States to declare war. That I can hardly believe. But the answer has been afforded by Marshal von Hindenburg himself, in the very remarkable interview which appeared in the press, I think, only this morning.

He depended clearly on one of two things. First, that the submarine campaign would have destroyed international shipping to such an extent that England would have been put out of business before America was ready. According to his computation, America cannot be ready for twelve months. He does not know America. In the alternative, that when America is ready, at the end of twelve months, with her army, she will have no ships to transport that army to the field of battle. In von Hindenburg's words, "America carries no weight." I suppose he means she has no ships to

carry weight. On that, undoubtedly they are reckoning.

Well, it is not wise always to assume that even when the German General Staff, which has miscalculated so often, makes a calculation it has no ground for it. It therefore behooves the whole of the Allies, Great Britain and America in particular, to see that that reckoning of von Hindenburg is as false as the one he made about his famous line, which we have broken already.

The Road to Victory

The road to victory, the guarantee of victory, the absolute assurance of victory is to be found in one word—ships; and a second word—ships; and a third word—ships. And with that quickness of apprehension which characterizes your nation, Mr. Chairman, I see that they fully realize that, and today I observe that they have already made arrangements to build one thousand 3,000-tonners for the Atlantic. I think that the German military advisers must already begin to realize that this is another of the tragic miscalculations which are going to lead them to disaster and to ruin. But you will pardon me for emphasizing that. We are a slow people in these islands—slow and blundering—but we get there. You get there sooner, and that is why I am glad to see you in.

But may I say that we have been in this business for three years? We have, as we generally do, tried every blunder. In golfing phraseology, we have got into every bunker. But we have got a good niblick. We are right out on the course. But may I respectfully suggest that it is worth America's while to study our blunders, so as to begin just where we are now and not where we were three years ago? That is an advantage. In war, time has as tragic a significance as it has in sickness. A step which, taken today, may lead to assured victory, taken tomorrow may barely avert disaster. All the Allies have discovered that. It was a new country for us all. It was trackless, mapless. We had to go by instinct. But we found the way, and I am so glad that you are, sending your great naval and military experts

CANADIANS IN A VICTORIOUS CHARGE AT VIMY RIDGE

One of the Most Important Successes in the Great British Offensive East of Arras.

The Unarmed Men Near the Captured Trench Are Germans in the Act of Surrendering

here, just to exchange experiences with men who have been through all the dreary, anxious crises of the last three years.

America has helped us even to win the battle of Arras. Do you know that these guns which destroyed the German trenches, shattered the barbed wire—I remember, with some friends of mine whom I see here, arranging to order the machines to make those guns from America. Not all of them—you got your share, but only a share, a glorious share. So that America has also had her training. She has been making guns, making ammunition, giving us machinery to prepare both; she has supplied us with steel, and she has got all that organization and she has got that wonderful facility, adaptability, and resourcefulness of the great people which inhabits that great continent. Ah! It was a bad day for military autocracy in Prussia when it challenged the great Republic of the West. We know what America can do, and we also know that now she is in it she will do it. She will wage an effective and successful war.

Establishing a Real Peace

There is something more important. She will insure a beneficent peace. I attach great importance—and I am the last man in the world, knowing for three years what our difficulties have been, what our anxieties have been, and what our fears have been—I am the last man to say that the succor which is given to us from America is not something in itself to rejoice in, and to rejoice in greatly. But I don't mind saying that I rejoice even more in the knowledge that America is going to win the right to be at the conference table when the terms of peace are being discussed. That conference will settle the destiny of nations—the course of human life—for God knows how many ages. It would have been tragic for mankind if America had not been there, and there with all the influence, all the power, and the right which she has now won by flinging herself into this great struggle.

I can see peace coming now—not a peace which will be the beginning of war; not a peace which will be an endless

preparation for strife and bloodshed; but a real peace. The world is an old world. It has never had peace. It has been rocking and swaying like an ocean, and Europe—poor Europe!—has always lived under the menace of the sword. When this war began two-thirds of Europe were under autocratic rule. It is the other way about now, and democracy means peace. The democracy of France did not want war; the democracy of Italy hesitated long before they entered the war; the democracy of this country shrank from it—shrank and shuddered—and never would have entered the caldron had it not been for the invasion of Belgium. The democracies sought peace; strove for peace. If Prussia had been a democracy there would have been no war. Strange things have happened in this war. There are stranger things to come, and they are coming rapidly.

There are times in history when this world spins so leisurely along its destined course that it seems for centuries to be at a standstill; but there are also times when it rushes along at a giddy pace, covering the track of centuries in a year. Those are the times we are living in now. Six weeks ago Russia was an autocracy; she is now one of the most advanced democracies in the world. Today we are waging the most devastating war that the world has ever seen; tomorrow—perhaps not a distant tomorrow—war may be abolished forever from the category of human crimes. This may be something like the fierce outburst of Winter which we are now witnessing before the complete triumph of the sun. It is written of those gallant men who won that victory on Monday—men from Canada, from Australia, and from this old country, which has proved that in spite of its age it is not decrepit—it is written of those gallant men that they attacked with the dawn—fit work for the dawn!—to drive out of forty miles of French soil those miscreants who had defiled it for three years. "They attacked with the dawn." Significant phrase!

The breaking up of the dark rule of the Turk, which for centuries has clouded the sunniest land in the world, the freeing of Russia from an oppression which

has covered it like a shroud for so long, the great declaration of President Wilson coming with the might of the great nation which he represents into the struggle for liberty are heralds of the dawn. "They attacked with the dawn," and

these men are marching forward in the full radiance of that dawn, and soon Frenchmen and Americans, British, Italians, Russians, yea, and Serbians, Belgians, Montenegrins, will march into the full light of a perfect day.

Eloquent Welcome From Lords and Commons

Lord Curzon's Speech and Others

Both Houses of Parliament passed resolutions on April 18, 1917, expressing profound appreciation of the action of the United States in joining the allied powers "and thus defending the high cause of freedom and the rights of humanity against the gravest menace by which they have ever been imperiled." Earl Curzon, in moving this resolution before the House of Lords, said:

SINCE the beginning of the war one by one the independent nations of the earth have been drawn into its terrific and devastating orbit. The great powers who met the first shock of conflict on one side were France, Russia, and Great Britain, or, rather, I would prefer to substitute the phrase, British Empire, because from the first hour of war it was the whole of that empire that leaped to arms. It is the whole British Empire that on our side has been engaged, and will remain engaged to the end. Alongside of these allied powers were the minor but heroic and suffering States of Belgium, Serbia, and Montenegro. At the other end of the world we received, and we continue to receive, loyal and valuable assistance from Japan. At a later date Italy was driven by considerations partly of honor, partly of political necessity, to enter this struggle. Again, a little later Rumania followed suit. Portugal, the most ancient of our allies, could not stand aloof, and at the present moment her soldiers are fighting alongside of our own in France and Flanders. In Greece many of the most patriotic sons of that country, under the leadership of the brave M. Venizelos, are also engaged in conjunction with our own troops in the trenches out-

side Saloniki. Elsewhere large parts of Arabia have arisen to throw off the detested yoke of the Turk.

Such has been the accumulation of forces that have gathered since the beginning of the war on the side of the Allies. In the same period I cannot recall any accretion that has been made to the forces of the powers of the German and Austrian Empires, except the inglorious and unnatural partnership of the Bulgarian and the Turk. But in the last fortnight, in the short time that has elapsed since we last met in this House, another and graver portent has occurred. There has entered into the war the greatest democracy in the world, whose twice-elected President, representing 100,000,000 of the most liberty-loving, the most peace-loving, the least aggressive of the peoples of the earth, has summoned his people to arms with a trumpet call that will ring through the ages, and will always be accounted one of the historic declarations of mankind.

The case of America in entering the war is widely differentiated from that of any of the other allied countries. All the other States whom I have mentioned were drawn into the war either at the beginning or at no very long date afterward. The great majority of them certainly have been engaged now for two years, if not for longer. But the case of America was different. For nearly three years that nation and her official head scrupulously and sedulously abstained from entering the war, exhibiting a patience and a forbearance which were perhaps not always quite understood, and which did not even excite universal satisfaction among some sections of her own people. But there are other

differences between the position of America and that of the other allied powers. All of them have had a direct and personal interest. The interest of the United States is secondary and remote. The majority of them were either inured to war by previous experience, or were not indisposed to war by political ambition. America during the last half century has had little experience of war and has no ambitions to gratify in the present case. We know how it has been expressed over and over again by the foremost statesman of America that her people have a constitutional aversion to war, and that they have a rooted dislike to be in any degree involved in the secular ambitions or quarrels of the Government.

Some of the nations who were fighting are, like ourselves, fighting for their continued national existence. No one can say that the national existence of America has been imperiled. Others, again, have entered the struggle, alas! because their territories have been overrun by the brutal foe. Not a single enemy has set foot, or is likely to set foot, on the soil of America. Some of them are fighting either to extend their boundaries or to recover possessions which they have lost or to satisfy claims of nationality. America requires no territory. She has nothing to recover because there is nothing of which she has been deprived. She has no lost tribes to gather again into her fold. If a nation so placed with those hereditary instincts and others that I have described, and after this long period of hesitation to which I have referred, is yet compelled to join the Allies, there must be some great and overwhelming reason for that fact. Yes, my Lords, there is. America has tardily but definitely entered the struggle because she sees that there is at stake a cause greater than the rights or liberty or the honor of any individual people. It is the rights of humanity that have been and are being cruelly outraged from day to day. It is the liberty of the whole world that is threatened. It is the honor of civilization that is at stake.

My Lords, the best part of half a century ago an American poet in circum-

stances of war thus gave expression to the sentiments of his fellow-countrymen:

Hark! I hear the tramp of thousands,
And of arméd men the hum;
Lo! a nation's hosts have gathered
Round the quick alarming drum—
Saying, "Come,
Freemen, come!

Ere your heritage be wasted," said the quick
alarming drum.

That is the call that has again sounded in the ears of Americans, and the call to which they have responded. It is the voice of freedom calling upon the freest people in the world. The entry of the United States into this war is a great event, not merely in the fortunes of the war or in the annals of the American people, but in the moral history of the human race. Not merely does this act invest the figure of America with a glory that will never fade, but it stamps the character of the struggle in which we are engaged as an uprising of the conscience of the world, as a combined effort to put an end to the rule of Satan on this earth, an effort which cannot be slackened or abated until that peril has been entirely and finally subdued. Each one of us may be proud to have lived in these times and to have witnessed this great landmark in the history of mankind.

As to the consequences of the entry of America into the war it is too early to speak. Its practical concrete effects may not be immediate, but that they must in the long run be tremendous and far-reaching no man can doubt. We may rest assured that, having drawn the sword, America will put the whole of her strength into the struggle. She is a nation that does nothing by halves; there is nothing small about the character and purpose of America, any more than there is about her territories and population. We may rest confident that she will spare nothing, either the splendid resources with which she has been endowed by nature, and which she has developed with the genius of her own people, or the vigorous energies of that people. She will not pause or stay until the peace of the world has again been built up on secure foundations and guarantees have

been secured for its maintenance in future.

There is only one other reflection that must occur to every one of us who has British blood in his veins; it is a great thought to us that at length, whatever there has been of pain in the association of America with ourselves has been finally obliterated and the two great English-speaking nations of the world stand side by side in this historic struggle. We rejoice that America is at last at our side, or shall I put it the other way and say that we rejoice we are at the side of America? We rejoice that the three flags—the Stars and Stripes, the tricolor, and the union jack—will float side by side both on the seas and in the trenches on the Continent. I shall only be expressing the wishes of your Lordships' House if I ask you this afternoon to join the House of Commons in sending to the American Government and the American people this message of congratulation and pride that we are, together with them, united at last in the greatest cause for which nations have ever suffered or individual human beings have willingly laid down their lives.

Lord Crewe's Tribute

Lord Curzon was followed by Lord Crewe, Lord Bryce, and the Archbishop of Canterbury in speeches of similar quality. The most significant portion of Lord Crewe's address is here reproduced:

We ourselves have never doubted from the first the rightness of our cause. If I may be allowed to conceive for a moment what is inconceivable, if it had been the fact that an attack had been made upon the two Central Powers, I am quite certain that no Government here would have involved us against them in war, even though it might have been argued that the most deep-seated cause of such an attack was to be found in the military aims and the general ambitions of Germany. The case of France and of Russia is, as we know, clear. But the origin of the issues of the war could not be, and could not be expected to be, so visible across the Atlantic as they were at home. It must be remembered that there were millions in America whose original pre-

possessions and sympathy were rather on the side of our enemies than of ourselves. It must be remembered, too, that unlimited money and some ingenuity—although it was in effect sometimes clumsy ingenuity—were exercised in America to distort the facts by enemy agents against us and our cause.

It must be remembered, too, that from quite an early stage in the war much material loss and a great deal more inconvenience was necessarily inflicted upon innocent citizens of the United States by our necessary action in the stoppage of cargoes not only to Germany but also to some neutral countries contiguous to Germany, and I cannot help saying in passing that if at the earlier stages of the war the Government of the day had followed some of the advice which has been given here—I am certain with the utmost feeling of patriotism—those measures that we took would have pressed harder still upon America and the other neutrals. The effect would have been not that America would have joined Germany, because that, I am convinced, she never would have done, but she might have been frozen, so to speak, into a position of permanent neutrality not too friendly to us from which she might never have parted until the close of the war. I say this as a tribute to the action of Lord Grey of Fallodon, Lord Robert Cecil, and Mr. Balfour in their conduct of the diplomatic relations with the United States which have now had so happy a result.

As the noble Earl pointed out, there was evidence both here and in the United States from time to time of some impatience that the merits of our cause were not more fully recognized there. It must be remembered that the right opinion had to permeate the vast masses of the population in no way directly interested; that in America the famous phrase is the government of the people by the people, and that it was necessary that President Wilson must remain silent so far as joining the Allies was concerned until he was able to speak, as he has now spoken, in the name of the whole Union.

I question if there ever has been a com-

munity which has so steadily pursued high ideals, which has so conscientiously been swayed by serious impulses, and which has been so uniformly dependent on moral sanctions as the United States of America. It has therefore been a positive attraction to America in reaching her resolution to join us in the war that she has nothing substantial to gain from the victory which we foresee—nothing to gain in the way of annexation, absorption, the establishment of a protectorate, or even penetration, that finest nuance of national acquisition. As the months went on not only were the horrors of war multiplied and the sacrifice of life became greater and greater, but the slender restraints which humanity and the custom of nations have in the past imposed on the conduct of the war were more and more defied and derided by Germany; and the moment came when America had to decide. Her clear decision has now been given. We can all rejoice with pride in the large measure of common ancestry we share, pride in the great traditions of free government of which we are the joint inheritors, that now the seal has been set of the detached and impartial judgment of America upon our original declaration that we and our allies are in this way obeying the call of honor, and that we stand for that civilization which is bound up with the maintenance and extension of the liberties of the world.

Asquith's Memorable Words

An identical resolution was introduced in the House of Commons by Bonar Law, Chancellor of the Exchequer. His speech and others were summarized in the May issue of this magazine. The full text of Mr. Asquith's is as follows:

It is natural and fitting that this House, the chief representative body of the British Empire, should at the earliest possible opportunity give definite and emphatic expression to the feelings which throughout the length and breadth of the empire have grown day by day in volume and in fervor since the memorable decision of the President and Congress of the United States. I doubt whether even now the world realizes the full signifi-

cance of the step which America has taken. I do not use the language of flattery or of exaggeration when I say that it is one of the most disinterested acts in history. An inveterate tradition of more than 100 years has made it a cardinal principle of American policy to keep clear of European entanglements. A war on such a scale as this must of necessity dislocate international commerce and finance, but on balance it was, I think, doing little appreciable harm to the material fortunes and prosperity of the American people. Nor were distinctively American interests, at home or abroad, and least of all what is the greatest of all interests in a democratic community—the maintenance of domestic independence and liberty—directly imperiled by the ambitions and designs of the Central Powers.

What, then, is it that has enabled the President, after waiting with the patience which Pitt once described as “the first virtue of statesmanship” for the right moment, to carry with him a united nation into the hazards and the horrors of the greatest war in history? It is not, as my right honorable friend [Bonar Law] has well said, a calculation of material gain; it is not in the hope of territorial aggrandizement, it is not even the pricking of one of those so-called points of honor which in days gone by have driven nations, as they used to drive individuals, into the dueling ground. No, it is none of these things. It is the constraining force of conscience and humanity growing in strength and in compulsive authority month by month with the gradual unfolding before the eyes of the world of the real character of German aims and German methods.

It is that force, and that force alone, which has brought home to the judgment of the great democracy over the seas the momentous truth that they were standing at the parting of the ways, and that they had to take one of those decisions which in the lives both of men and of communities determine for good or for evil their whole future. What was it that our kinsmen in America realized was at issue in this unexampled conflict? The very things which they and we, if we are

to be worthy of what is noblest in our common history, are bound to indicate as the essential conditions of a free and honorable development of nations of the world—justice, humanity, respect for law, consideration for the weak and the unprotected, chivalry toward enemies, the observance of good faith—these, which we all used to regard as the commonplaces of international decency, have one after another been flouted; menaced, trodden under foot as though they were the effete superstitions of some bygone creed.

America has seen that there was here at issue something of wider import than the vicissitudes of battlefields or even the rearrangement of the map of Europe on the basis of nationality. The whole future of civilized government

and intercourse, in particular the fortunes and the fate of democracy, are brought into peril.

In such a situation aloofness is seen to be not only a blunder, but a crime. To stand aside with stopped ears, with folded arms, with an averted gaze, when you have the power to intervene is to become not a mere spectator, but an accomplice. There was never in the minds of any of us any fear that the moment the issue became apparent and unmistakable the voice of America would utter an uncertain note. She has now dedicated herself, without hesitation or reserve, heart and soul and strength, to the greatest of causes. To that cause, stimulated and fortified by her comradeship, we here renew our own fealty and devotion.

America and the League of Honor

The editor of The London Telegraph published this memorable "leader" two days after President Wilson's historic address of April 2, 1917

THE world is at a new birth. The old order of things is passing away.

Less than three weeks ago Russia dealt her heaviest blow at the Central Powers by breaking the shackles that bound her. President Wilson's speech to Congress on Monday carried that revolution a stage further in its dynamic course. It was a proclamation of war by the United States against Germany; but it was much more than that. It constituted a reasoned indictment not of a people, but of a system of government which plunged Europe into war in the Summer of 1914, has now dragged the great American people into the maelstrom, and may yet involve even the remote Republic of China in actual belligerency, as well as, possibly, the other democracies of South and Latin America. "Our object," Mr. Wilson declared in one of his eloquent sentences full of deep significance, "is to vindicate the principles of peace and justice in the life of the world as against selfish autocratic power, and to set up among really free and self-governed peoples of the world such a concert of purpose and action as will henceforth

insure the observance of those principles." That sentence constitutes a new Declaration of Rights; the Allies will gladly and proudly subscribe to it.

This struggle has been described as a war of nations. In a sense that may be true, for the German people have been hoodwinked and deceived; but deep down it is being revealed more and more as a conflict of principles on which civilization rests. The nations have time and again been drenched in blood by ambitious and vain, if not sometimes insane, despots. President Wilson has now uttered a decree, not against the Germans, for he was at pains to state that "we have not quarreled with the German people," but against the autocracy over them, with its narrow cliques of intriguers and desperadoes who willed this war, and in waging it have endeavored to drag the world into the morass of moral ruin in which they are being buried. Unless we mistake President Wilson's words, they mean that the United States will make war against the Emperor William II., but will conclude peace with the German people, unfet-

tered and vocal, whenever they decide to abandon the inhumanities and illegalities practiced by the present régime.

Several months ago Mr. Wilson urged the formation of a League of Peace; today, in taking up Germany's challenge of war, he stands forth as the prophet of a League of Honor—a confederation of democracies determined, at all cost, to achieve the salvation of the human race from serfdom. His speech is the sequel to the Russian Revolution, it forms the evangel of the transformation which must come in Central Europe before the universe can breathe freely again. There is no hope for the future but in a partnership of the democratic nations; "no autocratic Government could be trusted to keep faith within it or observe its covenants." The war has been placed on a new level by this statesmanlike pronouncement from Washington. A new era has dawned. Germany is proclaimed as an outlaw—that and nothing less—by the one great State which has hitherto remained neutral.

Canning once looked to the New World to redress the balance of the Old; his faith was not misplaced, though the footsteps of Time have seemed sometimes to lag. In our own islands we long since, in characteristic fashion, cast off the old shackles; we have gradually built up a Constitution unique in its attributes. The Crown remains, the fountain of national honor, the guardian of the people's liberties, the emblem of a worldwide rule which seeks not dominion but kinship. King George reigns not from an autocratic throne, but in the hearts of a people never more united in loyalty than in these days of storm and crisis. Our allies are one with us in facing the new day. With all sincerity, from the highest to the lowest, the words of President Wilson will be echoed on this side of the Atlantic; the Allies, moving forward in company with the American people, will constitute henceforth a League of Honor, pledged to free civilization from a menace which would otherwise have corroded the foundations, on which we and the other democracies of the world have built in faith, courage, and endurance. The war is the same war, but it has gained

a fresh significance by the declaration of the President of a Republic remote from the main theatres of conflict, and yet stretching its hands across the waste of waters in token of fealty to the cause of humanity.

In anticipating the action of the United States confronted by a conspiracy threatening its life, we prophesied that the Americans, when they took the decisive step, would be satisfied with no half measures. That anticipation finds its fulfillment in the historic scene enacted in Congress on Monday. Never did the ruler of a State speak with greater dignity. We have been proud of the sacrifices we have made, but this nation, and those associated with it, will be prouder today in the knowledge of this latest noble vindication of the purpose of the Allies. Occasionally some irritation has been exhibited at the hesitation shown at the White House; the scene in Congress was an overwhelming answer to criticism. The Germany which forged a new British Empire in the fiery furnace of her hatred, has created out of the United States one self-conscious, self-respecting nation. President Wilson has watched in magnificent patience the process of cohesion. He has his reward in the enthusiastic reception given to his speech. He needs no apologist as he confronts the world today, encompassed by a great people, drawn from all the nations of the world, and divided by racial and religious differences, but united on a supreme issue which has brought the successor of Washington, Monroe, and Lincoln into the arena of the world war.

What will the United States do when the Presidential policy has been formally approved? More than half a century ago, when Abraham Lincoln was faced by the stern call to action, he declared: "Let us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it." In that spirit, we confidently apprehend, the Americans will take the decision that must bring them into conflict with a power which for forty years devoted itself to the preparation of force to enable it to impose its unbending and cruel will

on other nations. A hundred million people, virile, courageous, and determined, are entering the furnace to be tested by the great ordeal; they have only a small army, it is true; their navy may not be able to exercise much immediate influence on the course of events; but they have moral force, vast wealth, and splendid industrial resources. They are embarking on a new crusade in intimate, helpful association with the other great democracies in no grudging spirit. The very intensity of their love of peace will decide the extent of their participation in this universal uprising in defense of all that is fairest and brightest in civilization.

President Wilson is the chosen oracle of the people of the United States, and he has proclaimed that "To such a task

we can dedicate our lives, our fortunes—everything we are, everything we have—with the pride of those who know the day has come when America is privileged to spend her blood and might for the principles that gave her birth and the happiness and peace which she has treasured." A new page in American history is being turned, but the new chapter to be written in blood will be the fitting sequel to a volume in which the people of the United States take a worthy pride. America joins "the concert of free peoples" which has resolved to "make the world itself free." When Germany willed this war, she willed, unknowingly, the close of one era and the opening of a new and happier phase in human experience.

French Praise for America's Action

Paul Deschanel, President of the French Chamber of Deputies, greeted the entry of the United States into the war with this address:

WITH enthusiasm the French Chamber of Deputies salutes the decision of the President of the United States, which is the very voice of justice, and the energetic declaration of the Federal Senate, accepting the war imposed by Germany. In the "Persæ," Aeschylus has said, "Let insolence germinate; that which springs up is the stalk of crime; a harvest of sorrows will be reaped." And we may say, "The stalk of crime bears justice; after the harvest of sorrows, behold the harvest of justice!"

The cry of children and of women, from the depths of the abyss into which they have been hurled by an abominable crime, has echoed to the ends of the earth. The ashes of Washington and Lincoln have stirred; their mighty souls inspire America.

Is it a question only of avenging Americans? Is it a question only of punishing the violation of the treaties to which the United States had put its signature? No; the eternal verities proclaimed in the Declaration of Independence of 1776, the holy cause which

Lafayette and Rochambeau defended, the ideal of the pure spirits from which the great Republic sprang—honor, morality; liberty—these are the supreme treasures which gleam in the folds of the Star-Spangled Banner!

Descendants of the New England Puritans, men fed on the precepts of the Gospel, men who, under the eye of God, will punish the fiendish deeds of the Spirit of Evil, lying, perjury, assassination, desecration, rape, enslavement, martyrdoms, and cataclysms of every kind; Catholics cut to the heart by anathemas against their religion, by outrages against their cathedrals, their statues, culminating in the destruction of Louvain, of Rheims; professors of universities, faithful guardians of the idea of justice; workers of the East and of the Central States, farmers and cattle raisers of the West, workmen and artisans threatened in their toil by the torpedoing of ships, by the stoppage of commerce, outraged by insults to the national flag, behold them all in turn aroused against the mad arrogance which seeks to enslave the world, the sea, the sky, the souls of men!

At the hour when, as in the heroic hours of the war of independence, Americans are getting ready to fight at our

side, let us once more repeat it: we do not seek to keep any one from living, from working, from toiling freely; but the tyranny of Prussia has become a peril for the New World as for the Old, for England, for Russia, for Italy, not less than for Austria, for Germany herself. To free the world, through the common effort of the democratic peoples, from the yoke of the military and feudal caste of Prussia, in order to establish peace on justice, is a work of human liberation and of universal salvation.

In accomplishing, under a Presidency henceforth immortal, the greatest act of her history since the abolition of slavery, the glorious nation whose whole history has been the development of the idea of liberty remains faithful to her origin and is creating for herself yet another title to the gratitude of the human race. The French Republic, across the ruins of her cities and her monuments devastated without motive and without excuse, by disgraceful savagery, sends to her elder sister, the American Republic, the palms of the Marne, of the Yser, of Verdun, and of the Somme, to which new victories will soon be added!

Antonin Dubost, President of the French Senate, expressed the sentiments of that body in these words:

The Senate receives with an intense patriotic and republican emotion the communication in which the Government announces that the United States is henceforth at war in solidarity with ourselves. Thus the initial crime of Germany unrolls one after the other all its fatal consequences. It is unchaining the greatest insurrection of free peoples the world has ever seen against the ultimate tyranny—the militarism of Prussia. It is associating them in succession in a magnificent democratic solidarity, and behold the sword of Washington, answering the sword of Lafayette, in its turn cast into the scales!

The great Republic had already assumed spontaneously a sublime mission to save Belgium from dying of starvation! At the solemn moment, when it yields to a more imperious summons, that of outraged honor, the French Senate

addresses to it at once our gratitude and our fraternal greeting!

Honor to the new soldiers of Liberty who, knowing all the frightful power of Germany to work evil, yet resolutely face it! Honor to the new judge who tomorrow will take his place in the High Court of Justice of Humanity, and who will pronounce with us the collective and individual penalties earned by the Germanic coalition, its leaders, its accomplices!

President Wilson's manifesto called forth from Le Temps of Paris a noteworthy editorial article, which said in part:

President Wilson, from the first day, guided his policy as a man of law. His very impassibility, his refusal to judge, his fear of emotion, have sometimes surprised us. But that very attitude gives to his present decision the value of a verdict. Neither greed of territory nor national passion has carried the United States into the war but the systematically established certitude that Germany methodically violates the laws of war and peace and that only the defeat of Germany can assure the peace and dignity of the nations.

The Germans, against all truth, were capable of accusing us, contrary to the evidence of the facts, of desiring a war of "revanche." History showed, in truth, in the side of France a grievous wound, opened by old aggression. The Germans have been able, in spite of documents and certainties of the strongest kind, to impute to Russia, so deeply saturated with their influence, designs which were nonsensical. They have been capable of attributing to England, which was unprepared, which had provided only six divisions for her defense, the absurd plan of crushing their military power, which had been heaped up in a formidable structure during half a century. They have been able to do this, because the cross-fire of European interests aroused hereditary rivalries in which lies had free play. What will they be able to say of America?

M. Gauvain, in Le Journal des Débats, wrote:

The great Republic beyond the Atlantic, peopled by millions of German race and descendants of Germans, refuge of the persecuted of all lands, land of freedom, of science, and of liberty, has denounced the policy of Germany as the scourge of the human race. No newspaper or magazine article, no communiqué, no proclamation will avail against that.

All the Hindenburgs and Ludendorfs will not be able to change it. In measure as the men of Berlin unlock new efforts, imagine new atrocities, bring into operation new and more perfect instruments of destruction, the peoples of the world rise one by one against the New Barbarians. Does Wilhem II. really believe that he will be able to reduce to subjection these new foes? Does he imagine that his chemists and mechanicians will end by putting the world beneath his feet? He has against him something he did not believe in, something he treated as a phantom, and which is stronger than his 16-inch guns—the conscience of the human race. That conscience has taken time to find itself, to liberate itself, for it was enmeshed in a network of lies, of sophistries, and of treacheries. But behold it at last

arise, free, resolute, active, on both hemispheres; it will lay low the powers that prey.

Gustave Hervé, in La Victoire:

Hurrah! for the great American Republic!

Hurrah! for the sublime fathers who went thither in the seventeenth century, fleeing tyranny, to found the first republican hearth which was lit in modern times!

Hurrah! for old Washington and his glorious rebels, who would not allow the noble tradition of revolt against oppression and injustice to perish!

Hurrah! for the great Abraham Lincoln, liberator of the slaves, who kept the American Republic in the high road of the ideal and of human brotherhood!

Hurrah! for President Wilson, the founder of the international police, which will, in the future, cure predatory Governments of the wish to begin again the exploits of the grand assassin of Berlin!

Hurrah! for the grand republican idea which, for a century now, has brought low all autocracies, all oppressions, all tyrannies!

Hurrah! for the future United States of the World!

German Opinion on America's Intervention

GERMAN opinion on America's entry into the war was a mixture of defiance and discomfort. On the one hand there was the attitude of those Germans who believed that they could fight the whole world; on the other that of the cooler heads who perceived that both morally and materially America's adhesion to the cause of the Allies was the most damaging thing that had happened to Germany since the war began. Naturally, President Wilson's war message was taken as a text and every line of it subjected to criticism.

Many newspapers attacked the distinction made by the President between the German people and the German Government. The North German Gazette, for example, said:

"President Wilson presumes to present himself as the messiah of true liberty to our people engaged in a severe struggle for their existence. What sort of slavish soul does he suppose that the German people have, to believe that they could permit any outside intervention whatever? The German people see in the President's words of peace only an attempt to loosen the firm bond which unites the people to the German Princes, so that we may become the easy prey of our enemies."

The Cologne Gazette, commenting upon the same passage in the President's message, said: "What President Wilson wanted was only a peace which would put us in the hands of our enemies. The German people indignantly protest

against this subtle distinction between them and their Government, for they stand united behind the Government and know that the declared enemy cannot do it more injury than the hidden adversary, whom the German people feel it a relief to be able at last to treat as an open enemy."

The Munich Nachrichten tried to estimate the situation in a more level-headed manner. "Although we can face our new adversary without too much anxiety," it said, "it would nevertheless be a mistake not to realize fully the worldwide effect of President Wilson's war message. By joining the league of our enemies the United States and perhaps also China complete the ring of powers sworn to our downfall. All round the earth there stretches the chain of countries which English policy has thrown against Germany and her allies. For us it is now really a matter of life or death."

The Frankfort Gazette bewailed the fact that German culture had had little influence in the United States. "It is still more sad," that journal added, "to have to tell ourselves that this war was necessary to cure us of our illusions on this point. The events of the European war have never been approached in the United States in a spirit of true neutrality."

The Berliner Tageblatt, after admitting that rarely had a political document produced such a "depressing" effect as the President's war message, went on to say: "This message is based partly on ignorance of the mistakes which Mr. Wilson has made by becoming responsible for supplying the Entente with war material, partly on accusations without truth. It was through submitting to the American spirit of gain that the President permitted the trade in munitions to continue. When now he speaks of right and humanity, his voice is full of discords and his words are calculated to create the impression that the war psychosis obliterates judgment. * * * We do not think that America's intervention will have an essential effect on the results of the war. The Entente is going to have a momentary advantage,

but it will soon be aware that America is like a stick that breaks when one wants to lean on it."

Altogether different was the standpoint of Maximilian Harden, the outspoken editor of *Die Zukunft*. He boldly denied that America was actuated by any mercenary or material motive whatever, but that the issue everywhere was democracy against despotism. "Our fate depends," he said, "not on bits of territory which European States can no longer take away from one another and can no longer hold to their own permanent advantage, but upon the acquisition of higher spiritual values. Elevate the conscience of mankind and light up the German house also! Then what the enemy demands too loudly, but what we in secret feel to be a necessity, will come to pass. The will of the people will be free and Germany will know for what the dearest children of her bosom are dying and suffering!"

When the Reichstag resumed its session on May 2, the President, Dr. Johannes Kaempf, in his opening address, said that President Wilson had lost his senses in asserting that America was waging war against Germany in the interests of mankind and on the ground of justice. Continuing, Dr. Kaempf said:

"President Wilson represents the German people as without will of their own and as having been driven into the war by a group of ambitious people, but he tells nothing of the long years of encirclement and machinations against them; nothing of the enemies' recently strongly expressed will to destroy Germany."

"The German people rose Aug. 4, 1914, as one man and still fight today to defend their freedom, independence, and life. President Wilson says he has no quarrel with the German people, for whom he entertains only sympathy and friendship."

"President Wilson desired by his message to sow discord in Germany. As President of the German Reichstag, which is elected on the freest franchise in the world, I declare that this effort will come to naught; that it will have no influence on the common sense of our people and that President Wilson will bite granite."

"With our truest heart's blood we established the German Kaiserdom, and with our truest heart's blood we shall fight for the Kaiser and the empire. What our forefathers fought for and longed for, what we have achieved on the battlefield, will not perish, even at President Wilson's word of command.

"We decline all interference by a foreign Government in our internal affairs. If all signs are not misleading the decisive point of the world's war is approaching. We see our death-defying troops withstanding the enemy's assaults. Our U-boats will show England how Germans can avenge her nefarious starvation war. We proved recently our financial strength by a sixth war loan. We adhere to our firm belief in Germany's star and in a peace which will secure for all time the Fatherland's happy development."

The Frankfort Gazette, commenting on May 4 upon the British and French missions to the United States, pointed out that America's entry into the war had already had an effect that even her peace friends would never have dreamed of. It admitted that the effect which America had had on the Russian revolution and on the latest peace desires of the Entente Allies was to be lamented from the German standpoint. Summing up President Wilson's motives in joining the belligerents; the Frankfort Gazette enumerated them as these: First, America's desire to partake actively in the peace conference; second, America's wish to stifle forever the nationality feelings awakened by the war; third, the wish to realize her armament plans in order to be prepared later; fourth, the wish to build up an American merchant fleet.

Americans Who Have Fought for France

By Paul Louis Hervier

French Author and Journalist

M. Hervier, author of a history of "American Volunteers in the Ranks of the Allies," recently contributed to the *Bulletin des Armées* a brief article telling the French soldiers in the trenches what Americans had done to help them. Portions of it are here translated for CURRENT HISTORY MAGAZINE.

THE Americans who offered their services to France after the outbreak of war in 1914 were recruited without solicitation in all classes of society: Millionaires, writers, lawyers, engineers, former soldiers and sailors, boxers, butchers, explorers, and especially university students. I have tried to bring together the data and documents regarding these ardent volunteers, and again and again I have been thrilled by simple anecdotes as by those deeds of ancient history which we love to repeat in all our manuals for the lessons they convey.

There is the case of Norman Prince, who, after a period in the Foreign Legion, became an aviator, achieved remarkable exploits, and was killed in action. Will his place remain empty? Not at all! His brother is coming.

Then there is Dr. David D. Wheeler,

who left his fine practice in Buffalo to come and care for our wounded. The stories told him by the injured men made such an impression on him that he wished to share their dangers. He abandoned his surgical instruments and took up arms. He was wounded by a dum-dum bullet, and, though exhausted by the loss of blood, dragged himself over the battlefield and used his waning strength in comforting other wounded men who lay without aid.

These anecdotes and many others will later be jewels in American history. At this moment they are the sacred heritage of all civilization fighting against aggressive barbarism.

The American volunteers, who wished, in August, 1914, to join their French brothers in defending the ideal represented by the word "liberty," almost all entered the Foreign Legion. One of

them, Paul Rockwell, grievously wounded in Champagne, sent to a New York editor this response, which is sweet to our hearts:

"In the Foreign Legion about 200 Americans are serving or have served. The bitterest regret of my life is that so few Americans have come to aid France. When we Americans were in need of aid, Lafayette and his followers were a hundred times more numerous than we are in this war, and they came from a total French population scarcely larger than that of two cities in America today. But we have one reason to feel a little pride. With the exception of, say, six or eight, all the men who came to pay our debt to France have proved to be good fighters. None came for money. Some came for the simple love of adventure, but I believe that the motive of most of them was an ideal."

A dangerous but attractive arm, that of aviation, especially appealed to the daring of these young Americans, anxious as they were to prove their courage and devotion. Men will long continue to speak of the services rendered to the French Army by the American Escadrille; they will long recount the exploits of Norman Prince, who died for France on Oct. 15, 1916; of Victor Chapman, who died for France in June, 1916; of Kiffin Rockwell, who died for France on Sept. 23, 1916; of Denis Dowd, the skilled pilot, who died in an airplane accident at the Buc airdrome in the beginning of August, 1916; of William Thaw, the Pittsburgh millionaire; of Elliott Christopher Cowdin, of Lufbery, of Bert Hall, of Paul Pavelka, James R. MacConnell, and all the rest.

The American Escadrille gets many new recruits. The American legionaries love danger and have the heart to continue the work begun by audacious predecessors shortly after the beginning of the war. Walter Appleton of New York, after a long stay in the Legion, is at the aviation school, as is Marius Rocle of New York, who was not yet 17 years old when he arrived in France in 1914. Decorated with the Croix de Guerre, wounded at Verdun, he will soon have his brevet as pilot. William Dugan of Roch-

ester, decorated with the Croix de Guerre, wounded at Verdun, likewise is in the aviation school. As for Lincoln Chatkoff of Brooklyn, after twenty-two months in the ranks of the Legion, and after having obtained his brevet as pilot, he chose to return to the Legion.

A brief article such as this cannot give the names of all the brave men who have come to fight for us, but must be devoted rather to the significance of their generous and fruitful service. This is what has stirred and touched us. Young Americans who had careers awaiting them in their own country, who in many cases possessed fortunes that would have given them all the material joys of life, and in other cases felt within themselves the rare forces of talent or creative genius, have by their coming proclaimed the justice of our cause to all the world. It is not a matter, then, of giving here a list of these who have achieved the supreme heights of the moral task which they voluntarily took up; the eulogy deserved by each is swallowed up in one great common glory.

Nevertheless, let us glance at the golden book of American volunteers. We shall find there the names of Edward Mandell Stone, a graduate of Harvard, the first American volunteer killed; of Henry W. Farnsworth, killed in Champagne; of the poet, Alan Seeger, an idealist, dead for France; of John Earle Fike, a former American soldier, killed June 16, 1915; of Russell A. Kelly, killed the same way; of Nelson Larson, a former American sailor, killed on the anniversary day of American independence, 1916; of Frank Clair of Columbus, dead of wounds; of René Phelizot of Chicago, a daring hunter of big game, killed at Craouelle in February, 1915; of Harman Edwin Hall of Chicago, killed June 16, 1916, &c. We shall not forget their acts of devotion.

Here we find also the names of Frank Musgrave of San Antonio, lawyer, today a prisoner in Germany; of John Bowe of Minneapolis, wounded and cited in the Order of the Day; of Charles Sweeney, decorated with the Legion of Honor and promoted Lieutenant; of Edgar Bouigny of New Orleans, four times wounded;

of Brook B. Bonnell of Brooklyn, decorated with the War Cross and the Military Medal; of Andrew Walbron of Peterson, wounded three times; of his brother, Ernest Walbron, who had a leg carried away by a shell on the Somme; of George Delpeuche, decorated with the War Cross for having taken five prisoners alone and unaided; of Frederick Capdeville of New York, Charlie Christopher Charles of Brooklyn, Charles Trinkard, Jack Janz of Kentucky, David King of Providence, Jack Cordonnier, Frederick Mulhauser, (three citations;) Michael Steinfelds of Chicago, Eugene Jacobs, Bob Scanlon, the negro boxer; Achille Clinger, Jack Moyet, and the rest.

This is only a short summary of the heroic chapter. A great number of Americans enlisted in the English Army, others in the Canadian Army, and still others came to France to serve in automobile ambulances. They have saved and cared for our wounded with ceaseless zeal, risking their lives, and often losing them. At the end of January, 1917, seventy citations in official orders had been merited and bestowed upon these brave men. A beautiful history!

On March 19 a number of aviators of

the Lafayette Escadrille were protecting aerial observers who were watching the movements of the German Army. One of them was attacked by three enemy airplanes. He courageously accepted battle with them, but after prodigies of valor he was killed; his name was James Rogers MacConnell. The Paris Figaro, in announcing his glorious end, gave a sketch of his career. He was 30 years old, a native of Carthage, N. C., and had left a lucrative business position to join the French Army in the first days of the war.

In April, 1916, he had organized the American Escadrille with his brothers in heroism, Victor Chapman, Kiffin Rockwell, Norman Prince, and others, now active or fallen. He fought in Artois, in Alsace, at Verdun, and on the Somme. In moments of the most deadly peril he was always calm and cheerful. He was decorated with the War Cross and was twice cited in terms of highest praise in the military Order of the Day. Mr. MacConnell was an author, having recently published a book entitled "Flying in France," which ended with the words: "The war may kill me, but I have it to thank for much."

Value of Helmets in Saving Life

Discussing the value of the steel helmet in battle, a French medical writer in *La Nature* says that out of 55 cases of head injury it was found that 42 occurred in soldiers who wore no helmet. Among the 42 there were 23 fractured skulls. The remaining 19 cases suffered from severe scalp wounds. Among the 13 cases which wore helmets there was not a single fracture of the skull; 8 showed some concussion effects and 5 had slight wounds. A considerable number of the unprotected cases died; none of the protected died.

The most significant fact which has emerged since the helmet was introduced was emphasized by Dr. Roussy at the Academy of Medicine. He said that the percentage of cases showing wounds in the head had increased. The reason was, of course, that the number of sudden deaths from the cause had markedly decreased.

A French writer points out that of 479 abdominal wounds 332 were caused by shrapnel and pieces of shell having a low velocity. An abdominal protection would save these cases.

Again, among 15 penetrating wounds of the lung 2 only showed exit orifices for the bullet or piece of shell, i. e., in 13 cases out of 15 the projectile had not enough force behind it to drive it through the body tissues. A breastplate would have saved these wounds.

The mortality from these low-velocity shrapnel wounds is said to be about ten times greater than from bullet wounds which penetrate. The conclusions are arrived at in *La Nature* that as three-fourths of war wounds which are received for treatment are now due to shrapnel and pieces of shell at low velocity, and as these wounds are very fatal on account of the infection and blood poisoning following them, it will be worth while to consider the question of protection for all those parts.

Factors in the Russian Revolution

By A. J. Sack

[Mr. Sack is American staff correspondent for the official publications of the Russian Ministry of Finance; also American correspondent of the Petrograd Telegraph Agency, the Retch, Petrograd; Birjewiya Viedomosti, Petrograd, and Russkiya Viedomosti, Moscow.]

THE great revolution in Russia is only the epilogue to the great drama played in Russia, one act after another, for the last twelve years. The first act of this drama was the revolution of 1905, which came at the conclusion of peace with Japan. As the result of the revolutionary movement which in October, 1905, culminated in a general political strike, when all industrial life and railroad transportation was stopped in Russia, came the famous Czar's manifesto of Oct. 17, (30.)

In this manifesto the Czar promised, in the most categorical form, that the people of Russia would enjoy the highest form of political freedom, that the suffrage law governing election to the Duma would be changed so that voting would become universal, that the legislative power of the empire would be vested from then on in the Imperial Duma, the Imperial Council and the Czar, and that without the consent of the Duma no new law could be introduced nor any existing law be changed.

On April 27 (May 10) the First Duma was convened. The entire country showed its opposition to the old régime by choosing as Deputies people most prominent in the liberal movement. The Socialists did not participate in the campaign for the First Duma, declaring a boycott because of their disapproval of the undemocratic suffrage laws. The majority in the First Duma was held by the Constitutional Democrats. This fact, in view of the undemocratic suffrage system and the refusal of the Socialists to participate in the election, shows that, although the First Duma was in strong opposition to the old régime, the country was even more radically opposed to the Czar's Government than the Duma.

The first act of the First Duma was a

demand for general amnesty for all political offenders in Russia. The first Russian Parliament solemnly recognized the revolt against the old Government as a legitimate fight for the rights of the nation, pronouncing every participant a hero. The main political demand of the First Duma was the demand for the responsibility of the Ministers to the legislative bodies. "The executive power should be subordinate to the legislative power"; this was the conclusion of the famous speech made by Deputy V. D. Nabokoff, who gave perfect expression to the fundamental political desires of the first Russian Parliament.

First Duma's Reform Plans

In an address presented to the Czar the First Duma outlined a full program of reforms urgently needed for the country. The Parliament demanded full political freedom, responsibility of the Cabinet of Ministers to the legislative bodies, autonomy for Poland and Finland, democratization of the suffrage law governing election of members to the Imperial Duma, democratization of the local self-governing bodies, (municipalities and zemstvos,) radical changes in the social legislation referring to the workers, increased land holdings for the peasants, &c. If the program of the First Duma had been carried out Russia would have become a constitutional monarchy of the English type, with very progressive social legislation.

The First Duma was dismissed, although its demands were quite moderate in view of the spirit of the country. The Second Duma was called, and in this campaign the Socialist factions in Russia participated in full. As a result the country, angered by the opposition of the old régime, sent to Parliament about 120 Socialists. The Constitutional Democrats

came into the Second Duma again as a very strong faction, although this time they did not hold the majority.

The Second Duma, which gathered in the Fall of 1906, was the culminating point in the first Russian revolution. The revolutionary forces of the country seemed to be at their fullest strength at that time, and, nevertheless, certain symptoms of the coming reaction were already visible. The demands of the Socialists had been terrorizing the moderate liberal elements so that these finally gave their support to the Czar's Government, which began to fight the revolution openly.

In the beginning of the Summer of 1907 the Second Duma was dismissed; part of the Socialist Deputies were sentenced to Siberia, and the suffrage laws were changed by the Czar, so that Russian democracy was practically deprived of representation, although in the manifesto of Oct. 17 (30) it had been solemnly promised that no law would be changed or introduced in the empire without the consent of the legislative bodies represented by the Duma and Imperial Council.

Failure of the Movement

The principal revolutionary forces during the first uprising in Russia were the workers, who demanded political freedom, the right to organize, and progressive measures in social legislation; the peasants, whose chief demand was land and equality of rights with all other classes in Russia; the different nationalities, the Polish, Finnish, Jewish, and other elements, who demanded autonomy or equal rights; and the capitalistic class, the bourgeoisie, who had become an influential factor in Russia's economic life with the development of capitalism. None of these groups was satisfied with the results of the revolution. The country did not receive even elementary political rights, the workers did not receive the right to organize, the peasants received no land, Finland was deprived of her Constitution, Poland was as oppressed as before, the sufferings of the Jews daily became more and more unbearable.

The first Russian revolution brought the country no gains, and the reaction which came at the beginning of 1907 was a reaction more of psychological than of sociological nature. The great country quieted down almost completely, not because the great tasks of the first revolution were accomplished, but because the country was exhausted from the battle with the old régime. The demands made by the First Duma, very much more moderate than the country it represented, showed that the entire nation was opposed to the Czar's Government. But the nobility was still with the Czar, and the Government had at its service the powerful machinery of the police and almost the entire army, officered mostly by Russian noblemen, blindly devoted to the throne.

The reaction, the darkest reaction in Russia's national history, began at the beginning of 1906. It is interesting to observe that the culminating point of this reaction was the Fall of 1907, when, in October, Professor S. A. Mouromtzeff, the President of the First Duma, the most respected citizen of Russia, the symbol of the longing for freedom in Russia, died, and in November, Leo Tolstoy, the greatest genius Russia has contributed to the world's culture. These deaths seemed to awaken the great country. The hundreds of thousands of people on the streets of Moscow at the funeral of Professor Mouromtzeff, the thousands of people and delegates coming from all parts of Russia on special trains to the little village where Tolstoy was to be buried, the public speeches made in these days, significant for Russia's culture—all these showed that the country was awakening from its deep sleep to new political and cultural activities.

The New Reform Movement

The Fall of 1910 may be marked as the beginning of the new movement against the Czar's Government. It had taken four years for the reaction to reach its lowest mark—from the beginning of 1906 to the end of 1910—and it took another four years for the country, awakened to political activities, to reach again the boiling point of revolution. In July,

CELEBRATING AMERICA'S ENTRANCE INTO THE WAR

Premier Lloyd George and Ambassador Page (on the left) at the Banquet of the American Luncheon Club in London, Given to Celebrate the Declaration of War by the United States. The Premier's Address Was One of the Historic Utterances of the Occasion

(Photo from Central News Service)

1914, just before the war, 400,000 Petrograd workers went out on political strike and the streets of Petrograd were covered with barricades.

This time the united country again faced the Government as an enemy. The same elements that had participated in the first revolution faced the Czar's Government, ready to fight, only now they were more educated and the moderate elements among them more determined than during the first revolution. The cruel policy of the Government during the time of reaction and the illuminating speeches in the Duma, from day to day, explaining to the people the dramatic political situation in the country, bore great results. The moderate elements, who, terrified at the Socialists' demands during the first revolution, had given their support to the Government, now abandoned it. In July, 1914, the Government again faced a united front of all the progressive forces of the country, a powerful coalition led, as in 1905, by the fighting vanguard of the revolution, the Petrograd workers.

Policy of Russian Democracy

Then suddenly came the war, which was immediately recognized by all the revolutionary forces in Russia as the war of justice on the side of the Allies, as the war for freedom and civilization in Europe. The revolutionary elements decided temporarily to abandon the internal conflict and to concentrate all the attention of the democratic forces on carrying on the war till German militarism should be broken. This was an invaluable service rendered in this critical moment by Russian radical and Socialist leaders to their country and to all humanity. Such prominent leaders as the old Prince Kropotkin, as George Plechanov, the founder of Russian Social-Democracy, as Vladimir Bourtzeff, indorsed the war on the side of the Allies from the very beginning and helped the Allies' cause with their powerful influence on the democratic masses of Russia. For the same end was that famous Socialist appeal made to the country, the appeal signed by Plechanov, Deutsch, Alexinsky, and Arkseniew.

Russian democracy stopped the revolu-

tion in July, 1914, because of the war. Russian democracy again started the revolution and gloriously accomplished it, also for the sake of the war. The Czar's Government showed itself incapable not only of governing but also of defending the country. Inefficiency, grave and in many cases direct treachery, marked the activities of the Czar's Government, which was not very enthusiastic in the war for democracy and justice in Europe. When it became evident that under the old Government the defeat of Russia was inevitable, Russian democracy raised its hands and took into them the fate of the country.

Among the events occurring in Russia immediately after the revolution, one of the most important was the National Conference of the Constitutional-Democratic Party, the leader of which, Professor Paul Milukoff, became Secretary of Foreign Affairs after the revolution. As I have said before, the Constitutional-Democratic Party held the majority in the First Duma, and had strong, influential factions in the Second, Third and Fourth Dumas.

This party, led by such prominent men as the late Professor S. A. Mouromtzeff, Professor Paul Milukoff, A. I. Shingareff, Prince Paul Dolgoroukoff, Prince D. Shakhovskoy, M. M. Vinaver, and others, rendered invaluable service to the cause of Russian liberty. It would surprise no one in Russia if, out of the about 600 proposed seats in the future Constituent Assembly, the Constitutional Democratic Party hold from 300 to 350.

About 1,500 delegates from all parts of Russia came to the National Conference of the Constitutional-Democratic Party. Prince Paul Dolgoroukoff, the Chairman of the Central Committee of the party, opened the conference, presided over by M. M. Vinaver, the newly appointed Jewish Senator.

Two Important Reports

There were two important events at this conference. The first was the report by Professor F. F. Kokoshkin, member of the First Duma and one of the greatest authorities on constitutional law, who insisted that the party abandon the principle of constitutional monarchy and

proclaim for a republican form of government. Professor Kokoshkin declared himself in favor of Presidential election by direct vote and responsibility of the Cabinet to the Parliament, as in France.

Professor Kokoshkin's report was eagerly supported by Prince Eugene Troubetzkoy, one of Russia's leading men, former Professor of the University of Moscow and member of the Imperial Council, who, as a big landowner thoroughly acquainted with conditions in the Russian villages, reflected the spirit of the Russian peasantry toward the revolution. Prince Troubetzkoy reported that under the terrible experiences of the war the peasants had, during the last two and a half years, lost entirely their former almost religious belief in the Czar. According to Prince Troubetzkoy's report, "the Czar is now for the peasants only a symbol of police, graft, and all kinds of vice." The convention accepted unanimously the recommendations of Professor Kokoshkin and Prince Eugene Troubetzkoy, proclaiming for a republican form of government.

It may be expected that, aside from the Constitutional-Democrats, with their 300 or 350 seats in the Constituent Assembly, 150 to 200 seats will belong to different Socialist factions. The decision of the Constitutional-Democratic Party practically decides the question of the form of the future Government of Russia. If not unanimously, then by an overwhelming majority the Constituent Assembly will proclaim a republican Government for Russia.

The other significant moment in this National Conference occurred when Professor Paul Milukoff, the leader of the party and Secretary of Foreign Affairs, made his speech. Probably, for the first time in his political career, Professor Milukoff paid tribute to his political adversaries, the Russian Socialists. In a speech enthusiastically greeted by the entire conference, Professor Milukoff pointed out the invaluable service rendered the country by the Socialists during these critical days. The Socialists were the fighting power of the revolution; they bravely faced the police and the troops, and paid with their blood for

Russian freedom. In addition, it was Socialist organization that kept order in Russia after the revolution and saved the country from the worst kind of anarchy. In the same spirit as Professor Milukoff's speech was the speech of Mr. Nekrasov, a prominent leader of the Constitutional-Democratic Party and the new Secretary of Means of Transportation.

Result of a Coalition

The revolution in Russia was accomplished by a coalition of liberal and Socialist forces. And this coalition will build the new Russia. To understand Russian political life at the present time means to understand the real nature of liberalism and socialism in Russia. Russian liberalism, as represented by the Constitutional-Democratic Party, is quite well known in this country. As for Russian socialism, until now it has been terra incognita for the American public.

First of all, socialism is one of the most powerful factors in Russian political life. In the United States the labor movement and socialism are two distinct forces, whereas in Russia these two forces are united in one. In the United States the Federation of Labor, representing over 2,000,000 workers, has no relation to the socialist movement of the country, whereas in Russia every organized worker is a Socialist and all the labor unions are socialistic.

The Socialist Party of the United States has only one representative in Congress, whereas Russian socialist factions had 120 representatives in the Second Duma and about thirty in the Third and Fourth Dumas, chosen during the time of darkest reaction under the most undemocratic suffrage system.

Hence, we have the difference in the nature of the Russian and American socialism. Socialism in the United States is a small movement, without any real influence on the political life, and therefore I would venture to say without any sense of responsibility for its actions. If it were an influential factor it would probably not have accepted resolutions of the kind passed by the last conference of the American Socialist Party at St. Louis.

Russian socialism is more like Belgian and French socialism. As Belgian and

French Socialists from the very beginning indorsed the war on the side of the Allies, so did the Russian Socialists. As the Belgian and French Socialists, who, understanding their responsibility toward their countries and humanity, delegated Vandervelde, Guede, Semba, and Toma as their representatives in the Cabinets, so did the Russian Socialists, sending as their representative the new Secretary of Justice, Deputy Kerensky.

Authority of Present Cabinet

Several facts in connection with the recent revolution really illumine the present political situation in Russia. The first fact is that the present Russian Cabinet was appointed at a joint session of the Executive Committee of the Duma and the Executive Committee of the Petrograd Council of Workingmen and Soldiers. It was at the moment when all Petrograd was in the hands of the revolutionists, and there is no doubt that at that moment the Executive Committee of the Council of Workingmen and Soldiers had sufficient power to take all the political machinery in its own hands. At this critical moment the Russian Socialists showed real statesmanship. They agreed to a Coalition Cabinet and to the appointment of A. I. Gouchkoff as Secretary of War and Navy. This appointment was very significant. Mr. Gouchkoff until the revolution was a very conservative man, very unpopular in Russia for his political views, but everybody in Russia respected his sincere patriotism and his organizing ability.*

Russian Socialists consenting to the appointment of Mr. Gouchkoff indorsed thereby, once more, the war against Germany, and the necessity of strong discipline on the fighting lines. Consenting further to the appointment of Professor Paul Milukoff as Foreign Secretary, Russian Socialists consented to the principle that no separate peace is possible for Russia, that the only peace she will conclude will be a general peace in full accordance with her allies.

The latest events in Petrograd do not contradict this statement. We may dis-

agree with this movement entirely, or we may see certain weak points in it, but it is only fair to recognize that this is a movement not for a separate but for a general peace. One of the leaders of this movement is Prince Tzeretelli, the former leader of the Social-Democratic faction in the Second Duma. Prince Tzeretelli is one of the most noble figures in Russian life. A brilliant speaker, always enthusiastic, always idealistic, he is respected in Russia by all factions.

Career of Tzeretelli

When the Second Duma was dismissed and it became known that the Socialist Deputies would be arrested and tried, some of the influential friends of Prince Tzeretelli prepared everything for his escape abroad, but Tzeretelli flatly refused to go. "I am a representative of the people," he answered his friend in a quiet but determined tone. "I work for the people and do not see why I should escape if the police want me." He was arrested, tried, and sentenced to hard labor. He was sent to Siberia, and then from time to time news came to Petrograd that he was dying of tuberculosis in his prison cell. In spite of many petitions the Czar's Government refused to do anything to ease Tzeretelli's fate, and nobody in Russia expected to see him again leading the democratic masses.

Being liberated after the revolution, Tzeretelli went directly to Petrograd. Knowing from dispatches that the Council of Workingmen and Soldiers in Petrograd was engaged at a special meeting preparing a resolution which would show the council's position toward the Provisional Government and the war, Tzeretelli sent a telegram to the meeting introducing his own resolution. The resolution insisted on support for the Provisional Government and the war until German militarism be entirely broken, and it was enthusiastically accepted by the council.

Tzeretelli's name is almost holy for the Petrograd workers and for the Russian workers in general. He is, together with his friends, Chkheidze and Skobelev, practically the ruling spirit of the movement in Petrograd. Neither Tzeretelli nor Chkheidze or Skobelev is for a

*Mr. Gouchkoff, Secretary of War, resigned from the Cabinet on May 14, 1917.

separate peace. According to their views the allied democracy must fight until not a single German soldier is left in Belgium, in the northern provinces of France, in Serbia, or in Russian Poland. Peace is impossible for them without the full restoration of all parts of the Allies' territories occupied by the Central Powers.

The future peace for Russian Socialists is a general peace that will bring peace for all Europe and bring it forever.

Their peace program is quite misunderstood in this country, although probably it possesses all the qualities which should make it meet with approval here. The allied countries need not fear. The Russian democracy is not thinking of and would never consider a separate peace. As for a general peace, Russian democracy desires the kind of peace outlined by the President of the United States in his famous address to Congress.

The Critical Situation in Russia

Conflict Between Radicals and the Provisional Government Regarding the Nation's War Policy

EVENTS in Russia in the month ended May 15 followed each other with such startling swiftness, and the reports were so conflicting, that it was difficult to arrive at the truth. The one fact clear at this writing (May 15) is the existence of a wide breach between the Provisional Government set up by the revolution and the Council of Workmen's and Soldiers' Delegates. This breach seriously menaces stable government, seeming to portend either civil war, with consequent chaos, or the disintegration of the country into fragmentary republics, an easy prey to Germany.

The first intimation given the outside world of the conflict between the Provisional Government and the Council of Workmen's and Soldiers' Delegates was the vigorous protest of the latter against a joint note sent to the Allies by the Provisional Government on May 1, wherein the word of Russia was pledged against a separate peace and for a renewal of cordial co-operation with the Entente Allies. The note was signed by Foreign Secretary Milukoff and instructed the various diplomatic representatives to the allied countries to transmit the following communication:

The Provisional Government of Russia published on April 27 a manifesto to Russian citizens wherein it explained the views of the Government of Russia as regards the objects to be attained in the war. The Minister of

Foreign Affairs instructs me to communicate to you the contents of the document referred to and to add the following considerations:

Our enemies have striven lately to sow discord among our allies by propagating absurd reports regarding the alleged intention of Russia to conclude a separate peace with the Central Powers. The text of the document annexed will form the best refutation of such intentions. The general principles therein enunciated by the Provisional Government are in entire agreement with the ideas which have been expressed repeatedly up to quite recently by eminent statesmen of the allied countries.

These principles were expressed lucidly also in the words of the President of our ally, the great overseas Republic. The Russian Government under the old régime certainly was not prepared to appreciate and share these ideas as to the liberating character of the war, the establishment of a stable basis for pacific co-operation of nations, the freedom of oppressed peoples, &c., but emancipated Russia can now use language which will be understood by modern democracies and hasten to add her voice to that of her allies.

The declaration of the Provisional Government, being imbued with the new spirit of free democracy, naturally cannot afford the least pretext for assumption that the demolition of the old structure has entailed any slackening on the part of Russia in the common struggle of all the Allies. On the contrary, the nation's determination to bring the world war to a decisive victory has been accentuated, owing to the sense of responsibility which is shared by all in general and each one of us in particular.

This spirit has become still more active by the fact that it is concentrated on the immediate task, which touches everybody so closely, of driving back the enemy who invaded

our territory. It is understood, and the annexed document so expressly states, that the Provisional Government in safeguarding the right acquired for our country will maintain a strict regard for its engagements with the allies of Russia.

Firmly convinced of the victorious issue of the present war, and in perfect agreement with our allies, the Provisional Government is likewise confident that the problems which were created by this war will be solved by the creation on a firm basis of a lasting peace, and that, inspired by identical sentiments, the allied democracies will find means of establishing the guarantees and penalties necessary to prevent any recourse to sanguinary war in the future.

This note was sent in response to a demand of the council that the Government express itself. It followed a series of turbulent outbreaks in Petrograd in consequence of the agitation of Radical Socialists under the leadership of one Nikolai Lenine. In fact, Lenine was suspected of anarchistic tendencies and was assailed as in the pay of Germany. His inflammatory speeches against the Provisional Government and the Allies precipitated one riot in Petrograd, but he was finally suppressed and quiet was restored. The slumbering unrest of the extremists, however, soon was again manifest, and at length forced the Government to express itself in this letter of May 1, which subsequent events have brought into prominence.

The document aroused strong disapproval among members of the council, and serious anti-Government demonstrations occurred in Petrograd on May 3 and 4. The Executive Committee of the council had discussed the note throughout May 2 and 3, holding all-night sessions. It adjourned at daybreak of May 4 without reaching a decision, but every speaker at the meeting emphasized the contention that the power in Russia rested in the hands of the representatives of the workmen and soldiers, and that they were determined to enforce their views upon the temporary Government or immediately dispossess it and construct a Government of their own liking.

Most of the leaders advocated a compromise by the removal of Milukoff, permitting the rest of the Government to remain in power. M. Tcheidse, President of the body, after reading the Govern-

ment note, declared that he found it quite nullified the effect of the previous declaration of April 9, and added:

The form of this note and its vague allusions to a victorious end of the war are so ambiguous that one can deduce anything he wants to from it, even the ideas of the old Government. Steps must be immediately taken to clarify this so that the country will know that the Government does not intend to agree to annexations, expropriations, and contributions. After this explanation is published and the Allies are informed of its contents the proletariat classes of the allied countries must take similar steps to make their Governments repudiate such intentions.

M. Stankevich, Social Democrat, who followed M. Tcheidse, said:

This note has struck a serious blow to our unity with the Government. The Government today feels the discord which exists and which is so evident in the street demonstrations.

Fear of Allies Expressed

The speaker then hinted that the Entente Allies might not approve of the stand taken by the Russian proletariat, and declared in this connection:

It is necessary to mobilize all the forces of the democracy, because we may be menaced from the outside. We will not allow any one to attack us. If the Government continues to follow their line of conduct we will go further—we can arrest the Government. It must fulfill our program, for we have the power, and we can telephone tonight expressing our distrust of the Government, and it will be compelled to resign.

If the action of the Government was dictated by wrong intentions we will immediately vote our distrust, and the present Cabinet will be replaced by one of our own choosing. I tell this to you to show you the power that is in our hands.

But we must be careful. The finances of the country are in bad condition, the supply question is critical, and we must seriously consider before adopting extreme measures. Only after mature deliberation can we decide that the temporary Government must be removed. Then we can take the power in our hands and bear all the responsibility. On account of the complicated nature of the problems confronting the country we must take the mildest means.

M. Chernoff, who spoke next, said:

The present situation is more serious than when the trouble occurred between the old régime and the revolutionists. In the first days of the revolution it was a fight between two hostile camps; now it is a fight between conquerors. The situation can have dangerous results, and the principal thing we need at the present is quiet and order. But we must cast away the imperialistic influence from

our foreign policy as well as from our internal life. Our program must have brought knowledge to all Governments, and we must request from our allies that they reconsider their aims in the war.

M. Bonin, another speaker, recommended a Coalition Ministry. He reiterated the same warning against extreme measures as had the previous speakers.

Anarchist Members for Action

The opinions ranged through every shade of political belief. The speakers included anarchist members who flatly proposed the overthrowing of the present Government immediately. One of the anarchists said:

The temporary Government has thrown off its mask, and we see that it is not much better than the old. We are naïve and simple. M. Milukoff is a sly person and can find any way to deceive us. Down with him! Throw off the temporary Government!

Another speaker declared that the note of May 1 showed a policy of world imperialism. He added that it was a mistake to send recruits to fill the gaps in the ranks at the front, because these men were needed in Petrograd. The speaker proposed the formation of a coalition committee to exert the same influence on foreign policy that the present council wields over home politics.

M. Voytinsky, the last speaker, said:

Every soldier must know he is not fighting for the ideas of Milukoff, or for Constantinople and the Dardanelles, but for the new freedom.

Late in the day the committee sat in special session with the council of the Provisional Government for a discussion of the Government's motives in issuing the note. The upshot of it was that the Executive Committee decided that it would be inexpedient to demand the resignation of the Government at the moment, and it persuaded the soldiers engaged in the demonstrations to return to their barracks. It was reported that the Executive Committee's decision was by a vote of 34 to 19.

Hostility to Milukoff

On May 4 the demonstrations were distinctly against Foreign Minister Milukoff. Many soldiers participated in them, but there were also countermanifesta-

tions in behalf of the Government. Detachments of soldiers and workmen gathered in front of the headquarters of the Provisional Government, carrying red flags and banners, with inscriptions "Down With Milukoff!" "Down With Guchkoff, Minister of War!" and "Down With the Provisional Government!"

When Milukoff saw the banners he came out on the balcony of the palace, with M. Shingaroff and M. Neckrasoff, and soon had turned the hostility of the crowd into enthusiastic support. He began by saying that he was fearful not for Milukoff but for Russia. If the inscriptions interpreted the feelings of a majority of the citizens, he asked, what must be the condition of Russia? The Entente Allies would say Russia had betrayed her allies, and had struck her name from the list of the allied powers.

"The Provisional Government cannot accept that view of things," continued M. Milukoff. "I declare to you that the Provisional Government and myself, as Minister of Foreign Affairs, will defend a position in which no one will dare to charge Russia with treason. Never shall Russia consent to a separate peace! The Provisional Government is a sailing vessel which can only move with the help of the wind. We look, then, for your trust, which is the wind that is to make our ship go forward. I hope you will supply us with that breeze, and that your confidence will aid us in propelling Russia toward liberty and prosperity and in upholding the dignity of our great, free country."

The words of the Foreign Minister evoked hearty cheering.

A Precarious Truce

A truce was patched up on May 4 when the council gave a vote of confidence in the Government by a narrow margin of 35 in a total of 2,500. In announcing its action the council declared that it had received from the Government the following explanation of the meaning of the note to the Allies:

The note was subjected to long and detailed examination by the Provisional Government, and was unanimously approved. It was obvious that this note, in speaking of a de-

cisive victory, had in view a solution of the problems which were mentioned in the communication of April 9 and which was thus specified:

"The Government deems it to be its right and duty to declare now that free Russia does not aim at the domination of other nations or at depriving them of their national patrimony, or at occupying by force foreign territories, but that its object is to establish a durable peace on the basis of the rights of nations to decide their own destiny.

"The Russian Nation does not lust after the strengthening of its power abroad at the expense of other nations. Its aim is not to subjugate or humiliate any one. In the name of the higher principles of equity, the Russian people have broken the chains which fettered the Polish Nation, but it will not suffer that its own country shall emerge from the great struggle humiliated or weakened in its vital forces."

In referring to the "penalties and guarantees" essential to a durable peace the Provisional Government had in view the reduction of armaments, the establishment of international tribunals, &c.

This explanation will be communicated by the Minister of Foreign Affairs to the Ambassadors of the allied powers.

Would Not Modify Note

The Provisional Government, through Premier Lvoff, declined to modify the note sent to the Allies, stating that the Ministers were prepared to resign their posts if necessary. The Premier said:

It is impossible to send another note. The temporary Government will comply with its duty, and leave its post rather than take such a step, which would menace the country with very serious consequences. The Government understands fully the responsibility it has assumed in behalf of the country, and in the view of that responsibility is ready to resign if it becomes necessary.

M. Milukoff, confirming the stand taken by Premier Lvoff, said:

The note expressed the view of the temporary Government. It has no other aim. The recent note repeats and develops the idea expressed in the first note, which was worked out in conjunction with the Council of Deputies. If we compare the notes it is clear that the information they contain constitutes a step forward. The events of yesterday will make the Allies very sad while pleasing our enemies.

The Government's Statement

The lack of harmony between the Government and the council continued, however, notwithstanding the settlement of the May 1 note matter. On May 8 the

Government issued an announcement as follows:

The attempts by separate groups of the population to realize their desires by expropriations or launching declarations when made by the less organized classes threaten to ruin interior discipline and unity and create favorable ground, on the one hand, for acts of violence against the new régime, and, on the other hand, for the development of private interests to the detriment of the general welfare.

The temporary Government considers it its duty to declare frankly and definitely that such conditions render the administration of the country extremely difficult and menace it with interior ruin and defeat at the front.

The frightful spectre of civil war and anarchy hovers over Russia, threatening its freedom. There is a dark, sad path leading through civil war and anarchy to the return of despotism. This must not be the path of the Russian people.

Then follows an appeal for unity in support of the Government created by the revolution, and the declaration continues:

The temporary Government will renew with stronger persistence its efforts to attract into the staff of representatives those active protective forces of the country which up to the present have not taken any part in the government of the country.

Simultaneously with the declaration appears a note addressed by M. Kerensky to the Council of Workmen's and Soldiers' Delegates in which he says:

I consider the condition of affairs now greatly changed. The situation is much more serious on the one hand, and on the other the power of the organized labor democracy has grown. That power no longer has a right to remain aloof from the participation in responsibility for government when their participation will bring strength to the power born of the revolution. Under these conditions the representatives of the labor democracy must take the burden of power, but only after being formally elected and vested with power by the organizations to which they belong.

The suggestion of a Coalition Government was not accepted by the council. May 10 a celebration of the First Duma occurred, when an extraordinary session of the sitting Duma was held, also attended by ex-members besides the members of the Government.

Addressed by Rodzianko

President Rodzianko on this occasion, in the course of an address, said:
The war which was forced upon us, which

we did not desire, and for which we are in no way responsible, must be brought to a successful termination, in such a manner that the integrity of the country and the national honor of Russia shall be entirely maintained. The innumerable sacrifices we have laid upon the altar of this war demand that the peace should correspond with the immensity of our efforts and that the aim for which we are struggling, the triumph of the ideals of justice and liberty, be assured us.

The Germans oppose to these splendid ideals their own program, which is totally different—the hegemony of the world and the enslavement of the nations. The struggle for principles so mutually contradictory cannot terminate in a draw, but only by a decisive victory by one or the other of the adversaries. Only the complete defeat of German militarism will assure the happiness of the world.

The gulf separating the Germans—the devastators and destroyers of civilization—from the Allies is too deep for the war to be concluded without the realization of the ideals I have mentioned. Peace in the present conditions would only be an armistice of greater or less duration. Do not forget that the working classes of Germany, however socialistic they be, ardently desire victory, for Germany cannot reduce her vast industry, and her defeat by the Allies would be like the blow of a club for the workers of Germany, who naturally support the imperialistic aspirations of their Government.

That is why I declare emphatically that the Russian people must make every sacrifice to bring this war, in concert with their allies, to a complete victory, all the more because such a victory would consolidate forever the liberties we have just won.

Russia cannot betray the allies by whose side she has been fighting for three years, and she will remain faithful to them.

Guchkoff Exposes Conditions

M. Guchkoff, whose speech was received with loud and prolonged applause from all parts of the house, said:

Unfortunately the first feeling of radiant joy evoked by the revolution soon gave place to one of pain and anxiety. The Provisional Government explained the cause of this in its recent declaration, in which it was pointed out that the destruction of the old forms of public life, to which an end had been put by the revolution, had been effected more rapidly than had the creation of new forms to replace them.

It is especially regrettable that the destruction has touched the political and social organization of the country before any life centre has had time to establish itself and to carry out the great creative work of regeneration.

How will the State emerge from this crisis? That is the question for solution and on which will depend not only the consolidation of the

liberties won, but the issue of the war and the destinies of the country. In any case the duality of power—and even polyarchy—and the consequent anarchy now prevailing in the country make its normal existence difficult.

Our poor country is fighting at an extraordinary hard conjuncture of an unparalleled war and internal troubles such as we never have seen before, and only a strong Governmental power able to rely on the confidence of the nation can save it.

We received a terrible legacy from the old régime, which was incapable of governing in time of peace and still less was able to do so while waging war.

We all know the conditions in which our valiant army defended every foot of Russian territory and how it still is carrying on a truly heroic but not hopeless struggle. One more effort and an effort by the whole country and the enemy will be beaten, but we have got to know first of all whether we can make this effort.

The coup d'état found echoes in the army and navy which, believing in their creative strength, unanimously adhered to the new régime and set to work on a radical reform of the armed forces of the country.

For the moment we hoped our military powers would emerge from the salutary process regenerated and renewed in strength and that a new reasonable discipline would weld the army together, but that has not been the case, and we must frankly face the fact that our military might is weakened and disintegrated, being affected by the same disease as the country, namely, duality of power, polyarchy, and anarchy, only the malady is more acute.

It is not too late to cure it, but not a moment must be lost. Those who, either deliberately or not realizing what they were doing, have cast into our midst the subversive mot d'ordre "peace at the front and war in the country," those people, I say, are carrying on a propaganda of peace at any price and civil war, cost what it may.

That mot d'ordre must be smothered by another, that being "war at the front and peace within the country."

Gentlemen, some time ago the country realized that our mother land was in danger. Since then we have gone a step further, for our mother land is on the edge of an abyss.

Two Strong Men Resign

The Executive Committee of the Council of Workmen's and Soldiers' Delegates decided on May 9 to issue an appeal to the peoples of the world in behalf of the calling of a peace conference in a neutral country, to consist of an assemblage of the Socialist Internationale.

Events now moved rapidly. General Korniloff, commander of the Petrograd garrison, resigned on May 13 on account

of the interference by the council with his orders, and in consequence of their demand that all his orders should be subject to their indorsement. This resignation was followed on May 13 by that of Guchkoff, the Minister of War, who sent the following letter to the Premier:

In view of the condition in which the power of the Government has been placed, especially the authority of the Minister of War, in relation to the army and the navy, a condition which I am powerless to alter and which threatens to have consequences fatal to the defense, the liberty, and even the existence of Russia, I can no longer exercise the functions of Minister of War and Marine and share responsibility for the grave sin being committed against the country.

The same day the council issued an appeal to the army, in which it stated that German imperialism was seeking to destroy revolutionary Russia and enslave the Russian people. It appealed to the soldiers to defend Russia with all their power, and asserted that a separate peace was impossible. The appeal said the only solution of the war must be a general peace among all nations by agreement. It said the council was aiming at peace by calling for a revolution among the workmen of the Central Powers, but that peace could not be achieved unless the enemy at the front was checked. The manifesto begged the soldiers not to renounce their offensive and warned against fraternizing with the enemy.

Kerensky's Solemn Warning

The situation was hourly growing more critical. On the 14th the Minister of Justice, Kerensky, who heretofore was regarded as the lukewarm member of the Government and at heart a Socialist leader, expressed himself as follows to a deputation of delegates from the front:

I came to you because my strength is at an end. I no longer feel my former courage, nor have my former conviction that we are conscientious citizens, not slaves in revolt. I am sorry I did not die two months ago, when the dream of a new life was growing in the hearts of the Russian people, when I was sure the country could govern itself without the whip.

As affairs are going now, it will be impossible to save the country. Perhaps the time is near when we will have to tell you that we can no longer give you the amount of bread you expect or other supplies on which you have a right to count. The process of the change from slavery to freedom is not

going on properly. We have tasted freedom and are slightly intoxicated. What we need is sobriety and discipline.

You could suffer and be silent for ten years, and obey the orders of a hated Government. You could even fire upon your own people when commanded to do so. Can you now suffer no longer?

We hear it said that we no longer need the front because they are fraternizing there. But are they fraternizing on all the fronts? Are they fraternizing on the French front? No, comrades, if you are going to fraternize, then fraternize everywhere. Are not enemy forces being thrown over on to the Anglo-French front, and is not the Anglo-French advance already stopped? There is no such thing as a "Russian front," there is only one general allied front.

Tremendous applause greeted this, and Kerensky continued:

We are marching toward peace and I should not be in the ranks of the Provisional Government if the ending of the war were not the aim of the whole Provisional Government; but if we are going to propose new war aims we must see we are respected by friend as well as by foe. If the tragedy and desperation of the situation are not realized by all in our State, if our organization does not work like a machine, then all our dreams of liberty, all our ideals, will be thrown back for decades and maybe will be drowned in blood.

Beware! The time has now come when every one in the depth of his conscience must reflect where he is going and where he is leading others who were held in ignorance by the old régime and still regard every printed word as law. The fate of the country is in your hands, and it is in most extreme danger. History must be able to say of us, "They died, but they were never slaves."

Milukoff Answers Questions

To the same delegation Minister Milukoff answered various questions put to him as follows:

Q.—How do the Allies regard our renunciation of annexation and contribution and the right of all nationalities to determine their own fate?

A.—The latter demand has been acceded to by the Allies, while the question of annexation is so bound up with the question of the right of nations to determine their own fate that nothing definite can be said on this subject. As regards contribution, the Allies hold that the nation which suffered must be rehabilitated by the power which ruined it. Uniting all three Polands in one whole is not annexation, nor is the return of

Alsace-Lorraine to France. As regards the Dardanelles, we have relinquished all claims to conquest, and the fate of Constantinople depends upon the views of the Allies.

Q.—What do the Allies think of the Russian revolution?

A.—At first they were glad, but now they are concerned about the fall of discipline in the army and are beginning to fear the desire for immediate peace may gain the upper hand. I declare that not a single Russian party entertains the idea of a separate peace.

Q.—Is it true Japan is preparing to bring an army into Russia?

A.—No, because Japan's interests lie further to the east than in the region of Baikal.

Q.—What advantage does America bring the Allies?

A.—Russia receives a loan on the very favorable terms of 3 per cent. and also technical aid. America has offered to put the Siberian Railway in order, and is supplying Russia with vast quantities of ammunition.

American Workers' Appeal

Samuel Gompers, President of the American Federation of Labor, on May 7 sent the following appeal by cable to the Executive Committee of the Council of Workmen's and Soldiers' Delegates at Petrograd:

Executive Committee of the Council of Workmen's and Soldiers' Delegates, Petrograd, Russia:

The gravest crisis in the world's history is now hanging in the balance and the course which Russia will pursue may have a determining influence whether democracy or autocracy shall prevail. That democracy and freedom will finally prevail there can be no doubt in the minds of men who know, but the cost, the time lost, and the sacrifices which would ensue from lack of united action may be appalling. It is to avoid this that I address you.

In view of the grave crisis through which the Russian people are passing, we assure you that you can rely absolutely upon the whole-hearted support and co-operation of the American people in the great war against our common enemy, Kaiserism. In the fulfillment of that cause the present American Government has the support of 90 per cent. of the American people, including the working classes of both the cities and the agricultural sections.

In free America, as in free Russia, the agitators for a peace favorable to Prussian militarism have been allowed to express their opinions, so that the conscious and unconscious tools of the Kaiser appear more influential than they really are. You should realize the truth of the situation. There are but few in America willing to allow Kaiserism and its allies to continue their rule over those non-German peoples who wish to be free from their domination. Should we not protest against the pro-Kaiser Socialist interpretation of the demand for no annexation, namely, that all oppressed non-German peoples shall be compelled to remain under the domination of Prussia and her lackeys, Austria and Turkey? Should we not rather accept the better interpretation that there must be no forcible annexations, but that every people must be free to choose any allegiance it desires, as demanded by the Council of Workmen's and Soldiers' Delegates?

Like yourselves, we are opposed to all punitive and improper indemnities. We denounce the onerous punitive indemnities already imposed by the Kaiser upon the people of Serbia, Belgium, and Poland.

America's workers share the view of the Council of Workmen's and Soldiers' Delegates that the only way in which the German people can bring the war to an early end is by imitating the glorious example of the Russian people, compelling the abdication of the Hohenzollerns and the Hapsburgs and driving the tyrannous nobility, bureaucracy, and the military caste from power.

Let the German Socialists attend to this, and cease their false pretenses and underground plotting to bring about an abortive peace in the interest of Kaiserism and the ruling class. Let them cease calling pretended "international" conferences at the instigation or connivance of the Kaiser. Let them cease their intrigues to cajole the Russian and American working people to interpret your demand, "no annexation, no indemnities," in a way to leave undiminished the prestige and the power of the German military caste.

Now that Russian autocracy is overthrown, neither the American Government nor the American people apprehend that the wisdom and experience of Russia in the coming Constitutional Assembly will adopt any form of government other than the one best suited to your needs. We feel confident that no message, no individual emissary, and no commission has been sent or will be sent with authority to offer any advice whatever to Russia as to the conduct of her internal affairs. Any commission that may be sent will help Russia in any way that she desires to combat Kaiserism wherever it exists or may manifest itself.

Word has reached us that false reports of an American purpose and of American opinions contrary to the above statement have gained some circulation in Russia. We denounce these reports as the criminal work of

desperate pro-Kaiser propagandists, circulated with the intent to deceive and to arouse hostile feelings between the two great democracies of the world. The Russian people should know that these activities are only additional manifestations of the "dark forces," with which Russia has been only too familiar in the unhappy past.

The American Government, the American people, the American labor movement, are whole-heartedly with the Russian workers, the Russian masses, in the great effort to maintain the freedom you have already achieved, and to solve the grave problems yet before you. We earnestly appeal to you to make common cause with us to abolish all forms of autocracy and despotism and to establish and maintain for generations yet unborn the priceless treasures of justice, freedom, democracy, and humanity.

AMERICAN FEDERATION OF LABOR,
SAMUEL GOMPERS, President.

Manifesto by Labor Council

A sudden change in the entire situation occurred on May 15, when the Executive Committee of the Council of Workmen's and Soldiers' Delegates reversed its former action, and by a vote of 41 to 19 decided to participate in the Government and form a coalition with the Provisional Administration. It also declared definitely against a separate peace. The following manifesto was issued by the council:

Soldiers and comrades at the front, we speak to you in the name of the Russian revolutionary democracy. The people did not wish the war, which was begun by the Emperors and capitalists of all countries, and, therefore, after the abdication of the Czar, the people considered it urgent to end the war as rapidly as possible. Do not forget, soldiers and comrades, that the regiments of William are destroying revolutionary Russia. Do not forget that the loss of free Russia would be a catastrophe, not only to us but to the working classes of the entire world. Defend, therefore, revolutionary Russia with all your power.

The Council of Workmen's and Soldiers' Delegates leads you toward peace in another way. By calling for a revolution of the workmen and peasants of Germany and Austria-Hungary we will lead you to peace after having obtained from our Government a renunciation of the policy of conquest and after demanding a similar renunciation from the allied powers. But do not forget, soldiers and comrades, that peace cannot be achieved if you do not check the enemy's pressure at the front, if your ranks are pierced and the Russian revolution lies like an inanimate body at William's feet. Do not forget, you in the trenches, that you are defending the

liberty of the Russian revolution and your brother workmen and peasants.

Now, how are you to accomplish this defense if you remain inactive in your trenches? Frequently only an offensive can repel or check a hostile offensive, frequently those who await an attack perish. Soldiers and comrades, having sworn to defend Russian liberty, do not renounce the offensive. Fight and struggle for this liberty, and while fighting and struggling fear the enemy's traps. The fraternizing which is taking place at present at the front can easily become a trap. Do not forget that revolutionary troops have only the right to fraternize with troops who are also revolutionary and who are also ready to die for peace and liberty.

The German Army is not a revolutionary army if it is still blindly following William and Charles, Emperors and capitalists. You are fraternizing openly, not with enemy soldiers but with officers of the enemy's General Staff, disguised as common soldiers. Peace will not be obtained by separate treaties or by the fraternizing of isolated regiments and battalions. This will only lead to the loss of the Russian revolution, the safety of which does not lie in a separate peace or armistice.

Reject, therefore, everything which weakens your military power, which distracts the army and lowers its morale. Soldiers, be worthy of the trust that revolutionary Russia puts in you.

Appeal to Socialists

An appeal was also issued by the council to the Socialists of Germany and Austria. This appeal concludes as follows:

The democracy of the revolution of Russia appeals to the Socialists of Austria and Germany. You cannot allow your Governments to be the executioners of Russian liberty. You cannot allow your Governments, taking advantage of the joy evoked in the Russian Army by liberty and fraternity, to hurl their troops on to the western front, in the first place in order to crush France, and then to dash on Russia and finally crush you as well as the international proletariat in the grip of imperialism.

The democracy of revolutionary Russia appeals to the Socialists of neutral and belligerent countries not to allow the triumph of imperialism. May the cause of peace proclaimed by the Russian revolution be brought to a happy conclusion by the efforts of the international proletariat.

In order to unite these efforts the Council of Workmen's and Soldiers' Delegates decided to take the initiative in convoking an international conference of all Socialist parties and factions in all countries. Whatever may have been the dissensions which rent socialism during the three years of war, no section of the proletariat ought to re-

nounce participation in the common struggle for peace by the Russian revolution.

We are convinced that we shall see the representatives of all Socialist groups at the conference we are convoking. A unanimous decision of the international proletariat will be the first victory of the workers over the international imperialists. The proletariat of all countries should unite.

The following are passages from the appeal:

The revolutionary democracy of Russia does not desire a separate peace which would loose the hands of the Austro-German alliance. It is well aware that such a peace would be a betrayal of the cause of democracy and of labor in all countries. This cause would by such an action be paralyzed in the face of a triumphant imperialism. It knows that such a peace may lead to the ruin of other countries and the triumph of the ideals of Chauvinism and revenge in Europe, which would leave the Continent in a state where it would inevitably prepare in the near future for a fresh and sanguinary collision.

The Russian revolutionary democracy addresses itself in the first place to you, Socialists of the allied countries. You must not allow the voice of the Russian Provisional Government to remain isolated from the union of the allied powers. You must force your Governments to proclaim resolutely the platform of peace without annexations or indemnities and the right of the people to settle their destinies.

You will thus afford our revolutionary army, which desires peace between the peoples, the assurance that its bloody sacrifices will not be utilized in an evil manner. You will give it strength to carry out with all its revolutionary enthusiasm the military operations which fall to its lot. You will fortify its mind in the belief that in defending the liberty conquered by the revolution the army also is struggling in the interests of an international democracy.

You will force the Governments of enemy countries to renounce forever their policy of usurpation, pillage, and violence, and openly to recognize their crimes, thus calling upon their heads the just anger of their peoples.

Resignation of Milukoff

Paul N. Milukoff, Minister of Foreign Affairs and the most conspicuous leader of the Social Democrats, tendered his resignation and withdrew from the Government altogether on May 16, on account of a difference between himself and the other members of the Provisional Government on the question of the coalition. The Cabinet was entirely reorganized, with M. Tereschtenko, Minister of Foreign Affairs, replacing Milukoff. It

was decided to take into the Cabinet five representatives of different Socialist groups, which, with A. F. Kerensky, who became Minister of War, made a total of six of these groups sharing in the Government. Three of the appointees were Social Democrats and three, including M. Kerensky, Socialist Populists.

Of the former, M. Skobeleff, Vice President of the Council of Workmen's and Soldiers' Delegates, was appointed Minister of Labor. M. Malantovitch, an Odessa lawyer, also has been chosen. Two of the Socialist Populist Ministers were M. Tchernoff and M. Pechekonoff. Professor Manuiloff, Minister of Public Instruction, and A. I. Shingaroff, Minister of Agriculture, remain in office. It was also decided to be desirable to include in the Government Feodor Kokoshkine, Constitutional Democrat and a professor at the University of Moscow, and M. Tzeretelli, member of the Council of Workmen's and Soldiers' Delegates. The duty of these men will be to prepare for the Constituent Assembly.

The new Foreign Secretary is thirty-three years old and is regarded as one of the ablest men of Russia. Originally a member of one of the richest families and a so-called "beet sugar king," he came into prominence at the outset of the war as a member of Guchkoff's War Industries Board. Soon he was put in charge of foreign exchange and achieved such success that he was made Minister of Finance by the new Government.

Ex-Minister of Justice Kerensky, the new Minister of War, was at the beginning of the revolution the most popular man in Petrograd, as he was the link between the constructive moderates then in power and the radical Socialists, who were demanding excessive reforms. Kerensky, who is a social revolutionary and about forty years old, realized that the four million Socialists in Russia could dominate a population of 180,000,000 people, and his great aim was so to moderate the Socialist program as to make it immediately practical and acceptable. Throughout he has helped restrain the radical elements by his great personal influence as one of them.

American Mission to Russia

The personnel of a special mission to Russia was announced on May 15 by the State Department at Washington. Mr. Root, the head of the mission, was given the rank of Ambassador, while six of his associates were commissioned as Ministers. The members are as follows:

Elihu Root, former Secretary of State, to be Ambassador Extraordinary of the United States on Special Mission.

John R. Mott, New York, Envoy Extraordinary on Special Mission.

Charles P. Crane, Illinois, Envoy Extraordinary.

Cyrus H. McCormick, Illinois, Envoy Extraordinary.

Samuel R. Bertron, New York, Envoy Extraordinary.

James Duncan, Massachusetts, Envoy Extraordinary.

Charles Edward Russell, New York, Envoy Extraordinary.

Major Gen. Hugh L. Scott, Chief of Staff of the Army, to be military representative of the President.

Rear Admiral James H. Glennon, naval representative of the President.

Colonel R. E. L. Michie, Colonel William V. Judson, Lieut. Col. T. Bentley Mott, Surgeon Holton C. Curl, Lieutenant Alva D. Bernhard, Secretary Basil Miles, Major Stanley Washburn, and Interpreter F. Eugene Prince.

It was announced semi-officially on the same day that the mission was for the express purpose of meeting sinister misrepresentations by Germany in Russia, which are calculated to provoke some of the Russian factions into making a separate peace with Germany before the American Commissioners can arrive in Petrograd.

Aid to the new republic from the United States will take other forms than the loaning of money. American ability, business methods, powers of organization, and facility all will be placed at the disposal of the new Government by the commission.

The same day the United States Gov-

ernment gave evidence of its good faith in the new Government of Russia by making its first loan to that country in the sum of \$100,000,000. The money was made available for purchases of supplies in this country and was deposited to Russia's credit in the Federal Reserve Banks. By that arrangement Russia will be enabled to draw against the amount as money is needed to meet obligations here.

The President held a conference with the mission May 14 and gave them broad authority to confer with any existing Government in Russia with a view to insuring that Russia shall continue in the Entente Alliance.

The Railroad Commission

A collateral American commission to aid Russia in rehabilitating and developing the railroads of the country left for Petrograd on May 9. The personnel of this commission was as follows:

John F. Stevens of New York, former Chief Engineer of the Panama Canal, Chairman; W. L. Darling of St. Paul, Chief Engineer of the Northern Pacific Railway; Henry Miller of St. Louis, former Operating Vice President of the Wabash Railroad; George Gibbs of Philadelphia, former Chief Mechanical Engineer of the Pennsylvania Railroad, and J. P. Griner of Baltimore, Chief Consulting Engineer of the Baltimore & Ohio Railroad.

Mr. Stevens has been appointed to the rank of Minister Plenipotentiary and accredited to the Russian Government as such.

Before leaving Washington the commission made arrangements to furnish the Russian Government with a large amount of material and rolling stock, and will be able to promise that these will be ready at the call of Russia. The fullest and most complete co-operation in furnishing locomotives, cars, and rails will be guaranteed by the commission in the name of the United States Government, which is receiving the hearty co-operation of American railroad interests.

Poland's Share in Russian Freedom

A Noteworthy Proclamation

THE Russian revolution has brought, not only liberation to the Russians themselves, but to all peoples formerly held in bondage under the Czar. If the Poles are not able to participate in the new freedom while their country is still occupied by the Teutonic invaders, the outlook for them is far more hopeful than it has been since the last partition. In contrast to the "made in Germany" plan for Polish autonomy, which was hemmed in by many limitations, the new Russian Government has come out with a proclamation outlining a democratic plan that is free from outside pressure.

A couple of weeks after the revolution had taken place a deputation of Poles, consisting of Count Wielopolski and Messrs. Shebako, Karpinski, Garousevitch, Jaronski, and Goscicki, was received by Prince Lvoff, President of the Russian Provisional Government, and asked him to proclaim the independence and unification of the three Poland—Russian, German, and Austrian—as well as the rights of the Poles to be represented in the Constituent Assembly. Prince Lvoff replied that the standpoint of the Provisional Government was exactly the same as that of the Poles themselves, and that the desired proclamation was about to be published. Almost immediately all the members of the Provisional Government signed the proclamation, which was issued in the following terms:

Poles, the old political order in Russia, the source of your bondage and ours, and the cause of disunion, has been forever overthrown.

Liberated Russia, personified in its Provisional Government, invested with the fullness of power, hastens to address to you its fraternal greetings and to call you to the new life of liberty.

The old order gave you hypocritical promises which it could but would not carry out. The Central Powers have profited by its mistakes to occupy and devastate your country, and, with the object of fighting against Russia and her allies, have given you illusory political rights, which are extended,

not to all the Polish people, but only to a part of Poland temporarily occupied by the enemy. This is the price for which the Central Powers wanted to buy the blood of a people who have never fought on the side of despotism. But now no Polish Army is going to fight for the suppression of liberty and the dismemberment of its country under the command of the hereditary foe.

Brother Poles, for you also the hour of the great decision has struck. Free Russia calls you into the ranks of the combatants for the people's liberty. The Russian people, who have borne the yoke, acknowledge that the fraternal Polish people also have the fullest rights as defined of their own free will.

Faithful to the agreement with the Allies and to the common cause against militant Germanism, the Provisional Government considers that the creation of an independent Polish State, the stronghold of all the territories, the greater part of whose populations constitute the Polish people, will be a certain guarantee of lasting peace in the renovated Europe of the future.

Attached to Russia by a free military union, the Polish State will be a solid rampart against the pressure brought to bear by the Central Powers on the Slav nations. The Polish people, freed and united, will of itself determine its system of government by expressing its will through a Constituent Assembly convoked in the ancient capital of Poland. Through a common life the Polish people will thus receive a solid guarantee of its civic and national existence.

The Russian Constituent Assembly will have to consolidate definitely the new fraternal union and give its consent to the territorial changes in the Russian State which are indispensable to the formation of a free Poland from all the three parts into which it was cruelly separated.

Brother Poles, take the fraternal hand which free Russia holds out to you. Faithful guardians of great traditions, move forward from now on to the opening of the new and brilliant era of your history, the era of the resurrection of Poland.

Let the union of our hearts and minds anticipate the future union of our States and let the glorious appeal of ancient days made by the forerunners of your liberation re-echo with renewed force.

Onward in the struggle, side by side, hand in hand, for our liberty and yours!

The Austro-German proclamation in November, 1916, of an independent Poland was received by the people with little enthusiasm. The demonstrations of that time were meagre as compared with

the striking reception accorded to President Wilson's reference to the freedom of Poland in his address to the Senate on Jan. 19, 1917. When the text of the President's address was published in Warsaw, says a dispatch recently received by the State Department at Washington, the students of the University and Technical High School held a meeting at which they passed a resolution of gratitude and admiration of President Wilson's work. The students then marched in a body of several thousand strong to the American Consulate, cheering for the United States and the President. Similar demonstrations were held by the United Sporting Clubs of Warsaw.

Delegations from all the political, social, commercial, scientific, and educational organizations and institutions of

Warsaw called at the consulate and presented addresses of thanks to the President, with the request that they be sent to Washington. Thousands of people representing all classes of Polish society also called to express their gratitude and admiration. A special committee undertook to prepare an address with 1,000,000 signatures for presentation to the President, but the German authorities prevented the execution of this plan by ordering the removal of all notices and lists concerning the address, although at that time diplomatic relations between the United States and Germany had not yet been broken off. The German authorities did not conceal their annoyance over the demonstrations, which were in marked contrast to the reception of the Teutonic proclamation in the previous November.

Russian Troops in France Take New Oath of Allegiance

General Palitzine, commanding the Russian troops in France, issued the following Order of the Day—published in the Journal Militaire pour les Troupes Russes en France, April 12, 1917—directing the soldiers to take a new oath of allegiance to the Russian Provisional Government:

In accordance with a telegram from the Adjutant to the Chief of Staff at the General Russian Headquarters, received on March 18, 1917, I order that oath be administered to soldiers of every rank now stationed in France, in conformity with a formula which has been addressed to me by telegraph:

"Soldiers, you take oath to your country; you swear to serve it faithfully and honestly, and to execute the orders of the Provisional Government which now rules the Russian State. You are sent here to fight against the common enemy, with the allied armies, to defend the common cause with them.

"The hour is approaching when, under the force of our combined efforts, the enemy will be broken. Remember that a good soldier is brave, obedient, and always faithful to his cause. Be strong in your oath and in your valor, in order that the land of Russia, which has sent you here, may be proud of you. Russia has decided to prosecute this war to a victorious end, and we, her sons, must loyally execute her will. May Almighty God help us in our task.

"This Order of the Day will be read to all the soldiers before they take the oath."

GENERAL PALITZINE.

Naval Power in the Present War

By Lieutenant Charles C. Gill

United States Navy

VI.—Naval Lessons of the War

This article is the sixth in a series contributed to *CURRENT HISTORY MAGAZINE* by Lieutenant Gill of the superdreadnought *Oklahoma*—under the sanction of the United States Naval Department—with a special view to the lessons to be derived from past naval events of the war.

THE advancement of naval science, increasing the complexities of ships and guns with a consequent greater perplexity and intricacy of the problems to be solved, both in preparing material and in the development of skill to operate the material, has emphasized the need of wise naval management. The importance of good plans, well understood and well carried out, is a lesson of the war which this country has been quick to grasp and act upon. The nation's naval policy is the fountain head of all naval plans, and it may be mentioned as a step toward the adoption of a wise policy that the recommendations of the Naval General Board on this particular question are now published in full.

The Naval General Board consists at present of five Admirals, three Captains, and two Commanders. Assignments to this duty are for about two years, arranged in overlapping terms so as to permit a changing personnel with a consequent influx of ideas from the active fleet without breaking up the continuity of the work. The duties are deliberative, to draw knowledge from past and current events, to study strategy and tactics as practiced now and in the past, at home and abroad; to advise respecting navy yards, bases, and stations; to make recommendations as to the size, composition, and disposition of fleets; to determine the characteristics of speed, armor, and armament for new ships; in short, to make plans both for naval preparations in time of peace and for employment of the fleets in time of war.

This board was created in 1903 and has established a reputation for painstaking and disinterested service. In determin-

ing our naval policy it would seem well to give the General Board's recommendations great weight as expressing the best technical opinion in our country. The following extracts are quoted from the board's report, dated July 30, 1915:

The navy of the United States should ultimately be equal to the most powerful maintained by any other nation of the world. It should be gradually increased to this point by such a rate of development, year by year, as may be permitted by the facilities of the country, but the limit above defined should be attained not later than 1925.

Strength of American Navy

The present war has taught that an effective navy is the logical defense for a country situated like the United States. And by an effective navy is meant, not an impotent navy like that of Spain in 1898, nor a semi-effective navy like the one now protecting Germany's immediate shores, but one adequate to seek and defeat enemy ships long before they can approach our coasts, thus protecting outlying possessions and the sea-borne trade so necessary to our national life; in other words, by an effective navy is meant one which stands for worldwide respect for legitimate American interests; one which is ready, if need be, to defend these interests in all parts of the world.

To determine what should be the composition of such a fleet is a difficult problem, to understand the details of which requires expert technical knowledge. These technical details are the province of the Naval General Board. The principles, however, from which these details are deduced are not hard to understand, and they are of first importance as the foundation on which the entire fabric of naval defense rests. As these prin-

ciples of sea power become better understood by the general public, wiser legislation to safeguard national interests will follow. The recent three-year building program is a noteworthy step in the right direction.

Three-Year Building Program

The following table shows the vessels authorized in the three-year building program—those for which the first appropriations have already been made, those for which estimates for the fiscal year 1918 have been submitted to cover the first year's work, and those which will remain to be covered in the Naval bill for the fiscal year 1919:

Types.	Authorized in 3-year program.	Appropriated for in Naval bill of 1917.	Recommended to be appropriated for in Naval bill of 1918.	Remaining to be provided for in Naval bill 1919.
Battleships	10	4	3	3
Battle cruisers.....	6	4	1	1
Scout cruisers.....	10	4	3	3
Destroyers	50	20	15	15
Fleet submarines.....	9	..	4	5
Coast submarines.....	58	30	14	14
Fuel ships.....	3	1	..	2
Repair ships.....	1	1
Transports	1	1
Hospital ships.....	1	1
Destroyer tenders....	2	..	1	1
Submarine tenders....	1	..	1	..
Ammunition ships....	2	1	..	1
Gunboats	2	1	..	1
Total	156	66	42	48

This program is a step toward the adoption of a policy aiming to make good the deficiencies of the past; but it is only a preliminary step, and if an adequate navy is to be provided this program will have to be both pushed and enlarged to the full extent of the nation's facilities.

Best Types of Warships

A fairly definite idea of the work which has to be done in order to make the sea power of the United States an effective guarantor of national security may be arrived at through a discussion of the various types of warships, noting briefly their characteristics, their uses, and the proportionate numerical strength of each class required in building up a

well-balanced United States Navy. The estimates which follow have to be made in the light of the best obtainable information. They are approximate and subject to modification from time to time, to meet new conditions resulting from unforeseen developments. It is always to be remembered that the struggle for control of the seas is an ever-present spur to invention and progress in the development of the weapons used. Old ships are constantly being replaced by new models. Hence the relative value of the respective units may vary somewhat from year to year.

It is like a race for the largest stakes that the world has to offer. Control of the seas is the objective, and the nation which gains this control is the one that maintains a fleet powerful enough to overcome the strongest enemy fleet that it may encounter, and able to take and keep the seas in all weathers. Although the particular kinds of ships and guns used in answering the demands of naval strength come and go in continual evolution, still, these broad general demands of sea power remain the same. It is better, therefore, to study the abstract requirements of sea power and to note the trend of naval development in meeting these requirements than to rivet attention on the particular types of ships now in use as though they were immutable and incapable of being deposed.

The Question of Guns

The cornerstone of naval power is the gun; and the measure of a nation's sea power is the strength of her battleship fleet. In spite of the development of the mine and torpedo into important factors, the high-power naval gun is still supreme; so it has been in the past; so it is now; and so it probably will continue to be in the future.

As has previously been pointed out the only effective naval defense is a fleet strong enough to keep the enemy at a distance. Germany's fleet, although strong enough to prevent the enemy from landing on German shores, has not been powerful enough to dispute the control of the high seas, and has, therefore, proved non-effective. A navy adequate

to defend must be powerful enough either to defeat the enemy fleet on the high seas or to contain it in enemy home ports. The main reliance of such an effective navy is the long-range gun.

There is general agreement among experts as to this principle, that the gun is the prime consideration in naval warfare; but the different types installed in the newest ships of the various countries indicate somewhat divergent views as to what is the best design of naval gun. It is obvious that the heavier the projectile and the harder it hits the more will be the damage done. In a general way the principal considerations are: First, accuracy; second, high velocity; third, weight of projectile; fourth, durability of the gun to sustain continuous fire, and fifth, rapidity, or volume of fire. It is thus seen that the size of the projectile is limited by the efficiency of the propelling power and by the structural capacities of the gun and mount. In other words, the heavier the shell, consistent with high velocity, long range, and accuracy, the better; but if the structural durability of the gun is threatened, or if velocity and accuracy are sacrificed in order to throw a heavier projectile, a point is soon reached where damaging power is lost instead of gained.

The varying conditions of sea and visibility under which naval actions may be fought also tend to modify the effectiveness of the different sizes and designs of guns according to the circumstances which may exist at the time of any particular engagement. The gun which would win a fight at close range in misty weather might be defeated by the same enemy gun on a clear day at long range. At the shorter ranges the gun of moderate size might dominate a larger and more powerful enemy gun by greater rapidity and volume of fire. Although this is a contingency to be reckoned with, still, the present tendency is to increase the size of the projectile as fast as improvements in the powder and gun structure permit; and this tendency appears to be one likely to continue in the future. We may expect, therefore, that the size of naval guns will increase step by step

with scientific improvements in gun construction and powder.

Requirements of Battleships

Since the gun is the prime consideration, the other characteristics of a battleship depend upon what design of ship is considered most serviceable to the purpose of the gun. Some idea of the requirements of a battleship may be had by keeping in mind that it is desirable to mount as many guns in one ship as is consistent with having a homogeneous fleet possessing tactical mobility, moderate speed, long cruising radius, seaworthiness, habitability, and protection from the blows of the enemy whether delivered from above or below the water. It requires careful weighing of proportionate advantages and disadvantages to harmonize these characteristics into the combination which will produce the best possible type of battleship.

The advantages of ships of large tonnage over smaller vessels are many; more heavy guns can be carried, the platform is steadier, the cruising radius is larger, the habitability and seaworthiness are better, and more effective means of protection can be installed. On the other hand, there is a limit of size beyond which the advantages are outweighed by the disadvantages; the question of expense enters, and any very large increase in the size of warships might be argued against on the grounds that it would be like putting "two many eggs in one basket." Manoeuvring abilities are adversely affected by very large displacements, and the depths of the various waterways as well as the accommodations of canals and dry docks impose definite limits to the size of ships.

On the whole it may be expected that the tendency to increase the tonnage of battleships will continue for quite some time. It would also appear an improvident policy for any country to increase the size of its battleships by radical changes of large increments, because this would entail expense and a bad effect upon the homogeneity of the fleet. These objections might easily outweigh the advantages gained. It may be assumed, therefore, that future increase in the size

of warships will be a gradual growth with a very likely decreasing acceleration.

The influence of new inventions and new ideas in the development of the lesser units of the navy have caused the Naval General Board to modify its original recommendations respecting the proportions of these lesser units, but "the fundamental fact that the power of a navy is to be measured by the number and efficiency of its heavy fighting units—battleships—has remained unchanged,"* and since 1903 the board has consistently recommended a program aiming at an adequate navy, with a basic strength of forty-eight battleships by 1919.

Necessary Auxiliary Units

Battleships alone, however, do not constitute a complete and well-balanced navy. In order that the heavy guns may work to their best advantage, the battleships carrying them call for powerful fast scouts to break through and get information, and also to drive back enemy scouts seeking information. Destroyers are needed to attack and confuse the enemy ships, and at the same time guard their own large ships from similar attacks. Submarines are necessary to help defend the coasts and also to operate as a tactical sub-division of the fleet. Mine layers are needed to harass and menace enemy ships, while mine sweepers and patrols are required to search for enemy mines and submarines. In addition to these combatant units, auxiliaries, including transports, repair ships, hospital ships, and supply ships, are essential to the life and vigor of a fighting navy.

The floating instruments of sea power, moreover, must be backed by suitably situated and properly defended permanent bases and navy yards in which ships may seek rest and rehabilitation. Strategically situated island possessions are also needed for naval bases, by which lines of communication may be kept open to such temporary advance bases as the

requirements of a particular campaign may demand.

It is thus seen that, while relative naval power is primarily measured by the strength of the respective battleship fleets of the various naval powers, the battleships should be attended by the necessary auxiliaries in order to exert their maximum effectiveness.

Battle Cruisers as Scouts

The battle cruiser is the most powerful type of scout, and in addition to high speed has great offensive powers, together with endurance and a moderate protection of armor. While the chief function of this type is to get information, it has, because of these offensive and defensive characteristics, additional uses. The battle cruiser may fight for information and break through a hostile screen; she may support the lighter craft of her own fleet, beat back enemy scouts and guard the main body from surprise; she may be used to protect national sea routes and attack those of the enemy; and in battle she may operate as a fast wing and take a position favorable for using both guns and torpedoes.

It is thus seen that the battle cruiser can do all that the lighter scout can do and more, but these greater powers entail greater cost. The essential characteristic of a scout is speed in conjunction with a large cruising radius. If heavy guns and armor protection can be added without compromising the speed, so much the better, and all scouts would be battle cruisers were it not for the perplexities in construction and great expense involved.

The information service of a fleet requires a large number of scouts, and in order to produce them without undue cost the light cruiser has been developed, small in size and lightly armored, but with adequate speed and cruising radius for scout duty. The unarmored light cruiser, carrying torpedoes and intermediate guns, may be regarded as a development of the destroyer; it is larger, more habitable, carries larger guns, and is more useful as a scout. The ultimate development of the light cruiser would appear to be a larger unarmored ship

*See report of Naval General Board for 1916 program.

with great speed, carrying torpedoes and a few of the most powerful naval guns. Such a ship could outrun anything it could not fight, and it would take almost an equal number of battle cruisers to deny information sought by a group of these big-gun fast scouts making determined efforts to break through or to go around the opposing battle cruisers. The thin armor of the battle cruiser would afford protection against the small guns of light cruisers, but would be of no avail against the heavy guns of this new type of scout.

Unarmored Battle Scouts

At present there is talk of a ship to be developed by this country which might be called the "battle scout," its characteristics being extreme speed and maximum gun power without armor protection. Those that favor this type hold that just as the armored cruiser fell into discredit so will the battle cruiser fall into discredit upon the advent of the "battle scout." The idea is that the battleship is for the main strength of the fighting line, having extreme gun power and extreme endurance and armor protection; that the logical auxiliary of such a battle fleet is a class of ships having extreme speed and extreme gun power without armor protection; that any compromise between these two, such as a battle cruiser, is unsound from the standpoint of economy—that is, getting best results from money expended.

In the present emergency the lack of suitable scouts is particularly conspicuous. One of the reasons why more scouts have not been built is that the need of battleships and destroyers has been considered more urgent. It has always been argued that scouts could be provided much more easily and quickly than could the more distinctively fighting types of naval vessels. The plan, however, to requisition and buy fast mail and passenger steamers for use in the information service has been somewhat upset by the submarine warfare of Germany, and the present need of scouts is keenly felt. That the Naval General Board is alive to this need may be inferred from the following excerpts taken from the recom-

mendations submitted for the 1916 program:

In the struggle to build up the purely distinctive fighting ships of the navy—battleships, destroyers, and submarines—the cruising and scouting element of the fleet has been neglected in recent years, and no cruisers or scouts have been provided for since 1904. This leaves the fleet peculiarly lacking in this element so necessary for information in a naval campaign, and of such great value in clearing the sea of torpedo and mining craft, in opening and protecting routes of trade for our commerce, and in closing and prohibiting such routes to the commerce of the enemy. The General Board believes that this branch of the fleet has been too long neglected, and recommends that the construction of this important and necessary type be resumed.

The 1916 program did not provide for any scouts, but since then in the three-year program, beginning in 1917, provision has been made for six battle cruisers and ten scout cruisers.

Value of Destroyers

The destroyer, a familiar and popular fighting ship, the usefulness of which the experience of the present war has clearly demonstrated, displaces about 1,000 tons, has no armor protection, carries torpedoes and small-calibre guns, and possesses high speed, quick manoeuvring qualities, and sufficient radius to permit cruising with the fleet. Destroyers have a wide range of employment, including scouting, patrolling, convoying, and fighting. They are almost indispensable to the battleship fleet. While cruising both during the day and at night the destroyers help screen the capital ships and are ready for any kind of emergency duty.

When the time of battle comes it would be hard to overestimate the value of destroyers in making attack on the enemy capital ships, in breaking up the projected attacks of enemy destroyers, in delivering the deathblow to crippled enemy ships; and making smoke screens for tactical purposes, either to confuse the enemy or to envelop and protect any of their own ships which may happen to be hard pressed.

An excerpt from the report of the Naval General Board dated Nov. 17, 1914, reads as follows: "After mature con-

sideration of all the elements involved the General Board concluded that a well-balanced fighting fleet for all purposes of offense or defense calls for a relative proportion of four destroyers to one battleship."

Submarines of Limited Value

The outstanding characteristic of the submarine, as the name indicates, is its ability to navigate below the surface of the water. This enables it to evade the enemy, to make a surprise attack, and to escape by hiding. These faculties are manifestly suitable for the weaker belligerent to use against the stronger enemy. Navies that dominate, that have power to seek and destroy in the open, are not dependent upon abilities to evade and to hide.

In making a brief survey of the naval activities of the war, it is seen that the submarine has been of no great value to the superior navies controlling the seas, but has been practically the only effective naval weapon of the inferior fleets. When used against the enemy battle squadrons it has influenced strategy and tactics and scored a few minor successes in sinking some of the older men-of-war, but generally speaking has produced no very important results. When used against merchant ships the submarine has been unable to attain effectiveness while complying with the rules and usages of international law, but by resorting to unscrupulous methods it has become a dangerous commerce destroyer.

The war has shown that the chief tactical value of the submarine is for defense, to hold the enemy at a distance. The fleet submarine has also demonstrated an offensive value which may be useful in attaining a tactical advantage. It may be inferred, therefore, that the United States needs submarines both to help defend her coasts and to operate as a tactical subdivision of the fleet.

The General Board recommends that, in addition to the submarines for guarding our coasts, a division of larger fleet submarines be built as the beginning of a powerful underwater contingent capable of cruising with a fleet in distant operations.

The United States Navy is also deficient in the types of auxiliaries less distinctively combative, but still necessary to the maintenance of a fighting navy. These include colliers, oil-fuel ships, repair ships, mother ships for submarines and aircraft, transports, and hospital ships. The characteristics and uses of these vessels are obvious, and the respective number needed may be determined by logistical calculations. Lesser naval units, including mine layers, mine sweepers, patrol ships, and submarine chasers, also have work to do in modern warfare and must be provided for in adequate numbers.

American Navy's Present Role

In the present war, since the combined allied fleets are overwhelmingly superior to the battle fleets of our enemies, the immediate mission of the American Navy is to combat the submarine menace. In giving priority to building the lesser units employed in this phase of naval warfare, and in urging the shipyards to greater effort in building traders to replace the merchant tonnage sunk by mine and torpedo, there is grave danger that the people may lose sight of the fact that the battleship fleet still remains the chief guarantor of national security. Battleships cannot be improvised; it takes years to construct them; hence, prudence demands that our capital ships receive continual attention in order that national security in future years may not be jeopardized.

For the first time in the history of the United States Navy a building program covering a period of years has been adopted; though it falls short of the recommendations of the General Board, it indicates an awakening to our naval shortcomings and a desire on the part of the people to correct them. The fleet we already have, though behind the British and German Navies in size, still affords cause for gratification as to quality. It may be fairly claimed in no boastful temper that our individual first-line ships, in construction, in guns, in ammunition, and in gunnery, acknowledge no superior. This is encouraging, but not satisfying. So much remains to be done that more cannot be said than that a fair start has been made.

Dramatic Naval Fight Off Dover

Night of April 20, 1917

A FLOTILLA of six German destroyers, under Captain Gautier, crept out from the German naval base at Zeebrugge, Belgium, early in the evening of April 20, 1917, and crossed the English Channel, with the object of attacking Dover. After firing 650 shots at the Dover fortifications—said by the British report to have landed harmlessly in a plowed field—they cruised about with the object of encountering enemy merchantmen, or possibly of intercepting Premier Lloyd George, who was expected to cross the Channel that night.

The night was intensely dark but calm. Suddenly the raiders sighted two British destroyers on patrol duty, and instantly fired upon them at a range of 600 yards. The British responded by closing in swiftly upon them and trying to ram the leading German destroyer. In the eventful five minutes that followed there was a boarding encounter with cutlasses and bayonets, recalling the days of wooden warships, and it ended with the sinking of two of Germany's newest and largest destroyers, the G-85 and G-42, and the damaging of two others, as the raiders disappeared at full speed in the darkness.

"Our vessels," said the British Admiralty report the next morning, "suffered no material damage, and our casualties were exceedingly slight in comparison with the result obtained. Our patrol vessels were handled with remarkable gallantry and dash, and the tactics pursued were a very fine example of destroyer work. We were fortunate in being able to save the lives of ten German officers and 108 men from the vessels sunk."

The day after the battle twenty-eight German bodies were washed ashore at Dover, and these, with twenty-two British dead, were buried there with full military honors. The German dead each bore a floral wreath from the Vice Admiral at Dover, inscribed "To a Brave and Gallant Enemy."

The story of this engagement, com-

plied by the British Admiralty from accounts of officers and men who participated, is one of the most stirring in the naval annals of the war. The British destroyers Swift and Broke, on patrol duty, were steaming on a westerly course in the darkness when they sighted the Germans, who instantly opened fire. The Swift replied and tried to ram the leading enemy destroyer. She missed ramming, but shot through the German line unscathed, and, in turning, neatly torpedoed another boat in the enemy line. Again the Swift dashed at the leader, which again eluded her and fled, with the Swift in pursuit.

In the meantime the Broke had launched a torpedo at the second boat in the line, which hit the mark, and then opened fire with every possible gun. The remaining German boats were stoking furiously for full speed.

The Broke's commander swung around to port and rammed the third boat fair and square abreast the after funnel. Locked together thus, the two boats fought a desperate hand-to-hand conflict. The Broke swept the enemy's decks at pointblank range with every gun, from main armament to pompom, maxim, rifle, and pistol.

Two other German destroyers attacked and poured a devastating fire on the Broke, whose foremost gun crews were reduced from eighteen to six men. Midshipman Donald Gyles, although wounded in the eye, kept all the foremost guns in action, he himself assisting the depleted crews to load. While he was thus employed, a number of frenzied Germans swarmed up over the Broke's forecandle out of the rammed destroyer and, finding themselves amid the blinding flashes of the forecandle guns, swept aft in a shouting mob.

The midshipman, amid the dead and wounded of his own gun crews, and half blinded himself by blood, met the onset single-handed with an automatic revolver. He was grappled by a German, who tried to wrest the revolver away.

Cutlasses and bayonets being among the British equipment in anticipation of such an event, the German was promptly bayoneted by Seaman Ingleson. The remainder of the invaders, except two who feigned death, were driven over the side, the two being taken prisoner.

Meanwhile, the Swift continued her pursuit, but slight injuries which she received earlier in the action prevented her from maintaining full speed, so she abandoned the chase and sought fresh quarry. Sighting the outline of a stationary destroyer, from which shouts were heard, the Swift approached warily, with her guns trained, to find that it was the destroyer which had already been rammed by the Broke. The Germans were bellowing: "We surrender."

Fearing treachery, the Swift waited, and presently the destroyer keeled over and sank stern first, the crew jumping into the water.

As no other enemy was visible, and the action, which had lasted approximately five minutes, appeared to be over, the Swift switched on her searchlights and lowered boats to rescue the swimmers. Those who remained of the crews of the Swift and the Broke, after exchanging details of the action, cheered each other until they were hoarse.

The British casualties are set down as comparatively slight, and the spirit of the wounded is illustrated by the conduct of the Broke's helmsman, Seaman William Rowles, who, though hit four times by shell fragments, remained at the wheel throughout the action, and finally only betrayed the fact that he was wounded by reporting to his Captain, "I am going off now, Sir," and fainted.

Two minutes after ramming, the Broke wrenched herself free from her sinking adversary and turned to ram the last of the three remaining German boats. She failed in this object, but in swinging around succeeded in hitting the boat's consort on the stem with a torpedo. Hotly engaged with these two fleeing destroyers, the Broke attempted

to follow the Swift in the direction she was last seen, but a shell struck the Broke's boiler room, disabling her main engines.

The enemy then disappeared in the darkness. The Broke, altering her course, headed in the direction of a destroyer, which a few minutes later was seen to be heavily afire, and whose crew, on sighting the British destroyer, sent up shouts for mercy. The Broke steered slowly toward the German, regardless of the danger from a possible explosion of the magazines, and the German seamen redoubled their shouts of "Save! Save!" and then unexpectedly opened fire.

The Broke, being out of control, was unable to manoeuvre or extricate herself, but silenced the treachery with four rounds; then, to insure her own safety, torpedoed the German amidships.

A number of the wounded only presented themselves in the sick bay the following day, one stoker giving the surgeon the ingenious excuse: "I was too busy, Sir, clearing up the rubbish on the stokers' mess deck."

Captain Evans, commander of the destroyer Broke, is the well-known antarctic explorer and was the last man to see Scott when they parted 145 miles from the south pole.

The German Government reported the sinking of a British destroyer in this fight, asserting that it was hit by a torpedo amidships and was seen to sink stern foremost within five minutes. It also stated that a heavy explosion was heard in another British destroyer, while a third was seen to have a large hole in the side. The British Admiralty twice issued formal denials, asserting flatly, "There was no loss on our side."

Dunkirk, on the French side of the Channel, was the scene of a similar German destroyer raid on the night of April 24-25. The coast batteries replied to the gunfire, and British and French patrol ships engaged the enemy, who retreated in the direction of Ostend. One French torpedo boat was sunk in the brief action.

The Death Agony of a Submarine

Story of a Survivor

THE Monge, a French submarine, was rammed by an Austrian warship and sunk in the Adriatic on Dec. 29, 1915, and as its crew was taken prisoner the details of its destruction remained unknown for more than a year. Then the following vivid letter from one of the imprisoned members of the crew found its way into print. After describing the impact of the surface ship, the writer continues:

"The water enters in torrents. The safety hatch is closed, but the Monge descends very swiftly; it reaches a depth of 200 feet, and the plates crack under the pressure of the water. We give ourselves up as forever lost. Our vessel is being crushed; we feel it flattening in upon us. No one says a word, but everybody works. Orders are executed as in ordinary times; no panic, not a cry.

"We are facing the most certain and perhaps the most hideous death, yet our commander is superb in his coolness, and he has a crew that is worthy of him. The steel braces supporting the hull—bars as thick as my fist—are twisted like so many wires. The accumulators fall down on each other; the electric current is intensified, the fuses burn out, the acid decomposes—it is the second phase; after the crushing comes asphyxiation.

"'Courage! Courage! We are rising!' That is the cry of the second torpedo master, for to him belongs the most delicate and certain of all our remedies. In fact, we feel that we are rising, and in a minute or two we have gone from a depth of 200 feet to the surface. We are saved!

"Alas! A third ordeal. The Austrians have seen us and begin shelling us at short range. A single shell pierces our hull. The commandant orders for the third time: 'To your posts for the dive!' This time all is indeed ended; the motors no longer act, none of the machinery runs, and the water keeps pouring in. Everybody goes to his post without a murmur, and yet we all know that this time death awaits us—and what a death! The commandant changes his mind. Our vessel is lost; why sacrifice the crew? He lets his arms drop, and two big tears roll down his cheeks, tears of pride and of impotence.

In a calm voice, however, he tells us to save ourselves. The impossible had been attempted; we could give up with a light heart.

"Before rising to the surface the commandant asks us to cry three times, 'Vive la France!' and to sing the 'Marseillaise.' Such were the last words and orders of the man who was and remained the commandant of the Monge, for he chose not to leave his beloved boat. As soon as we reached the deck we complied with his request and thrice shouted 'Vive la France!' and sang the refrain of the 'Marseillaise.' When the water rose to our waists we had only time to throw ourselves into the sea. The Monge sank on Dec. 29, 1915, at 2:30 in the morning. There were three deaths—the commandant and two mechanician quartermasters."

The French Government has honored the memory of Lieutenant Morillot, commandant of the Monge, by giving his name to a ship captured from the enemy.

Military Operations of the War

By Major Edwin W. Dayton

Inspector General, National Guard, State of New York; Secretary, New York Army and Navy Club

Major Dayton has long had the official recognition of the United States War Department as an authority on strategy and tactics. The article here presented is the fourth in a series which he is writing for *CURRENT HISTORY MAGAZINE*, covering in a rapid and authoritative narrative all the military events of importance since the beginning of the great European conflict.

IV.—The Tragic Story of the Dardanelles

AS the year 1915 opened, the long intrenched western front presented the condition which it soon became the fashion to describe as a "stalemate." Indeed, on this front the contest did resemble a chessboard contest in which master players had fought each other to a standstill. The Germans held practically all of Belgium and a very valuable slice of Northern France, but, although their defense of the invaded territories seemed well-nigh impregnable, it was evident that they could not hope to renew the effort of the past Summer to reach either Paris or the Channel ports.

On the other hand, England's small professional army had been almost annihilated in the hard battles in Northern France, and Lord Kitchener's optimistic prediction that huge new armies would be ready for service by May, 1915, suggested that a great allied offensive would not be possible before that time. France held by far the larger part of the long battle line, and Joffre was busy eliminating the unfit from high commands and installing in their places soldiers whose virtues had been discovered under fire. Both France and England began to realize what was needful in artillery and munitions, and in addition to enormous orders placed in America the home production of shells and guns was multiplied many times over.

In the comparative pause which distinguished the early part of the year the whole administrative system tried to tone itself up to the strenuous requirements of the time—much confusion had been caused by accepting for service on the

firing line skilled mechanics whose services were more needed in the munition works. While these errors were being corrected both London and Paris began to smoke out the host of slackers who had found safe berths at home. On the eastern front all the world felt that, aside from the crushing defeat at Tannenberg, the Russians had done remarkably well. Their problem would never be a lack of men, but the scarcity of munitions was serious. The northern seaport at Archangel was sealed by the arctic ice, and the Japanese shipments had a long journey across Asia by the Trans-Siberian Railway.

Situation of Central Powers

Germany had failed to make the war a short one by overwhelming and eliminating either of her opponents in the first rush of the fighting. The prodigal use of artillery necessitated economy for the Winter months while new supplies were manufactured. Much, too, was needful to help Austria to build up a more efficient fighting force. The armies of the Dual Monarchy had crumbled utterly in Poland, Galicia, and Serbia. It seemed at that time as though Austria might even prove an easy road for an allied army aiming at the heart of Germany from the south. Serbia's triumph on the ridges had fired Italy with an ambition to win Trent in the Alps and Trieste on the Adriatic.

The astonishing failure of the Austrian armies in the first six months of the war not only embarrassed the German General Staff by compelling the dispatch of reinforcements to the south-

east, but added materially to political difficulties. Italy, benevolently neutral and remembering the ties of the late alliance, could be a great help in reaching the markets of the outside world—Italy joined to the Allies would be a new and serious danger along the weak Austrian frontier. Rumania, too, was likely to be dangerously influenced by the apparent impotence of Austrian arms.

It is by no means impossible that the real historians who write of this war a generation hence may see that the best time for the war to have ended was in the beginning of 1915. The combatants as yet included only the original groups. The savage fighting and enormous destruction of property, while already serious, had nowhere reached the deadly development of the later periods. It then began to be evident that the war could not be a short one, and that its cost in blood and treasure would impose heavy burdens on mankind for many generations. Really determined action on the part of the leading powers not then involved in the war might possibly have halted the carnage. It was nearly two years later when Germany suggested peace, and the suggestion fell on ears deafened by what happened in 1915 and 1916.

What had been done in 1914 could never be forgotten, nor perhaps forgiven, but this period was one in which the dark future began to be correctly estimated. England still shuddered at the prospect of compulsory service, and the best blood of France was being drained. Germany must have been aware that succeeding years would be certain to roll up a great preponderance of man power on the allied side. Possibly it was the Prussian system which closed the mouths of those who might wisely have proposed to end the war then on the best terms possible.

British in Mesopotamia

England had declared war on Turkey in November, and on the 7th of that month a brigade of regular infantry from India (mostly native troops) captured a Turkish fort at Fao, a little town at the head of the Persian Gulf.

The British troops sailed on up the Schatt-el-Arab, which receives above Basra the combined waters of the Euphrates and the Tigris. An intrenched camp was established at Sanijeh, and here presently two more brigades arrived from India. After winning a battle at Sahil the combined military and naval forces advanced upon the important city of Basra, which was easily captured on Nov. 23. Early in December the fortified town of Kurna, fifty miles above Basra, was captured, and since then the British have remained in undisputed control of the whole delta. Bagdad, Turkey's main military station in Mesopotamia, is more than 300 miles to the north on the Tigris. This short and successful campaign gave Britain control of the region from which a Turkish force under German direction might have threatened India.

Defeat of Enver Pasha

In January, 1915, both Turkey and Russia had armies in Northern Persia, where on the 30th of the month, after a severe defeat, the Turks lost Tabriz, which they had occupied some time before. Several small Russian columns invaded Kurdistan, but were held close to the frontier by the vigorous resistance of Turkish regulars moved up from the interior.

Meanwhile a Russian army numbering about 100,000 under General Woronzov began an advance toward Erzerum, the strongly fortified Turkish base in Armenia. Enver Pasha, with a Turkish army considerably stronger, defeated the Russians between Kaprikeui and Khorasan just before Christmas. Enver attempted an elaborate enveloping manoeuvre, which involved well-nigh impossible marches by separate corps through high mountain passes choked with snow and impassable for either artillery or supply trains. One after the other the separated Turkish corps were defeated, although they all fought well, and by the middle of January the remains of Enver's army were in full retreat upon Erzerum, having lost probably one-third of their strength.

This disaster denied to Austria the

help that a successful Turkish diversion against Southeastern Russia would have provided. A successful Turkish campaign would certainly have diverted some of the Russian forces which were then threatening to pierce the Carpathians and invade the Plains of Hungary.

Egypt and the Suez Canal

On Dec. 17, 1915, England proclaimed Egypt to be a British protectorate, and a strong British force was organized under Major Gen. Sir John Maxwell to meet the attack which it was expected would be made upon the Suez Canal. Late in November there was a skirmish on the east side of the canal, at Katyeh, between Bedouins and the British Camel Corps, and late in January skirmishing was renewed with small Turkish detachments which had crossed the 130 miles of desert east of the canal. In the first week of February a Turkish force of somewhat under a division attempted to cross the canal. The British troops were greatly helped by the gunfire of a number of British and French warships in the Canal, and by the end of the week the Turks were in full retreat across the desert. The lack of water had made it impossible for the Turks to move over the desert an army strong enough to cross the canal and invade Egypt, and the difficulty of the terrain kept the victorious British from pursuing the defeated enemy, who were able to carry off their guns and transport.

Attack on the Dardanelles

Gallipoli Peninsula is a hilly, irregular tongue of land something more than fifty miles in length and varying from three to ten miles in width. On the west the Aegean Sea breaks on a rugged shore, with a few stretches of sandy beach where boats may land. The eastern side of the peninsula guards the strait of the Dardanelles, through which all sea traffic must pass to Constantinople and the Black Sea beyond. This strait, from three-quarters of a mile to five miles in width, but averaging between two and three miles, is the most important waterway in the world, because it forms the only outlet by water

for the whole vast region of Southern Russia, Bulgaria, Rumania, Syria, and Turkey, which have coasts touching the Black Sea.

The military importance of this sea channel in the present war was tremendous, for if the Allies could seize the Dardanelles they would cut off the

ADMIRAL DE ROBECK,
Naval Commander at Dardanelles

Asiatic Turks and minimize the danger of German attacks upon Egypt or India. Even more important would be the opening of an all-the-year route by which Russian grain could come out to England and France in ships which should carry back guns and munitions so greatly needed in Russia. In addition, and perhaps paramount to all other incentives for a campaign against Constantinople, was the fact that the ancient city on the Golden Horn was the one great prize in Europe that might enrich the spoils of the victors. Berlin and Vienna would remain German and Austrian, after the final treaty should be signed, but the Turk's capital might be expected to change hands and fly a new flag.

Russia seemed likely to force a way through the Balkans from the north. England determined with French help to reach the goal first—by naval means if

possible, but by a combined military and naval force in case the strait should prove too strong for the marine attack alone. There was a precedent in British naval annals for the belief that a fleet might force its way through, for in February, 1807, seven ships of the line under Sir John Duckworth forced the

Operations at Gallipoli

England seized the excellent harbor of Mudros in the Greek Island of Lemnos and made that the base of the naval forces operating against Gallipoli. On Feb. 18 the British and French fleets attacked and soon silenced the old-fashioned stone forts at the entrance to the Dardanelles, but beyond these antiquated forts lay a series of mine fields blocking the channel. Mine sweepers under cover of a heavy fire from the fleet endeavored to clear the channel and open a way for the fighting units of the fleets. The operations of the mine sweepers were made very difficult by the fire of field batteries and heavy howitzers concealed among the hills and shifted cleverly whenever located by the attacking forces. In the middle of March, in the midst of a heavy gun fire, the Turks skillfully directed some large mines, which sank three battleships, two British and one French.

After a month of fruitless and costly fighting it was decided that the strait could not be forced by naval attack alone, and a combined British and French army was mobilized to land and attack the Turks in co-operation with the fleets. The French Division of Territorials and Senegalese was commanded by General d'Amade. General Ian Hamilton had the Twenty-ninth Division of British regulars with the Royal Naval Division and the Australian and New Zealand Army Corps. These forces were concentrated in Mudros Harbor and held until the Spring gales had blown themselves out and there was promise of a quiet sea for the very difficult operation of landing the expeditions through the surf.

On April 25, at daybreak, the French and British fleets bombarded all the Turkish positions and the transports sent their human freight ashore. The French landed on the Asiatic side of the strait to attack the powerful fortifications on that side. The British effected a number of landings on the southern end of Gallipoli, but the main attacks were intended to be those near Gaba Tepe and Cape Helles.

The forces attacking in the Cape Helles region landed at three small

SIR IAN HAMILTON,
British Commander at Gallipoli

passage, silencing forts and sinking Turkish ships. The Turks then fired stone shot two feet in diameter, but when the Italians attempted to rush a fleet of torpedo boats through in a night attack in 1910 they were defeated by modern guns and searchlights installed by German engineers. The fortifications were greatly strengthened and the artillery increased after the outbreak of the war in August, 1914. The Turkish coasts were difficult for attack, and the swift current of the strait made the use of floating mines a dangerous adjunct to the shore line defenses. The forts on both sides of the Dardanelles were strongly garrisoned, and a large mobile force of Turkish infantry was intrenched in the very difficult hill country of the peninsula. A number of German officers were on duty with these Turkish forces.

beaches, where great difficulties were overcome by extreme bravery, but the losses involved in these landing operations were appalling. The Turkish artillery and machine gunners were firing at ranges from 100 to 300 yards. Barbed wire entanglements had been set in the surf off shore, and the little beaches were mined. Strong detachments of Turkish infantry were well concealed on the rough, scrub-covered hillside, and were dislodged in savage bayonet fighting by the survivors of the landing parties. Large numbers of British soldiers were killed in the boats by machine gun and rifle fire.

Christening of the "Anzacs"

The Australians won imperishable fame at the beach about fifteen miles north of Cape Helles, near Gaba Tepe, where they fought all day and all night singing their song, "Australia Will Be There." The Turks attacked constantly with heavy infantry detachments, but the fleet moved in and rained projectiles upon them. Finally, after a terrific ninety-six-hour battle, the Australian and New Zealand Army Corps won and fortified their position. In commemoration of their heroism this hitherto unnamed beach became famous under the name A-N-Z-A-C.

The British won a footing along the southwestern shores of Gallipoli at a cost to the battalions engaged of from one-third to one-half of their strength. The survivors were too exhausted to drive the attack into the hills, and the Turks were given a breathing spell in which they brought up reinforcements of men and munitions.

The French Corps landed on April 26, at V. Beach, below Sedd-el-Bahr, and, not encountering very great opposition, fought their way inland for a mile on the following day and joined hands with the British on their left. The united forces attacked the Turkish town of Krithia on April 28, but when within about 1,300 yards of the objective were forced back by powerful Turkish attacks. They dug themselves in finally and held their lines until the Turks delivered terrific new attacks on May 1. The first lines of the

Turkish infantry had been deprived of cartridges and attacked with the bayonet only. They carried the front of the position, broke through to the second line and in the darkness of a moonless night cut their way through both French and British until stopped by the British supports. This battle lasted five days, and night after night the Turks attacked with the bayonet.

By May 5 the British Twenty-ninth Division had lost one-half its men and nearly 70 per cent. of its officers. Nevertheless, on May 6 the Allied forces mustered strength and courage to attack the hill of Achi Baba, which dominated the lower ground toward the water held by the French and British. After an all-day battle, in which the losses were extreme, the line had won an advance of 200 yards. This battle continued for days and culminated in a further advance of some 600 to 700 yards on the evening of May 8, when some of the brave Australians and New Zealanders had been brought down from Anzac to help. There were no other great battles, but there was constant fighting through the remaining weeks of May.

Achi Baba Almost Taken

On June 4 the Allies made another grand attack, having meanwhile been reinforced by the newly arrived Forty-second Division. After a prolonged bombardment an advance of 600 to 700 yards was won and the summit of Achi Baba almost taken. The Turks rallied, and in a brave counterattack recaptured a field work called the Haricot, which the French infantry had stormed and garrisoned with Senegalese troops. From this position the Turks enfiladed the British lines and forced both the British Royal Naval Division and the Manchester Brigade to abandon the lines which they had won at a terrible cost.

On June 21 the French won again the Haricot work, and on the 28th the British, in a brilliant attack, advanced a thousand yards. This success was especially notable because the 10,000 British soldiers were all new men of not over six months' training, who charged up hill in an attack perfectly co-ordi-

nated and carried fortified lines with the bayonet. When the first attacking line had settled into the captured position another 10,000 fresh troops charged and captured three more Turkish lines. These 20,000 men were not enough, however, to push the attack further. At midnight, June 29-30, a Turkish attack by a force of 30,000 men at Anzac was repulsed with great loss.

While the allied forces awaited the arrival of heavy reinforcements promised for midsummer a plan was matured for a great attack. This intended that the troops near Cape Helles should fight a holding battle while a powerful attack to the north at Anzac should aim to win the dominating heights midway of the peninsula from which infantry might gain control of the highway to Constantinople and artillery could shell by direct fire the Turkish fortifications along the strait. In addition the new forces were to be landed still further north at Suvla Bay, three miles above Anzac, and attempt to turn the Turkish right flank. While these attacks were to be concerted, the actions must necessarily be separate battles fought by armies separated from each other. The plan was for the attack at Anzac to be made on Aug. 6 and on the night of the 6th-7th (moonless) the new army was to be landed at Suvla.

The splendid Australian troops at Anzac in July dug and hid under cover twenty-five miles of dugouts for the concealment of the 30,000 men who were to reinforce them preparatory to the great attack. The new troops were landed with great caution at night to hide the arrangements from the watchful Turks, always ready to hurry reinforcements to any threatened part of the line. In addition to providing a hiding place for the 30,000 newcomers the Australians carried ashore and hid hundreds of draft animals and hundreds of tons of supplies. The navy brought over a distance of 500 miles the eighty tons of fresh water required by this army daily, and this, too, was stored in hidden tanks ashore.

Battle of Suvla Bay

The battle in the Cape Helles sector opened promptly and raged with great

ferocity from Aug. 6 to Aug. 13. Its object was achieved, for not only was the large original force of Turks held there, but strong reinforcements were brought down from the north.

For several days the warships bombarded the Turkish positions on the Lonesome Pine plateau, which was the immediate objective in the Anzac sector. Late in the afternoon of Aug. 6, after a whirlwind of shells had brought the bombardment to its culmination, the Australians leaped from their trenches and charged the Turkish lines. They won the covered trenches and in five days and nights of constant counterattacks succeeded in holding them. This long struggle was almost all the time a hand-to-hand duel with bayonets and bombs.

As the battle at Lonesome Pine developed, the troops destined for the attack to the north left Anzac and marched along shore to the scene of their effort. Several strong outposts were rushed most gallantly, but the Turks held the main hill crests valiantly, and all efforts to dislodge them failed. As this night battle was in progress transports crowded into Suvla Bay and the new 30,000 men were landed. The beach was mined, and defended by riflemen as well, so that the new army began to lose men as it stepped ashore. The mission of this army was to seize the high hills inclosing the low-lying basin back of the bay, but they suffered vital hours to slip through their fingers for one reason or another, and meanwhile the Turks, at midnight on the 8th-9th, got strong forces into the critical positions and thereby wrote failure at the bottom of this gory page in English military history.

On the morning of Aug. 8 the British and Australian regiments renewed the battle north of Anzac and gained some promising successes, although at appalling cost. The delayed advance on their left from Suvla nullified these successes and made the battle a useless waste of life. British regiments which had won one of the most vital hill crests were shelled and decimated by their own war-

ships, after which a huge force of Turkish infantry counterattacked and practically annihilated several British regiments.

The great battle of Aug. 6-10 was a British defeat and practically ended the fighting on Gallipoli, although some minor successes were achieved later in August among the hills back of Anzac. In November a violent blizzard raged for several days and hundreds of British soldiers were frozen to death, while many thousands were invalided home as the result of extreme exposure. In December the Anzac and Suvla positions were evacuated, and early in January, 1916, the last British soldiers left Gallipoli from the Cape Helles sector.

The failure of the Turks to attack the British while evacuating their positions remains one of the unsolved riddles of the war. The British losses in the Gallipoli campaign were 115,000 men killed, wounded, and missing, with about 100,000 more sick. While the attempt toward Constantinople persisted it kept a large army of several hundred thousand Turks away from other fields. Meanwhile, the German successes in 1915 against Russia relieved the Turk from the threat of a Russian attack from the north.

When the allied forces were withdrawn from the peninsula practically all the veteran Turkish troops were freed for use in Rumania or Asia Minor. Throughout the terrific fighting in April, June, and August the Turks fought with magnificent courage and proved themselves equally valiant in both attack and defense. They treated captured and wounded prisoners with real kindness. The British Twenty-ninth Division (regulars) and the Australian and New Zealand Corps won imperishable fame.

Russian Front in 1915

In January, 1915, the Russian armies were making a determined stand on a long front running from the Masurian Lakes south inside the Prussian frontier until above the Narev it curved out into Russia and continued west of Mława, east of Płock, and over the Vistula, near the mouth of the Bzura. Thence running southeast to Bukowina, below Czerno-

witz, this long battle line reached the Rumanian frontier, having attained a total length of nearly 900 miles, the greatest embattled line in the world's history.

The Germans faced the Czar's troops down as far as the Nida, where they joined the left flank of the Austrian armies, which had been stiffened by the introduction of several complete German corps. Przemyśl was still resisting the Russians, but was surrounded and closely invested.

In January the Grand Duke Nicholas undertook several advances on the flanks — Russian cavalry cut the railway in East Prussia, and in the Carpathians the Pass of Kirlibaba was stormed. Early in February von Mackensen launched another attack upon Warsaw, having concentrated nearly 150,000 men along the Rawka for a new frontal attack upon the great Polish city. Under cover of a heavy bombardment and a blinding snowstorm the battle began, and the Germans pushed a wide wedge some five miles into the Russian line before they were checked by Feb. 4. The German losses are estimated to have been in the neighborhood of 20,000 men, and much of the ground was readily yielded to Russian counterattacks.

Following this reverse the great German strategist launched two major operations directed against the Russian right and left flanks. In the first week of February the Russian thrust in East Prussia had very nearly reached Tilsit, with the left flank of the expedition at Johannisburg. Then Hindenburg struck, and with a much superior force succeeded in enveloping the Russian right at Pilsken and Gumbinnen. This part of the Russian Army was driven into the forest region above Suwalki and completely broken up. Such units as escaped back into Russia made their way separately, and quite without further tactical connection with their comrades heavily engaged between Lötzen and Johannisburg. The Russians here fought a stubborn rear guard action with much success, and although defeated they succeeded in retreating over their own frontier without suffering very great loss. The Germans

captured 80 guns and something over 30,000 prisoners, besides carrying the war out of Prussian and into Russian territory, where it has remained ever since.

Von Hindenburg undoubtedly planned to renew the attack upon Warsaw by a flank movement which should cut the railway communications to the north, but the Russians resisted successfully efforts aimed at Grodno and Ossowietz, and by the middle of March vigorous counter-attacks drove the Germans back to within ten miles of the frontier. Meanwhile another German army on a front of twenty-five miles between Mława and Chorzele struck hard toward the south, and on Feb. 24 captured Przasnysz, taking a number of guns and half a brigade. Strong Russian reinforcements came up, and although many of the men were armed only with bayonets and bombs, Przasnysz was recaptured on Feb. 26.

Winter in the Carpathians

In the south General Brusiloff renewed his efforts to win the Carpathian passes and open a door for the Russian invasion of Hungary. While he attacked from Dukla to the Uzsok another column struck close along the Rumanian frontier, and on Jan. 6 took Kimpolung and on the 17th captured the Pass of Kirlibaba. About this time the Austrians began to show a greater determination to drive the menace of invasion out of the Carpathians, and General von Linsingen, having taken the passes east of the Lupkow, began to invade Galicia.

At the ridge of Koziowa Brusiloff withstood the Austrian rush and stopped the advance of the Austrian left wing. The right wing, however, pushed up through Bukowina and took both Czernowitz and Kolomea. On March 3 Stanislaw was taken, which brought the Austrians within seventy miles of Lemberg. Soon Russian reinforcements arrived, and Stanislaw was retaken. The latter part of March saw the Russians still holding the Dukla, while the passes east of the Uzsok were firmly held by Austria.

On March 22, after a siege of almost seven months, the fortified city of

Przemysl was taken by the Russians. Accounts of the military conditions prevalent among the large forces which had been shut up in this strongly fortified position for so long a time indicated quite clearly what was the matter with the Austrian army. While the soldiers were reduced to almost starvation rations, general officers and their staffs continued to live openly a life of luxurious extravagance. The selfishness and incompetence of the superiors were naturally destructive of that morale among the troops without which no amount of training will secure the best results.

Attrition in the West

As 1915 dawned the battle lines in Belgium and France were about 500 miles long, and of that long line little more than 10 per cent. was held by the British and Belgians—the French defended nearly 90 per cent., and in addition to the battle casualties they lost many men from sickness caused by exposure in the trenches. Toward the north there was constant rain and sleet, while the positions in the Vosges and Argonne were buried deep in heavy snows. The fighting in the Winter and early Spring was confined to local attacks and counterattacks, usually favorable to the Allies.

The German artillery was decidedly less effective than it had been in the early months of the war. Large numbers of guns had been returned to German armories for repair, and it was said that more than 60 per cent. of the German shells fired at this time failed to explode. The German troops on the western front probably numbered 2,000,000 men.

Late in January the Allies made a spirited attack upon German positions east of Nieuport, among the sandy dunes of the Belgian coast, where they won part of an entrenched position, which enabled them to threaten the German trenches on the east side of the Yser. After this local success that part of the line lapsed into a dormant state for months.

In February the Germans blew up a British trench near Ypres, and there was

a seesaw battle near St. Eloi. The Princess Patricia's Regiment of Canadian Light Infantry in a sortie captured a German trench and many prisoners.

A severe battle raged near La Bassée on Jan. 25-26, when the Germans broke through part of the British lines and inflicted heavy losses upon the brigade of Guards regiments holding that part of the intrenchments. The Black Watch lost a great many officers and men, and the regiments engaged included such famous units as the First Scots Guards, First Coldstreams, First Cameron Highlanders, King's Royal Rifles, Second Sussex and London Scottish. The driving back of the British line caused the French left under Maud'huy to be dangerously exposed, but the Germans failed to seize their opportunity to turn this flank. On the same day the Germans fought their way into Givenchy, but were ejected after a hard hand-to-hand struggle.

In the last days of January and the first of February a severe battle raged about the brickfield west of La Bassée, and it was here that Lance Corporal Michael O'Leary of the Irish Guards won the Victoria Cross by killing eight Germans and capturing two. In January and February there were local battles at Lens, Arras, and Roye, and an important battle followed a French attack above Soissons. At first considerable success attended this effort, but heavy German reinforcements were brought up and the French were driven back across the Aisne with the loss of several thousand men and about twenty guns. General von Kluck, the German commander, made a great effort to capture Soissons, but Maunoury blocked the effort by the skillful use of French artillery and infantry reserves.

In February and March the French carried on an almost constant series of attacks in Champagne, which compelled the Germans to bring heavy reinforcements from the north. Not a great deal of ground was won, but nearly 10,000 German dead were buried by the French and 2,000 prisoners were captured. Meanwhile in the Verdun region further toward the south fierce battles were

fought near Les Eparges and Pont-à-Mousson. In the Vosges the French and then the Germans won successes in the region of Mülhausen, Cernay, and Hartmanns-Weilerkopf.

Neuve Chapelle

In March, 1915, the British forces in France numbered half a million men, with General Sir John French the Commander in Chief and Sir Douglas Haig commanding the First Army, from La Bassée to Estaires. General Sir Horace Smith-Dorrien commanded the Second Army, which held the lines up to the Ypres salient. On March 10 at 7:30 A. M. the British guns began to hurl a hurricane of shells upon the German trenches about Neuve Chapelle. Field guns, field howitzers, sixty-pounders, coast-defense guns, and fifteen-inch howitzers had all been crowded together for this bombardment, which flung four shells to every yard in the sector attacked during the thirty-five minutes before the range was increased and the storm of explosives broke over the town itself. When the British infantry advanced they readily won the positions, which had been pounded into dust heaps by the artillery, and the town fell into their hands.

The moment appeared ripe for the capture of the ridge east of the town, which dominates the great highway from Lille to the south, but in certain places some of the units had failed to carry out their part of the great plan. The battle continued with the utmost intensity through the 11th and 12th, but the Germans prevented any further advance, and the net result of the great effort was the capture of Neuve Chapelle. On the 14th and 15th the Germans developed a great offensive at St. Eloi, a village fifteen miles north of Neuve Chapelle. They won the village, but lost it later when General Haig's men attacked in great force.

The battle at Neuve Chapelle was a bitter disappointment to the British. The casualties were very heavy and were in part caused by the faulty ranging of their own artillery. The staff plans were in part imperfect, and altogether this effort was looked upon as a costly failure, with much of the fault in high places.

Final Official Reports on Gallipoli

Vice Admirals de Robeck* and Wemyss Tell of the Navy's Part in the Withdrawal of Troops

THE British Admiralty published, on April 11, 1917, the dispatches from Vice Admiral Sir John M. de Robeck, late Vice Admiral Commanding the Eastern Mediterranean Squadron, and Vice Admiral Sir Rosslyn E. Wemyss, late Senior Naval Officer, Mudros, describing the naval operations in connection with the withdrawal of the army from the Gallipoli Peninsula in December, 1915, and January, 1916. These communications furnish details of the all-important part played by the British Navy in what was one of the most difficult operations of the war.

Vice Admiral Wemyss, whose dispatch is dated Dec. 22, 1915, deals with the withdrawal from Suvla Bay and Anzac, which occurred eighteen days before the final evacuation of the peninsula. This preliminary operation was carried out in three stages. The principle decided upon for all three stages was secrecy and the attempt to take the enemy entirely by surprise. Every effort was therefore made during the whole of the operations to maintain the beaches, offing, &c., in their usual appearance, and all embarkations were carried out during the dark hours. The increase in the number of motor lighters, boats, &c., in use at the beaches was hidden as far as possible during the daytime. The preliminary stage was completed satisfactorily by Dec. 10, when the definite orders to evacuate were received.

It had been computed that ten nights would be required for the intermediate stage, on each of which 3,000 personnel and a proportion of guns and animals would be embarked from each beach. The estimate was eventually reduced, special efforts being made in order to take advantage of the fine weather. The intermediate stage was completed on the night of Dec. 17-18, and from the absence of any unusual shelling of the beaches during these nights it was apparent that

the enemy had no idea of the movement in progress. Some 44,000 personnel, nearly 200 guns, numerous wagons, and 3,000 animals were evacuated during this period, together with a large amount of stores and ammunition.

A Risky Operation

The final stage commenced on the night of Dec. 18-19, and was completed on the night of Dec. 19-20. The weather conditions, however, proved to be ideal. On each of the two nights it was necessary to evacuate rather more than 10,000 personnel from each beach, and for this special arrangements were necessary. The chief possible difficulties to contend with were two—first, the bad weather to be expected at this season, second, interference by the enemy.

After some heavy winds, fine weather set in with December, and, except for a strong northeasterly wind on the 15th, continued until twenty-four hours after the completion of the evacuation. This prolonged period of fine weather alone made possible the success which attended the operation.

The final concentration of the ships and craft required at Kephalo was completed on Dec. 17, and in order to prevent enemy's aircraft observing the unusual quantity of shipping a constant air patrol was maintained to keep these at a distance. Reports of the presence of enemy submarines were also received during these two days; patrols were strengthened, but no attacks by these craft were made. The evacuation was carried out in accordance with orders. No delays occurred, and there were no accidents to ships or boats.

Destruction of Stores

On the night of Dec. 18-19 the embarkation was finished at Suvla by 3 A. M., and at Anzac by 5:30 A. M., and by daylight the beaches and anchorages at

these places had resumed their normal aspect. The second night's operation, so far as the navy was concerned, differed in no wise from the first, precisely the same routine being adhered to. The last troops left the front trenches at 1:30 A. M., and the signal that the evacuation was complete was received at 4:15 A. M. at Anzac and 5:39 A. M. at Suvla.

A large mine was exploded at about 3:15 A. M. by the Australians, and at Suvla all perishable stores which had not been taken off and which were heaped up in large mounds with petrol poured over them were fired at 4 A. M., making a vast bonfire, which lighted everything round for a very long distance. In spite of all this, the enemy seemed perfectly unaware of what had taken place. As day dawned, soon after 6:30, the anchorages of both places were clear of all craft, except the covering squadrons, which had been ordered up during the night, and when the sun had sufficiently risen for objects to be made out, the bombardment of the beaches commenced with the object of destroying everything that remained. At Suvla this consisted only of some water tanks and four motor lighters, which had been washed ashore in the gale of Nov. 28 and never recovered, owing principally to lack of time. At Anzac it had been deemed inadvisable to set a light to the stores which it had been found impossible to embark, so that here the bombardment was more severe, and large fires were started by the bursting shell. Admiral Wemyss continues:

A curious spectacle now presented itself, certain areas absolutely clear of troops being subjected to a heavy shell fire from our own and the enemy's guns. It seems incredible that all this work had taken place without the enemy becoming aware of our object, for, although the utmost care was taken to preserve the beaches and offing as near as possible normal, yet it proved quite impracticable to get up boats and troop carriers in sufficient time to carry out the night's work, and yet for them not to have been visible from some parts of the peninsula. At 7:25 A. M. I ordered the squadron to return to Kephala, leaving two specially protected cruisers to watch the area. These subsequently reported that they had caused a good deal of damage among the enemy when they eventually swarmed down to take possession of the loot, the realization of which, I trust,

was a great disappointment to them. All the arrangements were most admirably carried out, and the time table previously laid down was adhered to exactly. * * *

Before closing this dispatch I would like to emphasize the fact that what made this operation so successful, apart from the kindness of the weather and of the enemy, was the hearty co-operation of both services. The evacuation forms an excellent example of the cordial manner in which the navy and army have worked together during these last eight months. Nothing could have exceeded the courtesy of Generals Sir William Birdwood, Sir Julian Byng, and Sir Alexander Godley, and their respective staffs, and this attitude was typical of the whole army. The traditions of the navy were fully maintained, the seamanship and resource displayed reaching a very high standard. From the commanding officers of men-of-war, transports, and large supply ships to the midshipmen in charge of steamboats and pulling boats off the beaches, all did well.

Admiral de Robeck's Report

In the final operations, described by Vice Admiral de Robeck, the weather was not so uniformly favorable. Moreover, the difficulties were increased by the attentions of the enemy, who, however, thanks to the care and skill of our commanders, remained in entire ignorance of what was afoot.

Forty-eight hours before the evacuation was completed the number of men remaining on the peninsula was to be cut down to 22,000. Of these 7,000 were to embark on the last night but one, leaving 15,000 for the final night. At the request of the military the latter number was increased to 17,000. As few guns as possible were to be left to the final night, and arrangements were made to destroy any of these which it might be found impossible to remove, or which, by reason of their condition, were considered not worth removing.

The preliminary stage commenced on the night of Dec. 30-31, and terminated on the night of Jan. 7-8. During this stage all personnel except 17,000 were removed, as well as the majority of the guns and a great quantity of animals, stores, &c. The amount of stores remaining on shore after the preliminary stage was greater than was anticipated or intended; this was almost entirely due to the unfavorable weather conditions, and, as men were evacuated, to a shortage in working parties.

On Jan. 2 and 3 strong northeasterly winds blew all day; the morning of the 4th was calm, but the weather broke at 7 P. M., and by 11 P. M. it was blowing a gale. The transfer of guns, animals, and stores, &c., from motor lighters to transports and supply ships lying off the beaches was a matter of great difficulty under such conditions of weather.

Working Under Heavy Fire

During the whole of this period "V" and "W" beaches were subjected to a heavy and accurate shell fire from the enemy's batteries mounted on the Asiatic shore, and also from guns firing from positions to north of Achi Baba. All these guns were accurately registered on to the beaches, and the shelling continued day and night at frequent and uncertain intervals; that the actual loss of life from this fire was very small borders on the miraculous; the beach parties were completely exposed, and piers and foreshore constantly hit by shells while officers and men were working on them; even when resting in the dugouts security from enemy's fire could not be assured, and several casualties occurred under these conditions. The work on the beaches was practically continuous; during the daytime motor lighters, &c., were loaded up with stores, &c., to be transferred to storeships at night; by night the work was most strenuous.

During the whole time there remained the paramount necessity of preventing the enemy gaining intelligence of what was in progress; this added greatly to the difficulties of work during daylight. Enemy aircraft paid frequent visits to the peninsula; on these occasions, while the "Taube" was in evidence, animals and transports approaching the beaches were turned and marched in the opposite direction, and stores and horses already in lighters were even unloaded on to the beaches to give the appearance of a disembarkation.

On the afternoon of the 7th the enemy delivered a very heavy artillery attack against certain portions of our advanced position, probably the most intense bombardment our trenches in the Helles area have ever been subjected to. Attempts were made by the enemy to follow up

this bombardment by an infantry attack, but the few Turks who could be persuaded to quit their trenches were instantly shot down, and the infantry advance was a complete failure. This bombardment and attack most fortunately took place at a time when our forward position was fully manned, and when there were still about sixty guns in position on the peninsula, with a very large supply of ammunition.

Embarkation Difficulties

The enemy was certainly deceived as to the date of our final departure from his shores, and his artillery fore on the final night of the evacuation was negligible.

The decision arrived at on Jan. 6 to evacuate practically all the personnel of the final night from "W" and "V" beaches necessitated some rearrangement of plans, as some 5,000 additional troops had to be embarked from these beaches. To use motor lighters from the already crowded piers would have lengthened the operation very considerably, and it was therefore decided to employ destroyers to embark 5,200 men from the blockships, which were fitted with stagings and connected to the shore; thus existing arrangements would be interfered with as little as possible. The result was excellent. The destroyers, which were laid alongside the blockships, in spite of a nasty sea, being handled with great skill by their commanding officers, once more showing their powers of adaptability.

The necessary amendments to orders were issued on the morning of the 7th, and, in spite of the short notice given, the naval operations on the night of Jan. 8-9 were carried out without confusion or delay, a fact which reflects great credit on all concerned, especially on the beach personnel, who were chiefly affected by the change of plan. On the 8th the weather was favorable, except that the wind was from the south; this showed no signs of freshening at 5 P. M., and orders were given to carry out the final stage. The actual embarkation on the 8th commenced at 8 P. M., and the last section were to commence embarking at 6:30 A. M. By 9 P. M. the wind had fresh-

ened considerably, still blowing from the south; a slight sea got up, and caused much inconvenience on the beaches.

A floating bridge at "W" beach commenced to break up, necessitating arrangements being made to ferry the last section of the personnel to the waiting destroyers. At Gully beach matters were worse, and, after a portion of the 700 troops had been embarked in motor lighters and sent off to his Majesty's ship *Talbot*, it was found impossible to continue using this beach, (one motor lighter was already badly on shore—she was subsequently destroyed by gunfire,) and orders were given for the remainder of the Gully beach party to embark from "W" beach; this was done without confusion, special steps having been taken by the beachmaster to cope with such an eventuality. After a temporary lull the wind again increased, and by 3 A. M. a very nasty sea was running into "W" beach.

It was only by the great skill and determination displayed by the beach personnel that the embarkation was brought to a successful conclusion and all the small craft except one steamboat (damaged in collision) got away in safety. The last troops were leaving at 3:45 A. M., after which the beach personnel embarked. Great difficulty was experienced in getting the last motor lighters away, owing to the heavy seas running into the harbor.

This was unfortunate, as the piles of stores which it had been found impossible to take off, and which were prepared for burning, were lit perhaps rather sooner than was necessary, as were also the fuses leading to the magazine. The latter blew up before all the boats were clear, and I regret to report caused the death of one of the crew of the hospital barge, which was among the last boats to leave. It was fortunate that more casualties were not caused by the explosion, débris from which fell over and around a great many boats.

Operations a Complete Success

Admiral de Robeck attributes the success of the operations principally to:

- (a) Excellent staff work.
- (b) The untiring energy and skill displayed

by officers and men, both army and navy, comprising the beach parties.

(c) The good seamanship and zeal of the officers and crews of the various craft employed in the evacuation of the troops.

(d) The excellent punctuality of the army in the arrival of the troops for embarkation at the different beaches.

The navy [he continues] has especially to thank Generals Sir William Birdwood and Sir Francis Davies for their forethought and hearty co-operation in all matters. The staff work was above reproach and I hope I may be permitted to mention some of those military officers who rendered special assistance to the navy. They are: Major Gen. the Hon. H. A. Lawrence, Brig. Gen. H. E. Street, and Colonel A. B. Carey, R. E., the latter of whom performed work of inestimable value in the last few days by improving piers and preparing means of rapid embarkation from the blockships.

The program and plans as regards the naval portion of the operations were due to the work of my chief of staff, Commodore Roger J. B. Keyes, to whom too great credit cannot be given; to Captain Francis H. Mitchell, R. N., attached to General Headquarters; Major William W. Godfrey, R. M. L. I., of my staff; Captain Cecil M. Staveley, (principal beach master at Cape Helles;) Captain F. G. Talbot, in charge of the vessels taking part, and Acting Commander George F. A. Mulock, chief assistant to Captain Staveley.) The organization of the communications, on which so much depended, was very ably carried out by my fleet wireless officer (Commander James F. Somerville) and my signal officer, (Lieutenant-Hugh S. Bowlby.)

The naval covering squadron was under the command of Rear Admiral Sydney R. Fremantle in his Majesty's ship *Hibernia*, who had a most able colleague in Captain Douglas L. Dent of his Majesty's ship *Edgar*, whose ability had done so much to improve the naval support to the Helles army. The work of this squadron was conducted with great energy and was in every way satisfactory. It controlled to a great extent the enemy's guns firing on to the beaches. Whenever the enemy opened fire, whether by day or night, there were always ships in position to reply, a result which reflects much credit on the officer named. The Army Headquarters gave us again the invaluable assistance and experience of Lieut. Col. C. F. Aspinall in arranging details, and I cannot help laying special stress on this officer's excellent co-operation with my staff on all occasions.

A Wonderful French War Museum

The Val-de-Grâce and Its Record of What Science Has Done to the Soldiers of France

J. Ernest Charles, writing for *Les Annales*, Paris, has told this interesting story of the Musée du Val-de-Grâce, founded at the suggestion of Justin Godart, French Under Secretary of State, and established under the direction of Dr. Jacob, Professor in Val-de-Grâce College, with the co-operation of Drs. Pascal, Perret, Lefort, Latarget, André, and Rothschild. The article is specially translated for *CURRENT HISTORY MAGAZINE*.

MONUMENTS also have their destiny. The Val-de-Grâce, founded or developed by Anne of Austria as a thank offering to God for the tardy birth of the young Prince who was to become one of the most bellicose Kings of Europe, has long been the structure in Paris devoted especially to curing the ills caused by war. A hospital for soldiers, an advanced school for doctors and military surgeons, the Val-de-Grâce is now the museum where all the most wonderful achievements of science against the murderous weapons of war are exhibited.

Go to the Val-de-Grâce Museum of the Military Health Service, which Justin Godart, Under Secretary of State, took the lead in founding for the instruction of future generations. It will be a visit both stirring and sad, and yet comforting withal. You will be able there to follow the whole history of the war by the sufferings it inflicts and by the remedies, daily growing more efficient, which men of heart and of genius are creating to cure them. Science is fighting desperately to diminish the wickedness of men, and science is often victorious—especially French science. By its extraordinary activity and generosity it has done marvels.

Professor Fernand Widai, speaking of the vast strides of preventive medicine, the results of vaccination against smallpox, typhoid, cholera, which have abolished in this war those terrible epidemics of other wars, said: "Jenner's vaccination: English! Pasteur's vaccination: French!" The great life protecting discoveries have been made on this side of the trench line. Others have tried to dishonor science. Our learned men have

saved its good name. They have persuaded us that, despite all this methodical carnage, one could and should still have faith in a truly humanitarian science. And it is here, in these grave and somewhat melancholy rooms, that the elements of the story have been assembled.

Let it no longer be said that history is only for the entertainment of curious men. These archives gathered here, these reports of Health Service Directors, which intrepid seekers for truth will some day read; these memoirs of army surgeons imprisoned in Germany, these scientific announcements, these photographic documents, in short, this history of the war as seen from within, of war as it really is—in all these we have the materials for volumes yet to be written, and for many future discoveries. Scientists and students, standing before the varied wealth of this anatomical-pathological museum, which exhibits the infinite diversity of lesions produced in the human body by modern engines of war, will hold fruitful discussions.

Marvels of Surgery

But the great masses of the people themselves will be overwhelmed with admiration in the presence of the results already achieved, whether by surgical operations of prodigious daring, or by other still bolder operations through which the surgeons not only repair the broken body, but seem to rebuild it entirely, making of a ruined man a new being, sound, solid, a man with the desire and possibility of action, filled afresh with the love of life. For these savants recreate youth, force, almost happiness. They accomplish resurrections—physical and moral resurrections.

Consider these plaster casts that record the successive stages of the plastic reparations made especially by Professor Morestin. Young men are brought in with faces mutilated, plowed open, ravaged; they no longer look like human beings. They have become objects of horror. They feel themselves consigned to solitude, to distress, to daily martyrdom. This one has the jaw torn away, the chin gone, and the upper lip hangs in shreds over a bloody abyss. That one no longer has a nose. A third has a chin and cheek that look as if they had been gnawed away. They are all hideous to look at, spectacles to frighten children and make even compassionate women turn from them forever.

Now, the surgeons take these ruined faces and rebuild them—actually reconstruct them. Professor Morestin removes a bit of rib from the unfortunate who has lost a nose, inserts it under the skin of the forehead, lets it gradually regain vitality, slips it down to the position of the nose, covers it with skin—and of that frightful wound there remain scarcely perceptible traces. Another cartilaginous graft makes a new chin for the soldier whose lower jaw was shattered, and there remain only light ridges and the regular lines of a scar to tell of what had been a terrible mutilation.

Sculptors in Living Flesh

What shall be done with this soldier whose eye socket and cheek bone have been crushed deep into the face? Is it possible to lessen the horror of such a wound? The surgeon, little by little, fills in and carpets the excavation for the eye with shreds of skin which grow together; and in like manner he treats the bared surface of the maxillary bone. An artificial eye is inserted, absolutely like the one that is intact, and it seems to look with the same look, to live with the same life. The wounded man now can return to a useful place in society.

And the wonderful modelings of these sculptors in human flesh have names hard to retain: Engraftment, rhinoplasty, cheiloplasty, refection of the lips,

ocular-pulperial prothesis, refection of the eye and eyelid. And this strange yet simple vocabulary is growing every day, for names must be given to the meticulous and patient miracles of surgical science, and these miracles are multiplying incessantly. The plaster casts and photographs of the Val-de-Grâce show the phases of each. Surgeons are pres-tidigitators who do not desire to keep their secrets to themselves. * * *

In the Val-de-Grâce Museum a manikin that seems almost alive has undergone all the wounds, the fractures, the perforations, the mutilations developed by the war in such abominable variety; and this manikin bears all the apparatus invented to remedy them. Here is an artificial leg, supple and easily controlled; there is an apparatus with springs and metallic rings which enables a man to move the fingers of a hand which a wounded radial nerve has paralyzed. And here is the apparatus that supplies the place of a paralyzed muscle for shoulder articulation—the deltoid muscle, to call it by its name. Yonder is a similar apparatus to supply the loss of the bony substance of the humerus. If the wounded man has paralysis of the sciatic nerve his foot is inert; a shoe sole mounted on springs and articulated with steel rods enables him to use it. Gloves with springs in the back give a man the use of his hand when wounded nerves paralyze the fingers. Other contrivances permit him to dress himself without aid. Still others act as substitutes for stiffened, wasted, or absent members, so that the mutilated man can be a mechanic, a farmer, or can perform the most diverse professional tasks; in short, can again live in the workaday world of men and women.

Engines of Destruction

In this museum also are grouped all the engines of destruction created by the perverse imagination of those who champion the unlimited spread of sorrow and death: Zeppelin bombs, airplane bombs, incendiary shells, shrapnel, asphyxiating gas or explosive shells, aerial torpedoes, grenades, simple balls, little projectiles almost denuded yet whose in-

credible swiftness multiplies their murderous force. Here they are, these bullets, twisted, flattened, shattered, themselves mutilated; they seem to bear witness that evil cannot be done with impunity.

Near this destructive paraphernalia is the protective apparatus. Against the lachrymal, suffocating, asphyxiating gas we have the original hyposulphite plug, modest but useful; then the different improvements on this, each marking a step of progress, until we reach the present mask, which guarantees safety. But it may be thought that warriors with heads muffled in steel furnish blind targets for projectiles. It is true, alas! that defensive arms are not as perfect as the offensive. But at least some of them reduce the destructive power of modern weapons. Especially is this true of the steel helmet, that masterpiece invented by Adrian; and when one examines all these helmets, which have been dented, scarred, smashed, pierced, and which yet have resisted, one begins to glimpse still further improvements. One wishes our soldiers might have fine armor like that of mediaeval times, yet lightened and adapted. From looking at these helmets, battered, yet sound after so many battles, may not some inventor get the inspiration for an effective protection that will shield our fighters?

The Fight Against Disease

If there is no absolute protection against wounds, there is such against epidemic disease, and this is something new. In former wars epidemics were more fatal than battles. Typhoid fever spread inevitable death, and cholera was always present. "Not all died of it, but all were stricken." Marshal St. Arnaud owed his death—and his glory—to cholera. Was it not this disease which, raging in its deadly way during the recent Balkan wars, stopped the Bulgarian Army in its march on Constantinople?

History of recent wars in this regard has become merely history of evils definitively abolished. Science here is truly victorious. Let inventors of rival serums prove each other's methods without virtue if not actually pernicious; we must, nevertheless, look with re-

spect upon the exhibit of vaccines furnished by army laboratories, these graphic charts which bear irrefutable witness to the progressive disappearance of contagious diseases from our armies, and must perceive that one of the most dreaded causes of death has disappeared.

Medicine has shown as great genius as surgery in diminishing the ill-effects of wounds. No one can stand indifferent before the molds and models that depict the irrigation and disinfection of wounds by the Carrel process and the Dakin fluid. Carrel's method has aroused almost universal enthusiasm; only a few remain unconvinced. The Carrel method for the treatment of infected wounds has furnished its own proofs, and what proofs! It regenerates the tissues, it makes the flesh live again, it saves men, it makes physicians and surgeons cry in professional exaltation, "Wounds treated by the Carrel method are splendid to see!"

Work of the Ambulances

But the creative activities of physicians and surgeons recorded in this museum would be in vain if the wounded reached the hospital too late. Now the dressing stations have been brought close to the wounded, and the transport of the wounded to these stations has been accelerated. Herein lies the secret of the wonderful improvement brought about in the last eighteen months by a Military Health Service that is truly active, bold, methodical, vigilant, foreseeing, practical—modern!

The singularly expressive bas-reliefs of the sculptor Larrivé here represent these profoundly tragic scenes in their utmost simplicity. First we see men mount guard in the embrasure of a trench. One of them is wounded. On the spot immediately he receives first aid. Then another soldier, grievously wounded, is carried on a litter along the trenches and boyaux, the stretcher-bearers negotiating the difficult turnings with practiced skill. Now it is a first-line aid post. Near the door are ranged the guns and sacks of the wounded, and you see the protected shelter, with the

surgeons working calmly under a roof reinforced with sacks of earth and logs of wood. At length we are in the interior of the "poste de secours" itself. There is a bed of straw, a table for giving the wounded immediate treatment. Stretched on the table, under the brutal light of an acetylene lamp, lies a wounded man whom the busy Major is examining. Already a stretcher bearer is crossing the threshold with another victim. And to think that many of these posts, where the very speed of the operation assures the recovery of the patient, are situated 200 yards from the German lines, forty yards from the French lines—six yards underground!

Many of the wounded can be transported without delay to the ambulances at the front and the hospitals at the rear. Everything has been done to perfect this service. Mark the documentary collections of the Val-de-Grâce—ambulance models, tents, sanitary barracks, wagons, automobiles, &c.; one is soon convinced that the past has bequeathed scarcely anything to the present sanitary service. There are celebrated names—Larrey, Percy—but only names. The Health Service up to our time remained subordinate, rudimentary, insufficient—criminally insufficient. The soldier counted only as long as he could fight; after he had become useless as a warrior he ceased to be "interesting." Little attention was paid to him. Now everything is organized to preserve the sons of France.

A Great Hospital System

At Val-de-Grâce there is a relief plan of a vast evacuation station. Thither are gathered the wounded from all directions, at high speed, with care and order. In immense barracks they are sorted and classified. The empty spaces are adorned with gardens. And the hospital trains follow each other, carrying the

wounded more and more swiftly toward the distant distributing stations, whence they are sent promptly to the various hospitals of the district. A great silence, solemn and calm, rests upon this vast evacuating station. It is no longer the silence of death. One feels that the wounded are going away toward health, recovery, life.

Another stroll through the pensive quiet of these instructive halls will give you still other impressions, for here each document marks the moments of the struggle of nature against the hostile powers of wounds and disease, the mysteries of advancing science reveal themselves one by one, and the whole is one large, clear synthesis of efforts and results. The Museum of the Val-de-Grâce will be useful not only to historians but to those who are destined to make new discoveries.

Frenchmen originated the idea and set the example, but the Germans did not let it go to waste. They imitated it, and established a museum like ours almost immediately. We at least have the certitude that the Museum of the Val-de-Grâce will be in no danger of perishing. The whole world will come here later to pay homage to the disciplined ardor of the French scientific spirit. In a minute study devoted to the health service, Professor Pierre Delbet records the astonishment and delight of French physicians who had long been held prisoners in Germany. They had seen nothing like our new methods, nothing comparable to the progress achieved in France in the art of curing the wounded of this war. The Museum of the Val-de-Grâce preserves that astonishment in tangible form. In the midst of catastrophes French science has kept all its virtue, and, when peace returns, will spread its benefits abroad through the world more widely than ever.

Germany's Form of Government

The Constitutional Fabric Which President

Wilson Says Must Be Altered

By Walter S. Smoot

The war message of President Wilson indicated that the United States would make no peace with Germany until its present system of autocracy was overthrown. What constitutes that system is explained herewith by Mr. Smoot in an analysis of the German Constitution prepared for CURRENT HISTORY MAGAZINE.

THE present German Empire dates its existence from the proclamation of King William I. of Prussia as German Emperor (Deutscher Kaiser) at Versailles, Jan. 18, 1871, near the close of the Franco-Prussian war. Its Constitution is little changed, however, from that adopted in 1866 after the Prussian victory of Königgratz had expelled Austrian dominance from Germany and replaced it by Prussian guidance in so far as the German States of the north were concerned, but had failed to so affect the southern States—Bavaria, Württemberg, Baden, and South Hesse. Bismarck, with masterly foresight, made this Constitution of the North German Federation flexible enough to admit the South German States when the time came, but rigid enough to secure the union's complete domination by Prussia.

As in the federation, the imperial sovereignty of Germany is not vested, theoretically, in the person of the ruler, but in the Bundesrat, or Federal Council, whose members are German lords sent as representatives of the twenty-two monarchies and three free city republics, whose union forms the empire. Actually, however, despite the Kaiser's being, strictly speaking, mere President of the German Federation, and forbidden to veto laws passed by the Imperial Parliament, his will is law in every root and branch of the German Government. The imperial dignity is hereditary in the line of Hohenzollern; he possesses 17 votes out of 61 in the Bundesrat and 236 out of 397 in the Reichstag, and so can order the passage or killing of any measure he wishes; he appoints and dismisses

without regard to the political complexion of the legislative bodies the Imperial Chancellor, who stands second only to himself in the Government; lastly, while he may not declare an offensive war without the consent of the Bundesrat, he is Commander in Chief of the navy and actively so of the army, in both of which fighting arms he appoints the chief officers and exacts the fullest and blindest obedience and allegiance.

Power of the Bundesrat

The Bundesrat, or Federal Council, representative of the imperial sovereignty vested in the whole body of German rulers, in complexion is like that of the British House of Lords, being the stronghold of the Junkers or conservative militarists of Germany, and in representative character is like the Senate of the United States, representing the various States of the Union. Unlike the situation in the American upper house, however, the German States are not equally represented in the Council. Prussia, comprising nearly two-thirds of the empire both in area and population, is officially given seventeen votes and actually controls one more, that of the principality of Waldeck; Bavaria, Saxony, Württemberg, Baden, Hesse, Mecklenburg-Schwerin, Brunswick, and the imperial territory of Alsace-Lorraine send delegations varying from six to two members each; all the other States, including the free cities of Lübeck, Bremen, and Hamburg, have one representative—sixty-one lords in all.

The Bundesrat is a non-deliberative body, the members voting immediately by States upon the measures called up, in

strict accordance with instructions received from their home Governments; consequently, only the results, not the proceedings, of its sessions are published, leaving free consideration and discussion of German legislation to the Reichstag. The functions of the Bundesrat are legislative, executive, and judicial. First, bills must have its approval before they may become laws; second, it supervises, subject to the Emperor's will, the imperial administration; third, it acts as a Supreme Court of Appeals in case any one of the State courts is accused of a denial of justice.

The Reichstag a Forum

The great German forum for the discussion of public questions and the hope of the democratic element in Germany today is the Reichstag, or Imperial Parliament, corresponding to our House of Representatives. The membership numbers 397 Delegates, chosen today throughout the empire, exactly as in 1867, on the basis of one member to each 100,000 of the population. The elective system for the Reichstag is rigidly uniform throughout Germany, though Prussia and many other States have different systems for the election of the members of their State Legislatures. Every German citizen over 25 years of age, not mentally deficient or a criminal and not in active service with the colors, may vote in the general elections for the Reichstag; the Delegates are chosen for a term of five years—unless the House is sooner dissolved by the Emperor—and are paid for their services. The Reichstag enjoys neither executive nor judicial powers, but acts as the great deliberative body of the empire, the only forum in Germany where public opinion may be heard upon current legislation with any semblance whatever of fullness and freedom.

The Imperial Chancellor

The Kaiser selects and appoints from among the Prussian Delegates to the Bundesrat his Imperial Chancellor, who is the chief Minister of the empire and may be dismissed at the imperial pleasure without the slightest regard to the attitude of the parties in either the Bun-

desrat or Reichstag. The Chancellor, therefore, is responsible solely to the Emperor, from whose favor he derives his authority, and is not in the least affected by legislative praise or censure. He is the Emperor's closest confidant and adviser, and as such acts as intermediary between the Kaiser and the Parliament, particularly the Reichstag. He is the presiding officer of the Bundesrat; must countersign all newly approved laws with his signature; appoints the German officers in the Emperor's name, and oversees the discharge of their duties.

The control which the Emperor exercises over the Chancellor extends also to the other Imperial Ministers, who are consulted by the Kaiser individually as their advice or aid is especially required. We have, therefore, in Germany no cabinet system, the executive powers vested in a group of popular leaders who retain their portfolios only so long as their every important act is approved by Parliament, as in England and the other European countries. Instead, we have the German Kaiser, his functions and authority as Emperor supplemented by those as King of Prussia, enjoying an incalculable range of power, and the popular legislative body, the Reichstag, subjecting the Government to criticism and check rather than to direction.

The Social-Democratic Party

We may date the rise of the German workingman from the mid-Napoleonic period, when Prussia, as a war measure, extended liberty to her serfs, men bound for life to toil for their lords on the great rural estates. However, we do not find him asserting himself until the introduction of machinery and the formation of great factory communities in Germany, well along in the nineteenth century, had divided the population into two distinct classes—capital and labor.

In 1873 there was a great panic; the Government gave little or no relief to the want and misery which followed, and the workingmen by thousands joined a new political organization, the Social-Democratic Party, formed to secure recognition of the rights and needs of German workingmen. In 1876 the first

detailed party program of the Social-Democrats was published; since all the suffering endured by the working classes was attributable to the concentration of the country's wealth in the hands of a few, the gradual abolition of private ownership of sources and means of production, like railways, canals, and mines, was proposed, and in its place was to be substituted the establishment, by the aid of the State, of co-operative productive associations owned, worked, and controlled by and in the interests of the people themselves.

So much the party as a socialistic organization proposed. For the interest of democracy it urged that the ballot be made secret and obligatory upon all Germans over twenty years old of both sexes; that legislation and trial be by citizens chosen directly by the people themselves; that decision of war or peace be left in the hands of the people; that a system of militia be substituted for a paid standing army; that no abridgement whatever be made of freedom of the press, of assembly, and of conscience; that the period of daily toil be restricted and enforced work on Sunday be prohibited; that the labor of children be prohibited and that of women protected; that the formation of labor unions be allowed, and a graduated income tax established.

Bismarck's Harsh Law

The Iron Chancellor, Otto von Bismarck, who had made a united Germany "not through fine speeches and majority votes, but by Blood and Iron," was then at the height of his power as active head of the German Government; to him many of the demands of the Social-Democrats seemed just and reasonable, but more he classed as red revolution. In 1878, after two attempts had been made upon the life of the Emperor by fanatics who happened to hold Social-Democratic beliefs, he put through the Reichstag the "Law of Exceptions," designed to suppress popular agitation altogether and providing that all meetings, publications, and societies purposing "the subversion of the social order" and promoting socialistic tenets and ideals

were to be forcibly suppressed, and that martial law was to be proclaimed in any city threatened with riot or other labor disturbance.

Under this harsh law, which remained in effect twelve years, scores of agitators were expelled from the country, over 200 labor unions were disbanded, and hundreds of publications were suppressed, but its lasting result was to throw the whole number of Social-Democrats into a compact body, whose representation in the Reichstag doubled from 1877 to 1884. Bismarck, having incurred the enmity of nearly every political party in Germany except the National Liberals, was by this time in great straits for popular support; therefore, to conciliate and enlist the aid of the Social-Democrats he advocated a number of reforms for the benefit of the working classes and carried out a few of them.

In 1883 the Government enacted a law insuring the workman against sickness, and the next year a supplementary one insuring him against accident. By 1887 child and female labor had been limited by legislative enactment and Sunday set apart as a day of rest. In 1889 the final measure was passed, insuring workmen against poverty from permanent disablement or old age. The Social-Democratic Party in the Reichstag opposed these laws as an attempt to steal their thunder, and the party lost ground in consequence, but gradually more than recovered it. The party leaders pointed out that the provision directing the workman to pay an appreciable portion of his wages into the several workmen's insurance funds for emergencies which oftentimes never arose robbed him of his independence and freedom of choice in disposing of his wages.

The Crown and the People

The only hope for free government in Germany, therefore, lies in the success of the above-detailed program of the Social-Democratic Party; for as it stands the Government, though it is founded on a written Constitution and the Reichstag is elected by popular vote, is the least democratic in Western

Europe. In the first place, the Constitution makes essential the approval of each and every law by the Military Imperialists who compose the Bundesrat, which may thus veto a law passed by the popular assembly, the Reichstag. In the second place, the representatives of the people in the Reichstag have absolutely no voice or control in the inner councils of the Government. The Emperor rules by right of birth and is subject to none—"I take my crown from God alone!" His Ministers, far from bearing the mandate of the dominant party in Parliament, are responsible to the Emperor alone, since it is he who at will appoints and dismisses them. His immense bloc of votes in both houses of Parliament, combined with the additional support he usually receives, is sufficient for him to pass or block any measure he wishes; and, furthermore, he may vote down any constitutional measure to which he is opposed, since fourteen votes in the Bundesrat are sufficient to defeat any proposed amendment to the Constitution.

German Liberal Movement

Public criticism of the Government is liable to cause the arrest and imprisonment of the offender. The complete subjection of the popular will to the dictates of the Government is seen in the fact that four times in the past the Reichstag has been dissolved for presuming to use its only weapon against the Government—rejection of the Ministry's measures—and in all four cases a new election has provided an assembly which passed the measure upon which its predecessor was wrecked.

So it is that in Germany the will of the people is directed by the masterful, all-powerful few, who compose the Government, along the path which has been prescribed and marked out for it; and the Hohenzollern dynasty has succeeded in preserving to a remarkable degree its ideal of a Government imposed from above and being of and for the people only to a limited degree.

Under the influence of liberal movements coming to a head in other States of Europe and in America, the Social-

Democratic Party came less and less to radically condemn the existing order and more and more to appear as the champion of reform confronting the intolerably despotic imperial system. German politics possesses no large liberal party advocating the democratic principles of responsible Ministers, equal electoral districts, and retrenchment in military expenditures; consequently it has devolved upon the Social-Democrats to be the chief promoters of German democracy, resisting sturdily the ambitious and warlike projects of Kaiser Wilhelm II., advocating a decrease in expenditures for colonial purposes, striving for the promotion of international peace, and scorning the divine right theories of the Emperor.

In their efforts toward reform the Social-Democrats have been supported by the other parties of the democratic Left in the Reichstag, and by many adherents from the Catholic Centre and the Conservative Right, showing that the liberal movement, though subject to suppressive measures, has been rising in Germany, as well as in other countries.

German exponents of this liberal movement see the first step in its success in the projected redivision of the empire into new and more equitable electoral districts.

In 1867, under the Confederation, a law was passed dividing the country roughly into electoral districts of 100,000 voters each and assigning one member in the Reichstag to each electoral district. Since then the population of Germany has increased from 40,000,000 to 65,000,000, hundreds of thousands have removed from the country to the city, rural districts of formerly 100,000 inhabitants have dwindled, while great manufacturing centres have increased three and four fold in population, and still this law has never been changed.

As a result, Berlin, for instance, although its population would entitle it to twenty representatives in the Reichstag, actually possesses only six. Then, too, this condition has been responsible for the dominance of the relatively small Socialist minority in the Reichstag by the large Conservative majority; in 1907

the Socialists, though polling over 3,250,000 votes, elected only forty-three members to the Reichstag, while the Conservative Junkers, militarists living on great country estates, cast only 1,500,000 votes and returned eighty-three delegates to the Reichstag. Despite these disadvantages at the polls, the Socialists made large gains in the elections of 1912.

The Imperial German Government has always opposed both a redivision of electoral districts and the institution of parliamentary government by two parties—the “party in power” and the opposition—which such a change would inevitably bring about. It knows that increase of representation would mean such an increase in the number of delegates from the towns and their industrial elements as to shift the dominant power in the Government from the Conservative Right to the Liberal Left. It knows that the rise of a great Liberal Party in the Reichstag would put an end to its present independence of the various small parties which divide the lower house against itself. It still holds that the Ministry should be held responsible only to one man, the Emperor, and subject to no let or hindrance on the part of the people. This stand it will adhere to and maintain as long as it can.

The Kaiser a Reactionary

Conspicuous among the opponents of German liberalism and reform is the figure of the present Kaiser, William II. His ideal of a reigning Prince, which he has constantly striven to realize, is that of one who watches over and guards and regulates with beneficent paternalism every interest in his people's life. William I. had no more devout belief in monarchy and the mission of the Hohenzollerns; Frederick the Great had no smaller belief in government of the people by the people, than William II. Throughout history the Hohenzollerns have been remarkable for their adherence to the theory of the divine right of Kings, for the maintenance of a peerless army, and for the swift addition of more territory to their dominions. Emperor William has followed in the footsteps of his fathers in fulfilling the first of these two, and

it is not his fault that he will not be able to fulfill the third.

In his speeches he has endeavored to secure blind acceptance by the people of the god-like character of the Hohenzollern rule by repeatedly exalting the memory of his ancestors and admonishing his auditors to follow him cheerfully and unquestioningly as their divinely appointed ruler:

“It is a tradition in our House to consider ourselves as designed by God to govern the peoples over which it is given us to reign. My grandfather placed, by his own right, the crown of the Kings of Prussia on his head, once more laying stress upon the fact that it was conferred upon him by the Grace of God alone, not by Parliament, by meetings of the people, or by popular decision; and that he considered himself as the chosen instrument of Heaven, and as such performed his duties as regent and ruler. Considering myself as the instrument of the Lord, without heeding the views or opinions of the day, I go my way, which is devoted solely and alone to the prosperity and peaceful development of our Fatherland.”

Standing on False Ideals

The worldwide democratic movement of recent years has awakened only enmity in the Emperor's breast, and he does not seem to be able to realize that a new era of democracy has at last dawned in the German Empire in which the people are to control their own political life. Rather, he has tried to force the old despotic order upon an age of far better and different ideals. One speech of his in particular, made to recruits at Potsdam, Nov. 23, 1891, at a time of disorder and reform agitation, the world will never forgive or forget: “*More than ever, unbelief and discontent raise their head. It may happen, though God forbid, that you may have to fire on your own parents and brothers. Prove your fidelity, then, by your sacrifice.*”

In the light of the conditions in German politics outlined in this article, and of recent events, this paragraph from Dr. John Clark Ridpath's “History of the World” (1911 edition) sounds almost

like a prophecy and shines like a beacon of hope for the future:

"It is the misfortune of the Germany of today that her greatness still rests upon the foundations of military force. To the extent that this is so, her strength is weakness and the imperial system endangered. It remains for the present and the future to demonstrate whether

Germany shall be able, with her powerful intellect and splendid moods of mental action, to eliminate from her political and social system the elements of force, of personal will, of feudal antecedence, of remaining absolutism, and to leave behind in her tremendous crucible only the beauty of her genius and the liquid gold of liberty."

Painful Charges of Brutality to Prisoners

THE London Times of April 11 printed a dispatch from a special correspondent at Berne, Switzerland, which contained a distressing indictment of the cruelty practiced by German women toward English prisoners. The correspondent says that the accounts from 1,500 English soldiers released from German prison camps now in Switzerland give testimony which "will make a monument of German shame that will stand as a warning to the world for generations." He continues:

"One has heard before how German women refused to give British wounded any food or drink on their long journey through Germany, so that they suffered unutterable anguish for days together; but it is only when one hears the stories in mass—a hundred, one after another—that one gets any idea of the universality and the horror of it all. There are in Switzerland today scores and scores of men of all ranks who had the same experiences. Food and drink were denied them, (by women wearing the Red Cross,) and the denial was accompanied with the filthiest abuse.

"It was the common amusement of these Red Cross women to tempt our men, who were in the last extremity of hunger and thirst, by holding food and drink out to them to try to make them snatch at it, and then drawing it away. Many scores of our men, begging for a drink, had coffee, or water, or soup tendered to them; and then at the last moment the gentle nurse would spit in the cup or glass. Not seldom our men, in their suffering, had to drink the defiled stuff, while the women looked on and

laughed. An equally common entertainment with these women was to offer a wounded man a glass, perhaps, of water; then, standing just outside his reach, pour it slowly on to the ground or down between the station platform and the railway carriage.

"The French prisoners, we know, were not regarded with the same hatred as the British. One of our officers was wearing a pair of blue French trousers. Putting off his tunic, he appealed to a Red Cross nurse for food, and she, taking him to be French, gave it him. In his excitement he inadvertently said, 'Oh, thank you!' Thereupon, seeing his nationality, she snatched the food away again. Sometimes French officers were able to get food, which they generously shared in secret with British comrades. In at least one case the behavior of the Red Cross women was too much even for the German soldiers.

"Two of our officers were in a railway carriage with nine wounded German privates. The latter at every station were plied with food and drink and cigarettes, but the British officers were merely called 'English swine,' and given nothing. This went on for over twenty-four hours, until the German soldiers could stand it no longer. Then two of them pretended to have finished their own portions hurriedly, and asked for more. Keeping what they then received out of sight till the train was in motion, they gave it to the British officers.

"Cases of physical maltreatment of our wounded by the German nurses were just as common, as systematic, as was the refusal to give them nourishment."

The Hand of God in Prussianism

A Study of the German War Spirit

DR. J. P. BANG, Professor of Theology, at the University of Copenhagen, has written a book, entitled "Hurrah and Hallelujah," which consists largely of excerpts from the works of Pan-German poets and from the sermons of clergymen who see in Germanism the hand of God. The title is taken from a collection of poems published by a German pastor, Konsistorialrat Dietrich Vorwerk, under the title, "Hurrah and Hallelujah," which Dr. Bang considers so significant that he has adopted it for this "documentation" of the teachings of Germany's religious and intellectual leaders. A translation has just been published by the George H. Doran Company.

"The Allies," says Dr. Bang, "have denounced the Germans as barbarians. If this were meant to imply that Germany was not a civilized nation such an accusation would, of course, be absurd. Germany is unquestionably a civilized nation and none of the spokesmen of the allied powers would think of denying that she has produced rich treasures of 'kultur.' Wherever the German mind has labored, wonderful riches have been the outcome.

"But the charge of barbarism points in an entirely different direction. It points to a development within Germany which has been going on with headlong rapidity, especially during the past fifty years. Even the highest kultur can turn to barbarism when it becomes subservient to utterly false and immoral ideas.

"In Germany such a craving for power, such a worship for mere strength, has taken root and grown, that the claim of right to be a determining factor in international relations has been entirely pushed aside. A colossal and ever-increasing self-admiration, a belief in the glory of all things German, the surpassing merits of the German nature, which alone has the right to rule the world, a cynical, brutal assertion that in relation

to this claim all existing treaties, all appeals to international law, all consideration for weaker peoples, are of no significance whatever—all this we have witnessed with shuddering astonishment.

"The greatest and most popular of all the new German prophets is the poet Emanuel Geibel, whose centenary has recently been celebrated, (born 1815, died 1884)," says Dr. Bang. "It is he who has given the classic expression to the new German hope of Germany's victorious march through the world. This has been achieved in the lines which are quoted times without number in the newest German war literature:

"Und es mag am deutschen Wesen
Einmal noch die Welt genesen!

"The world may yet again be healed by Germanism.' The hope here expressed has become a certainty for modern Germany, and the Germans see in this the moral basis for all their demands. Why must Germany be victorious, why must she have her place in the sun, why must her frontiers be extended, why is all opposition to Germany shameful, not to say devilish, why must Germany become a world empire, why ought Germany, and not England, to become the great colonial power? Why, because it is through the medium of Germanism that the world is to be healed; it is upon Germanism that the salvation of the world depends. That is why all attacks upon Germanism are an offense against God's plans, and opposition to His designs for the world; in short, a sin against God.

"In the first edition of Pastor Vorwerk's poems there occurred a paraphrase of the Lord's Prayer, of which I will cite the last three petitions and the close:

"Though the warrior's bread be scanty, do Thou work daily death and tenfold woe unto the enemy. Forgive in merciful long-suffering each bullet and each blow which misses its mark! Lead us not into the temptation of letting our wrath be too tame in carrying out Thy divine judgment! Deliver us and our ally from the infernal enemy and his servants

on earth. Thine is the kingdom, the German land; may we, by aid of Thy steel-clad hand, achieve the power and the glory.

"Here, however, the Germans themselves thought the poet had gone too far; the poem was denounced as blasphemous in a religious paper, and it did not appear in later editions of the book.

"Another poet, Fritz Philippi, has written the following poem, entitled 'World-Germany':

"In the midst of the world war Germany lies like a peaceful garden of God behind the wall of her armies. Then the poet hears the giant strides of the new armor-clad Germany; the earth trembles, the nations shriek, the old era sinks into ruin. Formerly German thought was shut up in her corner, but now the world shall have its coat cut according to German measure and as far as our swords flash and German blood flows, the circle of the earth shall come under the tutelage of German activity.

"We have become a nation of wrath; we think only of the war. We execute God's almighty will and the edicts of his justice we will fulfill, imbued with holy rage."

Dr. Bang quotes long passages from published war sermons, most of which proclaim the identity of Germanism and Christianity. This is from a volume of sermons published by Pastor H. Francke, Liegnitz:

They envy us our freedom, our power to do our work in peace, to excel in virtue of ability, to fulfill our appointed task for the good of the world and humanity, to heal the world by the German nature, to become a blessing to the people of the earth. Wherever the German spirit obtains supremacy, there freedom also prevails. * * *

Here we come upon the old, intimate kinship between the essence of Christianity and of Germanism. Because of their close spiritual relationship, therefore, Christianity must find its fairest flower in the German mind. Therefore, we have a right to say: "Our German Christianity—the most perfect, the most pure." * * *

German craving for truth and German strength of faith, working along Biblical paths, have attained to the true faith, the pure religiousness, whose first and greatest spokesman is Jesus Christ. Thus the Germans are the very nearest to the Lord, and may claim for themselves that they have "continued in His Word." * * *

We fight, then, not only for our land and our people; no, for humanity in its most mature form of development; in a word, for Christianity as against degeneration and barbarism. Therefore, as surely as the history of mankind moves onward and not backward, and truth is higher than lies and hypocrisy, God must be with us, and victory ours.

"The German God"

In the report of an address by a German theological professor, in the Berliner Lokal-Anzeiger for Nov. 13, 1914, we read as follows:

But the deepest and most thought-inspiring result of the war is "the German God." Not the national God, such as the lower nations worship, but "our God," who is not ashamed of belonging to us, the peculiar acquirement of our heart. Max Lenz has already testified to the revelation of the "German God," and Luther's hymn, "Ein feste Burg ist unser Gott," merely expresses the same idea in other words.

In a sermon preached Sept. 6, 1914, Pastor Karl Koenig said:

Not fear, but strength! Since the days of the Morocco affair, the most painful thing for us who hold Germany's strength and greatness to be a necessity for the history of mankind, was the fact that the inevitable weakening in our policy at that time—in-avoidable because our fleet was not yet ready, because the Kaiser Wilhelm canal was not yet completed, because Heligoland was not yet fully fortified, and because the whole Morocco business was not a matter for the sake of which the conscience of our people would have approved a war—the fact that this weakness of our policy, to which necessity compelled us, led foreign nations to suspect our Kaiser of timidity. William the Timid! Thus they mocked in France, thus they hissed in England, and the Muscovites rubbed their hands in glee. * * *

Must we not, even now, be thankful that Russian thirst for power, and French ambition, fostered and encouraged by English egoism, did not let the shots fired at Serajevo lead to a stern chastisement of Serbia, as moral earnestness demanded, but allowed them to swell into the thunder rolling through this, the greatest war which has ever shaken the world. Two years too early for our enemies, but an act of grace from God for ourselves and our allies! For now we have the lead in the iron game of war; and though England may lurk in the background, waiting for her turn in the game—so be it, England—we know exactly what trumps you hold, but whether you know ours, coming days will show. * * *

Our German power shows its nature precisely in this, that it can wait until God, through its conscience, commands: "Now is the time to strike and defend thyself." The time had not come in the days of the Morocco episode. But it has come now, and German power, deliberate and calm, now faces a world of foes. Conscience commands, and then there is neither wavering nor political wrangling, no ambiguous Anglicizing, no ambiguous Muscovitizing, but one thing only: Yes or no, and "German blows, German power."

In a pamphlet entitled "War Devotions," which has run through several editions, Pastor J. Rump, Berlin, thus outlines Germany's mission:

We stand facing the decisive hour for Europe; nay, we must even say, for Asia and Africa. On Germany, which, contrary to all human calculation, has in this war been guided to victory, the Lord will confer the duty of heralding the progress of His Kingdom throughout humanity. On the paths of commerce and intercourse we shall go forth to all nations, and, after the fierce fight is over, carry Jesus to them, in the quiet, peaceful work of a true Kultur. England, in these paths, has lowered herself to become a nation of hucksters, who have long abandoned the service of God for that of Mammon. Let England's doings be a warning to us, Christians!

Pastor Goesch of Bustrow delivered a discourse on war and Kultur, which concludes with these words:

We Germans, reviled as Huns and barbarians, having through the war been taught the value and benignant power of our Christian-German Kultur, will become the missionaries of Kultur to the people of the earth. As a nation which knows and wills, which strives and achieves, we will conquer that place in the sun which is due to us, and will become bearers of light to the other nations, so that their eyes may be opened to the deed of infamy, the Kultur-murder, to which they have stooped, blinded by hatred and envy. This German war against the whole world shall break the way for German Kultur to the whole world!

Dr. Bang, in conclusion, points out that a systematic campaign of chauvinism and incitement to war had long been carried on in Germany. He quotes from "a remarkable book," published in 1913 by a German-American, Professor O. Nippold:

Chauvinism has grown enormously in Germany during the last decade. This fact makes the strongest impression on those who have returned to Germany after living a long time abroad. I, myself, can say from experience how astonished I was, on returning to Germany after a long absence, to

see this psychological transformation. * * * Hand in hand with this outspoken hostility to foreign countries there goes a one-sided war enthusiasm and war mania such as would have been thought impossible a few years ago. One can only deplore the fact that today there is so much irresponsible agitation against other States and so much frivolous incitement to war. It cannot be doubted that this agitation is part of a deliberate scheme, the object of which is gradually to win over the population, and if possible the Government, no matter by what means—even by the distortion of fact and malicious slander—to the program of the chauvinists.

These people not only incite the nation to war, but systematically stimulate the desire for war. War is pictured not as a possibility that may occur, but as a necessity that must come, and the sooner the better. The sum and substance of the teaching of the chauvinistic organizations, such as the Pan-German League and the German Defense Association, is always the same; a European war is not merely an eventuality for which we must be prepared, but a necessity at which, in the interest of the German Nation, we should rejoice.

One of the leaders of the association known as Young Germany wrote in its official organ for October, 1913, according to Dr. Bang:

War is the noblest and holiest expression of human activity. For us, too, the glad, great hour of battle will strike. Still and deep in the German heart must live the joy of battle and the longing for it. Let us ridicule to the utmost the old women in breeches who fear war and deplore it as cruel or revolting. No, war is beautiful. Its august sublimity elevates the human heart beyond the earthly and the common. In the cloud palace above sit the heroes Frederick the Great and Blücher, and all the men of action—the Great Emperor, Moltke, Roon, Bismarck are there as well, but not the old women who would take away our joy in war. When here on earth a battle is won by German arms, and the faithful dead ascend to heaven—a Potsdam Lance Corporal will call the guard to the door, and "Old Fritz," springing from his golden throne, will give the command to present arms. That is the heaven of Young Germany.

Under German Rule in France and Belgium

A Young Englishman's Experience

J. P. Whitaker, a young Englishman, was at Roubaix in Northern France on business when the Germans unexpectedly invaded that region in September, 1914. After passing two and a half years there under German military rule, he escaped in March, 1917, by way of Belgium and Holland, and wrote an interesting account of his experiences for The London Times. His observations regarding the changed policy of the Germans in Belgium revealed some things hitherto unknown to the outside world. Mr. Whitaker found the rule of the invaders in Roubaix and Lille comparatively humane at first, but he continues:

TOWARD the end of March, 1915, a distinct change became noticeable in the policy of the German military authorities, and for the first time the people of Roubaix began to feel the iron heel. The allied Governments had formally declared their intention of blockading Germany, and the German Army had been given a sharp lesson at Neuve Chapelle. Whether these two events had anything to do with the change, or whether it was merely a coincidence, I do not know; the fact remains that our German governors who had hitherto treated us with tolerable leniency chose about this time to initiate a régime of stringent regulation and repression.

The first sign of the new policy was the issue of posters calling on all men, women, and children over the age of 14 to go to the Town Hall and take out identification papers, while all men between 17 and 50 were required also to obtain a control card.

Up to this time I had escaped any interference from the Germans, perhaps because I scarcely ventured into the streets for the first two months of the German occupation, and possibly also because, from a previous long residence in

Roubaix, I spoke French fluently. Strangely enough, though I went to the Town Hall with the rest and supplied true particulars of my age and nationality, papers were issued to me as a matter of course, and never during the whole two years and more of my presence in their midst did the enemy molest me in any way.

Methods of the Invaders

The only incident which throws any light on this curious immunity occurred about the middle of 1915. Like all other men of military age, I was required to present myself once a month at a public hall, in order to have my control card, which was divided into squares for the months of the year, marked in the proper space with an official stamp "Kontrol, July," or "August," or whatever the month might be. We were summoned for this process by groups, first those from 17 to 25, then those from 25 to 35, and so on. Hundreds of young fellows would gather in a room, and one by one, as their names were called, would take their cards to be stamped by a noncommissioned officer sitting at a table on the far side of the room. On the occasion I have in mind the noncommissioned officer said to me, "You are French, aren't you?" I answered, "No." "Are you Belgian?" "No," again. "You are Dutch, then?" A third time I replied "No."

At this stage an officer who had been sauntering up and down the room smoking a cigarette came to the table, took up my card, and turning to the man behind the table remarked, "It's all right. He's an American." I did not trouble to enlighten him. That is probably why I enjoyed comparative liberty.

Enslavement is part of the deliberate policy of the Germans in France. It

began by the taking of hostages at the very outset of their possession of Roubaix. A number of the leading men in the civic and business life of the town were marked out and compelled to attend by turns at the Town Hall, to be shot on the spot at the least sign of revolt among the townspeople.

Not a few of the mill owners were ordered to weave cloth for the invaders, and on their refusal were sent to Germany and held to ransom. Many of the mill operatives, quite young girls, were directed to sew sandbags for the German trenches. They, too, refused, but the Germans had their own ways of dealing with what they regarded as juvenile obstinacy. They dragged the girls to a disused cinema hall, and kept them there without food or water until their will was broken.

Barbarity reached its climax in the so-called "deportations." They were just slave raids, brutal and undisguised.

The procedure was this: The town was divided into districts. At 3 o'clock in the morning a cordon of troops would be drawn round a district—the Prussian Guard and especially, I believe, the Sixty-ninth Regiment, played a great part in this diabolical crime—and officers and noncommissioned officers would knock at every door until the household was roused. A handbill, about octavo size, was handed in, and the officer passed on to the next house. The handbill contained printed orders that every member of the household must rise and dress immediately, pack up a couple of blankets, a change of linen, a pair of stout boots, a spoon and fork, and a few other small articles, and be ready for the second visit in half an hour. When the officer returned, the family were marshaled before him, and he picked out those whom he wanted with a curt "You will come," "And you," "And you." Without even time for leave-taking, the selected victims were paraded in the street and marched to a mill on the outskirts of the town. There they were imprisoned for three days, without any means of communication with friends or relatives, all herded together indiscrim-

inately and given but the barest modicum of food. Then, like so many cattle, they were sent away to an unknown fate.

Months afterward some of them came back, emaciated and utterly worn out, ragged and verminous, broken in all but spirit. I spoke with numbers of the men. They had been told by the Germans, they said, that they were going to work on the land. They found that only the women and girls were put to farm labor.

The men were taken to the French Ardennes and compelled to mend roads, man sawmills and forges, build masonry, and toil at other manual tasks. Rough hutments formed their barracks. They were under constant guard both there and at their work, and they were marched under escort from the huts to work and from work to the huts. For food each man was given a two-pound loaf of German bread every five days, a little boiled rice, and a pint of coffee a day. At 8 o'clock in the morning, after a breakfast consisting of a slice of bread and a cup of coffee, they went to work. At 4 o'clock in the afternoon they returned for the night and took their second meal—dinner, tea, and supper all in one. Often they were buffeted and generally ill-used by their taskmasters. If they fell ill, cold water, internally or externally, was the invariable remedy. Once a commission came to see them at work, but they had been warned beforehand that any man who complained of his treatment would suffer for it. One of them was bold enough to protest to the visitors against a particularly flagrant case of ill-usage. That man disappeared a few days later.

Saved by American Food

Long before this the food problem had become acute in Roubaix. Simultaneously with the establishment of the system of personal control over the inhabitants the Germans closed the frontier between France and Belgium and forbade us to approach within half a mile of the border line. The immediate effect of this isolation was to reduce to an insignificant trickle the copious stream of foodstuffs which until then poured in from Belgium—not the starv-

ing Belgium of fiction, but the well supplied Belgium of fact.

Butchers and bakers and provision dealers had to shut their shops, and the town became almost wholly dependent on supplies brought in by the American Relief Commission. Fresh meat was soon unobtainable, except by those few people who could afford to pay fabulous prices for joints smuggled across the frontier. Months ago meat cost 32 francs a kilogram (about 13 shillings a pound) and an egg cost 1 franc 25, (a shilling.) Obviously such things were beyond the reach of the bulk of the people, and had it not been for the efforts of the Relief Commission we should all have starved.

The commission opened a food depot, a local committee issued tickets for the various articles, and rich and poor alike had to wait their turn at the depot to procure the allotted rations. The chief foodstuffs supplied were: Rice, flaked maize, bacon, lard, coffee, bread, condensed milk, (occasionally,) haricot beans, lentils, and a very small allowance of sugar. Potatoes could not be bought at any price.

Hungry German Soldiers

Unfortunately, though I regret that I should have to record it, there is evidence that by some means or other the German Army contrived to intercept for itself a part of the food sent by the American Commission. One who had good reason to know told me that more than once trainloads which, according to a notification sent to him, had left Brussels for Roubaix failed to arrive. I know also that analysis of the bread showed that in some cases German rye flour, including 30 per cent. of sawdust, had been substituted for the white American flour, producing an indigestible putty-like substance which brought illness and death to many. Indeed, the mortality from this cause was so heavy at one period that all the grave diggers in the town could not keep pace with it.

One could easily understand how great must have been the temptation to the Germans to tap for themselves the food which friends abroad had sent for their victims. It is a significant fact that sol-

diers in Roubaix were eager to buy rice from those who had obtained it at the depot at four francs (3s 4d) the pound in order, as they said, "to send it home." I shall describe later how utterly different were the conditions in Belgium as I saw them.

Meagre as were the food supplies for the civilians in Roubaix, those issued to the German soldiers toward the end of my stay were little better.

At first the householders, on whom the soldiers were billeted, were required to feed them and to recover the cost from the municipal authorities.

Collection of Metals

In passing, I may mention that all ordinary money, gold, silver, and bronze, disappeared from circulation long ago. Some of it possibly was hidden by the townsfolk, but much more was collected by the Germans and sent out of the country. It was replaced by paper money of all denominations, even to cardboard sous. After some months the billeting system was altered, and the German military authorities undertook the feeding of their men. From that time onward there was a progressive fall in the quantity and deterioration in the quality of the soldiers' daily rations. To the end they seemed to have no lack of jam, not plum and apple, but something red, which looked rather like raspberry. Often I have seen them walking along the street munching a thick slice of rye bread covered with a generous layer of this jam.

Just before I left, I was shown one day's menu provided for the troops. Breakfast consisted of dry bread and coffee, dinner of boiled barley, and supper of cooked beet root. It was some comfort to us to know that, while we could barely subsist, the Germans were evidently not much better off.

Conditions in Germany were reflected also in the systematic plundering of workshops and houses of everything made of brass, copper, pewter, or German silver. The Germans began by taking all stocks of raw and combed wool, raw cotton, and raw silk from the warehouses, and followed this up by appropriating

all woolen piece goods. They next requisitioned all oil. Late last year they issued a proclamation calling upon the residents to declare to the military authorities what brass was in their possession. Of course, nobody paid any attention to the order.

A few days later parties of German soldiers went through the town, street by street, and seized every article of brass, bronze, or copper on which they could set eyes. Without ceremony they entered private houses, helped themselves to stair rods, brass or copper kettles and other cooking utensils, gas fittings, fittings from fireplaces, door plates, clothes hooks, and knickknacks of every kind. Nothing was overlooked. They took up brass-headed carpet pins; they even tore the candlesticks from pianos. The things were bundled into a cart, on the tail of which were scales, like those carried on coalmen's trolleys. Everything was weighed, and a receipt was given at the rate of 2 francs per kilogram, or 10 pence per pound. Bronze statuettes worth at least 500 francs were taken at the intrinsic cost of the metal.

The process was not confined to private houses or workshops. One day the Germans made a tour of the cafés and ripped off the pewter tops of the counters. They also went from shop to shop and carried away the brass trays from the scales. I saw one cart go along the street piled high with gramophone horns.

Hope of Conquest Gone

Of all the things I saw and heard in Roubaix and Lille none impressed me more than the wonderful change which came over the outlook and demeanor of the German soldiery between October, 1914, and October, 1915.

I had many opportunities of mingling with them, more, in fact, than I cared to have, for now and again during this period two or three of them were actually billeted on the good folk with whom I lodged.

I knew just sufficient of the German language to be able to chat with them, and they made no attempt to conceal from me their real feelings. I am merely repeating the statement made to me

over and over again by many German soldiers when I say that the men in the ranks are thoroughly tired of the war, that they have abandoned all thought of conquest, and that they fight on only because they believe that their homes and families are at stake.

On that Autumn morning when the first German troops came into Roubaix they came flushed with victory, full of confidence in their strength, marching with their eyes fixed on Paris and London. They sang aloud as they swung through our streets. They sing no more. Instead, as I saw with my own eyes, many of them show in their faces the abject misery which is in their hearts.

Last year scores of them told me, quite independently, that the war would come to an end on Nov. 17, 1916. How that date came to be fixed by the prophets nobody knew, but the belief in the prophecy was universal among the soldiers.

The Guns on the Somme

That was before the battle of the Somme. For days we in Roubaix heard the distant roaring of the guns in that great encounter. Night and day without ceasing their rumble sounded. We had grown accustomed to the sound of the guns about Ypres and Armentières; we had sat at our windows in the evening and watched the flashes in the darkness; we had even heard at night-time the rattle of machine guns. But we had never heard so continuous or so heavy a thunder as that which came to us from the Somme.

We were used, too, to the sight of wounded Germans brought in from the front; but Roubaix, and, still more, Lille, never witnessed such a constant stream of broken men as that which poured in last July and August.

In Roubaix alone, in addition to the town hospitals, the Germans had suddenly to improvise hospitals in the work-house, the boys' college, and the girls' college. Every bed was filled, and to the rest of the wounded the doctors in Roubaix could give only such attention as is possible in a dressing station, pending their conveyance into Belgium.

I found among the soldiers a general agreement that they would infinitely rather face the French troops than the British. They attributed their greater fear of our men to the idea, probably mistaken, that our men were less ready than the French to make them prisoners as soon as they raised their hands and cried "Kamerad." I suspect, however, that the unnerving effect on the Germans of the Sir Douglas Haig system of trench raiding is the real explanation.

This is how a German soldier gave me his impression of the British raids: "They are the worst horror we have to contend with. The English seem to do it for sport, not for war. A bombardment is bad enough; but you know it is coming. You do not know when or where a raid is coming. These Englishmen daub their faces with clay, come along the ground on all fours, smother our advance posts, and are in our trenches before we know where we are. They come not with rifles and revolvers, but with knives and sledge-hammers and bombs. We cannot use our rifles against them. They are too near, and perhaps we have not fixed our bayonets. We must either run or be killed. The English will clear a trench on a stretch of 150 yards and get away again without losing a man."

It would be difficult to exaggerate the genuine terror with which the raids have filled the German soldiers of all ranks and regiments.

Lawless Acts of Officers

As a rule, the soldiers did not maltreat the civilians in Roubaix, except when they were acting under the orders of their officers; when, for example, they were tearing people from their homes to work as slaves. They had, however, the right of traveling without payment on the tramcars, and they frequently exercised this right to such an extent as to preclude the townsfolk from the use of the cars.

Apart from that annoyance, there was little ground for complaint of the general behavior of the soldiers. The conduct of the officers was very different. For a long time they made a habit of

requisitioning from shopkeepers and others supplies of food for which they had no intention of paying. One day an officer drove up in a trap to a shop kept by an acquaintance of mine and "bought" sardines, chocolate, bread, and fancy cakes to the value of about 200 francs, (about \$40.) He produced a piece of paper and borrowed a pair of scissors with which to cut off a slip. On this slip he wrote a few words in German, and then, handing it to the shopkeeper, he went off with his purchases. The shopkeeper, on presenting the paper at the Kommandantur, was informed that the inscription ran, "For the loan of scissors, 200 francs," and that the signature was unknown. Payment was therefore refused. This case, I believe, was by no means an isolated one.

Brutal Methods of Officers

When an officer was billeted on a house, he would insist on turning the family out of the dining room and drawing room and sleeping in the best bedroom; sometimes he would eject people entirely from their home.

By contrast the docile private soldier was almost a welcome guest. I remember well one quite friendly fellow who was lodged for some time in the same house as myself and some English over military age in the suburb of Croix. He came to me in great glee one day with a letter from his wife in which she warned him to beware of "the English cut-throats." She went on to give him a long series of instructions for his safety. He was to barricade his bedroom door every night, to sleep always with his knife under his pillow, and never to take anything we offered him to eat or drink.

Despite the temptations to crime and insubordination which naturally attend an idle manufacturing population of some 125,000 people, there were very few civilian offenses against the law, German or French, among the inhabitants of Roubaix.

Time hung heavily on our hands. Cut off from the outer world except by the occasional arrival of smuggled French and English newspapers, we spent our

time reading and playing cards, and at the last I hoped I might never be reduced to this form of amusement again. In the two and a half years cut out of my life and completely wasted I played as many games of cards as will satisfy me for the rest of my existence.

But even if the inhabitants, in their enforced idleness, had any temptation to be insubordinate, they had a far greater inducement to keep the law in the bridled savagery of the German gendarmerie. These creatures, who from the color of their uniform and the brutality of their conduct were known as the "green devils," seemed to revel in sheer cruelty. They scour the towns on bicycles and the outlying districts on horseback, always accompanied by a dog as savage as his master, and at the slightest provocation or without even the slenderest pretext they fall upon civilians with brutish violence.

It was not uncommon for one of these men to chase a woman on his bicycle, and when he had caught her, batter her head and body with the machine. Many times they would strike women with the flat of their sabres. One of them was seen to unleash his dog against an old woman, and laugh when the savage beast tore open the woman's flesh from thigh to knee.

No Starvation in Belgium

In January Mr. Whitaker crossed the line into Belgium with the aid of smuggler friends, traversed that country, chiefly on foot, and two months later escaped into Holland and so to England. In Belgium he was astonished to find what looked like prosperity when compared with conditions in the occupied provinces of France. After expressing gratitude to Belgian friends and a desire to tell only what is truth, he proceeds:

The first fact I have to declare is that nowhere in my wanderings did I see any sign of starvation. Nowhere did I notice such privation of food as I had known in Northern France. Near the French frontier, it is true, the meals I took in inns and private cottages were far from sumptuous, but as I drew nearer to the Dutch frontier the amount and variety

of the food to be obtained changed in an ascending scale, until at Antwerp one could almost forget, so far as the table was concerned, that the world was at war.

Let me give a few comparisons. At Roubaix, in France, at the time when I left in the first week of this year, my daily diet was as follows: Breakfast—coffee, bread and butter (butter was a luxury beyond the reach of the working people, who had to be content with lard); midday meal—vegetable soup, bread, boiled rice, and at rare intervals an egg or a tiny piece of fresh meat; supper—boiled rice and bread. Just over the border, in Belgium, the food conditions were a little better. The ticket system prevailed, and the villagers were dependent on the depots of the American Relief Commission, supplemented by local produce.

A little further, and one passed the line of demarkation between the étape—the part of Belgium which is governed by General von Denk, formerly commanding the troops at Valenciennes—and the *gouvernement général*, under the command of General von Bissing.

Here a distinct change was noticeable. My first meal in this area included fillet of beef, the first fresh meat I had tasted for weeks. Tickets were still needed to buy bread and other things supplied by the Relief Commission, but other food-stuffs could be bought without restriction.

At Brussels the food supply seems to be nearly normal. My Sunday dinner there consisted of excellent soup, a generous helping of roast leg of mutton, potatoes, haricot beans, white bread, cheese, and jam, and wine or beer, as preferred; while for supper I had cold meat, fried potatoes, and bread.

At Antwerp, with two French friends who accompanied me on my journey through Belgium, I walked into a middle-class café at midday. I ordered a steak with fried potatoes and my friends ordered pork chops. Without any question about tickets we were served. We added bread, cheese, and butter to complete the meal and washed it down with draft light beer. Later in the day we took supper in the same café—an egg omelette, fried potatoes, bread, cheese, and butter.

And the cost of both meals together was less than the cost of the steak alone in Roubaix.

Thriving in Rural Belgium

Even in the little village where I hid myself there was no dearth of good food. Sugar was scarce, and the bread was made of brown wholemeal flour. But meat was plentiful, especially cold home-bred pork. A typical midday meal here included soup, steak or chops, potatoes, and little sweetcakes; supper was the usual Belgian meal of fried potatoes and bread soaked in boiled milk. So far from starving during my enforced self-concealment, I actually found myself gaining in flesh.

When I add that in Brussels, Antwerp, and other towns the retail shops displayed an abundance of foodstuffs of every sort, and that, according to common knowledge, the German soldiers buy a great deal of food for transmission to their homes, it will be realized that some parts, at any rate, of Belgium are not suffering so severely as most people in England suppose from want of nourishment.

It is not for me to explain these things. I cannot fathom the reasons which may have induced the Germans to refrain from commandeering the Belgian supplies of home-produced food. Belgium, of course, has been for years the best exponent of intensive agriculture in Europe. Her food exports to England and France alone before the war were considerable. Just as much food is being produced now as before the war, and, so far as I could discover, the people have plenty to eat.

It is in the invaded territory of France that the spectre of famine walks. It is not sufficiently understood that the German gentleness to the Belgians is only equaled by their bitterness toward the French.

It is not only in respect of food that Belgium is happier than her neighbor. I have already mentioned that the civilians of Roubaix were denied the use of the railways. The Belgians are under no such disability. They find some diffi-

culty in moving from one to the other of the two areas into which, as I indicated above, Belgium has been partitioned, unless they are armed with special passports. But within either of those zones the natives are allowed to travel without hindrance.

Again, while the occupied portion of France is entirely without postal services, the Belgians have the ordinary facilities for internal communication. They are required to use German stamps heavily marked in black letters with the words "Belgian Post"; and they are required to pay 8 centimes (three more than usual) for the transmission of a postcard, and 15 centimes (an extra charge of 5 centimes) for a letter. The collections and deliveries, however, are made by the regular Belgian postmen.

Busy Shops and Theatres

The policy of the Germans, in short, appears to be to interfere as little as possible with the everyday life of the country. The fruits of this policy are seen in a remarkable degree in Brussels. All day long the main streets of the city are full of bustle and all the outward manifestations of prosperity.

Women in short, fashionable skirts, with high-topped fancy boots, stroll completely at their ease along the pavement, studying the smart things with which the drapers' shop windows are dressed. Jewelers' shops, provision stores, tobacconists, and the rest show every sign of "business as usual." I bought at quite a reasonable price a packet of Egyptian cigarettes, bearing the name of a well-known brand of English manufacture, and I recalled how, not many miles away in harassed France, I had seen rhubarb leaves hanging from upper windows to dry, so that the French smoker might use them instead of the tobacco which he could not buy. Even the sweetstuff shops had well-stocked windows.

The theatres, music halls, cinema palaces, and cafés of Brussels were open and crowded. On the second night of my visit I went with my two French companions to the Théâtre Molière and heard a Belgian company in Paul Hervieu's

play, "La Course du Flambeau." The whole building was packed with Belgians, thoroughly enjoying the performance. So far as I could tell, the only reminder that we were in the fallen capital of an occupied country was the presence in the front row of the stalls of two German soldiers, whose business, so I learned, was to see that nothing disrespectful to Germany and her armies was allowed to creep into the play.

At another theatre, according to the posters, "Véronique" was produced, and a third bill announced "The Merry Widow." At the Théâtre de la Monnaie, which has been taken over by the Germans, operas and plays are given for the benefit of the soldiers and German civilians. One afternoon I spent a couple of hours in a cinema hall. A continuous performance was provided, and people came and went as they chose, but throughout the program the place was well filled. The films shown had no relation to the war. They were of the ordinary dramatic or comic types, and I fancy they were of pre-war manufacture. Nothing of topical interest was exhibited.

The Appearance of Plenty

All the scenes which I have described in Brussels were reproduced in Antwerp. There was a slightly closer supervision over the comings and goings of the inhabitants, but there was the same unreal atmosphere of contentment and real appearance of plenty. Though a good number of officers were in evidence, the military arm of Germany was not sufficiently displayed to produce any intimidation. Perhaps the most obvious mark, here and in the capital, that all was not normal was the complete absence of private motor cars and cabs from the streets.

In the country districts two things struck me as unfamiliar after my long months in France. About Roubaix not a single head of cattle was to be seen; in Belgium every farm had its cows. In Belgium the mounted German gendarmerie—the "green devils" whose infamous conduct in the Roubaix district I have

described—were unknown. Their place was filled by military police, who, by comparison with the gendarmes, were gentleness itself.

I do not profess to know the state of affairs in parts of Belgium which I did not visit, but I do know that my narrative of the conditions of life that came under my personal inspection has come as a great surprise to many people who imagine that the whole of Belgium is starving.

We in hungry Roubaix looked out on Belgium as the land of promise. The Flemish workers who came into the town from time to time from Belgium were well fed and prosperous looking, a great contrast to the French of Roubaix and Lille. The Belgian children that I saw were healthy and of good appearance, quite unlike the wasted little ones of France, with hollow blue rings round their eyes.

The people of Roubaix, knowing these facts, are convinced that the Germans are endeavoring to lay the foundations of a vassal State in Belgium. Foiled in their attempts to capture Calais, the Germans believe that Zeebrugge and Ostend are capable of development as harbors for aggressive action against England. The French do not doubt that the enemy will make a desperate struggle before giving up Antwerp.

The picture I have presented of Belgium as I saw it is, of course, vastly different from the outraged Belgium of the first stage of the war.

Lest there should arise any misunderstanding, I complete the picture by stating my conviction, based on intimate talks with Belgian men and women, that the population as a whole are keeping a firm upper lip, and that attempts by the Germans to seduce them from their allegiance by blandishment and bribery will fail as surely as the efforts of frightfulness.

Escaping Into Holland.

Mr. Whitaker's account of his escape into Holland closes thus:

When we drew near to the wires, just before midnight, we lay on the ground

and wriggled along until we were within fifty yards of Holland. There we lay for what seemed to be an interminable time. We saw patrols passing. An officer came along and inspected the sentries. Everything was oppressively quiet.

Each sentry moved to and fro over a distance of a couple of hundred yards. Opposite the place where we lay two of them met. Choosing his opportunity, one of my comrades, who had provided himself with rubber gloves some weeks before for this critical moment, rushed forward to the spot where the two sentries had just met. Scrambling through barbed wire and over an unelectrified wire, he grasped the electrified wires and wriggled between them. We came close on his heels. He held the deadly electrified wires apart with lengths of thick plate glass with which he had come provided while first my other companions and then I crawled through. Before the sentries returned we had run some hundreds of yards into No Man's Land between the electrified wires and the real Dutch frontier.

Only one danger remained. We had

no certainty that the Dutch frontier guards would not hand us back to the Germans. We took no risks, though it meant wading through a stream waist deep. Our troubles were now practically over. By rapid stages we proceeded to Rotterdam.

I was without money. My watch I had given to the Belgian villager in whose cottage I had found refuge. My clothes were shabby from frequent soakings and hard wear. I had shaved only once in Belgium, and a stubby growth of beard did not improve my general appearance.

At Rotterdam I reported myself to the British Consul. I was treated with the utmost kindness. My expenses during the next four or five days, while I waited for a boat, were paid and I was given my fare to Hull. There I was searched by two military police and questioned closely by an examining board. My papers were taken and I was told to go to London and apply for them at the Home Office. As I was again practically without means I was given permission to go to my home in Bradford before proceeding to London.

German Crimes in the Somme Retreat

Official Report, Summarized by Henry Cheron

Before the French Senate

[Translated for CURRENT HISTORY MAGAZINE from the French text of the Journal Officiel and the Bulletin des Armées.]

ON the morrow of the very day when the tenacious courage of the French and British soldiers compelled the enemy to retreat on the Somme—a worthy pendant to his defeat on the Marne—your Commission on War Damages sent a number of its members to visit the reconquered regions and get at the truth of the conditions which you had ordered it to investigate.

Perhaps the commission would have been content simply to file a report of the facts if these had not revealed such violations of the laws and customs of war, such crimes committed by the occupying forces, so profound a contempt for the most elementary rules of public conscience, that it has believed it to be its duty to denounce the outrages without delay. The report, incomplete though it must be, will be a first tribute to truth, right, and justice, realities which no nation, however powerful it may think itself, can violate in our epoch with impunity.

In the beginning we may recall that Germany solemnly indorsed the international convention, passed at The Hague on Oct. 18, 1907, in which the high contracting parties, facing the eventuality of war and animated, as they expressly stated, "by the desire to serve, in that extreme case, the interests of humanity and the increasing exigencies of civilization," imposed upon any military authority occupying territory in an invaded State certain rules which it is well now to read over again:

Article 46—The honor and the rights of the family, the lives of individuals, and private property, as well as religious convictions and the exercise of the right of worship, must be respected. Private property cannot be confiscated.

Article 47—Pillage is formally interdicted.

Article 50—No collective punishment, pecuniary or other, can be inflicted on populations

by reason of individual acts for which the community cannot be considered collectively responsible.

Article 55—The occupying power shall consider itself only the administrator and controller of the usufruct of public buildings, real estate, forests, and agricultural enterprises belonging to the enemy State and located in the occupied territory; it must safeguard the funds of these properties and administer them in accordance with the rules of usufruct.

Article 56—Property belonging to municipalities, to religious, charitable and educational institutions, or to institutions devoted to the arts and sciences, even though connected with the State, shall be treated as private property. All seizure, destruction, or intentional injury of such establishments, of historic monuments, of works of art and science is forbidden and shall be cause for legal redress.

In the preamble of this convention of 1907, which was solemnly ratified a second time by the German Empire, it was provided that—

In cases not included in the rules adopted by the powers the people remain under the safeguard and dominion of the principles of international law derived from the established usages of civilized nations, from the laws of humanity, and from the demands of the public conscience.

Finally, Article 1 of Convention 4, adopted Oct. 18, 1907, said:

The contracting powers will give to their armed land forces instructions that will conform with the regulations in regard to the laws and customs of war on land, annexed to the present convention.

Another Scrap of Paper

To this the German Empire affixed its signature. The principle underlying this convention was that war should be carried on between armies and not between noncombatants, and that everything should be done to save the inhabitants from horrors whose indirect effects in any case would bear down upon them all too cruelly.

What account did the Germans take of this international treaty? For them it was nothing but a scrap of paper, like all the others. They have trampled upon

it to such a degree that one must go back to primitive times, to the most savage epochs of ancient history, to find acts of vandalism and bestial savagery worse than those of which we have obtained proofs.

The commission visited all the reconquered districts. While Paul Doumer and a certain number of colleagues went to Chauny and the region northeast of Soissons, we, with Messrs. Hervey, Reynald, Eugène Mir, Mougeot, Galup, Servant, and Magny, traversed the regions of Noyon, Guiscard, Ham, Lassigny, Roye, Nesle, and Péronne.

We visited in detail these cities and about fifty villages. We wished to compare our facts with the earlier reports that had been made in the name of the Government, whether by the commission headed by George Payelle, first President of the Court of Accounts, or by the Director of Military Justice, who was sent out by the Minister of War. Today we bring you the first elements of a report which is as exact as possible, and from which, whatever our legitimate anger against the Germans, we have carefully excluded all passion susceptible of altering the truth. Besides, the truth is so horrible that it needed no amplification. Everywhere we were the anguished witnesses of the same spectacle: pillage, systematic destruction, acts of barbarism committed without the least excuse of military necessity.

We have made a clear distinction, it is scarcely necessary to say, between damages due to war and damages voluntarily inflicted by the enemy. We have set aside all the effects of battle—of a battle at times so fierce, so terrible, that it has demolished, destroyed, effaced everything, even to the smallest stone in the smallest house. What we have retained are the acts of violence committed in cold blood among unarmed civilians; the evil done for the sake of evil, the pillage and destruction of private property and public edifices; the attacks on the life, liberty, and honor of private individuals; all those acts which call for denunciation before the whole world, if only to blast and dishonor forever the cursed Government

and race that undertook to saddle their domination upon other peoples, and impose on them a culture already practiced in all countries by notorious highway-men.

Banks in Noyon Plundered

Let us come to the facts. From Ribecourt to Noyon the farms are everywhere destroyed. Noyon appears to be little damaged externally, although the barbarians blew up a certain number of houses and destroyed some factories. But, on closer examination, what odious pillage! Everywhere the furniture has been carried off. What has not been carried away has been smashed; the mirrors have been shattered by revolver shots. In a room of the Hôtel du Nord we found, amid all sorts of débris, a steel safe gutted with a crowbar. It was in this hotel that the Kommandantur had been located.

They robbed the stores from the beginning. On March 6, 7, and 8, 1915, in the presence of the Deputy Mayor of Noyon, and despite his energetic protests, they broke open the door of the safe belonging to the Société Générale. For this purpose they use blowpipes. The chief officer of the Kommandantur directed this brigandage in person. The safe was then closed with a seal, but later they broke the seal. Before leaving Noyon they carried off everything from the safes.

On Feb. 24, 1917, an officer calling himself a representative of the Treasury at Berlin presented himself at the house of M. Brière, a Noyon banker, 72 years old. He ordered the banker to open his safety deposit vaults. M. Brière refused. Then, with the aid of a blowpipe, the soldiers proceeded to force open the safe doors. The depositors were present. Their protests were in vain. The Germans carried away everything that was in the bank—cash, deeds, bonds, business and official papers, jewels, silverware, negotiable papers, and archives. When the banker observed to the German officer that the archives would be of no use to him, he replied, drily: "I have been ordered to empty the boxes, and I am emptying them."

The same thing was done on Feb. 27, 1917, at the Cheneau & Barbier Bank,

where two officers and two German soldiers entered the basement, broke open the safes with the aid of a blowpipe, and carried away the valuables. Finally, on March 16, having mined a number of residences and public buildings, the Germans blew up twenty or more of them.

Brutal Acts at Sampigny

The villages in the neighborhood of Noyon fared no better. At Sampigny the pillage was conducted with unusual savagery. In all the houses there is manure to a depth of twelve inches. A porcelain merchant was treated with special brutality. On the eve of departure the Germans drove him out into the street, and, while he stood there looking on, smashed all the porcelains in his house with hammers. A business man at Sampigny, M. Cabrol, had left his safe open in order to show that it was empty, and thus save it from destruction: the Germans nevertheless blew it up.

At Guiscard the soldiers were preparing to burn the whole village when the French arrived; there was no time to put their plans into execution, but they had already carried off everything of value—furniture, linen, cooking stoves—and had broken the mirrors. The soldiers had stolen mattresses under the eyes of their officers.

We entered what had been a pharmacy; we found, amid débris of every sort, family portraits slashed with a knife. Ordure was everywhere. They had taken all the waterpipes from the houses, the bells from the church, and even the works of the clock.

At Ham there is general chaos at the canal entrance. Pillage and wilful destruction are in evidence on all sides. Two of the most beautiful residences in the city were used by the enemy; one as the officers' casino, the other as the abode of General von Fleck. Here again the Germans carried away everything of value and smashed the rest. They even went to the length of sawing through the doorframes, destroying the windows with hammer blows, pulling out the chandeliers and trampling on them. To complete the work, they deposited filth in the pianos.

In the region between Ham and the canal they destroyed everything by fire. This is true of Esmerly-Hamel, where they burned the bell tower of the church; likewise of Eppeville and Verlaine. Everything is destroyed at Erchen and Solente. At Champien, amid the ruins one finds a German cemetery, in the heart of which rises an allegorical monument representing peace! The barbarians did not hesitate to write on this monument the following formula: "To the memory of friend and enemy comrades united in death." What hypocrisy! An officer has informed us that in the same community a coffin was exhumed and the remains of the dead replaced by vile ordure.

Used Battering Rams

The destruction is general and methodical at Roiglise, at Avricourt, at Amy, at Margny-aux-Cerises, where we found one of the battering rams with which the barbarians batter down houses. It is the old Roman battering ram adapted to this base use. A particularly odious regiment of Saxons committed these acts in the region of Margny. In this town the Germans violated graves in the cemetery in order to bury their dead there. The rest they blew up.

At Plessis-Cacheleux the destruction was equally systematic. From Plessis to Roye the country is a desert. Magnificent farms, such as the Bourresse farm, are nothing but pitiful ruins. At Roye there was organized pillage of all the houses. The home of the notary, especially, was sacked of everything. The bell tower was wantonly pulled down; the bell is still in it. From Roye to Nesle all the villages, such as Carrépuis, Ballâtre, Marché, Rethonviller, Billancourt, were systematically destroyed.

At Nesle the Germans committed the worst violence from the first day of the city's occupation. They laid hands upon every movable object in the houses, from cellar to garret, especially upon wines; they carried away all articles of taste: pictures, mirrors, clocks, candelabra, and objects of art. When the furnishings of a house were of considerable value they arrested the owner for espionage and

robbed him during his absence. Some days before their departure they pretended that by order of their Emperor they had to pillage, sack, and destroy everything. This order was punctually executed by the Twentieth Regiment of Heavy Artillery, the Thirty-eighth Infantry, and the Sixth Foot Chasseurs, on orders from General Hahn, commanding the Thirty-fifth Division.

The officer just named, setting the example, had the men carry away everything movable from a room which he had occupied for four months. The bells were thrown from the steeples and the fragments were shipped to Germany. Finally, in the last week—that is to say, from March 10 to 17—the invaders gave themselves up to an orgy of unqualifiable acts—incendiarisms, total destruction of many houses, the poisoning of wells, springs, and fountains.

From Nesle to Péronne they left a desert; Herly was systematically sacked, the houses reduced to ruins, the château burned. At Manicourt and Curchy everything is destroyed and burned, and it is the same at Arrancourt-le-Petit, Puzeaux, Homiécourt, Marcheopot, Barleux, Flaucourt. We will not describe the scene at Villers-Carbonnel and Péronne, now a heap of tragic and grandiose ruins; nor at Lassigny, where, indeed, the destruction was caused by the battle.

Chauny a Mass of Ruins

The same aspects of destruction were encountered by our colleagues, especially at Chauny and to the northeast of Soissons. At Chauny, after having taken the measurement of all the cellars and houses for two months, and calculated the amount of explosives necessary to blow up each building; after giving themselves up to unbridled plunder, carrying away furniture, smashing safes, robbing churches, they devoted two weeks to destroying the whole city by flame and mine with an inflexible and pitiless method. Nothing remains of the city except one suburb where they had massed the inhabitants—and then bombarded them. They directed their shells particularly at the Institution St. Charles, a refuge for old men, where they had

grouped the persons who were ill. The City of Chauny, which had counted more than 10,000 inhabitants, is now only a mass of ruins.

The inhabitants driven from the villages near St. Quentin testify to the same acts of vandalism. All their furniture was stolen or broken. Houses were destroyed by explosion or fire. At Vaux-Roupy the Germans blew up the chapel of the château and the tombs. At Seracourt-le-Grand they learned of the existence of a mortuary chapel belonging to the family of one of our most venerated colleagues. Wishing to add to the sufferings of their glorious hostage, they blew up that chapel and the tombs. Eyewitnesses told us that to accomplish this sorry business the Germans had to retrace their steps three times.

Massacre of Fruit Trees

By the side of this first series of facts there is another. If they destroyed and pillaged private property and public edifices, mark how they behaved in regard to those farming enterprises of which The Hague Convention said that the enemy in an invaded country should consider himself the administrator, entitled only to the usufruct.

Here they committed an act more vile, more wicked, more odious than all the others. They sawed down all the fruit trees! And when they had no time to saw them down they tore off the bark to kill them.

No words can describe the pitiful scene in what were formerly the orchards of that rich farming region, where apple trees, pear trees, cherry trees, sawed off two feet from the ground, lie as so many fragments of a property deliberately destroyed. Along the roads is a veritable cemetery of trees, trees cut down by thousands. What strategic use can be assigned to such vandalism? They went so far as to blow up some trees with dynamite. It was destruction for destruction's sake, or, rather, it was the impotent rage of a people jealous of France, a people which, not having been able to win by courage, attempted on retreating to annihilate all the sources of wealth.

In certain localities, such as Ham, the farm laborers themselves were compelled to saw down the trees to which they had given years of care. The effect of this abominable destruction upon the minds of the inhabitants should also be noted. Members of the old reserve regiments, mostly farmers, who are repairing the roads with marvelous rapidity, were particularly exasperated by the massacre of trees. They gave vent to deep curses against the perpetrators, longing to inflict upon them the punishment merited by such a crime.

That is how the Germans have respected The Hague conventions in regard to private property, public monuments, and farming interests in the occupied territory. Let us see now what they have done regarding the honor, liberty, and life of the inhabitants.

Crimes Against Noncombatants

We will not dwell upon the thousand vexations which our heroic people had to endure at the hands of their oppressors for nearly three years—quarrels over food, threats to the inhabitants if they did not give the soldiers a part of the American supplies, the seizure of the most necessary tools and possessions.

At Rove they took away by degrees all the bedding of an honored woman at the head of a boarding school which dates from 1870. Under the pretense of installing her in a neighboring house they pillaged her home and took away even her mattress and pillow. At Margny-aux-Cerises a German soldier threatened to strike a young girl who was nobly caring for her paralyzed mother, her sick grandmother, and a blind neighbor whom she had added to her burdens out of the largeness of her heart if she did not give up the bread and potatoes in her possession. At the peril of her life this brave little French girl defended the food of the three invalids for whom she was acting as guardian angel.

The inhabitants of the evacuated villages say that nothing was left them to eat; that they had to hide potatoes; that requisitions were made upon them at any moment; that fines and imprisonments rained upon them. A cultivator at At-

tilly told us that one day about noon—at the time of their departure—German soldiers arrived and said: "We are going to blow up your house at 1 o'clock." And they kept their word. At Guiscard we were told that in the middle of Winter they compelled young girls to work outdoors at the heaviest tasks—for example, at sewer cleaning—without any regard for their physical strength. The only alternative was prison.

When they were about to blow up the citadel at Ham they warned the inhabitants by fixing the hour when the operation was to take place. A bugle call was to be the signal. The population was to assemble in the church, with two days' provisions. Then, suddenly moving the hour forward—and that at 2 o'clock in the morning—when the inhabitants were still in bed they touched off the explosion without warning anybody. It made victims.

On account of the sufferings of the people there have been many deaths of children in all the occupied communities.

At Noyon, upon their arrival, Aug. 30, 1914, the German officers sought out the members of the Municipal Government, at the head of which was our heroic colleague, Noël, who recently received the cross of the Legion of Honor. They compelled these men to go at the head of the column which was about to occupy the city. They made them walk beside the commandant's horse, and, as they could not keep up, they were brutally treated. The Deputy Mayor, M. Jouve, having fallen, was beaten with lance butts. A citizen, M. Devaux, who had been seized as a hostage, was shot without cause behind the Mayor's house. An officer fired his revolver in cold blood at the doorkeeper of the City Hall; he missed him, but the unfortunate man died shortly afterward as a result of the nervous shock.

A baker, M. Richard, who was simply looking out of his door at French prisoners passing along the street, was killed by a rifle bullet in the abdomen. Mme. Delbecq, a woman who refused a drink to a drunken German soldier, was killed by a rifle shot.

Captives From Noyon

On Feb. 18, after having compelled all the inhabitants of 15 to 60 years to pass the night in the college, they took them away into captivity. More than eighty innocent young girls were thus torn away from their families, in spite of tears and sobs.

Sister Saint Romuald, lady superior, made some particularly moving statements. She said that when the Germans began their operations for retreat they evacuated 250 to 500 sick cases from the region of St. Quentin into the civil hospital at Noyon. These arrived in such frightful condition that seven or eight of them died every day. They were people who had been torn from their beds without time to take anything with them; paralytics, dying men, nonagenarians; there was even a woman of 102 years. Many of those who died had to be buried without any means of verifying their identity.

Mme. Deprez, owner of the Gibercourt Château, was suffering from serious heart trouble, which compelled her to keep her bed. A German officer arrived and ordered her to get up. The poor woman said she would obey in spite of her sufferings, and begged the officer to withdraw while she dressed. He refused and compelled her to dress before him. Mme. Begue of Flavy-le-Martel also had heart disease. They removed her. Her children of 10 and 7 years wished to follow, but the German officer refused. The little ones clung to the wheels of the carriage begging not to be separated from their mamma. Without regard for their tears and cries the officer brutally thrust them aside and left them in the road.

Everywhere they carried into captivity the inhabitants of 15 to 60 years, even the young girls, except women who had very small children. A woman in Holnor told us that they had taken away her little boy of 14 years. A high officer in the French Army reported to us, on the word of eyewitnesses, a significant remark of the German commandant at Ham. Having pointed out a young girl of 16 years he said: "That one is for me."

A woman from Ham related that on Feb. 10 she learned that 600 inhabitants were about to be taken away. Distracted—for she had three daughters—she ran to the Kommandantur and found that the rumor was true. The victims were ordered to meet in the court of the château with not more than sixty pounds of baggage apiece. At the same time all the people were ordered to bring their valuables, but this they did not do. The three daughters of the witness, aged 18, 20, and 26 years, went to the appointed place. From 10 o'clock in the morning till 3 in the afternoon the captives waited in the glacial cold. Parents rushed to them to say good-bye, and there were heart-breaking scenes. They were driven away with rifle butts, and at 3 o'clock the captives were forced to go to the railway station. The Germans had the cruelty to set up a camera to preserve a picture of this sad procession. A week or two afterward the mother of whom I have spoken learned that her daughters were not working, but were quartered in empty houses. Since then she has heard nothing from them.

A person driven from Seraucourt-le-Grand told us that on June 29, 1916, at the moment of a French offensive, the Germans gathered the men of 17 to 55 years in the public square to take them into captivity. When relatives approached to say farewell they were stopped by bars and machine guns. One woman had to brave the guns to go to the aid of her sick husband.

Life Under German Rule

The martyrdom of the inhabitants of Chauny was particularly terrible. For nearly thirty months they lived under the most intolerable and humiliating régime. Obligated not to leave their homes before 8 o'clock in the morning, to return by 7 in the evening, to live without lights at night, they had to salute the German officers, hat in hand, under pain of imprisonment. On Feb. 18 the Germans began sending northward all the inhabitants of 15 to 60 years. On the 23d they ordered the rest of the population—about 2,000 persons—to assemble in the square before the City Hall. They herded these with 3,000 inhabitants of neighboring vil-

lages in a suburb called Brouage. On March 3 there was a new gathering of these unfortunates, including the ill and infirm. They were compelled to pass six hours in review, enduring such sufferings from the cold that twenty-seven persons died the next day and others in the succeeding days. Then the unfortunates were packed into cellars, where for the next two weeks they heard the explosions in their houses, which were blown up over their heads!

Sufferings of Refugees

The evacuation of certain villages was carried out with equal cruelty. A woman from Gricourt, whom we met at Noyon, told us that her sick husband was driven out of his home without regard for his condition. He died, and she is left with seven children. Other inhabitants of that and neighboring villages told us that they had been driven out of their homes in the night. They had been compelled to travel a part of the way in wagons half full of manure. Then, from Babeuf to Noyon, they went on foot in the mud, with their little children suffering from cold and hunger. Some of these unfortunates died of exhaustion after reaching our lines. Everywhere the inhabitants were evacuated in this way, without enough to eat, and without regard to the weakness of children and invalids. Seventeen old men coming from Roisel arrived in such a state of exhaustion that they died within a few days.

These are atrocious facts, but however agonizing the story, however frightful the sight of heaped up ruins, we nevertheless brought back from our visit a profound impression of comfort; for, after having verified and denounced the cowardly acts of the German executioners, we have had to bow our heads before the nobility of the victims. Not for an instant during their long captivity did our compatriots despair of France. Not for an instant did they doubt our ultimate victory. They said so, they proclaimed it before our enemies, upon whom they imposed silence by their dignity, their pride, and their courage.

It is also my duty—I will speak with discretion, for it is not well to give up to

an excessive optimism—to report another matter which all these people have declared. After having seen the German Army arrive in August, 1914, so strong, so well equipped, so admirably victualled, that they wept with rage, they saw that, little by little, annoyance crept into the ranks of our enemies. The refugees declare that during the later months the Germans suffered from increasing lack of food. On this point they are unanimous. The bread given to the German soldiers was almost uneatable. Sometimes they threw it away, and not even the dogs would eat it. Nettle soup, turnip-cabbage, and the black broth which they call glue, constituted their main diet. Their coffee was made of parched barley. They tried constantly to get food from the inhabitants when these received relief supplies. Meagre as was their own fare, they sent a part of it to their families in Germany, who, they said, were in absolute want.

We do not mean to draw any excessive conclusions from these facts. It would be puerile to deny that our enemies can still oppose a great resistance to us—let us not deceive ourselves—but we place the truth on record when we state, on the testimony of our compatriots from the invaded districts, that a great physical and moral weakening is noticeable in all the German soldiers.

Condign Punishment

As for their own sufferings, so great that in many places our army surgeons found a dangerous condition of exhaustion, our heroic compatriots applied to it this admirable formula: "We forgot everything when we saw French soldiers again." They were filled with joy at finding France again, that sweet France which is more beloved the more it suffers. They brought out the tricolor flag, carefully hidden for thirty months, and hoisted it immediately on the ruins of the Mayoralty or church. The children waved little flags. At the gates of Roye a triumphal arch was raised for the entrance of the French Army.

Our duty is to avenge the wrongs of which our compatriots have been the victims. There would no longer be justice in the world if such crimes, sys-

tematically committed by a nation which prides itself on having all the progress of science at its service, could be committed with impunity. For these crimes there should be the triple punishment of international law, of penal law, and of the victory of the civilized world.

First, the judgment of international law: There is an article of the Convention of Oct. 18, 1907, which I have not yet cited. I even believe that this article was inserted at the demand of Germany. I refer to Article 3 of Convention IV., which says: "The belligerent who shall violate the provisions of said rule shall be held liable to indemnity if there is cause, and shall be responsible for all acts committed by persons belonging to its armed forces." Consequently, they are responsible materially, financially—they must pay! * * *

Do you know how they regret their crimes? One of our colleagues, M. Ordinaire, just now read this sentence from the *Vossische Zeitung*: "Our troops are full of joy, the joy of having inflicted harm on some one else." The whole German mentality is in that remark. Not only do they not repent the crimes they have committed, but they still boast of them. They must be reached by the penal law. The first punishment that is necessary, the one without which the others will be impossible, is victory. * * *

The martyrdom of our fellow-countrymen has stirred in all our souls a new resolve of pitiless justice. We will go to the end, to the furthest point to which our strength will carry us, over the ruins

of German imperialism and militarism, to establish the triumph of peace, of liberty, and of the inalienable rights of the human conscience.

The Senate Resolution

At the end of M. Cheron's address the Senate by a unanimous vote passed the following resolution:

THE SENATE:

Denouncing before the civilized world the criminal acts committed by the Germans in the regions of France occupied by them, crimes against private property, against public edifices, against the honor, the liberty, the life of individuals;

Asserting that these acts of unheard-of violence were perpetrated without the excuse of any military necessity and in systematic contempt of the international convention of Oct. 18, 1907, ratified by the representatives of the German Empire;

Holds up to universal execration the authors of these crimes, whose permanent repression is demanded by justice;

Salutes with respect those who have been their victims, and to whom the nation solemnly promises, here placing the vow on record, that they shall have full reparation from the enemy;

Affirms more than ever the will of France, sustained by her admirable soldiers—and in accord with the allied nations—to pursue the struggle which has been imposed on her until German imperialism and militarism are definitely crushed, responsible as they are for all the miseries, all the ruins, and all the griefs heaped upon the world!

Pitiful Tales From Ruined Homes

Philip Gibbs, the war correspondent, sent to The London Telegraph of April 1, 1917, this moving account of the sufferings of French civilians in the region liberated by the German retreat on the Somme:

I AM moved to write again of the old men and women and of the young women and children who have been liberated by our advance. I am moved because day by day I have been visiting the places that were once their homes

and are now the rubbish heaps which lie about that great stretch of country laid waste by the enemy in the wake of his retreat where there is only silence and black ruin; because, also, I have just been among these people, seeing their tears, hearing their pitiful tales, touched by hands which plucked my sleeve so that I should listen to another story of outrage and misery. All they told me, and all I have seen, builds up into a great tragedy. These young girls, who wept before me,

shaken by the terror of their remembrance, these brave old men, who cried like children, these old women, who did not weep, but spoke with strange, smiling eyes as to life's great ironies, revealed to me in a fuller way the enormous agony of life behind the German lines now shifted back a little, so that these people have escaped.

It is an agony which includes the German soldiers, themselves enslaved, wretched, disillusioned men, under the great doom which has killed so many of their brothers, ordered to do the things many of them loathe to do, brutal by order even when they have gentle instincts, doing kind things by stealth, afraid of punishment for charity, stricken both by fear and hunger. "Why do you go?" they were asked by one of the women who have been speaking to me. "Because we hope to escape the new British attacks," they answered. "The English gunfire smashed us to death on the Somme. The officers know we cannot stand that horror a second time." They spoke as men horribly afraid. Of their hunger there seems no doubt. They begged food of these civilians, who would have starved to death but for the American relief supplies. They killed cats and dogs to provide themselves with a taste of meat which otherwise they do not taste. This, although the German Kommandantur seized all the cattle and foodstuffs of the French inhabitants, and requisitioned all their hens and took the eggs the hens had laid.

"I was the bailiff of Mme. la Marquise de Caulincourt," said an elderly man, taking off his peaked cap to show me a coronet on the badge. "When the Germans came first to our village they seized all the tools, and all the farm carts, and all the harvesting, and then they forced us all to work for them, the men at 3 sous an hour, the women at 2 sous an hour, and prison for any who refused to work. From the château they sent back the tapestries, the pictures, and anything which pleased this commandant or that, until there was nothing left. Then in the last days they burned the château to the ground, and all the village and all the orchards." "It was the same always," said a woman. "There were

processions of carts covered with linen, and underneath the linen was the furniture stolen from good houses."

"Fourteen days ago," said an old man, who had tears in his eyes as he spoke, "I passed the night in the cemetery of Vraignes. There were 1,015 of us people from neighboring villages, some in the church and some in the cemetery. They searched us there and took all our money. Some of the women were stripped and searched. In the cemetery it was a cold night and dark, but all around the sky was flaming with the fire of our villages.—Poeuilly, Bouvincourt, Marteville, Trefeon, Monchy, Bernes, Hancourt, and many more. The people with me wept and cried out loud to see their dear places burning, and all this hell. Terrible explosions came to our ears. There were mines everywhere under the roads. Then Vraignes was set on fire and burned around us, and we were stricken with a great terror. Next day the English came, when the last Uhlans had left. 'The English!' we shouted, and ran forward to meet them, stumbling, with outstretched hands. Soon shells began to fall in Vraignes. The enemy was firing upon us, and some of the shells fell very close to a barn quite full of women and children. 'Come away,' said your English soldiers, and we fled further."

Russian prisoners were brought to work behind the lines, and some French prisoners. They were so badly fed that they were too weak to work. "Poor devils!" said a young Frenchwoman, "it made my heart ache to see them." She watched a French prisoner one day through her window. He was so faint that he staggered and dropped his pick. A German sentry knocked him down with a violent blow on the ear. The young Frenchwoman opened the window, and the blood rushed to her head. "Sale bête!" she cried to the German sentry. He spoke French and understood, and came under the window. "'Sale bête'?" For those words you shall go to prison, Madame." She repeated the words and called him a monster, and at last the man spoke in a shamed way and said: "Que voulez-vous? C'est la guerre. C'est cruelle, la guerre!" This man had

kinder comrades. Stealthily pitying the Russian prisoners, they gave them a little brandy and cigarettes, and some who were caught did two hours' extra drill each day for a fortnight.

"My three sisters were taken away when the Germans left," said a young girl. She spoke her sisters' names, Yvonne, Juliette, and Madeleine, and said they were 18 and 22 and 27, and then, turning away from me, wept very bitterly. "They are my daughters," said a middle-aged woman. "When they were taken away I went a little mad. My pretty girls! And all our neighbors' daughters have gone, up from 16 years of age, and all the men folk up to 50. They have gone to slavery, and for the girls it is a great peril. How can they escape?" How can one write of these things? For the women it was always a test. Many of them had surprising courage, but some were weak and some were bad. The bad women forced on the others in a way so vile that it seems incredible. They entered into relations with German officers, and flaunted viciously under their protection, and robbed women of quality of their dresses and linen, and demanded jewelry from houses looted by their officers, and laughed as they drove in German cars past Frenchwomen of gentle birth who were forced to work in the fields. They are stories such as Guy de Maupassant might have written, but worse than he imagined.

There was no distinction of class or sex in the forced labor of the harvest fields, and delicate women of good families were compelled to labor on the soil with girls strong and used to this toil. There were

many who died of weakness and pneumonia and underfeeding. "Are you not afraid of being called barbarians forever?" asked a woman of a German officer, who had not been brutal but, like others, had tried to soften the hardships of the people. "Madame," he said, very gravely, "we act under the orders of people greater than ourselves, and we are bound to obey, because otherwise we should be shot. But we hate the cruelty of war, and we hate those who have made it. One day we will make them pay for the vile things we have had to do."

"Sir," said a Sister of Charity, "these people whom you see here were brave, but tortured in spirit and in body. Beyond the German lines they have lived in continual fear and servitude. The tales which they have told us must make the good God weep at the wickedness of his creatures. There will be a special place in hell, perhaps, for the Emperor William and his gang of bandits." She spoke the words as a pious conviction, this little pale woman with bright and kindly eyes, in her nun's dress.

Roughly and hurriedly I have put these things down. It is only later that one may strike the balance of them all, and draw the right lesson of all this tragedy which is the nature of war. An old lady whom I met today drew perhaps the great lesson in its strict truth. "I am 77 years old," she said. "I saw the war of 1870, and was a prisoner of the Germans. Now I have seen this war, a thousand times worse than that other one. Two such wars in a lifetime are too much. But one such war in all the history of the world is still too much. Can we not finish with it forever?"

Brand Whitlock On Belgian Deportations

"One of the Foulest Deeds in History"

The State Department made public on April 21, 1917, a report from Brand Whitlock, American Minister to Belgium, written in January, when he was still holding his difficult position at Brussels under German occupation. Of all his reports since the beginning of the war

this is the only one thus far given to the public. It reads as follows:

IN order to fully understand the situation, it is necessary to go back to the Autumn of 1914. At the time we were organizing the relief work, the Comité National—the Belgian relief organiza-

tion that collaborates with the Commission for Relief in Belgium—proposed an arrangement by which the Belgian Government should pay to its own employees left in Belgium, and other unemployed men besides, the wages they had been accustomed to receive.

The Belgians wished to do this for humanitarian and patriotic purposes; they wished to provide the unemployed with the means of livelihood, and, at the same time, to prevent their working for the Germans.

The policy was adopted and has been continued in practice, and on the rolls of the Comité National have been borne the names of hundreds of thousands—some 700,000, I believe—of idle men receiving this dole, distributed through the communes.

The presence of these unemployed, however, was a constant temptation to German cupidity. Many times they sought to obtain the lists of the *chômeurs*, [unemployed,] but were always foiled by the claim that under the guarantees covering the relief work the records of the Comité National and its various sub-organizations were immune. Rather than risk any interruptions of the *ravitaillement*, for which, while loath to own any obligation to America, the Germans have always been grateful, since it has had the effect of keeping the population calm, the authorities never pressed the point other than with the *Burgomasters* of the communes. Finally, however, the military party, always brutal and with an astounding ignorance of public opinion and of moral sentiment, determined to put these idle men to work.

In August von Hindenburg was appointed to the supreme command. He is said to have criticised von Bissing's policy as too mild; there was a quarrel; von Bissing went to Berlin to protest, threatened to resign, but did not. He returned, and a German official here said that Belgium would now be subjected to a more terrible régime, would learn what war was. The prophecy has been vindicated.

The deportations began in October in the *étape*, at Ghent and at Bruges. The policy spread; the rich industrial districts of Hainaut, the mines and steel

works about Charleroi were next attacked; now they are seizing men in Brabant, even in Brussels, despite some indications, and even predictions of the civil authorities, that the policy was about to be abandoned.

During the last fortnight men have been impressed here in Brussels, but their seizures here are made evidently with much greater care than in the provinces, with more regard for the appearances. There was no public announcement of the intention to deport, but suddenly, about ten days ago, certain men in towns whose names are on the list of *chômeurs* received summonses notifying them to report at one of the railway stations on a given day and penalties were fixed for failure to respond to the summons, and there was printed on the card an offer of employment by the German Government, either in Germany or Belgium.

On the first day, out of about 1,500 men ordered to present themselves at the Gare du Midi, about 750 responded. These were examined by German physicians and 300 were taken. There was no disorder, a large force of mounted Uhlans keeping back the crowds and barring access to the station to all but those who had been summoned to appear. The Commission for Relief in Belgium had secured permission to give to each deported man a loaf of bread, and some of the communes provided warm clothing for those who had none, and in addition a small financial allowance.

As by one of the ironies of life the Winter has been more excessively cold than Belgium has ever known it, and while many of those who presented themselves were adequately protected against the cold, many of them were without overcoats. The men shivering from cold and fear, the parting from weeping wives and children, the barriers of brutal Uhlans, all this made the scene a pitiable and distressing one.

It was understood that the seizures would continue here in Brussels, but on Thursday last, a bitter cold day, those that had been convoked were sent home without examination. It is supposed that the severe weather has moved the Germans to postpone the deportations.

The rage, the terror, and despair excited by this measure all over Belgium were beyond anything we had witnessed since the day the Germans poured into Brussels. The delegates of the Commission for Relief in Belgium, returning to Brussels, told the most distressing stories of the scenes of cruelty and sorrow attending the seizures. And daily, hourly, almost, since that time, appalling stories have been related by Belgians coming to the legation. It is impossible for us to verify them, first because it is necessary for us to exercise all possible tact in dealing with the subject at all, and, secondly, because there is no means of communication between the Occupations Gebiet and the Etappen Gebiet.

Transportation everywhere in Belgium is difficult, the vicinal railways scarcely operating any more because of the lack of oil, while all the horses have been taken. The people who are forced to go from one village to another must do so on foot or in vans drawn by the few miserable horses that are left. The wagons of the breweries, the one institution that the Germans have scrupulously respected, are hauled by oxen.

The well-known tendency of sensational reports to exaggerate themselves, especially in time of war, and in a situation like that existing here, with no newspapers to serve as a daily clearing house for all the rumors that are as avidly believed as they are eagerly repeated, should, of course, be considered, but even if a modicum of all that is told is true, there still remains enough to stamp this deed as one of the foulest that history records.

I am constantly in receipt of reports from all over Belgium that tend to bear out the stories one constantly hears of brutality and cruelty. A number of men sent back to Mons are said to be in a dying condition, many of them tubercular. At Malines and at Antwerp returned men have died, their friends asserting that they have been victims of neglect and cruelty, of cold, of exposure, of hunger.

I have had requests from the Burgomasters of ten communes from La Louvière, asking that permission be obtained

to send to the deported men in Germany packages of food similar to those that are being sent to prisoners of war. Thus far the German authorities have refused to permit this except in special instances, and returning Belgians claim that even when such packages are received they are used by the camp authorities only as another means of coercing them to sign the agreements to work.

It is said that in spite of the liberal salary promised those who would sign voluntarily no money has as yet been received in Belgium from workmen in Germany.

One interesting result of the deportations remains to be noted, a result that once more places in relief the German capacity for blundering almost as great as the German capacity for cruelty.

They have dealt a mortal blow to any prospect they may ever have had of being tolerated by the population of Flanders; in tearing away from nearly every humble home in the land a husband and a father or a son and brother, they have lighted a fire of hatred that will never go out; they have brought home to every heart in the land, in a way that will impress its horror indelibly on the memory of three generations, a realization of what German methods mean, not, as with the early atrocities in the heat of passion and the first lust of war, but by one of those deeds that make one despair of the future of the human race, a deed coldly planned, studiously matured, and deliberately and systematically executed, a deed so cruel that German soldiers are said to have wept in its execution and so monstrous that even German officers are now said to be ashamed.

Illegal Property Seizures

Minister Havenith of Belgium on April 20 delivered to the State Department at Washington a memorandum warning the world that any dealings in Belgian property or credits seized by German agents would be contested in the courts after the war. The memorandum says:

An order of the German Government, dated Aug. 29, 1916, disregarding the principles of international law, or-

ganizes forced liquidation of certain business concerns in Belgian territory occupied by the enemy.

According to trustworthy information the German Government has further ordered certain establishments to turn into the bank of the German Empire the amount of the accounts of French and English citizens.

The law of Belgium, of which the Hague Convention forms part, does not recognize as valid the powers granted for purposes of liquidation to receivers appointed by the occupant nor the liquidating operation. Therefore when the territory is liberated parties injured by the abuse of de facto power that may have been exercised by receivers or other liquidating agents will have a remedy

at law against the said receivers or agents.

All contracts or other legal instruments going beyond the mere custody or conservation of property will be voidable. This will in particular apply to alienations of real or personal property, conveyances of debt; in a word, all acts of disposal.

The representatives in places out of the occupied Belgian territory of Belgian or foreign firms or corporations that have been sequestered by the German authorities would make themselves liable to the penalties provided by the law decree of Dec. 10, 1916, besides damages through civil action, if they should carry out the instructions given them by the receivers or liquidating agents.

"Liberty Enlightening the World"

By HENRY VAN DYKE

Thou warden of the western gate, above Manhattan Bay,
The fogs of doubt that hid thy face are driven clean away:
Thine eyes at last look far and clear, thou liftest high thy hand
To spread the light of liberty world wide for every land.

No more thou dreamest of a peace reserved alone for thee,
While friends are fighting for thy cause beyond the guardian sea:
The battle that they wage is thine; thouallest if they fall;
The swollen flood of Prussian pride will sweep unchecked o'er all.

O cruel is the conquer-lust in Hohenzollern brains:
The paths they plot to gain their goal are dark with shameful stains:
No faith they keep, no law revere, no god but naked Might;
They are the foemen of mankind. Up, Liberty, and smite!

Britain, and France, and Italy, and Russia newly born,
Have waited for thee in the night. Oh, come as comes the morn,
Serene and strong and full of faith, America, arise,
With steady hope and mighty help to join thy brave Allies.

O dearest country of my heart, home of the high desire,
Make clean thy soul for sacrifice on Freedom's altar-fire:
For thou must suffer, thou must fight, until the war lords cease,
And all the peoples lift their heads in liberty and peace.

German Reprisals on Prisoners

French Captives Placed in Range of French Guns by Orders From Berlin

GENERAL VON STEIN, the German Minister of War, delivered an address before the Reichstag on March 3, 1917, in which he announced that, owing to French mistreatment of German prisoners, counter-measures had been adopted under which, beginning on that date, French prisoners would be placed in the zone of fire until the alleged abuses of the enemy were discontinued. In the course of his speech he said:

The situation is worse in France. Unfortunately things do not grow better there, but worse. The enemy endeavors to oppress our unfortunate comrades, body and soul. The liberties which we granted to prisoners in our camps, by allowing them occupation with art and science, as much as they like and were used to, are unknown in France. We therefore abolished these liberties in our prisoner camps. The time of warning which had been fixed at four weeks, after which countermeasures would be taken, only benefited the enemies. During that time we treated our prisoners decently, and our prisoners in the hands of the enemy had to suffer four more weeks of torture. I asked that the time be cut short, and this has been granted today. Countermeasures will be taken immediately and continued until we receive from hostile Governments news that the hostile measures have been abolished.

Thousands of prisoners were discovered working close behind the French front, in range of the fire of our own guns. If these unfortunate people seek cover against our fire the French officers prevent this with arms. We have taken countermeasures, and brought French prisoners into the same situation behind our front. This will be continued until the enemy has decided to fulfill our demands and withdraw his prisoners fifty kilometers [about 32½ miles] behind the front. The lowest act which they commit is that, especially during recent times, they have tortured German prisoners immediately after capturing them with all means in order to make them speak about military facts. This ghastly fate is especially reserved for officers and non-commissioned officers. They are locked up for days in receptacles resembling cages. They are made to suffer hunger for days in order to break their spirits. We do not meditate for one moment following the enemy on this road, but the front has been ordered to hold back

prisoners taken there for some time, and to bring them into a similar situation. Low actions will not, however, be committed by us. I saw in France numberless crowds of French prisoners pass by. Our field-gray soldiers curiously crowded around, but I never heard one insulting word, and still less saw any action against them. That was done by us "barbarians."

The War Minister said he was sure the measures of reprisal would not always be executed with sufficient strictness, as the German people were always good natured and even oversentimental in such cases. He turned next to the case of German prisoners in England, saying:

In England things are different. Although the English usually deny atrocities, it must be admitted that in many cases they redressed grievances, and that generally the treatment in England is better. This, however, does not exclude that also the English employ many prisoners close behind the front, and therefore adequate measures have been taken as reprisals. We further know that captured Germans in the French ports are made to work under unfavorable conditions in excessive fashion by the English. For this reason also English prisoners have been put in the same position on certain places of the front. Immediately after the declaration of the submarine war we brought to the knowledge of the English Government that eventual special treatment of our brave submarine crews would be answered immediately with similar measures.

About the Russians not much is to be said. Many things are obscure. It is not yet certain whether the sad conditions on the Murman Railway have been completely cleared up. Some of our airplane officers are still chained in dungeons. But it ought not to be passed in silence that, in spite of everything else, in Russia conditions in many places have become rather better than worse. For this thanks are due to the devoted activities of the Swedish and Danish Red Cross. Since Sweden took charge of our representation in Russia very energetic work has been done there in order to better the fate of our comrades. Denmark magnanimously followed Switzerland's example and agreed that institutions for exchange of prisoners be established. Also the King of Spain offered help in the same direction. We welcome all these warm-hearted endeavors with sincere gratitude.

I cannot speak about the fate of our captured countrymen without mentioning the people dragged from East Prussia and Alsace-Lorraine. There, perhaps, greater tragedies happened than among our prisoners. In my corps we had a young Alsatian clergyman who had been forced to leave his wife with a new-born child. The woman had to sit for weeks in a cellar, and was then dragged away by the French, and the unfortunate husband up to today has heard nothing of his family.

When a short while ago, in Belgium, workmen and inhabitants were sent to Germany for work a storm of indignation arose abroad and also at home. We did not remain silent. The Belgians are our enemies, and many of them, probably from a safe hiding place, fired against our troops. My East Prussian and Alsatian countrymen are much nearer to my heart. Unfortunately we could not obtain the least justice for these unhappy ones. France hides behind all sorts of pretexts, and pretends that these people do not want to return. In fact, very few, some thirty, have come back. During these days a sister was said to return with fifty children, but she came with empty hands. Whether a second sister, who comes in the next few days, will be more successful is not yet known. The Russian Government alleges national auxiliary service, and therefore refuses to release these people. I am always ready to defend the principle that we can do without the co-operation of these unfortunate ones if they are given back to us.

Official Reply of France

The French Government took immediate cognizance of the foregoing charges and issued the following official denial:

In his recent speech to the Reichstag, the German War Minister gives an official character to the allegations already published by the German "Wireless," and tries to persuade public opinion all over the world that German prisoners in France are subject to ill-treatment. He states that the period granted for the negotiations regarding the treatment of prisoners is now over, and that reprisals will be adopted. As a fact, the German Government has made a complaint to the French Government through the American Ambassador on the following points:

According to the German statements, at the time of their capture and interrogation, German prisoners have been ill-treated; they have been robbed and insulted; have been badly housed in the camps, and have been used as laborers in the area swept by shell fire. The Note, therefore, required:

(a) That the German prisoners should be taken away from the dangerous areas and put into camps at a distance of at least thirty kilometers [about twenty miles] from the front line;

(b) that they should not work within that distance from the front line;

(c) that they should be permitted to use the postal service with Germany;

(d) that delegates of the United States Embassy should be authorized to visit the camps in the zone of operations.

A reply had to be given before Jan. 15. On the precise date the French Government presented to the United States Embassy a reply:

(a) Formally refuting the accusations of ill-treatment;

(b) showing that no check had been placed upon postal correspondence;

(c) agreeing, in return for reciprocal treatment, to allow delegates from the United States Embassy to visit the prisoner camps;

(d) The French Government further declared itself formally ready to employ—on a reciprocal basis—no prisoner of war in the zone of fire, nor within twenty kilometers [12½ miles] of the front.

Up to the present the French Government has received no answer to this note.

The German Government talks of reprisals, and thereby pretends to ignore the fact that there is documentary evidence to show that many months before German prisoners were employed on the French front in the zone of operations the Germans themselves were employing French prisoners under the fire of French guns; and it can truly be said that if they are attacking now it is to defend themselves.

This is clearly proved by irrefutable documents which are also corroborated by the confessions of their own prisoners showing that a prisoner camp was established at a point particularly beaten by the French artillery, where our miserable countrymen were kept without shelter or cover of any sort until evacuation was necessary for sanitary reasons.

On the other hand, it is sufficient to read the correspondence of German prisoners addressed to their families to be convinced of the feeling of humanity which has been displayed toward them. No better conclusion could be given than the following words said on Nov. 3, 1916, in a camp near Verdun by a German officer: "I am greatly pleased to be a prisoner in the hands of the French, but I must tell you that these people are too kind and too foolish. It is quite natural that prisoners should work, and they are not overworked, as I can tell you from all I have seen."

A Swiss newspaper, the *Journal de Genève*, stated on March 4 that Germany was already executing her threats against French prisoners of war; that they were being placed in barracks without food or water and without heating arrangements, notwithstanding the extreme cold. It declared also that French prisoners were being compelled to work

in German trenches within reach of the French artillery.

Another German Statement

Under date of March 9 the Overseas News Agency of Berlin sent out a semi-official statement saying in part:

The measures taken by the Germans were adopted because about 30,000 German prisoners of war have for months been living under miserable conditions and forced to do the hardest kind of work close behind the French lines, in a majority of cases within the range of German artillery fire.

The French wireless service stated that Gustave Ador of Geneva, President of the International Committee of the Red Cross, had visited the German prisoners of war in the district of operations and had gained a most favorable impression regarding their treatment. There is no doubt the French authorities carefully selected a special district in which the conditions were favorable in order to deceive M. Ador and neutral countries. The French report regarding the German and French negotiations relating to prisoners of war in the district of military operations is not correct. Here are the facts:

The French Government in a note dated Dec. 21, 1916, was requested to assemble German prisoners of war in good camps situated at least eighteen miles behind the front, and to refrain from putting them to work at places nearer the firing lines. In case of refusal, or if no answer was given, it was announced that on Jan. 15 French prisoners of war would be sent into the German district of operations under similar conditions. The note as is known with certainty was immediately sent by telegraph to the French Government at Paris and it arrived there prior to Jan. 5, 1917.

The French answer, dated Jan. 15, reached Berlin only after the announced counter-measures had been put into effect. Besides, the contents of the answer in a great part were unsatisfactory. The French Government had not fulfilled the German request. It had merely declared it was ready to place the German prisoners of war twelve miles behind the front, where they were not sufficiently secure against the fire of long-range cannon, and where they were especially exposed to airplane attacks.

This declaration, of course, did not suffice for the abolishment of our counter-measures, especially since the experiences we had had with promises of the French Government relating to questions of war prisoners were very discouraging.

On the contrary, the French Government had to be asked to fulfill completely the German request. A communication to this effect was sent to the French Government in the beginning of February. On this occasion it was suggested to the French authorities that the whole district of operations on

both sides be completely cleared of war prisoners. This offer in itself proved that the German Government does not make French prisoners of war work in the districts of operations because of "lack of hands."

Since that time the French Government has not replied and prefers to expose Frenchmen to the fire of their own countrymen in order to be able to continue to torture German prisoners of war and to use them for labor contrary to international law.

The French Government complains that even in the middle of December French prisoners of war were singled out to be sent to the district of operations. This assertion is untrue. The prisoners of war in question were marked only a short while prior to the final day announced in the German offer. If they had to be sent there the guilt was solely with the French Government.

Denial by an American

Philip O. Mills, an American ambulance driver, denied General von Stein's charges against France in a communication to THE NEW YORK TIMES, dated March 6, declaring that the German War Minister's speech was due to Germany's determination to make French prisoners perform the dangerous work behind the lines, and that the charges were an excuse to justify that measure. He wrote:

"I can and do brand as a falsehood any statement that German prisoners are tortured or compelled to work behind the French lines under fire.

"Over six months' service on the French fronts as an ambulance driver of the American Red Cross, attached to a French division in the sector through which the largest number of German prisoners have been passed, (about 15,000,) thousands of whom I have seen and hundreds of whom I have talked to, gives me authority for what I say. The French use only their older men for work close behind the lines, and I have never seen a German prisoner in the fire zone doing anything but traveling toward the rear. Night and day I have been on the roads in the fire zone, and there isn't a prison camp or citadel that cannot be and has not been visited by our ambulance drivers. We have had eighty men in service with forty cars at Verdun during December, and never a tale from any man of any such atrocity as is quoted in this speech.

"The first assembling camp for prison-

ers of war is well out of gun range, well kept, and comfortable, and I have been through it often. The prisoners are immediately fed on arrival, with the regular French army ration and all the bread they can eat. I never saw or heard of a Frenchman abusing or ill-treating a German prisoner, but, on the contrary, have seen hundreds of little acts of kindness shown them. Everything is open to us foreign ambulance drivers, and we are treated as part of the French Army. It is absolutely false that German officers are locked in cages, &c., for I have seen them confined in comfortable houses and allowed exercise and good food.

"The whole speech is merely to try to justify an improper use of prisoners of war and to prevent the ever-increasing number of voluntary German surrenders.

"The French do not need to stoop to deny such lies, for there are now hundreds of good American citizens who have been to France and have seen how everything is conducted behind the French lines, and so can disprove for them all such slanders."

Employment of Prisoners

Germany holds approximately 2,000,000 prisoners, most of whom are Russians. General Groener, Chief of the War Emergency Office, reported in February, 1917, that 750,000 of these prisoners were employed as farm laborers, and that more were soon to be put to work in the agricultural districts.

An official report published in Berlin on Dec. 1, 1916, stated that there were 1,663,794 military prisoners in Germany on Aug. 1, 1916. In the two years of war to that date 29,297 prisoners had died. Of these, 6,032 died from tuberculosis, 4,201 from spotted fever, 6,270 from wounds, and the rest from other illnesses.

Russia has more than 1,000,000 military prisoners, of whom 428,000 were captured in 1916, mainly by General Brusiloff's armies. Besides these there are 200,000 Germans and Austrians interned as civil prisoners. At the end of 1915 the prisoners employed in State and agricultural work in Russia numbered 1,138,000, according to a Reuter dispatch from Petrograd. Of these 575,000 were under the jurisdiction of the Minister of Agriculture, 294,000 under the Department of Mines and Factories, and 169,000 under that of Ways and Communications. In the year 1916 the French captured 78,500 Germans and the British 40,800 on the western front, while in the Balkans the Entente armies took 11,173 Bulgarians and Turks. During the same period the Italians made prisoners of 52,250 Austrians. This gives the Entente Allies a total of more than 610,000 prisoners for the year 1916.

Great Britain has thus far made very little agricultural or industrial use of war prisoners, partly owing to the objections of labor unions and partly to fear of hostile acts.

THE EUROPEAN WAR AS SEEN BY CARTOONISTS

NOTE—Owing to the existing blockade CURRENT HISTORY MAGAZINE has been unable to obtain a proportional number of German cartoons for this issue.
